KEY TO PRONUNCIATION

For a full explanation of the various sounds indicated, see the KEY TO PRONUNCIATION in Vol. I.

ã as in *alc*, *fate*.
 ä " " *senate*, *chaotic*.
 â " " *glare*, *care*, and as *e* in *there*.
 ă " " *am*, *at*.
 ă " " *arm*, *father*.
 â " " *ant*, and final *a* in *America*, *armada*, etc.
 á " " *final*, *regal*, *pleasant*.
 ă " " *all*, *fall*.
 ă " " *eve*.
 ă " " *elate*, *evade*.
 ă " " *end*, *pet*.
 ă " " *fern*, *her*, and as *i* in *sir*, etc.
 ă " " *agency*, *judgment*.
 i " " *ice*, *quiet*.
 i " " *quiescent*.
 i " " *ill*, *fit*.
 ă " " *old*, *sober*.
 ă " " *obey*, *sobriety*.
 ă " " *orb*, *nor*.
 ă " " *odd*, *forest*, *not*.
 ă " " *atom*, *carol*.
 oi " " *oil*, *boil*.
 oo " " *food*, *fool*, and as *u* in *rude*, *rule*.
 ou " " *house*, *mouse*.
 ū " " *use*, *mule*.
 ū " " *unite*.
 ū " " *cut*, *but*.
 ū " " *full*, *put*, or as *oo* in *foot*, *book*.
 ū " " *urn*, *burn*.
 y " " *yet*, *yield*.
 B " " *Spanish Habana*, *Córdoba*, where it is like
 English *v* but made with the lips alone.

ch as in *chair*, *cheese*.
 D " " *Spanish Almodovar*, *pulgada*, where it is
 nearly like *th* in *English* then.
 g " " *go*, *get*.
 G " " *German Landtag* = *ch* in *Ger. ach*, etc.
 H " " *j* in *Spanish Jijona*, *g* in *Spanish gila*; like
 English *h* in *hue*, but stronger.
 hw " " *wh* in *which*.
 K " " *ch* in *German ich*, *Albrecht* = *g* in *German*
Arensberg, *Mocklenburg*, etc.
 n " " in *sinker*, *longer*.
 ng " " *sing*, *long*.
 N " " *French bon*, *Bourbon*, and *m* in the *French*
Étampes; here it indicates nasalizing of
 the preceding vowel.
 sh " " *shine*, *shut*.
 th " " *thrust*, *thin*.
 TH " " *then*, *this*.
 zh " " *z* in *azure*, and *s* in *pleasure*.

An apostrophe ['] is sometimes used as in *tā'b'l* (*table*), *kāz'm* (*chasm*), to indicate the elision of a vowel or its reduction to a mere murmur.

For foreign sounds, the nearest English equivalent is generally used. In any case where a special symbol, as *g*, *h*, *k*, *n*, is used, those unfamiliar with the foreign sound indicated may substitute the English sound ordinarily indicated by the letter. For a full description of all such sounds, see the article on PRONUNCIATION.

THE NEW INTERNATIONAL ENCYCLOPÆDIA

BAZAINE, ba'zên', FRANÇOIS ACHILLE (1811-88) A marshal of France. Entering the army in 1831, he served with distinction in Algeria, in Spain, in the Crimea, and in the Italian campaign of 1859. As head of the French army in Mexico, his African training stood him in good stead. His success with the guerrilla bands, however, led him to regard his abilities at too high a rate. He quarreled with Maximilian and was believed by his soldiers to be planning to set himself at the head of an independent empire in Mexico. Whatever his plans, the attitude of the United States forced the withdrawal of the French troops, and Bazaine returned to France in 1867. At the outbreak of the great war with Germany Bazaine was at the head of the Third Army Corps, near Metz. After the battles of Worth and Spichern he took command of the main French armies, and on Aug. 14, 1870, began a retreat from Metz. Defeated at Vionville, Mars-la-Tour, and Gravelotte, he retired within the fortifications of Metz, which was immediately invested by Prince Frederick Charles. Attempts to escape failing, Bazaine capitulated October 27, when 173,000 men, including three marshals and over 6000 officers, laid down their arms and became prisoners of war. In 1873 Bazaine was tried by a court-martial and sentenced to degradation and death for having failed to do his duty. The sentence was commuted to 20 years' imprisonment. But in 1874 Bazaine contrived to escape from the fortress on the Ile Sainte-Marguerite, where he was confined, and ultimately made his way to Madrid, where he died, 1888. Bazaine was a man of great personal bravery, but unfitted by training to cope with the large situation at Metz. The rôle of politics and intrigue he played at Metz will probably never be understood, although much light has been shed on the subject by M. Émile Ollivier in vol. xvi of his *Empire Liberal*. His dilatoriness was due largely to the overcaution he observed, which, justifiable in Mexico and Africa, was unsuited to central Europe and war with Prussia. In his own defense Bazaine published *Rapport sommaire sur les opérations de l'armée du Rhin du 13 Août au 29 Octobre, 1870* (Geneva, 1871), and *Episodes de la guerre de 1870 et le blocus de Metz* (Madrid, 1883). Consult also La Brugère, *L'Affaire Bazaine* (Paris, 1874), for an official account of the court-martial, and Comte d'Héris-

son, *La légende de Metz* (Paris, 1888), for a vindication of Bazaine.

BAZALGETTE, SIR JOSEPH WILLIAM (1819-91) An English civil engineer, born at Enfield (Middlesex). He was appointed chief engineer to the London Board of Works, and as such built large portions of the embankments and sewerage systems of that city. He constructed three bridges across the Thames and also the famous embankment bordering the river. As an expert on practical questions of municipal engineering, he was well known.

BAZÁN, ba-thán', EMILIA PARDO See PARDO-BAZÁN, EMILIA.

BAZAN, ba'zan', DON CÉSAR DE See DON CÉSAR DE BAZAN.

BAZANCOURT, ba'zan'kōōr', CÉSAR, BARON DE (1810-65) A French military historian, director of the Library of Compiegne under Louis Philippe. He was born in Paris and was appointed official historiographer by Napoleon III, whom he accompanied during several campaigns. The results of these expeditions appeared in his works on *L'Expédition de Crimée jusqu'à la prise de Sebastopol, chronique de la guerre d'Orient* (1856), *La campagne d'Italie de 1859, chronique de la guerre* (1859), *Les expéditions de Chine et de Cochinchine* (2 vols., 1861-62). His other works include *A Histoire de Sicile sous la domination des Normands* (1846), and the novels, *Georges le montagnard* (1851), *Noblesse oblige* (1851), and *La princesse Palihano* (1852).

BAZAR, ba-zar', or **BAZAAR** (Ar., Hind., and Pers. *bāzār*, a market) An Oriental market, covered or open, the region of the city given up to shops. Such a market when the shops are grouped about a square is called usually a *meidan*. The bazar generally comprises a number of streets partly or wholly roofed over and devoted to shops of the better class. The shops, grouped in streets or sections according to the goods dealt in, are mere recesses with open stalls or platforms in front. In the most monumental bazars the streets are covered with vaults, perforated with numerous apertures for light. Usually there is at least a central dome. The bazar is usually one of the principal monuments of a Mohammedan city, many cities had several, Aleppo is said to have had 40. A good example is the chief bazar of Adrianople, that of Ali Pasha—a brick structure, 1800 feet \times 500 feet with a gate at each end and four side entrances, entirely surrounded by walls and covered

with vaults, making it comparatively fireproof. Of the two principal bazars in Constantinople, the oldest portion (the Bezesten in the Grand Bazar) was built in 1461, shortly after the capture of the city. The term is also applied in the East to the open-air markets or sales on special days of particular commodities, like the Monday Cloth Bazar at Constantinople in the court of the Yen-i-Jami. In English use the word is also applied to any sale of mixed goods for charitable or commercial purposes.

BAZARD, ba'zar', AMAND (1791-1832) A French Socialist and founder of Carbonarism in France. He was born in Paris, early entered the National Guard, and at the age of 25 was appointed a knight of the Legion of Honor. Shortly after the establishment by him of the Republican Society known as *Amis de la Vérité*, he organized in 1820 the famous French association of the Carbonarists, founded upon the Italian organization of the same name, but adapted to the needs of the French revolutionists. The society grew rapidly in numbers and influence, within two years after its establishment it embraced more than a quarter of a million members. In 1825 Bazard joined the St Simonists and subsequently became the principal apostle of that movement, which under his influence spread rapidly. He followed up his public career on the new gospel by the publication of the famous journal, *L'Organisateur*, issued by the followers of the St Simonist school in 1829. The chief work of the school, however, was the *Exposition de la doctrine Saint Simonienne* (2 vols., 1820-30, 1854). Bazard severed his connection with the movement in 1831 and retired from public life.

BAZARJIK, ba'zar-jek', now officially called DOBRICH. A district town of Bulgaria, about 26 miles north of Varna (Map Balkan Peninsula, F 3). It contains a mosque and a number of churches and has an important annual fair. Pop., 1900, 13,436; 1905, 15,397. The town was twice taken by the Russians, in 1774 and 1810.

BAZAS, ba'zas'. The chief town of an arrondissement in the department of Gironde, France, on the Beuve, 33 miles southeast of Bordeaux (Map France, S, D 4). It is built on a rock, rising from the river, has a cathedral and remains of fortified walls dating from the thirteenth century, and several interesting mediæval houses. It carries on a trade in cattle and white wine. Bazas anciently belonged to the Vasates, during the Religious Wars it was the scene of atrocious excesses and reprisals; on both sides. Pop., 1896, 4806; 1901, 4695; 1906, 4684; 1911, 4704.

BAZIGARS, ba'zë-gürz'. A nomadic people of India, somewhat analogous to the gypsies of Europe. They recognize caste, are largely Mohammedan in faith, and forbid intermarriage with Hindus.

BAZIN, ba'zin', RENÉ FRANÇOIS (1853-) A French novelist, born at Angers. He studied law at Paris and in 1878 became professor on the law faculty in Angers University. He published sketches and novels laudatory of provincial life and the domestic virtues. His novels include *Stephanette* (1884); *Les Noëlets* (1890); *Madame Coennum* (1898); *Rumble amour* (1894); *De tous son côté* (1897); *La terre qui meurt* (1899); *Les Oubliés* (1901); *Donatienne* (1908). He also wrote books of travel, including *L'avenure* (1891); *Siècle* (1892); *Terre d'Espagne* (1896); and *Choc de France et d'Orient*

(1901). In 1903 he was elected to the French Academy. His later work includes *L'Ame alsacienne* (1903); *L'Isolée* (1905); *Le blé qui leve* (1907); *Le mariage de Mademoiselle Gmel* (1908, Eng. trans. 1913); *Nord-Sud Amérique, Angleterre, Corse, Spitzberg* (1913). The book by which Bazin is best known to English and American readers is that on modern Italy, rendered into English under the title *The Italians of To-Day* (1904), a careful and sympathetic study.

BAZOCHE, ba'zosh', or **BASOCHE**. A guild consisting of the clerks attached to the Parlement of Paris as well as the provincial parlements. When the French Parlement ceased to be the grand council of the King and confined itself exclusively to administering justice, a distinction of name necessarily sprang up between those noblemen who formed the royal train and the attaches of the court of justice. The former were called *courtiers*, the latter, *basochiens*. To keep up their dignity the Bazoches gathered round a mock king of their own, who resided at the Chateau des Tournelles or the Hôtel Saint-Pol. The Bazoches was divided into chapters, each wearing the livery of its captain. In Paris there were several of these chapters. Bazoches of Parlement (du Palais), Bazoches of Châtelet, Bazoches of the Chambre des Comptes, which last body took the name of "High and Sovereign Empire of Galilee." Parlements in other parts of France also had their Bazoches. Then historical existence can be traced to the beginning of the fourteenth century, when Philip the Fair conferred on the brotherhood certain privileges. The President was called King, Pivôôt, or Empereur. Henry III suppressed the regal titles, and conferred all the privileges and right attached to these offices on the chancellor. Still, the Bazoches continued to exist as a kingdom, minus its head, and effected on all occasions the language of royalty. Its jurisdiction included the consideration and decision of all processes and debates that arose among the clerks. It also caused a species of coin to be struck which had currency among its members, but, judging from the proverb about *la monnaie de basoches*, it did not enjoy an immense credit in the outer world of hard cash. The mock monarch also enjoyed the privilege of selecting at his pleasure yearly, from the French royal forests, a tall tree, which his subjects, the clerks, were in the habit of planting on the 1st of May before the grand court of the palace to the sound of tambourines and trumpets. But this was not all. In public sports this fantastic little kingdom was worthily honored, its chancellor had rooms at the Hôtel de Bourgogne, at the carnival the *basochiens* joined themselves to the corps of the prince of fools and to the performers of low farces and "mysteries." They also acted a species of satirical "morality" (see MYSTERIES), in which they made extensive use of the liberty granted to them in ridiculing vices and the favorites of fortune. Louis XII patronized these amusements. In 1500 he gave the brotherhood of the Bazoches permission to perform plays in the grand salon of the royal palace. Francis I witnessed them in 1538, but in 1540 they were interdicted. The Bazoches took an active part in the early Revolutionary proceedings, but the order was suppressed by the general decree of Feb. 13, 1791.

BAZZI, but'së', see SONOMA; IL. 11, 11.
BAZZINI, ba'tsë'në, ANTONIO (1818-97). An Italian violinist and composer, born at Brescia,

BEACH BIRDS

1. GREATER YELLOW LEGS (*Totanus melanoleucus*).
 2. SPOTTED SANDPIPER (*Actitis macularia*).
 3. DOWITCHER (*Macrorhamphus griseus*).

4. BLACK-NECKED STILT (*Himantopus mexicana*).
 5. LONG-BILLED CURLEW (*Numenius longirostris*).
 6. AMERICAN WOODCOCK (*Philohela minor*).

BDELLIUM

Italy At the age of 12 he was a successful concert performer and made many tours through Germany, France, Italy, and Belgium At 17 he was appointed organist of a church in his native town For four years, from 1843, he studied at Leipzig, devoting himself to Bach and Beethoven almost exclusively He had met Paganini when but 18 years old and became completely influenced by that master's art and style He has been classed with the Paganini school, and although criticised for mannerisms and sentimentality, was acknowledged to have brilliant technique of left hand and bow as well as great vivacity of style He was appointed professor of composition in the Milan Conservatory and director seven years later His compositions, which exhibit an assimilation of the beauties of Italian melody with the profundity and wealth of Teutonic harmony, include five string quartets, a string quintet, many compositions for the Church, an opera, *Tirandot*, produced in 1867, and a symphonic poem, *Francesca da Rimini* (1890)

BDELLIUM, δέλλι-um (Lat from Gk βδέλλιον, *bde'llion*, the equivalent of the Heb *b'dolaleh* in Gen ii 12) A gum resin, resembling myrrh High medicinal virtues were ascribed to it by the ancients, but it is no longer used The bdellium mentioned in Gen ii 12 was probably not a gum resin at all, but what it was is uncertain

BEACH, AMY MARCY CHENEY (1867-) An American composer and pianist, born at Hemen, N H After elementary instruction from her mother she studied harmony under Jumus W Hill, and piano with Ernst Persbo and Karl Baermann Advanced musical theory she studied independently, making her own translations of Berlioz and Gevaert Under her maiden name of Amy Marcy Cheney, and up to the time of her marriage to Dr Henry Harris Aubrey Beach, in 1885, she was known as a successful concert pianist, since then she has devoted herself almost entirely to composition The *Gaelic Symphony*, for full orchestra, conceded to be her best work, has been played by all the great national orchestras Of scarcely less importance is the *Sublate*, composed for the dedication of the Woman's Building, at the Columbian Exposition, a mass in E flat (Opus 5, 1892), for organ and small orchestra, a cantata for women's voices, *The Roses of Avonaton*, and *The Minstrel and the King*, a similar work for male voices, a concerto for piano and orchestra, a quintet for piano and strings, many compositions for piano, and songs

BEACH, DAVID NELSON (1848-) An American theologian, born at South Orange, N J, and a brother of Harlan Page Beach He graduated from Yale College in 1872 and from the Yale Divinity School in 1876 In the same year he was ordained a Congregational minister and became pastor at Westerly, R I He subsequently served in pastorates at Wakefield, Mass, Cambridge, Mass, Minneapolis, and Denver In 1903 he was chosen president of the Bangor Theological Seminary, at the same time receiving the chair of homiletics He took a prominent part in civic and social movements and during his residence at Cambridge was prominent in ridding that city of saloons He advocated the adoption of a modified Norwegian liquor system in Massachusetts, and became known as an enthusiastic worker for church unity and a better theology His published writings include: *Plum Words on Our Lord's Work*

BEACHES

(1886), *The Newer Religious Thinking* (1893), *The Intent of Jesus* (1896), *Statement of Belief* (1897), *The Annie Laurie Mine* (1903), *Meanings of the Battle of Bennington* (1903)

BEACH, HARLAN PAGE (1854-) An American missionary, brother of David Nelson Beach He was born at South Orange, N J, and graduated at Yale (1878) and at the Andover Theological Seminary (1883) He was missionary to China from 1883 to 1890 and at the head of the School for Christian Workers in Springfield, Mass, from 1892 to 1895, when he became educational secretary of the Student Volunteer Movement for Foreign Missions He became professor of the theory and practice of missions at Yale University in 1906 His works include *The Cross in the Land of the Trident* (1895), *Knights of the Labarum* (1896), *Dawn on the Hills of Tang* (1900), *Geography and Atlas of Protestant Missions* (1901-03), *India and Christian Opportunity* (1904)

BEACH, MOSES YALE (1800-68) An American inventor and publisher He was born in Wallingford, Conn, and in early life was a cabinetmaker He invented a rag-cutting machine for paper mills and engaged in the manufacture of paper In 1835 he acquired an interest in the New York *Sun*, a penny daily paper begun in New York about three years earlier, and soon became sole proprietor Leaving the paper to his sons, he retired in 1857 with an ample fortune

BEACH, REX (ELLINGWOOD) (1877-) An American author, born at Atwood, Mich He was educated at Rollins College, Winter Park, Fla, and later studied at the Chicago College of Law and the Kent College of Law (Chicago) It was not, however, as a lawyer that he became known, but as a writer of stories of adventure Among these are *Pardners* (1905), *The Spoilers* (1906), *The Barrier* (1907), *The Silver Horde* (1909), *Gong Some* (1910), *The Ne'er-do-Well* (1911), *The Net* (1912), *The Iron Trail* (1913) Two of these he dramatized, collaborating with Paul Armstrong in *Gong Some*, and with James McArthur in *The Spoilers*

BEACH BIRDS A collective term used by American sportsmen for such small wading birds as frequent marshy bays along the seacoast or seek their food on ocean beaches They are limicoles, such as snipes, sandpipers, willets, curlews, avocets, etc, described separately elsewhere Compare SHORE BIRDS, and see Plates of SHORE BIRDS, BEACH BIRDS

BEACHES, RAISED Tracts of ground at various elevations above the present sea or lake levels, which have evidently been beaches at some former time Such beaches owe their present position to earth movements, which may have taken place in connection with earthquakes, or as part of the general system of changes attending the development of the earth's surface It is now found that wherever the ocean waves and surf are acting upon the bolder headlands of islands or continents, the debris is being carried seaward, and a comparatively smooth floor is being formed over a belt of variable extent lying below sea level If this belt should rise suddenly, it would be recognized as a terrace of raised beach The characteristics of such beaches are first, the nearly uniform elevation of the level terrace running approximately parallel to the present shore line, second, the presence of beds of water worn and deposited material through

presence in the beds of marine or fresh-water shells belonging to species that were living at the time the sand was underneath the water. In America such beaches have been found around the coast of Maine, of California, along the west coast of South America, and the shores of many fresh-water lakes, and of Great Salt Lake.

In Scotland a terrace extends around the bold coast of the west highlands and the western islands at an elevation of about 25 feet above present sea level. The famous parallel Roads of Glenroy extend on each side of the valley of the Roy, the first pair at an elevation of 1130 feet, the second of 1060 feet, and the third of 945 feet, above sea level. These were originally supposed to be raised marine beaches, but are now considered as beaches cut by the waters of a lake which once filled the valley.

The most interesting raised beaches are those surrounding the Great Lakes of North America. A survey of these beaches, made by G. K. Gilbert, shows that they are at present not absolutely horizontal, but rise as much as 5 feet per mile as one proceeds northward and eastward, further, the southern shores of the present lakes show a tendency to flooding or drowning. This leads to the conclusion that the whole plain bearing the Great Lakes is being tilted, rising towards the northeast (north 27 degrees east) and sinking towards the southwest.

BEACHES, SINGING. See MUSICAL SAND.

BEACH FLEA, or SAND FLEA. A minute terrestrial, amputated crustacean which abounds upon seabeaches and hops away with flea-like agility when disturbed. In summer they collect in vast numbers under windrows of seaweeds, etc., where they serve as scavengers by devouring decaying animal matter. They form an important part of the food of shore birds, tiger beetles, etc. Those of the eastern United States belong commonly to the family Orchestridae. See AMPHIPODA.

BEACH GRASS. See AMMOPHILA.

BEACH PEA. See LATHYRUS.

BEACH PLANTS, also called STRAND, SHORE, or LITTORAL PLANTS. Plants that grow above the water line along the shores of oceans or great lakes. They form one of the edaphic groups of xerophytes (qv). The beach, as the term is here used, is composed of sand or gravel and is essentially a product of wave action, it comprises the zone which is, or has been, worked over by the waves. It is commonly delimited on the one side by the water line and on the other by dunes or sea cliffs. The lower portion of the beach is washed by the waves of summer storms and is devoid of life. Water plants cannot grow there because of excessive exposure, while land plants are excluded because of frequent wave action. Beyond this zone is another, which is washed by the high waves of winter storms, here annual plants are found, but not permanent perennials, since the winter waves destroy them. Beyond the reach of any but exceptional waves is the upper beach, and here the conditions for life are much improved; not only annuals, but also biennials and perennials, become more or less abundant.

The most characteristic type of beach plant is the succulent annual, of which the sea rocket (*Cakile*) may be considered a good example, since it is a common beach plant along the ocean shores of America and Europe and also along the shores of the Great Lakes. The development of succulent annuals of the beach is a fact of

great interest, since this type of vegetation is peculiarly characteristic of deserts. This suggests that the beach is a highly xerophytic habitat, and such is indeed the case, for there is no habitat in ordinary climates where the exposure to wind, light, heat, and cold is greater than here. Higher up on the beach there are often found biennial rosette plants, and perennials with long, underground stems, such as the beach pea (*Lathyrus maritimus*) and the sand reed (*Ammophila*).

The vegetation of beaches is almost always sparse. But few species can endure the severe conditions, and even in the case of these few species, the individuals are commonly scattered. As a consequence, the sandy or gravelly soil gives the dominant tone to the landscape, as is the case in deserts. A comparison of the ocean beach with the beach of the Great Lakes brings out the fact that the floras are almost identical. It might be supposed that the influence of salt (see HALOPHYTES) would be indicated by a different assemblage of plants along the seashore, but scarcely any inland and coastal plant societies are so much alike as those of lake and ocean beaches. This fact shows that the xerophytic character of the beach conditions determines the nature of its flora. See ECOLOGY.

BEACH PLUM. See PLUM, BEACH.

BEACHY HEAD (corrupted from *Fr. bel-chef, beau-chef*, beautiful head or headland). The loftiest headland on the southern coast of England, projecting into the English Channel, 2½ miles south-southwest of Eastbourne, Sussex (Map England, G 6). It consists of perpendicular chalk cliffs, 564 feet high, forming the east end of the South Downs. Near this point occurred a famous naval battle, in which the French fleet under Tourville defeated the combined English and Dutch under Torrington (1690). The Belle Tout or Beachy Head Lighthouse, 2 miles to the west, was built in 1831. This lighthouse is 285 feet above the sea, in lat 50° 44' 24" N, long 0° 12' 42" E. Its revolving light can be seen 23 miles out at sea.

BEACON (ME *becon*, AS *bedecan*, *bēcon*, Ger *Bake*, cf AS *beacman*, Eng *beck*, *beckon*, to make a sign). Any signal set upon a height, but especially the alarm fires used at one time to spread the intelligence of foreign invasion or other important event. These fire signals were in use in the earliest times. An instance is found in the book of the prophet Jeremiah, in his call (chap vi 1) to the people of Benjamin to "set up a sign of fire in Beth-haccerim for evil apprehend out of the north, and great destruction." Notices of beacons are found in the literary remains of ancient Persia, Palestine, and Greece. Another occurs in the tragedy of *Agamemnon* by the Greek poet *Æschylus*. The commander in chief of the Greek army at the siege of Troy is represented as communicating the intelligence of the fall of the city to his Queen, Clytemnestra, at Mycenæ, in the Peloponnese. The line consists of eight mountains, and the news is supposed to be conveyed from Troy in one night.

In England the beacons were kept up by a rate levied on the counties and had watches regularly stationed at them. They were carefully organized while the Spanish Armada was expected (For a vivid description of this consult Macaulay's *Armada*.) In the United States, as early as 1635, on Beacon Hill in Boston alarms were sent out by signal fires in case of attack by Indians. During the Revolution a line of signals was established reaching across New

England towards New Jersey and Pennsylvania, crossing New York at the Hudson Highlands. Two of these, above Fishkill, are now known as South Beacon and North Beacon. The latter was relighted at a celebration in 1883. In 1899 its site was marked by a monument erected by the Daughters of the Revolution.

In maritime affairs a beacon is a guide or warning signal. In former times signal fires, placed either in a cresset on top of a pole or in a tower on an eminence, were used to signal the approach of an enemy or to spread a call or warning for any purpose, a chain of them often conveying intelligence to great distances. Various hills have received the name of beacon from the fact that signal fires have at one time been lighted on them. At present lighthouses or other objects, placed conspicuously on a coast or over a rock or shoal to give notice of danger, as well as signals erected for facilitating the triangulation of the coast, are known as *beacons*. Two principal features are used for distinguishing beacons—color and shape, and the opinion given by the International Marine Conference held in Washington in 1889, was that the first object to be attained, from an international standpoint, was uniformity. For this purpose color is the best means, applying to all systems of whatever kind, while the shape admits of numerous exceptions. The color is also applicable in all countries and with little expense, whereas the immediate adoption of shape would involve changes of several existing systems. In consequence it was recommended to adopt a uniformity in color, the shape to remain optional. From an immense amount of data it was clearly shown that there has been a far greater lack of uniformity in beacons than in buoys (q.v.) and that even the different countries have not in themselves adhered rigidly to a fixed rule in the construction of beacons. Perhaps the most extensive system of day marks and beacons in use along the coast of the United States is found along the Florida reefs. There the beacons are either lettered or numbered. The cage, shaft, vane, letter, or figure is of different color in adjacent stations, so that there may be no confusion. Combinations of red, white, and black are used, and as a full description of each is to be had in the sailing directions of that section, the navigator is always able to determine his position. See LIGHTHOUSE.

BEACON HILL The hill north of Boston Common, so called from the fact that in the early history of Boston a beacon was set on it to give notice of threatened attacks by the Indians. The summit is occupied by the State House. Beacon Street, a noted residence street of Boston, extends along the slope of the hill skirting the Common and Public Garden westward through the Back Bay district.

BEACONSFIELD, bek-onz-feld. A market town of Buckinghamshire, England, 7½ miles northwest of Windsor. It was the birthplace and residence of Waller, the poet, Edmund Burke was buried in its parish church, and it gave its name to the title of Benjamin Disraeli, Earl of Beaconsfield. Pop, 1891, 1773, 1901, 1570, 1911, 2511.

BEACONSFIELD A municipality of Cape Colony, South Africa, 2 miles southwest of Kimberley, with which it is connected by tramway (Map Cape Colony, A. 7). It owes its growth and importance to the diamond-mining industry. Pop, 1881, 4259, 1891, 10,478; 1904, 9374, 1911, 14,294.

BEACONSFIELD, LORD See DISRAELI, BENJAMIN.

BEAD In architecture, a small, convex, round molding, sometimes called an astragal. It is of frequent occurrence in architecture, particularly in the classical styles. When carved into the form of a string of beads, long and short, it is called the bead-and-reel or bead-and-button molding. In woodwork any fine rounded molding is a bead, if sunk between two grooves, a sunk bead or plowed bead. The inner molding, usually gilt, in a picture frame, which mediates between the picture and the frame proper, is called a bead, whatever its section.

BEAD. A variety of personal ornament, made of various materials, as glass, pottery, metal, bone, ivory, wood, jet, amber, coral, etc., and perforated so that it can be strung on threads and made into necklaces, bracelets, rosaries, etc., or worked on cloth as a kind of embroidery. The use of beads is of great antiquity, for they are found in the most ancient of the Egyptian tombs as decorations of the dead, and beads supposed to have been used as barter by the Phœnicians in trading with various nations in Africa are still found in considerable numbers, and are highly valued by the natives under the name of "Aggry" beads. Ever since the fourteenth century the manufacture of glass beads has been chiefly engrossed by the Venetians. (See GLASS.) The manufacture is curious, the melted glass, colored or uncolored, is taken from the pot by two workmen, who slightly expand the collected mass by blowing down their blowpipes, they then open up the expanded glass and join the two together while still very soft. This done, they walk rapidly away from each other in opposite directions, in a long shed like a small ropewalk, and draw the glass, which retains its tubular character given by the blowing, etc., into rods of great length, and often extremely small diameter. On cooling, which takes place very quickly, these long rods are broken up into short lengths of about a foot, and a small number of these shorter rods are placed on a sharp cutting edge, after being annealed, and are chopped into lengths. The roughly cut beads are next mixed very thoroughly with fine sand and ashes, then put into a metal cylinder over a brisk fire, and turned round rapidly as they begin to soften with the heat. They are then agitated in water, which cleans away the sand and ashes and leaves the beads free, after which they are strung.

BEAD, BEADE, or BIDE (allied to *bīd*) A word which in Anglo-Saxon and Old English signified a prayer, and hence by extension came to mean the small perforated balls of gold, silver, glass, ivory, hard wood, etc., used for keeping account of the number of prayers repeated. A certain number strung on a thread makes a rosary (q.v.). A *bedesman* or *bedeswoman* is one who prays for another. Persons of station and wealth in old times "had regularly appointed bedesmen, who were paid to weary Heaven with their supplications." Bedesmen appointed to pray for the King and State sometimes lived together, and hence *bedehouse* is synonymous with an almshouse. A common form of signature at one time was "Your bounden bedesman," meaning "Your obedient servant."

BEADLE, be'dl. (OF *bedel*, of Teutonic origin, akin to AS *bīdel*, proclaimer, from *bīd*) Formerly an important parish officer, appointed by the vestry. He attended the vestry meetings, executed its orders, and assisted the constable in minor matters. He has been largely supplanted

by the verger, the visitor of the poor, and various petty town clerks

BEADS, SAINT CUTHBERT'S A title popularly given to the single joints of the articulated stems of encinites. The central perforation permitted them to be strung as beads, and from the fancied resemblance of this perforation to a cross, they were formerly used as *osanities* and associated with the name of St Cuthbert. They are also known as entochites, or wheel stones.

BEAGLE, be'gl (origin obscure) A breed of small-sized foxhounds, used in hare hunting, very similar to the harrier. For illustration, see DOG. See HOUND.

BEAGLE, THE A small brig of war, of 235 tons, engaged in surveying the southern coasts of South America and Tierra del Fuego and making a cruise round the world (1831-36) under command of Capt Robert Fitzroy, R.N. Charles Darwin was the naturalist of the expedition.

BEAK, or BEAK-HEAD' A brass prow fixed at the head of the ancient galleys, to pierce the enemy's vessel by ramming. The term was applied later to a small platform at the fore part of the upper deck.

BEAL, SAMUEL (1825-89) An Oriental scholar, and the first Englishman to translate direct from the Chinese the early records of Buddhism, thus throwing light also upon Indian history. He was born at Davenport and graduated from Trinity College, Cambridge, in 1847. After filling several curacies he became a chaplain in the Royal navy. He was on the *Sybilie* during the China War of 1856-58, and also visited Japan. In 1857 he printed for private circulation a pamphlet showing that the Tycoon of Yedo, with whom foreigners had made treaties, was not the real Emperor of Japan. He retired from the navy in 1877, and was elected to the chair of Chinese in the University College in London. His reputation was established by his series of works which traced the travels of the Chinese Buddhist pilgrims in India from the fifth to the seventh century, A.D. and by his books on Buddhism, which have become classics. Among his works are *The Travels of Sung-Yun and Fa-Hien* (1869); *The Catena of Buddhist Scriptures from the Chinese* (1872); *The Romantic Legend of Buddha* (1876); *Texts from the Buddhist Canon, Dhammapadam* (1878); *Buddhism in China* (1848); *Su-Yu-Ki, Buddhist Records of the Western World* (2 vols, 1884); *a Life of Buddha*, from the Chinese version of a Sanskrit original (vol xix of *The Sacred Books of the East*); and *The Life of Hsuen-Tsang* (1885), the great Chinese Buddhist pilgrim. He catalogued the set of books in the Buddhist Canon as known in Japan—a work of enormous proportions, sent to England by the Mikado's junior premier, Iwakura.

BEAL, WILLIAM JAMES (1833-) An American botanist, born at Adrian, Mich. He graduated at the University of Michigan in 1859 and at the Lawrence Scientific School in 1865, and in 1870 was appointed professor of botany at the Michigan Agricultural College. In 1881 he was first president of the Society for the Promotion of Agricultural Science. He is the author of *Grasses of North America* (2 vols, 1886-96); *The New Botany*, (1881), and *Seed Dispersal* (1898). He became professor emeritus in 1910.

BEALE, LIONEL SMITH (1828-1906). An English physiologist and microscopist. He was professor in the University of London, but resigned, in 1893. He was physician to the King's

College Hospital for 40 years and was elected emeritus professor of medicine in 1896. He has written in opposition to Darwin's theories. Among his works are *How to Work with the Microscope* (1887), *The Structure and Growth of the Simple Tissues of the Body* (1881), *Protoplasm* (1899), *Life Theories*, *Their Influence on Religious Thought* (1871), *Urinary Deposits and Calculous Disorders* (1868), *Our Morality and the Moral Question* (1886), *Life and Vital Action in Health and Disease* (1875).

BEALE, TRUXTON (1856-) An American diplomat, born in San Francisco. In 1874 he graduated from the Pennsylvania Military College, and four years later, after studying law at Columbia University, was admitted to the bar. Instead of practicing, however, he became manager of his father's ranch in California, where he remained for 13 years. In 1891 he was appointed United States Minister to Persia, and a year later Minister (afterward Envoy Extraordinary and Minister Plenipotentiary) to Greece, Rumania, and Servia. The years 1894-96 he devoted to travel in Siberia, Central Asia, and Chinese Turkestan. Many articles on international questions were contributed by him to reviews and magazines.

BEAM (AS *be'm*, Ger *baum*, tree) In engineering and architecture, a long piece of wood, stone, or metal used in a horizontal position to support a weight. Timber beams are usually rectangular in section and may consist of one large piece of timber or of several smaller pieces joined, butted, or spiked together. Beams of steel or iron may be a single-rolled steel shape, such as an I-beam, or they may be composed of a number of suitable steel shapes riveted together to form a single structure. (See STEEL SHAPES, GIRDERS.)

1, I-beam, 2, channel beam, 3, deck beam, 4, box beam

The term also has many special technical applications. In shipbuilding the beams are the strong, transverse pieces of timber, iron, or steel stretching across a ship from side to side to support the decks and retain the ship's sides at their proper distance. For this reason the term is used to denote the widest part of a vessel's hull, and *on the beam* is an expression applied to any point or object at right angles to the keel, as *on the starboard*, or *port*, *beam*, according to the side of the ship. The ends of a vessel's beams are supported by clamps and knees, and the centre by stanchions. The beams are given a crown in order that the decks may have a slight convexity to shed water. When made of wood, a *built-up beam* is formed of smaller beams, notched, scarfed, and bolted together; when of metal, it is composed of a web plate having angles or other sections riveted to it. *Cellular beams* are formed of wrought-iron plates riveted together with angle irons in the form of longitudinal cells, with occasional cross-stubs. *Composite beams* are composed of wood and metal, or of two different metals. *Keel'd beams* have slits in one side, made by saws, in order

to facilitate bending the beam in that direction. Beam also means the oscillating lever of a steam engine vibrating about a centre and forming the medium of communication between the piston-rod and the crank shaft, also called *working beam* or *walking beam*.

BEAM. The English translation for a number of Hebrew words. It refers to the beam of a building (2 Kings vi. 2, 5, 2 Chron. iii. 7, Song of Songs i. 17, 1 Kings vi. 9, and elsewhere), but in Judges xvi. 14 the reference is to a weaver's loom, as also in 1 Sam. xvi. 7. The famous passage in which "beam" occurs is in Matt. vii. 3-5 and Luke vi. 41-42. "And why beholdest thou the mote that is in thy brother's eye, but considerest not the beam (Gk. *doxos, dolos*) that is in thine own eye?" "Mote" signifies any light, dry particle, such as a dust grain or bit of straw.

BEAM ENGINE. See STEAM ENGINE.

BEAMING. A preliminary process to hand and power loom weaving, which consists in winding the warp threads on the weaver's beam, the two essential requirements being firmness in the winding and evenness in the spreading of the yarn. Beaming was a special employment followed by workmen trained to the business as beamers. See LOOM WEAVING.

BEAM TREE (*Pyrus uva*). A tree from 20 to 40 feet in height, native of almost all parts of Europe and of corresponding climates in Asia, not uncommon in the mountainous districts of Great Britain, and frequently planted. It has a straight, erect trunk, and a round or oval head, the leaves are ovate, cut and serrated (in some varieties, deeply lobed), white and downy beneath, the flowers in large terminal corymbs, the fruit scarlet, of the size of small peas. The fruit is acid and astringent, but becomes agreeable by incipient decay, it is sometimes called sorb or service berry and resembles the true service berry (qv) in quality, although it is much smaller. Beer is made from it by fermentation. Its very hard and fine-grained wood is used for cogs for the wheels of machinery. The whiteness of the foliage makes the tree ornamental in plantations. See PRUNUS.

BEAN. An annual plant of the family Leguminosae, widely cultivated for its seeds (beans) and pods, which are used as a food for both man and animals. The whole plant of some species is frequently grown for forage and green manuring. The broad bean (*Vicia faba*) is the common bean of Europe, of which the broad Windsor and Mazayan are the best-known varieties. It has been in cultivation from remote times. The plant is erect, 2 to 4 feet high, has thick, angular stems, leaves with 2 to 5 oval leaflets, flowers in clusters, generally white with black-eyed wing, pods large and thick, and beans thick, flattened, and generally angular. The varieties and subvarieties in cultivation are numerous and variable. They are grown both in the garden and field for forage and as human food. The plant is not well adapted to the hot, dry summers of either the United States or continental Europe, but succeeds well in England. It requires a heavy, rich, and well-drained soil. The Scotch, or horse bean, belongs to this species and is cultivated to a considerable extent as a forage crop. *Phaseolus vulgaris*, the kidney bean of Europe, is the common garden and field bean of the United States. It was introduced into Europe in the sixteenth century, probably from South America. New varieties of this species are easily originated, and several hundred dis-

tinct varieties are grown throughout the world. Kidney beans are commonly divided into two groups—green-podded and wax-podded. There are bush and pole varieties of each group. Practically all of the wax-podded beans, and many of the green-podded beans are eaten as snaps or string beans. Several varieties of the green-podded group are extensively grown as field crops, and the product is sold as dry beans. They may be planted either in hills or drills after all danger of frost is past, and require a warm, loose soil.

The Lima bean (*Phaseolus lunatus*) is a climbing species of South American origin, bearing very flat, broad pods, with short, flat seeds, slightly kidney-shaped. It is grown to a limited extent in various parts of the United States, and especially in California, where most of the seed is now raised. Some bush Limas have been developed in recent years. The soy bean (*Glycine hispida* or *Glycine soja*) is the common bean of China, Japan, and India. It is grown in Europe, and in some of the Southern and Southwestern States to some extent as a forage and soiling crop. (See SOY BEAN.) The cowpea (*Vigna unguiculata*) belongs to the bean family. It is the chief forage, soiling, and green manure crop of the southern United States, where the beans are also frequently used as food. (See COWPEA.) The scarlet-runner bean (*Phaseolus multiflorus*) is an ornamental climber which is also largely grown as string and green-shell bean in Europe, especially in England, where the Lima cannot be successfully grown. The frijole (*Phaseolus* spp.) is a small flat bean, raised in the southwestern United States, as well as in Mexico and other Spanish-American countries, where it ranks next to maize as a staple food. The tepary (*Phaseolus acutifolius latifolius*), a small variable bean which has long been grown by Indians in the same region as the frijole, has recently proved to be especially adapted to the exacting climate of the Southwest, and much more prolific than the frijole. Other beans, grown to a considerable extent in Oriental countries, but rather uncommon elsewhere, are the Lablab bean (*Lablab vulgaris*), asparagus beans (*Vigna sesquipedalis*), Mungo beans (*Phaseolus mungo*), and locust or carob beans (*Ceratonia siliqua*), grown in the Mediterranean region as a cattle food. The velvet bean (*Mucuna utihis*, now *Strobelobium* spp.) has lately come into cultivation in a number of Southern States as a forage crop and soil renovator. It has about the same feeding and fertilizing value as the cowpea. The velvet bean does not ripen its seeds north of Florida and the Gulf-coast States. For illustration see LEGUMES.

Feeding and Food Value. The ripe seeds of the bean are used to a limited extent in the United States as a feed for farm animals, while the whole plant is sometimes used as forage. In bean-growing districts the culls (which are not of good enough quality for human food) can usually be purchased at a low price and are a cheap feed, as they are rich in protein matter.

In Europe horse beans are frequently fed to horses, especially to those required to perform long-continued or severe labor. Sheep are fond of raw beans. For other farm animals, it is stated, beans may profitably be cooked. Beans are suitable for combining with corn or other grain rich in carbohydrates. Like other leguminous crops, bean forage is comparatively rich in proteins.

As a food for man, beans are extensively used

green or dry, or as the young tender pod, which, in many varieties, has little fibrous matter and is eaten with the seeds as string beans. Dry shelled beans have the following percentage composition: water, 12.6, protein, 22.5, fat, 1.8, carbohydrates, 59.6, mineral matter, 3.5. The fuel value per pound is 1605 calories. Fresh-shelled beans contain 58.9 per cent of water. String beans contain water, 89.2, protein, 2.3, fat, 0.3, carbohydrates, 7.4, mineral matter, 0.8 per cent, the fuel value is 195 calories per pound. The Windsor bean is used green or ripe, being the common bean of many regions of Europe. In America the navy or kidney is the bean most commonly used green or dry. Most of the varieties of string beans belong in this class. The Lima beans are of excellent flavor and quality, and are favorites, green or dry. The asparagus bean is becoming favorably known as a string bean.

Green shell beans and string beans are usually cooked in water, and prepared and served in a variety of ways. Dry beans are used for soups, purees, "baked beans," and other dishes. To develop their flavor long cooking is desirable. Judged by their composition, fresh beans compare favorably with other green vegetables. Dry beans are certainly a very nutritious food, being especially rich in protein, and thus fitted to replace meat to some extent in the diet. Taking into consideration the high food value of beans, their cost is usually low. It must be remembered, however, that, if eaten in large quantities, beans are less thoroughly digested than cereals, although usually well assimilated. Owing to the production of methane by fermentation in the intestines, beans are liable to cause flatulence.

Beans are sometimes ground to "bean flour." Large quantities of string beans and shell beans are dried by evaporation or canned. Cooked dry beans are also canned. String beans are sometimes preserved with salt, and allowed to undergo a peculiar process of fermentation.

The frijole is used green or dry. The dry bean is cooked in a variety of ways and is often highly seasoned with chiles. The pods of the locust or carob bean are often sold by confectioners under the name of St. John's bread. The seeds of this bean are surrounded by a sweet mucilaginous pulp, which is eaten to a considerable extent, especially in the Mediterranean region, as are also similar portions of the pods of the honey locust (*Gleditsia triacanthos*), soy beans (qv), and cowpea (qv). See CAROB.

Bean Diseases. The principal fungus disease to which the bean is subject is known as anthracnose, and is caused by the fungus *Colletotrichum lindemuthianum*. The fungus attacks stems, leaves, and pods of the bean, its presence being most conspicuous upon the pods, in which it causes deep, dark pits, seriously depreciating their value. The disease may be carried from one crop to another through the seed. Infected seeds are wrinkled and discolored, and all such should be rejected, as plants growing from them are sure to be affected, and they may convey the disease to otherwise healthy plants. Various treatments have been suggested for combating bean anthracnose, but careful selection of seed will probably give the most satisfactory results.

A rust of bean leaves, caused by *Uromyces phaseoli*, is sometimes troublesome, causing injury by defoliating the plants. The first appearance of rust may be recognized by small, nearly circular brown dots, which contain a brown

powder, the spores of the fungus. Later the spots are larger and the spores black. The liberal use of Bordeaux mixture (see FUNGICIDES) will prevent this disease. A mildew of Lima beans, due to *Phytophthora phaseoli*, is sometimes destructive. Loss of the crop may be prevented by the use of suitable fungicides.

BEAN, SAINT IGNATIUS. See STRYCHON.

BEAN, TARLETON HOFFMAN (1846-) An American ichthyologist, born at Bamberbridge, Pa. In 1892 he became associated with the United States Fish Commission. From 1880 to 1895 he was curator of fishes at the United States National Museum and from 1895 to 1898 was director of the New York Aquarium, which he organized. He was the commissioner in charge of fishes at the World's Columbian Exposition, 1893, at the Atlanta Exposition in 1895, at Paris in 1900, and chief of the departments of fish, game, and forestry at the Louisiana Purchase Exhibition, 1905. He published, with G. Brown Goode, *Oceanic Ichthyology* (1896), also descriptive lists of the fishes of New York, Pennsylvania, and other districts, and many contributions to government reports.

BEAN FEAST, also called **WAYZ GOOSE.** The English custom of an annual outing and dinner of workmen. It is either given by the employers or subscribed for by the workmen themselves. The name or names are possibly derived from the fact that beans, or a bean goose, figure prominently in the repast.

BEAN GOOSE. The small gray goose of Great Britain and northern Europe. See GOOSE.

BEAN KING'S FESTIVAL. A social rite observed principally in France, from which country it would seem to have been transplanted to Germany. On the evening of Twelfth Day, the Feast of the Epiphany (January 6), companies assemble to spend a few hours in mirthful relaxation. A large cake is baked, with a bean hidden somewhere in it. The cake is then divided into pieces, each person present receiving one, and whoever obtains the piece with the bean is king for the year. In this capacity he holds a mock court and receives the homage of the company, who amuse themselves also with other diversions. The Bean King, however, is compelled to pay for his dignity, for he has to give an entertainment on the next Twelfth Night, that an opportunity may be afforded to choose another king. In France this custom was, at an earlier period, so common that even the court indulged in it, although the Church, in the seventeenth century, excited itself zealously for its suppression. It has left a trace in the popular expression for a lucky man, *Il a troué la fève au gâteau* ('He has found the bean in the cake'). The theory that the Bean King's Festival owes its origin to the Roman saturnalia, when even the children partaking in the universal gloom were wont to elect a king, appears quite plausible.

BEAN TREE. See LABURNUM.

BEAN WEEVIL. A small, dark-colored downy beetle (*Breuchus fabae* or *obtectus*), which infests dried beans. The eggs are deposited on the young bean pods. This beetle continues to breed also in dry stored beans. It is therefore necessary to treat weeviled beans with binaphthide or carbon or hot water before storing them away. See WEEVIL.

BEAR, bär (AS *bēra*, Ger *Bär*, possibly akin to Lat *fera*, wild beast, GK. *φῆρ*, *phēr*, beast, Skt *bhalla*, bear). A large, shaggy plantigrade beast of prey, representing the carnivorous family Ursidae. Bears are native to all the wilder

parts of Europe, Asia (with its closely adjacent islands), North America, and the Andean region, but are absent from Africa, except the Atlas Mountains, and Australasia. As they thrive in confinement, they have always been familiar objects in menageries, and are thus among the best-known of beasts.

Characteristics Most bears are bulky, and some exceed in size any other carnivore, but this appearance of bulk is largely due to the looseness of the skin, the length of the coarse fur of their coats, the rudimentary tail, and the comparative shortness of their legs, the whole sole of the foot being pressed to the ground, instead of the toes only, as in most carnivores. In their relationships they stand between the dogs and the fur bearers (*Mustelidae*), but their nearest relatives are the raccoons. Their fossil ancestry is largely represented, and may be traced back to generalized forms in the early Tertiary, whence both dogs and bears seem to have descended by divergent lines.

The bear's head is broad and massive, with extended and somewhat pointed jaws, well furnished with teeth, but lacking the muscular power possessed by dogs. They have 6 cutting teeth above and 6 below, 1 canine tooth on each side in each jaw, with 4 false molars and 2 molars (or grinders) on each side above, and 4 false molars and 3 molars below. The false molars in general are soon shed. The true molars are very large, and have tuberculous

TEETH OF THE BEAR

Skull of a young grizzly, showing characteristic dentation

crowns suitable for grinding the vegetable food which forms a large part of their fare, and which the loose articulation of the jaw permits. The skeleton is massive and the muscles "plated" and of very great length, while the feet are armed with powerful claws adapted to digging in the ground and to moving or tearing pieces of logs or rocks. All but the heaviest bears are able to climb trees. Their ordinary movements are slow and rather clumsy, yet, when impelled by rage or fear, they will run for a short distance upon level ground with a speed that taxes a horse to follow and will make them way over rocks, rough ice, or up and down steep declivities, or among trees, with surprising quickness and agility. Their eyes are small, and their eyesight is probably not very effective, but their hearing, though the ears are externally small, round, and furry, is acute, and their sense of smell is keen. Unless provoked or fearful for the safety of their young, they are not usually aggressive in disposition, but are likely to display curiosity, rising upright upon their hind legs and surveying the intruder calmly. They are rarely cowardly, and when angered or brought to bay will defend themselves or attack most fiercely, seeking to strike

their enemy down or to seize him in a crushing hug and tear him to pieces with their teeth. The larger northern bears are therefore justly regarded as very dangerous beasts.

Food and Reproduction Bears are adapted by their teeth and digestive organs to a wide variety in food, and no animal is more omnivorous. Besides the flesh of such animals as they can capture, including pigs, calves, colts, and sheep, they eat fish (the chief diet with some species) and reptiles. They are also fond of fruits, berries, bulbous roots, leaves, herbs, grass, and birds' eggs, and of insects and honey, for which they will dig up ant hills and tear to pieces bees' nests and logs. They require an abundance of water and are not loth to enter it, some species being remarkably strong swimmers. They go about in pairs, or sometimes in small bands, and are diurnal rather than nocturnal in their habits, though often abroad at night. Each family has some sort of lair in a cave, dense thicket, or some similar place, varying with the circumstances, and there, in the early spring, are brought forth from one to four (usually two) young, which will remain with the mother until fairly well grown. The period of gestation is about seven months. In cold countries the birth of the young finds the mother still in hibernation, which is more or less complete for all the northern species, according to the degree of cold and the amount of snow, which prevents their seeking or obtaining much food. Hence, when they come out in the spring, they are likely to be thin and weak. The voice of bears is expressed in whines and coughing growls.

Fur The skin of bears forms a fur pelt useful for robes, overcoats, and rugs, and increasing in value with its growing rarity. A complete and ornamentally mounted skin, in the form of a rug, is worth in New York from \$75 to \$1000 for that of a polar bear, \$100 to \$500 for a grizzly, and \$50 to \$250 for a black or brown bear. The flesh is good food, the fat is valuable for the unguent called bear's grease, and the teeth and claws are turned into ornaments by civilized as well as savage artisans.

Classification The classification of bears is not yet satisfactorily determined, for several so-called species of wide distribution vary and blend confusingly. Dr C Hart Merriam, of Washington, is at work upon a monograph of American bears of the most elaborate type, which, when published, will greatly add to our knowledge, taxonomic and otherwise, of these animals. The following are the leading species and groups of the bears of the world: Polar Bear of circumpolar distribution, Brown Bear of northern Europe and Asia; Himalayan Black Bear, Japanese Bear, Sloth Bear and Sun Bear of the Old World, Spectacled Bear of South America, Big Brown Bears of North America, represented by the Kodiak Bear and Peninsula Bear, Grizzly bears of North America, represented by the Sitka Grizzly and the Sonora Grizzly, and the Black bears of North America, represented by the common Black Bear and Glacier Bear. See PLATE of BEARS.

The POLAR, WHITE, or ICE BEAR. The Polar Bear (*Ursus*, or *Thalassarcus maritimus*) is an inhabitant of the entire Arctic regions, where it seems to be extremely numerous upon all coast and islands, and may wander a vast distance from land upon the ice, or even by swimming for it has been encountered in the open sea-man;

miles from shore, and sometimes drifts a long way south on ice floes. In color it is creamy white, with black claws, and the color does not change to white in winter, as is the case with most Arctic animals. It is one of the largest of bears and has an elongated neck and straight head, so that specimens may exceed 9 feet from nose to tail. Its limbs are comparatively slender, its feet disproportionately long and hairy upon the soles, giving it a firm hold upon the ice and power in swimming. Its food is mainly seals, which it captures both on land (or ice) and in the water with great activity and cunning, but it also feeds upon such fish as it can catch in shallows or find dead, and in summer it regales itself on marine grass. Its sense of smell enables it to detect concealed food, and Arctic travelers find it difficult to build "caches" strong enough to withstand its efforts. Although a dweller in the coldest and most wintry part of the globe, this bear is abroad at all seasons, and brings forth its young in no better chamber than a cavern scratched in the snow, which may cover the mother and her nursing young for many days before she is able to lead forth the cubs.

The "EUROPEAN" BROWN BEAR (*Ursus arctos*) has been well known in captivity, as well as wild, ever since the days of the Roman arena, and it is still a resident in every "zoo" and the docile companion of wandering "bear tainers." It survived in Great Britain until nearly the twelfth century and is still to be found in the Pyrenees, eastern Alps, and thence through Russia, Syria, and Central and northern Asia to the Himalayas and Kamtchatka. It is probable, also, that the so-called barren-ground bear of the Hudson's Bay region and the great brown bears of Alaska (see below) are geographical races of this species, of which, also, the almost white Isabelline, or snow bear, of the Himalayas, and the Syrian bear (mentioned in the Bible and still ranging the mountains of Palestine) are local varieties. Everywhere it is a solitary denizen of forests and mountains, affording good sport in Europe, and of great service to the barbarians of northeastern Asia, who depend largely upon it for food and clothing. It is too well known to require particular description. For its history as an object of ancient sport and its employment in "bear baiting," etc., consult Harting, *British Animals Extinct within Historic Times* (London, 1880).

The HIMALAYAN BLACK BEAR (*Ursus torquatus*) and the JAPANESE BEAR (*Ursus japonicus*) are rather smaller species, usually glossy black. They resemble the American black bears and are held in high respect by sportsmen.

The SUN BEAR, or BRUANG (*Ursus malayanus*), of the Malayan Peninsula, Java, Sumatra, and Borneo, represents a distinct genus (*Helarctos*), in the view of many students, which is known also by several fossil species, including the huge CAVE BEAR (*Ursus spelæus*) of ancient Europe, supposed to have been exterminated by prehistoric man. The size is much less than that of either the brown or the sloth bear, the head broad and short, the fur short and close, and the tongue and lips are remarkably strong and flexible. With this go very long, strong claws, fitted for tearing to pieces ant hills and other insect retreats, whose inhabitants are easily gathered by means of the extensible, glutinous mouth. It inhabits dense mountain jungles and climbs expertly. Its color is black, marked with a white crescent (orange in the Bornean variety) on

the breast. It is peaceably inclined but fierce and aggressive when brought to bay, rising upon its hind legs and attacking with its long, sharp claws, but taken young, or bred in captivity, it becomes an amusing and somewhat intelligent ally of the showman. One kept as a pet by Sir Stafford Raffles, the most prominent of the early English governors and describers of Malaya, has become famous in ursine chronicles.

The ASWAIL, SLOTH BEAR, or HONEY BEAR (*Ursus*, or *Melursus*, *labiatus*) is a species inhabiting the jungles of all peninsular India and Ceylon, and is the juggler's bear of that region, where its facial grimaces and generally comical appearance are of great service to the wandering showman. This wantonness of countenance is due to the toothless condition of the front of the gums, where the incisors are lost in early youth, and to the fact that the lips are very long, and they and the whole snout are soft, extensible, and mobile to a surprising degree. These and other features are so pronounced that this bear has been separated in the genus *Melursus* by most students. It is submissive and teachable in captivity; but in freedom, when it habitually makes its home in some rocky cave in the jungle, it is brave and held in much respect by hunters. Its size equals that of the brown bear, yet it climbs about fruit trees with great ease. Its fur is peculiar, long, shaggy, and unkempt, remotely suggesting that of a sloth, and black in color, except for the whiteness of the muzzle and space about the eyes and a conspicuous V-shaped white mark on the breast. It seems to eat very little flesh, but lives mainly on fruit and insects, especially ants, termites, and the combs of honeybees, in securing which its extensible lips and tongue find their special use, hence the term "honey bear."

The AMERICAN BEARS are confusingly alike, and conservative naturalists have heretofore been unwilling to admit the reality of so many species as are distinguished in the list below. Some even question whether the Spectacled Bear (*Ursus ornatus*) of the high forests of the central Andes be not merely an isolated subspecies of the black bear, distinguished by its small size and the yellowish, goggle-like rings around its eyes. The latest account of the North American Ursids makes the following list of species, following the views of Dr. C. Hart Merriam: Grizzly Bears, *Ursus alascensis*, *californicus*, *horricus*, *horribilis*, *phoeniceus*, and *richardsoni*; Brown Bears, *Ursus dalii*, *enotopus*, *gyas*, *iscariensis*, *kradleri*, *midclendorfi*, *sheldoni*, *sitchensis*; Black Bears, *Euarctos alifrontalis*, *amblyceps*, *americanus*, *carlottæ*, *emmonsii*, *eremicus*, *floridanus*, *luteolus*, *Polar Bear*, *Thalassarctos* or *Thalarctos maritimus*.

The KODIAK BEAR attains the largest size of all known bears, and is the most bulky of carnivores, specimens not regarded as the heaviest having weighed 1200 pounds, many, however, are comparatively small. This huge species was discovered to science about 1895, on Kodiak Island, Alaska, where it is said to be numerous, but hard to get; and it is also believed to range the forested mountains of the neighboring mainland. It seems to subsist mainly on fish, which it scoops from the water with its paws, especially at the season when the streams are filled with salmon and other species ascending them to spawn. In color this bear "varies greatly among individuals, being of various shades and combinations of dark and yellowish browns." Dall's,

BEARS

1. INDIAN SLOTH BEAR (*Melursus labiatus*).
2. MALAYAN SUN-BEAR (*Ursus malayanus*).

3. GRIZZLY BEAR (*Ursus horribilis*).
4. POLAR BEAR (*Thalassarctus maritimus*).
5. AMERICAN BLACK BEAR (*Ursus americanus*).

or the Sitka Bear, seems separable from the Kodiak by points of skull-structure. It inhabits the Alaskan coast country, between Copper River and Baranov Island.

The GRIZZLY BEAR of western North America is perhaps, on the average, the largest, and certainly is the most formidable, of the family. It is justly regarded by sportsmen as the most dangerous beast in America, and at close quarters is the equal of any elsewhere in its reckless courage, muscular power, and ability for offense, the name *horribilis*, however, was a mere translation by Ord of his "grisly" into Latin and refers to color, not to character. When the mountain men speak of it as "Old Ephraim," they pay the respect of knowledge to power. Its range, before the encroachments of civilization, was northern Mexico to the Arctic Circle, and from the Pacific coast eastward into the plains east of the Rockies as far as circumstances favored, probably as far as the great bison herds were wont to travel, but everywhere it preferred forests. It is still to be found throughout the higher parts of the Rocky Mountains and the Sierra Nevada, increasing in frequency towards the north and reaching its acme of both size and numbers in Alaska. The size varies greatly, but a length of 9 feet and a weight of 1000 pounds are given as dimensions reached by many specimens. Their color is equally variable, the typical form being described by Elliot as "usually brownish yellow, with a blackish dorsal stripe, mane reddish brown, darkest near tips of hairs, which are brownish yellow or brown, legs generally black or blackish brown." Some specimens ("silvertips") are prevalently light gray, due to the points of the hairs being white, others ("cinnamons") are warmly reddish, and others nearly coal black. Their habits and methods of life seem as diverse as their appearance and habitat.

These great bears hibernate little, if any, and are abroad by day as well as by night, range the heated plains and jungly valleys or climb to the snowy peaks with equal ease. Often they go alone, but frequently travel in pairs or gather in small herds. One striking peculiarity, due, perhaps, to the great weight, is that they never climb trees, even as cubs. Nothing edible comes amiss as food. In former days they seized upon the stupid buffalo and were able to vanquish even the heavy bulls by the weight and tearing power of their mighty paws, and in these days range cattle are frequently destroyed, while those of the northwest coast region are expert in scooping up fish and subsist largely on salmon and the like. All are fearless of water. Although so terrible when enraged, there is no evidence that the grizzly is more quarrelsome than other species, and the tales of an undying feud between it and the black bear or the puma are largely romances. The attitude of these bears towards mankind cannot be stated dogmatically, nor foreseen in any particular instance. They may quietly withdraw or run away in a panic (as the present writer has known them to do), or stand their ground without aggression if let alone, on the other hand, many a man has lost his life by a totally unexpected and terrifically impetuous attack. Says J. H. Porter (*Wild Beasts*, 1894, p. 371), in a wise summary:

"No writer of any note except General Marcy has, as far as the author knows, denied that a grizzly bear soon comes to bay, and that he then

devotes his energies to destruction with entire single-mindedness. Those who have met him, alike with those who have acquainted themselves with any completeness with the observations of others, know that this brute's patience under aggression is of the briefest, and his inherent ferocity easily aroused. When it is injured, the animal is exceptionally desperate, and fights from the first as a lion, tiger, and jaguar are apt to do only in their death rally. Colonel Dodge expresses the best opinions upon this point in saying that 'when wounded, a grizzly bear attacks with utmost ferocity, and regardless of the number and nature of his assailants. Then he is, without doubt, the most formidable and dangerous of wild beasts.' 'In some way it has come about,' says Lockwood, 'that Bruin has secured for himself an almost superstitious respect.' The way he did so has just been mentioned. Men had reason to fear him, and their veneration followed as a matter of course. It was because he proved 'most formidable and dangerous' that Schwatka found among the Chilkat Indians the highest clan called brown bears, and for a like reason the native warrior wore his claws as a badge of honor. Ferocity, prowess, and tenacity of life appear most conspicuously in accounts of actual conflict. Enough has been said with respect to the first-named trait, and no one ever called the others in question."

The Indians and early hunters captured the animal in pitfalls and very strong traps, or worried it to death by numerous shots. A single bullet fortunately planted in heart or brain may overcome it, but it has been known to survive many heavy balls. It remains one of the prime objects of sportsmen's ambition, and one of the most valuable prizes of the professional hunter, since its pelt, when in good condition, will bring a large price in the market.

These remarks apply in a greater or less degree to the Alaskan bears already mentioned, and to the Barren-ground Bear, a smaller, whitish-brown form inhabiting the treeless regions between Hudson's Bay and the Coppermine River, whose separate specific identity is still subject to discussion.

The BLACK BEAR remains to be described. It is more widespread than any other in America, being found primitively wherever forests existed on the continent north of Mexico. Civilization has restricted this area of residence, yet these bears remain wherever any considerable tracts of forest exist and are frequently a pest to farmers by their forays upon the pigsty and sheepfold. Their size varies, but never reaches the bigness of the grizzly, the color seems normally black, but varies through brown and reddish to yellow. Some so-called "cinnamon" bears are of this species, and some are grizzlies. Their habits and food are closely similar to those of the European Brown Bear. They climb trees easily, are courageous, and may be very ugly customers when brought to bay, but are not often aggressive towards men. Those of Texas and Florida are by some regarded as separate species.

Possibly this is equally true of the small GLACIER BEAR, first described in 1895, which inhabits the St. Elias Alps of the central coast region of Alaska, but this will probably be found a tenable "species." It is smaller than the average of black bears, and unique in its color, which is hoary gray, closely resembling that of a silver fox, most nearly white on the under surfaces. The fur is not very long, but remarkably soft,

and with a rich under fur of a bluish-black shade, numbers of the long hairs being white" or white-tipped. The sides of the face are bright tan, and the claws are small, much curved, sharp, and black. Little is known as yet as to the special habits or food of this interesting little bear.

Bibliography. BEAR ANIMALCULE, or WATER-BEAR. See TARDIGRADA.

BEAR BAITING. A sport which consisted of setting a pack of dogs upon a bear, which was usually tied to a stake. It was an established amusement in many countries. In England it was known as early as the reign of Henry II, but was prohibited by Parliament in 1835. Queen Elizabeth not only allowed them the benefit of her royal patronage, but attended the bear baitings in person. The Puritans hated the sport, "not because it gave pain to the bear," as Macaulay has recorded, "but because it gave pleasure to the spectators," and it was suppressed during the period of Puritan rule, 1649-60. The places where bears were kept and publicly baited were called bear gardens. "Looks like a bear garden," is a common English expression used to this day to designate any disarranged or ill-kept room or grounds.

BEAR/BERTY. See ARCTOSTAPHYLOS.

BEARD. The hair which grows on the chin and cheeks of men. The beard is the distinctive sign of manhood, although exceptional instances occur of women with beards equal to those of men. The presence of the beard is the ethnological characteristic; it is found especially luxuriant among the Celtic and Slavic races, and scarcely at all among the North American aborigines, who customarily eradicate the few hairs which grow on their faces. It is usually the same color as the hair on the head, although shorter, stronger, and more wiry. In early times the beard was considered by almost all nations as a sign of strength and manhood, and was carefully cherished as being almost sacred. Its removal was regarded as a degrading punishment (See 2 Sam x, for the case of David's ambassadors). The Moslems have habitually observed a great care of the beard, carrying combs about with them for the purpose of dressing it. It is their custom to do so immediately after prayers, while still on their knees, the hairs that fall out are carefully picked up and preserved for burial with their owners. The practice of dyeing the beard was common among the Arabs and Persians, the former usually dyed it red, not only because dye of that color (be-

ing merely a paste of henna leaves) was easily obtainable, but because it was an approximation to golden yellow, the color recommended by Mohammed, who hated black, the color preferred by the Persians. The Egyptians commonly shaved their beards, except in time of mourning, and an unkempt, neglected beard was also a sign of grief among the Jews. In Greece the beard was universally worn until the time of Alexander the Great, who ordered his soldiers to shave, that their enemies might not seize them by the beards in battle. Shaving was introduced among the Romans about the same time. Pliny says that Scipio Africanus was the first Roman who shaved every day. Subsequently, the first day of shaving (generally the twenty-second birthday) was regarded as the entrance upon manhood and celebrated with great festivities. From the time of Hadrian to that of Constantine, the beard was again commonly worn. The ancient Germans, according to Tacitus, regarded a clean-shaven face as a sign of servitude, and the Lombards (Longobards) received their name from their long beards. The beard was commonly worn in France until the time of Louis XIII, when, the monarch being young and beardless, the fashion changed. French fashions in the matter have, in fact, usually followed that set by the monarch—an illustration of which is preserved in the English word "imperial" for the little tuft on the chin. In like manner the loyal Spanish courtiers removed their beards on the accession of Philip V, who was unable to grow one. Peter the Great compelled shaving in Russia by positive enactment, imposing a tax on beards in proportion to the rank of the wearer. A similar tax was for a while imposed in England under Henry VIII and Elizabeth, but fashion proved rebellious here, and the latter reign, with that of James I, was distinguished by a fantastic extravagance which clipped the beard into as many formal shapes as the old-fashioned box hedges. The Vandeyke beard, familiar to us in the portraits of Charles I, characterized that period, but in the eighteenth century the smooth face became usual, so continuing until comparatively recent times. In fact, the wearing of a beard was regarded in the early part of the nineteenth century as a symbol of dangerous and revolutionary opinions, and as such was restricted by the police regulations of some European countries. The Roman Catholic clergy in modern times, although most of the medieval Popes wore beards, are obliged to shave—an exception being made in the case of missionary orders and of a few individuals who receive special permission for reasons of health. Those of the Greek church have constantly worn full beards since the middle of the ninth century. As a general rule, the wearing of beards is discouraged by army regulations, and favored in the navy, but climatic conditions or assignment to exceptional duty may modify this rule.

Physicians recommend that the beard should be allowed to grow on the chin and throat in cases of liability to disease of the larynx or bronchial tubes, because of the unavoidable removal of cuticle in shaving the throat. The beard itself is liable to the same diseases as the hair, and, to a peculiar disease called "barber's itch" (q.v.). Consult Philippe, *Histoire philosophique, politique, et religieuse de la barbe* (Paris, 1845). See BARBER.

BEARD, CHARLES AUSTIN (1874—) An American political economist and educator, born

at Knightstown, Ind. After graduating from DePauw University in 1898 he took advanced work abroad at Oxford and in this country at Cornell and Columbia. Having received the degree of Ph.D. from Columbia in 1904, he became, three years later, a member of the faculty of that university, and was appointed, first, adjunct professor, then (1910) associate professor, of politics. His published writings include *The Office of Justice of the Peace* (1904), *Introduction to the English Historians* (1906), *Development of Modern Europe*, with J. H. Robinson (2 vols, 1907), *Readings in Modern European History*, with the same (2 vols, 1908-09), *Readings in American Government* (1909), *American Government and Politics* (1910), *Digest of Short Ballot Chapters* (1911), *American City Government: A Survey of Newer Tendencies* (1912), *The Supreme Court and the Constitution* (1912), *Economic Interpretation of the Constitution of the United States* (1913).

BEARD, DANIEL CARTER (1850-) An American artist, author, and naturalist, born in Cincinnati, Ohio. His academic education he received at Covington, Ky., and his art training (1880-84) at the Art Students' League in New York City. For many years he made illustrations for leading magazines, and he also illustrated many books, of which the most notable is Mark Twain's *Connecticut Yankee at the Court of King Arthur*. He was the originator and first instructor of the pioneer class in illustration, and was teacher of animal drawing at the Woman's School of Applied Design. In 1905-06 he was the editor of *Recreation*. An enthusiast in outdoor life, he instituted what later became an international movement when he founded the first Boy Scouts' Society in the United States. The Boy Scouts of America (qv.), an outgrowth of the early organization, chose Beard as its national commissioner. He is also credited with the discovery of a mountain, which has been named for him, adjoining Mount McKinley. He became a member of several zoological societies and was chosen president of the Society of Illustrators and of the Camp Fire Club of America. Besides many articles on nature subjects and sporting, his writings include *American Boys' Handy Book* (1882, 1903), *Moonlight and Six Feet of Romance* (1890), *Jack of All Trades* (1904), *Field and Forest Handy Book* (1906), *Boy Pioneers and Sons of Daniel Boone* (1909), *Boat Building and Boating* (1912).

BEARD, GEORGE MILLER (1839-83) A celebrated American neurologist. He was born in Montville, Conn., graduated at Yale, 1862, became a physician at the College of Physicians and Surgeons in New York in 1866, and devoted himself especially to nervous diseases. During the Civil War he served as assistant surgeon in the United States navy and later investigated the relation of the brain and nerves and made special studies of clairvoyance, animal magnetism, mind reading, and spiritualism. He contributed to numerous medical journals and published many books and pamphlets. His chief works are *The Medical Use of Electricity* (1867), *Eating and Drinking* (1871), *Hay Fever* (1876), *Writer's Cramp* (1879), *Nervous Exhaustion*, *Neurasthenia* (1880), *American Nervousness* (1881), *The Psychology of the Salem Witchcraft Ecstasies of 1692* (1882), and *Seasickness: Its Nature and Treatment* (1884). He collaborated with Dr. A. D. Rock-

well on *The Case of Guiteau* (1882) and *The Medical and Surgical Use of Electricity* (1888).

BEARD, JAMES HENRY (1814-93) An American artist. He was born in Buffalo, N. Y., studied in various towns in which he happened to reside, and settled in Cincinnati as a portrait painter. Among his sitters were Henry Clay, John Quincy Adams, General Harrison, President Taylor, and other public men. In 1846 he exhibited in New York his first composition, "The North Carolina Immigrants," which gave him a national reputation. Among later works are "The Land Speculator," "The Long Bill," "Out All Night," "Don Quixote and Sancho Panza," etc. In 1870 he removed to New York and in his later years devoted himself chiefly to animal painting.

BEARD, RICHARD (1799-1880) An American clergyman, born in Sumner Co., Tenn. He began to preach in 1820, graduated at Cumberland College (Princeton, Ky.) in 1832, was professor of languages there from 1832 to 1838 and at Sharon College (Miss.) from 1838 to 1843. From 1843 to 1854 he was president of Cumberland College and from the latter year professor of systematic theology at Cumberland University (Lebanon, Tenn.). He was the most distinguished theologian of the Cumberland Presbyterian denomination and published two works of importance: *Lectures on Theology* (3 vols, 1870) and *Why I Am a Cumberland Presbyterian* (1874).

BEARD, THOMAS FRANCIS (1842-1905) An American illustrator and lecturer, known as "Frank" Beard, born in Cincinnati, Ohio. He was a son of James Henry Beard and a brother of Daniel Carter Beard. He was educated in his native city and served in the Civil War in the Seventh Ohio Regiment. His illustrated accounts of battles in *Harper's Weekly* and the *Illustrated News* attracted wide attention. He was also a popular lecturer, in which field he became widely known through his "chalk talks." In 1881 he was made professor of aesthetics at the University of Syracuse, and in 1897 took charge of the illustrations on *Judge*, relinquishing this for a similar position on the *Ram's Horn*. He died in Chicago.

BEARD, WILLIAM HOLBROOK (1825-1900) An American artist, brother of James H. Beard, known chiefly as an animal painter. He was born at Painesville, Ohio, and first became known for his portrait work. After several years of travel and study in Europe he settled in Buffalo. In 1861 he removed to New York, where he was made a member of the National Academy in 1862. He became very popular through his humorous and grotesque portrayal of rabbits, bears, monkeys, etc., which he endowed with human attributes, and in them burlesqued human foibles. Among them are "Bears on a Bender," "Dance of Silenus," "Flaw in the Title," "Darwin Expounding his Theories," and "Bulls and Bears in Wall Street."

BEARD MOSS. See USNA.

BEARDSLEE, BÉRDZ'LÉ, LESTER ANTHONY (1836-1903) An American naval officer, born at Little Falls, N. Y. He graduated at the United States Naval Academy in 1856, was executive officer of the *Wachusett* in 1864 when that vessel captured the Confederate privateer *Florida*, at Bahia, Brazil; and in 1870 carried the first American flag through the Suez Canal. He was made a rear admiral in 1895. From 1894 to 1897 he was commander of the United States

forces on the Pacific Station. He discovered, surveyed, and named Glacier Bay, Alaska.

BEARDSLEY, *berdz'li*, AUBREY VINCENT (1872-98). An English illustrator, one of the most original and influential of the nineteenth century. He was born Aug. 8, 1872, at Brighton and was educated in a private school there. A marvel of artistic precocity, he drew at 4, at 11 was able to sell his copied compositions, and at 15 produced a sketchbook of admirable original drawings, illustrating his favorite books, particularly the French classics. He had no instruction in drawing, but studied independently the prints and drawings in the British Museum of the old masters, particularly Mantegna, Durer, Botticelli, and Michelangelo. Another formative influence upon his art was the music of Wagner, for Beardsley possessed extraordinary musical talent, and as a boy was quite a piano virtuoso. At the conclusion of his school years he was placed in an architect's office, but was forced by ill health to relinquish this employment and accept a clerical position. From this he was released by the advice and protection of Burne Jones, who procured him admission to the Westminster Art School, but Beardsley attended only the classes in the nude for a few months. In 1892 he began the well-known designs for *Mort d'Arthur*, done in what may be called his pre-Raphaelite manner. This was followed by Japanese, Greek, and lastly by French Rococo influences, all of which were in turn thoroughly assimilated and subordinated to his own originality. An admirable appreciation of Beardsley's art, written by the etcher Pennell upon the appearance of Beardsley's illustrations in the *Studio* of 1893, hailed him as the coming illustrator and made his future assured. He was art editor of the *Yellow Book* (1894-95), to which he contributed many of his most daring illustrations. Other works which he illustrated about this time were the *Book of the Moon*, *Mot Libray*, the *Pall Mall Budget*, and Oscar Wilde's *Salome* (1894). The year 1896 has been characterized as his *annus mirabilis*, for it saw the acme of his achievement. He then designed the illustrations for the *Rape of the Lock*, *Lysistrata*, and, somewhat later, the remarkable frontispiece to *Volpone*, which is considered by many one of the world's greatest pen drawings. A victim of consumption, he spent the winter of 1896-97 at Bournemouth, where he embraced the Roman Catholic faith. In the latter year he revived sufficiently to visit his beloved France, and died at Monteno, March 16, 1898, without attaining his twenty-sixth year. Beardsley created a new and thoroughly original style of illustration, in which, with decorative talent of the highest rank, all forms, animate and inanimate, are conventionalized and adapted to his own manner. As a master of the flowing white line masses he is equalled only by the Japanese. One of the most effective features of his style is the use of dots to render delicate fabrics and surfaces. He brooded long over his designs, but seldom made preliminary studies, the remarkable sureness of his execution being due to his wonderful power of concentration. His imagination is unexcelled in the annals of illustration; but although his art is always refined in character, its content is often morbid and sensual. Collections of his drawings were published under the titles *A Book of Fifty Drawings by Aubrey Beardsley*, with text by Aymer Vallance (1897); *A Second Book of Fifty Drawings* (1899); *The Early Work of Aubrey*

Beardsley (1899); *The Late Work of Aubrey Beardsley* (1901). Under the *Hall*, with letters and poems of the author, was published in 1904. Of his biographies, the best are by Arthurs Symonds (1905) and Robert Ross (1908).

BEARDSLEY, EBEN EDWARDS (1808-91). An American clergyman. He was born at Stepney, Conn., and graduated with high honors at Trinity College, Hartford. He was associated for a number of years with St. Peter's Church, Cheshire, Conn., and with the Cheshire Episcopal Academy, and in 1848 was appointed rector of St. Thomas's Church, New Haven, which during his ministry became one of the first churches in the State. He spent much of his time in historical research and made valuable contributions to the ecclesiastical history of Connecticut. His writings include *The History of the Episcopal Church in Connecticut from the Settlement of the Colony to the Death of Bishop Doane* (1865) (1865), *Life and Correspondence of Samuel Johnson, D.D.* (1874), *Life and Times of William Samuel Johnson, LL.D.* (Boston, 1876), *Life and Correspondence of the Rt. Rev. Samuel Seabury, D.D.* (1881).

BEARDSLEY, JAMES WALLACE (1860-). An American engineer, born at Coventry, N. Y. He graduated from the New York State Normal School at Cortland in 1884 and afterward studied engineering at Cornell University, receiving the degree of C. E. in 1891. After supervising construction for several years in the Chicago Sanitary District, he joined the United States Board of Engineers on Deep Waterways (1898) and was placed in charge, first, of the surveys of the St. Lawrence River and, later, of harbor work. Removing to the Philippine Islands in 1902, he there became successively consulting engineer to the Philippine Commission, chief of the Bureau of Engineering, and director of Public Works. He spent the years 1908-09 as a consulting engineer, investigating the irrigation of Java, India, and Egypt, and in 1910 he became chief engineer of the Porto Rico Irrigation Service.

BEARDSLEY, SAMUEL (1790-1860). An American jurist, born in Hoosic, N. Y. He filled several minor State positions, and was United States District Attorney from 1823 to 1830. Afterward he was a member of Congress (1831-36, and 1843-45), Attorney-General of the State (1837-38), became a judge of the State Supreme Court in 1844, and succeeded Judge Bronson as its Chief Justice in 1847.

BEARDSTOWN. A city in Cass Co., Ill., about 45 miles northwest of Springfield, on the Illinois River, and on the Chicago, Burlington, and Quincy, and the Baltimore and Ohio Southwestern railroads (Map Illinois, B 3). The Beardstown division of the Burlington Route has its machine, car, and repair shops here, and there are extensive cooperages and manufactures of flour, lumber, cement posts, button blanks, etc. Ice packing and the fishing industry also are of considerable importance. Among the features of interest are a fine park, a great railroad bridge, a steel wagon bridge, a Carnegie library, and the city hall in which Lincoln conducted the Armstrong trial. Settled in 1832, Beardstown was incorporated as a city under a general law of 1896. Its charter of that date provides for a mayor, elected biennially, and a city council. The water works are owned and operated by the municipality. Pop., 1890, 4226; 1900, 4827; 1910, 6107.

BEAR-FLAG WAR See CALIFORNIA, History, and FREMONT, J C

BEARING In navigation and surveying, the direction of an object with respect to the position of some other, or to the direction of an assumed point or line. As observed from a ship objects are said to bear *ahead*, *astern*, *abeam* when they are directly ahead, directly astern, or at right angles to the ship's keel line (i.e., 90 degrees from ahead or astern). An object which bears midway between ahead and abeam is said to *bear on the port* (or *starboard*) *bow* or *broad off the port* (or *starboard*) *bow*, if its bearing is midway between abeam and astern it bears *on the port* (or *starboard*) *quarter*, or *broad off the port* (or *starboard*) *quarter*. Intermediate bearings are expressed in points (32 in the whole circle, each $11\frac{1}{4}$ degrees) thus $11\frac{1}{4}$ degrees from astern is *one point on the port* (or *starboard*) *quarter*, the same amount from abeam is *one point forward* (or *abaft*) *the port* (or *starboard*) *beam*, similarly, $11\frac{1}{4}$ degrees from ahead is *one point on the port* (or *starboard*) *bow*. In like fashion the bearings may be one, two, or three points on bow, or quarter, or forward, or abaft, the beam. Four points from bow, stern, or beam is either *broad off the bow* or *broad off the quarter*. A ship is said to be *abeast* an object when it bears abeam, it is *aboard* another ship when the two are side by side and moving in the same direction. When an object lies across a certain direction it is said to be *athwart* it, as, a ship is lying *athwart the house* of another when she or her chain lies in a direction at right angles to that in which the other is swinging, any object extending across the ship lies *athwartship*. On board sailing vessels objects on the side from which the wind is blowing are said to be to *windward*, if forward of the beam (one or more points) on the *weather bow* or *foreward* of the *weather beam*, similarly when abaft the beam. If on the side of the ship away from the wind, the object is said to be *leeward*, *on the lee bow*, etc. Bearings taken without regard to the vessel, but with respect to absolute terrestrial direction, are either *compass*, *magnetic*, or *true*. For the ruling of 1913 as to the use of "port" and "starboard" in the United States navy, see HELM.

Bearing, Compass The angle between the compass needle and the direction of the object observed. See COMPASS.

Bearing, Magnetic The angle between the magnetic meridian and the direction of the object observed. See COMPASS.

Bearing, True The angle between the geographical meridian and the direction of the object observed. All bearings are measured in points ($11\frac{1}{4}$ degrees each) or degrees. The designation of true and magnetic bearings, either in points or degrees, is the same as for compass bearings, but the record of the bearing is followed by *p c* (i.e., per compass) for compass bearings and by *mag* (i.e., magnetic) for magnetic bearings, and by *true* for true bearings. See COMPASS.

In Machinery and Mill Work, the bearing is the name given to the surfaces of contact of stationary elements which support, guide, and restrain the moving elements which are transmitting motion and power. Such are met when revolving shafts are supported and kept in line, and at the two ends of a connecting rod of a steam engine. For reciprocating motion

the surfaces of the bearings must be made up of elements which are rectilinear in the line of the motion. Such bearings are usually called guides, and examples are found in the crosshead guides of a locomotive and also in most other forms of steam engines. For rotary motion the bearing surfaces must be surfaces of revolution, examples of such bearings are found in the hangers for mill shafting, in the pivots of turntables, trucks of railway cars, etc. The bearing surface of the support is often made of special metal to reduce friction. For similar purposes the rotating surface is often constructed so as to be supported and guided by steel balls traveling in a proper track or ball race or by cylindrical or conical rollers held by the support. The bearings of a bicycle are familiar examples of ball bearings, and both roller and ball bearings are used for motor-vehicle wheels. Some bearings are used in screw jacks, many machine tools, elevators, etc., in which the moving part is threaded like a screw and the support is threaded like a nut. Such bearings allow rotary motion and reciprocating motion at the same time resulting in a helical motion.

The *thrust bearings* of large steamship propeller shafts consist of a series of collars of rectangular section, which are receiving into depression in the bearing surface which they fit. The propulsive reaction is borne by the flat areas of the collars in the direction of the axis of the shaft. Such bearings are usually made with hollow spaces through which water for cooling can be circulated. These bearings differ from screw bearings in that the threads are not spiral, but run straight around the nut and shaft, and so only rotary motion is possible. In machinery *ball bearings* are often employed for many purposes and are capable of supporting great pressure or weight. *Roller bearings* are made which are capable of sustaining a weight of several hundred tons. Gun carriages and turrets rest upon roller or ball bearings. *Hydraulic or fluid bearings* are used where very heavy endwise thrusts are to be resisted, as in the vertical shafts of the massive turbines at Niagara Falls. An oil is pumped between the stationary bearing and a collar or disk which presses against the flat area of its end. Into the space between bearing and plate a thin film of oil is forced by a pump at a pressure just sufficient to overcome the endwise thrust of the shaft and keep the metallic surfaces from touching and rubbing. The excess of oil flows into a sump or cistern and is taken out to be used over again by the suction of the pressure pump. Great care must be taken to keep the bearings of a shaft in line, otherwise the shaft is flexed in each revolution and the power to bend it is wasted and the waste must be made up by the source of the power. In cylindrical bearings, as for revolving shafts of all kinds, the stationary part is the *bearing* and the revolving surface in contact with it is called the *journal*.

BEAR LAKE, GREAT See GREAT BEAR LAKE.

BEAR MOUNTAIN A hill of the Stony Mountain Range in Dauphin Co., Pa., north of Harrisburg, containing beds of anthracite. Its elevation is about 760 feet.

BÉARN, bə'arn' (*Benearnium*) of the Middle Ages, from the Gallic *Benarnus*. An ancient province of France, now forming the greater part of the department of the Basses-Pyrénées, Béarn was a portion of Aquitania under the

Romans and after the downfall of the Roman Empire passed under the domination of the Franks. After the tenth century the country attained great importance under a line of independent counts of the houses of Foix and Navarre. Its cities enjoyed extensive municipal rights from a very early time. Jeanne d'Albret, Queen of Navarre and Béarn, was the mother of Henri II, who ascended the French throne as Henri IV. By his enemies he was derisively called the Béarnois. When he became King, Béarn virtually became a part of France, but was formally incorporated with it only in 1620 by Louis XIII. Consult Bordenave, *Histoire de Béarn et Navarre* (Paris, 1873).

BEAR RIVER. A river which rises in north Utah in the Uintah Mountains, and flows nearly north. It enters Wyoming, reenters Utah, again crosses into Wyoming, and, taking a northwest course, enters Idaho, but at Soda Spring, Bannock County, it turns to the south, and reentering Utah, empties into Great Salt Lake (Map Utah, C 1). It is about 400 miles long, though the distance from its source to its mouth is only 90 miles. It is noted for the many soda, magnesia, and other mineral springs to be found on its banks.

BEAR STATE. Popular name for Arkansas. See STATES, POPULAR NAMES OF.

BEAS, be'as (anciently, *Hyphasis*). One of the five rivers of India, which give name to the *Punjab*, or "land of five waters." It rises on the verge of the Rohtung Pass of the Himalayas, in lat 32° 34' N and long 77° 12' E, its source being 13,200 feet above the sea level. After a course of about 300 miles it joins the Sutlej, 35 miles to the south southeast of Amritsar.

BEAT. The motion of the hand and arm, or baton, by which the conductor of a chorus or orchestra indicates the time and rhythm of a musical composition, and insures perfect unanimity of performance on the part of the singers or players. In ancient times the leader used his foot to mark the time, and this person, called by the Greeks *coryphaeus*, and by the Romans *pedicularius*, wore sandals of wood or metal to make his beat more emphatic. Leaders who marked the time by clapping their hands were called *manu ductores*. The etiquette of modern musical performance demands that the conductor shall perform his task as inaudibly and inconspicuously as possible, but this refinement is of recent date, for Rousseau, in 1768, writing of the Paris Opera, declares that the listener is "shocked by the continual and disagreeable noise made by him who beats the measure."

With the Greeks the up beat, indicated by the raising of the foot or the hand (called *arsis*, 'lifting'), denoted the unaccented part of the foot or measure, the down beat indicated by putting down the foot, in marching, dancing, or beating time (called *thesis*, 'putting down') denoted the accented part of the measure. The Roman grammarians wrongly fancied that the terms *arsis* and *thesis* referred to the raising and lowering of the verse, and so interchanged them, making *arsis* denote the accented, *thesis* the unaccented, part of the measure. Modern writers on Greek and Latin meters use the terms now in the Greek sense, now the Roman. In modern times the first note or count of the measure, which has always the strongest accent, is marked by a downward motion of the hand or baton. In double time, with two beats to the measure, this down beat is followed by an up-

ward beat on the unaccented count. In triple time, with one strong and two weak beats, the first beat is down, the second to the right, and the third upward. In quadruple time, with four beats, the usual order is down, to the left, to the right, and up. See CONDUCTOR.

BEATIFICATION (Lat *beatus*, blessed + *facere*, to make). A solemn act in the Catholic church, by which the Pope, after scrutinizing the life and services of a deceased person, pronounces him blessed. After this he may be venerated in a specified portion of the church, and the act holds out the prospect of future canonization, which entitles him to general veneration (not worship) in the Church Universal. Beatification was introduced in the twelfth century. It may be regarded as an inferior degree of canonization (q.v.).

BEATIFIC VISION (Lat *beatificus*, from *beatus*, happy + *facere*, to make, Lat *visio*, from *videre*, to see). The direct vision of God, constituting the bliss of angels and of men in heaven. A term of Roman Catholic theology. The Council of Florence (1439 A.D.) defined "The souls of those who, after receiving baptism, have incurred such stain of sin whatever, or who, after incurring such stain, have been purified in the body or out of the body, are at once received into heaven and clearly see God himself as He is, in Three Persons and One Substance, some, however, more perfectly than others, according to the diversity of their merits." Such vision is supposed to have been enjoyed by Moses (Ex xxxiii 11) and by Paul (2 Cor xii 4) before their death, but it is not ordinarily given in the flesh. Hence the loose application of the term to such visions as those of St. Catharine is improper. It is not taught that the saints have a perfect knowledge of God, for this is impossible to finite creatures. But they have such knowledge of Him as He wills, and see in Him all the facts concerning His creation which He wills to communicate. Thus, it is said, they can hear prayers addressed to them, though not omniscient, because enabled by the beatific vision. Consult *The Catholic Encyclopedia*, art. Heaven (New York, 1910).

BEATING THE BOUNDS. The popular expression in England for the periodical surveys or perambulations by which the ancient boundaries of parishes are preserved. Formerly the ceremony took place annually, but now it is observed less often. The procedure, according to common custom, is in this wise: On Holy Thursday or Ascension Day the clergyman of the parish, the parochial officers and other parishioners, together with the boys of the parish school, headed by their master, go in procession to the parish boundary. It is their duty to trace very carefully every foot of the boundary, even if ladders must be used in climbing over buildings and other obstructions. It is desirable to have as many boys as possible. At each "boundary mark" a halt is made, and the boys beat the mark with peeled willow wands to impress its location on their memories. The beating was not confined to the above performance of the boys, but where it was desired to preserve evidence of particular boundaries, the singular expedient was used of whipping the boys themselves on the spot, or one of them, who received a stated fee for the permitted castigation out of the parish funds—it being thought that the impression made on the memory was thus more likely to be lasting.

The custom is a Teutonic institution, taking its rise in the "procession" of the ancient mark or township. This procession was led by the priest, who performed sacrifices on altars placed near the borders. When the Germans were converted, the Christian priest took the place of the pagan, and the heathen sacrifice was supplanted by the mass. The procession is still maintained in Bavaria, as also in Russia. Similar duties were performed by the appointed "perambulators" in the New England Colonies and by the processions in early Virginia. In English law the correct legal term for beating the bounds is perambulation (q.v.). Consult Toulmin Smith, *The Parish* (London, 1857), Brand, *Popular Antiquities* (London, 1873-77), Lysons, *Encycrons of London*, vol. 11 (London, 1792-96), Hone, *Every Day Book* (London, 1826-31), Steer, *Parish Law* (London, 1887), Grimm, *Rechtsaltertumer* (Göttingen, 1854), Laveleye, *Primitive Property* (Eng. trans. London, 1878), Wallace, *Russia* (New York, 1881), and, in general, Howard, *Local Constitutional History*, vol. 1 (Baltimore, 1889).

BEATITUDES (Lat. *beatitudo*, blessing) The name frequently given to the opening clauses, nine in number, of the Sermon on the Mount, each of which begins with the word "Blessed." See Matt v 3-11.

BEATON, bē'ton, Scot. *pron* bā'ton, or BETHUNE, DAVID (1494-1546) A Cardinal and Primate of Scotland, noted for his opposition to the Reformation in that country and for his persecution of Protestants. He was born in Fife and became a student at St Andrews University, afterward studying canon and civil law in Paris. After filling several minor positions with ability, he was appointed Lord Privy Seal in 1528, and in 1533 went as Ambassador to France. On the recommendation of the French King, Pope Paul III in 1538 made Beaton Cardinal, and in 1539, at his uncle's death, he became Archbishop of St Andrews. On the death of James V, Dec 14, 1542, after the disastrous overthrow of the Scots at Solway Moss, Beaton produced an alleged will of the late King, appointing himself, with three others, regent of the kingdom during the minority of the infant Queen, Mary. The nobility, however, rejected the document and elected the Earl of Arrian regent, who then professed the Reformed faith. The following month Beaton was arrested and imprisoned, accused, among other charges, of a design to introduce French troops into Scotland, in order to stop the negotiations then in progress with Henry of England for a marriage between the young Prince of Wales, afterward Edward VI, and the infant Queen of Scots. He was soon after liberated and reconciled to the regent, whom he induced to abandon the English interest and publicly to abjure the Reformed religion. On the young Queen's coronation in 1543, Beaton was again admitted to the council and appointed Chancellor. Much has been written of his cruel persecution of the Protestants, but it must be discounted as the statement of his political as well as religious enemies. Persecution was undoubtedly carried on, but except in the cases of prominent people where political motives were added to those of religion, it can hardly be attributed to the Cardinal but rather to the whole spirit of the time. In February, 1546, he caused the celebrated evangelical preacher, George Wishart, to be arrested, tried for heresy, and, upon his condemna-

tion, to be burned at the stake. Even this, however, was prompted by the discovery of a plot against the Cardinal's life in which he had reason to believe Wishart was concerned. The lairds of Fife, friends of Wishart, determined to avenge him and secure their own safety by compassing the Cardinal's death. John Leslie, brother to the Earl of Rothes, his nephew Norman, and Kirkaldy of Grange, entered the archiepiscopal palace by stealth and, surprising the Cardinal in his bedroom, murdered him on May 29, 1546. Although a talented man, Beaton was arrogant, cruel, and immoral. He had six natural children. He married the three daughters into titled families, and one of his sons became a Protestant. Consult Chambers, *Biographical Dictionary of Eminent Scotsmen* (London, 1875), and Burton, *History of Scotland* (Edinburgh, n.d., Index).

BEATRICE, bē'a-tris A city, and the county-seat of Gage Co, Neb., 40 miles south of Lincoln, on the Union Pacific, the Chicago, Rock Island, and Pacific, and the Burlington railroads, and on the Big Blue (Map Nebraska, H 4). It contains a public library, a State Institute for the feeble-minded, a courthouse, and Federal buildings. The city has excellent water power and is engaged in the manufacture of flour, gasoline engines, agricultural implements, etc. The surrounding region is rich agricultural country, producing wheat, corn, oats, and alfalfa, and there are valuable stone quarries in the vicinity. Settled in 1859, Beatrice was incorporated as a town in 1871 and became a city two years later. The commission form of government has been adopted, and the city owns the water works and electric street-lighting plant. Pop, 1900, 7875, 1914, 9356.

BEATRICE 1 A brilliant and witty character in Shakespeare's *Much Ado About Nothing*. She finally marries her male counterpart, Benedick, in spite of herself. 2 See **BEATRICE PORTINARI**.

BEATRICE CENCI, bā'a-trē'chā chēn'ché See **CENCI**, **BEATRICE**.

BEATRICE PORTINARI, pōr'tē-na-rē (1266-90) The daughter of a Florentine noble, Folco Portinari, and wife of Simone dei Bardi, identified by Boccaccio with the Beatrice of Dante's poems. Dante first saw her when she was but nine years old, and but seldom afterward, yet his passion for her forms the theme of his *Vita Nuova*, and after her untimely death his love assumed a more and more mystic form, and he made her the central symbol of his *Divina Commedia*, the personification of Revelation. The identity of Beatrice and her allegorical significance in the *Divina Commedia* have been made the subject of an extensive literature, of which the best summary is given by Moore, *Studies in Dante*, 1st ser, pp 79-151 (Oxford, 1899).

BEATRIX, bē'a-triks 1 A character in Dryden's comedy, *An Evening's Love, or, The Mock Astrologer*. 2 **BEATRIX ESMOND**, a cousin to Henry Esmond in Thackeray's novel of that name, a beautiful, vain, ambitious woman, who also appears in the sequel, *The Virginians*, as Madame de Bernstein. Henry Esmond was in love with her and for her sake engages in the plot to bring back the Stuarts on the death of Queen Anne.

BEATRIX (bē'a-triks), **ANTELOPE**. An Arabian gemsbok (*Oryx beatrix*) resembling

the beisa (qv), but without black markings on the hind quarters See ORYX

BEATTIE, bā'tē, JAMES (1735-1803) A Scottish poet and moral philosopher. He was born Oct. 25, 1735, at Laurencekirk. He studied at Marischal College, Aberdeen, where he acquired a high reputation as a classical scholar. In 1760 he became professor of moral philosophy in Marischal College. Ten years afterward appeared Beattie's famous *Essay on Truth*, an attempt to refute the skepticism of Hume. The book, which now reads like an invective against Hume, at once made Beattie conspicuous as a defender of orthodoxy. He was introduced to George III, received a pension of £200, and had the offer of a living in the Anglican church and the chair of moral philosophy at Edinburgh. Though his head was slightly turned by this success, he declined all these offers. The essay is of little importance in the history of philosophy and has consequently been long neglected. In 1771 appeared the first part of *The Minstrel*, written in the Spenserian stanza, and in 1774 the second part. It is a delightful poem filled with true poetical emotion and rich in picturesque descriptions, while the versification has a quiet melody of its own. The poem describes "the progress of a poetical genius born in a rude age, from the first dawning of fancy and reason till that period at which he may be supposed capable of appearing in the world as a minstrel." Beattie intended to add a third part, but circumstances prevented his doing so. In 1776 he published a series of essays on poetry, music, etc., in 1783, *Dissertations Moral and Critical*, in 1786, *The Evidence of the Christian Religion Briefly and Plainly Stated*, and in 1790-93, *The Elements of Moral Science*—all of which works are written in a clear and graceful style and with a high appreciation of whatever is beautiful and good. He died Aug. 18, 1803. Consult Forbes, *Life and Writings of James Beattie* (Edinburgh, 1824).

BEAU BRUMMELL See BRUMMELL, GEORGE B.

BEAUCAIRE, bō'kar' (anciently, Lat *Ugernum*, later *Bellum Quadrum*, beautiful square). A well-built commercial town of France, on the right bank of the Rhône, in the department of Gard, opposite Tarascon, with which it is connected by a suspension bridge. The harbor is commodious for vessels, which enter it by a canal communicating with the Mediterranean and thus avoid the sand banks at the mouth of the Rhône. Beaucaire is well known for a great fair, established, it is said, as early as the twelfth century. It is held annually about the middle of July and lasts six days. In former times, when this fair was free from duties, it was attended by merchants and manufacturers from almost all parts of Europe, the Levant, and even Persia and Armenia, but the numerous imposts demanded since 1632, foreign wars, and the competition of Marseilles, Lyons, and other large places reduced the traffic of Beaucaire, which sank still lower in the days of the Revolution. The chief articles of present-day commerce are silks, wines, fruits, and stone from near-by quarries. Pop., 1901, 7859, 1900, 8764; 1911, 8453.

BEAUCHAMP, bō'shā, ALPHONSE DE (1767-1832). A French historian and publicist. He was born at Monaco, received his education in Paris, and entered the Sardinian military service. In 1792 he suffered imprisonment for re-

fusing to bear arms against his country, but escaped to France, and under the Directory obtained a situation in the office of the Minister of Police, and had the surveillance of the press. Here he commenced his *Histoire de la Vendée et des Chouans* (3 vols., Paris, 1806), which depicted the cruelties of the Fouché regime. As this work displeased the Emperor, Beauchamp was banished to Rheims, but he was recalled in 1811 and again received a subordinate appointment. Under the Restoration he received a pension and wrote for the *Moniteur* and the *Gazette de France*. Among his works are the *Histoire du Brésil* (Paris, 1815), *Histoire du Pérou* (Paris, 1807), *Vie de Jules César* (Paris, 1821), *Vie de Louis XVIII* (Paris, 1821), *Les Mémoires de Fouché* (Paris, 1823-29). He also been ascribed to him.

BEAUCHAMP, RICHARD DE See WARWICK, RICHARD DE.

BEAUCHAMP, bēch'am, WILLIAM MARTIN (1830-) An American ethnologist and clergyman, born in Coldenham, Orange Co., N. Y. He graduated at the DeLaney Divinity School and from 1865 to 1900 was rector of Grace Episcopal Church in Baldwinsville, N. Y. From 1884 to 1912 he was examining chaplain for the diocese of central New York. He made much valuable archaeological research, particularly concerning the Iroquois Indians. He was detailed in 1889 by the United States Bureau of Ethnology to survey the Iroquois territory in New York and Canada and prepared a map indicating the location of all the known Indian sites in that region. An enlargement of this map was published in his *Aboriginal Occupation of New York* (1900). His other works are *The Iroquois Trail* (1892), *Indian Names in New York* (1893), *Shells of Onondaga County* (1896), *History of the New York Iroquois, now Commonly Called the Six Nations* (1905), *Aboriginal Use of Wood in New York* (1905), *Aboriginal Place Names of New York* (1907), *Past and Present of Syracuse and Onondaga County* (1908).

BEAUCLERK, bō'klark, TOPHAM (1739-80). A gentleman who figures in Boswell's *Johnson* as the intimate and friend of the lexicographer. He was the only son of Lord Sydney Beauclerk. During his friend's last illness Johnson said he would "walk to the extent of the diameter of the earth to save Beauclerk," and after his death wrote to Boswell "Poor dear Beauclerk. . . His wit and his folly, his acuteness and maliciousness, his merriment and reasoning, are now over. Such another will not often be found among mankind." In 1768 Beauclerk married Diana, daughter of the second Duke of Marlborough, two days after her divorce from Lord Bolingbroke. Consult G. Birkbeck Hill, *Dr. Johnson, His Friends and his Critics* (1878).

BEAUFORT, bō'fört. A town, seaport, and the county-seat of Carteret Co., N. C., at the mouth of Newport River, 145 miles (direct) southeast of Raleigh, on the Norfolk Southern Railroad (Map. North Carolina, F. 3). It is a popular summer resort and has a good harbor, the entrance to which is protected by Fort Macon. Its principal industries are fishing and the manufacture of oil and scrap. The electric light plant is owned by the town. Pop., 1890, 2007, 1900, 2195, 1910, 2483.

BEAUFORT, bō'fört. A town, and the county-seat of Beaufort Co., S. C., on an inlet known as the Beaufort River, which connects with Port Royal Sound, one of the finest har-

bors in the State (Map South Carolina, D 4). Beaufort is 80 miles by rail southwest of Charleston, on the Charleston and Western Carolina Railroad. It is famous for the production of long-staple, or sea-island, cotton, is a centre of phosphate and fertilizer trade, and has also large exports of lumber. Truck farming is carried on extensively. The town has a national cemetery and the "Old Fort." It owns the water works and electric light plant. Beaufort was first incorporated in 1803 and is governed under a charter of 1913 by an "intendant," elected biennially, and a council. Pop., 1910, 2986.

Beaufort was founded in 1711 and, next to Charleston, was the earliest settlement in the State. Near the town in 1664 French Huguenots under Captain Ribault built a fort, which was abandoned in 1665. Shortly after, Menendez established a post on the site. In 1686 Lord Cairdross attempted to found a town here, but his settlement was immediately broken up by Spaniards from St. Augustine. The place was very prominent in the Colonial history of the State and for some years before the Civil War was a popular health resort for Southern planters. Near Beaufort, on Feb. 9, 1779, an American force under General Moultrie defeated a detachment of English troops under Prevost. Consult Parkman, *Pioneers of France in the New World* (Boston, 1865), and references in McCready, *History of South Carolina*.

BEAUFORT, bô'fôr', FRANÇOIS DE VENDÔME, DUC DE (1618-69). A French naval officer, the grandson of Henry IV. He was a conspirator with Cinq-Mars against Richelieu and fled for safety to England. Under Louis XIV he was in a conspiracy against Mazarin and was imprisoned. He escaped in 1648, became a leader of the Frondeurs, and was the idol of the Parisian populace, who called him 'King of the Markets' (*Roi des Halles*) on account of the coarseness of his language. He killed the Duke of Nemours, his brother-in-law, in a duel, afterward made his peace with the court and was appointed to command the navy. In 1664 and 1665 he defeated the African corsairs and in 1666 led the fleet which was to aid the Dutch against England. He was killed in 1669 while assisting the Venetians, who were besieged by the Turks in Candia.

BEAUFORT, bô'fôrt or bô'fêrt, HENRY (c. 1377-1447). An English Cardinal. He was a natural son of John of Gaunt, Duke of Lancaster, but he and his brother were later legitimized. He was educated and spent most of his youth at Aix-la-Chapelle. After holding various offices in England, he became Bishop of Lincoln in 1398 and chancellor of the University of Oxford in 1399. After his half brother, Henry IV, became King, Beaufort was made Chancellor of England in 1403. But he resigned this office when he removed to Winchester, of which he was made Bishop in 1404. For the next 40 years he was prominent in every political movement in England. He was twice again Chancellor, and as such depended for his strength upon the support of Parliament. He amassed enormous wealth and lent it freely to the King when the royal treasury was empty. On two occasions his loans to the state are said to have amounted to over £20,000, an extremely large sum for any individual at that time. He was present at the Council of Constance and voted for the election of Pope Martin V, by whom he was subsequently made a Cardinal and sent as

legate to Germany, Hungary, and Bohemia to organize a crusade against the Hussites. This undertaking failed. The Cardinal soon after fell under the displeasure of the Pope, because he used in France an English army raised for the Crusades. In 1431 Beaufort conducted the young King, Henry VI, to France and crowned him in Paris as King of France and England. Here he also endeavored, but vainly, to reconcile the Duke of Bedford, Regent of France, with the offended Duke of Burgundy. Cardinal Beaufort died at Winchester, April 11, 1447. Consult Stubbs, *Constitutional History of England*, vol. III (Oxford, 1895), and Radford, *Henry Beaufort* (London, 1908).

BEAUFORT, bô'fôrt or bô'fêrt, MARGARET, Countess of Richmond and Derby (1441-1509). She was the daughter of the first Duke of Somerset and became the wife of the Earl of Richmond (half-brother of Henry VI) and by him mother of Henry VII of England. Left a widow, she was successively wife of Sir Henry Stafford and of Thomas, Lord Stanley, afterward the Earl of Derby. She endowed Christ's and St. John's colleges at Cambridge. Consult Halsted, *Life of Margaret, Countess of Richmond* (1839), and Cooper's *Memoir*, edited by Mayor (1874).

BEAUFORT SCALE. An arbitrary scale of 12 numbers, for use in recording the apparent strength of the wind, introduced into the British navy by Admiral Beaufort about 1805 and now very generally used by all navigators. Originally the observer was supposed to know the general effect of the wind upon his own vessel or the standard vessel imagined by Admiral Beaufort—viz., the full-rigged man-of-war—but these vessels are not now built, although the wind terms retain their old significance, therefore the latter are retained, but the numbers expressing the equivalent velocities in miles per hour, as they result from modern investigations, are added in the following table.

Beaufort Scale No.	Designation of Wind	Approximate Wind Velocity in Miles Per Hour
0	Calm	3 or less
1	Light air	8 "
2	Light breeze	13 "
3	Gentle "	18 "
4	Moderate "	23 "
5	Fresh "	28 "
6	Strong "	34 "
7	Moderate gale	40 "
8	Fresh "	48 "
9	Strong "	56 "
10	Whole "	65 "
11	Storm "	75 "
12	Hurricane	90 "

BEAUGENCY, bô'zhan'sê'. A town in the department of Loiret, France, on the Loire, about 16 miles southwest of Orleans (Map France, N, G 5). It was formerly fortified and has been frequently besieged. The principal features are a Romanesque church of Notre Dame dating from the eleventh century, the remains of an abbey of the seventeenth and eighteenth centuries, and a statue of Joan of Arc, which was erected here in 1896 to commemorate her victory over the English in 1429. Pop., 1901, 3565, 1911, 3532.

BEAUHARNAIS, bô'âr'nâ', 'ALEXANDRE, VICOMTE DE (1760-94). 'A French statesman and soldier. He was born in the island of Martinique and served under Rochambeau in the American War of Independence. He embraced

the cause of the Revolution, was a member of the Constitutional Assembly, and on the night of the 4th of August, 1789, voted for the abolition of feudal privileges. He served with distinction on the committee for military affairs, and presided over the National Assembly when the news came of the flight of Louis XVI. "Gentlemen," he said, "the King has run away. We will proceed with the order of the day." He fought bravely in the north, especially at Mons, but resigned his command in 1793, in accordance with the law which excluded the nobility from the army. After he had lived for some time in retirement his enemies brought forth the charge that, as commander of the Army of the Rhine, he had been the cause of the loss of Mainz. He was put on trial during the Reign of Terror, convicted, and guillotined, July 23, 1794. His widow, Joséphine, married Napoleon Bonaparte, who adopted Eugène and Hortense, son and daughter of Beauharnais.

BEAUHARNAIS, EUGÈNE DE (1781-1824) A French general. He was the son of the Vicomte de Beauharnais, and after his mother's marriage with Bonaparte he accompanied him in the expedition to Egypt and in his campaigns in Italy. He rapidly rose to the highest military rank, and in 1805, after the erection of the Imperial throne, he was made a Prince of France and Viceroy of Italy. In 1806 he married the Princess Amelia Augusta of Bavaria and not long afterward was created Prince of Venice and declared by Napoleon his adoptive son and heir to the Kingdom of Italy. Although his political power was much limited, he conducted himself in Italy with much prudence, energy, and moderation, although he considered himself bound to carry out the decrees of the Emperor. His military talents were displayed in the wars against Austria, and in the retreat from Moscow the preservation of the French army from total destruction was ascribed to the skill and resolution of the Viceroy and of Ney. The victory of Lützen (1813) was decided by his conduct. From this scene of war Napoleon sent him to Italy, which he ably defended against Austria and Murat, who had deserted the cause of the French Empire. In the affairs of the Hundred Days he took no part, and in the Treaty of Fontainebleau and at the Congress of Vienna large sums were granted to him in compensation for his Italian possessions, with which he purchased from his father-in-law the Landgraviate of Leuchtenberg and the Principality of Eichstätt. His eldest son, Charles Auguste Eugène Napoleon, Duke of Leuchtenberg, married Queen Maria of Portugal on Jan. 25, 1835, but died on the 18th of March of the same year. Another son, Max Eugène Joseph Napoléon (died 1852), who succeeded his brother as Duke of Leuchtenberg, married the Grand Duchess Maria of Russia. Consult *Mémoires du Prince Eugène de Beauharnais* (Paris, 1858-60).

BEAUHARNAIS, HORTENSE EUGÉNIE See BONAPARTE

BEAUHARNOIS. The chief town of Beauharnois Co. in the province of Quebec, Canada, situated on Lake St. Louis (formed by the St. Lawrence River), 21 miles southwest of Montreal (Map Quebec, E 5). It has several mills and factories. Pop., 1911, 2015.

BEAULIEU, bô'lyé', JEAN PIERRE (1725-1819). An Austrian general, born at Namur. He entered the army in 1743, served in the Seven Years' War, being present at Breslau and Leu-

then, and in 1780 took an active part in the suppression of the Belgian insurrection. As major-general he increased his military reputation by his services in the campaigns against the French in Belgium. In 1796 he was appointed commander of the forces in Italy, but after the defeat by Bonaparte at Lodi he relinquished the command to Wurmser.

BEAUMANOIR, bô'mân'war', PHILIPPE DE RÉMI, SIRE DE (c.1250-96). A French jurist and poet. From 1279-82 he was *bailli* at Clermont, and from 1293 to his death at Senlis. His chief work, *Les Coutumes de Beauvoisis*, is highly commended by Montesquieu. It is the masterpiece of mediæval judicial literature, the main source of knowledge, not only of old French law, but of the society of the thirteenth century. The best edition is that of A. A. Beugnot (1842). Among his poems, the "Manekine," "Jehan et Blonde," and a "Salut d'amour" are the most noteworthy. Consult August Morel, *Etude historique sur les coutumes de Beauvoisis* (Paris, 1851).

BEAUMARCHAIS, bô'mar'shâ' A name assumed by Pierre Augustin Caron (1732-99), the most important French dramatist of the eighteenth century, though he wrote but two really successful plays, *Le barbier de Séville* (1775) and *Le mariage de Figaro* (1784). He was born in Paris, the son of a watchmaker, and was educated to his father's trade. He early developed a marked taste for music and sufficient proficiency to become music master to the daughters of Louis XV. He turned this position to good account in speculations. In 1764 he made a journey to Spain to protect or vindicate his sister, who had been abandoned by her betrothed, Clavijo. His account of this mission in his *Mémoires* suggested the drama *Clavijo* to Goethe. He brought from Madrid a knowledge of things Spanish that was later of much use to him. He now turned to the drama, wrote *Eugénie* (1767), a fairly successful domestic drama, and *Les deux amis*, a decided failure in the pathetic vein. Meantime he had become engaged in financial speculations that led to lawsuits, and these to a series of *Mémoires*, appeals to the public that are among the most vigorous, audacious, clever, and witty polemics in literature. Their attack on judicial injustice gave them a universal interest. They were eagerly read and deepened the discontent with the existing state of society that was to culminate in the Revolution. Beaumarchais thus became a political personality. He was confidentially employed by Louis XV and later by Louis XVI, but before this he had snatched a sensational dramatic triumph out of failure by rearranging a comic opera into a five-act comedy—his *Barbier de Séville* (1775), Spanish in scene, but essentially French at the heart, the most famous comedy of the century, save only its sequel from the same hand. It is simple, lively, ingenious, effective, and it contains one of the strongest-drawn characters of dramatic literature—Figaro, an incarnation of the new democracy.

Beaumarchais now engaged in furnishing the American revolted Colonists with supplies and acquired a pecuniary claim against the United States that remained long unsettled. His restless spirit also projected a complete edition of Voltaire, and he prepared a sequel to the *Barbier*, *Le mariage de Figaro*, so daringly democratic and revolutionary that it received the advertisement of a legal prohibition. This so

whetted public curiosity that when at last it was licensed, three persons were crushed to death in seeking entrance to the National Theatre (Théâtre Français, 1784). Here the wit is keener, the action swifter, the social satire more mordant than in the *Barbier*. Figaro, the light-hearted, versatile, shrewd scapegrace, was furnishing a social solvent that would disintegrate society and invite the Revolution. Beaumarchais had probably no more serious purpose than delight in his own wit. "He wished to fire a squib and he exploded a magazine." These comedies mark, in dialogue, construction, and intrigue, the high-water mark of the century. If they err, it is in the monotony of their brilliancy. The tradition of their unparalleled success gave models to Hugo and Dumas and inspired the operas of Rossini and Mozart. Beaumarchais did nothing more of significance. An opera libretto, *Tarare* (1777), is a trifle. A heavy melodrama, *La mère coupable* (1790), vainly seeks to recall Figaro. Soon Beaumarchais fled from the Terror to Holland. He returned in 1796 and left at death a comfortable fortune that he had managed to save from the wreck of the Revolution. Beaumarchais' works are edited by Gudin (7 vols., 1809), by Furne (6 vols., 1827), and by Moland (1874). Consult also Loménie, *Beaumarchais et son temps* (4th ed., trans. by Edwards, London, 1856), Lintilhac, *Beaumarchais et ses œuvres* (Paris, 1887), Gudin de la Brenellerie, *Histoire de Beaumarchais* (ed. Tourniaux, Paris, 1886), Lescure, *Éloge de Beaumarchais* (Paris, 1887), Bonnefou, *Étude sur Beaumarchais* (Paris, 1887), Hallays, *Beaumarchais* (Paris, 1897).

BEAUMARIS, bô-mâr'is (Fr. *beau marais*, beautiful marsh). A seaport, and the chief town of the island of Anglesey, North Wales, on the west side of the picturesque bay of Beaumaris, near the north entrance to the Menai Strait, 3 miles north of Bangor and 239 miles northwest of London (Map Wales, B 3). It is a modest little watering place, with excellent sea bathing. It has picturesque covered runs of an ancient castle, one of the three (Conway and Carnarvon being the other two) castles in Wales built by Henry de Ebreton, the famous architect of Edward I. Pop., 1891, 2200, 1901, 2326, 1911, 2231. Beaumaris is in steamship communication with Liverpool.

BEAUMONT, bô-mônt'. A city, and the county-seat of Jefferson Co., Tex., 84 miles by rail east by north of Houston, on the Neches River, the Sabine-Neches Canal, and on the Gulf, Colorado, and Santa Fe, the Gulf and Interstate, the Texas and New Orleans, the Kansas City Southern, and the Beaumont, Sour Lake, and Western railroads (Map Texas, E 4). The accessibility of vast forests has contributed materially to the city's development as one of the greatest lumber centres of the South, the transportation facilities afforded by the railroads being augmented by the water route through Sabine Pass, via the Neches River. Lumber, shingles, live stock, rice, and oil also are shipped, and the manufactures include sawed and planed creosoted lumber, largely cypress shingles, oil-field and saw-mill machinery and supplies, also cars, furniture, ice, cottonseed oil, refined oil, food stuffs, and various petroleum products. Oil, which was discovered in extraordinary quantity, has made Beaumont an important refining centre, and since 1900 the city's growth has been very rapid. A project for deepening the canal

which extends from Port Arthur to the mouth of the Neches River is now under way. It will permit ocean-going vessels to ply directly to Beaumont and will cost about \$1,000,000. Near the city are enormous rice irrigating plants. Pop., 1900, 9427, 1910, 20,640.

BEAUMONT, bô-mônt, formerly bô-mônt, FRANCIS (1584-1616). An English poet and dramatist. **FLETCHER**, JOIN (1579-1625). An English poet and dramatist. These writers were so closely associated in their lives and labors that their names have become indissolubly united. Francis Beaumont was the third son of Francis Beaumont, one of the justices of the common pleas. He was born at Grace-Dieu, Leicestershire, in 1584. When 12 years of age he became a gentleman commoner of Broadgates Hall (now Pembroke College), but he left Oxford without taking a degree. In 1600 he was admitted a member of the Inner Temple. An expansion of one of Ovid's legends (1602) has been attributed to him. When about 19 years of age, he became the friend of Ben Jonson and wrote commendatory verses to some of his dramas. He became acquainted with Fletcher, probably in 1606, and they lived in the same house till Beaumont's marriage in 1613 to Ursula, daughter and coheir of Henry Isley, of Sundridge, in Kent, by whom he had two daughters. He died March 6, 1616, and was buried in Westminster Abbey.

John Fletcher was born in 1579. His father, Richard Fletcher, a clergyman, was at that time incumbent of Rye, in Sussex, thereafter he was appointed Dean of Peterborough and attended Queen Mary on the scaffold, whose last hours he imbibed with irrelevant exhortation. On his elevation to the see of London he married a second time and thereby incurred the disfavor of the Virgin Queen. A John Fletcher, of London, assumed to be the dramatist, entered Bene't College (Corpus Christi), Cambridge, on Oct. 15, 1591. It is uncertain how long this Fletcher remained at the university or whether he took a degree. *The Woman-Hater*, produced in 1607, is the earliest play of our author. It is not known precisely in what circumstances Fletcher passed his life. He asserts his independence in some verses introductory to *The Faithful Shepherdess*, published about 1610, yet he wrote more rapidly than most men then writing for bread. Waiting in London, it is said, for a new suit of clothes as he was about to go into the country, he caught the plague, and died (1625), and was buried in the church of St. Saviour.

The works of Beaumont and Fletcher comprise in all 64 plays (according to Play), but it is difficult to allocate, in any satisfactory manner, the parts written by each. A good deal, however, has been accomplished by the application of metrical tests. In some of the plays other hands have been traced, especially Massinger's. And certain passages in *The Two Noble Kinsmen* are by Shakespeare. The best work of this famous collaboration is represented by *Philaster* (mostly Beaumont's), the tremendous *Maid's Tragedy* (in which Beaumont's genius is dominant), and *The Faithful Shepherdess* (mostly Fletcher's), a beautiful pastoral drama, which furnished some hints to Milton for his *Comus* and to Keats for his *Endymion*. Beaumont and Fletcher are the cleverest, gayest gentlemen. They rarely sound the deep sea of passion, but rather play over its surface. They have little power of serious characterization, and their in-

merous creations are seldom consistent, but they say the most clever and pleasant things. Morally, little can be said in their praise. No audience of the present day could sit out the representation of their purest plays. Some of the impurest are almost beyond conception, yet there is always an air of good breeding about them. The songs distributed through their plays almost equal Shakespeare's in sweetness and beauty. Consult *Works*, with notes and memoir (ed. A. Dyce, 11 vols., London, 1843-46), and a second, two-volume edition by Dyce, 1852, "Selected Plays," in *Mermoid Series* (London, 1887). The best recent edition is that edited by Arnold Glove and A. R. Waller, 15 vols., in *Cambridge English Classics* (New York, 1905). G. C. Macaulay, *François Beaumont: A Critical Study* (London, 1883), A. W. Ward, *History of English Dramatic Literature* (1899), vol. 11. For exhaustive discussion of authorship of the various plays, Boyle, in *Englische Studien*, vol. lxxiv (Heilbronn, 1877-1901), id. in *New Shakespeare Society* (London, 1880-86), also Fleay in the latter publication for 1874, and Upham, *The French Influence in English Literature* (1910).

BEAUMONT, SIR GEORGE HOWLAND (1753-1827). An English painter and patron of art. He was born at Dunmore (Essex) and was educated at New College, Oxford, and from 1790 to 1796 sat in Parliament for Bealston. He made an extensive and fine collection of drawings and paintings and was among the first properly to estimate the work of Wilkie, Landseer, and Gibson. He was one of the founders of the National Gallery, to whose collection he made valuable additions. As a pupil of Richard Wilson, he did some amateur painting in landscapes, two examples of which now hang in the National Gallery. He was a friend of Sir Joshua Reynolds, Coleridge, and Wordsworth, who dedicated to him several poems, notably *Elegiac Musings* (1830).

BEAUMONT, bô'môn', JEAN BAPTISTE ELIE DE. See ELIE DE BEAUMONT.

BEAUMONT, bô'môn't, formerly bû'môn't, WILLIAM (1785-1853). An American surgeon, born at Lebanon, Conn. He is noted for discoveries in the processes of laws of digestion, made in watching the operations of the stomach in the case of Alexis Saint-Martin. On June 6, 1822, Saint-Martin, then supposed to be 18 years old, while at Mackinac, Mich., was accidentally shot, receiving the entire charge of a musket in his left side, the muzzle of the gun being about three feet from his body. This discharge fractured two of his ribs, lacerated his lungs, and lodged in his stomach. Dr. Beaumont, who was then stationed at Mackinac as a surgeon in the United States army, restored Saint-Martin to health within a year, though the aperture made by the shot was never closed. Two or three years afterward Beaumont commenced a series of experiments upon the stomach of the young man, studying its operations and secretions, the action of the gastric juice, etc. These experiments he continued from time to time, his patient presenting the spectacle of a man enjoying good health, appetite, and spirits, with an opening in his stomach through which the action of that organ could be satisfactorily noted from the exterior. Beaumont was the first to obtain the gastric juice through a fistula from a living human being, and he demonstrated beyond a doubt its chemical properties and

digestive powers. He published the result of his experiments in 1833. Afterward he resigned from the army, and practiced medicine in St. Louis, Mo., until his death.

BEAUMONT DE LA BONNINIÈRE, bô'môn' de la bô'né'nyâr', GUSTAVE AUGUSTE (1802-66). A French publicist. In 1831 he and Tocqueville were commissioned by his government to study the prison system of America. In 1839 he was elected deputy from Sarthe and sided with the so-called dynastic opposition. After the February Revolution of 1848 he was returned as a member of the Constituent Assembly and here maintained the character of a sincere but moderate Republican. He was appointed by Cavaignac Ambassador to England. One of the opponents of the coup d'état of 1851, he was imprisoned for some time in the fortress of Mont Valerien, and after regaining his liberty he lived in retirement. The writings on which his reputation rests are *Le système pénitentiaire aux États-Unis, et de son application en France* (2 vols., 1833—partly by Tocqueville), *Morie, ou l'esclavage aux États-Unis* (2 vols., 1835), *L'Irlande, sociale, politique, et religieuse* (2 vols., 1830-42).

BEAU NASH. See NASH, RICHARD, and JERROLD, DOUGLAS.

BEAUNE, bôn. A town of the department of Côte d'Or, France, in the ancient duchy of Burgundy, situated in a pleasant district on the river Bouzeise, about 23 miles south-southwest of Dijon (Map France, N. K 5). The town is well built, it has a remarkable thirteenth-century parish church (Notre Dame), and a fine hospital, founded in 1443 by Nicholas Robin, Chancellor of Philip the Good, Duke of Burgundy. A communal college, a library, and a museum are its chief public institutions. Its industries comprise distilleries, cloth factories, and the manufacture of vinegar. Beaune has an active commerce in vegetables and farm products and is the chief seat of the wine trade of Burgundy, giving its name to one of the best of the Burgundy wines. As early as the seventh century it was a fortress under the name of Belna, and had its castle and its ancient Pop., 1901, 12,896, 1906, 13,540, 1911, 13,409.

BEAUNE, FLORIMOND DE (1601-52). A French mathematician, born at Blois. He contributed not a little to the development of Descartes' method in geometry, and his notes on Descartes' celebrated *Géométrie* have been incorporated in Schooten's edition of that book. The so-called "Beaune's Problem" (which has been completely solved only by Jean Bernoulli), still given in the integral calculus, was for his time new and remarkable; it turns on the determination of the nature of a curved line from a property of its tangent. By contributions of this nature Beaune helped to pave the way for the integral calculus. He was also the first to treat systematically the question of superior and inferior roots of numerical equations (posthumous publication, 1659).

BEAUNEVEU, bô'n'-vê', ANDRÉ (active 1360-1403). A Flemish sculptor, painter, and illuminator of manuscripts. He was born at Valenciennes, Hamnault, and was the leader, with Sluter (q.v.), in the school of realistic sculpture in Flanders and northern France that anticipated the Italian Renaissance. After working in sculpture and painting at Valenciennes (1361-62) he went to Paris in 1364 and was made royal sculptor to Charles V,

whose mausoleum he executed, besides those of Philip VI, John II, and Jeanne de Bourbon—all surviving in the abbey church of Saint-Denis. After his return to Flanders in 1374 he worked at Malines (Communal Hall), made tombs at Courtrai, and a statue of the Virgin for the belfry of Ypres (1377). He then entered the services of Duke Jean de Berry, brother of the King of France, and the greatest art patron of his day, and in 1390 directed the latter's ambitious projects of sculpture and painting at the Château of Mehun. His finest remaining illuminations are in a psalter of the Duc de Berry in the Bibliothèque Nationale in Paris. His surviving statues are remarkable for masterly force and intense realism. Froissart calls him the greatest artist of his day. Consult Durrieu, in *Histoire de l'art*, ed. Andre Michel, vol. II (Paris, 1902), id. *Les miniatures de Andre Beauneveu* (Paris, 1894).

BEAUREGARD, bô'rê-gard', *Fr* pron bô'r-gar' or bô'r-gar', **Pierre GUSTAVE TOUTANT** (1818-93). A Confederate general, born in New Orleans. He graduated at West Point in 1838 and the same year became second lieutenant in the engineer corps. He was engaged in engineering work at Newport, Barataria Bay, and Fort McHenry until 1846, when he went to Mexico, distinguishing himself in the war there. He became captain of engineers in March, 1853, was engaged in the construction of fortifications at Mobile, Lake Pontchartrain, and New Orleans until 1860 and in November of that year was appointed superintendent of West Point, a position he resigned Feb. 20, 1861, to serve in the Confederate army. He was immediately made brigadier general and took command of Charleston, where, April 12-13, by the bombardment of Fort Sumter (q.v.), he began the Civil War. He was second in command at the first battle of Bull Run, July 21, and the next day was raised to the rank of general. At the battle of Shiloh, April 6-7, 1862, he was second in command the first day, and on the death of A. S. Johnston assumed chief command, subsequently withdrawing to Corinth, where he remained until May 29. In 1863 he defended Charleston against the attacks of Dupont and Dahlgren, and early in 1864 assumed command of the Department of North Carolina, which was enlarged to include Virginia south of the James. On May 16, at Drury's Bluff, he won an important strategic success over Butler. (See **BERMUDA HUNDRED**.) He then commanded at Petersburg, Va., where he retarded Grant's advance upon Richmond. He afterward served with the Division of the West, and surrendered with Johnston to Sherman, April 26, 1865. He was president of the New Orleans, Jackson, and Mississippi Railroad from 1865 to 1870, became Adjutant General of Louisiana in 1878, and for some years was manager of the State Lottery. He declined an appointment to the chief command of the Rumanian troops in 1866 and, three years later, a similar appointment from the Khedive of Egypt. Consult Roman, *Military Operations of General Beauregard* (New York, 1883).

BEAUREPAIRE-ROHAN, bô'rê-par' rô'an', **HENRIQUES DE** (c 1818-94). A Brazilian traveler and geographer, born in the province of Piahy of French extraction. In 1845 he began the exploration of territory south of Rio de Janeiro. He penetrated into Paraguay, subsequently publishing the results of his exploration in the work entitled *Descrição de uma*

viagem de Cuyabá ao Rio de Janeiro (1846). Afterward he was appointed by the Brazilian government to collect statistical information on the interior provinces of the country. He later became lieutenant general in the Brazilian army, and in 1877 published the important geographical work entitled *Estudos acerca da organização da carta geographica e da historia physica e politica do Brazil* (1877).

BEAUTEMPS-BEAUPRÉ, bô'tân' bô'p'rê', **CHARLES FRANÇOIS** (1766-1854). A distinguished French hydrographer, born at Neuville-au-Pont. He accompanied the expedition sent in search of La Perouse in 1791 and made valuable charts of many of the places visited then and subsequently, when he was employed in all the important hydrographic labors undertaken during the Empire and the Restoration. The perfection of his work earned him the name of "the father of hydrography." He was elected a member of the Academy of Sciences in 1810 and was appointed chief hydrographer and keeper of the dépôt of marine and the colonies in 1814.

BEAUTY, bû'ti. See **ÆSTHETICS**, ART.
BEAUTY AND THE BEAST. A story, first told in Straparola's *Facetiae novae* (1550), of a self-sacrificing daughter who accepts the addresses of a beast and later falls in love with him because of his kindness. This breaks the spell, and he regains his human form. There is a French version in Mme Villeneuve's *Contes marines* (1740), another by Mme Beaumont (1757). Among numerous English adaptations may be mentioned that of Miss Thackeray. It is also the basis of Gretry's opera, *Zemire et Azor*.

BEAUVAIS, bô'vâ' (from *Bellovacum*). The capital of the department of Oise, in the old province of Ile de France, France, situated in the valley of the Therain (a tributary of the Oise), 41 miles north-northwest of Paris and surrounded by rising woodlands (Map France, N, H 3). It is the seat of a bishop and contains a public library of 30,000 volumes, a museum, etc. Among its several fine buildings, the most noteworthy is its uncompleted cathedral of St. Pierre, which consists of nothing but a choir and transept of amazing proportions, built in the decorated Gothic style. It was begun in 1225 and was intended to rival that of Amiens. The Basse Œuvre is probably the nave of the former cathedral, a Romanesque building of great antiquity. The manufactures of Beauvais include woolen and military cloth, gold and silver lace, carpets, Gobelin tapestry, boots and shoes, etc. Beauvais carries on a brisk trade in grain and wine. Pop., 1906, 20,248, 1911, 19,841. It was included in the country of the powerful Bellovaci, in Gallia Belgica, and was known by the Romans as Caesaromagus, afterward as Bellovacum. The Jacquerie, or Peasants' War, broke out in the neighborhood of Beauvais, March 21, 1358. In 1472 the town was besieged by Charles the Bold of Burgundy, with an army of 80,000 men, when the women of Beauvais, under the leadership of the heroine, Jeanne Laine, surnamed La Hachette for her daring, joined in the defense. Consult Labande, *Histoire de Beauvais* (Paris, 1892).

BEAUX, bô, **CECILIA** (1863-) An American figure and portrait painter. She was born of French descent in Philadelphia, where she studied painting, at first "independently," then with William Sartain. Finally, in 1889

90 she worked abroad under several masters, being chiefly influenced by Robert Fleury and Charles Lasar. Thereafter she resided in New York, where she came to rank as one of the most able and popular portraitists, of women and children especially. Among her many honors are the medals of the Carnegie Institute, Pittsburgh (1899), the Exposition Universelle in Paris (1900), the Pan-American Exposition, Buffalo (1901), and the Dodge prize of the National Academy of Design (1902). She was made a member of the National Academy and of the Société Nationale des Beaux-Arts. Her best-known paintings include "Last Days of Infancy" (1885), portraits of her niece Ernesta and of the Rev. James Grier, "Sita and Sarita," "Cynthia" (Miss Sherwood), "The Dreamer," "Mother and Daughter," "A New England Woman" (Pennsylvania Academy), "Dorothea and Francesca," daughters of Richard Watson Gilder, and a portrait of Mr. Gilder himself, exhibited at the St. Louis World's Fair of 1904. One of the most striking pictures of the 1913 (spring) National Academy exhibition was her "Portrait Study." Miss Beaux unites with a fine feeling for color a freedom of brush work which contributes much to the pleasure-giving qualities of her art. There is no sense of effort conveyed in the manipulation of pigment, no impression of dull and heavy tones. Unconventional and characteristic poses and a remarkable rendition of the sitter's hands are a striking feature of work that is essentially modern and highly individual. Consult Mrs. Bell, in *The Studio*, vol. xvii (1899), and Isham, *History of American Painting* (New York, 1905).

BEAUX-ARTS, bô'zâr', ACADEMIE DES. One of the five academies of the Institut de France (q.v.). It is divided into five sections, Painting, Sculpture, Architecture, Engraving, and Musical Composition. Its membership numbers 41, including a secretary chosen for life who is not a member of any section, 10 honorary and 10 foreign associates, and 50 corresponding members. Its publications embrace transactions, memoirs, and the *Dictionnaire Général des Beaux-Arts*.

BEAUX-ARTS, ECOLE DES See **ECOLE DES BEAUX-ARTS**

BEAUX-ARTS ARCHITECTS, SOCIETY OF. An association of American graduates of the Ecole des Beaux-Arts, Paris, established in 1902. The society carries on a system of art education which includes the establishment in different cities of the United States of ateliers or schools in which instruction in architecture may be obtained. The instruction is based on that given in the Ecole des Beaux-Arts. In each city the ateliers are formed by a group of students who desire to carry on a study of architecture. The master or patron whose work is given free is chosen or appointed, and the atelier is supported by contributions from the students. The committee on education of the society issues each year a certain number of programmes which include problems to be worked out by the different ateliers. These competitions are designated "Class A" and "Class B" competitions. Ateliers are established in about 60 cities in the United States and Canada. Many colleges and universities also avail themselves of the programme of the society in their course of instruction. The society awards four prizes—the Warren prize, offered for general excellence in planning a group of buildings, the Pupin prize, the gift of Prof. M. I. Pupin of Columbia Uni-

versity for the decorative treatment of some scientific appliance, the Goelet prize, the gift of Mr. Robert W. Goelet for excellence in planning a city block, and the Bacon prize, the gift of Mr. Robert Bacon for the greatest number of honors obtained in "Class A." Mr. Bacon also offers annually a Paris prize, the winner of which is chosen to pursue his studies in the first class in the Ecole des Beaux-Arts in Paris. The winner of this prize receives \$250 quarterly for two years and a half, dating from his departure for Europe.

BEAUX' (bôz) STRAT'AGEM, THE See **FARQUHAR, GEORGE**

BEA'VER (AS *beofen*, Ger *Biber*, OCh Slav *bebrû*, Skt *babhrus*, large ichneumon, also "brown", to this latter root the word may possibly ultimately belong). A large aquatic rodent of the family Castoridae, remarkable for its constructive habits and yielding a valuable fur and the substance castoreum. The family includes only one species, in the opinion of the majority of naturalists, which is, or has been, distributed throughout most of the forested parts of the North Temperate Zone. To this species Linnaeus gave the name *Castor fiber*, and the American form has been regarded as merely a variety of it. Recent American specialists, like Rhoads (*Proc Am Philos. Soc.*, 1898), believe, nevertheless, that the American beaver is specifically different from that of the Old World, is entitled to the name *Castor canadensis*, and is divisible into three distinct local races. In general characteristics all beavers agree so closely, however, that these notions of classification may be left to the taxonomists.

The *Old World Beaver*, once widely common throughout Europe and northern Asia, is now rare and isolated. Extinct in the British Isles since the twelfth century, a few colonies are preserved in the parks of the Marquis of Bute and other noblemen. It is said to exist in southeastern Norway, and isolated pairs are occasionally seen on some of the large German rivers, and in Austria, under protection of great landowners. "They also occur sparingly in Russia and Poland, in the streams of the Ural Mountains, and in those which flow into the Caspian. They live in burrows on the banks of rivers, like the water rat, and show little of the architectural instinct so conspicuous in the American form, but this may be owing to unfavorable external conditions rather than to want of the faculty, for there is a well-authenticated instance of a colony of beavers, on a small stream near Magdeburg, whose habitations and dam were exactly similar to those found in America." In Siberia they still exist in considerable numbers, though their pelts do not now figure largely in the export of furs, and there the animal is inclined to erect lodges and dams.

The *American Beaver* was scattered primitively over all wooded North America, from Mexico to Labrador and the northwestern limit of tree growth. It has been banished from all the more thickly settled parts, but survives in greater or less numbers throughout Canada north of civilized Ontario and Quebec, in the Rocky Mountain and Californian ranges, in the Appalachians south of West Virginia, and along the borders of northwestern Mexico. It is steadily decreasing, however, even in the Hudson's Bay region. The beaver is usually at least 2 feet in length from the nose to the root of the tail, and weighs about 35 pounds, and the

3. MUSKRAT (*Fiber zibethicus*), and winter lodge.

tail is about 10 inches in length. These dimensions are sometimes exceeded. The general form of the animal is thick and clumsy, broadest at the hips and squirrel-like. The body terminates in a thick oval tail, flattened transversely, about twice as long as broad, and naked of hairs, the surface being covered with plates of black, indurated skin, resembling horn scales. The fore limbs are small and squirrel-like, the hinder ones large and powerful. Each foot has five toes, those of the forefeet are short, and not connected by a web, those of the hind feet are long, spreading out like the toes of a goose, and webbed to the nails. In accordance with this remarkable peculiarity, the beaver in swimming makes use of the hind feet alone, the forefeet remaining motionless and close to the body. The tail is of service as a sculling oar and a rudder, and its loud slapping of the water when an alarmed animal dives is an effective signal of danger to others. The head is thick and broad, the nose obtuse, the eyes small, the ears short and rounded. The incisor or cutting teeth

circumference at the point of attack, but this was exceptional. This cutting is accomplished by the animals standing upon their hind feet and gnawing in parallel lines across the grain, then wrenching or biting out the chip between, and so steadily deepening the cut. The assertion that they can or do cause trees to fall in any desired direction is not justified by facts. Large trees are usually felled by the united efforts of a family of beavers.

Community Life and Architecture—The architectural operations and cooperative life of these animals are very wonderful, although the statement at one time commonly made, that beavers drive stakes into the ground, has no foundation in fact, and some of the other particulars which passed current along with it were equally fabulous. They dwell normally in colonies along streams, which may have been inhabited for scores of generations, and whose improvements represent the combined labor of thousands of individuals past and present. Such a colony begins by the settlement in the spring upon some sluggish, moderately deep woodland stream or pond of a pair of young beavers, who have emigrated thither from some old colony. Their first labor is to dig a burrow in the bank, the entrance to which is at a safe depth beneath the water, and the interior chamber at a safe height above its normal rise. In this burrow they make their home the first year, or perhaps two years, and such burrows, more or less in use and serving as refuges in danger, are common always in beaver settlements. It is essential that a sufficient depth of water be maintained before the door of this burrow to give clear ingress and egress under the winter's ice and to afford room for storage of winter provisions, and in most places chosen by the animals this can be arranged only by damming the stream. As the droughts and low water of summer begin, therefore, the beavers seek a place in the stream a little below their residence, where it is narrow, not more than $2\frac{1}{2}$ feet deep and has a firm bottom, and begin a dam. Gnawing down saplings 10 or 12 feet long, they drag and float them to the spot, and sink them lengthwise, side by side, across the current, beginning at the centre of the channel and loading them with stones, sods, and mud, to keep them in place. They will handle remarkably large stones for this purpose. The work is gradually extended until it reaches the bank on each side, and in doing so a convex outline upstream is usually given, but this probably is an accident of the increasing pressure of the obstructed current on the progressing wings of the new dam rather than an engineering design, for reverse (or weak) curves are frequently seen. Such a dam grows constantly by the addition of all sorts of material—not only the logs and sticks from which the bark has been gnawed for food, but others cut for the purpose, and a constant intermixture of roots and branches with stones, moss, grasses, and mud.

Additions, as well as constant repairs, are made on the upper side, which comes to present a low slope and comparative solidity, while the lower front of the dam is a more abrupt tangle of sticks and branches. The beavers work at the dam only at night, except in an emergency, and each one does what it thinks proper in a quite independent way, though the result is for common benefit. After many years such dams may be 4 or 5 feet high at the channel and

SKULL OF A BEAVER
Showing the chisel-like incisors

(two in each jaw) exhibit in the highest perfection this cardinal characteristic of the Rodentia. They are formed in front of hard, orange-colored enamel, while the back of the tooth is formed of a softer substance, more easily worn down, so that a sharp, chisel-like edge is always preserved, the bulbs being also persistent, so that the teeth are continually growing as they are worn away. There are four flat molar teeth (or grinders) on each side in each jaw.

The fur consists of two kinds, the longer hair comparatively coarse, smooth, and glossy, the under coat dense, soft, and silky. The color is generally chestnut, rarely black, spotted, or nearly white. The largest and reddest beavers are those dwelling on the streams of the northern Pacific coast, the smallest and darkest those of the Hudson's Bay region, while those inhabiting the southern Alleghenies are reddish brown, and those of the southern Rockies are pale. In consequence of its aquatic and bark-eating habits, the beaver is limited to the neighborhood of streams and ponds in wooded districts, and the northern range of the species is everywhere terminated by the limits of the forest growth. Its extraordinary powers of gnawing are exerted to cut down trees several inches in diameter, both for food and for the construction of those houses and dams which have rendered it so much an object of admiration to mankind. Dr. Elliott Coues mentions a poplar cut by beavers on the upper Missouri, which he found to be 9 feet in

stretch to the right and left across low ground for 50 yards or more, converting the space above it into a broad, grassy pond, having a network of clear channels. Morgan describes dams 600 feet long in northern Wisconsin, with many acres of flooded ground. The water does not flow over the tops of these dams, but percolates through them, though some of them become seemingly solid barriers of earth. "In places," says Hearne, "which have been long frequented by beavers undisturbed, their dams, by frequent repairing, become a solid bank, capable of resisting a great force, both of water and ice, and as the willow, poplar, and birch generally take root and shoot up, they by degrees form a kind of regular planted hedge, which I have seen in some places so tall that birds have built their nests among the branches." A large proportion of the marshy ponds and peat bogs of the country have had this origin.

Meanwhile, from the first summer onward, the gradually increasing number of beaver families have built each for itself permanent homes, known from their resemblance to the Algonkian wigwam as "lodges." The sites chosen are along the banks of the stream or canal, and several houses may be so close together as to touch, or they may be widely scattered. The larger lodges are, in the interior, about 7 feet in diameter, and between 2 and 3 feet high, with the floor and inner walls made smooth by gnawing and wear. The entrances are always two, both leading down into the water, and in northerly regions there is no opening into the air—a careful precaution against the cold of midwinter as well as against such insidious foes as weasels and black snakes. This structure, like the dam, is formed of branches of trees, matted with mud, grass, moss, and other material. The walls are very thick, and the entire structure not only secures much warmth, but is an efficient protection from wolves, wolverines, and other beasts of prey, especially when solidly frozen in winter. Each family builds, maintains, and occupies its own lodge, the current belief that several families live together arising from the fact that the young beavers usually continue to live with their parents until the third year. Single "bachelors" dwelling remote and alone are occasionally seen.

Food and Winter Provision.—The food of beavers is almost wholly the bark of deciduous trees, especially poplar, birch, willow, linden, and maple, they never eat "evergreen" bark, and are absent from forests exclusively coniferous. In the summer they gnaw at fresh bark day by day, and also eat more or less of lily roots and other green vegetables, berries, and leaves. The impossibility of obtaining this food in winter, when the waters and woods are clogged with ice and snow, compels them to prepare a supply. For this purpose the beavers become very active in the autumn, each family cutting down large trees and gnawing their limbs and trunks into sections small enough to be dragged to the water and floated to the neighborhood of their lodge. There this material is sunk to the bottom and firmly anchored until a sufficient supply has been acquired. The method of anchoring this winter's supply has long been a matter of speculation. The green wood is about as heavy as the water, and once in the pond it soon sinks of itself, becoming water-logged. The first few pieces of the winter's food are usually large and irregular, and these are usually placed in a

rough circle with the butts inward. This forms an entangling foundation which serves to hold in place the smaller pieces piled on top. In swift water anchorage for the first few pieces is secured by placing them on the lower slope of the house or against the dam. A carefully watched colony of beavers gathered 732 sapling aspens and several hundred willows for the coming winter, forming a pile almost wholly below the water, over 3 feet deep and 124 feet in circumference. Roots of water lilies and other aquatic plants are also stored to a less extent. The dams are also especially repaired in autumn. The freezing of the stream puts an end to their labors, whereupon the beavers retire to their lodges and remain there, subsisting upon their store, pieces of which are daily taken into the house, or into some bank burrow, and the bark is eaten.

It will readily be seen that the supply of edible wood within a manageable distance from the water would soon be exhausted by a beaver colony, and perhaps the most important service of the dam and its pond is to provide against this contingency. In a flat country the mere raising of the water by flooding spaces of woods answers the purpose to some extent, but this is most intelligently supplemented by the animals, who dig deep canals, 2 or 3 feet wide, which penetrate the woods in various directions, sometimes for 100 yards or more, and thus render accessible a large number of trees otherwise out of reach. These canals are kept open with great pains, while the rest of the pond becomes gradually grown up with grass, and they form avenues along which lodges and burrows are placed, and where the colony may swim freely and float their food and building materials from the woods to their lodges and dams, of which latter, on a long-tenanted and favorable stream, several may exist. This perfection of beaver economy is by no means seen everywhere, but might commonly be observed previous to 1850 in such highly favorable regions as the swampy forests about the headwaters of the Mississippi, and it is being renewed in northern Maine, where, under the protection of law, beavers are increasing and reoccupying their ancient haunts.

Economic Considerations.—Beavers are closely related to the squirrels, and, like them, "sit up" a great deal, holding their food up to their mouths in their fore paws, which otherwise are used very dexterously. The animals live well in confinement, and colonies are flourishing in zoological gardens and parks in New York, Washington, and other American cities, as well as abroad, where small, watered valleys, fenced with wire, are devoted to them. In closer captivity they betray their constructive instincts by weaving the sticks supplied them into the bars of their cages. They have usually four young at a birth and keep them at home for two years. In 1913, beavers bred for the first time in their pond in the New York Zoological Park.

The fur of the beaver, by reason of its softness and density, is one of the most valuable yielded by any animal, and in former times was the staple of the fur trade, especially in America, when the early prosperity of Canada and New York was based upon it. (For statistics see *FUR AND THE FUR TRADE*.) It is probable that only the invention of silk-plush applied to the making of hats saved the animal from extinction long ago. Beavers were obtained mainly

by wasteful methods of trapping, and they are so obtained yet and chiefly in winter. Their nocturnal habits and extreme shyness make the shooting of them impracticable. Their flesh is esteemed by the Indians and frontiersmen.

Large glandular pouches, two in number, closely connected with the organs of reproduction, contain the substance called *castoreum* (qv). Its uses in the animal economy are by no means well known, they are probably analogous to those of musk and civet, but its peculiar pungent odor is so attractive to beavers that use is made of it as a bait for beaver traps.

The beaver family dates from the middle of the Tertiary Period, a fossil species of very large size occurring in the Upper Pliocene of Europe. Fossils of a small size and some peculiarities are found in the Miocene of the United States.

Bibliography. Consult Harting, *British Animals Extinct within Historical Times* (London, 1880), Morgan, *The American Beaver and his Works* (Philadelphia, 1868), H. T. Martin, *Casertologia* (Montreal, 1892), and especially E. A. Mills, *In Beaver World* (Boston, 1913), standard works (see MAMMAL). Compare *COTUR*.

BEAVER. A borough, and the county-seat of Beaver Co., Pa., 23 miles northwest of Pittsburgh, at the confluence of the Ohio and Beaver rivers, on the Pittsburgh and Lake Erie and the Pennsylvania railroads (Map Pennsylvania, A 5). It is the seat of Beaver College (M. E.), opened in 1853, and was the home of Senator Matthew S. Quay, of Pennsylvania. Beaver was settled about 1700. The water works are owned and operated by the borough. Pop., 1900, 2384, 1910, 3456.

BEAVER, JAMES ADDAMS (1837-1914). An American soldier and politician, born at Millers-town, Pa. He graduated at Jefferson College (Canonsburg, Pa.) in 1856 and practiced law from 1859 to 1861. From 1861 to 1864 he served in the Federal army and in the latter year was mustered out with the rank of brevet brigadier general. From 1887 to 1891 he was Governor of Pennsylvania. In 1896 he was appointed judge of the Superior Court of Pennsylvania and was reappointed in 1906.

BEAVER DAM. A city in Dodge Co., Wis., 64 miles by rail northwest of Milwaukee, at the outlet of Beaver Lake, and on the Chicago, Milwaukee, and St. Paul and the Chicago and Northwestern railroads (Map Wisconsin, E 5). The city has parks, a public library, a hospital, an armory, an opera house, and Wayland Academy. It is situated in a fertile agricultural region, has good water power, flour and woolen mills, canning factories, and breweries and manufactures of machinery, lumber, ranges, and seeding machines. Settled in 1841, Beaver Dam was incorporated in 1856. It is governed by a mayor, elected biennially, and a city council. Pop., 1900, 5128, 1910, 6758.

BEAVER DAM CREEK, BATTLE OF. See MECHANISVILLE, BATTLE OF.

BEAVER FALLS. A city in Beaver Co., Pa., 31 miles by rail northwest of Pittsburgh, on the Pennsylvania and New York Central railroads, and on the Beaver River, five miles from its confluence with the Ohio River (Map Pennsylvania, A 5). It is in a region abounding in natural gas and coal and has manufactures of steel, automobile accessories, enamel signs, glass, clay, pottery and tile products, axes, shovels, tubing, and gas engines. The city contains Geneva College (Ref. Presb.), organized 1848, the

Providence Hospital, and a Carnegie library. Beaver Falls, originally called Brighton, was chartered as a borough in 1868. It adopted the commission form of government in 1913. Pop., 1890, 9735, 1900, 10,054, 1910, 12,191.

BEAVER INDIANS. An important Athapascan speaking tribe on the Peace River, Canada. Linguistic evidence indicates some relation to the Plains-dwelling Sarsi (qv).

BEAVER ISLANDS. A group of islands in Lake Michigan, about 40 miles west of the Straits of Mackinac and forming part of Charlevoix Co., Mich. (Map Michigan, D 3). They derive their name from the largest of the group, Beaver Island. The township of St. James, on Beaver Island, had a population in 1910 of 685, Peane township having 370 inhabitants. A lighthouse is maintained at the northeastern end of Beaver Island. The Mormons made an unsuccessful attempt to found a settlement there in 1846.

BEAVER STATE. Popular name of Oregon. See STATES, POPULAR NAMES OF.

BEAVERWOOD. See MAGNOLIA.

BEAZLEY, CHARLES RAYMOND (1868-) An English geographer and historian, born at Blackheath. He was educated at King's College, London, and at Oxford. Subsequently he became professor of history at the University of Birmingham. The Gilt Memorial of the Royal Geographical Society was awarded to him in 1907 for his *Dawn of Modern Geography* (3 vols., 1897-1906). In 1908 he was Lowell Lecturer in Boston, Mass., and he also visited and lectured at several American universities in this same year. Besides articles published in the *Atlantic Monthly*, *American Historical Review*, and *London Geographical Journal*, he is the author of *James of Aragon* (1890), *Hemly the Navigator* (1895), *John and Sebastian Cabot* (1898), *Voyages of Elizabethan Seamen* (1907).

BEBERINE (from *bebery*, the native name of the tree) A bitter alkaloid occasionally used in medicine, in the form of its sulphate, as a substitute for quinine, and, on account of its stimulating action on the stomach, as a stomachic. It is obtained from the bark of the greenheart tree (*Nectandra rodia* of the order Laurineae), indigenous to British Guiana.

BEBERU. See GREENHEART.

BEBEL, br'bel, FERDINAND AUGUST (1840-1913) A leader of the Social-Democratic party in Germany. He was born at Cologne, set up as a master turner at Leipzig in 1864, identified himself with the Socialistic movement among the working classes, and in 1867 became chairman of the permanent committee of the German workmen's unions. In 1869 he assisted at Eisenach in founding the Social-Democratic party, which was closely affiliated with the International Workmen's Association, established at London by Karl Marx. He was accused in 1872 of projected high treason against the Kingdom of Saxony and the German Empire, and of *lèse-majesté* against the German Emperor. On the combined charges he was sentenced to imprisonment for two years and nine months. His incarceration on these and subsequent charges, however, served only to increase his prestige among his party associates. In 1867 he was elected deputy to the North German Diet, and after 1871 he was almost continuously in the Reichstag, representing successively the districts of Rappachau-Meerane, Dresden, Strassburg, and Hamburg. In 1868 he

became connected with the staff of the *Volksstaat* at Leipzig and in 1891 with that of the *Vorwärts* at Berlin. Bebel became known as an effective orator and as the most influential member of his party. He represented the Marx tradition of the Social-Democrats and for this reason was attacked on the one hand by the "opportunists" of the Volmar school and on the other by the "extremists" or "impossibilists." He successfully opposed the efforts of Bernstein in the Congresses of Lübeck (1902) and Dresden (1903) to induce cooperation on given points with the old liberal parties. He received 175 votes for President of the Reichstag in 1912. His publications include *Der deutsche Bauernkrieg* (1876), *Die parlamentarische Tätigkeit des deutschen Reichstags und der Landtage* (1876), *Die Frau in der Vergangenheit, Gegenwart, und Zukunft* (1883), later as *Die Frau und der Sozialismus* (33d ed., 1902, Eng. trans. by Daniel De Leon, New York, 1904), *Charles Fourier* (1888), *Die Mohammed-arabische Kultur Periode* (1889), *Die Sonntagsarbeit* (1888), *Die Lage der Arbeiter in den Backereien* (1890), *Die Sozialdemokratie und das allgemeine Wahlrecht* (1895), *Für Volkswehr gegen Militarismus* (1898), and his memoirs *Aus meinem Leben* (3 vols., 1910-12, Eng. trans. by Ernest Untermann, under the title *My Life*, New York, 1911-12).

BEBEL, HEINRICH (1472-1518). A German humanist. He was born at Ingstetten (Württemberg). He studied at Cracow and Basel, and in 1497 was appointed professor of eloquence and poetry at the University of Tübingen. In 1501 he was crowned poet laureate by the Emperor Maximilian. His best-known works are his *Proverbia Germanica* (1508, new ed., Leyden, 1879), *Facetae* (1506), a collection of jests and anecdotes directed against the Roman Catholic clergy, and the satirical poem *Triumphus Veneris* (6 books, 1509). He was a friend of Erasmus. For his biography, consult Heinrich B. Zapf (Augsburg, 1802).

BECCAFICO, bĕk'kă-fĕ'kô (It. from *beccare*, to peck + *fico*, fig). An Italian name given in the south of Europe to various small and elegant warblers (Sylviidae), used as table delicacies, and specifically to the olive-brown garden warbler or pettychaps (*Sylvia hortensis* or *borm*), migratory in England. It haunts the fig orchards and vineyards and pecks holes in the rind of the ripening fruit, seeming to prefer to all others the variety of fig known in Italy as "fetifero." The damage done is slight, however, and some persons believe that in each instance the bird has found and removed an insect attacking the fruit. After fattening in the autumn upon this fruit their flesh becomes a dainty for the table, and they are shot for market in great numbers, though each affords hardly more than a mouthful of food. See FIG.

BECCAFUMI, bĕk'kă-fŭ'mă, DOMENICO, also called IL MECHERINO (1486-1551). An Italian painter and sculptor. He was the son of Giacomo de Pace, a peasant laborer on the estate of Lorenzo Beccafumi, a wealthy citizen of Siena, who took the boy into his service, and fostered his natural taste for art by placing him in the studio of Capanna in Siena, and afterward sending him to study in Rome. In his best work, painted in rivalry with Sodoma, he approaches that master in excellence, but his later productions are mannered and soulless. His most famous achievement was his series of designs for

scenes from the Old Testament for the wonderful pavement in the cathedral of Siena. For years the best artists worked upon this pavement, which was of white marble, the subject being engraved in black outline, and the border inlaid with magnificent patterns of varied colors. Beccafumi was occupied on this work 1517-25, in 1544 and in 1546. His best-known paintings are the frescoes on the ceiling of the city hall in Siena and an altarpiece in the museum there—his masterpiece. His last years were devoted principally to sculpture, particularly to 18 bronze figures of angels and 12 marble apostles for the cathedral of Siena. He was also an engraver of note, both on copper and wood. For the celebrated wood engravings of Beccafumi's pavement, see ANDREANI, ANDREA.

BECCARI, bĕk'kă-rĕ, ODOARDO (1848-). An Italian naturalist. He was born at Florence and studied at Lucca and Pisa. The three years from 1865 to 1868 he spent in Borneo, and from 1871 to 1876 he traveled in Celebes, New Guinea, and other of the East Indies. The results of his researches were published in the *Nuovo Giornale Botanico Italiano*, which he had founded in 1869, and in the *Bollettino della Società geografica italiana*. He is also the author of a work, in two volumes, entitled *Malesia raccolta d'osservazioni botaniche* (1884-85) and also *Nelle foreste di Borneo, viaggi e ricerche di un naturalista* (1902).

BECCARIA, bĕk'kă-rĕ'a, CESARE BONESANO, MARQUIS OF (1735-93). An Italian economist and jurist, born in Milan. The opinions of the French encyclopedists, as well as those of Montesquieu, had the greatest influence on the development of his thought. He wrote on the currency and other economic subjects, but his greatest work was his *Trattato dei delitti e delle pene* ('Treatise on Crimes and Punishments'), first published in 1764, in which he argues against capital punishment and which established his fame as the originator of more humane methods in dealing with criminals. The work was extremely popular, passing through six editions within 18 months, and was translated into many European languages. Kent unfairly accuses the author of an affected humanity, but did expose the invalidity of some of the arguments brought forward. Beccaria was among the first to advocate the beneficial influence of education in lessening crime. In 1768 Beccaria was appointed professor of public law and economy at Milan and achieved great success as a lecturer. His lectures are published in the Italian collection, *Scrittori classici italiani*, vols. xi and xiv, where also a biographical sketch will be found. A translation of his essay on "Crimes and Punishments" is included in J. A. Farrar's *Crimes and Punishments* (New York, 1872; London, 1880).

BECCARIA, GIOVANNI BATTISTA (1716-81). An Italian physicist. He was professor of experimental physics at Rome, Palermo, and Turin. In 1759 he was commissioned to measure an arc of a meridian in Piedmont. His principal works are *Dell'elettricismo naturale ed artificiale* (Turin, 1753) and *Dell'elettricismo artificiale* (Bologna, 1772). He made a great many experiments with atmospheric electricity, having been the first to demonstrate the existence of "free electricity."

BÊCHE-DE-MER, bâsh'de-mâr' (Fr. sea spade). A holothurian. See TREPANG.

BECHER, bĕk'ĕr, JOHANN JOACHIM (1635-82). A German chemist, born at Speyer. He

acquired an extensive knowledge of medicine, physics, chemistry, and economics, then taught and practiced medicine at Mainz. Later he founded a chemical laboratory at Munich, and in 1660 he was called to Vienna to inaugurate extensive commercial and industrial establishments. Becher had many enemies and was accused—not altogether unjustly—of charlatanism. In his *Physica Subterranea* (1669) we find the first clear mention of the imaginary fiery principle ("*terra pinguis*"), which afterward, under the name of phlogiston, played so important a rôle in chemical theory. Consult Erdberg-Kroczeniewski, *Johann Jochem Becher* (Jena, 1896).

BECHER, SIEGRIED (1806-73). An Austrian political economist, born at Plau (Bohemia). He studied at Prague and Vienna, was appointed professor at the Polytechnic Institute, Vienna, in 1835, and from 1848 to 1852 was employed in the ministry of commerce. His works include *Das österreichische Münswesen von 1524-1838* (2 vols, 1838), *Statistische Uebersicht des Handels der österreichischen Monarchie mit dem Auslande während der Jahre 1829-38* (1841), *Ergebnisse des Handels- und Zollverkehrs der österreichischen Monarchie von den Jahren 1819-43* (1846), *Die Volkswirtschaft* (1853).

BECHSTEIN, BERTHOLD, JOHANN MATTHAUS (1757-1822). A German naturalist, born at Waltershausen (Gotha) and educated at Jena. In 1795 he founded the school of forestry at Waltershausen and in 1800 was appointed director of the Academy of Forestry at Dreissigacker. He published *Die Forst- und Jagdwissenschaft nach allen ihren Theilen* (14 vols, 1818-27), *Abbildungen naturhistorischer Gegenstände* (8 vols, 1796-1810), *Naturgeschichte der Hof- und Stubenvogel* (1792, 5th ed, 1870).

BECHSTEIN, LUDWIG (1801-60). A German novelist, poet, and scholar born at Weimar. He first studied pharmacy, but subsequently devoted himself to the study of philosophy, literature, and history at the universities of Leipzig and Munich and in 1831 was appointed librarian of the Ducal Library at Meiningen. He was a learned student of Germanic folklore, wrote novels, epic and lyric poetry, but is now chiefly known for his collection of fairy stories. His publications include the poems *Der Totentanz* (1831) and *Luther* (1834), the novel *Das tolle Jahr* (3 vols, 1833), the tale, *Fahrten eines Musikanten* (1836-37), and the *Deutsches Märchenbuch* (1845, 45th ed, 1896), and *Neues deutsches Märchenbuch* (1856, 64th ed, 1895).

BECHUANALAND, be-chwa'-na-länd. A name formerly applied to the region in southwest Africa inhabited by the Bechuanas (qv) (Map Cape Colony, H 4). It included the crown territory of Bechuanaland (area 51,254 square miles, pop. 99,538), annexed to the Cape Colony since 1895, and the Bechuanaland Protectorate. The latter comprises all the territory bounded by the Molopo and the Zambezi rivers, the Transvaal province, Southern Rhodesia, and German Southwest Africa. Its area is estimated at 275,000 square miles. Bechuanaland is for the most part a high plateau, with an elevation of from 4000 to 5000 feet. In spite of its almost tropical situation the climate is only a little inferior to that of the Cape province and is very healthful for Europeans. The country is poorly watered, and there are several dry river beds, which fill up during the rainy season. The chief industry is cattle raising.

The protectorate is administered by native chiefs under the guidance of a British resident commissioner. The revenue is derived from customs and a hut tax, the latter collected by native chiefs. The Rhodesia Railways section of the "Cape-to-Cairo" line crosses the protectorate. The population (125,350 in 1911, of whom 1692 white) is made up of the Bamangwato, Bakhatla, Bakwena, Bangwaketse, Bamalete, and other tribes. They have their fixed boundary lines and have retained some of their political institutions. Consult *Annual British Colonial Reports* (London), Macnab, *On Veldt and Farm* (London, 1900).

BECHUANAS, be-chwa'-naz. Tribes of Bantu stock in the Transvaal Colony and centre of South Africa, among the most important of which are the Bakwena and Bamangwato. In this area they rank second only to the Kaffir so far as their historical importance is concerned. In response to civilizing influences and from natural adaptability the Bechuanas are among the most advanced nations of Africa. Their strong military and political organizations are shown in the formation of powerful native "kingdoms" and the extensive migratory movements of the tribes, though they are peaceable in disposition and skilful agriculturists. Kaffir corn (sorghum) forms the main crop. The women cultivate the soil, while the men tend the herds, which are kept for milk rather than for meat. Before the extinction of the larger mammals the chase was of some economic importance. In the manufacture of the skin cape ("kaross") and in fact in skin work generally the Bechuana excel all other South African tribes. They are also noted as blacksmiths. Their habitations are far more complex than those of the Zulu. A thatched roof is supported by a circle of tree trunks and a central pole, the walls, which do not touch the roof, are of wattle and daub, and there is also a courtyard, while a veranda is obtained by flattening one side of the wall, causing the eaves to project and raising a low platform underneath. At puberty both boys and girls are obliged to undergo a severe course of training. Totemism prevails, and "rain doctors" exercise much influence. In color they are brown rather than black, their height averages 1.684 meters.

BECK, ADAM (1857-) A Canadian legislator. He was born at Baden, Ont., and was educated at Rockwood Academy and Galt Grammar School. After succeeding as a manufacturer he became interested in municipal affairs and in 1902-04 was mayor of London, Ont. In 1902 he was elected to the Ontario legislature, and in 1905 was appointed a member, without portfolio, of the Conservative cabinet of Sir James Pliny Whitney, the Ontario premier. He became prominently identified with the work of developing and distributing electric power, generated at Niagara Falls, to the people of Ontario, and in 1906 introduced legislation creating the Hydro-Electric Power Commission, of which he was appointed chairman.

BECK, CARL (1856-1911). A German-American physician, born at Neckargemünd, Baden. He studied at the universities of Heidelberg, Berlin, and Jena, came to the United States in 1882, and was appointed surgeon to St Mark's Hospital, New York City, in 1886. Subsequently he became professor of surgical pathology in the College of Physicians and Surgeons of Chicago. He published a *Manual of Surgical Anesthetics*.

(1895), a *Text-book on Fractures* (1900), *Amerikanische Sticflichter* (1905), and *Surgical Diseases of the Chest* (1907)

BECK, CHRISTIAN DANIEL (1757-1832) A German scholar of distinction. He was born at Leipzig and studied at the university there. In 1785 he was appointed professor of Greek and Latin literature at the university and in 1819 professor of history. In 1825 he resumed the former chair. His method of literary instruction was historical rather than critical. From 1819 until his death he was editor of the *Allgemeines Repertorium der neuesten in- und ausländischen Literatur*. His works include the following: *Anleitung zur Kenntnis der allgemeinen Welt- und Volksgeschichte* (4 vols, 1787-1807), *Commentarii Historici Decretorum Religionis Christianæ et Formulæ Lutheranae* (1801), *Commentarii Societatis Philologicae Lipsiensis* (1801-04), and editions of Aristophanes (with Invenizzi and Dindorf), Pindar, Euripides, Thucydides, Pædo Albinovanus, and Calpurnius Siculus, Apollonius Rhodius, Plato, and Cicero.

BECK, JAMES BURNIE (1822-90) An American politician, born in Dumfriesshire, Scotland. He graduated at the law school of Transylvania University, Lexington, Ky., and from 1866 to 1875 was a member of Congress. From 1876 until his death he was United States Senator from Kentucky. He was a member of the commission appointed to define the Maryland-Virginia boundary and was prominent in the discussion of tariff and currency questions.

BECK, JOHANN HEINRICH (1856-) An American composer and conductor. He was born at Cleveland, Ohio. In 1879-82 he was a pupil of the Leipzig Conservatory, where he studied violin and composition. In 1895 he conducted the Detroit Symphony Orchestra, and in 1900 he became conductor of the Cleveland Symphony Orchestra. His works include a cantata *Deukalion*, a symphonic tone poem *Aus meinem Leben*, an overture to Byron's *Lara*, an overture *Romeo and Juliet*, a *Moorish Serenade*, a string sextet.

BECK, JOHANN TOBIAS (1804-78) A German theologian, born at Balingen, in Württemberg. He studied theology at Tübingen (1822-26), spent several years in the ministry, and was a professor, first at Basel, and then, after 1843, at Tübingen. He believed in orthodox Bible Christianity and was opposed to the "Tübingen School," which then flourished under the leadership of his fellow professor, F. C. Baur. Among his numerous publications, *Outlines of Biblical Psychology* (1877) and *Pastoral Theology of the New Testament* (1885) have been published in English. For his life, consult Riggenbach (Basel, 1887). Consult Adolf Schlatter, "J. T. Beck's theologische Arbeitsmethode" in *Beiträge zur Förderung christlicher Theologie* (4 vols, 1904).

BECK, KARL (1817-79) An Austrian poet, born of Jewish parents in Baja, Hungary. He studied in Vienna and Leipzig, lived in Berlin from 1844 until the outbreak of the Revolution of 1848, and subsequently in Vienna, where he was an editor of the *Lloyd*. Introduced to the literary world by Kuhnle, the editor of *Die elegante Welt*, he made his first great success with his *Nächte, gepanastete Lieder* (1838). His poetic writings skillfully interpret the national life and spirit of Hungary. *Jankó, der ungarische Rosshirt* (1842, 3d ed, 1870) is consid-

ered by many his best work. Other volumes are *Gesammelte Gedichte* (1844, 9th ed, 1869) and *Aus der Heimat* (1852, 4th ed, 1862). Consult Heinrich Nellen, *Aus Karl Beck's dichterischen Frühzeit* (Münster, 1908).

BECK, LEWIS CALED (1798-1853) An American physician, chemist, and mineralogist, born in Schenectady, N. Y. He graduated at Union College in 1811, was professor of chemistry in Rutgers College, and later in Albany Medical College. He was the author of a number of books and papers on botany and chemistry, also of an elaborate report on the mineralogy of New York, based upon his researches as mineralogist of the New York Geological Survey of 1835-41, which was published as one of the volumes of the *Natural History of the State of New York* (1842).

BECK, RICHARD (1858-) A German geologist, who has contributed much to the science of ore deposits. He was born at Aue and pursued the study of the natural sciences at the universities of Leipzig and Freiburg. In 1883 he joined the staff of the geological survey of Saxony, on which he served until his appointment, in 1895, to the professorship of geology at the Mining Academy of Freiberg. During his work in Saxony he published many reports relating to the aërial geology of that country, as well as special investigations in the fields of petrology and economic geology. In 1900 appeared his *Lehre von den Lagerstätten*, a work that has been translated into French and English (New York, 1905) and a standard for the study of the physical features and origin of the metalliferous deposits.

BECKE, BEKE, FRIEDRICH (1855-) An Austrian mineralogist and geologist, who became in 1898 professor of mineralogy at the University of Vienna. Born at Prague, he pursued the study of natural science at Vienna, where, on the completion of his training, he served for a time as lecturer in the geological sciences. He received an appointment to the University of Grenowitz in 1882, to Prague in 1890, and from there was called to Vienna, where he succeeded Tschermak in the chair of mineralogy and took up the editing of the periodical, *Mineralogische und Petrographische Mitteilungen*, founded by his predecessor. He is the author of many papers on geology and mineralogy, but his best-known contribution perhaps is a method for the determination of rock-forming minerals by means of their light-refractive properties, published by the Vienna Academy in 1893.

BECKE, GEORGE LEWIS, pen name LOUIS BECKE (1857-1913) An Australian novelist born at Port Macquarie, New South Wales. Becke wrote single-handed and with Walter Jeffery many tales of adventure in the Pacific islands, where the lawless white man corrupts the native. His best work deserves to rank with the short stories of Kipling and of Dawson. Among these writings are *By Reef and Palm* (1894, reissue, 1913), *Rodman the Boat-Steerer, Adventures of a Supercargo: The Ebbing of the Tide* (1896, reissue, 1913); *Pacific Tales* (1897), *Wild Life in Southern Seas* (1897), *The Mutineer* (1899), with Walter Jeffery, *Ridan the Devil* (1899); *The South Sea Pearler* (1900), *Tom Walrus* (1900, 1913), *The Tapu and Other Stories* (1901), *By Rock and Pool* (1901); *Breachley Black Sheep* (1902), *The Jelassoo Brig* (1902); *Helen Adair, Chunkey's Flats* (1903), *Tom Gerrard* (1904);

Notes from my South Sea Log (1905), *Sketches from Normandy* (1906), *The Adventures of Louis Blaise* (1909) See AUSTRALIAN LITERATURE

BECKENHAM, bek'en-am A town in Kent, England, 8½ miles southeast of London, with two stations on the London, Chatham, and Dover Railway. The municipality owns an electric lighting plant and public baths and maintains a technical institute. It is a residential suburb of London, and its most noteworthy building is the church of St George, the tower of which was completed in 1903, and contains bells in memory of Cecil Rhodes. Pop., 1901, 20,700, 1901, 26,300, 1911, 31,692.

BECKER, August (1828-91) A German journalist and novelist, born at Klingenmünster. He studied at Munich, from 1855 to 1859 was a member of the staff of the *Allgemeine Zeitung* of Augsburg, and from 1859 to 1864 editor of the liberal *Isar-Zeitung*. He published *Jungfrüdel, der Spielmann* (1854), a poem which established his reputation, and considerable fiction, including *Des Rabbi Vermächtnis* (1866), *Verhehmt* (4 vols., 1868), which was attacked for containing alleged portraits of contemporaries of the Bavarian court, and *Der Kuster von Horst* (1889).

BECKER, GEORGE FERDINAND (1847-) An American geologist, born in New York City. He graduated at Harvard in 1868 and subsequently pursued his scientific studies at Heidelberg and at Berlin. He was instructor in mining and metallurgy at the University of California from 1875 to 1879, and was associated with the United States Geological Survey from 1879 to 1892, and from 1894 to 1897. From 1879 to 1883 he was special agent of the tenth census and in 1896 made an examination of the gold and silver mines of South Africa. In 1898 he accompanied the United States army to the Philippine Islands as geologist and upon his return was appointed director of the Division of Chemical and Physical Research. The following is a partial list of his principal works: *Atomic Weight Determinations*, *A Digest of the Investigations Published since 1814* (1880), *Geology of the Comstock Lode and the Washoe District* (1882), *Statistics and Technology of the Precious Metals* (with S. F. Emmons, 1885), *Geology of the Quicksilver Deposits of the Pacific Slope* (1888), *Gold-Fields of the Southern Appalachians* (1895), *Geology of the Philippine Islands* (1901), *Experiments on Schistosity and Slaty Cleavage* (1904), *Relations between Local Magnetic Disturbances and the Genesis of Petroleum* (1909), *Age of the Earth* (1910), *Biographical Notice of Samuel Franklin Emmons* (1911), *Reports on the gold fields of South Africa and Alaska*. Becker's most important work was in connection with the origin and mode of occurrence of ore deposits, especially those of the Western States, to the knowledge of which he made extensive contributions.

BECKER, JEAN (1833-84) A German violin virtuoso. He was born at Mannheim and studied with Kettenus and Vincenz Lachner. After a short period as a conductor at Mannheim he entered upon a series of brilliant concert tours (1858) and finally settled in Florence, Italy, where in 1866 he established the famous Florentine Quartet.

BECKER, KARL (1823-96) A German statistician, born at Strohausen (Oldenburg). He

fought in the campaigns of 1848-50 against Denmark and rose to be a captain in the army of Schleswig-Holstein. In 1855 he organized the statistical bureau of Oldenburg, of which he became director, and from 1872 until his retirement in 1891 was director of the statistical office of the German Empire. He edited *Statistische Nachrichten über das Grossherzogthum Oldenburg* (1857-72) and from 1877 the *Monatshefte zur Statistik des Deutschen Reichs*. His writings include *Zur Berechnung von Sterbetafeln* (1874).

BECKER, KARL FERDINAND (1775-1849) A German philologist, born at Lieser, Prussia. He studied at the University of Göttingen, became a physician at Offenbach in 1815, and there opened a small private school. Here his work as an instructor led him to make researches in philology, which for a time met with considerable recognition. His view was that all languages are subject to certain logical and philosophical principles, and that thus a science of comparative philology might be arrived at by a process of deduction. This method was later largely discredited by the investigations of Jakob Grimm and others, whereby comparative philology is based on principles of history and ethnology and is attained inductively. Becker's works include *Deutsche Wortbildung* (1824), *Ausführliche deutsche Grammatik* (3 parts, 1836-39), and *Der deutsche Stil* (1848, 3d ed., revised by Lyon, 1884). Consult Helmsdorfer, *Becker der Grammatiker* (Frankfort, 1854).

BECKER, KARL FERDINAND (1804-77) A German writer on music, and organist. He was born in Leipzig. He was made professor of organ playing at the Conservatory in 1843, but resigned in 1856. Among his works on the history of music, which place him in the same rank with Kieselwetter and Winterfeld, the most important are *Die Hausmusik in Deutschland im 16., 17., und 18. Jahrhundert* (1840), *Die Tonkünstler des 19. Jahrhunderts* (1847). He was also among the most active contributors to the *Neue Zeitschrift für Musik*, and one of the original founders of the German *Bach Gesellschaft*.

BECKER, KARL FRIEDRICH (1777-1806) A German historian, born in Berlin. He studied at Halle and for a time was a teacher at Kottbus and Berlin. He wrote *Erzählungen aus der alten Welt für die Jugend* (3 vols., 18th ed., 1890), and a *Weltgeschichte für Kinder und Kinderlehrer* (9 vols., 1801-05), since frequently reprinted and so enlarged and revised by Wolfmann, Menzel, Loebl, and others as to leave, in spite of the gain in fullness and scientific accuracy, scant traces of its original charm of style and arrangement.

BECKER, KARL (LUDWIG FRIEDRICH) (1820-1900) A German genre and historical painter, born in Berlin. He was a pupil of Von Klover and Hess, afterward studied in Paris, Rome, and Venice, and first attained success with historical and mythological paintings. Later he showed a preference for subjects taken from the brilliant life of the Venetian Renaissance. The chief characteristics of his manner are historical fidelity, skillfulness of technique, and especially a richness of coloring, which in his later works so predominates as to make their interest merely external and decorative. Of his early works the best examples are "Benedictus Begging" (1850) and the frescoes of the Niobidensaal of the Berlin Museum. Among the large number of pictures in his later style may be mentioned

"The Doge in Council" (1864), "Charles V Visiting Titian" and "Durer in Venice" (1873), "In the Picture Gallery" (1874), "Emperor Maximilian Receiving a Venetian Embassy" (1877).

BECKER, NIKOLAUS (1809-45). A German poet, born at Bonn. He is the author of the well-known song beginning, "Sie sollen ihn nicht haben, den freien, deutschen Rhein," which, as an outburst of the popular German sentiment of the day, became widely celebrated. There are more than 100 different musical settings of it, none of which, however, has become popular. The song was answered by a number of French poets, notably Alfred de Musset ("Nous l'avons eu, votre Rhin allemand") and Lamartine ("Marseillaise de paix"). Becker's celebrated poems (Cologne, 1841) are quite mediocre.

BECKER, OSKAR (1839-68). A German political fanatic, known for his attempted assassination of King William I of Prussia. He was born at Odessa. In 1859 he entered Leipzig University and in 1861, at Baden-Baden, endeavored to kill the King by firing two shots from a pistol at a distance of three paces. The monarch suffered only a slight injury of the neck. The assassin, in a letter found upon him, stated as his motive the conviction that King William was unequal to the task of uniting Germany. He was sentenced to 20 years' imprisonment, but was pardoned by the King, and released in 1866, with the stipulation that he should leave Germany forever. He lived for a time in Chicago and subsequently in Alexandria, Egypt, where he died.

BECKER, PHILIP JOHANN (1809-86). A German radical. He was born at Frankenthal, in the Palatinate, grew up extremely democratic in his beliefs, and became a common laborer by preference. For his participation in the revolutionary movements of 1830 he suffered imprisonment. He finally turned to Switzerland, which was then the home of political outcasts from every land. There he fought under Ochsenbein, against the Catholic cantons of the Sonderbund. Upon the failure of Becker's attempt to revolutionize Baden (1848), Becker, who had organized troops for his support, returned to Switzerland and put himself at the head of an expedition of German and Swiss auxiliaries to support the cause of freedom in Rome and Sicily. Their movements being frustrated, he led his troops (1849) into the Palatinate and the Grand Duchy of Baden, where a rising had taken place, and took a prominent part in many engagements, displaying great courage and strategic skill. Becker afterward became known as a leader of the young Socialist party, an active agitator on behalf of the International Association of Workmen, and the editor of many Socialist organs. Later he became a revolutionary collectivist and an adherent of Karl-Marx.

BECKER, RUDOLPH ZACHARIAS (1759-1822). A German educator and author. He was born at Erfurt and studied theology at the University of Jena. As instructor at the Basewitz "Philanthropin" at Dessau, he founded a journal entitled *Dessauische Zeitung für die Jugend und ihre Freunde*, which he afterward continued at Gotha (1784), under the title of *Deutsche Zeitung für die Jugend*, and which in 1796 was published as the *Nationalzeitung der Deutschen*. In consequence of an article in the latter publication he was arrested by the French and imprisoned at Magdeburg for 17 months. His experiences during that period were admirably

described in the interesting narrative entitled *Beckers Leiden und Freuden in 17monatlicher französischer Gefangenschaft* (1814)—a work of genuine historical merit. One of his publications, bearing the title of *Not- und Hilfsbuchlein für Bauerleute, oder lehrreiche Freuden- und Trauergeschichte des Dorfes Miltheim* (2 vols 1787-98), became exceedingly popular.

BECKER, VALENTIN EDUARD (1814-90). A German composer. He was born at Würzburg where he became celebrated as a composer of popular male choruses (*Das Kirchlein*, etc.). He also wrote several masses and two operas, entitled *Die Bergkappen* and *Der Deserteur*.

BECKER, WILHELM ADOLF (1796-1846). A German classical scholar, born at Dresden. He studied at Leipzig and became professor of archaeology at that university in 1842. Two of his works were extremely popular: *Gallus oder Römische Scenen aus der Zeit Augusts* (1838, 3d ed by Goll, 1880-82), and *Charicles oder Bilder altgriechische Sitten* (1840, revised by Goll, 1877-78). The letterpress in each book portrays the life of which it treats in the form of a romance. Ample footnotes and excursions fortify the statements in the text. Both books were translated into English by Frederick Metcalfe, the translations have passed through many editions. Becker also began the elaborate *Handbuch der Römischen Alterthümer*, which was completed by Mauquardt and Mommsen. He wrote also *De Comicis Romanorum Fabulis* (1837), *De Romæ Veteris Murs atque Portis* (1842), *Die Römische Topographie* (1844), and *Zur Römischen Topographie* (1845).

BECKER, WILHELM GOTTLIEB (1753-1813). A German archaeologist and author, born at Oberkallenberg, Saxony, and educated at Leipzig. He became professor at the Ritterakademie, in Dresden, in 1782. In 1795 he was appointed director of the Dresden Gallery of Antiques and of the Coin Cabinet, and in 1805 he was also intrusted with the superintendence of the celebrated Green Vault. He published *Augustum, Dresdens antik Denkmäler enthaltend* (2 vols, 1805-09, 2d ed, 1832-37), with 162 engravings, *Zweihundert seltene Münzen des Mittelalters* (1813), and a large number of popular handbooks of art.

BECKERATH, BÉK'E-RAT, HERMANN VON (1801-70). A Prussian statesman. He was born at Krefeld, in Rhinish Prussia, and after acquiring a considerable fortune in banking he turned his attention to politics. He served in the Diet of his province and in the Prussian Diet of 1847 and went as a deputy to the Frankfurt Parliament of 1848, where he was an unwavering advocate of German unity and political liberty. His eloquence exercised considerable influence on this assembly. He was appointed Minister of Finance in the ministry constituted for Germany under the auspices of the Parliament, and presently was called to Berlin to construct a cabinet. He declined the task, because the King of Prussia would not give him a free hand in his scheme for the unification of Germany. When the reactionary movement set in, he resigned the posts he held under the government, but continued, as a member of the Prussian Second Chamber, a vigorous opposition to the Manteuffel Ministry, which had deserted the cause of German unity. He withdrew from politics in 1862. After the return of Manteuffel to power in 1858, Beckerath was again elected a member of the Prussian Second Chamber, but

was obliged to decline the honor on account of failing health. He devoted his later years to the affairs of Krefeld, his native town. Consult Kopstadt, *Hermann von Beckerath* (Brunswick, 1875).

BECKERS, bēk'ers, HUBERT (1806-89) A German philosopher. He was born at Munich and studied at the university there. In 1832 he was appointed professor of philosophy at the Lyceum at Dillingen and in 1847 professor of philosophy at the University of Munich. He is chiefly known as an expositor of the philosophy of Schelling. His works include *Cantica Spiritualia* (1845-47), *Ueber die Bedeutung der Schellingschen Metaphysik* (1861), *Ueber die wahre und bleibende Bedeutung der Naturphilosophie Schellings* (1866), *Aphorismen über Tod und Unsterblichkeit* (1889).

BECKET, THOMAS A (c1118-70) Archbishop of Canterbury, born in London. He was the son of a merchant and was educated at Merton Priory (Surrey), London, and Paris, and later studied canon law at Bologna and Auxerre. After earning his living for a time as a notary and clerk, he became connected with Archbishop Theobald of Canterbury, receiving two church livings and various offices. In 1155 Henry II made Becket Chancellor of England. His duties were numerous and burdensome and were vigorously discharged. His style of living was ostentatious, and when necessary he equipped troops at his own expense and commanded them in person. On May 23, 1162, he was elected Archbishop of Canterbury, through the King's influence. His private life in the past had been above reproach, and as archbishop he was noted for his zeal, devotion, and piety. He soon came into conflict with the King. In 1163 he opposed him in a matter of taxation, acting as the champion of the people. He also maintained vigorously all the prerogatives of the Church, in spite of the King's anger and hostility. Henry (1164) caused the Constitutions of Clarendon (q.v.) to be drawn up, embodying, as the King asserted, the ancient customs and laws of the country, but Becket refused to abide by them, declaring them contrary to canon law. A contest followed, in which the archbishop firmly resisted the King's authority whenever it conflicted with what he held to be the rights of the Church. Henry was determined to humble the archbishop, and under various pretexts mulcted him in large sums of money. Finally, when Becket, driven to desperation, appealed to the Pope, he was declared a traitor and compelled to flee secretly from England, Nov 2, 1164. For the next six years he remained in France. Henry confiscated Becket's property and was threatened by him with excommunication and interdict. Various attempts at reconciliation were made in vain. Finally, in 1170, after the King's son had been crowned by the Archbishop of York, in direct opposition not only to custom and law, but also to the express commands of Becket and the Pope, Henry felt obliged to make terms. Becket, anxious to return to England, was promised the restoration of all his confiscated property. He landed in England on Dec 1, 1170, and immediately the struggle between King and prelate broke out anew. Becket refused to absolve the bishops who had taken part in the coronation, because, after having disobeyed the Pope, they were unwilling to swear to obey in the future. On Dec 29, 1170, four knights went to Canterbury to demand, in the name of the

King, the absolution of the bishops. Becket refused, alleging the necessity of obedience to the Pope. The knights withdrew from the cathedral transept where they were, only to return with an armed following. Becket forbade his attendants to lock the doors, saying, "God's house must be closed against no man." There, by the altar, he was murdered, declaring, "For the name of Jesus and for the defense of the Church I am ready to embrace death." Henry was compelled to make heavy concessions and to do public penance at the martyr's tomb to avoid the ban of excommunication. The murderers, having repaired to Rome as penitents, were sent on a pilgrimage to Palestine. Feb 21, 1172, Becket was canonized by Pope Alexander III, and the anniversary of his death was set apart as the day of his festival. In 1220 his bones were raised from the grave in the crypt, where they had been hastily buried the day after his murder, and by order of King Henry III were deposited in a splendid shrine, which for three centuries continued to be the object of one of the great pilgrimages of Christendom and still lives in English literature in connection with Chaucer's *Canterbury Tales*. At the Reformation Henry VIII despoiled the shrine, erased Becket's name from the calendar, and, according to a doubtful account, caused his bones to be burned and scattered to the winds. The best collection of sources for the life of Becket is contained in Robertson and Shepard's (ed.) *Materials for the History of Archbishop Becket*, Rolls Series (London, 1875-85). These include a number of biographies by contemporaries and many letters. The best modern work is Canon Morris, *Life and Martyrdom of St Thomas Becket* (2d ed., London, 1885). Consult Hook, *Archbishops of Canterbury*, vol 11 (London, 1862); Thompson, *Thomas Becket* (London, 1889); Freeman, *Historical Essays* (1st series, London, 1871); Stubbs, *Constitutional History* (Oxford, 1895); Hutton, *St Thomas of Canterbury* (London, 1889); Abbott, *St. Thomas of Canterbury His Death and his Miracles* (1898); Ward, *Canterbury Pilgrimages* (London, 1904).

BECKFORD, WILLIAM (1760-1844) An English author, born Oct 1, 1760, he was the son of William Beckford, alderman and twice Lord Mayor of London. When he was about 11 years old, his father died, and he inherited the greater part of a very large fortune, consisting of estates in Jamaica and of Fonthill Abbey in Wiltshire. His annual revenue is said to have exceeded £100,000. Young Beckford evinced unusual intellectual precocity, for before he was 17 years old he composed a satirical essay, entitled *Biographical Memoirs of Extraordinary Painters*, a sort of parody on the usual biographies of eminent artists. In 1777 he went with a tutor to Geneva, where he remained about 18 months, and in the years succeeding he made tours through Flanders, Germany, Italy, Portugal, and Spain. In 1783 he married Lady Margaret Gordon, daughter of the fourth Earl of Aboyne, and left at once for Switzerland, where they remained until the death of Lady Margaret in 1786. He had already written *Vathek* An Arabian Tale. Of its composition, which may be assigned to 1781 or 1782, he says "It took me three days and two nights of hard labor. I never took off my clothes the whole time." This famous romance, written in French and published at Lausanne and Paris in 1787, was translated from the French MS by Samuel Henley

and published, without Beckford's consent, in London in 1786. In 1790 Beckford sat in Parliament for Hendon. In 1794 he accepted the Chiltern Hundreds and again left England. He went to Portugal, purchased an estate near Cintra, and occupied for a time that "paradise" which Byron commemorated in *Childe Harold*. Tormented by unrest, he returned to England and settled in 1796 at Fonthill, where he sought to realize the magnificence of his Oriental dreams. He erected a new building at Fonthill, the most prominent feature of which was a tower about 300 feet high. Beckford resided there till 1822, when he was compelled to dispose of the estate and house, with all its curiosities. It was bought by Colonel Farquhar for £330,000. Soon after, the great tower, which had been raised upon an insecure foundation, fell to the ground. On the sale of Fonthill, Beckford removed to Bath and immediately proceeded to erect another lofty building, the plan of which also included a tower, 100 feet high. While residing there, he did not mingle in Bath society, and the most improbable stories concerning the rich and morose genius in their neighborhood were circulated among the citizens and were believed by them. During all his life Beckford was a hard-working student with a passion for books. Some of his purchases were Imperial in their way. He bought Gibbon's library at Lausanne, to amuse himself when he happened to be in that neighborhood. He went there, read in the fierce way that he wrote, three days and two nights at a sitting, grew weary of his purchase, and handed it over to his physician, Dr. Scholl. Besides *Vathek* and his youthful essay, Beckford published two sentimental novels and sketches of his travels. Consult Garnett, *Vathek*, with a critical essay (London, 1893), and Melville, *The Life and Letters of William Beckford of Fonthill* (London, 1910).

BECKMANN, JOHANN (1739-1811). A German teacher and writer on technology and agriculture. He received instruction from Linnaeus and in 1766 was appointed professor of philosophy at Göttingen. In 1770 he became professor of agricultural economics, holding this position over 35 years. Among his works are *Grundsätze der deutschen Landwirtschaft* (1769, 6th ed., 1806), *Anleitung zur Technologie* (1776, 5th ed., 1809), *Anleitung zur Handelswissenschaft* (1789), *Beiträge zur Geschichte der Erfindungen* (5 vols., 1780-1805, Eng. trans.).

BECKWITH, JAMES CARROLL (1852-) An American portrait and genre painter. He was born at Hannibal, Mo., and studied in Chicago, New York, and (1873-78) with Carolus Duran and Yvonne in Paris. Soon after his return to New York, in 1878, he was elected to the Society of American Artists and in 1894 to the National Academy of Design. He was for 18 years professor in the Art Students' League, New York, and is a member of the National Institute of Art and Letters. He decorated one of the domes of the Manufacturers Building at the Chicago Exposition of 1893, but portraiture occupies his chief attention. Among his best-known portraits are those of General Schofield, Judge Palmer, Colonel Appleton, Mark Twain, and the Ogden and Parish families. At the St. Louis Fair (1904) he exhibited "The Nautilus" and portraits of Mrs. Beckwith and F. H. Hitch, in 1905, several portraits, including that of Richard H. Ewart, Col. Charles Henry Jones

(1906), Harold de Raasloff (1909), and "The Veil" (1912). He is represented by portraits in Yale University, Johns Hopkins, and West Point. The New York Public Library has a fine collection of his clayon and pencil drawings.

BECKX, PIÉRE, PIERRE JEAN (1795-1887). The twenty-second General of the Jesuits. He was born at Sichen, in Belgium, and became a member of the Society of Jesus in 1810 and the head of the order in 1853. Quite early his superiors recognized his rare abilities and sent him on several delicate missions. When Duke Ferdinand of Anhalt-Köthen became a convert to the Roman Catholic religion, young Beckx was appointed his confessor and officiated for some years as priest of the new church which was built at Köthen. After the death of the Duke Beckx continued at the court with the widow, the Duchess Julia, whom at a later period he accompanied to Vienna. In 1847 he became procurator for the Society in Austria. In the following year the Jesuits were driven from Austria, and Father Beckx went to Belgium, where he was nominated rector of the Jesuit College at Louvain. When the Jesuits were reestablished in Austria, he zealously supported the projects of the government, which were highly favorable to the interests of the Church. He lent his aid to the Primate of Hungary, Cardinal Szczepkowsky, who succeeded in obtaining the reinstatement of the Jesuits in that portion of the Empire and in founding the novitiate at Tynau. He was sent as a delegate to the assembly at Rome in 1853 which was to choose a successor to Father Roothaan and was elected General of the order. The prodigious success of the Jesuits since that time, especially in non-Catholic countries, is due in no slight degree to the ability and foresight of Father Beckx. Besides some minor writings and occasional discourses, he published a *Month of Mary*, which has passed through numerous editions and has been translated into many languages. He resigned his office in 1884, three years before his death.

BECKY SHARP. The significant name of the chief character in Thackeray's *Vanity Fair*. Endowed with uncommon wit, she is audacious, intriguing, and determined to rise in the world. She is incapable of love, but marries Rawdon Crawley for his position, which she is obliged to forfeit because of her scandalous relations with Lord Steyne.

BECQ DE FOUQUIÈRES See FOUQUIÈRES, BECQ DE.

BECQUE, BÉK, HENRI FRANÇOIS (1837-99). A French dramatic author. He was born in Paris, and first became known by his libretto for the opera *Sardanapale* (1867, music by Do Joncières). He was a member of the staffs of several journals, was for a time a banker, and as playwright met with varying fortunes, his *Michel Paupre* (1870) and *L'enlèvement* (1871) being failures, while his *Parisienne* (1885) achieved decided success. Consult James G. Huneker, *Iconoclasts, a Book of Dramatists* (New York, 1905).

BECQUER, BÀ-KÀR', GUSTAVO ADOLFO DOMÍNGUEZ (1836-70). A Spanish poet, born at Seville, the son of the genre painter, José Domínguez Becquer. An orphan at 10, he was brought up by his godmother, whose favor he lost by refusing to adopt a regular profession. At 18 he came, penniless, to Madrid, where he earned a precarious living by journalistic hack work and by translating foreign novels and where,

after a fruitless struggle of 15 years, he died. He left three volumes, made up of poems and prose legends. The latter, of which the best known is *Leyendas españolas*, are weird, morbid tales, strongly reminiscent of Hoffman, just as his poems are reminiscent of Heine, though lacking Heine's inimitable irony, and imbued with mysticism. His collected works (Madrid, 1885) have a biographical introduction by Correa, who also published the fifth, enlarged, edition, also in three volumes, in 1904. Mrs Humphry Ward published in *Macmillan's Magazine*, 1883, an excellent article concerning Becquer. Consult also Olmsted's Introduction to his edition of some of Becquer's *Legends, Tales, and Poems* (Ginn, 1907) for the fullest account of the poet's life. An excellent complete translation of his *Leyendas españolas* was made by Cornelia Frances Bates and published (New York, 1909) with a charming introductory study by her daughter, Katharine Lee Bates.

BEQUEREL, bek'rél', ALEXANDRE EDMOND (1820-91). A French physicist, son of Antoine Cesar Becquerel. He was born in Paris and inherited the scientific tastes and talents of his father, whom he assisted in many of his investigations. He was elected a member of the Academy of Sciences of Paris in 1863 and in 1878 succeeded his father as professor of physics in the Conservatoire des Arts et Metiers. In addition to cooperating with his father, he carried on a number of experiments in electricity and light, particularly in phosphorescence, an instrument known as the phosphoroscope having been invented by him. He is also well known for his work on the solar spectrum and the spectrum of the electric light. In addition to a large number of scientific papers published in French journals, Edmond Becquerel was the author of *La Lumiere, ses causes et ses effets* (1867), and, in cooperation with his father, of *Éléments de physique terrestre et de météorologie* and other works.

BEQUEREL, ANTOINE CÉSAR (1788-1878). The first of several generations of distinguished French physicists. He was born at Châtillon-sur-Loing, in the department of Loiret. In 1808 he entered the French army as an officer of engineers and served with distinction in Spain under Marshal Suchet. On his return to France he was appointed inspector of the Ecole Polytechnique, and after serving in that capacity and with the general staff of the army, at the Peace of 1815 retired from active service to pursue scientific studies. He became professor of physics at the Museum of Natural History in Paris in 1837. His attention was principally devoted to electricity and magnetism, and among his researches are many important discoveries. While studying the physical properties of yellow amber Becquerel had occasion to make experiments on the liberation of electricity by pressure. This led him to investigate the laws governing the production of electricity by chemical action. The result of his study was the overthrow of Volta's theory of contact and the construction by him of a constant cell. The production of a current by contact between different pieces of the same metal and the determination of the resistance of various liquids and atmospheric electricity were also investigated, and he was greatly interested in meteorology and thermo-electric apparatus. He also discovered a method of determining the internal temperature of human and animal bodies, and

in physiological investigations demonstrated that when a muscle contracts there is a development of heat. Becquerel may be considered one of the creators of electro-chemistry. His labors in this branch of science secured for him election to the Paris Academy of Sciences. After 1828 he applied electro-chemistry in the reproduction of mineral substances and in various electrolytic processes. In 1837 he was elected a member of the Royal Society of London and received the Copley medal. Among his works, in several of which he had the cooperation of his son, Alexandre Edmond, were the *Traité de l'électricité et du magnétisme* (1855), *Éléments d'électrochimie* (1843), *Traité de physique* (1842), *Éléments de physique terrestre et de météorologie* (1847), *Resumé de l'histoire de l'électricité et du magnétisme* (1858).

BEQUEREL, ANTOINE HENRI (1852-1908). A French physicist. He was the son of Alexandre Edmond Becquerel and was born in Paris. He was educated at the Ecole Polytechnique and the Ecole des Ponts et Chaussées. He became professor of physics in the Museum of Natural History in 1878 and in 1895 at the Ecole Polytechnique. He was admitted to the Institute in 1889. His researches, published chiefly in *Comptes Rendus*, have dealt mainly with such optical subjects as the rotation of polarized light by a magnetic field, phosphorescence, spectroscopic studies, and the invisible radiation from uranium, to which the name of Becquerel rays has been given. For this discovery he received the Rumford medal of the Royal Society of England. The Nobel prize for physics in 1903 was divided between M. Becquerel and M. and Mme. Curie, for their researches in radio-activity.

BEQUEREL RAYS. See BEQUEREL, ANTOINE HENRI.

BECSE, bek'sé (or Ó-Becse, Old Becse, called also Szerb-Becse, Serb Becse). A town of Hungary, in the county of Bács-Bodrog, on the right bank of the Theiss, near its junction with the Franzenskanal (which connects it with the Danube), 45 miles south of Szeged (Map Hungary, G 4). It has fisheries and flour mills and carries on an extensive trade in grain. Pop., 1900, 18,865, mostly Magyars. New, or Turkish, Becse (Uj-Becse or Torok Becse) is situated on the left bank of the Theiss, in the county of Torontál, 6 miles below Becse proper. It has trade in fruit and grain. Pop., 1900, 7725.

BECSKEREK, beč'kér-ek. Two towns in Hungary. 1. **GREAT BECSKEREK** (Hung. Nagy-Becskelek). The capital of the county of Torontál, situated on the Bega, about 45 miles west-southwest of Temesvár, with which it is connected by canal (Map Hungary, G 4). It is a busy market town, with a considerable grain and cattle trade. The cultivation of silkworms is an important industry. There are several annual fairs, and the town contains several print works, a theatre, and an old castle. Pop., 1900, 26,407, one-third of whom are Germans, about an equal number Serbs, and only about one-fourth Magyars. 2. **LITTLE BECSKEREK** (Hung. Kis-Becskelek), a town in the county of Temes, about 9 miles northwest of Temesvár. Pop., 1900, 3738, mostly German Roman Catholics.

BED (AS *bed*, *bedd*, Icel *besr*, Goth, *bad*, OHG *beti*, Ger *bett*, all from the root *bhōdh*, preserved in Lat *fidere*, to dig. Originally, an excavated spot, a dug-out place; a lair). This term originally indicated, in all Germanic languages, the litter (cf. French *lit*=bed) on

which a person slept. Then it was used to include the frame or shelf on which the bedding was placed, the bedstead.

The Ancient East In the ancient Orient there was little difference between the bed and the couch on which persons reclined during the day. In Egypt the frames were sometimes high and were reached by a stool or short steps, they were supported on curved legs ending in claw feet and were of graceful lines, with a slightly raised headboard, a mattress, and a wooden pillow, or head rest. Sometimes the mattress or bedclothes were supported by a wickerwork of palm branches. The beds of the Babylonians and Assyrians were more luxurious. Beds of ivory, gold, and fine woods were enumerated in the Amarna tablets among the objects sent from Syria to the kings of Egypt. A British Museum relief shows King Asurbampal reclining at dinner on a magnificent couch, while his queen sits in an armchair. Sometimes the bedding was placed in a recess on a raised slab, as in the palace of Sargon, at Khorsabad, without any bedstead. The prevalence of insects in the East soon led to the use of canopies, baldachins, and mosquito nettings. There was one over the bed of Holofernes in his tent. These Asiatic beds were sometimes portable, sometimes stationary. The Persians are supposed to have been the first to make up a bed not only comfortable but beautiful to see, though it is probable that they inherited their taste from the Babylonians. Their great men carried beds even on campaigns, for Herodotus mentions some abandoned by Mardonius in his sudden flight. Such beds were incrustated with gold and silver and covered with magnificent stuffs. The Jews could hardly have equaled this magnificence, still several interesting passages in the Old Testament illustrate their various uses. In receiving visitors the King bowed himself upon the bed (1 Kings 1:47), in Prov. vii:16 the bedding is described "I have decked my bed with coverings of tapestry, with carved works, with fine linen of Egypt." The Homeric poems mention the three main classes of early beds: the shake-down, the portable bed, the heavy bedstead, sometimes a fixture.

Greek Beds The *Odyssey* (xxii:190) describes the bed made for himself by Ulysses. The trunk of the olive tree around which he built and roofed his chamber was trimmed and used as one of the bedposts, the frame being made by the addition of three more feet and the connecting frame, the whole was inlaid with gold, silver, and ivory. The bedding was supported on leather straps, and on top of it were blankets to make it softer. At that time there seem to have been no stuffed mattresses. The Greek bedsteads of historic times were at first less gorgeous, being usually made of maple or boxwood, solid or veneered. But the custom of not sitting, but reclining at table on couches, led to a gradual increase in decorative beauty in the sixth century B.C. Even then the Asiatics did not think that the Greeks knew how to make a comfortable bed, and when the Persian King Artaxerxes gave a bed, with all its magnificent appurtenances, to the Athenian Ambassador Timogoras, he gave also a number of attendants skilled in preparing it. While the poor continued to use the primitive litter or the skins of animals for bed covers, the wealthy became more and more fastidious in the use of bed covering and ornament. Miletus, Corinth,

and Carthage became famous centres in the dyeing, weaving, and embroidering of bed covers, and the bedsteads and couches were inlaid or veneered with ivory, tortoise shell, and precious metals, and even provided with feet of solid silver or gold. There was a class of bedmakers at Athens.

The form of Greek bedsteads and bedding at different times is illustrated not only by numerous vase paintings, but by some marble beds found at Palatitza and Pydna, and a terra-cotta bed from Tanagra. The common elements were (1) a wood frame, (2) a vegetable trellis for springs, (3) a mattress covered with striped or figured linen, or woolen cloth, or leather, stuffed with dried reeds, or wool, or the fluffy product of the *gnaphalon*, (4) pillows, one round, and two or more square, covered with linen and filled with down or feathers, (5) bed covers of various kinds, brilliantly colored, embroidered with floral and animal patterns, some of heavy woolly cloth, some of lighter texture. The bedstead had posts sometimes square, sometimes round (turned), crowned usually by an Ionic capital and of graceful design. Sometimes they were in the form of columns, sometimes they were turned in a succession of slender necks and swelling bulbs. The frame itself was narrow, the footboard was seldom raised, but the headboard commonly projected above the bed. There appears to have been, during the fifth century, a reaction toward a more Spartan simplicity in bed and bedding—due, perhaps, to the fall of Athenian supremacy, but it did not last long, and the Alexandrian age saw an even greater Oriental luxury among the Greeks.

Roman Beds In Italy the Etruscans led in love of luxury, and their beds, as shown in the paintings and reliefs of their tombs, were of the same type as the Greek, with the added comfort of air cushions. Two funeral bedsteads, veneered in ivory, have been found in Etruscan tombs of the fourth and third centuries B.C. One is in the Papa Giulio Museum, Rome, the other in the Field Museum, Chicago. They are covered with fine carvings in relief. But it was not until the close of the Republic that the Romans laid aside their simplicity and combined all the good points of Etruscan, Greek, and Oriental beds. There were five classes of Roman beds and couches: (1) the ordinary sleeping bed, or *lectus cubicularis*; (2) the reclining-table couch, or *lectus triclinarius*; (3) the smaller lounge for rest and meditation in the daytime, the *lectulus*; (4) the high marriage bed, *lectus genialis*; and, finally, (5) the funeral bed, or *lectus funebris*, on which the deceased was exposed and carried in the funeral procession. There were bedsteads of massive bronze, beautifully decorated, as, for example, that found at Pompeii, with silver incrustations. Others were of massive silver, even of gold, while the majority were veneered with expensive woods, tortoise shell, or ivory, plates of gold or silver, or gold leaf, or else inlaid in patterns with different materials. The typical Pompeian ordinary bed is very similar to the modern wooden bedstead in its proportions and structure. Some frames were high and were reached by footstools. Not only were there usually both headboard and footboard, but also in the sleeping beds the back was often protected by a board. In all these particulars it varied from the Greek bed. The mattress rested either in girth or on a delicate diagonal trellis, and was for the

poor stuffed with straw or dried reeds, and for the rich with wool, or even feathers. The pillows were of feathers or down. The bed covers were rich in color—especially purple embroidered with gold—and made of Oriental stuffs.

Oriental Beds The Roman inheritance, lost in the West after the sixth century A.D., was continued in the Byzantine Empire, and the gorgeous couches and lounges in the Imperial palaces at Constantinople are famous. The Mohammedans inherited both the Byzantine and the Persian forms of luxury, and while not paying so much attention to the bed covers, which, on account of the warm climate, were necessarily light, developed the magnificence of the baldachins and other hangings over the beds and couches to such an extent that these woven and embroidered stuffs, damasks, velvets, etc., became the masterpieces of their class and were among the most regal presents. The Crusaders became acquainted with them and introduced them into the West. In Farther Asia beds and bedding have been and still are of great simplicity, usually in the form of simple couches or mattresses, which can be easily rolled up or carried away. In India they are called *charpoys*. The Japanese lie upon matting with wooden neck rests—a custom derived ultimately from Egypt. The Chinese use low beds, often elaborately carved.

The Middle Ages Meanwhile, in the West, bedsteads, though reduced to extreme simplicity, with the fall of Roman civilization had not entirely fallen into disuse. In the time of Charlemagne they were sometimes made of bronze tubing—like our own brass bedsteads, with bulbs at the joints and ends of the posts—with a rope netting to support the mattress and with numerous large pillows. In the crusading times of the twelfth century the beds acquired considerable richness, the frames were low and narrow, and of almost Spartan simplicity, there being no headboard or footboard, and only posts projecting slightly above the frame. These frames were, however, richly inlaid, carved, or painted, were covered with embroidered hangings and overhung with canopies. As in the Carolingian age, the bedding was arranged on a very inclined plane, so now the mattresses appear much longer than the frame, raised over the low headboard and suspended on a curve. With the advent of the Gothic age in the thirteenth century, which was the golden age of the manor life of the castles, beds increased still further in size and luxury. The marriage beds stood often not in a special bedroom, but in the main hall, where all persons could enter, and were entirely curtained about. Metal bedsteads had been entirely abandoned in favor of wood. The balustrade became wider and had an opening in the middle of the front side for entrance, the height of the headboard was increased, the mattress was laid flat, inside the frame instead of on top of it, and the number of pillows was increased.

In the fourteenth century the bedsteads decreased in size but increased in comfort, in fineness of linen sheets and richness of coverings. They were placed in bedrooms, which were now sumptuously decorated with hangings. There were often two mattresses instead of one, and they were covered with silk. Previously the sheets had been used to wrap the occupant in—as nightgowns were almost unknown—but now the sheets were larger and fell over the sides of

the bed, even to the ground, under the sumptuous covers.

Later European Beds In the fifteenth century their size became enormous, seven feet long by six feet or more wide. The rooms were so large, however, that, as heretofore, the bedsteads were headed to the wall, and sometimes there were two side by side, and four or five feet apart, covered with a single immense canopy, as in the beds of Isabelle de Bourbon. The beds of Henry II and Francis I were famous, and the kings began to hold receptions in bed. The canopies were of all sizes and shapes, and suspended from the ceiling or wall. But in the sixteenth century columns came into use to support them, and the four-poster was created. Heavier stuffs became the rage for covers and hangings—velvets, brocades, and damasks. The bedsteads were heavily carved, and the headboards were often solid to the top of the canopy. The heaviest made were the English Elizabethan beds of oak—immense structures. Considerably lighter were the oak frames of Flanders. In France and Italy the ordinary fine bed was of carved walnut. In the seventeenth century the mode in France became lighter, with great use of laces and gauzes and of figured tapestries. That century was preeminently that of beautiful beds, never equaled before or since. The inventories of Louis XIV show that this monarch had an unrivaled collection of 413 superb bedsteads of all forms—four-posters, pavilioned, duchesse, Imperial *en housse*, à *pentés*, etc. This museum of beds in the *Garde-Meuble* was the wonder of all visitors. The reign of Louis XV added only a more delicately fantastic ornamentation to this age of graceful design and varied coloring. The kings, queens, ministers, great ladies, and the high nobility commonly held early receptions in bed, there was the *petit lever* and the *grand lever*. (See *LEVEE*.) The *ruelle* was the narrow space between the wall and the head of the bed, where a person could stand concealed. This importance given to the bed insured the magnificence of every detail. The Empire beds, in mahogany, with bronze trimmings, are comparatively monotonous and heavy. The Colonial beds are a simplification of the heavier English four-poster. At present many types are used, but even the finest bedsteads made are commonplace compared with the best of the past four centuries.

Modern Beds Throughout the continent of Europe beds are of the open couch form, suitable in width for one person. They consist of a frame or bedstead, bearing one or two hair or wool mattresses, they are often provided with curtains, hanging from the ceiling. In Germany there is a common practice of placing large, flat bags of down above the other coverings of beds for the sake of warmth, and sometimes a bed of down altogether supplies the place of blankets. In Italy corn-husk mattresses are very common. Throughout America the beds are usually of the French, or open couch form. The simplest kind of bed yet invented—except, indeed, the Oriental rug spread on the floor—is one frequently to be seen in America. The bedstead consists of a folding trestle called a cot, constructed with canvas on the principle of a campstool, with a movable headboard at one end to retain the pillow. Its great advantage consists in its being easily folded up, and put away in small space. Another device for saving space is the "folding bed" proper, which is

often constructed so as to resemble when closed a bookcase or some other piece of furniture. Such beds are useful where a bedroom must serve also for a sitting room, but there are many objections, both aesthetic and sanitary. In America the English practice of providing a double bed instead of the Continental custom of furnishing a separate bed for each person prevails, although, largely for hygienic reasons, the single bed has become common. The English four-posted bed, or family bed, is a gigantic piece of furniture, having a roof or canopy supported by the four posts, which are generally of mahogany and finely turned and carved. On rods along the cornice hang curtains which can be drawn around the sides and foot. Lower wooden beds and beds of brass or iron have largely supplanted the old-fashioned four-poster and are popular on account of their cleanliness and cheapness. Consult the bibliography of FURNITURE.

BED, or STRATUM In geology, a layer or a number of layers of stratified sedimentary rock, with an approximately uniform lithological character. If shale, sandstone, and limestone succeed one another in layers, each forms an independent bed, or stratum, again, if a thick sandstone be composed of a number of layers, each of these layers, or certain groups of them, may be called "beds," or "strata." While most geologists confine the terms to layers of uniform vertical composition, there is a lack of uniformity in usage as regards the number and thickness of the layers to be included under them. For instance, "stratum" is sometimes used as above defined, while "bed" is applied to each of the constituent layers. Again, "bed" and "stratum" are used in the same sense either for a group of layers or for a single layer. The occurrence of sedimentary rocks in layers is described as "bedding" or "stratification." The cause of stratification is the intermittent supply of materials for deposition, due to such causes as varying intensity of wave action, tides, or irregular deposition from rivers. When the stratification is obscure, it would seem to indicate that the materials had been supplied with little or no intermission. The individual particles of strata or beds are laid down in such a way that they tend to oppose their broader sides to the greatest stress acting upon them, which is compounded of gravity and the stress of moving water. The result is a general arrangement of the greater diameters of the mineral particles in planes parallel to the planes of bedding or stratification. See LITHOGENESIS, STRATIFICATION.

BÉDARIEUX, bâ'da-ré-'*ô* A town in the department of Hérault, France, on the Orb River, 20 miles north of Béziers (Map France, S, H 5). It is well built and is an industrial centre, having cloth factories and tanneries, and manufacturing paper, glass, oil, hats, etc. Pop. 1801, 8065, 1911, 8186.

BEDBUG A reddish-brown, flattened, wingless, nocturnal insect (*Cimex lectularius* or *Acanthia lectularia*), peculiar to the fixed habitations of man and subsisting by sucking his blood. It represents a family Cimicidae, or Acanthidae, of heteropterous bugs (Hemiptera), which, with numerous allied forms, live upon the juices of plants and animals, and this parasitic life has caused degeneracy, until now this species has acquired a very flat body, capable of hiding in narrow cracks, and has completely lost its wings, it has

also gained the power of resisting great cold and of fasting indefinitely, so that it easily survives long intervals between tenants in a house—a fact which often accounts for an otherwise mysterious appearance of the pest. Its mouth consists of a three-parted proboscis, which can be thrust through the skin like a hollow needle and then becomes a blood pump. The parasite feeds by day in cracks and crevices of floors, walls, and furniture, frequenting beds especially, simply because there it gets its living at night. The eggs of the bedbug are minute, whitish oval objects, laid in clusters in the crevices used by the bugs for concealment, and hatch in about eight days, the young being almost transparent "nits," which grow darker in color as they increase in size, until, when full-grown, they may be a quarter of an inch long. This growth is attained by means of five molts, and if food and warmth be plenty, maturity may be attained in three months, but under adverse conditions growth may be greatly prolonged. A female may lay several packets of eggs and several broods be raised each year, indeed about 250 eggs are laid each spring in lots of 50, so that under favorable conditions (slovenly housekeeping) the multiplication is extremely rapid. These insects have been known as house pests from the earliest times, and it is believed came originally from India. Aristotle alleged that they arose spontaneously from sweat. Their spread is mainly due to their being carried from place to place in furniture, vehicles, and clothing. They do not seem to have reached England previous to the seventeenth century—not, at any rate, to a notable extent, since the word "bug," which now designates this pest primarily in British speech, is not so used in Shakespeare's writings. America received this pest from Europe, and ships have now spread it all over the world. There is a popular belief that it dwells in the woods under bark of decaying timber, and also that it infests certain other domestic animals, especially poultry. That it may sometimes prey upon other animals is possible, but entomologists believe it to be restricted to humanity, and that all similar bugs (see CORROSE) found upon bats, swallows, pigeons, and poultry are species peculiar to each of those animals and do not attack man. Certain bird lice have a deceptive resemblance, also, to the Cimicidae. Bedbugs are eaten by various predatory insects, especially cockroaches and ants.

The remedy lies in persistent and minute cleanliness. The application of the common remedies, benzine, gasolene, corrosive sublimate, kerosene, or hot water, usually suffice to rid an ordinary dwelling of these pests, but in larger buildings nothing is more effectual than thorough fumigation with sulphur or bisulphid of carbon. For immediate relief in a sleeping room, pyrethrum is most available, since it can be used while a room is occupied. Dusted between the sheets of a bed, it will protect the sleeper most effectually. Many patent remedies are advertised, but they are probably not more efficacious than those given above. Consult *Bulletin No. 4 and Circulars 46 and 47*, Division of Entomology, United States Department of Agriculture. See INSECT, PROPAGATION OF DISEASE.

BEDCHAMBER, LORDS OF THE. Officers in the British royal household, 12 in number, who wait in turn upon the sovereign's person. The salary is £1000. These offices in the reign of a queen are performed by ladies. Queen

Victoria usually had from 10 to 12 ladies, and extra ladies of the bedchamber, and 8 bedchamber women. These offices are objects of high ambition, from the access they give to the person of the sovereign, and are for the most part filled by 'the prime nobility of England.' They are usually vacated at each change of ministry. On Victoria's departure from the usual etiquette in 1839, Sir Robert Peel declined to form a ministry, and Lord Melbourne returned to office. The incident caused some excitement and is amusingly known as "The Bedchamber Plot." Consult *Armistage, Old Court Customs and Modern Court Rule* (London, 1883).

BEDDARD, FRANK EVERS (1858-). An English zoologist, born at Dudley. He studied at New College, Oxford, was naturalist to the *Challenger* Expedition Commission in 1882-84, and assistant editor in the preparation of the reports of the expedition. For a time he was examiner in zoology and comparative anatomy at the University of London and lecturer on biology at Guy's Hospital. In 1884 he was appointed prosector of the Zoological Society of London. His publications include *Animal Colonization* (1892), a *Monograph of the Oligochaeta* (1895), a *Text-Book of Zoogeography* (1895), *Structure and Classification of Birds* (1898), *Book of Whales* (1900), *Mammalia* (1902), *Earthworms and their Allies* (1912).

BEDDOES, bē'dōz, THOMAS (1760-1808). An English physician and author. He was born in Shropshire, was educated at Oxford, and studied medicine in Edinburgh and London. He was appointed lecturer on chemistry at Oxford in 1788, but his unconcealed sympathies with the French Revolution rendered his post uncomfortable, and he resigned in 1792. Retiring into the country, he then wrote his *History of Isaac Jenkins*, a moral tale, in which he laid down, in a popular style, rules of sobriety and health for the benefit of the working classes, and which soon became exceedingly popular. He established in 1798 a "pneumatic institute" at Clifton, for the treatment of disease by inhalation. It did not succeed, but is memorable as having introduced to the world Humphry Davy, who was for some time its superintendent. Beddoes settled in London in 1801, where he published his *Hygeia or Essays, Moral and Medical* (3 vols., 1802). Consult the *Life* by Dr John E. Stock (London, 1811).

BEDDOES, THOMAS LOVELL (1803-49). An English dramatist. He was born at Clifton July 20, 1803, the son of Thomas Beddoes. His mother was a sister of Maria Edgeworth, the novelist. In 1808 Dr Beddoes died, leaving his son to the guardianship of Davies Giddy, afterward Sir Davies Gilbert, president of the Royal Society. Young Beddoes was placed at the Bath Grammar School, from thence, in 1817, he removed to the Charterhouse, and in May, 1820, he entered as commoner at Pembroke College, Oxford. In 1821 he published *The Improvisators*. On this volume he looked with no favor at a later period and was accustomed to destroy stray copies wherever he could find them. In 1822 he published *The Bride's Tragedy*, a work of great promise. In 1825 he went to Gottingen to study medicine and from this time forth continued to live in Germany, with occasional visits to England. While engaged at Frankfort (1848) in dissecting, he received a slight wound, which led to blood poisoning. Under most distressing circumstances he committed suicide at

Basel, Jan 26, 1849. During his wanderings in Germany Beddoes was engaged at intervals in the composition of a drama entitled *Death's Jest-Book*. This work, together with his other manuscripts, consisting chiefly of poetry, he left to his friend, T. F. Kelsall, who published it in 1850, and in 1851 the collected poems of Beddoes, with an excellent memoir. Beddoes is chiefly known by this posthumous play, which is a tragedy conceived in the manner of Webster and Tourneville, the late Elizabethans, who dealt in the terror and pagantry of death. The blank verse is good, and scattered through the play are many songs recalling the ease and freshness of Shakespeare. Consult his *Poetical Works* (London, 1890) and *Letters* (London, 1894), both edited by Edmund Gosse.

BEDE, bēd, or BĒDA, bē'da, frequently called **THE VENERABLE** (c 673-735). The greatest name in the literature of Saxon England and probably the most distinguished scholar of his age. The exact spot of his birth is a point in dispute among antiquarians, but is commonly believed to have been in what is now the parish of Monkton, near Wearmouth, in Durham. In his seventh year he entered the neighboring monastery of St. Peter, at Wearmouth, where he was educated under the care of the Abbot Benedict Biscop and his successor, Ceolfrid. His instructor in the Scriptures was Trumbert. After studying for a time at Wearmouth Bede removed to the twin monastery of Jarrow, founded in 682, here he took deacon's orders in his nineteenth year, and was ordained priest in his thirtieth by John of Beverley, then Bishop of Hexham. In the shelter of his quiet retreat Bede devoted himself to the pursuit of literature. He studied Latin and Greek, and had at least some acquaintance with Hebrew, astronomy, and prosody. He wrote homilies, lives of saints, hymns, epigrams, works on chronology and grammar, and comments on the books of the Old and New Testaments. His own list of what he had written up to 731 is given in his *Ecclesiastical History* and contains 37 titles. His calm and gentle spirit, the humanizing character of his pursuits, and the holiness of his life present a striking contrast to the violence and slaughter which prevailed in the whole island. While laboring under disease, near the close of his life, he translated the Gospel of St. John into Anglo-Saxon and dictated his version to his pupils. He died May 26, 735, and was buried in the monastery of Jarrow, long afterward (in the middle of the eleventh century) his bones were removed to Durham. His most valuable work is the *Historia Ecclesiastica Gentis Anglorum*, in five books, to which we are indebted for much of our information on the history of England down to 731 A.D. Bede drew the materials for his work partly from Roman writers, but chiefly from native chronicles and biographies, records, and public documents, and oral and written communications from his contemporaries. There is a translation of the work into Anglo-Saxon, due to King Alfred.

In chronology the labors of Bede were important, as he introduced the Dionysian reckoning of dates in his work, *De Sæcæ Abitibus Mundi*, which served as a basis for most of the mediæval chronicles of leading events in the world's history. Among the many editions of Bede's history may be noticed: the sixth, published at Strassburg about 1500 much better

edition by Smith (Cambridge, 1722), more recent editions are those of Moberly (Oxford, 1869), Dr Giles in his edition of the whole works of Bede (12 vols, 1843-1844), with an English translation, and of Plumtree (2 vols, Oxford, 1896). There are at least 35 editions in all. Entire editions of Bede's writings have been published at Paris (1544-54), Basel (1563), and Cologne (1612 and 1688), London (1843-44), and in Migne's *Patrologia Latina* (Paris, 1844). English versions of his *Ecclesiastical History* have been published by Stapleton (1566), by Stevens (1723), by Hurst (1814), by Giles (1840), by Stevenson (1852), by Gidley (1870), by Jane (1903), by Sellar (1907), in the Everyman's Library, etc. Consult Gehle, *De Bedæ Venerabilis Vita et Scriptis* (Leyden, 1838), Browne, *The Venerable Bede* (London, 1880), Werner, *Beda der Ehrwürdige und seine Zeit* (Vienna, 1875), Bright, *Chapters of Early English Church History* (3d ed, Oxford, 1897), and the introduction to Plummer's edition of the *Historia Ecclesiastica*, *Life*, by Gurgut (1901) and Rannsey (1904).

BEDE, bēd, ADAM. The hero of a novel of the same name by George Eliot. He is a young carpenter, whose character is said to be partially drawn from that of the father of George Eliot.

BEDE, CUTHBERT. See BRADLEY, EDWARD.

BEDEAU, be dō', MARIE ALPHONSE (1804-63). A distinguished French general, born at Vertou, near Nantes. In the Belgian campaign of 1831-32 he was aid-de-camp to General Gérard. In 1836 he was sent to Algeria, as commandant of a battalion of the Foreign Legion. Here he acquired his military reputation. He took part in most of the operations by which the dominion of France was established over the natives and rose to the rank of general of brigade. In 1847 he was for a short time Governor of Algeria, but was superseded by the Duc d'Aumale. When the Revolution of February broke out, Bedeau, who was in Paris on leave of absence, was commissioned by Marshal Bugeaud to suppress the insurrection. This he found it impossible to do. By the Provisional Government he was appointed Minister of War—an office, however, which he immediately changed for the command of the city of Paris. He was elected to the Constituent Assembly and was made vice president of it, always voting with the Republican party. Along with Cavaignac, Lamoricière, and others, he was arrested on Dec. 2, 1851, and went into exile. He died in Nantes.

BEDEGUAR, bēd'g-gar (Fr. from Ar. Pers. *bādāwar*, a kind of white thorn or thistle). A large, roundish excrescence, or gall, sometimes called sweetbrier sponge, produced by the *Rhodites rosea*, a gallfly, on various species of rose. The excrescence is caused by a peculiar poisonous fluid injected by the fly into the plant tissue, externally mossy, it contains the larvæ of the insect and the juices of the plant on which they feed. It was once popularly believed to produce sleep.

BEDELL, FREDERICK (1868-) An American physicist, born in Brooklyn, N. Y. He graduated at Yale in 1890 and afterward took a scientific course at Cornell (1890-92). In 1892 he became assistant professor of physics at Cornell, and in 1904 professor of applied electricity. He made valuable investigations in alternating currents of electricity. In 1894 he became the

editor of the *Physical Review*. He wrote *Alternating Currents*, with A. C. Crehore (5th ed, 1909), *Direct and Alternating Current Manual*, with C. A. Pierce (2d ed, 1912).

BEDELL, GREGORY THURSTON (1817-92). An American clergyman, the third Protestant Episcopal Bishop of Ohio, and a member of the evangelical school of his church. He was born at Hudson, N. Y., the son of Rev. Dr. Gregory Townsend Bedell, and was educated at Bristol College, Pa., and at the Virginia Theological Seminary. He was rector of the Church of the Ascension, New York City, from 1843 to 1859, when he was chosen Assistant Bishop of Ohio. In 1873, on the death of Bishop McVaine, he became Bishop and the following year consented to the division of his diocese by the formation of the new jurisdiction of southern Ohio. He resigned in 1889. His numerous works include *The Pastor* (1880) and *Centenary of the American Episcopate* (1884).

BEDELL, WILLIAM (1571-1642). A prelate of the English church, born at Black Notley, Essex. He was educated at Emmanuel College, Cambridge, and after his ordination, in 1602, officiated as a clergyman at Bury St. Edmunds. In 1607 he accompanied Sir Henry Wotton as his chaplain to Venice. There he resided about four years, deeply engaged in study, and honored by the friendship of many distinguished men, in particular Fra Paolo Sapi, then engaged in the composition of his celebrated *History of the Council of Trent*. While residing here, he translated the English Common Prayer Book into Italian. On his return home he resumed his pastoral duties at Bury, where he lived for some time in such retirement that when his friend Diodati came to England, he inquired in vain for the admirable Bedell, whose merits were so well known in Venice, and only found him by chance. In 1616 Bedell was presented to the living of Horningsheath, a neighboring parish to Bury. His retired life and his Calvinistic theology long hindered the recognition of his merits. At length, in 1627, he was unanimously elected provost of Trinity College, Dublin, to which the fame of his learning and piety had extended. He refused to undertake the charge till positively commanded by the King. At the end of two years he was promoted to the united bishoprics of Kilmore and Ardagh, the latter of which he resigned in 1633. While in this diocese he removed his lay chancellor and took upon himself the ancient episcopal jurisdiction of hearing and deciding causes. His wisdom, firmness, and charity forced even his enemies to revere him, and when the rebellion of 1641 broke out he was the only English house in the county of Cavan that was spared. Refusing to dismiss his flock, he was imprisoned for a time and on being released ministered at a private house till his death, at Drumlor, Feb. 7, 1642. The Old Testament was translated into Irish under his direction, and, besides some other works, he translated the last two books of Fra Paolo's history. His biography was written by his son William, and this was afterward edited by T. W. Jones (London, 1872). Consult also Burnet, *Life of Bishop Bedell* (London, 1685).

BEDELS, bēd'لز, or **BEDELLS** (Ger. *Pedell*; see **BEADLE**). One of the most ancient of academic officials, an attendant on the rector and the university crier. Besides the university bedel there were bedels for the different facul-

ties, "nations," and often for the doctors of the university. In Oxford University there are at present four bedels. The senior bedel registers matriculations, gives due notice to those who are to preach before the university, attends such preachers to and from the university church, acts as private secretary to the vice chancellor, and gives his whole time to the service of the university. One of the sub-bedels constantly attends the vice chancellor. The other bedel and sub-bedel attend at university sermons, at congregations, the admission of proctors, and all state occasions. All wear a round cap and particular form of gown, and must be constantly resident in the university. At Cambridge University there are two similar officers called esquire bedels, who attend the chancellor (or in his absence the vice chancellor), preceding him with their silver wands on all occasions, and, among other duties, see that the university ceremonies are maintained and that public business is conducted in proper form.

BEDESMAN, *bedz'man*. See **BEAD**.

BEDFORD (corrupted from AS *Bēdcan fōrd*, protected ford). The county town of Bedfordshire, England, situated on both sides of the Ouse, here crossed by two bridges and navigable to the sea, about 45 miles north-northwest of London (Map England, F 4). The town, which is located in a broad expanse of rich pasture and agricultural land, is clean, well paved, and shows in its outward appearance and in the number of its municipal undertakings the progressive spirit of its citizens. It was incorporated in the reign of Henry II and now sends one member to Parliament. It has an excellent water supply, which nets it a substantial profit, and has an electric light plant. It maintains several parks and recreation grounds, public markets, and a cemetery. It is chiefly famed for its charitable and educational institutions, which are largely due to the beneficence of Sir William Harper, Lord Mayor of London in 1561, who founded a free school and endowed it with 13 acres of London land. The enormous increase in the value of the property (from £40 to £15,000 or upward a year) enables the trustees to maintain grammar, modern, and preparatory schools for boys, the same class of schools for girls, and also almshouses. The most important manufacture of Bedford is that of ironware, especially agricultural implements. A considerable traffic in agricultural products, timber, coal, and iron is maintained. Pop., 1891, 28,023, 1901, 35,144, 1911, 39,183. Bedford is of great antiquity and is mentioned in the Saxon Chronicle under the name of *Bēdicanford*, as the scene of a battle between the Britons and Saxons in 571. It suffered much from the Danes in the eleventh century. John Bunyan was born in the neighboring village of Elstow, and while a prisoner in the town jail, as a disturber of the peace, he wrote his *Pilgrim's Progress*. A bronze statue of him presented to the town by the Duke of Bedford adorns St. Peter's Green. Consult Porter, *An Historical Sketch of Bedford, England* (Boston, 1891).

BEDFORD. A picturesque village of Halifax Co., Nova Scotia, Canada, at the head of the beautiful Bedford Basin, nine miles north of Halifax, on the Intercolonial Railway (Map Nova Scotia, F 4). It is a favorite summer resort of the Haligonians.

BEDFORD. A town, and the county-seat of Missisquoi Co., Quebec, Canada, on the Canadian

Pacific Railway, 7 miles north of Lake Champlain (Map Quebec, D 5). It has manufactures of agricultural implements, edge tools, sewing machines, leather, lumber, etc. Pop., 1891, 1571, 1901, 1364, 1911, 1432. **UPPER BEDFORD**, an eastern township, has a population of 600.

BEDFORD. A city, and the county-seat of Lawrence Co., Ind., 85 miles southwest of Indianapolis, on the Chicago, Indianapolis, and Louisville, the Baltimore and Ohio Southwestern, the Bedford and Wallner, and the Terre Haute and Southeastern railroads (Map Indiana, C 4). It is noted for its extensive quarrying interests, the building stone being shipped in considerable quantity over a wide field. There are also railroad shops and roundhouses. The city owns its water works, and many of its buildings, both public and private, are fine stone structures. Pop., 1900, 6115, 1910, 8716.

BEDFORD. A borough, and the county seat of Bedford Co., Pa., 85 miles (direct) west by south of Harrisburg, on the Pennsylvania and the Huntington and Broad Top Mountain railroads (Map Pennsylvania, D 17). Bedford contains features of scenic and historic interest, notably Washington's headquarters, the old courthouse, the soldiers' monument, and the picturesquely located Bedford Springs, a popular summer resort. There are also two planing mills, a large peanut factory, a flour mill, and a handle factory. Bedford, originally called Raystown, was settled about 1751 and was laid out in 1766. For many years it was an important frontier military post and for a time in 1758 was occupied by a large force under General Bouquet, while in 1794, during the Whisky Rebellion, it was the headquarters of the troops under Gen. Henry Lee, sent against the insurgents. Bedford was incorporated in 1795, its charter of that date, still in operation, provides for a mayor, elected every four years, and a borough council. The water works are owned and operated by the municipality. Pop., 1890, 2242, 1900, 2167, 1910, 2385, 1914, 2500. Consult *History of Bedford, Somerset and Fulton Counties* (Chicago, 1884), *History of Bedford and Somerset Counties* (New York, 1906).

BEDFORD, GUNNING S. (1806-70). An American physician. He was born in Baltimore and graduated at Mount St. Mary's College in 1825. He then studied at Rutgers Medical College and in Europe. He returned in 1833 and in 1836 settled in New York, where his practice in obstetrics rapidly became extensive. With Dr. Valentine Mott he founded, in 1840, the New York University Medical College, where he occupied the chair of obstetrics until 1862. His *Diseases of Women and Children* and his *Principles and Practice of Obstetrics* were republished in England and translated into French and German.

BEDFORD, JOHN PLANTAGENET, DUKE OF (1389-1435). Regent of France, and third son of Henry IV of England. During his father's lifetime, he was Governor of Berwick-upon-Tweed and warden of the Scottish marches. In 1414, the second year of the reign of his brother, Henry V, he was created Duke of Bedford. He was commander in chief of the forces in England while Henry was carrying on the war in France. After the death of Henry V. (1422), Bedford in accordance with the dying wish of the King left the affairs of England in the hands of his brother, Gloucester, and went to France to look after the interests of the infant prince, Henry

I, his nephew. In compliance with the request of his deceased brother, he offered the regency of France to the Duke of Burgundy, who refused, he then assumed it himself, but not without insulting the Duke of Burgundy as to the best method of carrying out the Treaty of Troyes, by which Charles VI had declared Henry V next heir to the French crown. On the death of Charles VI, a few months after Henry V, Bedford had his nephew proclaimed King of France and England as Henry VI. In the wars with Charles VII which followed, Bedford displayed great generalship and defeated the French in several battles—most disastrously at Verneuil, in 1424. But, in consequence of the parsimonious way in which men and money were doled out to him from England, and the withdrawal of the forces of the Duke of Burgundy, he was unable to take full advantage of his victories. The appearance of Joan of Arc was followed by disaster to the English arms, notwithstanding her utmost energy of Bedford, and in 1435 he was mortified by the treaty of peace negotiated at Rouen between Charles VII and the Duke of Burgundy, which effectually ruined English interests in France. The death of the Regent, which took place Sept. 14, 1435, may have been occasioned by his anxiety and vexation on account of the union thus formed. Bedford, who was a patron of letters, purchased and removed to London the Royal Library of Paris, consisting of 900 volumes. Consult Stubbs, *Constitutional History*, vol. II (Oxford, 1895). In 1470 George Neville was made Duke of Bedford, later the Count of Pembroke, Jasper Tudor, who died in 1495, had this title. For the present family of Bedford, see RUSSELL, HOUSE OF.

BEDFORD CITY A town, and the county-seat of Bedford Co., Va., 25 miles southwest of Lynchburg, on the Norfolk and Western Railroad (Map Virginia, E 4). It has a picturesque location, at an elevation of nearly 1000 feet, and is the seat of Randolph-Macon Academy (Methodist Episcopal, South) and other educational institutions, and of the Elks National Home. The town lies in a productive region and has an important tobacco trade, with a number of tobacco factories, woolen and flour mills, and a pigment factory. It contains a municipally owned hydro-electric power and light plant and municipal water works. Pop., 1890, 2897; 1900, 2416; 1910, 2508.

BEDFORDSHIRE, béd'fôrd-shēr. A midland county of England, bounded northeast by Huntingdon, east by Cambridge, southeast and south by Hertford, southwest and west by Buckingham, and northwest by Northampton (Map England, C 4). Its extreme length is 31 miles, breadth, 5. Area, 466 square miles, five sixths of which is arable, meadow, and pasture lands. The principal towns are Bedford, the capital, Biggleswade, Leighton-Buzzard, Dunstable, and Luton. The inhabitants are chiefly engaged in stock raising, dairying, and agricultural pursuits. Manufactured products include agricultural implements, lace, and straw goods. Pop., 1891, 60,700; 1901, 171,250; 1911, 194,625.

BEDIVERE, béd'iv-er, Sm. A knight of the round Table, who cast King Arthur's sword, Excalibur, into the lake, and who bore the dying king to the boat in which he was carried to the Isle of Avalon.

BED'LAM (ME *Bedlem*, corrupted, in popular speech, from *Bethlem*, *Bethlehem*, shorter for

name of a hospital for lunatics, in St George's Fields, Southwark, London. It was originally founded in Bishopsgate Street Without, in 1246, by Simon Fitz-Mary, one of the sheriffs of London, as "a priory of canons with brethren and sisters." When the religious houses were suppressed by Henry VIII, this one fell into the possession of the corporation of London, which converted it into an asylum for 50 or 60 insane persons. In the year 1675 the hospital was taken down, and a new one, affording accommodation for about 150 patients, was erected in Moorfields at a cost of about £17,000. In 1814 the hospital was again pulled down, and the patients were transferred to a new hospital in St George's Fields, erected for 198 patients, but in 1838 extended so as to accommodate 166 more. The building, with its grounds, now covers an area of 14 acres, and is lacking in nothing likely to insure the comfort or promote the recovery of patients. In former times the patients were exhibited to the public, like wild beasts in cages, at so much per head, and visitors made sport of them, as told by Pepys and Boswell and shown in Hogarth's pictures. The funds of the hospital not being sufficient to meet the expenditure, partially convalescent patients, with badges affixed to their arms, and known as Tom-o'-Bedlams, or "Bedlam beggars," were turned out to wander and beg in the streets. Edgar, in Shakespeare's *Learn*, assumes the character of one of these. This practice, however, appears to have been stopped before 1675, for an advertisement in the *London Gazette* of that date, from the governors of Bedlam, cautions the public against giving alms to vagrants representing themselves as from the hospital, no permission to beg being at that time given to patients. At present the moral and physical management of the patients is so excellent that annually more than one-half of their number are returned as cured.

BEDLINGTON A town of Northumberland, England, on the Blyth, 11 miles north of Newcastle (Map England, E 1). It is an important coal centre, and much of this commodity is shipped. Most of the inhabitants are employed in collieries, glass works, and manufacturing of chains and small iron goods. Pop., 1891, 17,000; 1901, 18,750; 1911, 25,440.

BEDLINGTON A gray, rough-coated breed of terriers. See TERRIER.

BED'LOE'S ISLAND. Named from a former owner. An island comprising 13½ acres in upper New York Bay, 1½ miles southwest of the Battery, the southern extremity of Manhattan Island (Map Greater New York, C 9). It was ceded to the United States government for the purpose of harbor defense and was once occupied by Fort Wood, on the site of which now stands the Statue of Liberty presented by France to the United States. See LIBERTY, STATUE OF.

BEDMAR, ALFONSO DE LA CUEVA, MARQUIS DE (1672-1655). A Spanish politician. He was accredited Ambassador to Venice by Philip III and was accused of being the originator of an infamous plot against the Venetian Republic. With the Viceroy of Naples and Don Pedro de Toledo, Governor of Milan, he planned to seize the Venetian fleet, occupy the strong posts, fire the arsenals, and with the help of an Italian army and a Spanish fleet, plunder and destroy the city. The conspiracy was discovered, and

sent home (1619) He was made President of the Council of Flanders in 1622, and soon after Cardinal He finally came back to Spain as Bishop of Oviedo, and died in that city The authenticity of the accounts of Bedmar's plot has been disputed by later historians, and, to say the least, serious doubts have been cast on it The story of the conspiracy was treated by Otway in his *Venue Preserved* Consult Saint-Rene, *Conspiration contre Venise* (Paris, 1853), and Ranke, *Ueber die Verschwörung gegen Venedig* (Berlin, 1837)

BEDNAK-DOLA See AKMOLIN-K

BEDNUR, béd-nōō', or **BEDNORE**, béd-nōr' (Hind Bamboo City), or **NAGAR** A decayed city of Mysore, India, situated in the midst of a basin in a rugged tableland of the western Ghats, at an elevation of more than 4000 feet above the sea, in lat 13° 15' N and long 75° 6' E, 150 miles northwest of Seringapatam (Map India, C 6) It was formerly the seat of a rajah, was eight miles in circumference, and was strongly fortified In 1763 it was taken by Hyder Ali, who pillaged it of property estimated at £12,000,000, and subsequently made it the seat of his government, calling it Hydernagar (Hyder's town), of which the name "Nagar" is an abridgment It was taken by the British under General Matthews in 1783, but soon retaken by Tipoo, at the head of a superior force, when General Matthews and all the principal British officers were put to death The population, which once exceeded 100,000, had dwindled by 1901 to less than 1000

BED OF JUSTICE (Fr lit *de justice*) Literally, the seat or throne occupied by the French monarch when he was present at the deliberations of the Parlement Historically, a bed of justice signified a solemn session, in which the King was present, to overrule the decisions of the Parlement, and to enforce the acceptance of edicts or ordinances which it had previously rejected The theory of the old French Constitution was that the authority of the Parlement was derived solely from the crown, consequently, when the King, the source of authority, was present, that which was delegated ceased Acknowledging such a principle, the Parlement was logically incapable of resisting any demand that the King in a bed of justice might make, and decrees promulgated during a sitting of this kind were held to be of more authority than ordinary decisions of the Parlement Monarchs were not slow to take advantage of this power to overawe any Parlement that exhibited signs of independence The last bed of justice was held by Louis XVI at Versailles, Aug 6, 1787

BEDOS DE SELLES, be-dōs' de sél, Dom FRANÇOIS (1706-79) A French organ builder and author, born at Caux, near Béziers He was a Benedictine of the congregation of Sainte-Maur, and a correspondent of the Paris Academy of Sciences One of the most skillful organ builders of his time, he wrote an excellent treatise on *L'art du facteur d'orgues* (4 vols, folio, 1766-78, with numerous engravings) He published also *Gnomonique pratique* (1774), in exposition of the principles involved in the drawing of solar dials The former work has by some wrongly been attributed to one Jean François Monriot (died 1797), a Benedictine of Saint-Germain-des-Près

BEDOTT', Wmow The pen name of the author of the *Widow Bedott Papers*, Mrs Frances Miriam Whitaker

BEDOUIIN, béd'ōō-ēn or -in (Ar *Bedui*, *Badawi*, pl *Badwiin*, those of the desert) A typical nomadic people, still found in their purity in the deserts of central Arabia, where, in language, social life, and religion (outside of their profession of Islam), they retain much of primitive Semitism They have also wandered over northern and northeastern Africa, northward to the Caucasus, and eastward beyond the borders of Persia, the rural and semi-urban conditions of parts of all these countries modifying not a little their desert-born peculiarities Through the Berbers and Moors, with whom they have mixed, the Bedouin have had an influence upon Spain and southern France, which, in the case of the latter country, is made much of sociologically by Desmoulins in his *Les Français d'Aujourd'hui* (Paris, 1898) In these migrations much intermixture with other peoples has occurred Their independence, spirit of liberty, sense of hospitality, restlessness, etc., all find expression in a rich fund of song and story where the dreamy and exaggerative imagination of the race has full play Among the desert Arabs the Mufichara, or tribal song duel, a sort of primitive arbitration court, was developed The contrast and interrelations of desert and oasis, and the vicissitudes of migratory life, are reflected in the social and domestic institutions of the Bedouin The worst side of their character, the love for pillage and destruction, evidenced from the earliest times, has gained them an unenviable reputation the world over as robbers par excellence Nearly all the Bedouin are Mohammedans (See SEMITES) Consult Burckhardt, *Notes on Bedouins and Wahabys* (London, 1830), Blunt, *Bedouin Tribes of the Euphrates* (London, 1879), Zwemer, *Arabia, the Cradle of Islam* (1900), and the general works on Arabia, also the valuable *Encyclopædia of Islam*, now being published under the editorship of Dr Houtsma

BED'SORE' A sore on the hip, back, heel, etc., often a very troublesome complication of disease, to which a patient is liable when for a long time confined to bed and either unable or not allowed to change his position Bedsore are due to lowered nerve tone and pressure Thus they are likely to occur in cases of continued fever, or any other prolonged debilitating disorder, in paralysis, and in cases of fracture The skin, at certain projecting bony parts, chiefly about the region of the buttocks or on the heel, is apt to inflame, ulcerate, and slough, from the continued pressure, especially if the patient is not kept perfectly clean—as, for example, when the evacuations and urine escape involuntarily, or the skin is softened by excessive perspiration In a few of the cases the patient complains of a sense of discomfort at the parts, in others the sores give rise to exquisite suffering In all cases of prolonged supine position the parts naturally pressed upon by the weight of the body should be carefully examined every day When a long confinement in bed is expected, attempts should be made to thicken the cuticle and enable it to bear pressure better, by sponging with alcohol, and the patient should be put on an air bed or a water bed (qv) If the area, when first seen, looks red and rough, further damage is often prevented by covering it with a piece of zinc-oxide plaster and at once removing local pressure by air cushions specially constructed for cases of this kind If possible, the patient should be

made to alter his position frequently. Excoriations should be treated like other ulcers, with balsam of Peru, or iodoform and bismuth, or strapping with adhesive plaster.

BED-STRAW' (*Galium*). A genus of plants belonging to the family Rubiaceae, and distinguished by a small wheel-shaped calyx and a dry two-lobed fruit, each lobe containing a single seed. The leaves are whorled, and the flowers minute, but in many of the species the panicles are so large and many-flowered that they ornament the banks and other situations in which they grow. The species are very numerous, natives chiefly of the colder parts of the Northern Hemisphere, or of mountainous regions within or near the tropics. About 300 species are known, some of them very common weeds. Among these is the yellow bedstraw (*Galium verum*)—sometimes called cheese rennet, because it has the property of curdling milk and is used for that purpose—a small plant with linear deflexed leaves and dense panicles of bright yellow flowers, very abundant on dry banks. The flowering tops, boiled in alum, afford a dye of a bright yellow color, much used in Iceland, and the Highlanders of Scotland have long been accustomed to employ the roots, and especially the bark of them, for dyeing yarn red. They are said to yield a red color fully equal to that of madder, and the cultivation of the plant has been attempted in England. The roots of other species of the same genus possess similar properties, as those of *Galium trifidum*, a species abundant in low marshy grounds in Canada and the adjacent United States, and those of *Galium boreale*, another North American species used by some of the Indian tribes. Like madder, they possess the property of imparting a red color to the bones and milk of animals which feed upon them. Medicinal virtues have been ascribed to some of the species, as *Galium rigidum* and *Galium mollugo*, which have been extolled as useful in epilepsy. The roasted seeds of some, as *Galium aparine*, the troublesome goose grass or cleavers—remarkable for the hooked prickles of its stem, leaves, and fruit—have been recommended as a substitute for coffee, but it does not appear that they contain any principle analogous to caffeine. This plant is a native of the northern parts of Europe, Asia, and America. Its expressed juice is in some countries a popular remedy for cutaneous disorders. The roots of *Galium tuberosum* are farinaceous, and it is cultivated in China for food. The name "bedstraw" is supposed to be derived from the ancient employment of some of the species, the herbage of which is soft and fine, for strewing beds.

BEE (commonly explained as "the trembler," from the root *bhi*, to fear, AS *bed*, Ger *Bierre*). Any hymenopterous insect of the group Apoidea. This group (the Linnæan "genus *Apis*" and until recently regarded as the single family Apidae, or at most two families, Apidae and Andrenidae) comprises those Hymenoptera which have the hind feet dilated or thickened, the hairs of the head and thorax feathery, and the tongue adapted to lapping the nectar of flowers.

Bees stand, in organization and intelligence and in social and constructive abilities, at the head of the whole insect tribe; they abound in all parts of the world, but are most numerous in the warmer latitudes, more than 1500 species are known to science, they exert a most important influence upon the vegetable world by their

services in the cross-fertilization of plants, some of which now depend wholly upon their cooperation for their existence, and they furnish mankind with the important food honey, some species being semi-domesticated for the purpose of making it in large and manageable quantities for man's benefit.

Habits. All bees feed, when adult, on saccharine juices, particularly the nectar of flowers, but the larvae are fed by their elders on "beebread," which consists of the pollen of flowers collected by the bees and made into small masses. They begin their search with the opening of flowers in the spring, and do not cease it until the withering of the last blossoms in the fall compels the insects to desert and to go into winter quarters. There the social species have stored a supply of honey in a series of small waxen chambers or "cells," combined into "combs," upon which they subsist until spring, while the solitary species, which do not lay up such stores, mostly die, but their larvae, snugly placed in burrows, or other concealed or parasitic situations, remain quiescent until the return of warm weather, when they emerge. These remarks apply to the colder climates, in the tropics winter is not to be feared, but extensive droughts must be provided against. It is the habit of bees to devote their searching to a single sort of flower as long as it serves their purpose, each individual visiting blossom after blossom of that kind, instead of searching flowers indiscriminately, and to this habit is due the great service they accomplish in cross fertilization. See **POLLINATION**.

Feeding.—To enable them (or such, hereafter described, as do this work) to reach their liquid food in the nectaries, usually at the bottom of tube-like flowers, the bees have developed to the highest degree the prolonged mouth parts or "proboscis" characteristic of hymenopterans, and the extensible ligula or "tongue" is hairy, and terminates in a little spoon-like part, by which the nectar is brushed or lapped out of its receptacles and conveyed into the mouth. Here it is partly swallowed into a dilatation of the oesophagus, analogous to a bird's crop, and called the "crop" or "honey-bag" where it is "ripened" into honey (qv). When enough has been obtained, it is disgorged either as food for those of the community which remain at home in the nest, or to be stored in the comb cells of those species which lay up winter stores. The mouth of bees is also employed for cutting and tearing, and to this purpose their upper jaws are especially adapted. The bumblebees thus open their way into the tubes of flowers which are so deep and narrow that they cannot otherwise reach the nectar at the bottom. Others make use of their mandibles to cut out portions of leaves, or of the petals of flowers, to form or line their nests, the hive bees use them in working with wax, in feeding larvae with pollen, in cleaning out cells, in tearing to pieces old combs, in combats, and in all the great variety of purposes for which organs of prehension are required.

But it is not by means of any of the organs connected with the mouth that bees collect and carry to their nests the supplies of pollen needful for their young. The feathered hairs with which their bodies are partly clothed, and particularly those with which their legs are furnished, serve for the purpose of collecting the pollen, which adheres to them. It is brushed into a hollow on the outer surface of the first joint of the tarsus of each of the hinder pair of

legs, this joint being therefore very large, compressed, and of a square or triangular form—a conformation to which nothing similar is found in any other family of insects. This hollow receptacle is known as the corbiculum or "pollen basket", and in the social bees it is possessed only by the workers, since the perfect males (drones) and females (queens) never collect pollen.

Faculties—Bees possess a very high development of the nervous system, brain, and senses. The great compound eyes, as well as the ocelli characteristic of the higher hymenopterans, are here as highly developed as anywhere—perhaps higher—and bees depend greatly upon their eyes for information, observing carefully the situation of their home or any other place to which they may wish to return when leaving it for the first time, then rising in higher and larger circles until they catch sight of some landmark, when they strike straight towards it through the air, hence the proverbial phrase, "a bee line." Their visual sense of form and color must be well advanced also, and the bearing of this upon the development of color and form in blossoms is a matter of very curious interest and of much importance in the history of the mutual development of these insects and the plants they frequent. They are able, also, to guide their movements in the dark as accurately as in the full light of day—at least within the nest or hive, and this power is generally ascribed to the antennae, or "feelers," which are supposed to be not merely delicate organs of touch, but also organs of hearing or of smell. It is certain that the social bees communicate with each other by means of their antennae, and that they avail themselves of these organs for their ordinary operations, for recognition of each other, and for what may be called the conduct of the affairs of the hive. There can be no doubt that bees possess in a high degree the sense of smell, and their possession of the senses of taste and hearing is almost equally unquestionable, whatever difficulty there may be in determining the particular organs of the latter sense. The degree of development of these senses differs not only among the various families, but in the several forms of each species: thus a male honeybee has 13,000 facets in each eye, while the workers have only 6000, and Cheshire calculates that one antenna of a male has 37,000 olfactory cavities, while a worker's antenna has only about 2500.

Classification The latest conclusions of hymenopterists, following the lead of the late W. H. Ashmead, of the United States National Museum, are expressed in placing the bees as a superfamily Apoidea of the heterophagous Hymenoptera, and in dividing them into 14 groups ranking as families. The first two of these are "social" in their habits, forming communities in which each individual performs some duty for the common weal, namely, the true bees (Apidae) and the bumblebees (Bombidae). The remaining families are bees of "solitary" habits, each one living and working alone, even when the species is somewhat gregarious. These solitary forms are: The hairy digger bees of the family Anthophoridae, the cuckoo bees (Nomadidae), the small carpenter bees (Ceratinidae), the large carpenter bees (Xylocopidae), the mason, leaf cutter, and potter bees (Megachilidae), the parasitic Stelidae, the burrowing Andrenidae, Colletidae, Prosopidae, and others

Of these the Prosopidae are simplest and lowest, and as they are world-wide in their distribution, they are considered by evolutionists as the actual representatives of the primitive bee type, whence all have issued that are known to us to-day.

Solitary Bees—Most of the Colletidae burrow, making rather rude tunnels, or utilizing cracks in stone walls. The Andrenidae do the same. This is a very large and widespread family, numerously represented in the United States and in Europe. All are small, comparatively smooth, wasp-like, and often metallic in color. A notable genus is *Halictus*, which are among the smallest and most numerous of bees. "This genus, together with *Sphecodes*, differs from all other solitary bees in the fact that the impregnated females hibernate, . . . the males dying." The ensuing spring the surviving females dig their burrow, make and provision their cells, and oviposit." The great genus *Andrena* is also commonly represented in the United States as well as other parts of the world, and, like *Halictus*, digs burrows 6 to 10 inches deep, from which chambers branch off, the walls of which are "glazed with a mucous-like secretion." These are among the earliest of insects to appear in the spring, flying about the "pussy willows." They burrow and lay eggs in May, provision their nests with pollen about June 1, and the young appear in August in the Northern States. The Stelidae, of the Old World, are entirely parasitic in the nests of other bees, where they mature earlier than do the rightful owners and kill such of their larvae as they encounter, after consuming the food provided for the latter. The cuckoo bees (qv) of the family Nomadidae also lay their eggs and dwell in the nests of other bees, but seem to do so on perfectly good terms with their hosts.

The smooth and pretty "carpenter bees" of the family Ceratinidae are small, active, generally metallic blue, blue-black, or bright green, and fond of sunshine. "They bore tunnels into the stems of pithy plants and form their cells in these burrows. They are very commonly found in brambles. The cells are lined with a delicate silky membrane and are separated from one another by mud partitions. The common *Ceratina dupla* is a familiar example. With this bee the cells are filled with a paste of honey and pollen, upon which the larvæ feed." The great carpenter bees proper, the Xylocopidae, are, on the other hand, among the largest and most hairy of the tribe and make large burrows in solid wood (See CARPENTER BEE). The family Megachilidae is composed of a variety of highly developed bees, some of which burrow, while others make nests in wooden tunnels lined with pieces of leaves or form cells of clay. (See LEAF CUTTERS, MASON BEES, POTTER BEES). The Anthophoridae are also hairy bees of rather large size and gaudy colors that burrow in the ground. This completes the sketch of the solitary families, which agree in having only two forms—sexually perfect males and females—and in the absence of wax-making power, while their pollen-gathering implements are very poor in the lower ranks, and in the higher by no means equal to those of the two social families next to be considered.

The social bees (bumblebees and honeybees) are readily distinguished from other and plainly inferior members of the tribe by several striking peculiarities, succinctly stated by L. O. Howard as follows: "Each species is composed of three

classes of individuals—males, females, and 'neuters' or workers. They live gregariously in larger or smaller communities. They have the power of secreting wax, from which their cells are made, and the larvae are fed from time to time by the workers. The outer side of the dilated posterior tibia is smooth and in the workers is hollowed into a shining plate for carrying pollen, which is collected by means of the pollen brushes on the basal joint of the hind tarsi. The maxillary palpi are very small. As a general thing the body is covered with hair."

The lowest place in this category is occupied by the bumblebees (Bombidae), or "humblebees," as they are more frequently termed in Great Britain. These are fully described elsewhere (see BUMBLEBEE), and here it need only be said that their colonies, inhabiting nests underground, are not permanent. All the members perish on the approach of winter except the impregnated females ("queens"). These hide away singly, and each one founds a new colony early in the succeeding spring. Consequently the colonies are small, rarely exceeding 200 individuals, in American species at least, and no greater stores of honey are accumulated than suffice for the season's needs.

Social Bees—A distinct step in development, from every point of view, is the family Apidae, or honeybees, for these form permanent colonies, lasting through the winter by means of stored food, the amount of which is proportionate to and adequate for the needs of the colony, although that may and usually does number many thousands of lives, dispose of their unwieldy surplus of population by migration, and conduct a community life of extraordinary activity and usefulness by a systematic economy and a body of instincts, modified by intelligent judgment, which cannot be matched elsewhere in the animal kingdom. This activity and productive power has long been tuned to the use of man in the care of a few species which have been domesticated since prehistoric times. The different species of honeybee in a wild state generally make their nests in hollow trees or among the branches of trees, sometimes under ledges or in clefts of rocks, and their stores of honey are not only sought after by man, but afford food to numerous animals, some of which equally delight to prey upon their larvae. Several species have been made, in a limited degree, to subserve man's needs in a more regular way. The common bee of southern Asia (*Apis indica*) is kept in limited numbers, according to Benton, in earthen jars and sections of trees, simulating its natural home, in parts of the East Indies. Its cells are smaller than those of our hive bee, and under the rude methods employed only 10 or 12 pounds of honey are obtained. Another small East India bee (*Apis florea*) builds a comb about the size of one's hand in the open air, attached to a twig of a bush, and does not seem capable of domestication. *Apis dorsata* of the Far East, on the other hand, is of gigantic size, and Benton first learned its peculiarities. They build immense oval combs, often 5 or 6 feet long and 3 or 4 feet wide, which they attach to overhanging ledges of rocks or large limbs to lofty trees in the primitive forests of southeastern Asia and the neighboring islands, including the Philippines. Benton found that when these combs were placed in frame hives the bees did not desert them and were easily handled, the quantity of wax and honey was

always very large, and there seems no reason why this kind of bee should not be brought under cultivation in civilized regions. Several other species of possible importance in the future exist in other parts of the tropics, as *Apis adansonii* of West Africa, *Apis unicolor* of Madagascar and Mauritius, and the closely related stingless bees of the tropical American genus *Melipona*. Consult Bingham, *Fauna of British India: Bees and Wasps* (London, 1897).

Fossil Bees—The earliest forms of bees, as far as definitely known, lived in Tertiary times. A few specimens belonging to the order Hymenoptera have been found in Mesozoic strata, but it cannot be said with certainty that they include representatives of the group Apoidea. In the Tertiary period this group was probably fairly abundant, as a large number of fossil species have been described from Tertiary strata in Europe and America. The best-known European localities are Oensigen (Switzerland), Radoboj (Croatia), and Roth and Klotienssee (Germany), where 7 species of *Bombus*, 5 of *Anthophorites*, 1 of *Anthophora*, 2 of *Apis*, and 2 of *Osmia* have been found. In America the Tertiary lake beds of Florissant, Colo., have yielded a number of species of Apoidea bees, but the specimens generally are not sufficiently well preserved to permit of exact determination. The family Andrenidae is represented in fossil form by a few specimens from North Germany and from Florissant.

The COMMON HONEYBEE (*Apis mellifica*) This is supposed to be of Asiatic origin and was domesticated about the eastern end of the Mediterranean at the dawn of history, the bee keepers of Egypt, Syria, and Greece practicing many of the arts used with bees at present, such as moving them to new pastures from time to time, etc. It traveled into Europe with the Roman civilization, if not before, and came to America with the early colonists. Several races have been developed in the course of this long history of semi-domestication, and the best of them long ago reached the United States. Its communities seem ordinarily to number from 10,000 to 60,000 individuals. These communities are made up of three classes of bees. A single one is a fully developed female, capable, after a single fertilization, of almost unlimited production of eggs; she is the mother of the band, and is usually termed the "queen." Another consists of male bees, or "drones," which at certain seasons number from 600 to 2000. The third and most common class, counted by thousands in a flourishing community, are females whose generative organs are so undeveloped that they rarely produce eggs. They are therefore popularly but erroneously called "neuters," but are better known as "workers," since they perform all the labors of the hive.

The workers have a body about half an inch in length and about one-sixth of an inch in greatest breadth, at the upper part of the abdomen. The antennae are 12-jointed and terminate in a knob. The abdomen consists of six joints or rings, and under the scaly coverings of the four middle ones are situated the *wax pockets*, or organs for the secretion of wax. The extremity of the abdomen is provided with a sting which is straight. The basal joint of the hind tarsi is dilated to form a pollen basket, and the legs are well provided with hairs for collecting the pollen and brushing it into this receptacle.

The *males*, or *drones*, so called from the peculiar noise which they make in their flight, are much larger than the workers and thicker in proportion. The antennæ have an additional joint. The eyes are remarkably large and meet upon the crown.

The *perfect females*, or queen mothers, are considerably longer than either the workers or the males; they are also distinguished by the yellow tint of the under part of the body and differ from all the other inmates of the hive in the shortness of their wings, which, instead of reaching to the extremity of the abdomen, leave some of its rings uncovered. Neither males nor queens have wax pockets, nor have they pollen baskets. Their legs also are less hairy. The sting of the queen bee is curved. The mandibles both of the males and perfect females are notched or toothed beneath the tip, while those of the workers are not. There are two rival theories for explaining the origin of the different kinds of bees in a colony. Dzierzon maintains that fertilized queens can lay fertilized or unfertilized eggs at will, the former in queen cells, and worker cells, the latter in drone cells. Dickel contends, on the contrary, that by a variation in the food the workers can produce at will, queens, drones, or workers out of indifferent eggs or larvae.

The greater part of the life of the queen or mother bee is spent in laying eggs for the increase of the population of the hive, and this increase goes on at a rapid rate, as the queen not infrequently lays 3000 eggs in a day. The number, however, varies greatly. In cold weather it is very small, but the invariable presence of brood in different stages, in a well-stocked hive, proves that some eggs are laid even in winter. During the later spring months the number is very great, many practical apiarists considering that as many as 3000, or even 4000, are deposited daily. The community, however, is not destined to an indefinite increase, but in certain circumstances *swarming* takes place, and new colonies are founded.

The *impregnation of the queen* takes place high in the air, and usually within a few days after she has emerged from the cell. It is the only occasion of her ever leaving the hive, except that of swarming. The question has therefore been asked, why there are so many males in a bee community, but no very satisfactory answer has been given to it. The males are not known to fulfill any other purpose than that of the propagation of their species, and after the swarming season is over, the greater part of them are ruthlessly massacred by the workers, as if in dread of their consuming too much of the common store. The greater part of the workers themselves are supposed to live for from one to nine months, the duration of the life of the queen bees is rarely more than three years.

An eloquent and picturesque narrative of the nuptial flight of the queen bee has been given by Maurice Maeterlinck in his book, *The Life of the Bee*. No sooner has the union been accomplished than the male's abdomen opens, the organ detaches itself, dragging with it a mass of entrails, and the emptied body falls dead toward the earth. This extraordinary flight and its tragedy seem to be Nature's effort to secure cross fertilization, and at the same time a selection of the best available mates. To the queen mother of the hive is given a power of flight that only the strongest males can equal, nor does either of them seem much inclined to copulate

until their air tubes are distended with air and until under the excitement of extreme exertion. Hence the lofty flight is necessary, and the best one of all the males alone can overtake the fleeing queen. After impregnation, the queen returns to her hive, is cleaned and cared for by the workers, and thenceforth devotes herself to motherhood for the increase of her tribe.

Eggs and Young.—The queen bee, when about to begin to lay eggs, is the object of great attention on the part of the workers. She moves about in the hive, attended by a sort of retinue of about 10 or 15 workers, by some of which she is frequently supplied with honey. But the name of queen bee appears to have originated in a mistaken notion that something analogous to a monarchy subsists in the beehive, and imagination, being permitted a free scope, many things have been invested with a false coloring derived from this analogy.

The queen bee at first lays eggs which give birth to workers, and afterward produces eggs which become drones. With unerring instinct she places each egg in the kind of cell appropriate to it, which has been prepared beforehand by the workers, the drones' cells being larger than the workers' cells. The cells in which future queens are to be reared are very unlike all the others, but the eggs differ in no respect from those deposited in workers' cells. It is a curious circumstance that queens of which the fecundation has been prevented till they are considerably older than usual lay mainly drone eggs. It occasionally also happens that some of the worker bees lay eggs, and these invariably produce drones.

The eggs of bees are of an oblong shape and bluish-white color, about one-twelfth of an inch in length. They are hatched in about three days. The larvae are little, worm-like creatures, having no feet, and lying coiled up like a ring. They are diligently fed by the working bees until, in about five days, when large enough nearly to fill the cell, they refuse food, upon which the attendant bees seal up the cell with wax, and the larva, spinning itself a fine silken envelope or cocoon, is transformed into a pupa, and about the twenty-first day from the deposition of the egg the young bee, in its perfect state, breaks the covering and issues from the cell. It is caressed and supplied with food by the attendant bees and is believed not to try its wings until several days old. The cell from which a young bee has issued is speedily cleaned out and prepared for the reception of another egg or of honey. The fine silken envelope of the pupa, however, remains attached to the cell, of which the capacity thus becomes gradually smaller, until the cells of old combs are too small to receive eggs and can be used for honey alone—a fact of which the importance in relation to the economical management of bees is obvious. The spinneret, by means of which the larva spins the cocoon, is a small organ connected with the mouth. The food with which the larvae are supplied is a mixture of pollen, honey, and water, with the addition, possibly, of some secretion from the bread glands of the working bees, by which it is prepared. It varies a little, according to the age and kind of the larva, and the peculiarities of that given to young queens appear to be indispensable to their fitness for their future functions. Pollen is constantly found stored upon the cells of

the hive, and is called "beebread." Most people have met with such cells in honeycomb, and have observed the strikingly peculiar taste of the contents.

The combs of a beehive are parallel to each other, forming vertical strata of about an inch in thickness, and distant about half an inch from each other. The cells are therefore nearly horizontal, having a slight and somewhat variable dip towards the centre of each comb. The central comb is generally first begun, and next after it those adjoining it on each side. Circumstances frequently cause some departure from this uniform and symmetrical plan, which, however, still remains obvious. Each comb consists of two sets of cells, one on each side, and it may be mentioned as an illustration of the wonderful industry of bees, and the results of their combined labors, that a piece of comb 14 inches long by 7 inches wide, and containing about 4000 cells, has been frequently constructed in 24 hours. The greater part of the comb consists of the kind of cells fitted for breeding workers, a smaller part of it of the larger or drone cells. After the principal breeding season is over, the cells of some parts of the comb are often elongated for the reception of honey, and sometimes comb of greater thickness, or with unusually long cells, is constructed for that purpose alone, in which case the mouths of the cells are inclined upward more than is usual with the ordinary brood cells. When a cell has been completely filled with honey, its mouth is sealed or covered with wax.

The comb partition is composed of a multitude of little rhombs, or four-sided figures, with equal and parallel sides, and two obtuse and two acute angles, the obtuse angles being angles of 109° and the acute angles of 71° , agreeing with the results of mathematical analysis, applied to the difficult question of the form of the facets of a three-sided pyramid, which should terminate a six-sided prism, so as to combine the greatest economy of materials with the greatest strength. On looking at a piece of empty honeycomb, placed between the eye and the light, we readily perceive that the cells are not opposite to each other, cell to cell, but that the point of meeting of three sides of three cells, on one side, is opposite to the centre of a cell on the other side—a circumstance which is calculated greatly to increase the strength of the whole fabric. It follows also from this that the terminating pyramids of the cells on the one side do not interfere with the form of the cells on the other side, but the three rhombic facets, which terminate each cell, belong likewise to three distinct cells on the opposite side of the comb.

The only departure from perfect regularity in the form of the cells is in the transition from the smaller or workers' cells to the larger or drones' cells, which, when it takes place, is managed with great simplicity and beauty of contrivance.

Beeswax.—The material of which cells are built is chiefly wax (see BEESWAX), which is at first of a white color, but becomes brownish-yellow with age, and in very old combs almost black. Although wax exists as a vegetable product, yet beeswax is now known to be produced in the bodies of bees; and it has been found that they produce wax and build combs when supplied only with honey or saccharine substances. The bees which are about to proceed to wax making suspend themselves in clusters in the

hive, attaching themselves to each other by means of hooks with which their feet are provided, and while they remain motionless in this position, the wax appears to be formed, in small scales, which they afterward take in their mouths and curiously work up with a secretion from the mouth itself, passing the wax, in the form of a minute riband, through the mouth, first in one direction and then in the opposite one, and finally depositing it in its proper place for the foundation of the comb. The bees which elaborate and deposit the wax do not, however, always construct the cells, others aiding in this, partly by a process of excavation in the wax deposited. It is supposed by many naturalists that some of the working bees are exclusively waxworkers, some nurses, etc., but others think that there is only one class of working bees, all ready for any kind of work according to circumstances.

But wax, although the chief, is not the only material of the combs. *Propolis* (qv) is also employed in small bands to give greater strength to the cells, the mouths of which are surrounded with it and made thicker than their walls. This substance, which is obtained by bees from the viscid buds of trees, is also employed for more firmly attaching the combs to the hive, for closing up apertures in the hive, for covering up obnoxious substances, which are too large to be removed, and for a variety of similar purposes.

The Origin and Rearing of Queens.—Queen bees are hatched and reared in cells very different from the rest. They are vertical and not horizontal in their position—not hexagonal, but rather oval in form—and much larger than the other cells, even in proportion to the size of the animal that is to inhabit them, they are generally placed on the edge of a comb, and when they have served their purpose, are partially removed, so that during winter they resemble acorn cups in appearance.

Recently artificial queen rearing has been put on a practical basis. A number of round cells are made about the size of natural queen cells and placed on a frame in the upper part of the hive. They are then smeared with royal jelly, and ordinary larvae one to three days old are placed in the cells. The bees complete the cells and feed the growing larvae with royal jelly so that they develop into queens. Two queens cannot long exist in the same community. There is implanted in them a deadly rivalry, and the mother bee, if permitted, would even tear open every queen cell of which the inmate has nearly approached maturity, and inflict death by her sting, but workers throng around the queen, hem her in, and prevent the execution of her purpose.

Swarming.—The queen now becomes restless, her agitation communicates itself to those around her and extends through the hive, the ordinary work of the community is in great part neglected, fewer bees than usual are seen to leave or return to the hive, and at last the queen bee rushes forth, preceded and followed by crowds which press and throng upon each other, form a buzzing cloud in the air, and very generally settle upon a bush in the neighborhood, where they soon congregate closely together, hanging by their claws in a dense cluster. Sometimes they rise up in the air, and fly off at once to a considerable distance, apparently to some previously selected place in the hollow of a tree—in the chimney or roof of a house,

where they happen to find an aperture—or in some such situation. More frequently they settle not far from the hive which they have left, often on some very humble plant, or even on the grass, and soon rise again. It is the care of the keeper to prevent this by providing them immediately with a suitable habitation in a new hive, invitingly placed above them, or into which he puts the swarm after they have congregated closely together as above described. It sometimes happens that bees hurry out of their hive without their queen, in which case they do not in general congregate so closely together where they settle, and soon return to the hive again. Swarming generally takes place on a fine day, and when the bees seem on the very point of coming out, a cloud passing over the sun is enough to retard it. Bad weather occasionally not only retards but prevents it, the young queens being at last killed in their cells. A week after the first swarm of the season has left the hive with the old queen, as is usually if not always the case, the first young queen emerges, and if the bee community is a large and prosperous one, other young queens also come forth from their cells, and leave the hive with successive swarms, the number of which depends upon the climate, the season, etc. In England, it is not uncommon for a beehive to send off three swarms in a summer, the first being almost always the largest, and not infrequently itself sending off a swarm before the season is over. If a large production of honey is desired, it is customary for bee keepers to prevent more than one swarm coming from each hive during a single season. This swarming of the bees is, of course, made necessary by the over population of the hive, and is Nature's method of providing for the

only thus could the bee communities become sufficiently scattered to enable all to find sufficient flowers to furnish food.

Bees left without a queen, and with no means of supplying the want, appear to feel themselves cut off from the very purpose of their existence, the labors of the community are slackened, and its members soon dwindle away. It has already, however, been stated that bees left without a queen can provide themselves with one by transforming and enlarging a worker's cell which contains an egg or very young larva. This process is sometimes carried on as if by several distinct parties, in different parts of the hive at once, and, as if aware that time will be gained, the bees generally prefer cells containing larvae of two or three days old to those containing eggs.

Winter Life—Bees become torpid during cold weather and consume comparatively little food. They are readily aroused from this state, however, as may at any time be proved by tapping on a beehive, when it will be found that the temperature of the interior of the hive rises rapidly. Respiration is considerably lessened in the state of torpidity, and the temperature rises when it is resumed. The respiration of bees takes place by air tubes or *tracheæ* (see INSECTS), and is very active when the insect is in a state of activity. The respiratory movements are easily seen in looking at a bee. The consumption of oxygen by this process might be expected soon to reduce the atmosphere within a hive to a state in which it could no longer support animal life, but in summer, when respiration is active and the hive populous, a constant circulation of air is maintained by the insects themselves, some of which are employed in a rapid vibration of their wings for this purpose. A greater or smaller number of them, according to circumstances, may frequently be seen thus engaged in fanning the air at the mouth of a beehive.

Enemies—Among the enemies of bees, mention should be made of the wax or bee moths which, notwithstanding the danger of the stings of the bees, enter the hives and deposit their eggs. They belong to the small subfamily *Galleriinae*, with only six species in the United States. The large wax moth, *Galleria mellonella*, a well-known pest, is a purplish-brown and yellow moth, which creeps into the hive at night to deposit her eggs. The larvae hide by day and feed by night on the wax, burrowing through the cells and doing much damage, even to the extent of destroying the colony. The bee colony should be kept strong, the cracks in the hive should be well filled to keep out the moth, and all moths and larvae seen should be killed. The lesser wax moth *Achroia grisella* is less widely distributed and does not cause as much injury. Ants often become a serious pest. Mice sometimes eat their way into the hives in winter and destroy and plunder unmolested. The bee louse (*Brasilia caca*) is a troublesome parasite of bee colonies in the Mediterranean region, being most frequently found on the thoraces of queen bees. Several species of robber flies and dragon flies occasionally capture bees and eat them. There are also a number of bee-killing birds in Europe and the United States.

Diseases—The greatest drawback to apiculture is that of disease among bees, both of the adults and of the larvae or brood. The diseases of the brood, which are the more generally dis-

increase and proper dissemination of the species, by the establishment of new colonies. That the swarms should, in a wild state, seek new homes at a considerable distance is necessary, because

tributed and serious, are known as European foul brood, often referred to as "black brood," caused by *Bacillus pluton*, American foul brood caused by *Bacillus larvae*, and sac brood caused by a filterable or ultra-microscopic virus. It has been conservatively estimated that the loss from diseases of the brood in the United States alone reaches \$1,000,000 annually. The two forms of foul brood are widely distributed, occurring both in Europe and America. Both weaken colonies by reducing the number of emerging bees needed to replace the old adult bees which die from natural or other causes. The general appearance of the larvae affected with foul brood is similar in the two forms, the differences being found in the age of the larvae affected, in their response to treatment, and in the appearance and ropiness of the dead larvae. Much the same treatment is necessary to effect a cure. In appearance the brood in a diseased comb is irregular and scattered and unlike the compact masses of cells in healthy broods which contain larvae of the same age. The diseased larvae are pale yellow and unlike the pearly white healthy brood, later they turn brown, appear flabby, and are not so much curled up on a cell bottom as are the normal larvae of the same size. When the larvae do not die until the cells have been capped over, as is usually the case with American foul brood, cells are found here and there which are darker in color than the healthy ones. When these cells are opened, a brown mass is found which if drawn out is stringy and ropy, this ropiness is the surest practical indication of the presence of American foul brood.

When hives have been infected sufficiently long to show marked decline in the number of bees, the disease is likely to spread rapidly, as the remaining bees are usually inactive, and do not defend their hives against robber bees from strong healthy colonies, which in turn fall victims to foul brood. Both forms of foul brood spread from colony to colony and from apiary to apiary in much the same way. The common manner of conveying the virus is in honey which has become contaminated. The only reliable method of relieving the condition without destroying the entire diseased colony is to remove the bees from their infected surroundings to a new hive. This, commonly known as the shaking treatment, consists in the removal of all infected material from the colony and in compelling the colony to take a fresh start by building new combs and gathering fresh stores. It is done by shaking the bees from the old combs into a clean hive on clean frames.

Sac brood, often spoken of as "pickled brood," is a disease somewhat resembling foul brood, but without the characteristic ropiness. The larvae can be removed from the cell without rupturing their body wall and when thus removed have the appearance of a small closed sac. When badly infected, the colony becomes appreciably weakened by this disease. The treatment is the same as for foul brood.

The diseases of adult bees which are of less importance and less imperfectly known are so-called paralysis, the cause of which is unknown, non-infectious and infectious dysentery, the latter, also known as the Isle of Wight Disease, being caused by the protozoan *Nosema apis*, and by spring dwindling. In England the Isle of Wight disease has seriously threatened the industry.

BEE, BARNARD E (1824-61) A Confederate general, born in South Carolina. He graduated in 1845 at West Point and served with great ability and gallantry in the Mexican War. He was on frontier duty from 1848 to 1861, became a brigadier general in the Confederate army, and was mortally wounded while leading his brigade at Bull Run, July 21, 1861.

BEE, HAMILTON PROBLEAU (1822-97) A Confederate general, brother of Barnard E Bee, born in Charleston, S C. He was secretary on the commission which ran the boundary line between Texas and the United States from the mouth of the Sabine River to Red River (1839), acting as a representative of Texas. President Houston, of Texas, sent him as a commissioner to treat with the Comanche Indians in March, 1843, and although he and his associates were at first made prisoners, the mission was finally successful. When the hostilities with Mexico began, he resigned his office of secretary of the Texas Senate, and joined Gen Ben McCulloch's cavalry. He became a brigadier general of the Provisional army of Texas in 1861 and in the Confederate army in 1862.

BEE, THE A weekly magazine, first published by Mr Walkie, a London bookseller, on Oct 16, 1759. It ran through only eight numbers, but is notable from Goldsmith's contributions.

BEE BALM, balm. See OSWEGOO TEA.

BEEBE, CHARLES WILLIAM (1877-) An American ornithologist and explorer, born in Brooklyn, N Y, and educated at Columbia University. Having been appointed in 1899 curator of ornithology of the New York Zoological Society, he originated the collection of living birds in the New York Zoological Park and brought it up to first place, with a census of 900 species and 3000 specimens. In addition, he headed scientific expeditions to Nova Scotia, Florida, Mexico, Venezuela, British Guiana, the Himalayas, Borneo, China, and Japan. His most important trip, under the auspices of the Zoological Society, was undertaken in search of data for a monograph of the pheasants, a work costing over \$100,000. His publications include *Notes on the Psychology of Birds* (1903); *Two Bird-Lovers in Mexico* (1905), *The Bird*

BEE BIRD, or **BEE MARTIN**. The North American kingbird. In reference to its habit of catching honeybees, see KINGBIRD.

BEECH (OHG *buocha*, Lat *fagus*, Gk *φῆγος*, *phégos*, oak, cf Skt *bhāsh*, to eat), *Fagus*. A genus of trees of the family Fagaceae. The species are not numerous, most of them are forest trees of great beauty. The genus has been divided into two sections—*Eufagus*, with six species in the Northern Hemisphere, and *Nothofagus* in the Southern, mostly in the Andean region of South America, with a dozen species. By some botanists these are considered distinct genera. The European beech (*Fagus sylvatica*)

—see Plate of BALSAM—forms pure forests in many parts of Europe. It grows to a height of 100 to 120 feet and a diameter of 4 feet, and when standing alone becomes a very ornamental tree, with far-spreading branches, which often droop gracefully almost to the ground. It has thin, ovate, obscurely toothed leaves, finely ciliated on their margins. Its bark is smooth and is often of a whitish color. The beech thrives best in light but not sandy soils and does not send its roots deep into the ground, but rather horizontally under the surface. The wood is more or less of a reddish-brown color. It is very hard and solid but brittle, and when exposed to the open air very liable to rot and to be eaten by worms. When kept under water, it is very durable, hence its use in the erection of mills and for weirs, sluices, etc. It is also employed for many purposes by cabinetmakers and turners. It is very much used in France for making the *sabots*, or wooden shoes, worn by the peasantry, being preferred for this purpose to every other wood except walnut, on account of its incapacity for absorbing water. It is one of the best kinds of firewood in Europe. The bark is sometimes employed in tanning when oak bark is scarce. The beech bears lopping well and is often planted for hedges. Beechnuts, when fresh, have a sweet taste, like that of a walnut. They contain in large quantity a bland fixed oil, along with starch, a little sugar, and an astringent substance. A volatile, narcotic, poisonous principle, called *fagine*, is also found in them, but more in the husk than in the kernel, and when not only the smooth, leathery, outer husk, but also the thin brown inner pellicle has been removed, they constitute a wholesome food. They are, however, more generally used for feeding swine, poultry, etc., and are much employed in France and other parts of Europe for the manufacture of beech oil. When expressed without the application of heat and well clarified, this oil has an agreeable taste and is used for food, it keeps long without becoming rancid. Beech forests anciently abounded in England, and great herds of swine were fed in them. The beech is not, in general, found in Europe north of lat 59°, although it occurs 2° farther north in the Scandinavian Peninsula and in the temperate parts of Asia.

In gardens and pleasure grounds a variety is very frequently to be seen, the leaves of which have a blood-red color. The same color appears also in some degree in the leaves of the beech of North America (*Fagus ferruginea*, or *Fagus americana* as written by some botanists), which is distinguished by ovate, coarsely serrated and much acuminate leaves. It forms extensive forests in the northeastern United States and the adjoining British possessions, and its wood which is of a somewhat red or rusty color, is more valued than that of the white beech. Several species of beech are natives of the more elevated parts of the south of New Zealand, others belong to the south of South America. *Fagus*, or *Nothofagus*, is, in fact, more characteristic of the colder latitudes of the Southern than of the Northern Hemisphere. *Fagus*, or *Nothofagus*, *cunninghamii* is the "myrtle tree of the mountains of Tasmania—a very large tree with evergreen leathery leaves, in form much resembling those of the birch. *Fagus betuloides* is the evergreen beech of Tierra del Fuego, where it forms forests of which the dark-green foliage contrasts strikingly in winter with the dazzling snow. The wood is too heavy and brittle for masts, but makes tolerable planks, and is carried to the treeless Falkland Islands for roofing houses. *Fagus antarctica* ascends higher on the mountains about the Strait of Magellan. It has deciduous leaves and much resembles the common beech. *Fagus procera* grows in the Andes of Chile and attains a majestic size. It is a valuable timber tree. In the United States *Carpinus caroliniana*, a small tree, is called blue beech and water beech. A number of species of trees are called beech in Australia from the resemblance of their timber to the European beech.

BEECH DROPS. See CANCER ROOT.

BEECHER, CATHERINE ESTHER (1800-78). An American philanthropist and writer. She was born at East Hampton, L I, the daughter of Lyman Beecher, and the sister of Henry Ward Beecher and of Harriet Beecher Stowe. At the age of 19 years she was betrothed to Professor Fisher, of Yale, who shortly after lost his life at sea. She never married, but dedicated herself to the advancement of woman's education, opened a school at Hartford in 1822, and in 1832 one for young women in Cincinnati. Though she gave this up in 1834 on account of ill health, she continued to organize societies and schools for training women to social service, and to this end published numerous books, among which were *True Remedy for the Wrongs of Women* (1851), *Letters to the People on Health and Happiness* (1855), *Common Sense Applied to Religion* (1857), and *Religious Training of Children in the School, the Family, and the Church* (1864). She was a brilliant but rather eccentric woman.

BEECHER, CHARLES (1815-1900). An American Congregational divine. He was born at Litchfield, Conn., the fourth son of Lyman Beecher, was fitted for college at the Boston Latin School and at Lawrence Academy, Groton and graduated at Bowdoin in 1834. He studied theology at Lane Seminary and officiated as pastor of the Second Presbyterian Church, Fort Wayne, Ind., from 1844 to 1851, of the First Congregational Church, Newark, N J, from 1851 to 1854, of the Congregational Church, Georgetown, Mass., in 1857. From 1870 to 1877 he resided in Florida and was for two years

superintendent of public instruction. In 1885 he became state supply at Wysox, Pa., and died at Haverhill, Mass., April 21, 1900. He aided Henry Ward Beecher in the compilation of *The Plymouth Collection*, and Mrs Stowe in *Sunny Memories of Foreign Lands*, and published, among other books, *The Incarnation* (1849), *Pen Pictures of the Bible* (1855), *Spiritual Manifestations* (1879), *Eden Tableaux* (1880), and edited his father's autobiography and correspondence (2 vols, 1863).

BEECHER, CHARLES EMERSON (1856-1904). An American paleontologist, born at Dunkirk, N. Y. He graduated at the University of Michigan in 1878 and obtained the degree of Ph.D. from Yale in 1889. His early work in paleontology was done under the direction of Prof. James Hall, at Albany, N. Y. In 1888 he received an appointment at Yale University, was made professor of historical geology in 1892, and after the death of Professor Marsh he became the curator of the geological collections and professor of paleontology. Beecher's most important contributions have been to the knowledge of the development and structure of the trilobites and brachiopods. Several papers on the ontogeny and phylogeny of these and other classes of animals were collected in one volume entitled *Studies in Evolution* (1901, reissued, 1913), and appeared as one of the Yale Bicentennial publications. He also published "Brachiospongiae. A Memoir on a Group of Silurian Sponges" (*Memoirs of the Peabody Museum of Yale University*, vol. 11, part 1, 1899). He became a member of the National Academy of Sciences in 1890. Consult "Biographical Memoir of Charles Emerson Beecher" in *National Academy of Sciences, Biographical Memoirs*, vol. vi (1899).

BEECHER, EDWARD (1803-95). An American Congregational divine, born at East Hampton, L. I., the second son of Lyman Beecher. He graduated at Yale, 1822, and in theology at Andover, was pastor of Park Street Congregational Church, Boston, from 1826 to 1830, president of Illinois College from 1830 to 1844. He officiated as pastor of the Salem Street Church, Boston, from 1846 to 1856, and of the Congregational Church at Galesburg, Ill., from 1856 to 1872, then removed to Brooklyn, N. Y., where he engaged in literary and missionary work, and was pastor of the Parkville Congregational Church from 1885 to 1889. He was for six years senior editor of *The Congregationalist* and was for several years on the editorial staff of *The Christian Union*. Dr. Beecher wrote much on the theme that man is in a progressive state, the present being the outcome of a former life and a preparation for a future one to succeed after death, that the struggle between good and evil will not end with this life, but in some future era all conflicts will be ended, evil will disappear, and harmony become established. These views are set forth in *The Conflict of Ages* (1855) and *The Concord of Ages* (1860). He also published *Baptism: Its Import and Mode* (New York, 1850), *The Papal Conspiracy Exposed* (New York, 1855, Edinburgh, 1856); *History of Opinions on the Scriptural Doctrine of Retribution* (New York, 1878). He died in Brooklyn, July 20, 1895.

BEECHER, HENRY WARD (1813-87). A Protestant pulpit orator, born in Litchfield, Conn., June 24, 1813. He was the eighth child and third son of Lyman Beecher. From his

father he inherited a virile nature, a Puritan conscience, indomitable courage, and great force of character, from his mother, Roxanna Foote, of Cavalier ancestry and Episcopalian training, susceptibility to culture, love of music and art, a mystical disposition, and an almost feminine tenderness of nature. He entered Amherst College at 17, attained only moderate standing in college studies, but threw himself with enthusiasm into the study of English literature, phrenology, and elocution, and was active outside the college in prayer meetings, lectures, and lay preaching. In Lane Theological Seminary he pursued the same enthusiastic but somewhat fitful methods of study and alternated between a missionary enthusiasm and great spiritual depression accompanied with skepticism. His doubts were finally settled by a spiritual experience of Jesus Christ as the revelation of a God of infinite love and pity, which became the foundation both of his theological thought and his Christian life. On graduation he accepted the pastorate of a Presbyterian church of 20 members at Lawrenceburg, Ind., on the Ohio River, where he served both as sexton and preacher. He was thence called after two years to a New School Presbyterian church in Indianapolis, where his engaging personality, vivid imagination, and dramatic oratory brought him overflowing congregations. Eight years later he was called to the newly organized Congregational "Plymouth Church," in Brooklyn, N. Y. Here he preached for nearly 40 years to congregations of between 2000 and 3000. During a large part of his ministry one sermon each week and his Friday evening "Lecture Room Talks" were reported and published in full. Congregational singing was a feature of the public service, and the "Plymouth Collection," edited by Mr. Beecher in 1855, though since superseded by better hymnals, was the pioneer of them all. Several notable revivals of religion took place, and the church grew in membership to between 3000 and 4000, with two connected chapels or missions. Mr. Beecher also took an active part in the antislavery campaign, readily coöperating with the extreme Abolitionists, though he himself always advocated non-interference with slavery in the States and its gradual extinction under the Constitution by prohibiting its extension. He was also heard from the platform on every public question and was in great request as a Lyceum lecturer. The most notable of his addresses outside the pulpit were five orations delivered by him in England in 1863, where he successfully faced and eventually controlled more than one mob, and where he exerted a great influence in transferring the public sympathies of England from the southern to the northern side in the American Civil War. At the close of that war he advocated a policy of trust in the South and limited suffrage for the negroes with generous provision for their education and by so doing separated himself politically from the Republican party leaders. He was an early student of Spencer, Tyndall, Darwin, and Huxley, though not their follower, and accepted the doctrine of evolution on its first appearance, believing and teaching that it confirmed a rational Christianity. He accepted the Higher Criticism and applied it to the interpretation of the Bible. By instinct and temperament always an advocate of minimum governmental interference, he threw himself enthusiastically into the campaign for the election of Mr. Cleve

land in 1884 on the platform of tariff for revenue only. He retained his pulpit power to the last and died after a brief illness of apoplexy on the 8th of March, 1887.

When the *Independent* was established, Mr Beecher became first a regular contributor, then an editorial writer, then editor in chief. He soon resigned this position, his friend, Theodore Tilton, taking his place. The paper continued to publish his sermons until his break with the Radical leaders on the reconstruction problem, when their publication was suspended. In 1870 *The Christian Union* was established, with Mr Beecher as editor in chief. This was shortly followed by an attack by Mr Tilton upon Mr Beecher, ending in a suit against him for adultery. The trial, which lasted for six months, ended in a disagreement of the jury, 9 of the 12 voting in Mr Beecher's favor. Other investigations were more decisive. The largest and most representative council of the Congregational churches ever known in the history of the denomination declared unanimously their undiminished confidence in him, and at a public meeting tendered to him on the occasion of his seventieth birthday by the citizens of Brooklyn, without respect to church or party, eight years after the trial, and presided over by the justice who had presided at the trial, the public confidence of the community in him was expressed in the strongest terms.

In his later ministry Mr Beecher habitually spoke extemporaneously. He was as dramatic in private conversation as on the platform, and his imagination was as fertile. Surpassed in charm of manner and grace of diction by many orators, in combination of charm and power he was surpassed by few or none. The fervid passion of his oratory swayed his audience at the time, his marshaling of facts and his appeal to the reason rendered the impression permanent, while a mystical imagination often opened to the hearer a vision of a world invisible. He married (1837) Eunice White Bullard born in West Sutton, Mass., Aug. 26, 1812. His widow, three sons, and one daughter survived him.

Consult *Biography of Henry Ward Beecher*, by his sons, William C. Beecher and Samuel Scoville, assisted by Mrs. Beecher (1888); *Life of Henry Ward Beecher*, by J. H. Barrows (1893); *Henry Ward Beecher*, by Lyman Abbott (1903); and *Henry Ward Beecher: A Study of his Life and Influence*, by Newell Dwight Hillis (1913). Of his published works all are reprints of sermons, addresses, or occasional periodical articles with two exceptions. *Norwood*, a tale of New England life, and *The Life of Christ: Prayers from Plymouth Pulpit* (1867) interpret his devotional spirit, *Yale Lectures on Preaching* (1872-74) gives both his philosophy of preaching and his pulpit and pastoral methods, *Evolution and Religion* (1885-86) affords the best interpretation of his theological views.

BEECHER, LYMAN (1775-1863). An American theologian. He was born in New Haven, Conn., Oct. 12, 1775, died in Brooklyn, N. Y., Jan. 10, 1863, descended from one of the New Haven Colony of 1638. He lost his mother when an infant and was adopted by an uncle, Lot Benton, graduated from Yale in 1797, and next year became pastor of the Presbyterian Church at East Hampton, L. I., where his wife, Roxanna Foote, increased their slender means by teaching a private school. Mr Beecher's sermon on the death of Alexander Hamilton (killed in

a duel with Aaron Burr in 1804) gave him immediate fame, which rapidly increased until he was recognized as one of the foremost preachers in the country. In 1810 he went to Litchfield, Conn., where he was pastor of the Congregational Church 16 years. In 1814 he delivered and printed a series of six sermons against intemperance, which added greatly to his reputation for eloquence and power. He was also foremost in the Unitarian controversy which pervaded eastern New England. In 1826 he became pastor of the Hanover Street Congregational Church, Boston. In 1832 he became president of Lane Theological Seminary, a new institution near Cincinnati, Ohio, and held the office for 20 years during the first 10 of which he was pastor of the Second Presbyterian Church in Cincinnati. In 1835 he was tried by his Presbytery for teaching false doctrines, but was acquitted then, and again on appeal to the Synod. When the Presbyterian church divided, he went with the New School branch (1838). In 1852 he returned to Boston, intending to revise and publish his writings, but his mental powers failed, and not very long afterward he retired from public work, removing to Brooklyn, where he lived with his son, Henry Ward Beecher. He was married three times and had 13 children. All his sons, seven in number, became clergymen. Dr Beecher's sermons and speeches, though usually delivered extemporaneously, were the result of careful study and were marked by boldness, convincing argument, shrewd common sense, and irresistible wit. Consult his *Collected Works* (3 vols., Boston, 1852), *Autobiography and Correspondence*, edited by his son, Charles Beecher (New York, 1863), also James C. White, *Personal Reminiscences of Lyman Beecher* (New York, 1882), E. F. Hayward, *Lyman Beecher* (Boston, 1904).

BEECHER, THOMAS KINNICUT (1824-1900). An American Congregational clergyman, born at Litchfield, Conn. He graduated at Illinois College, 1843, and from 1854 until his death was pastor of a church in Elmira, N. Y., where he died. The son of Lyman Beecher, he shared the family genius and was noted for eccentricity and practical philanthropy. His publications embrace *Our Seven Churches* (1870), in which is a series of observations upon seven denominations in Elmira, and a posthumous work, *In Tune With the Stars*, stories for children, edited by Clara J. Farson (1902).

BEECHER, WILLIS JUDSON (1838-1912). An American educator and author, born in Hampden, Ohio. He graduated at Hamilton College in 1858, studied at the Auburn Theological Seminary, and in 1865 was appointed professor of moral science and belles-lettres at Knox College. From 1871 to 1908 he was professor of the Hebrew language and literature in Auburn Theological Seminary. He contributed frequently to periodicals and published *Farmer Tompkins and his Bibles* (1874), *Prophecy and the Promise* (1905), *The Dated Events of the Old Testament* (1907), *The Teaching of Jesus Concerning the Future Life* (1908), *Reasonable Biblical Criticism* (1911).

BEECHER STOWE, HARRIET E. See STOWE, HARRIET E.

BEECHY, bē'chī, FREDERICK WILLIAM (1796-1856). An English rear admiral and geographer, son of Sir William Beechey. He entered the navy in 1806, in 1814 was appointed to the *Tonnant*, and in 1815 participated in

the battle of New Orleans. In 1818 he accompanied, in the *Trent*, the Arctic expedition under Franklin, and in 1819 served on the *Hecla* during Lieutenant Parry's voyage. From 1825 to 1829 he commanded the *Blossom*, which sought to cooperate by way of Bering Strait with Arctic expeditions approaching from the eastward. Having been promoted to be captain, he in 1835-36 explored a part of the South American coast and from 1837 to 1847 was employed on the Irish coast survey. He was made rear admiral in 1854, and a year later he was elected president of the Royal Geographical Society. He was the discoverer of Ports Clarence and Grantley and published *A Voyage of Discovery towards the North Pole* (1848).

BEECHER, SIR WILLIAM (1758-1839). An English portrait painter. He was born at Burford, in Oxfordshire, Dec. 12, 1758. He is said to have been a house painter before becoming a student at the Royal Academy. In 1793 he was made portrait painter to Queen Charlotte and won the patronage of the court and of the fashionable class. He was knighted by George III for his picture, now at Hampton Court, which represents the King reviewing troops, which also brought him the rank of R.A. His earlier drawings exhibit more care and finish than are shown in his later works, when his popularity was assured. As a mark of his industry, it may be noted that in 64 years he exhibited 362 portraits at the exhibitions of the Royal Academy. Among the famous people whom he painted were Lord Nelson, Lord Cornwallis, John Kemble, and Mrs. Siddons. He is well represented in the National and the National Portrait Galleries, London, and in many American collections, including the Metropolitan Museum of Art, New York. He was very popular in his day and is still counted among the most celebrated of English portrait painters, but he excels neither in line nor in color. His portraits of women lack grace, as those of men character. Consult Redgrave, *A Century of Painters of the English School* (London, 1866).

BEEDEE. See BIDAR.

BEE EATER. A bird of the family Meropidae within the order Coraciiformes. They are related to rollers, kingfishers, and jacamars, and in the Old World play the same rôle that the latter do in our tropics. The 40 members of the family are mainly African or Oriental. They have rather long beaks and long swallow-like wings, giving them great grace and speed in flight and enabling them to capture insects on the wing. All wear a gorgeous plumage, green being the prevailing tint, and all the species have suffered great persecution from those who collect feathers and skins for millinery purposes. The common bee eater (*Merops apaster*) is perhaps the most beautiful bird of Europe. The crown and mantle are rich chestnut, passing lower down into purplous, the head white and black and the throat yellow, while the rest of the plumage is mainly vivid greenish-blue. Like several related families, the bee eaters breed in holes in earthen banks, sometimes 6 to 8 feet long and of their own digging, and often gather in great colonies, the shining white eggs rest upon the earth, but become half buried after a time in the wings and rejected parts of insects. The food of these birds consists almost wholly of bees and wasps. They congregate about beehives and, swooping close to them, seize and consume honeybees in great numbers, until the

cessation of flowers in August, and consequently of bee work, compels these birds to migrate southward. In mid-Africa the natives observe their movements as a guide to stores of wild honey. See Plate of KINGFISHERS, MOTMOTS, ETC.

BEEF. See MEAT.
BEEF'EATER, or **BUFFALO BIRD**. See OXPECKER.

BEEFEATER (*beef* + *eater*, menial, cf. AS *hlafaeta*, servant, from *hlaf*, loaf + *etan*, to eat). The popular designation for the British sovereign's Yeomen of the Guard. Since the reign of Henry VII they have formed part of the monarch's train at royal banquets and other state occasions. Their costume, maintained with unimportant alterations for nearly four centuries, has much to do with their attractiveness to sight-seers. The appellation is commonly, but erroneously, supposed to be a corruption of the French *beaufetier* or *buffetier*—one who attends the buffet, or sideboard. Skeat maintains that it means simply *eater of beef*, a servant or dependant, and quotes *eaters* (from Ben Jonson) and *pouder-beef-lubbers*, similarly used. Consult Preston, *Yeomen of the Guard* (London, 1887). See YEOMEN OF THE GUARD.

BEE-FLY. A fly of the family Bombyliidae, many of which resemble bees in general appearance, their bodies being more or less covered with dense whitish or yellowish hair. Some resemble bumblebees, while others are much more slender. They are flower-flies, living upon the nectar of flowers, and are efficient agents in the cross fertilization of plants, the pollen adhering readily to their hanks. The larvae are parasitic in the egg-pods of grasshoppers and also prey upon caterpillars, such as cutworms.

BEEFSTEAK CLUBS. A number of well-known social clubs, formed for the most part in London in the eighteenth century. The earliest of these was founded in 1709, with Richard Boscourt, the actor and friend of Steele, as *proprietor*, and having as members many of the wits, authors, and men of affairs of the day. The most famous of the clubs, however, was the "Sublime Society of Stinks," founded in 1735 by John Rich, then manager of Covent Garden Theatre. The story is told of the formation of this club that Lord Peterborough supped accidentally with Rich on steak and beer, and found these so much to his taste that the meetings became regular. They were held in a room in the theatre, and, as in all true Beefsteak clubs, the refreshments were limited to steaks with beer or wine. Hogarth, Thornhill, Wilkes, Garrick, Dodington, Aaron Hill, Leonidas Glover, Beard, the tenor, and other famous men belonged to this club. In 1785 the Prince of Wales joined the "Stalks" and afterward the Dukes of Clarence and Sussex and the Duke of Norfolk became members. Other devotees were the poet Morris and John Kemble. After the burning of Covent Garden, the "Sublime Society," as it was called, had rooms first in the English Opera House, then in the Bedford Coffee House, and finally in the Lyceum (1838), where it remained until it disbanded in 1867. Sheridan founded a Beefsteak Club in 1749, with Peg Wadlington as president, and with rooms in the Royal Theatre, Dublin. The present Beefsteak Club of London was established in 1876 with rooms in Toole's Theatre. In the United States the well-known newspaper correspondents' organization of Washington, D. C., the "Gridiron," is in a general way

similar to the English clubs. Consult Arnold, *Life and Death of the Sublime Society of Steaks* (1871).

BEEF TEA A light article of diet for sick persons and convalescents, which should contain some of the proteids—i. e., nitrogenous nutritive material of meat, as well as the extractives—generally prepared by placing scraped or chopped lean beef in a glass jar with cold water. After standing for half an hour or so, the jar, which should be tightly covered, is placed in a saucepan of water and gradually heated. For the first hour the temperature should be below the coagulating point of meat protein (167° F.). It should then be allowed to boil a short time to take away the raw taste and coagulate the red coloring matter. A little salt is then added to suit the taste. Beef tea has little food value, but it is somewhat stimulating to the appetite. It should not be given in heart disease (where a decreased amount of fluid is desirable), gout, or kidney disease. Mutton, treated in a similar manner, yields a broth which is believed to be somewhat less easily digested and may be hurtful, to invalids especially, if the fat be not skimmed off from the liquid. A knuckle of veal affords a similar broth or tea. Chicken broth, perhaps, the most readily digested and is especially suitable for invalids in cases of great irritability of the stomach.

BEEFWOOD See CASUARINA.

BEE KEEPING The several common races of the honey bee are known as the common black, brown, or German, the Italian, the Carniolan, and the Cyprian. The German race shows considerable variation in its markings and qualities, the workers have a dull rusty-brown color, specially about the thorax. Their disposition is shy toward and sting a person approaching the apiary and of stinging when they are manipulated, and other faults, have put them in disfavor. The Italian race, golden-yellow in color, requires less skill in subduing and handling and is perhaps the most popular. The Carniolans, say bees from the elevated Alpine province of Jainsiola, Austria, is the largest race and grow steadily in favor. The Cyprian, the yellowest of the original races, is native to the island of Cyprus. Though smaller-bodied and more slender than bees of the European races, they have produced the largest yields of honey. Other races not known as the Egyptian, Syrian, Palestinian, and Tunisian.

The *apary* or stock of beehives should, of course, be situated in a neighborhood where flowers sufficiently abound for the supply of honey. It is, however, by no means certain to what distance bees roam. Some authors mention a mile as the probable distance, but the opinion has apparently been hazarded on mere conjecture, and there seem to be good reasons for supposing that a much greater distance might more correctly be named. But whatever distance bees may be capable of traveling in quest of honey, it is undoubtedly of great importance that they should have good feeding ground in the immediate neighborhood of the apiary, and in many parts of the world the practice prevails of removing them from place to place, according to the season, in order that advantage may be taken of the greatest abundance of flowers. Thus in the south of Scotland beehives are very frequently removed to heath-covered tracts in the beginning of August, and remain there till the heath is out of flower, and this affords in many

parts of the country the most plentiful honey-harvest, although in other parts, especially where white clover abounds, the greatest quantity of honey is obtained earlier in summer.

As to the form of beehives, and the material of which they should be made, there are great differences both of opinion and practice. Glass

SECTION OF BOX HIVE

hives, and hives with glass windows, which can be covered at pleasure with wooden slides, are employed by those who wish to observe the movements and habits of bees, but for profitable purposes wood and straw are the materials in common use. In some parts of Europe cylindrical cork hives are much used, made by removing the wood of a portion of the cork tree, and leaving the bark uninjured, and hives of earthenware are common in Greece and Turkey. Frame hives, properly managed, are most successful. The hive which is most used in the United States, and which, with slight modification, has been adopted in England and her colonies, was invented by Langstroth. It is important that the owner should have facilities for giving in-

BOX HIVE

Dadant-Quinby form of Langstroth hive, open. *a*, front of brood apartment, *b*, alighting board, *c*, movable entrance block, *d*, cap, *e*, straw mat, *f*, carriage-cloth cover for frames, *g, g*, frames with combs. (From Langstroth.)

creased room both above and below the stock-hive, increased room above is required for the reception of pure honeycomb unmixed with brood, and the capability of adding to the hive below, by raising it up an additional story, is

often requisite to prevent swarming, which is incompatible with the collection of a large store of surplus honey.

Bees require attention at the time of swarming, that they may not fly away and be lost. They require also to be fed during winter, when, on account of a bad season, the lateness of the swarm, or other cause, they have not enough honey to support them. A common rule is that the weight of the contents of the hive must be at least 20 pounds, that the bees may survive the winter without being fed, and even in this case a supply of food for a short time in spring promotes the activity of the bees and their summer prosperity. The food ordinarily supplied to bees is either the coarser kind of honey or sugar and water. Strong ale and sugar boiled is also frequently given as food. The practice has very largely prevailed of killing bees by fumes of sulphur in order to take from them their honey in the end of autumn, a portion only of the increase of the stock being kept through the winter. This practice still has its advocates, but the majority of bee keepers take only what they can by top boxes or supers, or by cutting out combs, preserving all hives which are not so light that there is no good hope of their surviving the winter.

When honey is to be taken from bees, the person doing it must be carefully protected from their stings by gloves, veil, etc. It is best done during the heat of a fine day, when the bees more readily leave the combs of the super that is taken away and return to their hive. A little gentle tapping generally causes them to leave the combs, and a feather is used for brushing off those which are slow to do so. The smoke of the common puffball causes them to fall down in a stupor, from which they speedily recover, and its use is very convenient. It is gathered and dried for the purpose. Chloroform is also sometimes used for the same purpose, but the effect is apt to be fatal, unless care is taken to choose the morning of a fine day, so that the stupefied bees may have time to recover in the air and sunshine. Objections which might be raised against stupefying substances for smoking bees do not apply to wood for this purpose, such as hickory or hard maple.

Bees are much less apt to sting when swarming than at other times, due to their being gorged with honey, and in general all the necessary operations are performed without gloves or veil and with perfect safety. The sting of a bee is to many persons a thing of no great consequence, although in some it causes great local inflammation and swelling, and general derangement of health. The application of a little ammonia usually relieves the pain, or an onion cut through the middle.

The apiary should, of course, be in a sheltered place and where it enjoys a good amount of sunshine. The hives are very generally placed at short distances in the open ground, but some bee keepers protect them by a shed. In the former case each hive is usually covered with a straw hood in winter, to keep away the rain, as dampness is particularly injurious to bees. For the avoidance of dampness, and to prevent the bees from coming in contact with the ground when they hang in a great cluster at the door of the hive—when the weather is hot and the hive very populous—each hive is raised to a height of at least 15 or 18 inches from the ground.

Bibliography. Consult Cheshire, *Bees and*

Root, *The A B C and X Y Z of Bee Culture* (Medina, Ohio, 1913), Benton, *The Honey-Bee: A Manual of Instruction in Apiculture* (Dept. Agriculture, Washington, 1896), Maeterlinck, *The Life of the Bee* (Eng. trans., New York, 1901), Comstock, *How to Keep Bees* (New York, 1905). See HONEY.

BEEK/MANTOWN' BEDS. See ORDOVICIAN SYSTEM.

BEE LOUSE. A minute wingless fly parasitic on honeybees. One is known, *Brasilia cerca*, constituting the family Braulidae at the end of the dipterous series. It is similar to the LOUSE FLIES (Hippoboscidae), also known as FOREST FLIES. See FOREST FLY.

BEELEZEBUB, be-el'zê-bûb, or **BEELEZEBUL**. The name of the chief of the demons in Matt. x 25, xii 24, 27, Mark iii 22, Luke xi 15, 18, 19. It seems to be the Aramaic form of Baal Zebub, the god of Ekron. The alternative form, Beelzebub, though avoided in the Syriac, is well supported in the Greek manuscripts and is supposed to go back to *Baal*, 'lord,' and *zêbul*, 'habitation,' 'temple,' or, less probably, to *Baal*, 'lord,' and *zêbul*, 'dung.' A name meaning 'Lord of the (heavenly) mansion' might easily take on the meaning 'Lord of the (infernal) mansion.' The change of a god into a demon is a common religious phenomenon. See BAAL-ZEBUB.

BEEMSTER, bêm'stêr. A region about 15 miles north of Amsterdam in the Dutch province of North Holland, once a lake, and reclaimed at the beginning of the seventeenth century. It has an area of 17,825 acres and is very fertile and well adapted to cattle raising. The commune of Beemster has a population of 4689.

BEER (AS *bêor*, OHG *bior*, Ger *bier*, probably a dissimilation for 'breor' and connected with AS *brêowan*, OHG *brunwan*, Ger *brauen*, to brew, another etymology refers beer to AS *bêa*, barley). The term "beer," in its broadest sense, denotes any fermented liquor that has not undergone distillation. This definition of beer is very comprehensive and includes many varieties of fermented liquors not commonly known as beer. The name has also a more limited meaning. In England the name "beer" usually denotes some form of ale, and in the United States and in continental Europe the term is practically restricted to lager beer, which, however, is made in a variety of qualities. Brewing is the name given to the process of manufacturing beer, although, strictly speaking, the manufacture consists of two separate processes known as malting and brewing, which will be found discussed fully under BREWING.

Historically, beer is of great antiquity; it was manufactured by the Egyptians and afterward by the Greeks, Romans, and ancient Gauls. Among the ancient writers who mention beer are Herodotus, Tacitus, Pliny, Xenophon, and others. The Romans are supposed to have introduced the art of brewing beer into Britain, the only intoxicating beverages used by the Britons previous to the Roman conquest being mead and cider. Naturally the process of brewing practiced by these ancient peoples has been vastly improved upon by modern brewers, who have called in the knowledge of chemistry, bacteriology, etc., to aid them in perfecting their art. In certain sections, especially in parts of Germany, beer is prepared with malt hops and water.

only In other places, however, especially in America and England, for some of the malt is substituted corn, rice, cane-sugar syrup, inverted cane or beet sugar, glucose syrup, grape sugar, or prepared corn products

Varieties While beer is the generic name for all malt liquors, many of these liquors are known by other names, the principal of which will be enumerated and briefly explained

Ale would seem to have been the current name in England for malt liquor in general before the introduction of the use of hops from Germany about 1524 After this date the German word *Bier* ('beer') was used at first to distinguish the hopped liquor from ale, the unhopped As now used, ale signifies a kind of top fermentation beer containing more or less hops, but distinguished chiefly by its strength or high percentage of alcohol In the manufacture of ale the first fermentation is checked, while a considerable percentage of sugar remains undecomposed, which by the subsequent fermentation in the barrels is changed to alcohol and carbonic-acid gas The length of time which ale is left to ripen in the barrels is one week for mild ale, from two to four months for pale ale, and from 10 to 15 months for strong ale Burton ale may contain at times as much as 8 per cent of alcohol The Scotch ales are distinguished for the smallness of the quantity of hops used and for their vinous flavor They are fermented at a lower temperature than English ales, which are fermented at from 65° to 90° F India pale ale differs chiefly in having a larger quantity of hops

Porter is a kind of malt liquor which came into use in London in 1722 According to Leigh, "the malt liquors previously in use were ale, beer, and two-penny, and it was customary to call for a pint or tankard of half-and-half—i.e., half of ale and half of beer, half of ale and half of two-penny, or half of beer and half of two-penny In the course of time it also became the practice to ask for a pint or tankard of three-thirds (or, as it became corrupted, *three threads*), meaning a third each of ale, beer, and two-penny, and thus the publican was obliged to go to three casks for a single pint of liquor To avoid this trouble and waste, a brewer by the name of Harwood conceived the idea of making a liquor which should partake of the united flavors of ale, beer, and two-penny He did so and succeeded, calling it entire, or entire butt beer, meaning that it was drawn entirely from one cask or butt, and being a hearty, nourishing liquor, it was very suitable for porters and other working people Hence it obtained the name of porter, and was first retailed at the Blue Last, Curtain Road, Shoreditch The chief characteristics of porter are its dark-brown color, peculiar bitter flavor, and agreeable freshness in drinking It was originally brewed with malt roasted until slightly brown, now, however, under the improved system of brewing, pale malt, with the addition of some highly roasted malt (or other coloring matter) for the sake of color only, is used Enormous quantities are brewed by the London brewers A kind much stronger than ordinary porter or ale is also extensively brewed in London, Dublin, and elsewhere, under the name of *stout* It is quite dark in color and has a pronounced caramelized malt-like aroma and taste If the product is young, its taste is sweetish, but after aging it assumes a characteristic tartness

Lager beer, which is now so extensively manufactured in the United States, takes its name from the fact that it is kept several months in a storehouse (*Lager* in German) to ripen In the manufacture of lager beer this long storage is not usually practiced in the United States The wort is prepared in much the same manner as for ale, and is pumped from the hop-jack into shallow coolers placed in the upper stories of the brewery, and then passed over a pipe cooler or through a refrigerating apparatus until it is reduced to a temperature of about 45° F. Thence it is carried in pipes to large fermenting tuns and placed in cool cellars, or in chambers cooled by ice or artificial refrigeration, having a temperature of 40° to 45° F Here yeast is added, which, in the course of about 15–24 hours, incites fermentation, this being manifested by the appearance of minute bubbles of carbonic-acid gas, which, as in the fermentation of ale, carry a little of the yeast with them This does not, however, remain there, but, discharging the gas, to which it had adhered, settles to the bottom in the form of a viscous mass, this mass, with that which remains there, constituting what is called bottom yeast The slow fermentation employed in the process of making old-type lager beer causes a clarification and the commencement of a ripening, which affords a beverage free from the objectionable qualities of the common beer that goes under the same name, but which is known to brewers under the name of *Schweb-bier*, or *present-use beer* This is fermented in a much shorter time, but the saccharine and other matter is not fermented to the same extent as in the German article It must be noted, however, that, owing to the introduction of improved processes of fermentation, clarification, and impregnation of beer with carbonic-acid gas into the American brewing industry many of these objectionable features are now removed For the purpose of neutralizing what acetic or other acid might appear from a secondary fermentation, or for producing by interaction with it an additional quantity of carbonic-acid gas to give it "life," some brewers add in the operation of casking (racking) a quantity of bicarbonate of soda, immediately upon which the bung is driven in and the beer is ready for market German lager, however, lies a long time to ripen, and attains certain qualities not possessed by any other kind of beer, and highly prized by lovers of this beverage The lager beer brewed in the United States can very appropriately be called an American type of beer because the American has cultivated his taste for this style of brew In the United States beer is drunk much more rapidly and colder than in Europe. *Bock beer* is lager beer of extra strength and containing more alcohol, made in the spring of the year It requires two months to brew and ripen, and in making it 1 pound of hops to 3½ bushels of malt are used

Among the less-known varieties of beer must be mentioned the following "Brunswick Mumme" is a peculiar kind of beer formerly used in Great Britain and still used in Germany and somewhat in the United States It is made of malt and wheat, to which some brewers add oats and bran meal It is neither so wholesome nor so agreeable as common ale or beer

Another kind of beer, sold in California and vicinity, which is becoming popular, is *steam beer* It derives its name from the fact that it is highly effervescent and under high pressure,

thus resembling the properties to some extent of confined steam. For the process of preparing this beer, see article on BREWING.

In Pennsylvania a bottom fermentation beer containing very little alcohol is sold under the name of *succalee*. The name in all probability is a corruption of the German "Schwenke." The materials employed in its preparation are malt, hops, yeast, water, and some condiment like anise.

Another variety of beer (top fermentation) sold in Germany and to some extent in the United States is *Weiss beer* ("white beer"). The *Beirn Weiss beer* is prepared from wheat, barley malt, hops, and water. After about a three-days fermentation the beer is filled directly into bottles and jugs and stored for about 8 to 14 days, after which it is ready for consumption. The material used in the preparation of American Weiss beer rarely includes wheat, and in most instances it is made from barley malt and corn gists. The mashing process also differs somewhat from the European method.

Malt extracts or malt tonics are fermented beverages made from high-dried malt with an addition of either caramelized malt, black malt, or roasted corn, or a combination of several of the latter and hops and water. They are brewed in with a heavy original (wort) gravity (16 to 18 Balling). This class of preparations usually contains more alcohol and solids than the ordinary lager beer, and their sale is confined almost exclusively to the drug trade. The term "malt extract" must not be confused with the unfermented extract of malt, which is sold chiefly in a thick, syrup-like form. The latter preparations, if properly prepared, contain a starch-digesting enzyme and are used in medicine. The fermented beverages do not contain this enzyme.

Spontaneous fermentation beers are those in which the fermentation is incited by yeast, bacteria, etc., which fall into the wort accidentally and are sold chiefly in Belgium. They are not pure barley malt beers and are prepared with 40 to 50 per cent of unmalted wheat and barley malt. In Japan a kind of beer brewed from rice called *saké* is drunk.

In South America the Indians prepared and drank a beer made from corn, and known as *chica*, or *maize beer*, long before the Spanish conquest. The process following in making *chica* is similar to that of beer brewing. The maize is moistened with water, allowed partially to germinate, and dried in the sun. The maize malt so prepared is bruised, treated with warm water, and set aside until the fermentation is over. The *chica* or maize beer has a yellow color and a pleasant acid taste. In the valleys of the Sierra the maize malt is chewed between the teeth by the Indians and members of their households, and the chewed morsel, incorporated with the saliva, is put in jars with hot water, when the fermentation proceeds more rapidly than before, and a more highly prized beer is obtained. The *chica* is also made from barley, rice, peas, manioc, pineapples, and grapes. The Chin Tatars prepare a beer from millet seed, called *bouza*, or *millet beer*. The same seed is used in Sikkim, on the southern slopes of the lower Himalayas, and yields beer there called *murwa*. The Arabians, Abyssinians, and many African tribes employ *teff*, the seeds of *Poa abyssinica*, and millet seed as sources of beer. The Russians prepare a beer from rye called *kvass*, or *rye beer*. The Tatars fermented milk

into *louniss*, or *milk beer*. The Arabians used the milk to yield then *leben*, and the Turks to produce then *yauort*. In the north of Scotland, the Oikneys, and some parts of Ireland, buttermilk or soui milk is allowed to stand till fermentation begins, and an intoxicating liquor results. The South Sea Islanders prepare a beer from the root of *Macoppe methysticum*, or the intoxicating long pepper, which is called *ala*.

Composition. The exact composition of beer is not accurately known, but the principal constituents are water, alcohol, dextrin, maltose or malt sugar, glycerin, several kinds of acids, protein, the essential oil and resin, from the hops, and mineral salts. Ale and beer, and especially lager beer, contain considerable nutriment in the sugar and dextrin that they hold in solution, and in certain parts of Germany, where lager beer is very freely drunk, it seems to take the place to some extent of other food. The bitter substances that enter into its composition appear also to exercise a mildly tonic effect. The percentage of alcohol by weight in the most popular ales and lagers is as follows: Burton Ale, 8.25; Guinness's Stout, 6.29; Scotch Ale, 4.41; New York Lager, 3.85; Munich Lager, 3.74; Schenk-bier, 3.00. For statistics of production see LIQUORS, FERMENTED AND DISTILLED, STATISTICS OF.

BEER, *bar*, ADOLF (1831-1902). An Austrian historian, born at Prossnitz, Moravia. He studied history, philology, and political economy at the universities of Berlin, Heidelberg, Prague, and Vienna. In 1858 he was appointed professor at the Commercial Academy of Vienna, and in 1868 he was called to a similar chair in the technical high school in that city. As one of the foremost promoters of educational reform in Austria, he received in 1870 an important appointment in the Ministry of Education. He was elected to the Reichsrath in 1873 and became a member of the Upper House in 1897. The following are a few of the principal works of this prolific author: *Allgemeine Geschichte des Welt-handels* (1860-84); *Die Finanzen Oesterreichs im 19ten Jahrhundert* (1877); *Die orientalische Politik Oesterreichs seit 1774* (1883); *Die oesterreichische Handelspolitik im 19ten Jahrhundert* (1891); *Joseph II und Graf Rudolph Cobenzl, ihr Briefwechsel* (2 vols, 1901).

BEER, GEORGE LOUIS (1872-) An American historian and educator, born on Staten Island, New York City. He graduated from Columbia University in 1892 and in the following year took the degree of A.M. From 1893 to 1903 he was engaged in the importation of tobacco from Cuba, and during a portion of this period (1893-07) was also a lecturer on European history at Columbia University. He became a member of many historical and other learned societies. His writings on historical subjects include *Commercial Policy of England toward the American Colonies* (1893); *British Colonial Policy, 1751-65* (1907); *Origins of the British Colonial System, 1778-1660* (1908); *Old Colonial System, 1660-1754*: part 1, in 2 vols., *Establishment of the System, 1660-1688* (1913).

BEER, MICHAEL (1800-33). A German dramatic poet, born in Berlin. He won a considerable success with his tragedy of *Kyilmestras* (Berlin, 1819). His other works are *Die Braute von Aragomen* (1819); *Der Para* (1823), a one-act tragedy, which depicted the situation of the Jew in modern Germany and

was praised by Goethe, and *Struensee* (1828), his most successful work, for which his brother, the famous composer, Meyerbeer, wrote an overture and incidental music. His complete works were edited by Edward von Schenk (1835), who also published a volume of his correspondence (1837). Consult Paul Hoffman, "Urkundliches von Michael Beer und über seine Familie" in *Luphonor* (vol xv, 1908).

BEER, WILHELM (1797-1850) A German astronomer, brother of the preceding. In the Thiergarten of Berlin he built an observatory, where, with his friend Madler, he made a particular study of Mars and the moon. His map of the moon (1836) was awarded the Lalande prize by the French Academy. In 1840 he became a member of the Prussian First Chamber. He published *Der Mond nach seinen kosmischen und individuellen Verhältnissen* (2 vols, 1837) and *Die Dreikönigsverfassung in ihrer Gefahr für Preussen* (1849).

BEERBOHM, MAX (1872-) An English author and caricaturist, half-brother of the actor, Sir Beerbohm Tree. He was educated at Charterhouse and at Merton College, Oxford, and began a not very prolific literary career with contributions to *The Yellow Book*. Lord Northcliffe, then Mr Alfred C. Harmsworth, recognized his talent and secured his services for papers under his control. Thus launched, he became a contributor to many London periodicals. As a caricaturist, his talent is unmistakable, and he hit off the eccentricities and peculiarities of the leading figures of English social and political life in a long series of drawings—there have been five exhibitions of them since 1901—which highly amused the London public. In 1895 he spent some months in America with Beerbohm Tree, and in 1910 he married Florence Kahn of Memphis, Tenn. His books, excepting his one novel, *Zuleika Dobson*, are largely composed of material originally contributed to periodicals. His novel does not represent him at his best. It is a satirical and burlesque story of Oxford life. His reputation rests properly upon his essays, satires, and skits, which made him the pet of a London literary circle. Brilliant, *blasé*, irresponsible, audacious, egotistical, and with the courage of his lack of convictions, he belonged logically to the Wilde and Beardsley period. In a jest not without truth, he himself declared, in 1900, that he was already outmoded. Be this as it may, there is a wit, an elegance, a piquancy, and an aroma to his style that are all his own, and lend him a certain distinction. His published work includes the slender volume, *The Works of Max Beerbohm, More; Yet Again*, and *The Happy Hypocrite*, all brought out between 1896 and 1900, and *Caricatures of Twenty-five Gentlemen*, *The Poet's Corner*, *The Second Childhood of John Bull*, *A Book of Caricatures*, *Zuleika Dobson*, *A Christmas Garland* (a series of parodies), and *Fifty Caricatures* which appeared between 1900 and 1914.

BEERE, MRS BERNARD (1859-) An English actress. She was born at Norwich, a daughter of Mr Wilby Whitehead. After studying as the pupil of Hermann Vezin she began her dramatic career in 1873 at the Opera Comique, London. Her marriage, not long afterward, took her from the stage, but she returned to it as Mrs Bernard Beere and in 1883 attracted notice in *Fedora* and as the Countess

Zicka in *Diplomacy*. In 1888 she played at the Opera Comique in *As in a Looking-Glass* and *Masks and Faces*. She visited America in 1892. In 1897, after another retirement, she reappeared in *Charlotte Corday* and *A Sheep in Wolf's Clothing*. In 1900 she became the wife of H C S Olivier. Her last appearance was at the Coliseum in 1905, in a sketch called *The Spy*.

BEER MON'Y A peculiar payment to non-commissioned officers and soldiers in the British army, established in the year 1800, at the suggestion of the Duke of York. It consisted of one penny per day for troops when on home service, as a substitute for an issue of beer and spirits. It continued as an addition to the daily pay until 1873, when, the stoppages for rations having been abolished, the opportunity was taken to consolidate beer money and pay proper.

BEERNAERT, bar'nart, AUGUSTE MARIE FRANÇOIS (1829-1912) A Belgian statesman, born at Ostend. He was elected a member of the Chamber of Deputies in 1874 and in 1884 received the portfolio of agriculture, industry, and art. Soon afterward he was appointed President of the Council and Minister of Finance. He proved to be exceedingly skillful in dealing with many important questions, such as the revision of the constitution and proportional representation in the elections. Owing to the lack of adequate party support in connection with the latter measure, he resigned in 1894. In 1895 he was elected President of the Chamber of Deputies. He was a leading member of the International Peace Conference, both in 1890 and in 1907. In 1909 he received one-half of the Nobel peace prize.

BEERS, CLIFFORD WHITTINGHAM (1876-) An American social worker, born in New Haven, Conn. He graduated from the Sheffield Scientific School in 1897. As a result of over study and other conditions, he lost his reason and was for several years an inmate of sanitariums and asylums. He recovered and in 1908 published a remarkable book entitled *A Mind that Found Itself* (2d ed., 1912), an account of his experiences in the institutions where he had been confined, in addition to being a psychological study of the progress and development of his disease and his final return to mental health. It is one of the few authentic documents written by those who have lost their reason and recovered it. In 1909 he helped to found the National Commission for Mental Hygiene, a body organized for the study of mental diseases and the treatment of those suffering from them. He was also an organizer of the Connecticut Society for Mental Hygiene, and became its executive secretary. In addition to the book mentioned above, he wrote *The Value of Social Service as an Agency in the Prevention of Nervous and Mental Disorders*, and *A Society for Mental Hygiene as an Agency for Social Service and Education*.

BEERS, ETHEL LYNN (1827-79) An American poet, born at Goshen, N Y. Her earlier writings appeared under the name of ETHEL LYNN, derived from her baptismal name, Ethelinda. By birth an Eliot, descendant of the famous New England apostle to the Indians, she married William H Beers and afterward used her full name. She is best known for the war lyric, "All Quiet Along the Potomac," which appeared in *Harper's Weekly* in 1861. The authorship of this popular poem was soon claimed

for others, especially for a Southerner, but Mrs Beers's right to it is undisputable. Her verses were collected just at the time of her death in a volume entitled *All Quiet Along the Potomac, and Other Poems* (1879).

BEERS, HENRY AUGUSTIN (1847-) An American professor and litterateur, born in Buffalo, N. Y. He graduated at Yale in 1869 and taught there from 1871 to 1875, when he was made assistant professor of English literature and in 1880 professor. His chief publications are a collection of verses, *Odds and Ends* (1878), *A Century of American Literature* (1878), *Nathaniel Parker Willis and Prose Writings of N. P. Willis* (1885), a second collection of verses, *The Thankless Muse* (1885), *An Outline Sketch of English Literature* (1886), *From Chaucer to Tennyson* (1890), *Initial Studies in American Letters* (1891), *A Suburban Pastoral and Other Tales* (1894), *The Ways of Yale* (1895), *A History of English Romanticism in the Eighteenth Century* (1899), *A History of English Romanticism in the Nineteenth Century* (1901), *Points at Issue* (1904), *Milton's Tercentenary* (1910). Professor Beers became known also as a frequent contributor to periodicals.

BEERS, bars, JAN VAN (1821-88) A Flemish poet, born in Antwerp. In 1844 he became a librarian of the Antwerp Library and in 1860 professor of Flemish language and literature at the Athenaeum in that city. His works include *Levensbeelden* (1858), *Gevoel en Leven* (1869), *Rijpende blaren* (1883). Consult the biography by Pol de Mont (Haarlem, 1889).

BEERSHEBA, bē'er-she'ba or bē'er-shē-ba (Heb. beer, well + sheba, oath, or seven), the modern Bir-er-seba. One of the Simeonite towns in southern Judah (Josh. xix. 2). Two stories are told in explanation of the origin of the place and of the name. According to the one (Gen. xxi. 22-31), the place received its name as the "well of oath," because of the alliance formed here between Abraham and Abimelech, King of Gerar, which was ratified by a gift of seven ewe lambs from Abraham to Abimelech as a witness of the fact that the well was dug by Abraham. In further commemoration of the event Abraham is said to have planted a tamarisk at the place and to have invoked the name of Yahweh. The other account (Gen. xxvi. 26-33) ascribes the name giving to Isaac and apparently explains it as the well of "seven." Beersheba was situated in the extreme south of Palestine, about 52 miles southwest of Jerusalem. Its position led to the phrase "from Dan to Beersheba" as comprising Hebrew territory from north to south. Various interesting events are recorded by biblical tradition as having taken place at Beersheba. It was here that Abraham received the command to sacrifice Isaac (Gen. xxii.). In later days Isaac sojourned here. Esau was robbed of his birthright and blessing here (ib. xxviii. 10), and here Jacob sacrificed to Yahweh on his journey into Egypt (ib. xli. 1), the sons of Samuel were judges here (1 Sam. viii. 2), and to this place Elijah was forced to flee from Jezebel's wrath (1 Kings xix. 3) and from a locality in its neighborhood he set out upon his 40 days' journey to Horeb. Leaving aside these traditions, it is clear that Beersheba was the site of an ancient sanctuary to which importance was attached by the Hebrews as late as the days of Amos (Amos v. 5). As to the name, the sanctity attaching among the Semites to the

number seven makes it more plausible to explain the name as the "seven wells" in the sense of the "sacred well," rather than as the "well of oath" which appears to rest upon a play on the name. After the captivity Beersheba was occupied by the Jews. In the days of Eusebius it was great market town with a Roman garrison. Bishops of Beersheba are occasionally mentioned. The *notitia dignitatum* mentions Dalmatian as Illyrian troops as stationed there. The city found on the Madaba map. By the fourth century, however, it was deserted. There are extensive ruins on the northern bank of the Wady el Seba. On that side of the valley are also the seven wells, which supply excellent water, they are all from 5 to 9 feet in diameter and about 45 feet deep. The new town has grown up in recent years southwest of the old city. It is the seat of a *kaimakam*, has in the neighborhood of 1660 inhabitants, a serai, mosque, a post and telegraph office, a khan, and a number of stores. Consult Guerin, *Judée*, vol. ii, pp. 277 ff. (1869), Benzinger, in *Bacdec Palestine and Syria*, p. 170 (5th ed., Leipzig, 1912).

BEESLY, bēz'li, EDWARD SPENCER (1831-) An English scholar and historian. He was educated at Wadham College, Oxford, was professor of Latin at Bedford College (London) in 1860-89, and professor of history in University College (London) from 1860 to 1897. He also became editor of the *Postscript Review* and translated some of Comte's writings. His publications include also *Catalina, Clodius, and Tiberius* (1878), *Queen Elizabeth* (1892), *Strong Second Chamber* (1907). In his *Catalina* etc., he seeks to rehabilitate the three men with whom the book deals.

BEES'TON. A manufacturing town of Nottinghamshire, England, on the Trent, $3\frac{1}{2}$ miles southwest of Nottingham. It has important lace-making, machinery, cycle, and automobile factories. Pop., 1891, 6948, 1901, 8950, 1911, 11,336.

BEES'WAX The plastic material secreted by bees and used by them in making their cell. It is largely produced in Europe and in the United States and is an important article of export from various parts of Asia and Africa. Beeswax is a solid, tough substance, having pale yellowish-brown color, a specific gravity of about 0.96, and a pleasant odor resembling honey. It melts at 67°C (152.6°F). The crude wax is separated from the honey by pressure. The comb thus obtained is treated with water and heated and stirred until the wax melts. The wax is then run into a vessel of cold water, where it is further washed and allowed to solidify. As thus obtained, it is used on floors and for making sealing wax, lithographic crayons, and mastic varnish. Crude beeswax may be bleached by exposing thin shreds of the yellow wax to air and sunlight, the resulting wax is perfectly white and has neither taste nor smell. Wax may also be bleached with nitric acid and chlorine, although the latter combines with it. Candles made of wax have been bleached with chlorine yield, on burning, stifling vapors of hydrochloric acid. This fact, first investigated by Dumas, led to the establishment of the substitution theory in organic chemistry. The facility with which beeswax bleaches depends upon the variety of the wax. Certain varieties can scarcely be bleached at all. Bleached wax is employed in candle

making, and in modeling figures, flowers, and similar objects

BEET (AS *bete*, Lat *beta*) A genus of plants of the family Chenopodiaceae. There are about 15 species, mostly biennials, with smooth, ovate, stalked root leaves, and tall, leafy flowering stems. They are natives of the temperate parts of the Old World. The only species of economic importance is the *Beta vulgaris*. This has been in cultivation since before the Christian Era, and has been developed as a root vegetable, leaf vegetable, and as a foliage plant. The root-vegetable varieties, cultivated in gardens, constitute our table beets. Their color and form vary from dark blood-red to scarlet and white and from turnip shape to long tapering forms. The earlier and smaller varieties are usually turnip-shaped. As a vegetable, the garden beet is boiled, pickled, used as a salad, and the tops cooked for "greens." Young beets are extensively grown as an early market-garden crop in the vicinity of all the larger cities in the United States and are sometimes forced under glass (See VEGETABLES for illustration). Garden beets require a deep, rich, loose, well-tilled soil. The seed is sown as early in spring as the weather becomes settled, in drills 18 to 36 inches apart, and the young plants are afterward thinned to 4 to 6 inches in the row. The wider rows permit of horse-cultivation. Some 50 varieties of garden beets are grown in the United States. Of the early varieties, Early Blood Turnip, Eclipse, Egyptian, and Bassano are standard sorts. The Mangel-wurzel, or Mangold, is the variety now usually grown for cattle feeding. It is a coarser and very large form of the common beet. It is planted as soon as the ground can be tilled in spring, in drills 2 to 3 feet apart, and the plants are allowed to stand from 12 to 14 inches distant in the row. Further cultivation consists in keeping down the weeds, and shallow tillage. Golden Tankard, Golden Yellow Mammoth, and Mammoth Long Red are standard varieties. The sugar beet is a form of the common beet in which the percentage of sugar has been greatly increased by cultivation and selection. It is extensively grown in central Europe and in the northern and western United States for the production of sugar (See SUGAR BEET). The strain of the *Beta vulgaris*, which is grown as a pot herb, both leaf and leaf stalk being eaten, is generally known as Chard or Swiss Chard, and will be considered under the head of CHARD (q.v.). The foliage varieties of beets are grown for their ornamental value, and are used for bedding and for borders where strong and heavy effects are desired. The large leaves of the several varieties are richly marked with different shades of red, orange, silver white, and intermediate shades. Like all succulent roots, the beet has a high water content, 88 per cent, and owes its food value to the 10 per cent carbohydrates it contains. A little protein, fat, and ash are also present. Beets are cooked in many ways and are wholesome, palatable, and generally liked.

Beet Diseases. Beets are subject to a number of fungus attacks, some of which are confined to the leaves, others occurring upon the roots. The most destructive disease of the leaves is the leaf spot or blight, due to *Cercospora beticola*. The leaves are more or less covered with ashy spots, and later, by their drying up and falling away, little is left of the leaf

but the framework. When the attack is severe, the growth and maturity of the crop is affected to a considerable degree. Bordeaux mixture (see FUNGICIDES) will prevent this disease, if the leaves are kept well covered with it from June through the growing season. The fungus winters in the old leaves, which should therefore be collected and burned or they may be used as silage. A red rust caused by *Uromyces beta* and a white rust due to *Cystopus blitu* occur on the leaves. Both will yield to applications of the more common fungicides.

The fungus *Phoma beta* is quite destructive of beets in Europe, the leaves and roots being attacked. The leaves are blackened and the fungus follows them to the root, where a rot quickly sets in. Sugar beets are especially subject to this trouble.

Upon the roots the scab is one of the worst troubles. It is due to the same cause as the potato scab and will require the same treatment. A root rot due to *Corticium vagum solani* is troublesome in Europe. Small roots are killed and larger ones injured by the fungus, which readily survives in the soil. On this account, where the disease has appeared, other crops should be grown for a number of seasons. This disease, so far as reported, is most destructive to sugar beets. A bacterial disease of sugar beets is reported. The roots are not killed, but their sugar content is considerably reduced. It may be recognized by the greater prominence of the fibres in a cut section of the root, by the difference of color, and by less solid structure. No certain means for its prevention are known. Curly top, a disease recognized by the curled leaves, is rather common on sugar beets in the West. Its presence is usually accompanied by a diminished sugar content. Various insects, fungi, and other agents have been reported as the cause of this trouble.

BEET, JOSEPH AGAR (1840—) An English divine, lecturer, and author. He was born at Sheffield and was educated at Wesley College, Sheffield, and at Wesleyan College, Richmond. For 21 years he was engaged in pastoral work, from 1885 to 1905 he was a theological tutor at Wesleyan College, Richmond, and he was one of the original members of the faculty of theology in the University of London. The University of Glasgow conferred upon him an honorary D.D. Dr Beet delivered the Fernley Lecture on the "Credentials of the Gospel" in 1889, and in 1896 came to America, where he gave a series of lectures at the University of Chicago, at the summer schools of Chautauqua, and at Ocean Grove. Two of his theological works have been translated into Japanese and have been adopted as text-books in Japan. His publications include *Credentials of the Gospel* (1889), commentaries on St Paul's epistles, *Through Christ to God* (1892), *The New Life in Christ* (1895), *The Last Things* (1897, 1913)—in all of which he brings the methods of science and philosophy to bear upon the theological questions which he treats. He published, besides the books already named *A Manual of Theology* (1906), *Church, Churches, and Sacraments* (1907), *The New Testament Its Authorship, Date, and Worth* (1909), *The Old Testament Its Contents, Truth, and Worth* (1912), *A Key to Unlock the Bible* (reissue, 1913).

BEETHOVEN, bî'to-ven, LUDWIG VAN (1770-1827). A German composer, the unsurpassed master of instrumental music. He was baptized

in Bonn, Dec 17, 1770, and it is generally assumed that he was born on the preceding day. His father Johann (c1740-92) was a singer in the electoral chapel at Bonn, and his grandfather Ludwig (1718-78) had also been a singer, and since 1761 *Kapellmeister* at the same chapel. When only four years old, Beethoven showed decided love for music, so that his father, a weak and shiftless character and a very mediocre musician, began to instruct him on the piano and violin, not for the sake of cultivating a great talent, but for the sordid reason of exhibiting his son as a musical prodigy. Accordingly he proved a relentless and cruel taskmaster. In 1779 the boy was placed under the instruction of Tobias Pfeiffer, an excellent musician, who, however, left Bonn the next year. Beethoven's unusual talent was now so evident that the Elector charged himself with the expense of his further musical training. Thus the court organist Van den Eeden, who was also a remarkably fine pianist, became Ludwig's teacher on both organ and piano. After this teacher's death, in 1781, the instruction was continued by the new court organist, C G Neefe. It was he that first introduced his pupil to the mysteries of musical composition. In 1782 young Beethoven became Neefe's assistant at the organ, while at the same time he played viola in the orchestra. When only 13 years old, he conducted, during Neefe's occasional absences, the opera rehearsals at the piano. As early as 1781 he wrote his first compositions, a set of variations on a march by Dressler and three sonatas for piano, all of which show a remarkable command of form. Nevertheless, it was his playing, rather than his compositions, that at this time evoked general admiration.

In the spring of 1787 Beethoven visited Vienna, at a time when Gluck, Haydn, and Mozart were living there. On that occasion the boy's masterly improvisation elicited those prophetic words from Mozart "Keep your eyes on him, some day he will make a stir in the world." According to Ries, Beethoven actually had a few lessons from the famous master, who would have accepted the young man as a pupil had he not been entirely absorbed in the composition of *Don Giovanni*. Alarming news from home caused Beethoven to terminate his visit abruptly, he reached home only a few days before his beloved mother died of consumption on July 17, 1787. After her death home life became almost unbearable, for the weak father now abandoned himself completely to the vices of intemperance.

Under these circumstances it was fortunate for the young man that already before his visit to Vienna his masterly playing had been the means of introducing him as a teacher into some of the best families of Bonn. Among these was the widow of the Privy Councillor Von Breuning, two of whose children, Stephan and Leonora, became and remained Beethoven's fast friends throughout life. Mrs von Breuning treated the young musician as her own son. In this cultured and refined family Beethoven spent the greater part of his time, and here he first became acquainted with the masterpieces of German and English literature, for his general education had been sadly neglected. In fact, he had not attended school since his thirteenth year. Among the men whom he met at this time two play an important rôle in his life. Dr. Gerhard Wegeler and Count Wald-

stein. The former married Leonora von Breuning and, together with Beethoven's pupil, Ferdinand Ries, wrote a biography of the master, the latter, a Viennese by birth, came to Bonn in 1787 and immediately divined the extraordinary genius of the young man. It is almost certain that he was instrumental in persuading the Elector to send Beethoven to Vienna. In 1790, on his first journey to England, Haydn passed through Bonn, and the Elector personally introduced his young organist to the famous master. Definite arrangements for a course of instruction under Haydn were probably not made till Haydn's second visit on his return from London in July, 1792. By the end of October everything had been settled. Under date of Oct 20, 1792, Count Waldstein wrote the following parting letter "Dear Beethoven—You are now about to depart for Vienna. The long-delayed fulfillment of your wishes is at hand. The Genius of Mozart is still lamenting the death of his pupil. With the fettle Haydn he has found a refuge, but no occupation. Through him he desires once more to be joined to some mortal. By means of untiring application you will receive the Genius of Mozart from the hands of Haydn."

According to Thayer, Beethoven arrived in Vienna about Nov 10, 1792. In his quality of court organist of the Elector of Cologne, an uncle of the reigning Emperor of Austria, Leopold II, and as the protégé of Count Waldstein, who was related to some of the noblest families of Vienna, Beethoven was immediately admitted to the most exclusive circles. Without delay he began his lessons with Haydn, but before long the critical pupil discovered that the famous composer was a poor teacher. As arrangements had been made by the Elector for Beethoven to study with Haydn personally, it was impossible to change teachers without giving offense. Therefore, in order not to lose his time, Beethoven visited Haydn regularly, but secretly he had arranged with Johann Schenk (q.v.) for a thorough course in counterpoint. When at the end of 1793 Haydn undertook his second journey to England, he sent his pupil to the famous theorist Albrechtsberger (q.v.). With him Beethoven spent an entire year, until May, 1795, reviewing simple and double counterpoint and taking up canon and fugue. A considerable number of exercises of this time have been preserved. They show the same painstaking care and critical attitude that characterized the master's method of production throughout his career.

While Beethoven was thus pursuing a systematic course of instruction under his teachers, he did not entirely neglect original composition. Ever since his first attempts in 1781 he had continued composing, but his productivity was not by any means prolific. The fact that he never published any of these works in their original form seems to prove conclusively that he regarded those early attempts merely as a preparation for his future career. In this connection it may be stated that as recently as 1911 the manuscript of a symphony, bearing on its title-page the name of Beethoven, was discovered by Dr Stein in the archives of the University of Jena. Internal evidence shows that the work is undoubtedly a genuine work of Beethoven, and that it antedates the symphony which the master himself published as his first. External circumstances point to a period before 1792 as the probable date of composition.

LUDWIG VAN BEETHOVEN

FROM A PAINTING BY CARL STIELER, IN THE POSSESSION OF THE COUNTESS VON SAUEMAN, BERLIN

From the very beginning the musical atmosphere of Vienna seems to have exerted a beneficial influence on Beethoven's productive activity, for, considering the time spent in writing exercises for his teachers, the number and dimensions of the works that originated between 1792 and May, 1795, is remarkable. The fact that he published nothing before 1795 affords striking proof of the severe self-criticism to which he always subjected his own works.

In the year 1795, in his twenty-fifth year, Beethoven began his public career. In March he appeared in one of Haydn's concerts with his own concerto for piano and orchestra in C, in the double rôle of virtuoso and composer, and in October his opus 1, three trios for piano, violin, and 'cello, appeared in print. Before that time he had played only in the circles of the nobility to which he had been introduced by Count Waldstein. Here his remarkable talent found immediate recognition and secured for him an exceptional position. Many anecdotes are told of Beethoven's independence of spirit and lack of social manners. Frequently this led to unpleasant incidents and even temporary estrangement from his best friends, but in the end all such breaches of etiquette were overlooked and pardoned.

With his friend and patron, Count Lichnowsky, Beethoven visited Prague in 1796 and played in the houses of the nobility. The flattering reception accorded to him in these circles induced him to visit also Dresden, Leipzig, and Berlin. In the Prussian capital he played at court, and King Frederic William II was so impressed that he tried to induce the young master to settle in Berlin. But the King's death in the following year prevented the plans from being carried out. Of the next three or four years practically nothing is known beyond the fact that Beethoven spent the summer of 1797 in Pressburg and Pesth and that he fell seriously ill. To this illness is attributed an affliction of the ear which slowly but steadily impaired the master's sense of hearing, and about the year 1819 resulted in total deafness.

Not until his thirtieth year did Beethoven appear before the general public in his own concerts. Before that his public appearances, few and far between, had been restricted to concerts given by other artists. The remuneration he received for playing at the houses of his patrons was sufficient to relieve him from the necessity of accepting a regular position or giving lessons. All his time was devoted to composition. It is true that then, and also later, he did accept specially talented pupils, but not from necessity. Among the very few persons that could boast of having had personal instruction from the great master were the Archduke Rudolf, Karl Czerny (q.v.), and Ferdinand Ries. On April 2, 1800, Beethoven gave the first concert of his own compositions. Of the works that were then performed for the first time, the beautiful Septet, op. 20, and the First Symphony, op. 21, quickly found their way into the regular concert repertoire throughout Austria and Germany and spread the fame of their author. At comparatively short intervals one great work followed another, so that within three or four years Beethoven was a prominent figure in the world of music, even publishers began to vie with one another for the possession of works by the new master, whose name was men-

tioned by many reviewers in the same breath with Haydn and Mozart. For his concert of the year 1803, at which the Second Symphony, the third concerto for piano and orchestra, and the oratorio *Christus am Oberg* had their first hearing, the prices of admission were doubled. At irregular intervals Beethoven gave such concerts, which he called "academies," and at which only his own works were performed.

In 1808 Jerome Bonaparte, King of Westphalia, sought to attach the famous Vienna master to his own court at Cassel by offering him 600 gold ducats and the title of *Hofkapellmeister*. No sooner did this news become known in Vienna than Archduke Rudolf and the counts Kinsky and Lobkowitz pledged themselves to the payment of 4000 florins annually if Beethoven would refuse the King's offer and remain in Vienna. After he thus found himself in comfortable, even affluent, circumstances, he began to entertain plans for extended concert tours, especially to London, but the unsettled condition of affairs due to the Napoleonic wars prevented the realization of these schemes. Therefore the master remained in his adopted city, devoting himself to the creation of imperishable masterpieces.

Up to that time the fame of Beethoven had been limited to the circles of musicians and the more serious music lovers. The general public did not understand the new works, and their attitude was one of respectful admiration for the "learned" composer. A concert given on Dec. 8, 1813, established the master also in the popular favor. Maelzel, the inventor of the metronome, suggested to the composer the idea of celebrating the downfall of Napoleon after the battle of Leipzig. Thus originated the "Battle Symphony," one of Beethoven's weakest productions, one which he himself later called *eine Dummheit* ('a piece of folly'). This work, together with one of his very greatest, the Seventh Symphony, in A, constituted the programme, and it was the inferior work which roused the audience to a frenzy of enthusiasm, so that four days later the concert had to be repeated. In the following year, 1814, the master's only opera, *Fidelio*—produced originally in 1805 without success—was thoroughly revised. In this new form it was received with storms of applause on May 23, and has maintained a foremost place in the operatic repertoire to this very day. On the occasion of the famous Congress of Vienna, in the fall of 1814, *Fidelio* was chosen as the festival opera in honor of the gathering of the European monarchs (September 26), and on November 29 Beethoven directed a concert of his own works, at which the same potentates were present. Several of them, especially the Empress of Russia, expressed their high esteem of the master by means of very substantial gifts.

The period from 1815 to 1818 is the most unproductive in the composer's life. In November, 1815, Beethoven's brother Karl died, leaving his eight-year-old son to the guardianship of his famous brother. As the mother's reputation was not of the best, Beethoven adopted his nephew and burdened himself with his education. Unfortunately the boy from the very beginning became an endless source of trouble to his great uncle. In order to regain possession of her child the mother instituted a lawsuit, which dragged along, from one court to another, for four years, when the boy finally

was awarded to his uncle. At the same time he was also involved in a lawsuit against the heirs of Count Kinsky, who, after the latter's death, refused to pay their share of the 4000 florins guaranteed to Beethoven in 1809. And behind these petty annoyances there loomed larger and constantly larger the dreadful spectre of total deafness. The only ray of hope in this sad time came in June, 1817. It was an offer from the London Philharmonic Society to write two new symphonies and to come to conduct them personally. The sum offered was £300. Beethoven eagerly accepted. But the worries just described, combined with his weakened physical condition, prevented the fulfillment of the agreement. Nevertheless, the plan was not abandoned. Among the sketches of the year 1817 are some which were later used in the Ninth Symphony. They evidently were intended for one of the symphonies to be written for London. Likewise the projected journey is the theme of various letters as late as 1824, when the Philharmonic Society formally renewed its offer. The only great works written from 1815 to 1819 are the two sonatas for piano, op. 101 and 106, and the two sonatas for piano and cello, op. 102.

The appointment in 1819 of his former pupil, the Archduke Rudolf, as Cardinal Archbishop of Olmutz suggested to Beethoven the idea of writing a festival mass for the occasion of the solemn consecration which was to take place the following year. But the very first number, the *Kyrie*, assumed such colossal proportions that the completion of the work for the intended purpose was out of the question. The score of the *Missa Solemnis* was not finished till towards the end of 1822. Scarcely had the master written the last note, when he was again engrossed by a new work of gigantic scope, the Ninth Symphony. From now on till his death there was no pause in Beethoven's productivity. During these last years were written the three "last" sonatas, op. 109, 110, 111, and the last quartets, op. 127, 130, 131, 132, 133, 135.

About the year 1817 Beethoven's health, which had never been robust, began gradually to decline. If he had had some one who would have taken proper care of him and furnished him the comfort of a well-regulated home, matters might still have been mended. At all times of his life Beethoven had been very irregular about his meals. When absorbed in his work, he would go without food and even sleep for long periods. But even when he found that his health prevented him from undertaking the journey to London, he continued in his irregular habits. After the lawsuit about his nephew had been settled in 1820, troubles were by no means at an end. When the boy grew older, he was nursed by evil companions, and in the fall of 1825 it was discovered that he had been guilty of forgery. The blow was a terrible one, but the magnanimous uncle not only made full restitution and extended a complete pardon, but even kept the young man more closely about him in the hope of saving him. But in vain. Having failed in his examinations, driven to desperation by his creditors, and not daring to disclose the true state of affairs to his uncle, Karl (he was named after his father) made an attempt at suicide in the summer of 1826. He was found with a bullet wound in his head and brought to Beethoven's house. The effect of this catastrophe upon the master is described

by Schindler: "Signs of deepest grief were visible in his bent carriage. The decision and firmness that characterized his every movement were gone. A septuagenarian stood before us." Symptoms of some severe illness made their appearance. After Karl had recovered, it was decided that he should enter the army. Beethoven was all alone. In this extremity his brother Johann came forward. The brothers had never been on good terms, but there was no alternative, and the master accepted his brother's hospitality at the latter's estate at Gneixendorf. Here Beethoven finished the adagio of the quartet, op. 135, his last composition, on Oct. 30, 1826. A quarrel with his brother and sister-in-law put a sudden end to the visit. On a cold, wintry day, December 2, Beethoven returned in an open carriage to his home in Vienna, where he arrived in a state of utter exhaustion. At first the physicians diagnosed the case wrongly, and thus aggravated the malady, which at last was recognized as Bright's disease. With heroic fortitude, without a word of complaint, the master bore his sufferings for three months. On Jan. 3, 1827, when he realized that the end was near, he made his last will according to which his nephew Karl became his sole heir. After his death it was learned that his savings amounted to 20,000 florins. But even in this long agony of death the master's mind was still busy with plans of great works, among them a Tenth Symphony. In March the London Philharmonic Society sent a check for £100, for which the master dictated a letter of thanks on March 18. During a terrific thunderstorm on the afternoon of March 26, 1827, the immortal spirit left its earthly tenement.

Beethoven was never married in spite of the fact that he was richly blessed with the friendship of many noble women. On more than one occasion he seriously entertained the thought of marriage. But invariably the object of his affection belonged to the high aristocracy, and the prejudices of the times prevented the realization of the master's desires. Much romance has been woven about these love affairs, yet even to-day little more is positively known than was known by Dr. Wegele, who wrote in 1838: "Beethoven was never without an affair of the heart, which generally took a deep hold of him. At least as long as I lived in Vienna he always had some love affair, and frequently had made conquests, which, if not impossible, would have proved extremely difficult for many an Adonis."

Beethoven was a passionate lover of nature. The summers he always spent in the open country in the vicinity of Vienna. There he would walk with his sketch book always in his pocket, writing down his ideas as they came to him. These preserved sketch books afford a wonderful insight into the workings of this master mind. The constant erasures and alterations show that he rarely employed his themes in their original form. Some of the most marvelous themes were thus elaborated from rather ordinary original conceptions. These sketches bear testimony to the extreme care of Beethoven's workmanship, as well as to the rigorous self-criticism exercised during actual composition. Naturally such a method of production is somewhat slow, and in consequence the sum total of Beethoven's works is not large when compared to that of some other masters, especially Bach. These considera-

tions have misled several biographers, even Thayer, to attribute to Beethoven a lack of facility both in invention and execution. This charge is most readily disproved by Beethoven's consummate mastery of the free fantasia, which excited the admiration of Mozart, and to which the most famous musicians of Beethoven's own time bear enthusiastic testimony. In art it is not quantity, but quality, that counts. Haydn wrote 104 symphonies, Mozart 40, Beethoven 9. That among Beethoven's works there are some of decidedly inferior quality is largely due to the avarice of his brothers, who sold to publishers, without Beethoven's consent or knowledge, manuscripts that were never intended to be given to the world.

In the works of Beethoven absolute instrumental music has reached its culminating point—a point beyond which further progress seems impossible, not even conceivable. Haydn and Mozart had developed and definitely established the instrumental forms which Beethoven chose as the most fitting vehicle for the expression of his genius. He began exactly where his great predecessors had left off. In following the paths which they had pointed out, it was not only natural, but it became inevitable that the very nature of Beethoven's themes, calling for more extended and complex development because of their wider range, greater depth, and intenser emotionality, should lead to an enormous expansion of these forms, to an increase in the technical apparatus, to more exacting demands upon the mental power and mechanical skill of the executants, to entirely new harmonic and rhythmic combinations. Beethoven did not destroy existing forms. On the contrary, he conclusively proved their high artistic value. By subjecting especially one of them to the severest tests, Beethoven demonstrated that in the hands of a master the sonata form (q.v.) is not a stencil hampering freedom of expression, but a plastic mold adaptable to an infinite variety of content. Beethoven's power of emotional expression is as intense as it is universal. In this respect he far surpasses all his predecessors, even the mighty Bach. By using his art as the subjective expression of his own profound personality Beethoven opened new vistas that presented undreamt-of possibilities in the direction of emotional intensity, and it is in this direction especially that modern music has developed.

In its development the genius of Beethoven shows three distinct phases. The first period extends from 1795 to 1803 and, roughly speaking, comprises the works bearing the opus numbers 1-50. Here the composer still walks in the paths of his predecessors, but by no means as a mere imitator. Even the very earliest works bear the impress of a powerful individuality, and unmistakably foreshadow the wonders that are to come. Already contemporary critics were struck by something new, and complained of excessive thematic development, strange and harsh harmonies, forced rhythms. When he reached the end of this first period, Beethoven had already advanced beyond Haydn and Mozart in some respects, notably in his treatment of transition passages. Before that time it was customary to connect the main sections by simple passage work, often mere scales. Beethoven soon dispensed with such meaningless passages and mere decorative accessories; his transition passages were built up from thematic material. The second period extends from 1803 to 1815,

comprising the works from about op. 53-100. Usually the Third Symphony (Eroica), op. 55, is regarded as ushering in this period. Such passionate, intense accents, such bold syncopations and incisive rhythms, such startling dissonances had not been heard before, not even in Beethoven's music. The advance in emotional intensity from the Second Symphony to the Eroica (written in 1802 and 1803 respectively) is so marked, that the law of natural development, which especially in the case of Beethoven's genius always operated gradually, fails to afford a satisfactory explanation. After a period of utter dejection and hopeless despair, into which he was plunged by the realization of his impending doom of deafness, Beethoven emerged a new man, a superman. Out of that tragic struggle with himself, in the course of which he had sounded the very depths of human anguish, his genius rose purified of all earthly dross, in imposing, awe-inspiring grandeur. Henceforth sublimity is the dominant characteristic of Beethoven's works. His themes are such as imperatively demand broad and extensive development, hence that expansion of the development sections. Here the master shows an amazing skill and inexhaustible fertility in the transformation of his thematic material. Frequently a mere fragment of his theme, a simple rhythmic figure suffices to rear the most marvelous tonal structures. Truly, a creation out of nothing!

The works of the third period extending from 1816 to 1827, and comprising the opus numbers after 100, are characterized by colossal architectonic outline, with the minutest elaboration of details. The extraordinary mastery of thematic development of the second period appears even heightened and carried to the utmost limits of refinement and subtlety. Rhythm in its infinite variety becomes almost an independent factor of emotional expression. When approaching these last works for the first time, the mind is fairly overwhelmed, and almost confused, by this wealth of detail, so that until quite recently many excellent musicians considered these masterpieces, the very summit of instrumental music, as lacking in spontaneity and real inspiration. As a matter of fact, it is only now that the "last Beethoven" is beginning to be understood and appreciated in wider circles.

Beethoven wrote 9 symphonies, in C, op. 21, D, op. 36, E♭, op. 55, B♭, op. 60, C♯, op. 67, F (Pastoral), op. 68, A, op. 92, F, op. 93; D♯, op. 125, 9 overtures, 5 concertos for piano and orchestra, 1 concerto for violin and orchestra, 1 triple concerto for piano, violin, violoncello, and orchestra, 16 string quartets, 3 quintets, 2 sextets, 1 septet, 2 octets, 8 trios for violin, violoncello, and piano, 1 sonata for piano (4 hands), 38 sonatas for piano solo, 10 sonatas for violin and piano, 5 sonatas for violoncello and piano, 1 sonata for horn and piano, 2 fugues for string quartet and quintet respectively, 7 sets of variations for flute and piano, 3 sets for cello and piano, 2 sets for piano (4 hands), 21 sets for piano solo, the opera *Fidelio*, the oratorio *Christus am Ölberg*, incidental music to *Prometheus*, *Die Ruinen von Athen*, *Elmout*, and *König Stephan*, 2 masses in C and D (*Missa Solemnis*), the cantata *Der glorreiche Augenblick*, *Meeresstille und glückliche Fahrt*; an aria, *Ah Perfido!*, 18 canons, 67 songs, 7 books of English, Scotch, Irish, and Welsh songs for violin, violoncello, and piano,

and a considerable number of smaller compositions for piano solo as well as for various combinations of instruments

A critical edition of Beethoven's complete works in 24 volumes was published by Breitkopf and Hartel of Leipzig from 1864 to 1867

BEEBLE (AS *bitel*, *bétel*, literally 'biter,' from *bītan*, Eng *bite*) An insect of the order Coleoptera, which seems to be wingless when at rest, but really possesses two pairs of wings. At rest one pair is folded beneath two horny cases that fit over the back and meet in the median dorsal line. These horny cases are the elytra, or wing covers, which are only the modified forewings, and they distinguish beetles from all other insects save the earwigs, which are easily separable upon other grounds

The slight protection afforded by this armature seems to be very advantageous to beetles, for they form the largest order of existing insects "In bodily form," says Dimmock, "the Coleoptera present every variation from long cylindrical to nearly globular, from hemispheres to extremely flattened disks, from straggling ant-like forms to compact seed-like ones" All, nevertheless, exhibit a division of the body into three parts, which, however, are not the typical

head, thorax, and abdomen, but a modification of these—head, prothorax or fore body, and mesothorax and metathorax combined with the abdomen into a hind body

The Head bears various appendages, and the mouth opens forward or downward. The mouth

FORMS OF ANTENNAE OF BEETLES

Serrate antennae and modifications 1, serrate (*Ludius*), 2, pectinate (*Corymbites*), 3, bipectinate (*Proconophorus*), 4, Rhabdiate (*Acanthia*), 5, plumose (*Dendroctonus*), 6, 7, 8, irregularly serrate, approaching claviform (clavate antennae), 9, Trogonata, 10, Catoptrichus, 11, Colon, 12, Bryaxis, 13, Anogmus, 14, Liodes, 15, Epimerus, 16, Phymaphora, 17, Heterocerous, 18, Adranes, capillary and verticillate, 19, moniliform (*Dasycerus*) 20, lamellate (*Rhyssodes*), 21, Lucanus, 22, Bolbocerous, 23, irregular (*Lechnosterna*), 24, Dineutus

parts are strong, equally developed, and adapted both for gnawing and for seizing prey. The mandibles are large and strong, and in the males of some forms reach a great size (See STAG BEETLE) The Curculionidae, or snout beetles, have a long beak, but it is a prolongation of the head in front of the eyes, and not of any of the mouth parts

The eyes are compound and usually large and effective, except in a few cave-dwelling species (See CAVE ANIMALS) Ocelli are absent, as a rule, in the adult form, even where possessed by the larva. The compound eyes vary greatly in form and appearance and number of facets,

organs not only of touch, but of smell and probably of hearing. They appear under a variety of forms, some of which are pretty constant throughout large groups, giving them such names as clavicorn, lamellicorn, serriicorn, longi-

corn, etc. "The antennae are said to be clavate when thickened at the extremity, in the form of a club or knob, lamellate, when three or more of the terminal joints spread out in broad processes which lie flat upon one another, serrate, when the joints have on one side short angular processes like the teeth of a saw, pectinate, or comb-like, when the processes are fairly long and stand out nearly at right angles, or flabellate, if the processes are proportionately very long." It is believed that the senses of smell and hearing reside in the antennae. The former is evidently well developed in most, if not all, beetles, while the latter seems certainly possessed by many. The tapping of such species as the "deathwatch" implies a hstener of the same kind, and similar evidence is furnished by the fact that longicorns and some other beetles are often capable of producing sound by stridulating or rubbing together various external hard parts of the body, such as wings and legs, or surfaces and angles on the prothorax and metathorax, they produce some tones that man is incapable of hearing. These organs are possessed chiefly by the males, and a résumé of facts relating to it and to many other characteristics distinguishing the sexes of beetles may be found in chap x of Darwin's *Descent of Man* (London, 2d ed., 1874).

The *Fore Body* forms the second well-marked division of a beetle, and consists of the prothorax, which in Coleoptera is not united solidly with the two other thoracic segments, but connected movably with them. "Its tergite (promotum) is a very prominent feature in all beetles, reaching back to the origin of the elytra." It is hollowed forward to receive the head, and in some groups it is modified in form or possesses horns and spines of extraordinary appearance. These, as a rule, are seen only in the males, however, and most prominently among the lamellicorns. This fore body wears the foremost pair of legs, with which the hinder pairs may or may not agree. Beetles use their legs more than their wings. They do fly, but less frequently and skillfully than they run, jump, climb, swim, and burrow. Most of them are

extremely active and hence have well-developed legs and feet. These are all much alike in the ground runners and tree climbers, but variety is found among those of more special habits and habits. Thus, the jumpers have very long hind legs, with thickened femora, the diggers have thickened fore legs, with claws turned into excavators, the aquatic beetles have all or a part of their legs disposed as oars and made broad and flat and bordered with bristles. The parts of the legs vary considerably and with such regularity that the form of the coxa is used as one of the main standards in classifying families, while larger groups—Pentamera, Tetamera, etc.—are based on number and characteristics of joints in the tarsi. "The tarsal joints are hairy beneath, and those of the anterior (and sometimes also the middle) pair of legs of many male beetles are modified to clasp more firmly the female during copulation." The most peculiar of these modifications is seen among water beetles (Dysticidae). The legs of larvae are often reduced to mere rudiments or are absent.

The *Hind Body* is made up of the two posterior thoracic segments and the abdomen and is entirely hidden from dorsal view in most beetles by the wing covers, but the parts can be well seen on the ventral surface. To the mesothorax are attached the middle pair of legs and the wing covers, while the metathorax supports the hindmost legs and the membranous flying wings, which, when not in use, are curiously folded out of harm's way under the elytra, which also shield the soft-skinned abdomen. The elytra are not instruments of flight, except that they may be useful as balancers, when held out at right angles. They shut close together upon the back when at rest and in some forms are closely

united by a suture along the median line, or, in the case of certain running beetles, where the wings may be greatly aborted or perhaps may even be altogether absent, particularly in the

female sex, the elytra may even be wholly grown together into one shield. The elytra may be smooth and plainly colored, or may be highly polished, striated, pitted, and sculptured in a great variety of ways, as usually occurs in the terrestrial families. They may also bear spines,

LARVA (GRUB) OF A BEETLE

The legs spring from the three thoracic segments, the remainder of the body consists of abdominal segments

few or many, long and short, tubercles, and other prominences, or be clothed with pubescence or scattered hairs or scales or waxy secretions. "The excessive brilliancy and sparkling coloration of the diamond beetle of Brazil" is due to its being covered with scales, this is common among the weevils (Curculionidae) and not rare in a few other families of Coleoptera. Beetles exhibit almost every known shade of color (see Plate), and a few are iridescent, with beautiful metallic hues. "A little beetle (*Ooptocoryca aurichaloca*), not uncommon on the wild morning-glory (*Convolvulus*), looks, when alive, like a flattened drop of the finest polished gold. The species of certain families resemble one another in coloration and figuration, the leaf beetles (Chrysomelidae) have, for the most part, brilliant coloration, the ladybirds (Coccinellidae) have, for prevailing colors, red, yellow, and black, mostly arranged in round or roundish spots" (Dummock). As a general rule those whose lives are passed in the open sunlight are more bright in color than those that habitually dwell in cavities, under stones or water, or in the dark.

Habits and Food. Beetles dwell in the greatest variety of situations and in nearly all parts of the world. A few live in salt water, more in fresh waters, and a limited number breed in hot springs. Under great stones and in caves dwell a good many blind beetles, the degeneration of the visual organs in some of which has proceeded so far as to include even the optic nerves and lobes. Certain other forms are parasites in other animals or are to be found in the nests of termites and ants, for the very interesting facts of this association, see SYMMIOSIS.

The food of beetles and their young is as diverse as their habitats. A vast number of them, such as Hydrophilidae and Chrysomelidae, feed on vegetable matter, both living and dead, above or below ground. Still another vast host, Cincelidae, Carabidae, Dytiscidae, and Coccinellidae, live on animal food, which either the adults or their predaceous larvae capture alive, or appropriate when found dead, according to the custom of the species. In this fondness for decaying and excrementitious matter, often

minute in quantity, they perform an excellent service.

Enemies and Defenses. Birds, rodents, frogs, toads, and reptiles all prey upon beetles, both adult and larval. Flies, wasps, mites, and predaceous beetles feed on them, or lay eggs within them which develop at the expense of the strength and substance of their host. They are infested with parasitic worms and protozoa, fungi destroy them, and inclement weather and lack of food help to reduce their ranks. Against these adversities various beetles are more or less protected by having a coloration like that of soil, leaves, or the bark of trees, while certain others look like excrescences on the leaves of their food plants, or caterpillars dung and still others hide themselves under heaps of their own frass. A few look like sticks and seeds, the cocoons of one form resembling the seed pod of the food plant. A good many feign death by dropping to the ground. The bombardiers (qv) shoot at a pursuer. The abdomen of a number of beetles is held up in a warning attitude, as if to sting. Certain longcorns have the disagreeable taste and smell of fishies and even possess yellow markings in the region occupied by their luminous disks. For the luminescence characteristic of the Lampyridae see FIREFLIES, LUMINOSITY OF ANIMALS.

Economic Importance. The blister beetles (qv) are used to make blister plasters, particularly the one commonly known as Spanish fly. The grubs of various beetles are roasted and eaten by both white men and natives of the tropics, and the Romans, according to Pliny, fattened certain grubs (*Cossus*) with flour, to prepare them for the table. This *Cossus* was probably a member of the genus *Pronus*, the larvae of which are still eaten in some parts of the world. The hard parts of brilliant tropical species are often mounted as jewels to form pins, cuff buttons, hat pins, belt buckles, and the like. Fireflies sewed in gauze are used by Cuban women to adorn ball dresses. Many beetles, such as those of the ladybird family, prey on

HEAD OF A BEETLE LARVA

a, labrum; b, labial palpus, c, e, maxillæ, d, maxillary palpi, f, f, antennæ, g, mandibles

plant-eating insects; others, such as carrion and dung, and the burying beetles, place their eggs upon stable refuse, and a great many beetles fertilize flowers. Taken as a whole, beetles are economically injurious, for they ravage growing and stored crops, living wood, lumber, both

sawed and manufactured, carpets, furs, hides, woolen goods, cured meats, books, and zoological collections. The Dermestids (q v) are especially pestiferous.

Life History Owing to the difficulty of rearing beetle larvae, we know comparatively little of the life history of beetles. All undergo complete metamorphosis. The eggs are laid in the situations where the economy of the species demands that the grub should be born, in order to maintain itself, i. e., upon or within access of its food. Thus aquatic beetles lay their eggs in the water, leaf eaters upon plants, wood borers beneath the bark and in crevices of timber, the weevils upon tender seed pods or young seeds, and so on. The scarabs (see DUNG BEETLE, SCARAB) roll up their eggs in a ball of dry dung, and the burying beetles place theirs upon the carrion which is buried to await the hatching of the young. When the eggs are not laid so late as to be intended to remain dormant over winter, they hatch quickly, and the larva begins at once to feed upon its intended fare.

The larvae are commonly called "grubs," are usually whitish or of dull, inconspicuous hues, and ordinarily have three pairs of legs, one pair for each of the first three thoracic segments, which may vanish in older stages, but grubs that live within their food may be legless. Grubs may possess traces of still other legs, a number of them having a pseudopod on the posterior end of the abdomen. Like adult beetles, grubs have mandibulate mouth parts, and certain forms have channels in the mandibles through which liquid food is sucked. The larval state lasts for a number of years, which makes those species injurious to agriculture far more formidable than they might otherwise become.

Some beetles pupate in cocoons or cases, made of agglutinated bits of earth and wood. Those larvae that bore in wood go into the pupa stage in their burrows. Some forms pupate in the ground, others on the surface of the ground, while still others, such as the ladybird, suspend themselves to objects above ground by the posterior ends of the body. Several pupate in the last larval skin. The pupal state of the majority of beetles lasts only two or three weeks, but in some cases it lasts several years. On account of the hardness of the exoskeleton, beetles retain their shape well when dried, and hence collections of them are made with more ease than is possible in other departments of entomology, and adult beetles have been studied more than any other order of insects.

Classification. The enormous numbers of beetles do not adequately impress us, since beetles are less on the wing, and hence we see them less than flies, wasps, butterflies, or moths. The form and variation of the external parts are almost wholly used to determine their classification. The present number of described species is not far from 150,000, of which more than 11,000 species inhabit America north of Mexico, representing 83 families. The old subordinal divisions—Clavicornia, Serriicornia, etc.—based on the shape of the antennae, are no longer accepted as scientific, and in their place various subdivisions have been proposed. A commonly accepted classification is the following, based on the tarsi: (1) *Cryptotetramera*—four joints in the tarsus, one rudimentary Coccinellidae and Endomychidae. (2) *Cryptopentamera*—five joints, one being abortive. Chrysomelidae, Cerambycidae (longicorns), Brentidae, Curculionidae, etc. (3)

Heteromera—four front tarsi five-jointed, hind tarsi four-jointed. Meloidae, Stylopidae, Tenebrionidae, etc. (4) *Pentamera*—five-jointed. Ptinidae, Cleridae, Lampyridae, Elateridae, Buprestidae (serriicornis), Scarabaeidae (lamellicorns), Hydrophilidae, etc., including about half of all known beetles.

Many of these, and other families, will be found described elsewhere, in their vocabulary places. See also English names of groups or species, as ROVE BEETLE, FIREFLY, BOMBARDIER BEETLES, STAG BEETLE, GROUND BEETLE, etc.

Bibliography For general works, see INDEX. For the most recent and only general work on the classification of North American Coleoptera, consult Le Conte and Horn, *A Classification of the Coleoptera of North America*, Smithsonian Institution (Washington, 1883). For an excellent general account consult Kellogg, *American Insects*, 1908. A very complete list of the systematic writings on N. A. Coleoptera brought up to 1895 and arranged by families is published under "Bibliographical References in Henshaw's Third Supplement to the Coleoptera, etc." (Philadelphia, 1895). Most of the literature applies to single families, tribes, and genera, and references to important groups will be found mentioned underneath the accounts of these given elsewhere.

BEE/TLESTONE. A hard nodule of clay ironstone composed of shale. It is found at Newhaven, Wales. It is capable of taking a high polish and is therefore used by lapidaries to make ornaments. The name "beetlestone" is from a fossil frequently found in the nucleus of the nodule, the fossil was formerly supposed to be a beetle, but is now known to be a coprolite.

BEETLING (beetle, a heavy wooden mallet, from the root *beat*). A mechanical finishing process applied to linen and afterward to cotton shirting, in imitation of linen, to give the cloth a hard and wiry look, by flattening the yarn irregularly in an angled manner, and also in finishing fine linen damask. This is done by upright wooden stamps, placed close together in a row, with their square butts resting on a roller over which the cloth passes, doubled in a particular way, so that the yarn, when struck, acquires an angled appearance. Linen weft yarn for sailcloth is likewise beetled by such a machine, or by hand hammering on a large flat stone with a wooden mallet, to soften the yarn for easiness of working it in weaving. The yarn is also passed between longitudinally grooved rollers for the same purpose.

BEET PULP A term applied to the mass of sliced sugar beet remaining after the extraction of the sugar. It is a voluminous by-product of beet-sugar factories, and with the growth of the beet-sugar industry the means of utilizing it have received considerable attention. Beet pulp is fed quite extensively to cattle and sheep, and in Europe has been successfully fed to milch cows. Large feeding sheds are erected near the factories in some parts of the United States, several thousand head of steers and sheep being fed upon the beet pulp, supplemented by hay and a little grain. The pulp contains about 90 per cent of water, and in the wet condition must be fed at once or preserved in silos, which may be very crude. It would not pay for hauling any distance. It is also dried at an increasing number of factories and then keeps well and has a feeding value comparable with corn meal. See SUGAR.

BEETS, bāts, NIKOLAAS (1814-1903) A Dutch poet and author, born at Haarlem. He became professor of theology at the University of Utrecht, but is principally known by his contributions to belles lettres. His *Camera Obscura* (1839, 18th ed., 1888), which he published under the pseudonym of Hildebrand, has been called the finest piece of prose in the Dutch literature of the last century. It has been translated into several modern languages. His poetry, though inferior to his prose, enjoyed also great popularity. Among his poetic tales may be mentioned *Guy de Vlaming* (1853) and *Ada van Holland* (1846). His lyric songs include *Korenbloemen* (1853), *Nieuwe gedichten* (1857), *Verstoorde gedichten* (1862), *Harptoonen* (1892). His poetry was published in five volumes (1886-91). He was also the author of some critical essays and several works on theology, among them *Stichtelijke uren* (7 vols., 1848-60).

BEET SUGAR See SUGAR

BEETZ, bāts, WILHELM VON (1822-86) A German physicist, born at Berlin. He was at first professor of physics at the artillery school there. In 1855 he was appointed professor of physics at the University of Bern and in 1858 at the University of Erlangen. He was called to the chair of physics at the Munich Polytechnicum in 1868. He made researches in regard to the electrical conductivity of liquids, galvanic polarization, and other problems, contributed extensively to *Poggendorff's Annalen* and published *Leitfaden der Physik* (2d ed., 1857, 11th ed., 1893), and *Grundzüge der Electricitätslehre* (1878).

BEEVILLE A town, and the county-seat of Bee Co., Tex., 90 miles (direct) southeast of San Antonio, on the San Antonio and Aransas Pass and the Galveston, Harrisburg, and San Antonio railroads (Map Texas, D 5). It has a mild and equable climate, is in a region adapted to fruit and vegetable growing, and exports live stock, cotton, and bee products. Its chief industries include a broom factory and a cottonseed oil mill. Beeville adopted the commission form of government in 1912. Pop., 1910, 3269.

BEFANA, bā-fā'na (It. *Befana*, or *Befania*, corrupted from *Epiphania*, Epiphany) The name given in Italy to a singular custom prevailing on the festival of that name (January 6). According to tradition, the Befana was an old woman who, being busy cleaning the house when the Three Wise Men of the East passed by on their way to offer their treasures to the infant Saviour, excused herself for not going out to see them, on the ground that she would have an opportunity of doing so when they returned. They, however, went home by another way, and the Befana, not knowing this, has ever since been watching for their return. She is supposed to take a great interest in children who on Twelfth Night are put earlier to bed, and a stocking of each is hung before the fire. Shortly the cry "*Ecco la Befana!*" is raised, and the children, who have not gone to sleep, dart out of bed and seize their stockings, in which each finds a present bearing some proportion in value to his conduct during the year. If any one has been conspicuously ill behaved, he finds his stocking full of ashes—the method the Befana takes of expressing her disapprobation. It was also customary in Italy, on Twelfth Night, to carry an effigy called the Befana in procession through the streets amid great re-

joicings, but this, which was probably the relic of the celebration of a Middle-Age "mystery," has fallen greatly into disuse. The word is also used to awe naughty children. See BEAN KING'S FESTIVAL.

BEFORE THE MAST In rigged ships, that part of the upper deck forward of the mainmast used by the enlisted men. Aboard the mainmast the starboard side (in port, at sea, the weather side) of the quarter-deck is kept clear of all persons, except the officer of the deck and the captain, while the port side (at sea, the lee side) is used by the officers as a promenade, etc. This division of the ship at the mainmast gave rise to the expression *before the mast*, which is used in the same sense in the merchant service, where the customs are similar but less formal. Mariners serving before the mast are therefore enlisted men and not officers, both in the navy and in the merchant marine. In modern ships of war the arrangements of decks and masts are so different from those of the old rigged ships that the term "before the mast" has no meaning except as regards its application to the enlisted force, and it has fallen into disuse.

BEG See BEY, BASIŪ

BEGA, bā'ga, CORNELIS (1620-64) A Dutch painter and etcher. He was born in Haarlem and was a pupil of Adrian van Ostade. Like his master, he chose his subjects from low life in its humorous aspects, especially tavern scenes. Among the best of his numerous pictures are the "Peasants' Concert," in the Amsterdam Museum, "The Alchemist," in the Cassel Gallery, "Peasant Family," in the Berlin Museum, and "Rustic Interior," in the Louvre.

BEGARELLI, bā'ga-rlē'le, ANTONIO (c. 1498-1565). An Italian sculptor in terra cotta, the chief master of the Emilian school during the High Renaissance. He was born at Modena, where he studied under local masters and passed most of his life. Chronological reasons as well as the character of his art forbid the assumption that he was a pupil of Guido Mazzoni, as is commonly supposed. Equally erroneous is Vasari's statement that he was greatly influenced by Correggio. He was, however, just as were the painters of the Emilian school, indirectly influenced by Raphael. His sculptures are characterized by a certain nobility of form, a loving care in finish and detail, and a wholesome realism. Most of them no longer possess the beautiful patina, particularly in the flesh tints, for which they once were famous. Their prevailing tone is an ivory white, gilding and color being sparingly used, but the effect has been much impaired by subsequent varnishings. The principal defect of Begarelli's work is lack of composition, for his figures are grouped in the manner of mystery plays. Most of his sculptures are in his native city and the vicinity. To his early period belong a "Pieta" in Santi Agostino, and the almost unknown monument of the Prothonotary Biseotti in San Cesario, and the Presepio in the cathedral (1527). Among the best of his other works are the "Madonna with the Christ Child" in the Galleria Estense, and the "Madonna di Piazzola" in the Museo Civico, the "Descent from the Cross" in San Francesco (his most ambitious effort), a "Pieta" and other works in the Benedictine church of San Pietro, the monks of whose order were his especial patrons. His last years were devoted principally to 32 terra-

cotta statues for the church of San Benedetto Po near Mantua. In these, as in other later works, he was assisted by his nephew, LORENZO BEGARELLI, a sculptor of note, whose works are often confounded with his uncle's, but differ from them in breadth of treatment. Consult the article on the Begarelli by Bagliola in *L'Arte* (1909), and in Thieme and Becker, *Allgemeines Künstler Lexicon*, vol. III (Leipzig, 1909).

BEGAS, b'gas A distinguished family of German painters. The founder, KARL BEGAS (1794-1854), historical and portrait painter, was born at Heinsberg, near Aix-la-Chapelle. After studying with Philippart at Bonn, he entered the studio of Jean Antoine Gros in Paris (1813). Under the patronage of the King of Prussia he received important commissions and in 1821 a royal stipend for study in Italy, where he became an adherent of the "Nazarenes," or German Pre-Raphaelite school. In 1824 he returned to Berlin and became professor in the Royal Academy. Ever influenced by the prevailing fashion, he deserted the Nazarenes for romanticism, and finally became a realist. His best work is his portraits. Among his principal canvases are "Christ on the Mount of Olives" (1818, Garnisonkirche, Berlin), "Outpouring the Holy Spirit" (1821, Cathedral, ib.), "The Resurrection" (1827, Werdersche Kirche, Berlin), "Portrait of Thorvaldsen" (National Gallery, ib.), "Baptism of Christ" (Garnisonkirche, Potsdam), "Lorelei" (1834), "Mohrenwasche" (1843, National Gallery, Berlin). A number of his portraits of distinguished contemporaries (including Jacob Grimm, Meyerbeer, Cornelius, Alexander von Humboldt) are in the Hohenzollern Museum, Berlin.

BEGAS, KARL (the younger) (1845-). A German sculptor, brother of Reinhold Begas, in whose studio, as well as in Rome, he studied sculpture. In Berlin he achieved distinction as a sculptor of extremely graceful groups, such as "Sister and Brother," and others in the National Gallery (Berlin). Dignified in design also are the statues of Knobelsdorff (1886, Vestibule of the Berlin Museum), and of Solon and Aristotle (University of Kiel). Among his other works are the monument commemorating the Franco-Prussian War, unveiled at Cassel in 1898, the two groups representing Margrave Otto IV and Frederick William IV ("Siegesallee," Berlin), an equestrian statue of Emperor William II in the Hall of Fame at Barmen (1902), a "Boar-Hunt" in the Berlin Tiergarten (1905), and the monument in Urville, Elsass, to Empress Auguste Victoria.

BEGAS, OSKAR (1828-83). A German painter, eldest son of the elder Karl Begas. He was born in Berlin, studied with his father, and at 12 painted portraits of merit. In 1852 he won a scholarship which entitled him to a two-years course in Italy. His principal work there, a "Deposition from the Cross" with life-size figures, won him a gold medal and the place of official painter in the Prussian Academy. Among his best-known sitters were Peter von Cornelius (Antwerp Museum), Pauline Lucca, Crown Prince Frederick, General von Moltke, and William I. He also painted mural decorations (Berlin Rathaus), historical and genre pictures, like the "Hour of Gossip" (National Gallery, Berlin), and simple landscapes.

BEGAS, REINHOLD (1831-1911). The most prominent German sculptor of the later nine-

teenth century, second son of Karl Begas. He studied with Wichmann, Schadow, and principally in the atelier of Rauch. At Rome he was much influenced, both in subjects and in realistic tendencies, by his association with Boecklin and by the sculptures of Michelangelo and the Baroque artists. His "Pan Consoling a Deserted Nymph" (1837) was hailed as marking a new conception of sculpture in Germany and was followed by a series of similar subjects. Among the more important commissions of his earlier period are the group surmounting the Berlin Bourse (1850), the monument to Frederick William III at Cologne, the well known Schiller sepulchral monument (modeled in 1874), which won the Grand Prix at the Paris Exposition in 1900. During this period and also throughout his career he modeled a multitude of busts, such as those of William and Alexander von Humboldt, Menzel, Moltke, Bismarck, and a whole series of the Hohenzollern family. The pedestals were of a very original form, usually like that of a classical herm, richly decorated. He was in charge of the many portrait sculptures of the Berlin arsenal, with its Hall of Fame, for which he also executed the colossal statue of "Borussia" (1885) and others, and was, in fact, throughout his career the official sculptor of the Prussian court. Among his other important works are the marble sarcophagus of Frederick II, erected in 1892 in the mausoleum at Potsdam, and a colossal "Fountain of Neptune" (1886-91) supported by titans and surrounded by allegorical figures of rivers, waves, and by fishes and sea monsters—perhaps his masterpiece, and the mighty bronze group "Germania" surmounting the new Reichstag building.

The reign of Emperor William II offered even greater artistic opportunities. Setting aside an official competition, the Emperor himself commissioned Begas to carve the national monument to William I (1892-97), of colossal proportions and with numerous figures. He was also commissioned to erect the monument to Bismarck in front of the Reichstag building (1901), many statues in the Siegesallee of Berlin, and the marble statue of Emperor William II (1904) in the Palace at Potsdam. Begas's sculpture represents the reaction against the enfeebled classic tendencies of his day. It is characterized by a powerful realism and individualism and often by exaggerated action, resembling in this regard, as well as in its decorative qualities, Baroque art, which he revived. It is to his works, as well as to his numerous pupils, that Berlin largely owes its present Baroque appearance. His best productions are those of his middle period, particularly the mythological, genre, and portrait busts.

BEGBIE, HAROLD (1871-). An English author and journalist, born at Farnham St. Martin, Suffolk. He was educated privately and early began the practice of writing. Among his books, largely novels of the didactic type, are *The Political Struggle*, *Master Series* (1889-1901), *The Handy Man* (1900), *The Fall of the Cuckoo* (1901), *Master Workers* (1905), *The Priest* (1906), *The Cage* (1909), *Broken Earthenware* (1909), published in America (1910) as *Twice-Born Men*, and translated into French and published as *Pots Cassés* (1912), *Souls in Action*, which expands the narrative of *Twice-Born Men* (1911); *The Ordinary Man*

and the *Extraordinary Thing* (1912), *Other Sheep* (1912), *The Rising Dawn* (1913)

BEGG, ALEXANDER (1840-97) A Canadian historian, born at Quebec He was educated at Aberdeen, Scotland, and at St John's, P Q He early engaged in commercial pursuits, and in 1867 was the first to arrive at Fort Garry (now Winnipeg) with Canadian-manufactured goods for sale During the half-breed rebellion in 1869 under Louis Riel (qv), Begg sympathized with the discontented and had a considerable share in the successful effort to secure constitutional rights for them He was the first to engage in the steamboat and express-agency business in Manitoba and was active in helping to establish the municipal and commercial institutions of Winnipeg when it was a small town In 1878-84 he was Deputy Treasurer of the province, and shortly afterward went to England as immigration agent for the Canadian Pacific Railway He wrote *Dot It Down* (1871), *The Creation of Manitoba* (1871), *Ten Years in Winnipeg*, with W R Nurey (1879), and a valuable *History of the Northwest*, 3 vols (1894-95) He died in Victoria, B C

BEGG, JAMES (1808-83) A Scottish Free Church leader He was born at New Monkland, Lanarkshire Educated in Glasgow University, he entered the ministry in 1829 At the disruption of the Scottish church he joined the Free church and during the remainder of his life was minister of the church of the Newington, Edinburgh He headed a contingent of Highlanders, who could be counted on to vote against any measure savouring in the least of liberalism in theology or practice He died in Edinburgh Among his works are *A Handbook of Popery* (London, 1832), *Seal Rents Brought to the Test of the Scripture, Law, Reason, and Experience* (Edinburgh, 1838), *The Use of Organs and Other Instruments of Music in Christian Worship Indefensible* (Glasgow, 1866) Consult his *Life* by T Smith (2 vols, Edinburgh, 1885-88).

BEGGA, SAINT See BEGUINES

BEGGAR See MENDICANCY

BEGGAR-MY-NEIGHBOR A game at cards, usually played by two persons, between whom the cards are equally divided Holding their cards with their backs upward, the players lay down a card, alternately, until an honor is played, which is paid for by the adversary—four cards for an ace, three for a king, two for a queen, and one for a knave When such payment is completed, the winner lifts the trick. But if an honor should be laid down during the payment, then the payment of the debt is stopped and transferred to the opposite party, who must pay for that in the same way, and so on, till a full payment is made without an honor In the end one party gets all the cards into his hands and wins the game

BEGGAR'S BUSH, THE The title of a once popular comedy by Fletcher, Rowley, and Massinger (1622) Its source was probably a novel by Cervantes, entitled *Fuerra de la sangre* It has been laid under tribute in *The Royal Merchant* (1707) and *The Merchant of Bruges* (1815) The plot deals with the usurpation of a maiden's throne and her restoration to it by the aid of her lover, a prince disguised as a merchant

BEGGAR TICK See BUT MARGOLD

BEGGAR WEED (so named either because,

it indicates poverty of soil or because it was supposed to be so noxious a weed as to beggar the land) A name applied to a number of species of *Desmodium* which are considered valuable as forage plants or for enriching poor soils when plowed under One of the best known is the Florida beggar weed (*Desmodium molle* or *tortuosum*), which has no superior as forage produced upon light, sandy soils It is an annual leguminous plant, growing 3 to 10 feet high, the height varying with the locality When thinly grown, the stalks are liable to become woody, otherwise a large crop of forage of excellent quality may be obtained in from two to three months Stock of all kinds seem to relish the hay, which has a high nutritive value Yields of from 4 to 6 tons of hay per acre are reported from the Louisiana Experiment Stations Florida beggar weed does well as far north as Virginia, and it has been extensively introduced into the West Indies and elsewhere A number of other species of *Desmodium* are widely distributed, some of which may prove valuable They, in common with other leguminous plants, acquire large quantities of nitrogen from the air through the tubercles found upon their roots

BEGON, begôn', MICHEL (1638-1710) A French administrator and patron of science, born at Blois He entered the French navy, and rose to be Intendant of the West Indies, of Canada, and later of Rochefort and of La Rochelle In recognition of the interest shown by him in the progress of science, the important genus of plants *Begonia* was named for him

BEGONIA A genus of plants of the family Begoniaceæ, the species of which number about 450, and are found in the tropics of both hemispheres, being especially well represented in Mexico and Central and South America Some of the species of *Begonia* are very popular house plants and are extensively grown under the names of begonia, elephant ears, beefsteak geranium, etc, for their handsome flowers and their odd-shaped and often beautiful foliage. The plants are perennial herbs, or, in some cases, shrubby at base, and have root systems of several kinds, upon which schemes of classification have been based Some are tuberous, some have their stems continued into a rhizome, others have a cluster of scale-like bulbs, while still others have fibrous roots Ordinarily the fibrous-rooted species are designated as winter-blooming, the others being summer-blooming, unless especially forced to the contrary The leaves, which are radical, or, if borne upon the stem, alternate in two ranks, are usually unequal-sided, and vary within wide limits in size, outline, and texture. The flowers are monocious, the male usually having four petals, the female five, sometimes two petals. The stamens are quite numerous, the styles two or four, with the stigmas twisted like corkscrews The fruit consists of a winged capsule filled with numerous small seeds, which are without an endosperm.

Begonias may be propagated in a number of ways Their tuberous or bulbous roots may be divided, their stems rooted, or they may be grown directly, either from leaves which are cut and placed in the soil, or from incisions made in the leaf, which lies flat upon the ground The leaves form a callus where cut, from which ultimately arises a number of adventitious buds Horticulturally the begonias may be divided into the following sections fibrous-rooted or

winter-flowering, semi-tuberous or Socotran, tuberous or summer-flowering, and rex or ornamental-leaved varieties. Many cultural varieties and hybrids of each are known to the florist, some of the hybrids being plants of great beauty, as the "Gloire de Lorraine," the double-flowered, and some of the single-flowered tuberous rooted varieties, etc. The "Rex" begonias are of note on account of the remarkable coloration of the leaves in some varieties. They are originally of Asiatic origin and have by crossing and selection yielded many fine forms. The Socotran species have peltate leaves, those of the others being all unequal-sided. The cultivation of begonias was begun about 1777, and there are now hundreds of named varieties of recognized merit. Of rather easy cultivation, they do not seem to withstand the burning summer sun and frequent droughts of the United States, and they grow better as house plants than they do in the open. See Plate of GREENHOUSE PLANTS.

BEG-SHEER, bēg'shēr, or **BET-SHEER**, sometimes also spelled **BEX-SHEER** (named from the city of the same name on its shores, Turk beg, beg + Pers *Shehr*, city) (Map Turkey in Asia, D 4). A fresh-water lake in lat 37° 45' N and long 31° 30' E, in the western part of the province of Koneh, Asiatic Turkey, and supposed to be the ancient *Caraltis*. It is about 20 miles long, and from 5 to 10 miles broad, and is connected by a short stream of the same name with Lake Soghla.

BEGUNES, bâ-gēnz', **BEGUINÆ**, or **BEGUTTE** (ME *begyne*, *byggyn*, OF *béguine*, MI *beguina*, *beghna*, from Lambert le Begue). The name of the earliest of all non-monastic societies of women united for pious purposes, dating from the twelfth century and in all probability founded by Lambert le Bègue (died 1187), a priest of Liège, Belgium. The popular tradition of Brabant since the seventeenth century, that a St Begga, daughter of Pepin, and sister of St Gertrude, founded in 696 the first sisterhood of Begunes at Namur, has no historical basis. An account of their establishment at Vilvorde, near Brussels, is also demonstrably unauthentic. The Begunes were not restricted by vows, nor did they follow the rules of any order, but were united under a *supérieure* for the exercise of piety and benevolence, and lived generally in separate small cottages, which collectively formed the *beguinage*, or 'vineyard,' as it was scripturally termed. Their establishments were often enriched by liberal donations. A church, a hospital, and a house of reception or common entertainment generally belonged to every community of Begunes. The sisters were distinguished from the rest of the laity only by their diligence, devotedness, piety, and charity. Societies of Begunes flourished greatly during the twelfth and thirteenth centuries, when they spread themselves over France and Germany. Among the most important were those in Hamburg, Lubeck, Ratibon, Magdeburg, Leipzig, Goslar, Rochlitz, and Gohlitz. As the pietists of the Middle Ages, the Begunes were often subjected to persecutions by the mendicant orders of friars, but, on account of their practical usefulness, were sheltered by the Pope and Councils as well as by secular authorities. In the thirteenth and fourteenth centuries, the Begunes became united with the persecuted spiritualists among the Franciscans, and with the sect of the 'brethren and sisters of the free spirit.' Hence arose certain heresies, which, of course, occasioned inter-

ference on the part of the Inquisition, and on account of certain immoralities a synod held at Fritzlar required that all candidates must be 40 years old before they could enter a society of Begunes. These sisterhoods maintained their position in Germany and the Netherlands longer than in other countries. In Holland they existed at the close of the eighteenth century, and in the present day we find here and there so-called Begunen-hauser in Germany; but they are now nothing more than almshouses for poor spinsters. In Belgium, at Ghent, there are two extensive Begunages, Le Grand Beguinage de St Elizabeth and Le Petit Beguinage, the former dates from 1234 and was transferred from near the Porte de Bruges to its present site in the northeast of the town in 1874. It contains about 600 sisters, besides 200 *locataires*, or occasional inmates. Their houses form a kind of distinct little town, which, though environed by a wall and a moat, is open to the visits of strangers. Le Petit Beguinage, in a different suburb, contains about 400 members and is also inclosed and has many separate houses. It is conducted similarly. Lace making is one of the industries carried on. There are within the inclosure 13 convents in which the younger sisters live, the older ones live in little houses containing two or four occupants. Living here a life of retirement and piety, the Begunes in their simple dark dresses go out as nurses to the hospital and perform other acts of kindness among the poor. As above stated, they are under no monastic vow, but, having attached themselves to the sisterhood, it is their boast that none is known to have quitted it. Each one pays an entrance fee and yearly board. There are houses of Begunes also at Antwerp, Bruges, Louvain, and Mechlin, and a few in Holland. In 1854 one was established in France, at Castelnauvry, in the department of Aude. Consult Baedeker, *Belgium and Holland*, under "Ghent" (Leipzig, 1910).

Similar societies of laymen appeared in Germany, the Netherlands, and the south of France in the beginning of the thirteenth century, and were known in Germany as *Beghards* (Ger *beghren*, to seek with importunity), in France as *Begunes*, and in Italy as *buachi* and *bocasoti*, but they never obtained the reputation enjoyed by the Begune sisterhood. Towards the end of the thirteenth century they were commonly stigmatized as *dons gargons*, *dons pueri*, 'ministers' men,' 'bede men,' 'pietists,' 'vagabonds'—contemptuous titles, which expressed the low estimation in which they were held. On account of heretics of all sorts retreating into these half-spiritual communities, they were subjected to severe persecutions after 1367, and were gradually dispersed, or joined the orders of Dominicans and Franciscans. In the Netherlands, where they had preserved a better character than elsewhere, they maintained their ground longer, and were protected by Pope Innocent IV (1245), in Brussels by Cardinal Hugo (1254), and in Liège by Pope Urban IV (1261), but their communities disappeared in the fourteenth century. Consult Moshelm, *De Beghards et Begunabus* (Leipzig, 1790), E Hallmann, *Geschichte des Ursprungs der belgischen Beghnen* (1843), Gieseler, *Ecclesiastical History*, vol. III (Edinburgh, 1853).

BEGUM, bâ'gūm or bē'gūm (Hind *bēgām*, Pers *baigim*, lady, from Turk *bey*, lord; prince + possibly Ar *umm*, mother): A title of honor

bestowed upon sultanas, princesses, and other women of high rank in Mohammedan countries

BEHA-EDDIN, bā-ha'ed-dēn' See **BEHAD-DIN**

BEHAIM, bā'hīm, **MARTIN** (1459-1506) A famous German cosmographer. He was born in Nuremberg, of Bohemian descent, and probably received his scientific training from the famous savant Regiomontanus. Taking up a mercantile life, he traveled over Europe, visiting Venice, Mechlin, Antwerp, and Vienna, for purposes of trade, between 1475 and 1479. In 1480 he went to Portugal and began the business of making maps, in which he soon acquired fame and a competency. He was selected to accompany the Portuguese expedition commanded by Diogo Cam, on a voyage of discovery along the western coast of Africa, in 1484-85—an expedition which pushed nearly 20° beyond the best previous exploration, as far as the mouth of the Congo River, but it is very doubtful if he went beyond a part of the distance. In 1486 he visited Fayal, in the Azores, where there was a Flemish colony, and he shortly afterward married the daughter of the Governor of the islands of Fayal and Pico, Jobst von Hurter. He was a member of a commission to discover some practical method of determining a ship's position at sea by means of astronomical observations, and claimed to have rendered important service in this connection to the science of navigation. In 1490 he went back to Nuremberg, where he lived till 1493. During this period he constructed a globe as a gift to his native city, where it is still preserved, being the oldest in existence, but the map is curiously inaccurate even for its day and generation. After another short residence in Fayal he removed to Lisbon, where he died, July 20, 1506. For his biography, consult Murr, *Diplomatische Geschichte des Ritter Martin Behaim* (Gotha, 1801), and for more modern information, *Martin Behaim His Life and his Globe* (London, 1909).

BEHAM, bā'hām The family name of two German painters and engravers of the Renaissance, the most important of the so-called "Little Masters" of Nuremberg. Other forms of the name (Behaim, Beheim, Peham) also occur. The elder brother, **HANS SEBALD** (1500-50), was born at Nuremberg and acquired his art under the influence, if not as a direct pupil, of Albrecht Dürer. In 1525 he was banished from Nuremberg on account of his desic and socialistic views. Although allowed to return late in the same year, he led a wandering life at Ingolstadt, Augsburg, Munich, and elsewhere. In 1528 he was accused of illegally using Dürer's designs and was again banished. About 1531 he removed to Frankfurt, where he passed the remainder of his life. In that year he completed the fine miniatures of two prayer books for Albrecht of Brandenburg, Archbishop of Mayence, now in the libraries of Aschaffenberg and Cassel. Three years later he painted the well-known table now in the Louvre. Among the many illustrations which he designed for the publisher Egenolph in Frankfurt, the most celebrated are those of the *Old Testament* (1533). His excellent drawings are numerous in the principal German collections. He was one of the most prolific German engravers, the latest catalogue of his works (by Pauli, 1901) numbers 1074 woodcuts, 252 engravings on copper, and 18 etchings. He made a specialty of large woodcuts designed for mural decorations, such as "The Military

Pageant in Munich," the "Fountain of Youth," a "March of Soldiers," each over a meter wide. His woodcuts are free and spirited, his line engravings neat and delicate. After 1540 his art declined.

BARTHEL BEHAM (1502-40), born also at Nuremberg, was influenced in his art by his brother rather than by Dürer, as was commonly supposed. Banished from Nuremberg along with his brother in 1525, he settled at Munich and became court painter to Duke William of Bavaria. In 1540 the latter enabled him to visit Italy, where he died unexpectedly. The important paintings formerly ascribed to him at Donaueschingen and Berlin are now known to be the work of a Swabian contemporary, the Master of Messkirch. Among the few that can with certainty be assigned to him are the portraits of Chancellor Eck (1527) in the Weber Collection, Hamburg, Count Palatine Otto Heinrich (1535), the Augsburg Gallery, the "Portrait of a Noble Lady," in private possession, Munich, and 17 portraits of Bavarian dukes in the palace of Schleisheim. His masterpiece, "The Miracle of the Cross" (1530) is now in the Pinakothek, Munich. He ranks highest as an engraver, and in his later works approaches his brother in skill. The latest list of his engravings (Pauli, 1905) numbers 93. More than any other of the "Little Masters" he adopted the style and forms of the Italian Renaissance. Consult Koetschau, *Barthel Beham und der Meister von Messkirch* (Strassburg, 1893), Pauli, "Barthel Beham," in *Mitteilungen der Geschichte für vervelfaltigende Kunst* (Vienna, 1905), id., *Hans Sebald Beham* (Stassburg, 1901), *Studien zur Kunstgeschichte*, vols. cxvii, cxviii (ib., 1911).

BEHAR, bo-hār' (Skt. *vidhāra*, a Buddhist temple or convent.) A division in lower Bengal, British India. At the time of the readjustment of 1912 it was made a part of Behar and Orissa.

BEHAR AND ORISSA The name of a province in lower Bengal, British India (Map India, E 3). It was formed in 1912 and placed under an executive council and Lieutenant Governor in accordance with an announcement made by King George V at the Delhi Durbar, and comprises the Behar, Chota-Nagpur, Turhut, Patna, and Orissa divisions, and the districts of Purnea, Monghyr, Bhagalpur, and Sonthal Parganas in the Bhagalpur division. Roughly it occupies a rectangular tract between the Bay of Bengal and the Himalayas and is bounded on the north by Nepal, on the east by Bengal, on the south by the Bay of Bengal and Madras, and on the north by the Central Provinces and the United Provinces. In the north are the low, flat, alluvial plains of the Ganges, in the south and west are the tablelands of Nagpur and Orissa, and along the shore of the Bay of Bengal is the fertile delta of the Mahanadi River. Rainfall is plentiful, and the principal crop is rice, of which immense quantities are grown. Other products are sugar cane, paddy, maize, pulse, oil seeds, indigo, and the poppy plant. The total area of this new province is between 110,000 and 120,000 square miles, and the population in 1911 was nearly 40,000,000. The capital is Patna (q.v.).

BEHEMOTH (Heb. pl of *Behemah*, beast; as often in Hebrew, the plural indicates a "large beast," the lord of beasts as it were, and not a plurality of animals). An animal mentioned

in Job xl 15-24 There is no doubt that mythological notions are involved in the conception It is grouped (Job xl 25-31) with the Leviathan (q v) Both are described more fully in Ethiopic Enoch ix 7-9, Syriac Baruch, xxix 4, and Fourth Ezra vi 40-52 They clearly represent two primeval monsters The author of Job xl may have borrowed some features from the great beasts infesting the valley of the Nile Even a wholly mythical monster cannot well be described without resort to reality, as the pictorial representations of such beings by Egyptians and Babylonians show Hence Behemoth, 'the colossal beast' of primeval times, occasionally reminds us of a hippopotamus, just as Leviathan, the 'coiled' serpent of the abyss, the earth-encircling ocean, now and then recalls the crocodile Consult Gunkel, *Schöpfung und Chaos* (Göttingen, 1895) and Schmidt, *Messages of the Poets*, pp 200 ff (1911)

BEHISTUN, bā'his-tōon' (Ar, Pers bagh, garden + Pers stan, district, region, Bisutun of the old Persian inscriptions) A ruined town of the Persian province of Irak-Ajemi, 21 miles east of Kermanshah Diodorus Siculus (ii, 13) says that Queen Semiramis, on a journey from Babylon to Ecbatana, encamped here and had her likeness and the likenesses of a hundred of her guard cut into the rock of the mountain that rises at this place This tradition refers to a most remarkable inscription found at the limestone mountain at Behistun, which possesses great historical value The mountain rises to a height of 1700 feet, and the inscription is found at a height of 300 feet, in a position such that it must have been engraved with the aid of scaffolding Although observed by several travelers, it was not until 1835 that it was copied by Sir Henry Rawlinson, after infinite trouble and at great expense The inscription was made by Darius I (c 518 B C) and contains an account of his genealogy and his triumphs It is in cuneiform characters, and trilingual, being written in Babylonian, in Persian, and in Susian Accompanying the text there is an elaborate series of sculptures, representing Darius receiving nine pretenders to the throne, who stand before him with chains about their necks The inscription was cut into the rock with the utmost care and was preserved by a varnish harder than the rock itself After copying the inscription, Rawlinson spent many years in the task of decipherment He published the Persian text in 1846, in the publications of the Royal Asiatic Society, and this publication, with Rawlinson's translation of the inscription, was a most important contribution to the solution of the mystery of Persian cuneiform This accomplished, he and others, notably Westergaard and Norris, set themselves to work on the Babylonian text, and by 1852 the foundations were laid for the reading of the cuneiform inscriptions meanwhile found in Assyria (See ASSYRIA) In an inscription also found on the mountain wall at Behistun, but written only in the Susian language, Darius refers to the fact that he has ordered other inscriptions to be made on bricks and leather, of Jensen in *Zeitschrift der Deutschen Morgenländischen Gesellschaft*, p 237 (1901), King and Thompson, *The Sculptures and Inscription of Darius the Great on the Rock of Behistun*, p 157 (London, 1907) That official copies were taken is shown from a fragment of the Babylonian text published by Weissbach, *Babylonsche Miscellen*,

pp 24 ff (Leipzig, 1903). An official Aramaic version also existed, as we now know from the papyrus fragments discovered on the island of Elephantine and published by Sachau, *Aramäische Papyrus und Ostraka*, pp 185 ff (Leipzig, 1911) The Susian text was first published by Edwin Norris (London, 1853), and later by Oppert, *Le peuple et la langue des Mèdes* (Paris, 1879) For the best publication and translation of the Persian text consult Spiegel, *Die persischen Keilschriften* (2d ed, Leipzig, 1881), Weissbach and Bang, *Die altpersischen Keilschriften* (Leipzig, 1893), of the Babylonian text, Bezold, *Assyrischen Inschriften* (Leipzig, 1882), and of the Susian text, Weissbach, *Die Achämenideninschriften zweiter Art* (Leipzig, 1890)

BEHM, bām, ERNST (1830-84) A German geographer and statistician In 1858 he became assistant editor of the geographical periodical *Petermanns Mitteilungen*, and on the death of Petermann, in 1878, succeeded him as chief editor In 1866 he founded the *Geographisches Jahrbuch*, from which was detached in 1872 the *Bevölkerung der Erde* as a statistical supplement to the *Mitteilungen* From 1876 he took charge of the statistical department of the *Almanach de Gotha* His writings are marked by fullness, accuracy, and lucidity of arrangement

BEHN, bēn, AFRA, or AFRA (1640-89) An English novelist and playwright She was born at Wye, in Kent, the daughter of John Johnson, a barber When a child she sailed to Surinam, South America, with the Lieutenant Governor, whom she was accustomed to speak of as her father Here the young girl made the acquaintance of the celebrated slave Oroonoko, who afterward became the subject of one of her novels, and of a tragedy by Southerne Returning to England, she married a merchant of Dutch extraction named Behn, was presented at court, where her personal appearance and vivacious freedom of manners pleased King Charles II, who deputed her to watch events in Flanders She accordingly went to Antwerp, where she succeeded in discovering the intention of the Dutch to sail up the Thames and Medway, and communicated the secret to the English court, which, however, took no notice of the information—a slight that caused Mrs Behn to throw up state politics in disgust On her return to England she was associated with all the profligate wits, as well as the more staid scholars and poets of the time, and devoted herself to literature Her numerous plays, poems, tales, and letters are disfigured by general impurity of tone and indecency of language, and, in point of intellectual ability, none of her works deserve the high praise lavished on them by Dryden, Cotton, Southerne, and others Of them all, *Oroonoko* is worth perusal It is interesting by reason of its tendency toward realism Mrs Behn was buried in Westminster Abbey Consult her *Works* (London, 1871) and *Anglia* for January, 1902

BEHNESA See BAHNESA

BEHR, bār, WILHELM JOSEPH (1775-1851) A German publicist, born at Sulzheim He studied at Würzburg and Göttingen, and from 1799 to 1821 was professor of constitutional law at the University of Würzburg He subsequently was chosen mayor of Würzburg, but when elected deputy to the Diet, in 1831, the royal sanction of his election was refused On account of his freely expressed political opinions he was convicted of *lèse-majesté* and participation in

political machinations and only with the amnesty of 1848 regained his complete freedom. In the same year he was elected to the German National Assembly. He published *System der Staatskunst* (3 vols, 1810), *Verfassung und Verwaltung des Staats* (2 vols, 1811-12), *Darstellung der Bedürfnisse, Wünsche und Hoffnungen deutscher Nation* (1816), *Von den rechtlichen Grenzen der Einwirkung des Deutschen Bundes* (2d ed, 1820), *Allgemeine Polizeiwissenschaften* (1848).

BEHRAM, bē'ram, or **BEKHRAM**, bēk'-ram See ASSUS

BEHREND, BERNARD ARTHUR (1875-) An American consulting engineer, born in Pomerania, Germany. He was educated by private tutors and at the University and Polytechnic Institute of Berlin. After acting for some time as chief engineer of the Bullock Electric Mfg Co of Cincinnati, he became chief consulting engineer of the Allis Chalmers Co, and advisory engineer of the Westinghouse Co. His services as non-resident lecturer were employed at various times by McGill and Leland Stanford, Jr, universities and the University of Wisconsin. He invented and designed numerous electrical devices and machines and was awarded a gold medal at the St Louis Exposition in 1904. Besides monographs in American and foreign journals on the theory of alternating currents, motors, and generators, his writings include *The Induction Motor Its Theory and Design* (1900), *The Debt of Electrical Engineering to C E L Brown* (1901), *Engineering Education* (1907).

BEHRENS, bē'rens, ADOLPHUS JULIUS FREDERICK (1839-1900) An American Congregational clergyman. He was born at Nimeguen, Holland, emigrated to New Orleans with his parents in 1845, taught school and learned the trade of cabinetmaker, and studied at Denison University and the Rochester Theological Seminary, where he was graduated in 1865. He was pastor of Baptist churches at Yonkers, N Y, and Cleveland, Ohio, but joined the Congregationalists in 1876, and spent seven years as pastor of the Union Congregational Church of Providence, R I. In 1883 he became pastor of the Central Congregational Church in Brooklyn, N Y, where he remained until his death. A forcible thinker and a careful scholar, and of pleasing yet impressive personality, he stood in the foremost rank of American pulpit orators. Among his published works are to be found *Socialism and Christianity* (1886), *The Philosophy of Preaching* (1890), *The World for Christ* (1896), *The Old Testament under Fire* (1897).

BEHRENS, bē'rens, BERTA (1850-1912) A German novelist, who used the pen name W. Heiburg. She completed *Das Eulenhäus*, a posthumous novel by Marlitt in the *Gartenlaube*, in which periodical most of her novels appeared. Among them may be mentioned *Aus dem Leben meiner alten Freundin* (1879, 12th ed, 1908), *Lumpenmüllers Leschen* (1879), *Ihr einziger Bruder* (1882, 15th ed, 1909), *Waldblumen* (1882, 6th ed, 1894), *Trudenss Heirat* (1884), *Dazumal, eight stories* (1887), *Um fremde Schuld* (1895), *Antons Erben* (1898), *Seite Oldenroths Liebe* (1902), *Gesammelte Romane und Novellen* (10 vols, Leipzig, 1894-97), *Dr Danz und seine Frau* (1903), *Wie auch wir vergehen* (1907), *Ueber steinige Wege* (1908), *Der Storkere* (1909), *Famille Lorenz* (1910).

BEHRING, bā'ring or bē'ring See BERING

BEHRING, bā'ring, EMIL ADOLF (1854-) A German physician. He was born at Hantsdorf, Prussia, studied medicine in Berlin, in 1880 became an army surgeon, and in 1894 was appointed a professor at the University of Halle. In 1895 he was called to become director of the Hygienic Institute at Marburg. He was the discoverer of diphtheria antitoxin and attained a great reputation by that means and by his contributions to the study of immunity. At the International Tuberculosis Congress in 1905 he announced that he had discovered "a substance proceeding from the virus of tuberculosis." This substance, which he designated "T C," plays the important part in the immunizing action of Professor Behring's "bovivaccine," which prevents bovine tuberculosis. Among his publications are *Die Blutserumtherapie* (1892), *Bekämpfung der Infektionskrankheiten* (1894), *Beiträge zur experimentellen Therapie* (1900). He received the Nobel prize in medicine in 1901 for his discovery of a diphtheria serum, and in 1913 he announced the discovery of a new diphtheria serum.

BEHRISCH, bā'rish, ERNST WOLFGANG (1738-1809) A teacher and author. He was born near Diesden, and while acting as a private tutor at Leipzig became a friend and boon companion of young Goethe, upon whose early literary ambition he had a restraining influence. Upon his departure from Leipzig in 1767 he was made the subject of three odes by Goethe, who also subsequently referred to him in most friendly terms in *Dichtung und Wahrheit* and in his talks with Eckermann. A number of Goethe's letters to him are to be found in vol vii of the *Goethe-Jahrbuch* (Frankfort, 1886). For his biography, consult Iffossau (Dessau, 1883).

BEIJEREN, bē'er-en, ABRAHAM VAN See BEYEREN, ABRAHAM VAN

BEIJERLAND, bē'er-land An island of the province of South Holland, Netherlands, at the mouth of the Maas or Meuse, 5 miles south of Rotterdam (Map Netherlands, C 3). It is 15.5 miles long and 8.7 miles wide. It is very fertile and produces large quantities of flax.

BEILAN, bā-lān' A small town of Syria, situated a few miles from Alexandretta (qv), near the Beilan Pass, which separates the mountain ranges of Amanus and Rheus and is supposed to be the *Pylæ Syriacæ* (Syrian Gates) of antiquity, probably used by Alexander and the Crusaders (Map Turkey in Asia, G 4). The town is 1330 feet above sea level, has a good climate and an excellent water supply, and is used as a summer resort by the European colony of Alexandretta. Its population is about 5000.

BEILSTEIN, bēl'stēn, FRIEDRICH KONRAD (1838-1905) A Russian chemist, born in St Petersburg. He studied chemistry in Heidelberg, Göttingen, Munich, and Paris, and in 1860 became Wohler's assistant at Göttingen. In 1866 he was made professor of chemistry at the Institute of Technology in St Petersburg. He carried out a number of original investigations in organic and analytical chemistry, and wrote *Anleitung zur qualitativen chemischen Analyse* (Leipzig, 1867, several German editions of this work and translations into other European languages have been published), and *Die chemische Grossindustrie auf der Weltausstellung in Wien 1873* (Leipzig, 1873). Beilstein's *Handbuch der organischen Chemie* (1st ed, Hamburg, 1880-83) is indispensable to the chemical investigator.

and is well known to every student of organic chemistry. A third edition of this voluminous work was begun in 1893, and between 1901 and 1906 a set of five supplementary volumes were published by the German Chemical Society.

BEIRA, bí'ra (Port shore, strand, bank, from Gael, *bior*, water). A province of Portugal, bounded by Spain and the Atlantic on the east and west, respectively, the river Douro on the north, and the provinces of Alentejo and Estremadura on the south (Map Portugal, B 2). Area, 9208 square miles. The coast land is flat, but the elevation gradually rises from the northern frontier, the interior being traversed by a number of mountain chains, not exceeding 7000 feet in their highest summits. The province is drained by a number of small rivers, mostly tributaries of the Douro, and contains many mineral springs. The soil is mostly stony with the exception of the coast land. Agriculture, stock raising, and fishing are the chief industries. The country produces grain, chestnuts, wine, and oil, iron, coal, and salt are mined, and marble is quarried. Manufacturing has been little developed, thread making being the principal industry. Transportation facilities are inadequate, and commerce is insignificant. For administrative purposes Beira is divided into five districts: Aveiro, Viseu, Coimbra, Guarda, and Castello Branco. The city of Coimbra (qv) is the capital. Pop., 1890, 1,450,441, 1900, 1,515,834, 1911, 1,626,484.

BEIRA. A seaport of Portuguese East Africa, about 35 miles northeast of Sofala and 500 miles north of Delagoa Bay (Map Africa, H 6). The harbor is excellent and was visited in 1911 by over 500 vessels of 935,000 tons. Imports in that year were valued at nearly \$3,000,000 and exports at about \$2,625,000. The leading articles of trade are sugar, rubber, wax, tropical fruits, and mining products, which are exported, and iron and cotton manufactured goods, wine, and spirits, which are imported. The importance of Beira is due mainly to the fact that it is the terminus of a railway from the Pungwe River to Umtali on the frontier, thence continuing to Salisbury in southern Rhodesia, a total distance of nearly 400 miles. The present port dates from 1891, although the site is of considerable antiquity. There are no noteworthy features in the town besides the government buildings and the public gardens. Pop., 1911, 3420, of which about 750 are Europeans.

BEIRAM, bí'ram. A Turkish word designating the two great Mohammedan festivals. (1) the lesser Beiram, held for from one to three days at the end of the fasting month, Ramadan, (2) the Greater Beiram, held for four days, 70 days later.

BEIRUT, bá-rōól', or **BEYROUT** (anciently, *Berytus*, Gk βήρυθος, *Bérytos*, the city of wells, from Heb. Ar *beer*, *bir*, well). Capital of the vilayet of the same name in Syria, Asiatic Turkey, and the chief seaport of Syria (Map Turkey in Asia, F 6). It is situated on the coast, on the slopes of the Ras Beirut and St Dimitri, about 90 miles by rail northwest of Damascus. It consists of the old town, ill built and unattractive, and a number of suburbs, with fine streets and houses and many features of a modern city. With its moderate climate and its excellent water supply Beirut is regarded as one of the most healthful cities in Asiatic Turkey. European influence is shown in the numerous business houses, schools and

churches. There are 23 mosques and 38 Christian churches of different denominations, the chief mosque being a former church built by the Crusaders, also numerous educational institutions, maintained chiefly by missions, among which the French are the most influential, their language being almost exclusively that of the Christian population. The city contains also the Syrian Protestant College, an undenominational American institution independent of any missionary society, with faculties of arts and medicine, pharmacy and commerce, and about 1000 students.

The industrial and commercial growth of Beirut has been more rapid than that of any other city of Asiatic Turkey. Silk and cotton fabrics, as well as gold and silver articles, are the chief manufactures. The surrounding region yields large quantities of silk, cotton, and tobacco for export, while the chief imports are food stuffs and articles of apparel. The total value of the imports, in 1910, aggregated \$10,750,000. The harbor is deficient both in size and in depth, and heavier vessels are compelled to anchor outside. Regular steam communication is maintained with Great Britain, Austria-Hungary, and a few other European countries, while the coastwise transportation is effected chiefly by Turkish sailing vessels. Beirut is connected by rail with Damascus, Aleppo, and Tripoli. It is the seat of a pasha, a Greek bishop, a Maronite archbishop, and a papal delegate. The United States has a consular representative. The population is estimated at 120,000, of whom 36,000 are Mohammedans, 77,000 Christians, 2500 Jews, 400 Druses. There are about 4300 Europeans.

Beirut, mentioned in the Tell el-Amarna tablets (qv) as early as the fifteenth century B.C., is the Berytus of the classical writers. Under the Roman emperors it was the seat of a celebrated school of law. In 635 it was conquered by the Arabs, and was besieged and captured by Baldwin I, King of Jerusalem, in 1110. In 1187 it was retaken by Saladin. It soon passed under the power of the Druses (qv), who maintained their control of it until the nineteenth century. In 1840 it was bombarded and taken by the English fleet.

BEISA, bí'sa. A large antelope of Abyssinia (*Oryx beisa*), allied to the gemsbok, but lacking the tuft of hair on the throat. See GEMSBOK, ORYX, and Plate of ANTELOPES.

BEISSEL, bí'sel, JOHANN CONRAD (1690-1768). A German mystic, prominent as the founder of the sect of "Seventh-Day Dunkers" and of the Ephrata Community. He was born at Eberbach in the Palatinate and learned the trade of a baker. He also studied music and became a competent violinist. After he had taken a course in theology at Halle he was banished (in 1720) for holding Pietistic and Inspirational views, emigrated to America, and with a few friends settled in Germantown, Pa. In the following year he became a hermit at Mill Creek, Lancaster Co., Pa., where he remained until 1724, when he returned to Germantown and was there baptized as a Dunker. He soon began to preach doctrines distasteful to the Dunkers, especially with regard to celibacy and the observance of Saturday as Sabbath, and in May, 1725, founded the sect of Seventh-Day Dunkers. He again became a hermit in 1732, this time on the river Cocalico, but his adherents followed him to his retreat, and in 1735 he founded the "Order of the Solitary," and established

the celebrated settlement at Ephrata, Pa. (qv), at whose head he remained until his death. Here he put into practice many of his socialistic, communistic, and religious theories.

He published various collections of hymns, including *The Voice of the Lonely and Forsaken Turtle Dove—that is, of the Christian Church, by a Peaceable Pilgrim Traveling to Tranquil Eternity* (1747), and *Paradisacal Wonder-Play* (1766), which contains the sect's quaint "Brother Song" of 215 stanzas, and its "Sister Song" of 250 stanzas. He was also the author of the first volume of German poetry published in America, *Gottliche Liebes- und Lobestöne* (Philadelphia, 1730). By his fellow religionists he was known as "Friedsam," and the inscription on his tombstone at Ephrata reads: "Here rests an outgrowth of the love of God, 'Friedsam,' a Solitary Brother, afterwards a leader, ruler, teacher of the Solitary and the Congregation of Christ in and around Ephrata." For a partial account of his life, consult the curious *Chronicon Ephratense* (Ephrata, 1786).

BEIT, bāt. An Asiatic word signifying 'house,' 'abode,' or 'place,' the equivalent of which in Hebrew is *beth*. Thus, in Arabic we have *best-al-harām*, 'the house of the sanctuary,' or 'the sacred house,' the name of the central sanctuary at Mecca, and in Hebrew *Beth-el*, 'house of God,' *Beth-abara*, 'place of fords,' etc.

BEITALLAH, bit'al'la (Ar *best*, house + *Allah*, God). The house of Allah, or the Kaaba, at Mecca, also called "the old house" and "the holy house." See **MECCA**, **KAABA**.

BEIT-EL-FAKIH, bit'el-fa'kē (Ar *best*, house + *el*, the + *faqih*, teacher, schoolmaster). A fortified town of Asiatic Turkey, in the vilayet of Hodeida, formerly Yemen, situated about 19 miles from the Red Sea (Map Turkey in Asia, Q 13). It was formerly the chief centre of the coffee trade in Asia and still exports about 12,000,000 pounds annually. Pop., about 8000.

BEITZKE, bits'ke, HEINRICH (1798-1867). A German politician and historian, born at Muttrin (Pomerania). He served as a volunteer in the campaign of 1815, studied at the military schools of Coblenz and Mainz, entered the army as an officer in 1817, and retired in 1845 with the rank of major. In 1858 he was elected to the Prussian Chamber of Deputies. He published *Geschichte der deutschen Freiheitskriege in den Jahren 1813 und 1814* (3 vols., 1855)—an accurate and unprejudiced narrative, widely read, *Geschichte des russischen Kriegs im Jahre 1812* (1856), *Geschichte des Jahres 1815* (2 vols., 1866), *Das preussische Heer vor und nach der Reorganisation* (1867).

BEJA, bā'zhā (the *Paia Julia* of the ancients). A town and seat of a bishopric in the province of Alentejo, Portugal, 36 miles south of Évora (Map Portugal, B 3). It contains an interesting mediæval castle, a cathedral, the notable Church of Our Lady of the Conception, and a Roman aqueduct. Two fairs are held here annually. The city has a considerable trade in the cattle and agricultural products of the fertile region adjacent, and there are also tanneries, potteries, and oil refineries. Pop., 1890, 8394, 1900, 8895.

BEJAN, or **BAJAN** (ML *bejanus*, Fr *bejaune*, *bea jaune*, yellow beak, i.e. unledged bird, sometimes *beanus*, cf Ger *Gelbschnabel*). A name applied to freshmen in mediæval universities and still surviving in Scotland. *Bejaunia*, or payment for "first footing" by stu-

dents on entering the university, was general in the Middle Ages, and was part of a kind of imitative ceremony which included much horse-play and terminated with a banquet. Often there was elected a mock "abbot" of the Bejani. These practices led to so much abuse that they were frequently a subject of university statutes, which, however, tended rather to regulation than to suppression of this form of hazing. For an account of these ceremonies consult Rashdall, *Universities of Europe in the Middle Ages* (Oxford, 1895).

BEJAPORE, be'ja-pōi'. See **BEJAPUR**.

BEJAR, bi'jan. An old town of Spain, in the province of Salamanca, about 45 miles south of the capital of the province (Map Spain, C 2). It is situated on the river Cuervo de Hombro, on a plateau 3185 feet above sea level. Its industrial growth has been very rapid, and the principal manufactures are bread, yarn, thread, cotton and woolen fabrics, ribbons, soap, and bisque. There is considerable trade in wool. The surrounding country is fertile and produces grain, wine, vegetables, and chestnuts. Béjar gives its title to a ducal family, whose ancestral palace within its walls and the churches of San Juan, Santa Maria, and El Salvador are the most pretentious buildings. There are warm sulphur springs in the vicinity. Pop., 1900, 9488, 1910, 9209.

BEJART, bi'zhar'. A family of French comedians of the end of the seventeenth century. They formed part of Molière's troupe. One of them, Armande, was married to Molière in 1662 and embittered his last years by her coquetries. See **MOLIÈRE**.

BEJAS, bi'jaz. Hamitic peoples between the Nile, the Red Sea, Abyssinia, and Upper Egypt. They are tall (1.708 m) and muscular, with black, almost woolly hair. Keane subdivides them into Ababdeh, Bishari, and Taga. See **AFRICA**.

BEKAA, bek'a-a, El (Heb., Ar large valley). The Cœle-Syria of the ancients, the "plain of Lebanon" of the Old Testament. A beautiful and fertile elevated valley of Syria, situated between the nearly parallel ranges of the Lebanon and the Anti-Lebanon Mountains and watered by the Leontes (Litany). It occupies an area about 90 miles long with a greatest width of 20 miles, and is much used for a grazing ground by the Arabs, the banks of the watercourses being very fertile. The name of Cœle-Syria was once applied to the entire southern portion of Syria, embracing Phœnicia and Palestine.

BEKE, bek, CHARLES TILSTONE (1800-74). An English traveler, born at Stepney, Middlesex. He first studied law at Lincoln's Inn and devoted much attention to ancient history, philology, and ethnography. The results of these studies first appeared in his works, *Origines Biblicæ, Researches in Primæval History* (1834). Supported only by private individuals, he joined in Abyssinia the party led by Major Harris and distinguished himself by the exploration of Garam and the countries lying to the south, which were previously almost unknown in Europe. The results of these researches appeared partly in several journals and in *Abyssinia: A Statement of Facts*, etc. (2d ed., London, 1846). After returning to Europe, he published the *Essay on the Nile and its Tributaries* (London, 1847), *On the Sources of the Nile* (1849), *Mémoire justificatif en réhabilitation des pères Paes et Lobo* (1848), and *On the Geographical*

Distribution of the Languages of Abyssinia (1840). In 1861 he made a journey to Harrar and undertook in 1865 a fruitless mission to Abyssinia to obtain the release of British captives. In 1874 Dr Beke started for the region at the head of the Red Sea, where he claimed (though his views are disputed) to have discovered Mount Sinai east of the Gulf of Akabah, and not west, as generally supposed. Other works of his are *British Captives in Abyssinia* (1865), *King Theodore* (1869), *Idol in Horeb* (1871), *Jesus, the Messiah* (1872), *Discoveries of Sinai in Arabia* (published posthumously, 1878).

BÉKÉS, bá'kásh See CSABA

BEKKRAM See ASSUS

BEKKER, bék'kér, ELISABETH (1738-1804) A Dutch author, born at Vlissingen. During the Revolutionary period she lived in France, where she narrowly escaped death by the guillotine. Her chief work is *Histoire van Sara Burgerhart* (2 vols, 1782, 7th ed, 1886). She wrote some poems and a number of stories, marked by elegance of style and by skillful character delineation. These latter include *Histoire van Willem Levend* (8 vols, 1784-85), *Abraham Blankaart* (3 vols, 1787-89), *Connelia Waldschut* (6 vols, 1793-96).

BEKKER, IMMANUEL (1785-1871) A German classical scholar, born in Berlin. He studied at Halle under F. A. Wolf (qv), taking his degree in 1807, in 1811 he was appointed professor of philology at Berlin, where he continued until his death. Bekker's great service to classical philology consisted in his recensions of texts on the basis of new collations of manuscripts, independent of printed editions. His industry was enormous, and he carried on his researches in Germany, France, Italy, and England, examining in all over 400 manuscripts. Among the authors included in his recensions were Plato (for whose text he collated over 30 manuscripts), Aristotle, the Attic orators, Aristophanes, Thucydides, Theognis, Sextus Empiricus, Livy, Tacitus, and others. He was also engaged on the *Corpus Inscriptionum Graecarum*, edited 25 volumes of the *Corpus Scriptorum Byzantinorum*, and published *Anecdota Graeca* (3 vols, Berlin, 1814-21), as well as *Studies in Old French*. Consult Sandys, *A History of Classical Scholarship*, vol. III (Cambridge, 1908).

BEKTASHI See BAKTASHI

BEL One of the chief gods of the Babylonian pantheon. The name, meaning 'lord,' is the title employed by the Akkadians, or Semitic Babylonians, for the great Sumerian deity Enlil or Ellil, whose seat was at Nippur. It is not known what the Sumerian name signified, except that 'En' means 'lord.' His temple in Nippur was called E-kur, or 'mountain house,' and the Akkadians referred to him as *shadu rabu*, or 'great mountain.' Bel was the 'lord of the lands' in distinction from Anu and Ea, whose realms were the sky and the sea. The god of Babylon, Marduk, whose home as the son of Ea originally seems to have been Eridu, was identified with Bel, as Ammon was with Re in Thebes. Both the Hebrews and the Greeks, therefore, speak of Marduk as Bel. Bel was also worshiped by the Assyrians. The wife of Enlil-Bel was Nin-harsag-Belit. The Sumerian name means 'mistress of the mountain,' the Semitic only 'mistress.' Etymologically Bel is closely related to Baal, but in transliterating Syrian names compounded

with Baal the Assyrian scribes wrote Ba'lu or Baalu. Consult Zimmern, *Die Keilschriften und das Alte Testament*, pp. 354 ff (1902), Jeremias, *Das Alte Testament im Lichte des Alten Orients*, p. 95 (1906), Jastrow, *Die Religion Babyloniens und Assyriens* (1902-12, passim).

BÉL, báI, KARL ANDREAS (1717-82) A Hungarian historian, son of Matthias BéI. He was born at Pressburg, and studied at Altdorf, Jena, and Strassburg. In 1843 he became instructor and in 1757 professor of poetry at Leipzig, where he edited the *Acta Eruditiorum* and the *Leipziger Gelehrte Zeitung*. He was subject to melancholia and committed suicide during one of his periods of depression. He wrote *De Vera Origine et Epocha Hunnorum, Avarum, Hungarorum in Pannonia* (1757), *De Maria Hungarica non Rege sed Regina* (1744).

BÉL, MATTHIAS (1684-1749) A Hungarian historian and savant, born at Ocsova. He studied at Halle, was pastor at Neusohl and rector of the Evangelical Lyceum at Pressburg from 1719. He wrote *Hungaria Antiqua et Nova Prodomus* (1723), *Notitia Hungarica Nova Historico-Geographica* (4 vols, 1735-42), *Apparatus ad historiam Hungaricam* (1735-46). His works have proved rich sources of material for subsequent historical workers.

BÉLA, bá'la The name of four Hungarian kings of the dynasty of Arpad.—**BÉLA I** (1061-63) suppressed the last attempts to restore heathenism. By fixing a standard of weights, measures, and coinage he gave a permanent stimulus to the commerce of Hungary.—**BÉLA II** (1131-41), surnamed "the Blind," was greatly influenced by his bloodthirsty wife. At the time of his marriage there was a general slaughter of the advisers in the preceding reign. He managed, however, to live on good terms with the Greek and the German emperors. His death was due to intemperance.—**BÉLA III** (1173-96), grandson of Béla II, was educated at Constantinople and showed a predilection for Byzantine customs and culture, which he introduced into Hungary. He greatly increased the number of religious houses. His second wife was the sister of Philip Augustus of France.—**BÉLA IV** (1235-70), born 1206, was the son of Andrew II, who granted the Golden Bull (qv). His great object was the restriction of the nobles and the restoration of the royal power. He had constant trouble with Frederick II, Duke of Austria. But the greatest danger was from the Tatars, who in 1241 defeated him on the Sajó. Frederick promised aid but gave none, and Béla had to flee. He remained in Dalmatia until the Mongols withdrew, and then returned, making it his especial care to rebuild the ruined villages and to encourage colonization in the devastated parts. He was successful in recruiting his strength, vanquished Frederick at Vienna, and repelled a second Mongolian invasion. He was unsuccessful in war against Ottocar II of Bohemia, who defeated him in 1260. Consult Leger, *History of Austro-Hungary* (Eng. trans, New York, 1889).

BEL AND THE DRAGON The title of a section found in the Greek version of the Book of Daniel (see DEUTERO-CANONICAL BOOKS), but not in the Hebrew or Aramaic text. It contains two stories, which in general are these, though there are variations. (1) That Daniel convinced the King of Babylon of the fraud

practiced upon him by the priests of Bel, who pretended that the god ate at night the feasts regularly set in his temple, by having the floor of the temple covered with fine ashes, unknown to the priests. These came at night as usual, through a secret door, and removed the food, but by morning light their footprints were discovered on the floor. The King in his rage drove away the priests and destroyed the idol of Bel. (2) Daniel killed a dragon that was worshipped by the Babylonians by forcing it to swallow a mixture of pitch, fat, and hair, with the result that it burst. The people in their rage compelled the King to cast Daniel into the lions' den. Thither Habakkuk, the prophet, was carried from his home in Judea with food for Daniel. The King, on finding Daniel still alive on the sixth day, ordered his release and the punishment of his accusers. The original language of these additions to the Book of Daniel is supposed by many scholars to have been Aramaic. Consult Davies, in Charles, *Apocrypha and Pseudepigrapha of the Old Testament* (Oxford, 1913).

BELARIUS In Shakespeare's *Cymbeline*, an exiled nobleman, who in revenge steals the sons of Cymbeline. Having rescued Cymbeline when he was taken prisoner, Belarius becomes reconciled, and the two young princes are restored to their father.

BELASCO, DAVID (1859-) An American playwright and manager. He was born in San Francisco, where he spent most of his boyhood, and began in 1874 as an actor at the Metropolitan Theatre. Showing talent, however, in the adaptation of plays for the local stage, he soon found a wider field. One of his early successes was *Hearts of Oak* (1880), in which he toured with James A. Hearn. He was for a time stage manager of the Madison Square Theatre, New York City, and afterward was connected with the Lyceum Theatre. While there he wrote, in collaboration with Henry C. de Mille, *The Wife* (1887) and *The Charity Ball* (1889), and also, for E. H. Sothern, *Lord Chumley* (1888). In January, 1893, *The Girl I Left Behind Me*, which he wrote with Franklin Fyles, was produced at the Empire Theatre and had great success. In 1895 came *The Heart of Maryland*, a melodrama of the Civil War. Among his other plays are *Zaza* (1898), *May Blossom* (1884), *Men and Women* (1890), *La Belle Russe* (1882), *Valérie* (1886), *Du Barry* (1901), the last suggested at least by Jean Richpin's play of the same name, *Naughty Anthony* (1899), *The Darling of the Gods* (1902), a dramatization of John Luther Long's story, *Madame Butterfly* (1900), *The Girl of the Golden West* (1905), *Adrea* (1904), *The Rose of the Rancho*, in collaboration with R. Walton Trely (1906), *A Grand Army Man*, in collaboration with Pauline Phelps and Marion Short (1907), *The Return of Peter Grimm* (1911). Of late, through his extraordinary skill in training his actors and his minute attention to the mechanical details of lighting and stage setting, he has become better known as a successful producing manager than as a playwright.

BELAY' (probably from Dutch *beleggen*, nautical term of same meaning). A term which signifies to stop. A rope is *belayed* by winding it around a cleat, cavi, bitt, or belaying pin. To prevent the turns from unwinding they are usually put on in figure-of-eight fashion, one

loop around one end of the cleat or pin, the other around the other end.

BELAYING CAVILS are large wooden belaying pins, of rectangular section, but with rounded corners, built permanently into pin rails or life rails. They are intended for ropes too large to be conveniently belayed on pins of the ordinary type, or as friction pins around which large ropes are taken when lowering heavy weights.

BELAYING CLEAT A piece of wood or metal bolted to some part of the structure of a ship for the purpose of belaying ropes. The cleat has two horns around which rope is belayed as about a belaying pin, the section of an ordinary cleat is not unlike a letter H, one side of which is bolted to the ship's structure, leaving the other free for belaying purposes.

BELAYING PIN A short bar of iron, brass, or wood used for the belaying of ropes. The pin varies in length from 10 to 18 inches, and in diameter from three-quarters of an inch to an inch and a half. The pins are put through holes in wooden rails, called pin rails, or life rails, according as they are out at the side of the ship, or inboard, and partly surrounding a mast, and they are prevented from falling out of the rail by a shoulder a little above the middle of their length.

BELBEIS, bel-bas' An Egyptian town situated about 35 miles north-northeast of Cairo (Map Egypt, E 2). It is on the old caravan route from Cairo to Syria and on the railway line connecting Suez with Cairo. Pop., 1897, 11,267. In the vicinity of Belbeis are the ruins of Bubastis (qv).

BELCH, SIR TOBY A rollicking character in Shakespeare's comedy, *Twelfth Night*, who, with Sir Andrew Aguecheek, the clown, and Maria, lead Malvolio, the steward, to believe that the Lady Olivia is in love with him.

BELCHER, SIR EDWARD (1790-1877). An English admiral. He entered the navy in 1812 and in 1816 took part in the bombardment of Algiers. In 1825 he accompanied Captain Beechey on his expedition to Bering Strait. In 1836 he was appointed to the command of the *Sulphur* and for three years was employed in surveying the west coast of America. Returning by the western route, he rendered important services in the Canton River to Lord Gough, whose successes over the Chinese were greatly due to Belcher's soundings and reconnaissances. On his return he published a narrative of the voyage and in 1843 was made a post captain and knighted. In 1852 he was appointed to the command of an expedition sent out by the government to search for Sir John Franklin. He became an admiral in 1872. He published: *Narrative of a Voyage round the World in the "Sulphur" in 1836-42* (1843), *Narrative of the Voyage of the "Samarang" in 1813-46* (1848), *The Last of the Arctic Voyages* (2 vols., 1855).

BELCHER, JONATHAN (1681-1757). A Colonial Governor of Massachusetts and New Hampshire, and afterward of New Jersey. He was born in Cambridge, Mass., graduated at Harvard in 1699, and afterward spent six years in Europe. In 1730 he was appointed Governor of Massachusetts and New Hampshire, but he soon became embroiled in disputes with the Colonial Legislatures concerning the payments of the Governor's salary, questions of Colonial currency, and the protracted boundary dispute between Massachusetts and New Hampshire, and in 1741 was removed, in deference to the popu-

lar outcry against him. He has passed into history as perhaps the most unpopular of all the royal governors of Massachusetts. Some time after his removal he again visited England, where he succeeded in restoring himself to favor, and in 1747 he was appointed to succeed Morris as Governor of New Jersey. His administration of affairs in this province was for the most part wise and satisfactory to the people, and he remained in office until his death. As a Governor, especially in Massachusetts and New Hampshire, he was arbitrary and opinionative, reckless in invective against his opponents, not above the arts of cajolery and flattery, morbidly fond of display, and ostentatiously pious. On the other hand, he was a good administrator and rigidly enforced the laws. In 1756 he gave his library of 400 volumes to the College of New Jersey (now Princeton). Many of Belcher's letters, written between 1730 and 1741, were published in the *New England Historical and Genealogical Register* for 1865, and *The Belcher Papers*, with a biographical preface, were published by the Massachusetts Historical Society in 1893. Consult *Collections of the Massachusetts Historical Society*, vol. vi (Boston, 1893).

BELCHITE, bel-ché'tá. A town in the province of Saragossa, Spain, on the Aguas, a tributary of the Ebro, 25 miles southeast of Saragossa (Map Spain, E 2). It is celebrated as the scene of the battle of June 18, 1809, in which the French under Suchet completely routed the Spaniards under General Blake, capturing all their guns, with a loss of only 40 men to themselves. Pop., 1900, 3333.

BELCİKOWSKI, bel'tsë-kòv'ské, ADAM (1830-1900). A Polish writer, born at Cracow. He graduated in 1865 at the university there, and having taken his Ph.D., was appointed in 1868 instructor in Polish literature at the University of Cracow. He has written much, chiefly drama and literary criticism, his publications including *Adam Tarło* (1869), *Hungary* (1870), *Francesca da Rimini* (1873), *King Bolesław the Bold* (1882), and several essays in *Ze Studyów nad Literaturą Polską*, edited by Chmielowski (1886).

BELCK, WALDEMAR (1862-). A German traveler and archaeologist, born in Danzig. He studied chemistry, in 1884 accompanied the expedition which founded the German West African possessions, and after 1888 became connected as an electro-chemist with various commercial establishments. In 1891, and again with Friedrich Lehmann, in 1898-99, he traveled throughout Armenia, studying the remains of the primitive Turanian civilization, collecting a large number of new inscriptions, and making geographical observations.

BEL'DING. A city in Ionia Co., Mich., 25 miles (direct) northeast of Grand Rapids, on the Pere Marquette Railroad (Map Michigan, D 5). It manufactures silk, refrigerators, shoes, baskets, etc. The water works are owned and operated by the city. Pop., 1900, 3282, 1910, 4119.

BELED-EL-JERID, bël'éd-él-jê-réd'. A general term for a region of North Africa, between Algeria and the Great Desert, east of Morocco. It contains a number of oases, noted for their extensive production of dates.

BELEM, bâ-lên'. A city of Brazil. See PARÁ.

BELEM. A suburb of Lisbon (q.v.).

BELEMNITES, bël'em-nits (Gk. *βέλμων*, *belemmon*, dart, javelin). A genus of dibranchiate

cephalopods of the extinct order Belemnoida, allied to the modern squid. That portion of the shell usually found is the "rostrum," or "guard," a solid, cigar-shaped organ, more or less pointed at one end, and pierced at the other extremity by a conical cavity called the "alveolus." In perfect specimens there fits into this alveolus a conical chambered shell, the "phragmocone," which seems to be homologous with the similarly chambered shell of the Nautiloida and Ammonoidea. This phragmocone, which is provided with a siphuncle, has an initial chamber which closely resembles that of the primitive Ammonoidea, notably the genera *Baculites* and *Mimocoel*, and even more closely the modern dibranchiate genus *Spirula*. Above the phragmocone, and developed as an anterior extension of its dorsal wall, is the "proostracum," a more or less calcified plate that becomes the "pen" in the modern squid and cuttlefish, and which probably served to protect the vital organs and to give rigidity to the forward portion of the body. The entire shell was internal.

Some traces of the soft parts of the animal have been found, so that it has been possible to restore the outline of the body and the form of the fins. The general structure seems to have been quite like that of the modern squid, with its long posteriorly pointed body, provided with fin-like marginal expansions of the mantle. There were 10 arms, and these were furnished with strong horny hooks that assisted the creature to seize its prey. Mandibles, and, most interesting of all, the hardened contents of the ink bag have also been, in a few rare cases, preserved. The belemnites are, together with the Ammonoidea, the most characteristic of Mesozoic fossils, and they are found commonly in rocks of Lower Lias (Jurassic) to Upper Cretaceous age, in Europe, North America, and Asia. A single slab of Liassic rock from Whitby, England, now in the geological collection of the museum in Paris, has about 900 specimens on a surface 20 inches square. Some 350 species are known, and they range in form and size from elongated delicate kinds to short, stout varieties.

Belemnites is one of the earliest-known fossils. It has received many names that have expressed various ideas regarding its form, nature, and origin. The shell is supposed to have been known to Pliny, but the name "belemnites" was first applied to it by George Agricola in 1546. Previous to that time it had been called "*ingurium*," and was supposed to be the urine of a lynx petrified into amber. Popular names were "devil's-finger" and "thunder-stone," and they were used in early times as remedies for nightmare and other maladies. Later naturalists classed them as forms of amber, stalactites, sea-urchin spines, crocodile and fish teeth, and as chambers in which dwelt small marine animals. In 1724 Ehrhardt first recognized their affinity to Nautilus and Spirula. For illustration, see CEPHALOPODA.

BELEN. A town in Valencia Co., N. Mex., on the Rio Grande and at the junction of the El Paso-Albuquerque branch of the Santa Fe system and the New Mexico Eastern Railroad, 30 miles by rail south of Albuquerque (Map New Mexico, C 4). It has a State orphan's home. The Felipe Chaves Mausoleum is one of the most artistic architectural monuments in New Mexico. Belen is the centre of an agricultural community, especially noted for its vine-

yards, and has a large flour mill and railroad shops Pop., 1913 (est.), 2500

BELERIUM An ancient name for Land's End, the southwestern extremity of Cornwall, England, sometimes written **BOLERIUM** The name is of doubtful origin, though sometimes derived from Bellerus, a legendary Cornish giant

BELFAST, bĕl-fast' or bĕl-fast The capital of the province of Ulster, Ireland, a city and a county borough of four parliamentary divisions, within the geographical limits of Antrim and Down counties (Map Ireland, F 2) Belfast is situated on alluvial deposit and reclaimed marsh land at the entrance of the river Lagan into Belfast Lough, 12 miles from the Irish Sea and 113 miles by rail north of Dublin Architecturally the city has hardly kept up with its commercial development, but many squalid districts have been built over with handsome structures and new streets, of which one, the Royal Avenue, is the finest in Belfast Some of the principal streets are traversed by tramways The Lagan, on the north side of which, in county Antrim, the city is mainly situated, is crossed by four bridges, of which the most notable is the Queen's Bridge, widened in 1886 The public buildings include the city hall, which, opened in 1906, was built at a cost of some £300,000 in Donegall Square on the site of the old Linen Hall, the custom house and inland revenue office on Donegall Quay, the post office and the public library (40,000 volumes), art gallery, and museum of antiquities in the Royal Avenue, and the commercial buildings in Waring Street There are several fine banks, especially the Ulster Bank. There are five public parks, and the fine botanical gardens of the Natural History Society occupy 17 acres Of the churches the most notable is the Protestant cathedral in Donegall Street, which occupies the site of the old St. Anne's parish church and whose foundation stone was laid in 1899 The plan is a Latin cross, with a west front of 105 feet and a central tower of 175 feet The educational institutions of Belfast include Campbell College (1892), in the Belmont suburb, Queen's University, succeeding under Act of 1908 the old Queen's College (1849), the Municipal Technical Institute, and the Royal Academical Institution The chief newspaper is the Belfast *News-Letter*, established 1737

With a safe and commodious harbor, Belfast is one of the first-class ports of the United Kingdom There are several great docks and basins and a graving dock, notable are the Alexandra Dock (852 feet long and 31 feet deep) and the York Dock In 1911 the net tonnage of vessels arriving at the port was 3,105,624, and departing 3,248,643 The imports include grain and other raw produce, cotton, flax, and linen yarn, timber, coal, iron and steel, petroleum, sugar, etc As compared with the actual exports, the direct exports to foreign countries are unimportant, as most of the exports go through Liverpool or Glasgow In 1911 imports were valued at \$8,141,488, and direct exports £427,761 for domestic goods and \$856,792 for foreign and colonial The chief exports are linen, whisky, iron ore, aerated waters, and cattle The inland trade is carried on by the Lagan, the Ulster Canal, and several railways The staple manufacture is linen, dating from 1637, the industry rapidly increased after 1830, when machinery was introduced Im-

portant also are flax spinning, weaving, distilling, and the manufacture of rope, tobacco, and aerated waters The shipbuilding industry, producing some of the largest vessels in the world, shows an extraordinary development

Belfast became a city in 1888 and a county borough in 1899 In 1896 the boundaries were extended (to a total area of 16,594 acres, or 14,937 acres exclusive of water), the number of wards was increased from 5 to 15, and the municipal corporation, which since 1840 had consisted of 10 aldermen (one being mayor) and 30 councilors, was increased to 15 aldermen and 45 councilors The city owns the docks, ferries, abattoirs, and the gas and electric plants, maintains a fire department, libraries, museums, and workmen's dwellings, and controls the elementary schools Pop., 1821, 37,000, 1851, 103,000, 1891, 273,000, 1901, 340,180, 1911, 386,947 (the gain over 1901 being 10.8 per cent, as compared with a decrease of 0.1 for the county of Ulster and a decrease of 1.5 per cent for Ireland)

There is some reason to believe that a castle was built here about 1177 and destroyed by Edward Bruce in 1316 By the beginning of the fifteenth century Belfast was only a fishing village with a fortress in control of the house of O'Neill The town was secured by the English by grant in 1571 and in 1613 received a charter from James I During the seventeenth century it suffered rather less than other Irish towns from civil strife and developed notably in population and trade Cotton manufacture was introduced in 1771, and shipbuilding on a large scale began in 1791 The overwhelming numerical strength of the Protestants and the vigor of the Roman Catholic minority have on several occasions made Belfast the scene of riot and bloodshed

Consult Benn, *History of Belfast* (Belfast, 1877), Young, *Historical Notices of Old Belfast* (Belfast, 1896), Munce, *Workmen's Dwellings in Belfast* (1898), Fisher, *Trading Centres of the Empire* Belfast (London, 1901)

BELFAST, bĕl-fast' A city, port of entry, and the county seat of Waldo Co., Me., 30 miles southwest of Bangor, on Penobscot Bay, at the terminus of the Belfast division of the Maine Central Railroad (Map Maine, E 7). There is a good harbor, and the principal industries are the manufacture of shoes, doors, sashes, cigars, fertilizers, clothing, blinds, leather, boards, and sardine and corn canning There are also foundries and machine shops The city has a public library, a theatre and opera house, and several fine lodge and bank buildings Settled by Scotch-Irish in 1770, Belfast was incorporated as a town and named (from Belfast, Ireland) in 1773 It was chartered as a city in 1850 The charter now in force was adopted in 1853 and provides for a mayor, elected annually, and a bicameral city council Pop., 1900, 4616, 1910, 4618 Consult Williamson, *History of the City of Belfast* (Portland, 1877).

BELFORD A character in Samuel Richardson's novel *Clarissa Harlowe*. He and Lovelace agree to excuse in each other every breach of etiquette

BELFORT, bĕl-fôr' (Fr. beau, OF *bel*, beautiful + *fort*, fort, citadel) The capital of the territory of Belfort, France, a town of great strategical importance on the Savoureuse, commanding the Trouée-de-Belfort, a pass between the Vosges and Jura Mountains (Map: France,

N, M 5) It is dominated by a lofty citadel, on a rock 200 feet high. In front of the citadel is carved the "Lion of Belfort," a colossal figure, 36 feet in height and 72 feet long, the work of Bartholdi, commemorating the defense of 1870-71. Belfort has manufactories of machinery and cotton, breweries, and tanyards. There is considerable trade in grain and wines with Switzerland and Germany. The town was ceded to France by Austria in 1648, and was fortified by Vauban. During the war between France and Germany the town maintained a gallant defense against the German troops from Nov 3, 1870, until Feb 16, 1871. It then capitulated with all the honors of war. Belfort has been converted, by the construction of a vast system of new works, into one of the most impregnable fortresses in Europe. Pop, 1891, 25,445, 1901 (commune), 32,567, 1906, 34,640, 1911, 39,371. Consult Bardy, *Etude historique sur Belfort* (Belfort, 1898-1900).

BELFORT, TERRITORY OF A department on the eastern frontier of France (Map France, N, M 6). Area, 235 square miles. Pop, 1896, 88,169, 1901, 91,765, 1911, 101,386. It is named after its capital, and is the remnant of the former department of Haut-Rhin ('Upper Rhine'), the major portion of which was ceded to Germany by the Treaty of Frankfurt in 1871. The climate is variable, and the chief industries are agriculture, pasturing, mining, and the manufacture of iron, cotton, and woolen goods. There is considerable commerce in raw materials, and the products of local industries. Capital, Belfort.

BELFRY (ME *befrey, berfreit*, ML *ber(e)fredus*, MHG *bercfrut*, a watchtower, from *berc*, protection, Ger *beigen*, to cover, hide + *frut*, *fud*, place of security, tower, Ger *Friede*, peace). Originally a wooden movable tower for protecting a besieging force in an attack on a fortification, such as Caesar more than once mentions. Froissart describes one that was employed at the siege of the castle of Breteuil in 1366, and at the siege of Jerusalem, by the Crusaders, one was carried in pieces, put together just beyond bowshot, and then pushed on wheels to a proper position. Such towers sometimes rested on six or eight wheels, and had as many as 15 stories or stages, but the height was usually limited to three or four. They were often covered with rawhides to protect them from boiling oil or grease thrown upon them by the besieged, and there was a hinged drawbridge at the top, which was let down upon the parapet of the wall to assist in landing. The lower stage frequently had a battering-ram, while the others were crowded with archers and slingers. See **FORTIFICATION**.

From this use the word came to be applied to a watchtower, beacon, or bell tower used for alarm and refuge in towns and monasteries, and particularly to the wooden framework from which the bell was hung. In mediæval towns the bell was used not only on special occasions, but regularly, to announce work hours, sunrise and sunset, town gatherings, as well as fire alarms and calls to arms. The bell and belfry thus became the emblems of communal freedom, the most conspicuous belfries were those of the town halls, such as those of Florence and Siena, others were isolated square towers, as at Venice, and Bruges, and this was the primitive form, others were connected with city gates, as in some of the Hanse towns, Bordeaux, etc. In the fourteenth century clocks as well as sundials

were for the first time placed on belfries. The term "belfry" is even more commonly used of the wooden frame for the bell in any bell tower, even any church tower, and it was extended to include that part of the structure containing it, i.e., the upper part of the tower, the bell chamber or bell cage. But it is an error to use *belfry* and *bell tower* or *campanile* as synonymous. The extension of the term "belfry" from civil structures to include religious ones is late and incorrect. See **BELL TOWER**, **CAMPANILE**.

BELFRY OF BRUGES, Fr *pron* bruzh, THE See **LONGFELLOW**.

BELGÆ (Lat nom pl of *Belga*) The northernmost of the three great groups into which the Celtic tribes of ancient Gaul were divided. They occupied the territory between the *Seguana* ('Seine'), *Matrona* ('Marne'), *Mosella* ('Moselle'), *Rhenus* ('Rhine'), and the ocean, comprising the modern Belgium, with parts of Holland and northeastern France. To their south lay the *Celtæ*, or Gauls proper, and to their east the Germans. The chief of their many tribes were the Remi, Bellovacii, Suessiones, and Atrebatæ. The Belgæ had also crossed the Channel and settled in southern Britain, in Kent and Sussex. Caesar came in conflict with the Gallic Belgæ in 57 B.C., and crushed them after a long campaign (Ces B G II, 1-33), but several of the tribes revolted later. In the reorganization of the Empire under Augustus, the Belgæ were included in the province of *Gallia Belgica* on the west of the Rhine from the North Sea to the Lake of Constance. Consult T. Rice Holmes, *Caesar's Conquest of Gaul* (Oxford, 1911), J. Jung, "Geographie von Italien und dem Orhis Romanus," in Müller's *Handbuch der Klassischen Altertumswissenschaft* (Munich, 1897).

BELGAUM, *bêl-goum'* The chief city of a district of the same name in the presidency of Bombay, British India, situated east of the dividing ridge of the West Ghats, nearly 2500 feet above sea level, in lat 15° 50' N, and long 74° 30' E, 42 miles northwest of Dharwar (Map India, B 5). Belgaum possesses a fort, which in 1818 was taken from the Peshwa by the British. The town lies between the fort on the east and the military cantonment. Under its new masters the place has made considerable progress. In 1848 the citizens spontaneously subscribed a considerable sum for the reconstruction of their roads and lanes—a liberality which, besides drawing forth a supplementary grant of public money, roused the emulation of adjacent towns and villages. It has two high schools for the education of native youths, which are supported by the neighboring princes, the British government, and private individuals. The town has manufactures of cotton cloth and a trade in cotton, salt, fish, cor, dates, and coconuts. The average annual rainfall at Belgaum is about 36 inches. Belgaum is one of the principal military stations of the presidency. Pop of town, military cantonment, and suburbs, 1891, 40,700, 1901, 36,878, 1911, 42,623. Area of Belgaum district, 4656 square miles, pop, 1891, 1,013,000, 1901, 994,200, 1911, 943,820.

BELGIAN CONGO See **CONGO**, **BELGIAN**.
BELGIC CONFESSION. A statement of faith based on Calvinistic principles, written in French, formed by Guido de Bres, of Brabant, and others in 1561, and sent to Philip II of Spain to induce him to tolerate the Reformed Faith. It was published in the vernacular in

1562, afterward translated into Dutch and German, and was received as a symbolical book by the synods of Antwerp (1566) and Dort (1619). It is reprinted in French with English translation, in Schaff's *Creed*s, vol. iii, pp 383-436.

BELGIOJOSO, bĕl'jō-yō'sō, CRISTINA, PRINCESS (1808-71) An Italian patriot and author, born at Milan. She did much to assist the Italian patriots in their struggles against Austria. In 1830 she removed to Paris, where she edited the *Gazette Italiana* and the *Ausonia* in behalf of Italian liberation. In 1848 she returned to Italy, spoke in the cause of freedom, and equipped at her own expense a volunteer corps. Exiled upon the capture of Rome by the French (1849), she again returned to Italy in 1861 to found the periodicals *Italia* and *Perseveranza*. Her works include *Souvenirs d'exil* (1850), *Scènes de la vie turque* (1858), *Histoire de la Maison de Savoie* (1860), *Reflexions sur l'état actuel de l'Italie et sur son avenir* (1869).

BELGIUM A constitutional monarchy, one of the smaller European states, situated between lat 49° 30' and 51° 30' N, and long 2° 33' and 6° 0' E. It is bounded by Prussia on the east, France on the south and southwest, the North Sea on the northwest, and the Netherlands on the north. The area and population by provinces, according to the census of Dec 31, 1910, comparative population figures for 1900, and the density per square mile in 1910 are shown in the following table:

Provinces	Sq miles	1900	1910	Density
Antwerp	1,093	819,159	966,677	886.3
Brabant	2,268	1,263,525	1,469,677	1,159.0
West Flanders	1,249	805,236	874,135	699.9
East Flanders	1,168	1,099,971	1,190,335	987.5
Hainaut	1,437	1,142,954	1,232,867	857.9
Lège	1,118	826,175	888,341	794.6
Limburg	860	240,796	275,691	296.4
Luxemburg	1,706	219,210	231,215	135.5
Namur	1,413	346,512	362,546	256.8
Total Belgium	11,372	6,603,548	7,423,784	632.9

The increase during the decade was 10.91 per cent. The excess of births over deaths during that period was 717,563, of immigrants over emigrants, 12,678. Number of inhabitants speaking only French (1910), 2,833,334, Flemish, 3,220,662, German, 31,415, French and Flemish, 871,288, French and German, 74,993, Flemish and German, 8662, the three languages, 52,547, leaving 330,893 speaking none of the three languages, and including children under two years of age, and foreigners of other nationalities.

The population was estimated, Dec 31, 1911, upon the annual official returns at 7,490,411, Dec 31, 1912, 7,571,387.

Topography. The country can be divided into four natural regions. A western strip of coastal lowland spreads inland at its northern extremity so as to occupy the zone between the northern frontier and a broken line connecting the cities of Gand, Brussels, and Maestricht. The marshes of La Campine and the low plains of Flanders are included in this westernmost region. In the last-named province the land becomes so low that in many places dikes must be raised to check the encroachments of the sea. An area of low and broken relief between the valleys of the Meuse and the western basin of the Scheldt, constitutes a second natural region

which comprises nearly all of southern Belgium. The third is formed by the plateau of the Ardennes Mountains in the southeastern section of the country. It is delimited by the Sambre and Meuse rivers. The altitude here rarely exceeds 2000 feet, although a peak 2214 feet in elevation has been determined at Baraque Michel. The heavily exploited Belgian coal fields are found in this district. The elevated plains of Hesbaye belong to a fourth region which includes all of northeastern Belgium.

Climate. Three climatic zones can be distinguished in the country. It is generally mild and rainy along the Atlantic coast. Away from the influence of the ocean, along the German frontier, the humidity is less excessive and the temperature exhibits no great unevenness. Somewhat drier and more rigorous weather prevails in the higher areas. The average temperature in the low districts is about 50° F. The indigenous flora and fauna differ in no important way from that of the rest of north central Europe. See *Flora* and *Fauna*, under EUROPE.

The country is exceedingly well watered, even though its two great rivers, the Meuse and the Scheldt, rise in France and reach the sea in Holland. The navigability of these two water courses and that of their affluents, added to the existence of a well-developed network of canals, has created a large inland waterway traffic.

Geology. The oldest geological formations occur in the southern provinces, particularly along the Ardennes, which are an outlier of the Rhinish Highlands of Germany. Archæan and Silurian rocks occupy very small areas in this region, but the Devonian system is important. On the northern slopes of the Ardennes, from Liège on the east to Mons on the west, Carboniferous strata (carrying valuable deposits of coal) outcrop in considerable extent. The low-lying northern provinces of Belgium are underlain by Mesozoic and Cenozoic sediment, which were deposited in successive order upon the former shore lines and still retain a nearly horizontal position. Cretaceous and Tertiary strata are most widespread in occurrence.

Agriculture. The cultivation of the soil occupies a rather subordinate place in industrial Belgium, owing partly to unfavorable conditions, but mainly to the greater inducements offered to capital and labor by mining and manufactures. There were engaged in agricultural pursuits, in 1846, 24.98 per cent of the population, in 1880, 21.77, in 1895, 18.79—a constantly diminishing number.

As carried on in Belgium, however, agriculture has attained a high degree of perfection. There is a government agricultural board in each province, and the Department of Agriculture has special services devoted to forestry, irrigation, clearing and planting, cultivation, veterinary affairs, and agricultural laboratories. The nature of the surface in the various provinces determines the character of their agriculture. Thus, viticulture is practiced mostly along the valley of the Meuse River, cereal cultivation in the provinces of Antwerp, Brabant, East Flanders, Luxembourg, Namur, and Hainaut, cattle raising on the fertile slopes of the Ardennes and in the rich valleys.

The total area of the country, expressed in hectares (one hectare contains 2.47 acres), is 2,945,104. In the table below will be found the number of hectares in each of the great

divisions of the agricultural domain, according to census returns for three years.

	1866	1880	1895
Under crops	1,966,681	1,983,570	1,916,090
Forest	434,596	489,423	521,495
Uncultivated	262,477	231,964	169,329
Total	2,663,754	2,704,957	2,607,514

The area under main classes of crops is detailed below (in hectares), according to the annual agricultural census, first taken in 1901, and exclusive of enterprises comprehending less than one hectare

	1901	1905	1911
Cereals	743,860	740,193	744,782
Legumes	16,958	13,552	13,575
Industrial plants	95,015	79,271	74,348
Roots	201,219	211,472	232,726
Forage plants	659,767	396,180	386,472
Second crops*	176,194	178,182	189,996

* Short-season crops, sown after a principal crop has been harvested and on the same land

The area under cereals greatly declined during the last 20 years of the nineteenth century, having been 934,663 in 1880 and 809,691 in 1895. Industrial plants, with a decline from 64,150 hectares in 1880 to 51,642 in 1895, show an average improvement in the last decade. The cultivation of sugar beets has increased from 32,627 hectares in 1880 and 54,099 in 1895, to over 60,000 hectares in 1911.

Beet growing is chiefly carried on in the provinces of Brabant and Liège. Potatoes are a leading crop, the acreage devoted to them being slightly greater than that under wheat (160,626 hectares in 1912). Hops and tobacco are extensively grown, and the production of chicory is important.

A glance at the annual agricultural returns will show the yield from areas quoted above, the cereal and root classes in detail, expressed in quintals (1 quintal = 220.46 lbs.)

	1901	1905	1911
Wheat	3,849,652	3,374,980	4,285,238
Spelt	422,853	367,487	385,915
Rye	5,382,053	5,422,904	6,187,558
Barley	1,055,926	983,737	967,732
Oats	5,888,090	4,903,883	6,277,629
Indust. plants	24,340,045	24,032,261	17,715,132
Sugar beets	21,676,047	21,013,336	15,067,332
Forage beets	28,930,616	35,224,114	31,638,805
Potatoes	27,510,021	15,556,119	27,469,946
Forage plants	18,841,317	30,288,909	17,934,805

Under "industrial plants" above, flax is not included. The products of sown meadows are included with "forage plants."

Land Distribution.—The concentration of land-ownership, the relative advantages and chances of survival of small and large farms, and the possibilities in the way of application of capital in agriculture in connection with intensive cultivation, have nowhere perhaps been studied with greater care than in Belgium. As the conditions do not differ much from those in the neighboring countries of western Europe, the agricultural statistics of Belgium are of more than ordinary value. The following table

shows the number of farms at each of the censuses taken during the nineteenth century, and the percentage of increase or decrease from 1880 to 1895

Farms (in acres)	1846	1866	1880	1895	P c
Less than 1½	247,551	312,290	473,471	458,120	-03.2
From 1½ to 3½	70,413	108,084	121,905	85,021	-29.7
" 3½ to 12½	165,983	219,384	226,068	190,833	-15.4
" 12½ to 25	42,737	61,680	48,300	50,065	+01.4
" 25 to 50	26,585	30,696	25,953	28,151	+08.3
" 50 to 125	14,998	19,066	12,186	12,951	+07.9
More than 125	4,333	5,527	3,403	3,584	+05.3
Total	572,550	744,007	910,396	829,625	-09.7

(+) Increase

(-) Decrease

The above table discloses the interesting phenomenon that while the small farms (those with an acreage of less than 12½ acres each) had been increasing in number previous to 1880, and those with a larger acreage decreasing, the tendency has since been reversed, and since 1880 the small farms have been giving place to the larger ones. (The word "large" is applied to a farm in Belgium that would be considered very small indeed in the United States, but in Belgium the intensive system of cultivation makes it possible to apply a comparatively large amount of capital to a small area.) Within the group of small farms the smallest, those of less than 1½ acres in extent, mostly gardens or orchards attached to houses, have decreased only 3 per cent since 1880, while those from 1½ to 2½ acres have decreased nearly 30 per cent, and from 2½ to 12½ acres 15½ per cent. The largest increase took place in the two groups from 25 to 125 acres, viz., 8 per cent. At the same time there has been an increase in the number of tenants cultivating land. In 1846, 54.7 per cent of the total area under farms was cultivated directly by the owners, in 1866 only 50.3 per cent, in 1880 the proportion increased again to 53 per cent to fall in 1895 below one-half of the total, viz., 49.4 per cent. The changes in agriculture which accompanied this concentration of land and increase of tenantry have been partly, as stated above, a gradual abandonment of grain growing (caused to a great extent by the competition of the cheaper American grain) and the substitution of the cultivation of industrial plants, or of stock raising, or of activities partaking more of the industrial than the agricultural character.

Stock Raising.—This industry is extensively carried on, and the animals and animal products not only supply the domestic demand but furnish an important article of export. The dairy industry is especially important—Belgian cheese, and particularly that of Limburg, having a world-wide reputation. The number of stock animals in Belgium is shown as follows

Live Stock	1846	1880	1895	1911
Horses	294,537	271,974	271,527	261,967
Cattle	1,203,891	1,382,815	1,420,970	1,812,191
Hogs	496,564	646,575	1,183,133	1,229,423
Sheep	662,508	365,400	235,722	

As will be seen from the above table, in which the 1911 figures are taken from the report of the Minister of Agriculture, the number of horses has declined and that of cattle and hogs has increased.

The forests are mostly to be found in the south, especially in the provinces of Liège, Namur, and Luxembourg. They furnish but a small part of the wood required for the Belgian industries. The fisheries furnish employment to a few thousand persons, and the value of the deep-sea fish caught annually is not far from \$1,000,000. In 1903 the value of the catch was \$1,305,907.

Mining. The coal mines of Belgium constitute one of the chief sources of its national prosperity. The coal deposits extend through nearly the entire breadth of the country, from west to east, underlying about one-twentieth of its total area, chiefly along the valleys of the Meuse and Sambre. The development of the coal-mining industry is shown in the following table, which gives the number of mines in operation, the area covered (in hectares), the production (in metric tons), and the output value (in thousands of francs).

	No	Ha	Tons	1000 fr
1880	164	142,837	16,886,698	169,880
1890	134	137,661	20,365,960	265,503
1900	118	140,286	23,462,517	408,470
1910	123	168,717	23,916,580	348,877
1911	127	172,069	23,053,540	340,279

Among the minerals found in Belgium are iron, lead, copper, zinc, calamine, alum, peat, marble, limestone, and slate. The value of the products of the metallic mines is not large, and since 1880 the output has constantly declined. The abundance of cheap fuel has led to the establishment of an extensive metallurgical industry, the ores being imported.

Manufactures. The manufacturing industries occupy the majority of the population and are the chief source of the country's wealth. While the development of great enterprises has kept pace with the introduction of modern machinery, the house industries and small private enterprises have not lost ground. The census of Oct. 31, 1896, returns a total of 320,089 separate establishments in active operation. Of these, 305,045 (93 per cent) were individual enterprises, 18,678 (5 per cent) were operated by firms or companies, 1862 (0.5 per cent) by great corporations. The total number of persons engaged in these enterprises (which include mines, furnaces, etc.) was 1,102,244 (837,223 men and 265,021 women). Employed for all purposes in 1880, there were 14,060 steam engines, with a total of 607,142 horse power, in 1900, 22,991 (1,408,941 h p.), 1910, 27,816 (2,671,418), 1911, 27,990 (2,768,727). Private enterprise employed (census of 1896) 628,253 1/2 horse power.

The house industries are largely carried on by members of the family as a mere subsidiary employment. That does not represent, however, the entire extent of the small industry, as a large number of workshops employ two, three, or a few more persons, with little or no machinery.

The textile industry comprehends the manufacture of linen, woolsens, and cottons. Carpets are produced for export, as well as fine laces, lawns, and damasks.

Although the output from the metallic mines is small, the metal industry is highly important, ranking third in the number of people employed, and being next to the textile industry

in the value of its products, the manufacture of iron and steel especially being on a vast scale.

The first half of the following table presents the output in pig iron, manufactured iron, steel (ingots, nails, etc.), zinc ingots, lead, and silver from lead, in metric tons, the second half, the value, in thousands of francs.

	1880 Tons	1900 Tons	1910 Tons	1911 Tons

* In kilograms

From and including 1900, the output of the iron works includes the half-worked and the finished products, the value relates to the finished products only.

There are large ordnance foundries at Liège and Meehlin, and celebrated makers of firearms and machinery in Liège. Among other branches of Belgian industry are nail making at Charlevoix, and the manufacture of tinware, etc., at Liège and in Hainaut, wire and brass at Namur, zinc at Liège, lead and shot at Ghent, and gold and silver wares at Brussels and Ghent. The glass factories are world-renowned, the value of their output in 1900 was 65,912,000 francs. The chief works are in Hainaut, Brabant, and Namur and at Val-Saint-Lambert. Porcelain ware is manufactured at Tournai, Brussels, Ghent, and Mons. Other manufactured products are building material, food products, lumber and woodwork, hides and leather, chemicals, paper, beer, and tobacco. The sugar factories numbered 121 in 1900 (output, 306,076 metric tons), 92 in 1910 (271,282 tons), 89 in 1911 (234,704 tons), the refineries numbered 25 in 1900 (73,883 tons), 22 in 1910 (114,538 tons, including by-products), 21 in 1911 (121,226 tons, including by-products).

Railways. Belgium has a greater railway mileage in proportion to its area than any other country. The first railway was opened for traffic in May, 1835, from Meehlin to Brussels, a distance of 13 miles. During the first few years all railway construction was done by the government, but in 1842 private companies were permitted to enter the field. Most of the private lines, however, were bought out subsequently by the government, that policy being pursued with especial energy since 1897.

The total length of all lines (exclusive of light railways) in operation Dec. 31, 1911, was 2907 miles, of which 2690 were operated by the state and 217 by private companies. The state lines carried during the year 180,840,189 passengers (private lines, 18,049,557). The revenue for the year amounted to 313,292,497 francs (private, 33,909,926 francs) and the expenditure to 210,645,030 (14,151,403). The acci-

dents on all lines resulted in 164 fatalities and 1131 persons injured, from 1835 to Dec 31, 1911, out of a total of 4,108,815,572 passengers carried, 44,284 were killed (0.11 per million), or injured (1.93 per million)

Shipping and Navigation Belgium has a flourishing merchant marine, which is, however, unable to carry more than a fourth of the country's goods. The number of vessels increased from 67, with a tonnage of 30,149 (12 steam, 30,149 tons), in 1870, to 73 of 113,259 tons (steam, 69, of 112,518) in 1900, 104, of 191,132 tons (steam, 99, of 187,730) in 1910. In 1911 the steam vessels numbered 93, of 160,515 tons, and sailing vessels 8, of 5905. In 1911 the vessels entered at the ports of Belgium numbered 11,106, of 15,907,359 aggregate tons, cleared, 11,122, of 15,896,913, in 1910, 10,943, of 15,101,171, and 10,929, of 15,074,061, in 1900, 8619, of 8,500,772, and 8620, of 8,500,772, in 1870, 5868, of 1,575,293, and 5406, of 1,534,013. Over one-half of the entire shipping is carried in British vessels, over one-third is carried in German vessels, and over one-sixth in Belgian vessels. There were, in Belgium, in 1911, 1348 miles of navigable waters (rivers and canals), which float a large commerce, and about one-half of this mileage is contributed by the canals. Practically all the leading towns are connected in this wise. The Scheldt and the Meuse are navigable from France to the sea, and there are 15 other navigable rivers.

Commerce As a manufacturing country, Belgium requires mainly food products and raw materials from abroad in exchange for its manufactures. The chief articles of import include cereals, cotton, wool, flax, metals, chemicals, drugs and resins, mineral substances, lumber, textiles, oilseeds, hides, animals and animal products, coffee, caoutchouc, and machinery, while the chief exports include iron and steel (with manufactured wares), raw textile materials, yarn and thread, coal and coke, glassware, railway cars, machinery, chemicals and dyestuffs, minerals, zinc, cereals, and sugar. The trade development is shown in the following table, in which import and export figures are given for both the general and the special trade, in thousands of francs

	IMPORTS		EXPORTS	
	Gen	Spec	Gen	Spec
1840	246,400	205,600	183,500	139,600
1860	923,200	516,500	878,200	469,400
1880	2,710,400	1,680,900	2,225,200	1,216,700
1900	3,694,400	2,215,800	3,297,500	1,922,900
1910	6,551,700	4,265,000	5,694,800	3,407,400
1911	6,806,400	4,508,500	5,879,300	3,580,300

In the general trade, since and including 1900, is included the value of uncut diamonds imported (40,000,000 francs in 1900, 97,869,000 francs in 1910, 98,356,000 in 1911), and of cut (but unmounted) diamonds exported (43,000,000 francs in 1900, 98,450,000 francs in 1910, 99,049,000 francs in 1911). In 1911 imports and exports (general trade) by sea were valued at 3,261,700,000 and 2,551,500,000 francs, respectively, by land and railways, 2,918,000,000, and 2,552,300,000, by rivers and canals, 626,700,000, and 775,500,000. In the totals for

the special trade are included, from and including 1900, imports and exports of bulk and specie, amounting in 1900 to 46,543,830 and 15,429,015 francs, respectively, in 1910, to 199,841,769 and 76,139,441, in 1911, to 197,009,667 and 44,548,100.

An interesting feature of Belgium's commerce is the excess of its imports over its exports—a condition which has not changed since 1840. Far from being a drawback to the country, this adverse balance of trade has been one result of Belgium's commercial and financial expansion. The investments of Belgian capital abroad, especially in Russia and in Asia, are unusually large, and the surplus imports represent the materialized profits of foreign investments accruing to Belgian capitalists.

A table follows showing some of the principal articles imported for home consumption and exports of domestic produce in the 1911 trade, values in thousands of francs

Imports	1000 fr	Exports	1000 fr
Cereals*	698,200	Woolens	346,700

1901	49,389	14,601	1912	51,400	41,700

Banking. The banking system of Belgium centres in the National Bank, established in 1850 with a capital of \$5,000,000, increased to \$10,000,000 in 1872, when its charter was renewed until 1903. In 1900 its charter was extended to January, 1929. It is the sole bank of issue in the country and in addition to doing a general deposit and discount business with private individuals, serves as a repository of state moneys and has general charge of all the operations of the state treasury. The services to the state are performed free of charge, and in addition a certain amount is paid to the state annually for the privilege of handling its moneys. The bank has numerous branches throughout the country. It also conducts, free of charge, all the financial operations of the State Savings and Pension Institution, established in 1865. There are, in addition, several private banks and banking institutions, the oldest of which is the *Société générale pour favoriser l'industrie nationale*.

Finance. The franc (1 franc = 19.3 cents) is the unit of value. The following table shows ordinary (A) and extraordinary (B) revenue and expenditure for comparative years, in thousands of francs.

	1835	1870	1900	1909	1910
Rev. A	89,171	190,537	494,106	645,107	682,487
" B	1,904	14,905	48,672	150,109	132,918
Total	91,075	205,442	542,778	795,216	815,405
Expend. A	85,614	191,844	479,056	634,450	672,954
" B	1,490	25,064	95,102	151,747	156,502
Total	87,104	216,908	574,158	786,197	829,456

The deficit is really much larger than it appears, owing to the fact that the revenues include the amounts raised by loans in order to meet or reduce the deficits from year to year. The estimated revenue for 1912 was 703,882,584 francs, and the estimated expenditure was 708,080,500 francs.

Belgium has a system of taxation which is burdensome to the masses of the population. In 1854 the direct taxes constituted 25 per cent of the revenue of the state, and the indirect, 28 per cent. In 1901 the proportion of direct taxes fell to about 10 per cent, while that of the indirect taxes rose to about 35 per cent. The chief sources of direct taxation are property taxes, personal taxes, taxes on trades, etc., the most important indirect taxes are import duties, and excise duties on whisky, beer, vinegar, tobacco, and sugar.

In addition to taxation, revenues are derived from state domains and forests, state railways, telegraph, post office, and other government institutions conducted on a business basis. The largest item of expenditure, next to that on railways, posts, telegraphs, and telephones—which need not be considered here, as they are more in the nature of a profitable investment than a source of expense to the state—is the service of the public debt. Of the ministries, that of War draws most heavily on the treasury.

Public Debt.—Most of Belgium's debt has been incurred for profitable undertakings, especially in connection with her railway enterprises. The national debt has grown as follows, in francs

	Consolidated	Floating	Total
1840	255,831,120	24,104,000	279,935,120
1850	611,922,361	14,586,500	626,578,861
1860	634,137,847		634,137,847
1870	682,880,914		682,880,914
1880	1,422,814,049		1,422,814,049
1890	1,998,043,774	20,000,000	2,018,043,774
1900	2,650,888,151	57,651,000	2,708,539,151
1910	3,703,403,893	136,204,500	3,839,608,393
1911	3,734,354,038	201,565,500	3,935,919,538

The debt charge amounted to 186,588,127 francs in 1910.

Population. Belgium is the most densely peopled country in Europe, the average population in 1910 about 653 per square mile. The density of population for each province has been shown in the first table of this article.

The increase of the population may be seen from the following figures obtained by successive general censuses, with per cent of increase during the periods cited.

Year	Population	Increase	Increase p c
1846	4,337,196		
1856	4,529,660	192,464	4.44
1866	4,827,833	298,273	6.50
1880	5,520,000	692,176	14.34
1890	6,069,321	549,321	9.95
1900	6,693,548	624,227	10.28
1910	7,423,794	730,236	10.91
1911*	7,490,411	66,627	0.90

* Estimate

As in all well-settled countries, there is a surplus of women over men, the Belgian figures for 1910 being 3,680,790 men and 3,742,994 women. Of the total population, 2,833,334 were returned by the 1910 census as speaking French only, 3,220,662 Flemish only, and 31,415 German only, 871,228 French and Flemish, 74,993 French and German, 8652 Flemish and German, 52,517 the three languages, 330,893 persons spoke none of these languages. There are four cities with a population exceeding 100,000: Brussels, Antwerp, Liège, and Ghent.

Immigration and Emigration.—Belgium presents an exception among the countries of western Europe in that it has a greater immigration than emigration. The following table shows the annual average of the two movements for four decades and the number of immigrants and emigrants in 1911.

Years	Immigration	Emigration	Excess
1871-1880	15,409	11,472	4,027
1881-1890	19,207	17,698	1,509
1891-1900	24,667	21,304	3,363
1901-1910	36,425	29,482	6,943
1911	41,062	33,007	8,055

Immigration is greatest from France, Germany, and the Netherlands, the three countries averaging together about 90 per cent of the total. Curiously enough, emigration is distributed in about the same proportions among the same countries, only an insignificant proportion (about 2 per cent) going to the United States; all of which shows that the character of the emigration movement in Belgium is quite different from that in the countries of Ger-

many, Austria, Italy, and the United Kingdom. The emigration from Belgium is evidently of a temporary nature, the people going to and coming from the three neighboring countries mentioned as their interests require, but evidently not changing permanently their place of abode.

Religion. With the exception of some 30,000 Protestants and about 13,000 Jews, the people of Belgium are Roman Catholics. Religious liberty is untrammelled. The church must derive most of its material support from the people. The state, however, grants some subventions to the ecclesiastical orders. The country is divided into the six Roman Catholic dioceses of Mechlin, Bruges, Ghent, Tournai, Namur, and Liège.

Education. The percentage of persons 8 years old and over who could read and write was 69.04 in 1880, 73.95 in 1890, 80.88 in 1900, and 86.90 in 1910. The educational system includes secular institutions supported by the state or the local governments, and schools maintained and managed by the Roman Catholic priesthood. The efforts of the clergy to obtain control of popular education have been a principal feature of Belgian politics for a number of decades. The constitution of 1831 totally separated church from state, but conceded to the Catholic clergy as representatives of what was practically the only faith in Belgium the right of imparting religious instruction in the public schools, the Liberal party, abetted by the growing Socialist party, has made repeated efforts to do away with religious teachings in the schools and to substitute purely secular education. Higher education is provided for by the state universities at Ghent and Liège, and the free universities of Brussels and Louvain, all of which give courses in law, medicine, philosophy, and science, and at Louvain instruction is given in Catholic theology. Annexed to the universities are schools of engineering, manufactures, arts, and mines. In addition there are a large number of normal, commercial, and industrial schools, the Royal Academy of Fine Arts at Antwerp, and schools of design and music. The secondary schools include the royal atheneums and the high schools, which are supported and controlled by the government, the number of institutions of secondary learning which are under the independent control of the clergy is probably equal to the number of state schools. Primary education is left to the care of the communes, in every one of which there must be at least one elementary school, the state and the provinces, however, subsidize the communal schools and exercise the right of inspection. At the end of 1911 the primary schools for children were attended by 934,330 pupils, the infant schools by 275,911, and the primary schools for adults by 246,292.

Government. The government of Belgium is a "constitutional, representative, and hereditary monarchy," based on the constitution of 1831, which guarantees to the citizen equality before the law, personal liberty and security, the right of association and petition, and the freedom of worship, instruction, and the press. The crown is hereditary in the direct male line, and on the failure of male issue the monarch, with the consent of the chambers, appoints his successor. The king is commander in chief of the army, concludes treaties of war and peace, nominates officials, and issues decrees, but has no power

to suspend the execution of the laws. He rules through a council of ministers responsible to the chambers, and every royal act must be countersigned by a minister. The departments of state are 11 in number, under the control of the Minister of the Interior, of the Interior, of Science and Art, of Agriculture and Public Works, of Foreign Affairs, of Industry and Labor, of War, of Justice, of Railways, of the Colonies, and of Marine, and Posts and Telegraphs. The Ministry of Marine was created in November, 1912. The legislative power is vested in the king and the chambers, consisting of the Senate and the Chamber of Deputies. The Senate was composed, in 1911, of 120 members, of whom 93 were chosen by the direct suffrage of citizens over the age of 30, and 27 by the provincial councils. The Chamber of Deputies, which numbered 186 in 1911, is elected by the direct suffrage of every citizen over the age of 25. The chambers meet annually for a session of at least 40 days, but the power of prorogation and dissolution rests with the king. Bills dealing with the revenue and the annual contingent for the army must originate in the lower house. Superimposed on manhood suffrage, which makes every male Belgian not legally disqualified an elector, there is the system of plural suffrage, which gives an additional vote to citizens over 35 years of age possessing legitimate issue and paying at least five francs a year in house tax, as well as to citizens owning real estate to the value of 2000 francs, and two additional votes to professional men and the holders of diplomas from institutions of higher learning. In 1911-12 the number of electors for the Senate was 1,460,236, of whom 755,453 had each one vote, 394,123 two votes, and 310,660 three votes, the number of electors for the Chamber of Deputies was 1,721,755, of whom 998,483 had one vote, 404,786 two votes, and 318,486 three votes. By the law of Dec 29, 1899, the method of proportional representation was initiated. See *History*, below. For arms of the country, see Plate accompanying **HERALDRY**.

Local Government.—Belgium is divided into nine provinces, each under a governor appointed by the crown. The provincial council, which is chosen by direct suffrage for a period of eight years, deliberates on matters of local finance and administration, sanitation, roads, and police, and assesses direct contributions towards the state among the communes. Half the council is renewed every four years. Its acts are subject to the approval of the king. A permanent deputation, consisting of the governor and six men chosen from the council, serves as an executive committee and directs public affairs when the council is not in session. In 1911-12 there were 1,460,236 provincial electors. The provinces are subdivided into 41 arrondissements for administrative purposes and into 26 judicial arrondissements, which are the seats of high courts of original jurisdiction, and these are again portioned out into 222 cantons, each under a justice of the peace. The ultimate unit of local government is the commune. In 1911 there were 2632 communes. The affairs of the commune are debated and decided in the communal council, varying in membership from 7 to 51, and elected directly for a period of eight years by all resident citizens above the age of 25. In 1911-12 there were 1,320,074 communal electors. In communes of more than 2000 inhabitants, supplementary councillors are elected by em-

ployees and working men. The communal council exercises independent jurisdiction over local affairs, but deliberates also on matters delegated to it by the general or provincial government. The executive work of the commune is carried on by an aldermanic college, consisting of a burgomaster appointed by the king, and two or four aldermen elected by the communal college.

Justice in the case of petty civil disputes and minor offenses is administered by the justice of the peace, from whose decision there is no appeal in judgments involving less than 100 francs (\$20), or a penalty of not more than five days' imprisonment. For the trial of important civil cases there are 20 courts of first instance, while misdemeanors are brought before the tribunals of correction, and serious crimes and press offenses before jury courts of assizes sitting four times a year in every province. From the civil courts and the *cours d'assise* appeals lie to the *cours d'appel* at Brussels, Ghent, and Liège. The court of cassation, or supreme court, does not examine the facts of any case, but will reverse a decision of the lower courts where legal formalities have been violated. There are in addition special military and commercial courts and councils of *prud'hommes* for the arbitration of labor disputes, composed of workmen and employees.

Army. The army of Belgium is intended only for the purpose of national defense and the preservation of neutrality, wars of aggression being forbidden by the constitution. The army was recruited mainly by voluntary enlistment, until December, 1909, when a law was passed substituting "personal service" for conscription with substitution, thus considerably reducing the exemptions. In addition to the regular army of 41,000 men in 1910, there is the civil guard, consisting of 48,563 officers and men in 1910. The war strength is about 180,000 men. The terms of military service are eight years in the active forces (of which time two-thirds are spent on furlough) and five years in the reserve. Belgium has no navy. See ARMIES, NAVIES.

History. Belgium takes its names from the ancient Celtic people called the *Belgæ* (qv). The Roman Province of Gallia Belgica embraced a much greater area than modern Belgium, extending from the mouth of the Scheldt nearly to the Seine, and from the Strait of Dover to the range of the Vosges. In the fourth century the Germanic people of the Franks pressed forward into this region, and in the fifth century they became masters of it. After the disruption of the Frankish realm in the ninth century, the bulk of what is now Belgium was included in the Duchy of Lorraine (Lotharingia), which formed part of the realm of the eastern Franks (Kingdom of Germany), while in the extreme west arose the county of Flanders, a fief of the kings of France. In the tenth century the northern half of Lorraine became the Duchy of Lower Lorraine, the name of which was supplanted by that of Brabant in the thirteenth century. Brabant was one of several states that were formed out of the Lotharingian territories, the group including Limburg (annexed to Brabant in 1288), Hainaut, Namur, Mechlin, Luxembourg, and the ecclesiastical principality of Liège. In the latter part of the Middle Ages Flanders (which successfully withstood the encroachments of France) and Brabant attained

an almost unexampled degree of prosperity. Bruges, Ghent, Antwerp, Brussels, and other cities became the seats of a vast industry and commerce, and the arts flourished as nowhere else outside of Italy. In 1384 Flanders was united with Burgundy, whose dukes by the middle of the fifteenth century had come into possession of the greater part of the Belgian and Dutch Netherlands. The rulers of Burgundy aimed at founding a powerful state between France and Germany, and therefore endeavored to repress the free republican spirit which manifested itself in the rapidly rising towns, but the work of establishing an absolute monarchy was interrupted by the fall of Charles the Bold. By the marriage of Mary, daughter of Charles the Bold, with Maximilian in 1477, the Burgundian realm, the most opulent in Europe, passed (with the exception of the Duchy of Burgundy itself) to the house of Hapsburg. On the accession of Charles (the future Emperor Charles V), grandson of Mary and Maximilian, to the throne of Spain in 1516, the Netherlands were united with that kingdom, and in 1549 their formal union with the Spanish crown was decreed. The despotic measures of Philip II, the son and successor of Charles, excited in the Netherlands a long and bloody war for civil and religious freedom, which ended in the independence of the northern or Dutch Netherlands, while in the southern provinces (modern Belgium) both the sovereignty of Spain and the rule of the Roman Catholic church continued. In 1598 the Belgian Netherlands were ceded by Philip II to the Archduke Albert, who married Isabella, daughter of the King, and for a brief time the country became a distinct and independent kingdom. Several measures for the better regulation of internal affairs, especially in the administration of justice, and for the revival of industry, which had been injured by the unenlightened policy of Philip, were projected. Unfortunately Albert died childless in 1621, and Belgium fell back into the hands of Spain and became involved in the wars attending the decline of the Spanish monarchy. Peace generally was concluded at the cost of Belgium. By the Treaty of the Pyrenees (1659), the county of Artois, Thionville, and other districts, were given to France. Subsequent conquests by the same powerful neighbor secured to it, at the Peace of Aix-la-Chapelle (1668), the possession of Lille, Charleroi, Oudenarde, Courtrai, and other places. These were partly restored at the Peace of Nimègue (1678), but as a compensation, Valenciennes, Neupoit, Cambai, Saint-Omer, Chaumont, and other places, were given up, and only partially regained at the Peace of Ryswick in 1697. After the conclusion of this treaty, at the close of the reign of Charles II of Spain, some endeavors were made to create prosperity in Belgium by a new system of taxation and customs and by the construction of canals to counteract the injury done to its commerce by the closing of the navigation of the Scheldt. But these projected improvements were interrupted by the War of the Spanish Succession, concluded by the Peace of Utrecht in 1713. By this treaty Belgium was given to Austria, Holland retaining the privilege of garrisoning the most important fortresses on the French frontier and also of exercising a monopoly of the navigation of the Scheldt. The Belgian Commercial Company at Ostend, founded

by Charles VI in 1722, fell in 1731—another sacrifice to the cupiditv of Holland. During the War of the Austrian Succession (1744) almost the whole country fell into the hands of the French, but was peaceably restored to Austria by the Treaty of Aix-la-Chapelle (1748).

Belgium remained undisturbed by the Seven Years' War, and during the long peace following the Treaty of Aix-la-Chapelle prosperity was restored, and especially was this the case during the mild reign of Maria Theresa of Austria. Joseph II, son and successor of Maria Theresa, sought to obliterate the line which William of Orange and Marlborough had drawn with so much pains between the Dutch Netherlands and the Austrian Provinces. He compelled Holland to consent to the abolition of the barrier contract, and in consequence the Dutch garrisons were removed. The Dutch strenuously resisted his attempt to restore the free navigation of the Scheldt, and as France supported them in their resistance the Emperor had to yield. Meanwhile his administrative reforms offended the people of his own provinces. In a short time discontent openly manifested itself. The Austrian authorities were attacked, Brabant refused to pay taxes, while the more violent fled into Holland and organized an armed expedition. In 1787 a Belgian republic was proclaimed, but Leopold II, who succeeded Joseph II in 1790, suppressed this insurrection, agreeing, however, to a restoration of the old constitution and privileges. The peace that followed was interrupted by the outbreak of the French Revolution. The Belgian Netherlands were conquered by Pichegru in the campaign of 1794 and ceded to France by the Treaty of Campo Formio. The country shared the fortunes of France during the Consulate and the Empire, received the *Código Napoléon* and in all political relations was a part of France. After the fall of Napoleon it was united with Holland, and its boundaries defined by the Congress of Vienna (1815).

The union brought into sharp relief the difference between the Dutch Protestant population, with their commercial habits, and the Catholic population of agricultural and manufacturing Belgium. Furthermore, the important provisions of the constitution had regard chiefly to the interests of Holland. Attempts were made to make Dutch the official language, the privileges of the Belgian clergy were abridged, and the poorer classes were severely taxed, while the government was almost exclusively composed of Dutchmen. The Liberals and the Catholics both strongly resented the encroachments of Holland—the Liberals, from a desire to preserve the national secular institutions, the Catholics, from a desire to preserve the national church. When these parties showed signs of coalescing, the government attempted concessions, which came too late to check the outburst of dissatisfaction, then followed reactionary attempts at coercion and intimidation, which fanned the flame of discontent.

Inspired by the French Revolution of 1830, the Belgians revolted against the Dutch. The rising took place in Brussels, Aug 26, 1830, and soon spread over all Belgium. Finding that the revolt was spreading in spite of force, King William offered a separate government for the Belgians and a personal union with Holland. The Belgians rejected this, declared their inde-

pendence, October 4, organized a provisional government, and called a congress, which met in November and adopted three principles: (1) Belgian independence, (2) hereditary monarchy, with representative institutions, (3) exclusion of the House of Orange. They then proceeded to frame a constitution. The citadel of Antwerp was still held by a Dutch garrison under the intrepid General Chassé. Meanwhile the London Conference of the Powers had assembled to consider this breach of the treaties of 1815, and after mature deliberation recognized the independence of Belgium as a *fait accompli* (December 10). During 1831 the Conference arranged the terms of the separation, and in 1832 Belgium was neutralized and its neutrality was guaranteed by the Concert. Meanwhile the Belgian Congress had elected as King a son of Louis Philippe, but he declined under pressure from England, and after the brief regency of Baron Surlet de Chokier, Prince Leopold (qv) of Saxe-Coburg was elected King, June 4, 1831, and subscribed to the constitution. This prince proved himself a wise monarch. Holland refused to acknowledge the validity of the decision of the London Conference and sent an army against the Belgians, who were defeated in August, 1831. A French army under Marshal Gérard advanced to arrest the progress of the Dutch. England gave a note of warning, and the Dutch forces were withdrawn. Holland, however, still refused to abide by the decrees of the London Conference, and England and France proceeded to renewed coercion. The coast of the Netherlands was blockaded, and Marshal Gérard laid siege to the citadel of Antwerp. On Dec 23, 1832, General Chassé surrendered, and the liberation of Belgium was completed. Holland made peace with England and France at London, on May 21, 1833. A definite settlement between Holland and Belgium was not effected until 1839, when it was agreed that Luxembourg and Limburg should be divided between the two kingdoms.

The government of Belgium was of the parliamentary type, the people, as represented by the electorate, being regarded as the source of power. As soon as independence was achieved and recognized by Europe, the Liberal and Clerical parties, which had united against outside influence, fell into their natural opposition. The Liberals declared the encroachments of the Catholic religion to be "dangerous and continually hostile to civil society." The King studiously avoided organizing a party ministry, and the minister of justice declared that "the division into Catholics and Liberals is without meaning in the presence of the great principles of liberty consecrated by the constitution." The Education Act of 1842 made moral and religious instruction compulsory in the public schools, and entrusted it to the Church, under government supervision. This brought the school question permanently into Belgian politics, where, with the suffrage, it has since held the leading place. The elections of 1847 at last brought to a close the system of government in subservience to the church. A new Liberal ministry was formed by Rogier and others, whose programme promised the maintenance of the independent civil authority. The institution of numerous agricultural and commercial schools, normal *ateliers*, popular libraries, and other means used for raising the working class, were followed by most beneficial results. The

revolutionary movement which swept over Europe in 1848 menaced the tranquillity of the country, but the King declared himself ready to retain or to surrender the crown of Belgium according to the decision of the people. This declaration strengthened the party of order, while it disarmed even those most disaffected to the crown. Leopold I died in 1865, and was succeeded by his son, Leopold II. Leopold II (qv), a shrewd business man, is chiefly remembered in history for the support given by him to the International African Association, resulting in the establishment of the Congo Free State (qv), of which he was chosen sovereign. By a will executed in 1899, King Leopold bequeathed his new dominions to the Belgian State. In 1890 a convention was entered into by Belgium and the Congo Free State, by which Belgium, in consideration of a subsidy of 25,000,000 francs to the Congo Free State, received the right to annex that country at the end of 10 years. This right is still continued under an Act of Aug. 10, 1901. The outbreak of the Franco-Prussian War in 1870 threatened the neutrality of Belgian soil, causing something of a panic, which was intensified on the publication, by the Prussian Foreign Office, of a secret proposal made some time previously by Napoleon III to Prussia, involving the annexation of Belgium to France. But the written assurance of both the French Emperor and the Prussian King, to the effect that Belgian neutrality would be scrupulously respected, served to restore tranquillity, and these personal assurances were formally embodied in a treaty between England, France, and Prussia in the same year.

During the first decade of the twentieth century the Congo question was paramount in Belgium. Investigation proved time many accusations of cruelty practiced there by government officials. Leopold had treated the Congo region more as a personal source of private revenue than a ward of Belgium, and as a result his personal overlordship of the territory was abolished and in 1908 the Congo Free State was annexed to Belgium. The following year Leopold died, and was succeeded by his son who was crowned Albert I. Within Belgium, political strife has centered mainly about the suffrage, in 1890 the agitation for universal suffrage culminated in a monster popular demonstration, which led the ministry to promise in November of the same year an immediate consideration of the question. The constitution as revised in 1893 embodies the results of this struggle. The suffrage was conferred on all male Belgian citizens above the age of 25, but to counterbalance this sudden increase in the power of the lower classes, one or two supplementary votes were allowed in certain cases. Under this provision, 1,462,232 voters disposed of 2,239,621 votes in the year 1900. Its adoption gave the Catholic party a very large majority. The old Liberal party practically disappeared, the opposition being represented by a radical Socialist party. To regain something of its former power, the Liberal party, aided by the Socialists, instituted an agitation for the establishment of the principle of proportional representation, in accordance with which representation in the chambers is apportioned among the different political parties in proportion to the number of votes cast by each at the election for deputies. Such a measure was adopted in

1899, and the immediate result was the rise of the Liberal party. The coalition of Liberals and Socialists for a number of years continues to agitate for the extension of proportional representation, and ultimately, of universal suffrage to provincial and communal elections. But in this they have been unsuccessful. The continued prosperity of Belgium has told largely against them, and the last election (1912) was virtually a Catholic triumph, the Catholic party having a clear majority over all others of 16. The Socialists in despair organized a general strike which began April 14, 1913, and continued to April 23, of the same year. The strike was by no means universal, and the utmost that was obtained by it was the promise of an electoral commission to report on the condition of suffrage. Despite, however, the inequalities in the suffrage laws, there has been much advance in recent years in Belgium in social legislation. The hours of work in unhealthy trades have been regulated, old-age pensions have been provided for miners, night labor in factories has been forbidden to women, children's judges have been provided, and also arbitration boards for industrial pursuits to which women are eligible. For the Congo question see BELGIAN CONGO.

BELGOROD, byél'gò-rót, or **BIELGOROD** (Russ. *byelyi*, white + *gorod*, city). The capital of a district and an archiepiscopal see in the Russian government of Kursk, situated on the right bank of the Donetz, 87 miles south of Kursk and 43 miles from Kharkov (Map Russia, E 4). Belgorod, which derives its name from a neighboring chalk hill, is divided into two—the old and the new—towns. It has manufactures of leather and soap, and agriculture is fairly well developed. There is a considerable trade in wax, apples, tallow candles, and especially of chalk, of which about 1800 tons are

produced annually within the city limits Pop, 1897, 21,900

BELGRADE, bēl'grād' (Serv *Beograd*, from *bēl*, white + *grad*, city, fortress, in Ger *Weisenburg*, same meaning, anciently *Singidunum*) The capital of Serbia, situated at the confluence of the rivers Save and Danube opposite the Slavonian town of Semlin (Map Turkey in Europe, C 2) It contains half a dozen distinct quarters The famous old fortress occupies in part the level ground at the junction of the two rivers and in part is built on a hill about 150 feet high Belgrade, with its wide streets and its electric lighting and transit systems, presents an entirely modern appearance. One section, known as the English quarter, has handsome villas and gardens There are large business houses and hotels and a number of banks The King's palace, the metropolitan cathedral and residence, the national theatre, and the public offices are among the principal buildings One of the old mosques is in a good state of preservation The city contains fine parks, an old Turkish kiosk erected for Prince Milosh, and a monument to Prince Michael At the head of the educational institutions is a university with faculties of philosophy, jurisprudence, and engineering Belgrade is the seat of the Royal Serbian Academy of Sciences, to which belongs the national library, with about 60,000 volumes It is the great entrepôt of the trade between Austria-Hungary and Serbia The exports are largely raw Serbian products, the imports, manufactured articles The population has increased rapidly, in 1884 there were 26,600 inhabitants, in 1890, 54,500, in 1895, 59,100, in 1900, 69,097, in 1905, 77,816, in 1910, 90,890 At the close of the Middle Ages Belgrade was a frontier fortress of Hungary and in the Turkish wars was a key to that kingdom It was stormed in 1521 by the Turks, who had attempted to capture the town in 1456 and had been repulsed with great loss by John Hunyady and a crusading force Thrice taken for Austria—in 1683 by the Elector of Bavaria, in 1717 by Prince Eugène (after a brilliant victory over the Turks), and in 1789 by General von Laudon—it was restored each time, by treaty, to the Turks Though Serbia became practically independent in the early part of the nineteenth century, the Turkish garrison was not withdrawn till 1867

BELGRAND, bēl'gran', MARIE FRANÇOIS EUGÈNE (1810-78) A French civil engineer, born at Ervy (Aube) He studied at the Ecole Polytechnique and the Ecole des Ponts et Chaussées, became in 1852 a chief engineer, and in 1875 an inspector general of the first class He designed the water supply and sewerage systems of Paris, two mammoth works of engineering His publications include *Les travaux souterrains de Paris*, consisting of four parts, *La Seine, études hydrologiques, régime de la pluie, des sources des eaux courantes* (1873), *Les eaux et les aqueducs romains* (1875), *Les eaux anciennes de Paris* (1877), and *Les eaux nouvelles* (1882)

BELGRA'VIA The fashionable residence district in London, built up south and west of Belgrave Square In the early part of the nineteenth century it was a marshy farm, which was filled in and drained about 1825 Consult Hare, *Walks in London* (London, 1883)

BELHAVEN A town in Beaufort Co, N C, 120 miles (direct) each by south of Raleigh,

situated at the mouth of the Pungo River, near Pamlico Sound, and on the Norfolk Southern Railroad (Map North Carolina, F 2) The surrounding region is fertile, the principal products being cotton, corn, and potatoes Fish and oysters are taken from the near-by waters The town contains a large cooperage and lumber mills Pop, 1910, 2800, 1913 (est.), 3200

BELIAL, bē'l'al or bē'l'yal A Hebrew term occurring 27 times in the Old Testament, and generally taken to mean 'wicked' or 'worthless,' both in the moral and the material sense It occurs very frequently in the Bible in the phrase "sons of Belial" (1 Kings xxii 10, 13, 2 Chron xiii 7, Deut. xiii 13), and however we may account for it, Belial was personified and became a designation of the arch-demon Satan (2 Cor vi 15). The etymology which until recently was current, dividing the word into two parts, *bēl*, 'without,' and *yaal*, 'worth,' is to be rejected It has been satisfactorily shown by Cheyne (*Expositor*, 1895, pp 435-439) that the word *bēl* is used in the Old Testament in three senses (1) great wickedness, (2) hopeless ruin, and (3) subterranean watery abyss (Ps xviii 4) In view of this third meaning Cheyne proposes to connect Belial with Belihl, a goddess of the underworld in Babylonian mythology There is much to be said in favor of this view, though of course we must assume that the term, after coming to the Hebrews, was developed (as were the other mythological terms of foreign origin) in a manner that in the course of time separated it from its Babylonian prototype

BELLANÍS (bā'lé-a-nés') OF GREECE A continuation of *Amadis of Gaul*, by Jerónimo Fernández (1547) It was translated from the Spanish into Italian in 1586, into English in 1598, and into French in 1825 It was one of the books in Don Quixote's library, and was censured there by the "cure" for its masses of extrinsic detail Another English version appeared in 1673

BELIDOR, bā'lé'dor', BERNARD FOREST DE (c 1698-1761) A French military engineer, born in Catalonia He was the inventor of military mining and continues an authority on subjects connected with hydraulic architecture and artillery He published *Sommaire d'un cours d'architecture militaire, civile, et hydraulique* (1720), *Tratté des fortifications* (1735)

BELIEF (the verb *believe*, AS *gelyfan*, Goth *galaubjan*, Ger *glauben*, literally means 'to esteem dear, to value', cf E *hef*, Goth *haba*, dear, Lat *habet*, *habet*, it pleases, Ger *Liebe*, love) In discussing the subject of belief, the psychologist has to distinguish sharply between two related questions that of the composition of the believing or assenting consciousness, and that of the nature of belief as an attitude or function of mind at large Under the former head (1) we find the most diverse views prevailing in the different psychological systems Locke (1632-1704), James Mill (1773-1836), and Spencer (1820-1903) offer a purely intellectualistic analysis For Locke belief is an association of ideas on the ground of probability If the association corresponds to a natural connection among the objects of idea, the belief is right, otherwise it is wrong The reasons for erroneous assent are to be found in want of proofs, want of ability or will to use them, and wrong measures of probability (reliance on authority, yielding to passion) Mill declares, in similar vein, that in

every instance of belief there is an indissoluble association of ideas. "I never have a sensation, nor the idea of that sensation, without associating with it the idea of myself. In the case of a present sensation, and that of a present idea, the sensation and the belief in the sensation, the idea and the belief in the idea, are not two things, they are, in each case, one and the same thing." Those psychologists who deem these analyses defective have pointed out that while belief always implies the presence in consciousness of ideational material, the object of belief, it is rather a feature of the emotional and volitional than of the purely intellectual life. This fact is recognized by Bagehot, when he speaks of the "emotion of conviction", by James, when he defines belief as "a sort of feeling more allied to the emotions than to anything else", and by Bain, who, postulating a primitive tendency to credulity as he postulates a primitive tendency to spontaneous movement, describes belief as "in its essential character a phase of our active nature, otherwise called the will."

Recent experiments show, in fact, that belief may have either an affective or an ideational course. Moreover, belief may appear as an overt train of mental processes, or it may be implicit in the course and arrangement of a given consciousness. These results need confirmation, but they serve, so far as they go, to account for the great variety of analysis offered in the pre-experimental period.

(2) *The nature of belief as an attitude or function of the mind at large*.—That belief can be envisaged, not as a complex of conscious processes, but as a state of consciousness (see ATTENTION), appears in Hume's (1711-76) account of it. "Belief is nothing but a more vivid, lively, forcible, firm, steady conception of an object than the imagination alone is ever able to attain. It consists in the manner of the conception [of the ideas] and in their feeling to the mind. It gives them more weight and influence, makes them appear of greater importance, enforces them in the mind." Hume does not profess "perfectly to explain" this mode of conception. He is followed by J. S. Mill, who asserts that the difference between "thinking of a reality and representing to ourselves an imaginary picture" is "ultimate and primordial", and by Brentano, who makes "judgment" one of the elementary conscious functions. Without questioning the functional uniqueness of the state of assent, we may say, in general, that belief is a state of attention, with extreme liability of suggestion in a given direction.

BELINDA. See EDEWORTH, MARIA.

BELINSKY, byé-lén'ské, VISARION GRIGOREVICH (1810-48). A Russian literary critic, a contemporary of Gogol, Turgenev, and Dostoyevsky. He was born in southern Russia, the son of a district physician in the government of Penza. He attended the gymnasium at Penza and studied philology at the University of Moscow, where he became intimate with the "idealist" circle of Stankevitch, Herzen, and others. In 1832, on account of a tragedy (in

the style of Schiller's *Robbers*) directed against serfdom, he was expelled from the university, ostensibly on the ground of "incapacity." In 1834 he made his debut with the famous "Literary Reveries"—a brilliant survey of the historical development of Russian literature—in *Rumoi*, and contributed to it and the *Moscow Telescope* until their suppression in 1836. Two years later, with several friends, he undertook to edit the *Moscow Observer*. Under the influence of Bakunin and a one-sided interpretation of Hegel's proposition, "Whatever is, is right," he preached complete acceptance of and conciliation with reality. At the same time he expounded the theory of art for art's sake, which aimed at an artistic embodiment of "eternal ideas" and not at a reproduction of life. In 1839 he went to the capital and became principal contributor of the *Memoirs of the Fatherland*. "Reality" soon frightened him here, and all the fiery striving for truth and right now turned into deep grief over this reality. From 1840 to 1848 he wrote a series of long essays on Derzhavin, Lermontov, Gogol, Koltsov, Pushkin (the last a volume of over 600 pages), and other popular writers, the whole forming practically a history of Russian literature from Lomonosov down to his own day. Belinsky's critiques now acquired a social character, and he appeared not only as a keen aesthetic judge, but as a passionate literary propagandist as well, fighting for personal rights, unmasking social and literary hypocrisy, scourging conservatism, conventionalism, and lack of humaneness in society. In 1846 he began to contribute to the *Contemporary*, rejuvenated under the editorship of the poet Nekrasov. His last great effort was his *Literary Review for the Year 1847*, in which he saw the hope of Russian literature in the "naturalistic" works of Turgenev, Gontcharov, Dostoyevsky, and others. His health was undermined by the hardships he had endured and his incessant literary labors, and the trip abroad could not check the progress of consumption, which brought him to his early grave on the eve of his arrest by the police on account of his radical views.

A perfect master of style, passionate and endowed with a brilliant fancy, with a natural bitterness greatly increased by physical ailing and the hardships of life, he poured all his heart and soul into his work. Greeting with ardent delight the appearance of promising new writers, he unceasingly foretold their future development, basing his opinions upon a careful analysis of their work. Besides giving correct estimates of all the chief Russian writers and bringing down the history of Russian literature to certain well-defined periods, he was the first Russian to establish right conceptions of art and literature and to point out the direction which literature must take to become a social force. In 1910 Russia celebrated the centenary of Belinsky's birth with an enthusiasm and appreciation worthy of one of her greatest literary critics, the founder of higher journalism, and a humanitarian unsurpassed in Russian history.

His works, in 12 volumes, were first published in 1850-62. In 1898, after the expiration of copyright, several new editions appeared. The best is that supplied with profuse notes by S. Vengerov. Consult A. Pypin, *Belinsky's His Life and Correspondence* (Saint Petersburg, 1876).

BELISARIUS (Slav *byelû*, white + *tsar*, prince, czar) (c 505-565). An heroic and loyal

Byzantine general, to whom the Emperor Justinian was indebted for many of his victories. He was born in Thrace, and first attained celebrity as the commander of the Eastern army or the Empire, stationed on the confines of Persia, where in 530 A.D. he gained a victory over a Persian army nearly twice as large as his own. The historian Procopius was at this time secretary of Belisarius. In the following year Belisarius was compelled by the impatience of his troops to offer battle at Callinicum, a town at the junction of the rivers Bilecha and Euphrates, some authorities state that he was defeated, and in consequence recalled, this is probably not true. At all events, he remained faithful to his sovereign, and rendered him great service in Constantinople, where the strife of "the Greens" and "the Blues" (two of the factions into which the keen interest in the chariot races in the circus long had split the people) had endangered the authority and even the life of Justinian. Already a new Emperor, Hypatius, had been elected, when Belisarius, at the head of the Life Guards, attacked and slew in the race course 30,000 of the rioters and restored tranquillity (532). Previous to this he had married a wealthy but profligate lady, Antonina, who accompanied him on his military expeditions. In 533 A.D. Belisarius was sent, with an army of 15,000 men, to recover the province of Africa held by the vandal King, Gelimer. Belisarius gained two victories, made the King a prisoner, seized his treasures, and brought him to Constantinople, conquering on the way Sardinia and the Balearic Isles. Medals were struck in Belisarius' honor, and in March, 534, he was invested with the dignity of Consul, having previously enjoyed the distinction of a double triumph, according to the old Republican custom.

Belisarius was not idle long. The divisions existing in the royal family of the Ostrogoths induced Justinian to attempt to wrest Italy from their hands. In 535 Belisarius conquered Sicily, and in the autumn of 536 he crossed over to lower Italy, where all the cities submitted to him except Naples, which he carried by storm. On December 10 he entered Rome, and held it for a year against the Goths, until the enemy raised the siege. In 538 Narses was dispatched with reinforcements for the army in Italy, but some misunderstanding occurred between the two generals, and they failed to relieve Milan, which in 539 was sacked by Biazas, nephew of the Gothic King, Vitiges. Narses was recalled from Italy, and Belisarius was placed at the head of both armies. Refusing his assent to a treaty proposed to King Vitiges by Justinian's ambassadors, he drove the Goths back to Ravenna, which he captured, together with Vitiges himself. But before he could complete his conquest of the Goths, he was recalled by Justinian to Constantinople. In 541-542 he was engaged in a campaign against the Persians, who had captured Antioch, but he was again superseded, if Procopius is worthy of belief, on account of the slanderous representations made to the Emperor by his own wife, Antonina. His second great struggle with the Ostrogoths now began. The barbarians, under Totila, had again invaded and conquered Italy. In 544 Belisarius was sent against them, but with an insufficient army. He, however, maintained his ground for about four years, harassing the enemy by his skillful movements, and succeeded in regaining possession of Rome for a time, but in spite of

his repeated entreaties no reinforcements were sent to him and in September, 548, he was recalled. His rival, Narses, was appointed in his place.

After 10 years of retirement Belisarius once more came forward, at the head of an army hastily collected, and overthrew the Bulgarians, who threatened Constantinople. Towards the end of his life this faithful servant, who at Ravenna had refused the crown of Italy offered to him by the Goths, was accused of a conspiracy against Justinian, and imprisoned, December, 563, but, according to Malala and Theophanes, Justinian became convinced of his innocence, and restored him, after seven months, to all his honors. He died March, 565.

The life of Belisarius has been treated with great license by writers of fiction, especially by Marmontel, who represented the hero as cruelly deprived of sight and reduced to begging for his bread in the streets of Constantinople. Tzetzes, a writer of the twelfth century, states that during his half-year's imprisonment Belisarius suspended a bag from the window of his cell and exclaimed to those who passed by "Give an obolus to Belisarius, who rose by merit and was cast down by envy", but no writer contemporary with Belisarius mentions this circumstance. Lord Mahon, in his life of Belisarius (London, 1829), endeavors, but without success, to confirm the tradition, or rather the fiction, of Belisarius' having been deprived of sight and reduced to mendicancy. This fiction supplies the subject of a fine picture by the French painter Gérard. The works of Procopius are the most important original sources for the life of Belisarius. For secondary works, consult Bury, *Later Roman Empire* (London, 1893), Hodgkin, *Italy and Her Invaders* (Oxford, 1880-85), Gibbon, *Decline and Fall*, edited by Bury, vol. iv (London, 1898), *The Cambridge Medieval History*, vol. 1 (New York, 1911).

BELIZE, be-liz', or **BALIZE**. The capital and chief seaport of the colony of British Honduras (q.v.), in Central America (Map Central America, C 2). It is situated at the mouth of the Belize River. Coral reefs along the coast form a natural breakwater through which a passage admits vessels into the harbor. Ocean-going vessels are obliged to load and unload by means of lighters. The town has considerable trade in logwood and mahogany. It has been the centre of this trade for over 300 years. Pop., 1903, 9113, 1911, 10,478.

BELKINE, byl'ken, IVAN. The pseudonym of the Russian poet Pushkin.

BELKNAP, bel'näp, GEORGE EUGENE (1832-1903). An American naval officer, retired in 1894. He was born in New Hampshire. In 1847 he entered the navy as a midshipman. From 1856 to 1858 he served in the East Indies. In the Civil War he commanded the *New Ironsides* during the bombardment of the forts and batteries in Charleston harbor and led the attack at the capture of Fort Fisher, N. C. In 1874, as commander of the *Tuscarora*, he was engaged in making deep-sea soundings between the United States and Japan, to determine the possibility of laying a submarine cable across the Pacific, and invented an apparatus for securing specimens of soil from the ocean bed which is now used in both the naval service and the coast survey. He was appointed superintendent of the United States Naval Observatory in 1885 and became a rear admiral in 1889.

BELKNAP, JEREMY (1744-98) An American Congregational minister, born in Boston, and pastor at Dover, N H, and at Boston. He was a graduate of Harvard (1762) and in 1791 founded the Massachusetts Historical Society. Among his works are a painstaking and readable *History of New Hampshire* (3 vols, 1784-1792), *American Biography* (2 vols, 1792-98), *The Foresters: An American Tale* (1796), and a *Collection of Psalms and Hymns* (1795). He devoted much of his life to historical and biographical research. His *Life*, with parts of his correspondence, appeared in New York, 1847.

BELKNAP, WILLIAM WORTH (1820-90) An American soldier. He was born at Newburgh, N Y, graduated at Princeton in 1848, and settled as a lawyer in Keokuk, Iowa. He entered the Union army as major of volunteers, 1861, distinguished himself in Sherman's Atlanta campaign, and was brevetted major general in 1865. He was Secretary of War under President Grant from 1869 to 1876 and in the latter year was impeached on charges of corruption, but resigned before the proceedings could be formally begun, so that this charge was dropped on the ground of lack of jurisdiction. He committed suicide.

BELL (perhaps connected in origin with *bell*, *bellows*, to roar). A hollow, cup-shaped, metallic percussion instrument, suspended by a neck and sounded by a swinging clapper, or a hollow metallic sphere sounded by a loose ball in its interior. From a remote antiquity cymbals and hand bells were used in religious ceremonies. In Egypt it is certain that the feast of Osiris was announced by ringing bells, the Jewish high priests wore golden bells attached to their vestments, and in Athens the priests of Cybele used bells in their rites. The Greeks employed them (*koda*) in camps and garrison, and the Romans announced the hour of bathing and of business by the *tintinnabulum*. The introduction of bells into Christian churches is usually ascribed to Paulinus, Bishop of Nola, in Campania (353-431), but there is no evidence of their existence for a century later. That they were first made in Campania is inferred from the name given to them—*campanæ*, hence, *campanile*, the bell tower. Their use in churches and monasteries soon spread through Christendom. They were introduced into Gaul about 500, and Benedict, Abbot of Wearmouth, brought one from Italy for his church about 680. Pope Sahinian (600) ordained that every hour should be announced by sound of bell, that the people might be warned of the approach of the canonical hours (qv). Bells came into use in the East in the fifth century, and in Switzerland and Germany in the eleventh century. Most of the bells first used in western Christendom seem to have been hand bells. Several examples, some of them, it is believed, as old as the sixth century, are still preserved in Ireland, Scotland, and Wales. They are made of thin plates of hammered iron, bent into a four-sided form, fastened with rivets, and brazed or bronzed. Perhaps the most remarkable is that which is still preserved at Belfast, and said to have belonged to St Patrick, called the *Clog-an-eadhachta Phádraic*, or 'the bell of Patrick's Will'. It is 6 inches high, 5 inches broad, and 4 inches deep, and is kept in a case or shrine of brass, enriched with gems and with gold and silver filigree, and made (as an inscription in Irish shows) between the years 1091 and 1105. The bell itself is believed to be mentioned

in Ulster annals as early as the year 552. The four-sided bell of St Gall, an Irish missionary, who died about 646, is still shown in the monastery of the city which bears his name in Switzerland. Church bells were suspended either in the steeples or church towers, or in special bell towers. They were long of comparatively small size, the bell which a king presented to the church of Orleans in the eleventh century, and which was remarkable in its age, weighed only 2600 pounds. In the thirteenth century much larger bells began to be cast, but it was not until the fifteenth century that they reached really considerable dimensions. The bell "Jacqueline," of Paris, cast in 1400, weighed 15,000 pounds, the famous bell of Rouen, cast in 1501, weighed 36,364 pounds. The largest bell in the world is the great bell of Moscow, cast in 1733, it being 21 feet high, 21 feet in diameter, and weighing 432,000 pounds. This bell, in 1737, was injured by a fire and remained partly buried in the earth until 1837, when it was raised, and now forms the dome of a chapel formed by excavating the earth beneath it. Among other large bells are the great bell of Burma, 12 feet high, 16½ feet in diameter, weighing 260,000 pounds, the great bell at Peking, 14 feet high, 13 feet in diameter, and weighing 130,000 pounds, those at houses of Parliament, London, 30,000 pounds, Montreal Cathedral, 28,500 pounds, Notre Dame, Paris, 28,672 pounds, St Peter's, Rome, 18,600 pounds, St Paul's, London, 11,470 pounds.

An interesting installation of bells are the four forming the Westminster peal of the tower of the Metropolitan Life Insurance building in New York City, which ring at twice the height of any other peal in the world. The four bells weigh seven tons and are not suspended but are mounted on upright supports and used with automatic clappers to strike the quarter hours. The largest bell weighs 7000 pounds and is 70 inches across the mouth, being tuned to B flat. It strikes the hours as well as takes part in the general choir. The second bell weighs 3000 pounds and is tuned to E flat, while the third, weighing 2000 pounds, is tuned to F natural, and the fourth, of 1500 pounds, is tuned to G.

The art of casting bells seems to have made little advance as the result of modern inventions, it being impossible to make better bells to-day than were made 300 or 400 years ago. The material used in making bells is a kind of bronze known as bell metal (see ALLOYS), which is an alloy of copper and tin. Authorities differ as to the best proportions of the copper and tin. Some give 80 parts of copper to 20 of tin, or 4 to 1, others increase the tin to 16 to 5, and again others state the proportions as being 3 to 1. In the reign of Henry III of England it would seem to have been 2 to 1, and the small bronze bells discovered by Layard in the palace of Nimrud are found to contain 10 of copper to 1 of tin. Hand bells are often made of brass, antimony alloyed with tin, German silver, real silver, and gold. The notion that in old times silver was mixed with bell metal to sweeten the tone is a mistake. Silver, in any quantity, would injure the tone. The quality of a bell depends not only on the composition of the metal it is made of, but very much also on its shape, and on the proportions between its height, width, and thickness, for which the bell founder has rules derived from experience and confirmed by science. The pitch of a bell is higher the smaller it is. For a peal of four bells to give the pure

chord of ground tone (keynote), third, fifth, and octave, the diameters require to be as 30, 24, 20, 15, and the weights as 80, 41, 24, 10. A smaller quantity of metal than is due to the calibre of the bell, though giving the same note, produces a meagre, harsh sound, and the real or fancied superiority in dignity of tone of some old bells is ascribed to a greater weight of metal having been allowed for the same note than modern economy would dictate. Bells have been cast of steel, some of which have had a tone nearly equal in fineness to that of the best bell metal, but deficient in duration, having less vibration. Some have also been cast of glass, with a considerable thickness of the material, and these give an extremely fine sound, but are too brittle to stand the continued use of the clapper.

The manufacture of bells is simply a process of founding. A core is first constructed of brickwork, which is covered with layers of clay which, by means of a template, is formed to the exact form and dimensions of the interior of the bell to be cast. On this mold is laid a "model" of earth and hair, which is the exact counterpart of the future bell. A third and heavy shell is then built over the model, which, when completed, is lifted, and the "model" is broken away from the core, and the outside shell is then replaced, leaving a space between it and the core the exact size and shape of the "model." Into this space the molten bell metal is run and allowed to cool.

After the casting is trimmed the bell is tuned by paring off metal from its interior. This process of tuning has been reduced to a highly scientific basis, and it is now realized that a bell to be properly in tune with others must be in tune with itself. It must have at least five tones at correct intervals to one another so that they form a perfect musical chord. These tones or harmonics are called the hum note, fundamental, and nominal, and the third and fifth to the fundamental or strike note. In the case of a C bell the first three would give three C's in octaves.

In recent years, particularly in the United States, so-called tubular bells, consisting of cylindrical tubes of bell metal suspended vertically from hooks, have been employed for sets of chimes both in and out of doors. These tubes, which are suspended by loops of leather, catgut, silk, or other cords passed through holes drilled in the walls of the tube, are struck from above by hammers, usually through the agency of an appropriate mechanism connected with a clock or other movement, and the different tones of a combination are obtained by adjusting the length and weight of the tubes, the shorter the tube the higher the pitch. The largest tubes for out-of-door use probably run to 8 or 9 feet in length with a weight of 200 pounds or thereabouts, but difficulties have been encountered in tubes of large size due to atmospheric changes and other causes affecting the tuning. The advantages are the light weight and the facility with which the striking mechanism can be arranged for controlling the various changes and tunes. Tubular chimes are found at their best in hall clocks where the tubes are usually nickel-plated and are particularly suitable for electric control mechanism.

From old usage bells are intimately connected with the services of the Christian Church and thus have acquired a kind of sacred character.

They were founded with religious ceremonies and consecrated by a complete baptismal service, received names, had sponsors, were sprinkled with water, anointed, and finally, covered with the white garment of chrism, like infants. This usage is as old as the time of Alouin (735-804) and is still practiced in Roman Catholic countries. Bells had mostly pious inscriptions, often indicative of the widespread belief in the mysterious virtue of their sound. They were believed to disperse storms and pestilence, drive away enemies, extinguish fire, etc.

Church bells were at one time tolled for those passing out of the world. The custom of ringing what was called the *passing bell* "grew" (*Quarterly Review*, September, 1854) out of the belief that devils troubled the expiring patient and lay in wait to afflict the soul the moment when it escaped from the body. . . . The tolling of the passing bell was retained at the Reformation, and the people were instructed that its use was to admonish the living and excite them to pray for the dying. The practice of slowly and solemnly tolling church bells at deaths, or while funerals are being conducted, is still maintained as a mark of respect for the deceased. The *pardon bell* of pre-Reformation England was tolled before and after divine service, to call the worshippers to a preparatory prayer to the Virgin Mary before engaging in the solemnity, and an invocation for pardon at its close.

The ringing of the *curfew bell*, supposed to have been introduced into England by William the Conqueror, was a custom of a civil or political nature and only strictly observed till the end of the reign of William Rufus. Its object was to warn the public to extinguish their fires and lights at eight o'clock in the evening. The eight-o'clock ringing is still continued in parts of England and Scotland. An article in the *Ecclesiastical Review*, 1911, gives a survey of the historic uses of bells in church worship.

The *hanging of bells* in dwelling houses, and ringing them by means of wires, either mechanically or electrically, from the different apartments, is a comparatively modern invention, for it was not known in England in the reign of Queen Anne. The form of bell now most commonly used for houses and for call bells in hotels, business houses, etc., is the electric bell. The arrangement required to ring a bell or system of bells by electricity is simple. Some form of galvanic battery requiring little attention is placed in any convenient corner, and from it an insulated wire, with the necessary branches, is conducted to the various rooms, thence to, perhaps, as many bells, and finally back to the battery to complete the circuit. Each single bell is provided with a clapper, to which is fixed a piece of soft iron. Near this is an electro-magnet, wound with a quantity of insulated wire, to which the main wire is connected, so that upon the passage of the signal current the magnet attracts the piece of iron fastened to the clapper, and the clapper strikes the bell. In this way any number of bells may be rung at once by sending a powerful current through the wire to which they are all connected. Such arrangements of bells are used very extensively for giving signals simultaneously in a number of rooms or buildings—for example, for striking the hours in all of the rooms of a school building, for sounding alarms of fire throughout hotels or large buildings, etc.

Bells for continuous vibratory ringing are of

the same construction as those just described, excepting that they are provided with a device for continuously vibrating the clapper while the bell is being rung. The wire, instead of being connected directly to the coil around the magnet, is connected to a post, against which the clapper rests after striking the bell. The coil is connected to the clapper, and the current passes through the post, and the clapper to the coil. When a signal on the wire causes the magnet to attract the clapper and strike the bell, the connection is immediately severed by the clapper leaving the post, and no more current can pass until the clapper has returned after striking the bell. Instantly when this occurs the connection is reestablished, the clapper retracted, and the bell again struck. Thus a continuous ringing is produced as long as the person presses the calling button. This push button is simply an ornamental cap covering the terminals of the wires leading to the bells. A slight pressure of the hand upon the button in the centre forces the spring-shaped terminals of the wires into contact with each other and allows the current to pass from the battery to the bell.

Consult Briscoe, *Curiosities of the Belfry* (London, 1883), Tyack, *A Book about Bells* (London, 1899), Walters, *Church Bells of England* [with bibliography] (London, 1912), Beckett, *Clocks, Watches, and Bells for Public Purposes* (London, 1903), Pease, *Notes on the Uses of Bells among the Greeks and Romans* (Cambridge, 1904), Bertheld, *Enquetes campanaires* (Montpellier, 1904). See BELL RINGING.

BELL, SONG OF THE (*Lied von der Glocke*) The best known poem of Schiller, published in the *Musenalmannach* for 1800. In this poem the operations of casting the bell are correlated with the most important events in the whole course of human life. It is the highest development of Schiller's non-dramatic poetry, perfect in form, and embodying a very broad range of sentiment and conceptions.

BELL, ACTON The pen name of Anne Brontë.

BELL, ALEXANDER GRAHAM (1847-) An American inventor and scientist, distinguished for his invention of the telephone (qv). He was born in Edinburgh, Scotland, the son of Alexander Melville Bell. He received his education in Edinburgh and at London University, and in 1870, with his father, removed to Canada. He was greatly interested in his father's system of instruction of the deaf and dumb, and in 1872 he became professor of vocal physiology in Boston University. Soon thereafter he began experiments which led to the invention of the speaking telephone, and for this, on Feb. 14, 1876, he received a patent. Though his claims were opposed by other inventors, his rights to the invention were sustained by the United States Supreme Court, and he is now considered entitled to the credit of being the first to construct the instrument in a practical shape. In an imperfect form the telephone was exhibited at the Centennial Exposition of 1876 and was carefully studied by scientists from abroad. Further experiments led to the improvement of the apparatus, and a company was organized for its development. From this company, which has enjoyed an almost absolute monopoly of the telephone business in the United States, Professor Bell received large royalties and dividends. He was also the inventor of the photophone, used for the transmission and reproduction of sounds by waves of light, and of the graphophone, an

instrument which mechanically reproduces human speech. He has been active in scientific investigation, contributing liberally to geographical and aeronautical research. Several important aeroplanes were constructed through his interest, which also made possible much experimentation. Professor Bell has always maintained his interest in the instruction of deaf-mutes and has carried on and published important researches in this field, many of which have been published by the Volta Bureau, of which he was the founder. He was elected a member of the National Academy of Sciences in 1883, and in 1881 he received the Volta prize from the French government. He has served as president of the American Association to Promote Teaching of Speech to the Deaf, as president of the National Geographic Society, and as a regent of the Smithsonian Institution. In 1913 Dartmouth College conferred upon him the degree LL.D.

BELL, ALEXANDER MELVILLE (1819-1905) A Scottish-American educator, born in Edinburgh. From 1843 to 1865 he was a lecturer at Edinburgh University and in the latter year became lecturer at the University of London. In 1870 he became instructor in Queen's College, Kingston, Canada, whence, in 1881, he removed to Washington, D. C. He was the father of Alexander Graham Bell, and is best known as the inventor of so-called "visible speech" (qv), a system of instruction very successfully used in teaching deaf-mutes to speak. His publications include *Principles of Speech and Elocution* (1849), *Visible Speech: The Science of Universal Alphabets* (1867), *The Science of Speech* (1897), *Elocutionary Manual* (7th ed., 1899), *English Visible Speech and its Topography* (1904). See DEAF-MUTE, *Methods of Instruction*.

BELL, ANDREW (1753-1832) A Scottish educational reformer. He was born at St. Andrews and was educated at its university. From 1774 to 1781 he lived as a tutor in Virginia, but returned to Great Britain and took orders in the Church of England. In 1787 he went to India, where, within two years, he obtained appointments to no less than eight army chaplainships. While at Madras, in 1789, he was intrusted with the management of an institution founded by the East India Company for the education of the orphan children of the European military. As he found it impossible to secure properly qualified assistants, he at last resorted to the expedient of conducting the school with the aid of the pupils themselves. Hence originated the far-famed "Monitorial System" (qv). He superintended this institution for seven years, when the state of his health forced him to return to Europe. In 1797 he published a pamphlet entitled *An Experiment in Education, Made at the Male Asylum of Madras*, which attracted little attention until Joseph Lancaster published a tractate on education (1803) recommending the monitorial system and admitting Bell to have been its originator, an admission which he afterward retracted. In 1816 the Church founded the National Society for the Education of the Poor, and appointed Bell superintendent. He afterward became a prebendary of Westminster, and Master of Sherburn Hospital, Durham. He left £120,000 for the purpose of founding various educational institutions in Edinburgh, Glasgow, Leith, Aberdeen, Inverness, Cupar, and St. Andrews. Consult Meiklejohn, *An Old Educational Reformer*.

(Edinburgh, 1881), Fitch, *Educational Aims and Methods* (New York, 1900), Southey, *Life of Rev Andrew Bell* (London, 1844)

BELL, SIR CHARLES (1774-1842) A Scottish surgeon, anatomist, and physiologist, known for his discoveries in connection with the nervous system. He was born in Edinburgh, the son of the Rev William Bell, of the Episcopal church. In 1797 he became a member of the Edinburgh College of Surgeons and soon after was appointed surgeon to the Royal Infirmary. In 1804 he proceeded to London and lectured on anatomy and surgery at the academy in Great Windmill Street. He was admitted to the Royal College of Surgeons in 1812 and elected surgeon to the Middlesex Hospital. After the battle of Corunna in 1809 he visited the wounded who were landed on the southern coasts of England and housed in Haslar Hospital, and after the battle of Waterloo he had charge of a hospital at Brussels. In 1824 he was appointed senior professor of anatomy and surgery to the Royal College of Surgeons, London, and subsequently a member of the Council. On the establishment of the London University, now University College, in 1826, Bell was placed at the head of the department of medicine.

In 1829 he received the Royal Society's medal for his discoveries in science. In 1831 he was knighted by William IV. In 1836 he was elected professor of surgery in the University of Edinburgh. He was a fellow of the Royal Societies of London and Edinburgh and a member of other learned bodies. He wrote on surgery and the nervous system and edited jointly with Lord Brougham, Paley's *Evidences of Natural Religion*. Bell was one of the eight distinguished men selected to write the celebrated *Bridgewater Treatises*, his contribution being *The Hand Its Mechanism and Vital Endowments, as Evincing Design* (1834). Among his principal works are *The Anatomy of the Brain Explained in a Series of Engravings* (1802), *A Series of Engravings Explaining the Course of the Nerves* (1804), *Essays on the Anatomy of Expression in Painting* (1806), posthumous edition, much enlarged, entitled *The Anatomy and Philosophy of Expression as Connected with the Fine Arts* (1844), *A System of Operative Surgery* (1807-09, 2d ed, 1814), *Anatomy of the Brain* (1811), *Dissertation on Gunshot Wounds* (1814), *Anatomy and Physiology of the Human Body* (1816), various papers on the nervous system, in the *Philosophical Transactions*, *Exposition of the Natural System of the Nerves of the Human Body* (1824), *Institutes of Surgery* (1838), *Animal Mechanics*, contributed to the *Library for the Diffusion of Useful Knowledge* (1828), *Nervous System of the Human Body* (1830). Consult *Correspondence of Sir Charles Bell* (London, 1870).

BELL, CHARLES FREDERIC MOBERLY (1847-1911) An English writer and newspaper director, born in Alexandria, Egypt. Educated at a private school in Lancashire, England, he early returned to Egypt, where he became correspondent for the London *Times*. During this period he published three books *Khedives and Pashas* (1881), *Egyptian Finance* (1887), *From Pharaoh to Fellah*, a series of historical and descriptive sketches (1888). As correspondent of *The Times* he made himself thoroughly acquainted with the condition of Egyptian politics and was able through his letters to influence English public opinion. Among

other events he described the revolt of Arabi Pasha, the bombardment of Alexandria, and the campaign of Tel-el-Kebir. Presently, the affairs of *The Times* having fallen into a critical condition, Bell was recalled from Egypt to become manager of the paper. Due to his efforts, *The Times* was relieved of its embarrassments and put upon a basis of enlarged usefulness. In a second crisis, occurring in 1908, he also took a prominent part. Of the Times Publishing Co., Limited, which was then formed, he became managing director. Through his dealings with the staff of permanent and special correspondents abroad, Bell kept in close touch with the handling of news and the editorial department, as well as with the business interests of *The Times*. He is largely responsible for the successful effort to establish the legality of newspaper copyright not only on editorial matter but also on news writing. Among enterprises undertaken by him were the establishment of The Times Book Club, and the publication of *The Times Atlas* and *A History of the South African War*.

BELL, CLARK (1832-) An American lawyer and authority on medical jurisprudence, born at Whitesville, N. Y. Admitted to the bar in 1853, he became eight years later assistant district attorney of Steuben County in his native State. Later, as attorney of the Union Pacific Railway, he drew up the act which Congress passed to aid its construction. In 1883 he began a long service as editor and publisher of the *Medico-Legal Journal*. For 16 terms he was president of the Medico-Legal Society and was the founder of the American Congress on Tuberculosis. He was a delegate of the United States to the International Medical Congress at Paris in 1900 and to that held at Lisbon in 1906 and was made a member of many foreign as well as American learned societies. He is the author of *Bell's Medico-Legal Studies* (11 vols., 1893 et seq.), *Judicial History of the Supreme Court of the States and Provinces of North America* (1895 et seq.), *Spiritism, Telepathy, and Hypnotism* (1902, 2d ed, 1904).

BELL, CURRER The name under which Charlotte Brontë first wrote.

BELL, DIGBY (VALENTINE) (1849-). An American actor and comic-opera singer, born in Milwaukee, Wis. For a time he was engaged as a broker and as a steamship passenger agent, then he studied singing in Naples, where he took leading parts in operas. As an actor he made his first appearance at Malta in 1876. He returned to this country to sing in concert and in comic opera—touring the United States and Canada with Augustin Daly, the McCaul Opera Company, and the Duff Opera Company, and having especial success as the admiral in *Pinafore*, as Ko-Ko in *The Mikado*, and in the *Prates of Penzance* and *Patience*. He starred in *Tar and Tartan*, was for a while with Lillian Russell's company, in 1903 played Sam Weller in *Mr Pickwick* (with De Wolf Hopper), and in 1910-12 appeared in a notable revival of *The Mikado*.

BELL, ELLIS The pen name of Emily Bonte.

BELL, GEORGE JOSEPH (1770-1843) A Scottish lawyer, brother of Sir Charles Bell. He was born in Edinburgh and was admitted to the bar in 1791. Acknowledged one of the greatest masters of commercial jurisprudence of his time, and in particular of that department which relates to the laws of bankruptcy, he was in 1822

appointed professor of Scottish law in Edinburgh University, and in 1823 a member of the commission for inquiring into Scottish judicial proceedings. Subsequently he was a member of a commission to examine into and simplify the mode of procedure in the Court of Session. On the report drawn up by Bell was founded the Scottish Judicature Act, prepared by him, which effected many important changes in the forms of process in the superior courts of Scotland. Appointed in 1831 one of the clerks of the Court of Session, he was in 1833 chairman of the royal commission to examine into the state of the law in general. He also prepared a bill for the establishment of a court of bankruptcy in Scotland. His *Commentaries on the Laws of Scotland and on the Principles of Mercantile Jurisprudence* (1826, 7th ed 1870), attained the highest reputation, ranking with the *Institutes of Lord Stair*. He also published *Principles of the Law of Scotland* (1839).

BELL, HENRY (1767-1830) A Scottish engineer, who probably introduced steam navigation into Europe. He was born at Torphichen Mill, Linlithgow, and in 1783 was apprenticed to his uncle, a millwright. He was instructed in ship modeling at Borrowstounness and completed his knowledge of mechanics at Bell's Hill. Removing to London, he was there employed by the celebrated Rennie. About 1770 he returned to Glasgow and in 1808 removed to Helensburgh, where he kept the principal inn and devoted himself to mechanical experiments, chiefly with the steam engine. In January, 1812, a small vessel, called the *Comet*, with an engine constructed by Bell, was launched on the Clyde with success—the first on European waters. A monument has been erected to his memory at Duglass Point, on the Clyde. See **STEAM NAVIGATION**.

BELL, HENRY GLASSFORD (1803-74) A Scottish lawyer and author. He was born in Glasgow and studied at Edinburgh. In 1828 he founded the *Edinburgh Literary Journal*. He was admitted to the bar in 1832, was appointed sheriff-substitute of Lanarkshire in 1838 and in 1867 sheriff-principal. He was a president of the Athenæum, a founder of the Royal Scotch Academy, and a lecturer before the Philosophical Institution. He was considered the best Scottish mercantile lawyer of his time. His publications included a vindication of Mary, Queen of Scots (2 vols, 1828-31), *Summer and Winter Hous* (1831), *My Old Porripho* (1832)—both collected by Bell from the *Literary Journal*—and *Romances and Minor Poems* (1866).

BELL, HENRY HATWOOD (1807-68) An American naval officer, born in North Carolina. He entered the navy as midshipman in 1823, was for many years connected with the East India Squadron and in 1856 commanded a vessel of the squadron which destroyed the barrier forts, near Canton, China. In 1862 he was appointed fleet captain of the West Gulf Squadron and took a prominent part in the passage of Forts St Philip and Jackson and the capture of New Orleans. He was, for a time in 1863, in command of the West Gulf Squadron. In 1865 he was assigned to the command of the East India Squadron and in 1866 was promoted to be rear admiral. He was drowned at the mouth of the Osaka River, Japan.

BELL, HENRY THOMAS MACKENZIE (1856-) An English poet and critic, born in

Liverpool, March 2. He wrote several volumes of sincere verse. *The Keeping of the Vow* (1879), *Verses of Varied Life* (1882), *Old Year Leaves* (1883), *Spring's Immortality and Other Poems* (1896), *Pictures of Travel and Other Poems* (1898). In 1900 appeared a collection of his poems, edited by J. J. Nesbitt. Bell contributed to many periodicals, to the *Dictionary of National Biography*, and did notable critical and biographical work on Victorian authors, as in *Charles Whitehead* (1884, new ed, 1894), *Christina Rossetti* (4th ed, 1898), and later he published *Collected Poems* (1901), *John Clifford God's Soldier* (1908), *For God, and for the Commonwealth* (1909). In 1913 he edited the *China Year Book*.

BELL, JAMES FRANKLIN (1856-) An American soldier, born at Shelbyville, Ky. He graduated at West Point in 1878 and served on the plains with the Seventh Cavalry. He served in the Spanish-American campaign in the Philippines and against the natives. In 1903 he became commandant of the Infantry and Cavalry School and Staff College at Fort Leavenworth. He succeeded General Bates as chief of staff in April, 1906. After the San Francisco earthquake he had charge of the distribution of supplies and of the garrisoning of the ruined city. He was made a major general in 1907 and appointed commander of the Philippine division in 1911.

BELL, JAMES MONTGOMERY (1837-) An American soldier, born in Williamsburg, Pa. He graduated at Wittenberg College in 1862, entered the Federal army as first lieutenant of volunteers, and served throughout the Civil War. From 1866 to 1898 he served against the Indians on the frontier. In October, 1899, he was sent to the Philippine Islands, where in March, 1900, he was placed in command of the Third District of the department of southern Luzon, and in April was appointed Military Governor of the same district. He retired in 1901, with the rank of brigadier general.

BELL, JOHN (1691-1780) A Scottish traveler. He was born in Anternomy and was educated for the medical profession. In 1714 he went to St Petersburg and soon afterward was appointed physician to an embassy from Russia to Persia. In 1719 he was sent to China through Siberia and in 1738 went on an embassy to Constantinople, where he settled for some years as a merchant. In 1747 he returned to Scotland. His *Travels from St Petersburg to Various Parts of Asia* was published at Glasgow in 1763.

BELL, JOHN (1763-1820) Brother of Sir Charles Bell. A Scottish surgeon. He was born in Edinburgh, studied under the celebrated Black, Cullen, and Monro *secundus*, and while attending the anatomy classes of Dr Monro, first conceived the idea of teaching the application of the science of anatomy to practical surgery. He commenced in 1786 lecturing in Edinburgh on surgery and anatomy, and in 1793 published the first volume of his *Anatomy of the Human Body*. In 1797 appeared the second volume, and in 1802 the third. A volume of anatomical drawings, illustrative of the structure of the bones, muscles, and joints, was published in 1794, another volume on the arteries, illustrated by his brother Charles, appeared in 1801. In 1798 Bell attended the seamen of Lord Duncan's fleet wounded at Camperdown, and in 1800 he published a *Memorial*

Concerning the Present State of Military Surgery His *System of the Anatomy of the Human Body* and his *Discourses on the Nature and Cure of Wounds* (1793-95) were translated into German. Early in 1816 he was thrown from his horse, and his health declining, he went to Paris and thence to Italy. He died in Rome of dropsy. Besides the works mentioned, he was the author of *The Principles of Surgery* (1801-07, new ed. by his brother, Sir Charles Bell, 1826). A posthumous work, entitled *Observations on Italy*, was published (1825) by his widow.

BELL, JOHN (1797-1869). An American statesman. He was born near Nashville, Tenn., graduated at Cumberland College (now Nashville University) in 1814, studied and practiced law, and in 1817 was elected to the State Senate. He served in Congress from 1827 to 1841, for 10 years as chairman of the Committee on Indian Affairs. He supported General Jackson in the presidential campaign of 1832, but in 1834 joined the newly established Whig party and was elected as its representative, over James K. Polk, to the Speakership of the House. In 1841 he became a member of President Harrison's cabinet, as Secretary of War, but, with the rest of the cabinet, excepting Webster, resigned (September 11) on account of the rupture between President Tyler, who had succeeded Harrison, and the Whig organization. From 1847 to 1859 he was a member of the United States Senate. In 1860 he was nominated for the presidency by the Constitutional Union party (q.v.), and in the ensuing election received the electoral votes of Kentucky, Tennessee, and Virginia. At first, though strongly opposed to the policy of "coercion," he deprecated secession and seemed disposed to support President Lincoln, but he soon gave his adherence to the cause of the Confederacy and advised his State to withdraw from the Union.

BELL, JOHN (1811-95). An English sculptor, born at Hopton, Suffolk, and educated at the Royal Academy schools. His early work was vigorous and natural at a time when classical principles still held sway, but his power declined in later life. Among his statues are those of Lord Falkland and Sir Robert Walpole (1854) in St. Stephen's Hall at Westminster. One of his best-known designs is a monument to the Guards who fell in the Crimea, in Waterloo Place. Another is the Wellington Monument at the Guildhall. In decorative art he also distinguished himself. He was one of the sculptors of the Albert Memorial in Kensington Gardens, London, which was unveiled in 1873, his work being the group representing the United States directing progress of America. A large copy of this in terra cotta is in Washington.

BELL, JOHN-JOY (1871-). A Scottish journalist and author, born in Glasgow. Educated at the University of Glasgow, he became known soon after his graduation for activity in journalism and novel writing. His first book, *The New Noah's Ark*, was published in 1898. This was followed by several other books, until 1902, when his *Wee Mac Gregor* established his reputation as a new Scottish humorist in Great Britain and the United States. This book was followed by many others, among which may be mentioned *Misses McLeerie* (1903), *Wee Mac Gregor Again* (1904), *Joseph Redhorn* (1908), *Oh! Christina!* (1909), *The*

Kingdom of Dreams (1911), *The Best Man* (1911), *Courtin' Christina* (1913), and a dramatization of *Wee Mac Gregor*, in 1912.

BELL, JOHN KEBLE (1875-) An English novelist and playwright, born at Basingstoke, Hampshire. He was educated at Wantage and at Worcester College, Oxford. Beginning newspaper work in London on the staff of the Press Association, he was editor of the *Sketch* in 1902-04, and dramatic critic of the *Daily Mail* in 1904-08. Under the pen name of "Kemble Howard" he wrote the following plays: *Compromising Martha* (1906), *The Dramatist at Home* (1900), *The Girl Who Couldn't Die* (1911), *The Embarrassed Butler* (1912). His other publications and novels include *The Chequer Papers* (1901), *Love and a Cottage* (1903), *The God in the Garden* (1904), *Love in June* (1905), *Bachelor Girls* (1905), *The Cheeiful Knave* (1910), *One in the Family* (1911).

BELL, LILLIAN (MRS A. H. BOGUE) (1867-) An American author. She was born at Chicago, Ill., and when only eight years of age began her literary career. As a constant contributor to magazines and a writer of many books, she became well known. Over 600 author's readings, in all the principal cities of the United States, were given by her, and on a notable occasion, in 1907, she appeared with James Whitcomb Riley and John Fox, Jr. During a four years' residence abroad she traveled extensively. Among her writings are *Love Affairs of an Old Maid* (1893), *A Little Sister to the Wilderness* (1895), *The Instinct of Steppfatherhood* (1898), *The Expatriates* (1900), *Abroad with the Jummies* (1902), *The Interference of Patricia* (1903), *At Home with the Jardines* (1904), *Why Men Remain Bachelors, and Other Luxuries* (1906), *Concentrations of Bee* (1909), *Angela's Quest* (1910). Although popular, her work is marked by a certain crudity, which is, however, characteristic of a well-known type of Western writers, and is perhaps best exemplified in her novel *The Expatriates*.

BELL, SIR LOWTHIAN (1816-1904). An English manufacturer and politician, born at Newcastle-on-Tyne. He was mayor of Newcastle in 1854 and in 1862 member of Parliament for Hartlepool from 1875 to 1880, and in 1885 was created a baronet. He was the founder of the Port Clarence Iron Works, on the Tees, and wrote *The Chemical Phenomena of Iron-Smelting* (1872), in which he demonstrated the practicability of the hot-blast furnace, and showed how far furnace dimensions could be increased for the sake of fuel economy, and a *Report on the Iron Manufacture of the United States, and a Comparison of it with that of Great Britain* (1877).

BELL, ROBERT (1800-67). An Irish writer, the son of a magistrate. He was born in Cork, Jan. 16, 1800, and when very young obtained an appointment in a government department in Dublin. He was for a time editor of the government journal, *The Patriot*. In 1828 he removed to London and was appointed editor of *The Atlas* newspaper. In 1838, in conjunction with Sir Edward Bulwer Lytton and Dr. Lardner, he started *The Monthly Chronicle* and afterward became editor of it. In 1841 he retired from *The Atlas*. For Lardner's *Cyclopaedia* Bell wrote "The History of Russia" (1836-38) and *The Lives of the English Poets* (1839), completed Southey's *Naval History* (1837), left unfinished by the author, and wrote a con-

tinuation of Mackintosh's *History of England* (1853). At the London theatres three five-act comedies were produced by him. He was author, also, of a collection of tales, *Hearts and Altars* (1852), a novel, *The Ladder of Gold* (1856), *Life of Canning* (1846), *Outlines of China* (1845), *Memorials of the Civil War*, consisting of the Fairfax correspondence (1847), and *Wayside Pictures through France, Belgium, and Holland* (1858). But the work by which he is chiefly remembered is an annotated edition of the English poets (24 vols., 1854-57). He died April 12, 1867.

BELL, ROBERT (1841-) A Canadian geologist, born in Toronto, Ont. He studied at McGill University, and in 1857 was appointed to the staff of the Canadian Geological Survey, of which he became the senior member and assistant director. Throughout the Dominion he made very extensive topographical surveys and explorations. He was medical officer and geologist on the *Alexis* Expedition to Hudson Strait and Bay in 1885, in 1888-89 was a member of the commission appointed by the government of Ontario to report on the mineral resources of the province and in 1895 surveyed the Noddawai River (emptying into James Bay), the western and chief branch of which was named after him. In addition to this work he was also, in 1863-67, professor of chemistry and natural sciences in Queen's University (Kingston). He published upward of 180 papers and reports on topics connected with exploration, and the scientific and economic features of Canadian geology.

BELL, THOMAS (1792-1880) An English naturalist. He was born at Poole and died at Selborne. From 1816 to 1861 he lectured on dental surgery and comparative anatomy at Guy's Hospital, London. In 1836 he became professor of zoology in King's College, London. He was the author of several works on British animals, especially *History of British Quadrupeds* (London, 1837, 10v ed., 1874), and similar works on *Reptiles* (1839) and *Crustacea* (1853). He played an important part in the development of scientific societies in London. At the age of 70 he retired to Selborne, where he issued in 1877 a classical edition of White's *Natural History of Selborne*. His original scientific writings relate chiefly to fossil Chelonia and Crustacea. Consult *Nature*, vol. xxi, pp. 473, 499 (London, 1880).

BELLA, STEFANO DELLA (1810-64) An Italian designer and etcher. He was born in Florence, studied there and at Rome, and went in 1839 to Paris, where he remained until 1850. Besides executing many other works, he was commissioned by Cardinal Richelieu to engrave a "Siege of Arras." The remainder of his life was spent at Florence. He executed upward of 1400 different subjects—battles, sea-pieces, landscapes, and animals, all of which are characterized by freedom and delicacy and give evidence of high imagination and much careful manipulation. They are also of great value for the knowledge of the history of civilization in the seventeenth century. One of his most admired works is a view of the Pont Neuf, Paris (1846). His excellent drawings are often ascribed to Callot (q.v.), who exercised the greatest influence upon his art.

BELLABELLA. See KWAKUTUL.

BELLACOO'LA. A detached Salishan tribe, living upon the Bellacoola River, which empties

into Bentinck Arm, about lat 52° N., British Columbia. Their name is of Kwakutl origin. Epidemics and diseases introduced by the white men have now reduced the tribe to a few hundred souls.

BELLADON'NA (for derivation see below), DWALE, or DEADLY NIGHTSHADE (*Atropa belladonna*). A plant of the natural order Solanaceae. It is an herbaceous perennial, growing up every year as a bush, from 2 to 6 feet high, with ovate entire leaves, and bell-shaped flowers of a lurid purple color, which are larger than those of the common harebell, stalked and solitary in the axils of the leaves. It produces berries of the size of a middle-sized cherry, which, when ripe, are of a shining black color and of a sweetish and not nauseous taste, although the whole plant has a disagreeable, heavy smell. All parts of the plant are narcotic and poisonous, and fatal consequences not infrequently follow from eating its berries. Its roots have sometimes been mistaken for pansies. The name *Belladonna*, "fair lady," is supposed to have originated in the employment of the juice for staining the skin or from its power of dilating the pupils and giving a glistening appearance to the eyes. The name "dwale" is thought to be derived from the same root with the French *déuil*, "mourning"—an allusion to the same qualities that have obtained for the plant the appellation of deadly nightshade. Others assert that it comes from the Anglo-Saxon and is connected with the word "dull," on account of its stupefying effects. *Atropa* is from *Atropos*, one of the Fates. The other species of *Atropa* are South American. *Belladonna* owes its powerful effect on the animal system to the alkaloid atropine (qv). *Belladonna* is used in medicine in extracts both of the leaves and root. Externally as a plaster or liniment it relieves inflammatory pains and neuralgias. Internally it is of great value in relieving spasmodic affections of the respiratory passages, such as asthma, bronchitis, and whooping cough. On the intestines it acts as an antispasmodic, relieving colic and checking peristalsis. It is almost a specific in the nocturnal incontinence of children.

BELLADONNA LILY. See AMARYLLIS.

BELLAGIO, bel-lä'jō (It. *bello*, beautiful + *agio*, rest, repose, comfort). A village of the province of Como, north Italy, celebrated by historians, artists, and novelists. It is at the most beautiful point on Lake Como, where a wooded promontory separates the two arms of the lake (Map Italy, D 2). There is regular steamboat communication with Como and with Lecco, and the village contains excellent hotels, beautiful gardens, an English church, and many magnificent villas. Pop., 1901 (commune), 3538. 1911, 3776.

BELLAIRES, bel-lä'r'. A city in Belmont Co., Ohio, on the Ohio River, and on the eastern boundary of the State, 4 miles south of Wheeling, W. Va. It is also on the Baltimore and Ohio, the Cleveland and Pittsburgh Division of the Pennsylvania Railroad, the Cleveland, Lorain, and Wheeling, and the Ohio River and Western railroads (Map Ohio, J 5). Here the Baltimore and Ohio Railroad crosses the river on a fine iron bridge. The city has extensive manufactures of glass, steel, enamel ware, and iron. It is in a rich agricultural district, producing vegetables, fruit, coal, and clay. Bellaires adopted the Federal plan of government in 1910, and

owns its water works Pop, 1890, 9934, 1900, 9912, 1910, 12,946

BELLAMIJ, bē'l'a-mi, or **BELLAMY**, JA-KO-VUS (1757-86) A Dutch poet. He was born at Flushing (Vlissingen) and studied theology at Utrecht. He was a distinguished poet, and the revival of Netherlandic literature was due probably to his influence and that of Van Alphen. His principal works include *Gezangen myner Jeugd* (published under the pseudonym of Zelands, 1782, 2d enlarged ed under the name of Bellamy, 1790), *Vaderlandsche Gezangen* (1783-85). His most celebrated poem, "Roosje," appeared in the collection entitled *Proeven voor het verstand den smaak en het hart* (1784). A complete edition of his poems was published by Loosjes (1842).

BELLAMONT, bē'l'a-mōnt, or **BELLO-MONT**, RICHARD COOTE, EARL OF (1636-1701). A Colonial Governor of New York, Massachusetts, and New Hampshire, from 1697 to 1701. He became a member of the English Parliament in 1688, and in the same year was prominent as a supporter of William, Prince of Orange, who in 1689 made him Earl of Bellamont and appointed him treasurer and receiver general to Queen Mary. In 1695 he was appointed Governor of New York, and in 1697 received a commission as Governor of New York, Massachusetts, and New Hampshire, but did not arrive in America until the following year. He was expressly directed to suppress illegal trade and put an end to piracy, and in 1696, with King William's sanction, he organized a company which sent out Captain Kidd (q v) against the freebooters. By many, accordingly, Bellamont has been unjustly accused of having connived at Captain Kidd's own piracies, though it was he who finally arrested him and sent him to England for trial. Bellamont's rigid enforcement of the laws, his sympathy with the democratic as opposed to the aristocratic party, and his strict policy with regard to land grants aroused much opposition among certain classes in New York, though he was very popular in Massachusetts and in New Hampshire. He has been spoken of as "the first actual friend of the people and sympathizer with honest democratic forms of government who administered the affairs of New York under the English Crown." Consult Frederic De Peyster, *The Life and Administration of Richard, Earl of Bellamont* (New York, 1879).

BELLAMY, EDWARD (1850-98). An American journalist and author. He was born at Chicopee Falls, Mass., studied at Union College, and in Germany, in 1871 was admitted to the bar and in the same year became a member of the staff of the New York *Evening Post*. Subsequently he was a critic and editorial writer for the Springfield (Mass.) *Union* and with others established at Springfield the *Daily News*. His best-known work is *Looking Backward*, or, 2000-1887 (1888), which has had an extraordinary sale and has been translated into many languages. Although not written for such a purpose, the book was extensively received as a gospel of Socialism, and led to the organization of many Bellamy clubs, and of the Nationalist party, in the promotion of which Bellamy himself was active as a writer and lecturer. *Equality* (1897), the sequel to *Looking Backward*, is an inferior volume on similar lines. Bellamy further published sociological essays, short stories, and some longer works of fiction,

including *Dr Heidenhoff's Process* (1879), *Miss Ludington's Sister* (1884), and *The Duke of Stockbridge*, the last appearing three years after his death, which occurred on May 22, 1898, at Chicopee Falls. W D Howells has declared that in Bellamy America is "rich in a romantic imagination surpassed only by that of Hawthorne."

BELLAMY, GEORGE ANNE (c 1731-88). An English actress. She was born, by her own account, at Fingal, Ireland. "George Anne" was a name given by mistake for Georgiana. She was the illegitimate daughter of Lord Tyrrawley and was educated by him. Choosing, however, to live with her mother, she made the acquaintance of Mrs Woffington and other actors and was engaged at Covent Garden to play Monimia in *The Orphan* (November, 1744). Her success thereafter was rapid. Her Belvidera, in *Venue Preserved*, and her Desdemona were much admired. She participated in the rivalry for popular favor in *Romeo and Juliet* in 1750, playing with Garrick at Drury Lane, while Barry and Mrs Cibber played at Covent Garden. She was thought the more charming of the Julietes. Mrs Bellamy was extremely popular, and until she forfeited her character by her various liaisons, was received in the best society. She lost her beauty early, and her later life was unhappy, apparently through her own extravagance and reckless habits. Her last appearance was at Drury Lane May 24, 1785, in a benefit to herself, in which she was unable to act, but spoke a short address to the spectators. Consult *An Apology for the Life of George Anne Bellamy, late of Covent Garden Theatre, Written by Herself*, 6 vols (London, 1785), Matthews and Hutton, *Actors and Actresses of Great Britain and the United States* (New York, 1886), and Galt, *Lives of the Players* (London, 1831).

BELLAMY, JOSEPH (1719-90). An American theologian, born at New Cheshire, Conn. He graduated at Yale in 1735, was licensed to preach in 1737, and in 1740 became pastor of the Congregational Church of Bethlehem, Conn. He was prominent as an itinerant preacher during the "great awakening" of 1740-44. Subsequently he established in his parish a noted theological school, in which were trained many distinguished New England divines. As a pulpit orator he was by some esteemed the equal of Whitefield. As a writer he greatly assisted by his scholarship and logic in laying the foundations of what became known as the New England theology. His system of divinity was much like that of his friend and associate, Dr Jonathan Edwards. He received the degree of doctor of divinity from the University of Aberdeen. His publications include *True Religion Delineated* (1750), *The Nature and Glory of the Gospel* (1762), and *The Law Our Schoolmaster* (1762). His *Complete Works* were published in 1811-12 (3 vols, New York) and 1850 (2 vols, Boston, with a memoir by Dr Tryon Edwards).

BELL AND EVERETT PARTY. See CONSTITUTIONAL UNION PARTY.

BELLANGÉ, bē'l'an'zhā' (JOSEPH LOUIS) HIPPOLYTE (1800-66). A French battle painter. He was born in Paris, studied with Gros, and practiced first as a lithographer. His first marked success in painting was "The Return of Napoleon from Elba," exhibited in 1834. From 1837 to 1854 he was director of the museum at Rouen. His principal works are at Versailles,

in the Louvre, and in the provincial museums, as at Amiens, Bordeaux, Rouen. They are chiefly battle scenes and reveal remarkable insight into the human side of military life as well as a close familiarity with all the details of battle. The following may be cited as examples: "Battle of Fleurus" (1836), "Battle of Wagram" (1837), "Soldier Returning" (1842), "Kellermann's Charge at Marengo" (1847), "Passage of the Guadarrama" (1852), "Battle of the Alma" (1855), "Assault on Malakoff" (1859), "Two Friends" (1861), "Cuirassiers at Waterloo" (1865), "The Guard Dies," his last work (1866).

BELL ANIMALCULE. See VORTICELLA.

BELLARMINE, bēl'lar-mīn or -mēn. The name of a jug devised by the Dutch Protestants in ridicule of Cardinal Bellarmine. Its form was after the churchman's figure, and his face was on it.

BELLARMINE, bēl'lar-mīn or -mēn. In Italian form, BELLARMINO, bēl'lar-mē'nō, ROBERTO FRANCESCO ROMOLO (1542-1621). A Roman Catholic theologian. He was born at Monte Pulciano, in Tuscany, Oct. 4, 1542. He entered the order of Jesuits in 1560 and was distinguished among his confrères by the zeal with which he studied theology, the Church Councils, the Fathers, Hebrew history, and the canon law. In 1563 he gave lessons in polite literature and astronomy at Florence, and in rhetoric at Mondovì, 1564-67. In 1569, when he went to Louvain as professor of theology, he began that long controversy with "hectics" which formed the main business of his life. From 1576 to 1589 he was professor at the Roman College. Then he went to France and was in Paris at the time of the siege by Henry IV. In 1591 he was back in Rome and shared in the revision of the Vulgate. In 1592 he became rector of the Roman College. In 1599 he was made a Cardinal against his own inclination, and, though himself a Jesuit, he honorably sided with the Dominicans against Molina's view in a noted controversy. From 1602 to 1605 he was Archbishop of Capua. After the death of Clement VIII (1605) he declined promotion to the papal chair, but was induced by Paul V to hold an important place in the Vatican, where he remained until the time of his death, which took place in the novitiate house of the Jesuits, Sept. 17, 1621. In his work, *De Potestate Pontificis in Rebus Temporalibus* ('On the Pope's Power in Secular Matters'), he advocated the doctrine of the spiritual supremacy of the Pope over all kings. On this account the book was condemned as treasonable in Paris, Venice, and Mainz.

His chief work contains the disputations held in the Roman College, 1576-81, *Disputationes de Controversiis Christianæ Fidei adversus hujus Temporis Hæreticos* (3 vols., Rome, 1581, 4 vols., Prague, 1721, 4 vols., Mainz, 1842). These disputations are regarded by Catholics as the best arguments for their tenets. There can be no question of their merits with regard to erudition and adroitness in controversy, but such Protestant opponents, and he had many of them, as Gerhard, in his *Bellarmino Orthodoxus Testis* (Jena, 1631-33), and Dallæus tried to show that many of the conclusions are far from being sound or logical. Industry, clearness, and acuteness are the chief merits of Bellarmine's great work. He was also conspicuously fair and complete in his statement of his opponents'

positions. Among his other writings the most able is the *Christianæ Doctrinæ Applicatio*, originally written in Italian and now translated into all the European languages. Pope Urban VIII, at the instigation of the Jesuits, declared Bellarmine to be a "faithful servant of God", but his canonization as a saint has hitherto been opposed. Curiously enough, his autobiography (Rome, 1675; Louvain, 1753; Ferrara, 1762) stood in the way. The book had become very scarce when J. I. von Dollinger and F. H. Reusch reprinted it, *Die Selbstbiographie des Kardinals Bellarmine, lateinisch und deutsch, mit geschichtlichen Erläuterungen* (Bonn, 1887).

Among his famous controversies were those with James I. of England and the Scottish jurist William Barclay, of Aberdeen. His attitude towards the revolutionary scientific theories of his time was more moderate than is commonly supposed. He was a personal friend of Galileo, who dedicated one of his works to him. Nevertheless, as the most learned and important member of the Sacred College, he was compelled to warn the philosopher against unwarranted theological interpretations of the new Copernican theory. Bellarmine did not personally reject that theory, but he maintained that it should be received only as a theory until the scientific proof of it was complete and final. His works, edited by Justin Fèvre, were published in Paris (12 vols., 1873-74). Some of his writings have been translated into English, e.g., *The Seven Words from the Cross* (London, 1870). For his biography, consult J. B. Condeire (Paris, 1893).

BELLARY, bel-lā'rē, or **BALLARI**. The capital of the district of the same name in India, 380 miles southeast of Bombay and 270 miles northwest of Madras, in lat 15° 8' N and long 76° 59' E (Map India, C 5). It is an important junction of the railroads to Bombay and Goa, is one of the principal military stations in the presidency of Madras, and is connected by good roads with Belgaum, Bangalore, Hyderabad, and Madras. The fort, dating from the sixteenth century, stands on a rock 2 miles round and 450 feet high, and is supplied with water from tanks excavated in the solid granite. Besides the fort and adjacent cantonment, Bellary includes a native town with fine bazaars. It has a considerable trade in cotton and cotton cloth which is manufactured in the town. Pop., 1891, 59,500, 1901, 57,700, 1911, 58,247.

BEL'LASTON, LADY. A character in Fielding's novel, *Tom Jones*. She is the mistress of the hero and for some time supports him.

BELLAVITTS, bēl'lā-vē'tis, COUNT GRUSTO (1803-80). An Italian mathematician. He was born at Bassano, near Padua, and was for years professor of mathematical analysis at Padua. He contributed extensively to modern geometry and is especially known for his work in projective geometry and his method of equipollence. His published works include text-books of descriptive geometry (Padua, 1851, 2d ed., 1868), analytical geometry (Padua, 1870), and other valuable treatises.

BELLAY, bē'lā', JOACHIM DU (c.1524-60). A French poet, member of the Pléiade (qv), known as "The French Ovid." He was a cousin of Cardinal du Bellay, and was born in Paris of noble family, but poor and self-educated. His friendship with Ronsard dates from 1548 and led to his *La défense et l'illustration de la langue française* (1549)—an admirable piece of literary

criticism, followed by a collection (*Recueil*) of poems and another (*L'Olive*) of love sonnets (1550). He went with Cardinal du Bellay to Italy (1550), published a translation of two books of the *Æneid* (1552), returned after a mysterious love affair, in 1555, to Paris, where he became Canon of Notre-Dame, went to Venice, published poems, Latin and French (*Les antiquités de Rome*), in 1558, and his best collection, *Les regrets* (1559). He died as Archbishop-designate of Bordeaux while preparing *Les feux rustiques* for the press, at the height of advancing powers. In sublimity and pathos he is first in the Pléiade. Spenser translated 60 of his Roman sonnets into English (1591). The best edition of Bellay is by Marty-Laveaux (2 vols., 1866). Bellay's *Letters* are edited by Nohac (1883). There is a *Life* by Seche (1880). Consult Pater, *Studies in the History of the Renaissance* (London, 1888), and Seche, *Œuvres choisies avec notes* (Paris, 1894). A statue of Bellay was unveiled at Ancenis in 1894, with noteworthy addresses by Heredia and Brunetière.

BELLBIRD The English name of various tropical birds whose voices suggest the tones of a bell, specifically, a chatterer (family Cotingidae), called "campanero" by Spanish-speaking people of the lower Amazon and the Guianas, where it lives, and *Chasmorhynchus niveus* by ornithologists. It resembles the waxwings (Ampelidae) in form, but is pure white, and feeds mainly upon forest fruits gathered mostly in the high tree tops, where small flocks move about all day, but are by no means common, and at midday, when most other birds of the

AMAZONIAN BELLBIRD
Showing the caruncle

forest are silent, its note rings out "loud and clear like the sound of a bell. You hear his toll, and then a pause for a minute, then another toll, and then a pause again, and then another toll, and so on." So Waterton described it, others have likened the sound to blows upon an anvil, but all agree that it can be heard at an immense distance and is very striking. Another remarkable feature of this bird and its relatives, several of which live in South and Central America, and have more or less bell-like voices, are the fleshy appendages (*caruncles*) about the face, especially conspicuous in the present species. From its forehead depends a slender caruncle (see illustration), jet black but dotted all over with starlike tufts of feathers. It was long believed that this caruncle was concerned in the singular voice of the bird, because Charles Waterton (*Wanderings in South America*, London, 1825) asserted that it could be inflated from the palate and would stand erect like a rigid spire above

the beak to the height of 3 inches. This seemed plausible, but has been proved erroneous by observation upon birds kept in captivity, particularly about 1881 by J. J. Quelch, a naturalist of Georgetown, British Guiana.

"The caruncle," he says (*The Field*, London, Nov. 26, 1892), "is never carried upright. The erect position, in fact, is an impossible one, since the organ is made up of very fine elastic tissue, which causes it to depend lower and lower over one side of the beak during extension. When the bird is about to utter its characteristic notes, it slowly becomes elongated, at times as much as 5 inches. At the conclusion of the note the organ may remain extended until the next note, or may be partially retracted, but when a long interval takes place the structure is always allowed to shrink up to about half an inch or an inch in length, and it then hangs against the beak. During extension the caruncle is never inflated with air, but is always in a state of collapse." Quelch then adds a description of the curious behavior of the bird in uttering its ringing notes, which follow great draughts of air into its lungs. A related species of Costa Rica (*Chasmorhynchus tricauculatus*) has three of these elongated caruncles on the head—one on the forehead close to the base of the bill, and one at each corner of the mouth. A Brazilian species (*Chasmorhynchus nudicollis*) is white, with large spaces of naked skin about the eyes, beak, and throat, colored green.

In Australia one of the honey suckers (Meliphagidae) is called bellbird—a small greenish-yellow forest bird (*Manorhina melanophrys*), whose *ching-chang* from the tea-tree "scrub" is welcomed as an assurance that water is near. In New Zealand another honey sucker (*Anthus melanura*), now nearly extinct, is given the name for a similar reason, it is remarkable for decorating its thicket-hidden nest with the most gaudy feathers it can find.

BELL, BOOK, AND CANDLE The excommunication by bell, book, and candle was a solemnity belonging to the Church of Rome. The officiating ecclesiastic pronounced the formula of excommunication, consisting of maledictions on the head of the person anathematized, and closed the pronouncing of the sentence by shutting the book from which it was read, taking a lighted candle and casting it to the ground, and tolling the bell as for the dead. This mode of excommunication appears to have existed in the Western churches as early as the eighth century. Its symbolism may be explained by quoting two or three sentences from the conclusion of the form of excommunication used in the Scottish church before the Reformation. "Cursed be they from the crown of the head to the sole of the foot. Out be they taken of the book of life. And as this candle is cast from the sight of men, so be their souls cast from the sight of God into the deepest pit of hell. Amen." The rubric adds "And then the candle being dashed on the ground and quenched, let the bell be rung." So, also, the sentence of excommunication against the murderers of the Archbishop of Dublin in 1534. "And to the terror and fear of the said damnable persons, in sign and figure that they be accursed of God, and their bodies committed into the hands of Satan, we have rung these bells, erected this cross with the figure of Christ, and as ye see this candle's light taken from the cross and

the light quenched, so be the said accused murderers excluded from the light of heaven, the fellowship of angels and all Christian people, and sent to the low darkness of fiends and damned creatures, among whom everlasting pains do endure." See EXCOMMUNICATION

BELLE ALLIANCE, bél' a'lé-ans', LA (Fr fine union, beautiful alliance) A farm in the province of Brabant, Belgium, 13 miles south of Brussels. It is famous as the position occupied by the centre of the French army in the battle of Waterloo; June 18, 1815. The Prussians gave the name Belle Alliance to this decisive battle, the French named it from Mont-Saint-Jean, the key of the British position, about 2 miles to the north, while the English name, Waterloo (qv), is taken from the village where Wellington had his headquarters

BELLEAU, bē-lō', REXY (1528-77) A French poet, born at Nogent-le-Rotrou. He was a member of the Pleiade (qv), soldier, courtier, and tutor at the court of Lorraine. He made several translations from the classics (*Anacréon*, 1556) and published collections of descriptive and pastoral poetry with intermingled prose under the titles, *Petites inventions* (1557), *Bergerie* (1565), and *Amours et nouveaux échanges de pierres précieuses* (1576). His commentaries on Ronsard's *Amours* showed a remarkable range of classical learning and a delicate taste. He wrote also a rhymed comedy, *La reconnoissance* (*Recognition*), which shows humor and life and marks progress in the French stage. Belleau is the French Heriuck, picturesque, warm, but with a sweetness that dloys and without true taste or deep passion. His works have been collected by Gouveneur (3 vols, 1867) and by Marty Laveaux (2 vols, 1879)

BELLE CHOCOLATIERE, LA, la bēl shō'-kō-lā'tyā' A portrait by Jean Etienne Liotard (qv) of the Princess of Dietrichstein. Before her marriage the subject, Annette Beldaut by name and famous for her beauty, was a humble servant in a Viennese café. It is as such that she is represented in the picture. The latter now hangs in the Dresden Gallery

BELLECK' CHINA A fine grade of porcelain celebrated for its iridescent lustre. The body is Parian (qv), cast in the usual fashion, wet in a plaster mold, then glazed and fired. The lustre is obtained by the application of metallic washes, which are subsequently fired. The inventor of these lustres was a Frenchman, J. J. H. Brianchon, who obtained an English patent in 1857. Until the expiration of his patent they were imported from France. Belleck ware was first produced in England in 1858 by Walter Goss, at Stoke-upon-Trent, but it first became popular at the manufactory in Belleck, county Fermanagh, Ireland, whence its name. A remarkably delicate variety of this ware is known as "egg-shell Belleck"

BELLEFONTAINE, bēl'fōn-tān A city and the county seat of Logan Co., Ohio, on the highest ground in the State, 4 miles (direct) northwest of Columbus, on branches of the Cleveland, Cincinnati, Chicago, and St. Louis, the Ohio Electric, and the Toledo and Ohio Central railroads (Map Ohio, C 5). It has manufactures of carriage and automobile bodies, iron and steel bridges, harness, tools, mattresses, churns, shoe blacking, flour, and cement, and contains a large plant of the Cleveland, Cincinnati, Chicago, and St. Louis Railroad, including its yards and car shops. About 8 miles

from Bellefontaine is the well-known Lewiston reservoir, which has an area of 13,400 acres and a holding capacity of four and a half billion cubic feet. The city was settled in 1818. It is governed by a mayor, elected for two years, two directors, appointed by him, and a city council, elected by the people. There is an administrative board of education, elected by the people. Bellefontaine owns and operates its water works, gas and electric light plants, and sewage system. Pop., 1900, 6649, 1910, 8238

BELLEFONTAINE, BENEDICT A fine old character in Longfellow's "Evangeline," the father of the heroine. Of primitive simplicity, he was so devoted to his Acadie that he died of grief over the expulsion of his people

BELLEFONTE, bēl'fōnt', A borough and the county seat of Centre Co., Pa., 34 miles northeast of Tyrone, on the Pennsylvania, the Bellefonte Central and the Central of Pennsylvania railroads (Map Pennsylvania, F 5). It is a summer resort noted for its fine scenery and a famous spring, which, since its utilization in 1807, has not varied in its enormous outflow, abundantly supplying the borough. Pennsylvania State College is 12 miles from Bellefonte. The borough has a soldiers' and sailors' monument and a statue of war Governor Andrew G. Curtin. The large State Penitentiary, formerly at Pittsburgh, is now situated 4 miles from Bellefonte. The borough has large limestone quarries and limekilns and other important industrial interests represented by pig-iron furnaces, machine shops, match factories, a skewer, and a shirt factory. Settled as early as 1770, Bellefonte was incorporated in 1806. The government is administered by a chief Burgess, elected every three years, and nine councilmen. The water works are owned and operated by the borough. Pop., 1890, 3946, 1900, 4216, 1910, 4145

BELLEGARDE, bēl'gard' (Fr *belle*, fem of *beau*, beautiful + *garde*, protection) A fortress of the second class, perched on an isolated peak, 1380 feet above the sea, in the department of Pyrénées-Orientales, France. It commands the road from Perpignan to Figueras. Here the French under Philip III were defeated by Peter III of Aragon in 1285. It was captured by the Spaniards in 1674 and again by the French under Marshal Schomberg in 1675. After the Peace of Nimègue (1678-79) a regular fortress, with five bastions, was erected here by order of Louis XIV. In 1793 it was blockaded and taken by the Spaniards under Ricardos, but was retaken, 1794

BELLE HÉLÈNE, bēl' a'lēn', LA (Fr The beautiful Helen) An opéra bouffe, words by Meilhac and Halévy, set to music by Offenbach, and first given in 1864

BELLEISLE, bēl'ēl', CHARLES LOUIS AUGUSTE FOUQUET, DUC DE (1684-1761). A French soldier and statesman. He fought bravely in the War of the Spanish Succession (1702-13) and in 1718 against Spain. He became lieutenant general in 1732, took part in the War of the Polish Succession, and negotiated the treaty three years later whereby Lorraine was united to France. As Minister to Austria he showed himself a determined enemy of the Pragmatic Sanction and labored to bring the Elector of Bavaria to the throne. In the War of the Austrian Succession he captured Prague, but, finding himself unable to hold it, executed a masterly retreat to Eger (1742). In 1745 he was a prisoner in the hands

of the English, but was exchanged. He was made successively duke, peer, and lastly Minister of War. In this last capacity he introduced many useful reforms into the army organization, especially during the Seven Years' War. He was elected a member of the Academy. Consult *Mémoires du Duc de Belleisle* (London, 1760), and *Letters* (trans. London, 1759).

BELLE ISLE, bel' î', STRAIT OF The northern entrance to the Gulf of St. Lawrence from the Atlantic Ocean, separating southeastern Labrador from northern Newfoundland (Map Newfoundland, D 1). It is about 80 miles long and from 10 to 15 miles wide. It offers dangers to navigation, yet is traversed by ocean vessels, and lies on the shortest route from the St. Lawrence River to England. See also **BELLE ISLE, NORTH**.

BELLE-ISLE-EN-MER, bel'el'ân'mâr' (Fr.) beautiful island in the sea), known also as Guerveur. An island belonging to the department of Morbihan, France, in the Atlantic, 8 miles south of Quiberon Point (Map France, N, B 5). Its length is 11 miles and its greatest breadth 7 miles. Its climate is remarkably mild. Pop., about 10,000, chiefly engaged in pilchard and sardine fishing. Salt is also made on the island, and excellent draught horses are bred; agriculture is well developed. Its northern extremity is well known to Frenchmen as being Sarah Bernhardt's favorite holiday resort. The chief town is Le Palais, a seaport and fortified place. The island contains many interesting relics of antiquity and is of great interest historically. Admiral Hawke defeated the French fleet off Belle-Isle in 1759, and the English took the island in 1761. It was ceded to France by the Treaty of Paris in 1763.

BELLE ISLE, NORTH, or BELLE ISLE An island in lat 52° N, long 55° 20' W, near the middle of the eastern entrance to the Strait of Belle Isle, which separates northern Newfoundland from southeastern Labrador (Map Newfoundland, E 1). It is nearly 15 miles from either coast and has an area of about 15 square miles. At its southern extremity is a lighthouse with a fixed light, at an altitude of 470 feet, and visible for 28 miles. Below this light, at a height of 128 feet, is a second fixed light. A signal gun is fired every half hour in foggy weather.

BELLENDE, or BALLENDEN, or BALLENTYNE, JOHN A Scottish ecclesiastic, poet, and translator, born about the beginning of the sixteenth century. He was educated at St. Andrews University and in Paris, where he took the degree of D.D. at the Sorbonne. Bellen-den is best remembered by his translations of Boece's *Sootorum Historia* (done in 1533), and of the first five books of Livy (also done in 1533), interesting as specimens of the Scottish prose of that period and remarkable for the ease and vigor of their style. To both of these works are prefixed poetical prologues or prologues. Bellen-den's *Cronicles of Scotland* professes to be a translation of Boece, but is a very free one and contains numerous passages not to be found in the original, so that it is in some respects to be considered almost an original work. The author enjoyed great favor for a long time at the court of James V, at whose request he made these translations. As the reward for his performances he received grants of considerable value from the treasury and afterward was made Archdeacon of Moray and Canon of Ross. He opposed the Reformation

and, becoming involved in ecclesiastical controversy, left his country. According to Lord Dundrennan, Bellen-den was alive in 1587, but according to others he died much earlier. The translation or "traduction" of Livy was first published in 1822 by Mr. Thomas Maitland (afterward Lord Dundrennan), uniform with his edition of the *Cronicles*.

BELLENDE, WILLIAM A Scottish author in the time of Queen Mary and her son James VI. His personal history is obscure, all that we know is the testimony of Dempster (*Hist. Eccl.*) that he was a professor in the University of Paris and an advocate in the Parlement there, and that he was employed in that city in a diplomatic capacity by Queen Mary and also by her son, who conferred on him the appointment of Master of Requests. His first work, entitled *Ciceronis Princeps*, etc., was published in Paris in 1608, his next, *Ciceronis Consul, Senator, Senatusque, Romulus*, in 1612. Of these the first series aimed to collect all Cicero's remarks on royal government, the other dealt with government by the Consuls and the Senate. His next work, *De Statu Præci Orbis*, appeared in 1615 and consists of a condensed sketch of the history and progress of religion, government, and philosophy in ancient times. These three works he republished in a collected form the year after, under the title *De Statu Libri Tres*. His crowning labor, *De Tribus Luminibus Romanorum*, was published after his death (Paris, 1633). The "three luminaries" were Cicero, Seneca, and Pliny, out of whose works he intended to compile, on the same plan as his previous works, a comprehensive digest of the civil and religious history, and the moral and physical science of the Romans. The account of Cicero alone was completed and forms a remarkable monument of Bellen-den's industry and ability, and a treasure-house of the historical information to be drawn from Cicero. "Bellen-den," says Hallam, "seems to have taken a more comprehensive view of history, and to have reflected more philosophically on it, than perhaps any one had done before." Bellen-den's works furnished the materials for Dr. Middleton's *Life of Cicero*, though that learned divine makes no allusion to the forgotten Scot, whom he plundered wholesale. Warton first denounced the theft, which was afterward made clear by Dr. Parr, in his edition of *De Statu*, in three books, published in 1787.

BELLENZ See **BELLINZONA**.

BELLE PLAINE A city in Benton Co., Iowa, 90 miles northeast of Des Moines, on the Chicago and Northwestern Railroad (Map Iowa, E 3). It is the centre of a rich dairy district and has railway repair shops, a brick and tile factory, a brass foundry, a cannery, and a creamery. The water works are owned by the city. Belle Plaine was settled in 1862 and was first incorporated in 1879. Pop., 1900, 3283, 1910, 3121.

BELLEROPHON (probably from its resemblance to the helmet of Bellerophon. See **BELLEROPHON**). A genus of extinct gastropods of the order Aspidobranchiata. It is the type of the family Bellerophonidae, closely related on the one hand to the Pleurotomaridae and on the other to the Fissurellidae. The genus contains about 60 species, of which number one-half are American, the remainder European and Asiatic, and which range through rocks of Ordovician to Permian Age. The shells are globose,

symmetrically coiled in a single plane, with the whorls rapidly enlarging, and the aperture slightly expanded with a thickened margin. The outer margin of the aperture is somewhat sinuate and is provided with a small notch or slit, which is homologous with the slit of *Pleurotomaria* and which served for the passage of the siphons of the living animal. Extending backward from the slit along the median line is the "slit-band," which in some species is replaced by a keel. The genus did not attain any considerable prominence until Carboniferous time, when it became abundant. The best-known American examples are *Bellerophon crassus* and *Bellerophon precariatus*, both common in the coal measures of the Mississippi valley and the Southwest. A great number of species were formerly included under the name of *Bellerophon*, but more careful study has resulted in their distribution under several new generic names and even under other family names. See GASTROPODA.

BELLEROPHON (Gk Βελλεροφόντης, *Bellerophon*tes, slayer of Bellerus). The son of Glaucus, and grandson of Sisyphus, according to the narrative in *Iliad* vi. He was driven forth by King Prietus on account of the false accusations of his wife Antea, who had become enamored of him, but had been repulsed. Prietus sent him to Antea's father, Iobates, King of Lycia, with a sealed message, which advised his death. To accomplish this task, dispatched him against Solymi and the Amazons, both of whom he defeated, finally destroying an ambuscade set by Iobates to slay him. Satisfied of his bravery and innocence, Iobates gave him his daughter in marriage. Later writers modified the story in various ways. Bellerophon was transferred from Argos to Corinth and made son of Poseidon. He was also aided in killing the Chimæra by Athena, who enabled him to capture the winged horse Pegasus (qv). The Homeric version is evidently the hereditary story of the Lycian kings, to prove their Greek origin, but there is evidence in the coins of Corinth that the exploit of Bellerophon was at one time localized in Peloponnesus. Other stories represented him as fleeing to King Prietus because of the murder of his brother, Bellerus, and as later returning to take vengeance on the wife of Prietus, here called Sthenobea. In Homer, Bellerophon ends his life wandering in the Aleian Plain, hated by the gods, but Pindar tells how he tried to ascend to heaven upon Pegasus, but was dashed to the earth. This version was combined with the earlier by making Bellerophon fall upon the Aleian Plain, where he wandered blind and lame. Bellerophon's adventures formed the subject of a lost play by Sophocles, and of two lost plays by Euripides. In art Bellerophon is frequently represented with Pegasus alone, but more often in battle with the Chimæra. This scene is also found among the reliefs of the Heroon at Göl-bashi in Lycia. Bellerophon was worshipped as a god at Corinth and in Lycia. There seems good reason to see in him a sea divinity of the Argolid, like Poseidon, who later sank to the position of a hero. Consult Fischer, *Bellerophon* (Leipzig, 1851).

BELLERUS. A fabulous giant associated with Bellerum, the modern Land's End, Cornwall. In Milton's poem "Lycidas" Bellerus is a name for Land's End.

BELLE SAV'AGE (Fr *Belle Sauvage*, beautiful savage). One of the old London taverns, on Ludgate Hill. Built around a court, it was a capital place for an extemporized stage, the performance on which could be viewed from the balcony above. Dickens, in his *Picturesque Papers*, mentions it as the inn visited by old Weller.

BELLES-LETTRES, bël-lët'tër (Fr fine letters, from *beau*, fem *belle* + *lettre*). A term adopted into the English and various other languages. It is generally used in a vague way to designate the more refined departments of literature, but has in fact no precise limits. In English usage it is synonymous with another vague expression, "polite literature," including history, poetry, and the drama, fiction, the essay and criticism. It is sometimes used also for "the humanities." The term has no recorded use in English before 1710, when it was used by Swift in *The Tatler*.

BELLEVILLE, bël'vel' (Fr beautiful city). A former eastern suburb of Paris, now a part of that city, and largely inhabited by the poorer classes.

BELLEVILLE. The capital of Hastings Co, Ontario, Canada, on the Bay of Quinte, Lake Ontario, at the mouth of the Moira River, and on the Grand Trunk Railway, 113 miles east of Toronto (Map Ontario, F 3). It is an important dairy centre, there are iron foundries, cement works, potteries, planing and woolen mills, and there is trade in lumber and grain. Albert University, with separate colleges for men and women, St Agnes College (women), and the Provincial Deaf and Dumb Institute are located here. The city is the seat of a United States consulate. Pop, 1901, 9119, 1911, 9876.

BELLEVILLE, bël'vel' A city and the county seat of St Clair Co, Ill., 14 miles east by south of St Louis, Mo., on the Illinois Central, the Louisville and Nashville, and the Southern railroads (Map Illinois, C 5). It is the seat of a Roman Catholic bishop and contains the Belleville Fair Grounds, a public library, founded in 1836, St Elizabeth Hospital, St Vincent Hospital, and St John's Orphan Asylum. The city is in a productive agricultural and coal-mining region and is noted for its manufactories, which include stove works, iron and brass foundries, machine shops, a nail mill, tack works, glass works, shoe factories, brickyards, ice plant, distillery, breweries, and flour mills. Settled in 1814, Belleville was incorporated first in 1846. The government is vested in a mayor, elected biennially, who appoints all the important administrative officers, and a council. Pop, 1906, 18,756, 1910, 21,122.

BELLEVILLE. A town and the county seat of Republic Co, Kans., 219 miles west-northwest of Kansas City, on the Union Pacific and the Chicago, Rock Island, and Pacific railroads (Map Kansas, E 3). It is in an agricultural and stock-raising district and has grain elevators, flour mills, alfalfa mill, lumber yards, etc. The water works and electric light plant are owned and operated by the city. Pop, 1890, 1868, 1900, 1833, 1910, 2224.

BELLEVILLE. A town in Essex Co, N. J., on the Passaic River, the Morris Canal, and the Erie Railroad (Map New Jersey, D 2). It is a popular residential suburb of Newark, with which it is connected by electric roads, and has important manufactures of wire cloth, druggists' rubber supplies, metal goods, brushes,

dynamos, baking machinery, bicycle tires, brass-foundry and copper products, chemicals, etc. The town contains an Elks' Home and a public library. Pop, 1910, 9891.

BELLEVUE, bel'vu'. A city in Campbell Co., Ky., on the Ohio River, opposite Cincinnati, and on the Chesapeake and Ohio Railroad (Map Cincinnati and vicinity, F 5). The leading industries are the quarrying of sand, gravel, and loam. Settled in 1866, Bellevue was incorporated in 1871. Its charter provides for a mayor, elected every four years, and a city council of 8 members, elected biennially. Pop, 1890, 3163, 1900, 6332, 1910, 6683.

BELLEVUE. A city in Huron and Sandusky counties, Ohio, 15 miles south by west of Sandusky, on the Pennsylvania, the Lake Shore and Michigan Southern, the New York, Chicago, and St. Louis, the Lake Shore Electric, and the Wheeling and Lake Erie railroads (Map Ohio, E 3). It is in a fertile agricultural region, has large railroad shops, extensive limestone quarries, lumber yards, and canneries, and manufactures agricultural implements, ditching machines, soda fountains and fixtures, and stoves. The city contains a Carnegie library and a hospital and owns its water works. It has a unique sewage system made possible by a peculiar geological formation. The city is built over an underground stream that empties into Lake Erie, and each residence and business block has a hole about 100 feet deep drilled to the stream which disposes of both surface and sanitary drainage. Consult *Engineering News*, May 1, 1913, article by W. J. Sherman. Pop, 1900, 4101, 1910, 5209.

BELLEVUE. A borough in Allegheny Co., Pa., adjoining Pittsburgh, on the Pittsburgh, Ft. Wayne, and Chicago Railroad, and on the Ohio River. It is a purely residential town and contains the Suburban General Hospital and the Balph Memorial Park. Pop, 1890, 1418, 1900, 3416, 1910, 6323.

BELLEVUE, bel'vu'. 1 A chateau of Madame de Pompadour, near Sévres, only ruins of which remain. 2 The name of the celebrated municipal hospital of New York, for which buildings to cost \$12,000,000 are in process of construction (1913). See HOSPITALS.

BELLEW, HAROLD KYRLE (1857-1911). An English actor and playwright. The son of a clergyman of Calcutta, he was born in England. Of his early life, seven years were spent as a cadet in the British navy, after which he went to Australia, where he was an actor, a newspaper man, and a lecturer. He returned to England and made his debut at Brighton. He was soon well known in London in leading parts. His first appearance in America was in October, 1885, in *In His Power*, at Wallack's Theatre, New York, where during the following season he was leading man. He next year (1887) began his long connection with Mrs. James Brown Potter, with whom he played throughout the English-speaking world. Among his notable rôles were Leander to Mrs. Potter's Hero, in his own play, *Hero and Leander*, produced at the Shaftesbury Theatre, London (June, 1892), *Marat*, in *Charlotte Corday* (1895), and *Romeo*, which he played, with Mrs. Potter as Juliet, in New York in March, 1896, and later the same year in Australia. His best-known rôles here were Raffles and Brigadier Gerard in the two plays by these names. He died in Salt Lake City while on tour.

BELLEY, bē'lē'. The chief town of an arrondissement of the same name in the department of Ain, France, picturesquely situated in the interesting Val Romney, 18 miles northwest of Chambery (Map France, S, K 3). It is the seat of a bishopric and has a fine cathedral part fifteenth-century Gothic and part modern, an episcopal palace, a museum, and a public library. Lithographic stone, the best in France, is quarried and exported from the neighborhood, and it has silk and cotton industries. The ruins of a Roman temple attest the antiquity of Belley. Pop, 1901, 6467, 1906, 5707, 1911, 6182.

BELLFLOWER. See CAMPANULA.

BELLI, bel'lē, GIUSEPPE GIOACHINO (1791-1863). An Italian dialect poet, author of a famous collection of sonnets in the Roman dialect, *I sonetti romaneschi* (ed. by Morandi, 4th ed., Città di Castello, 1908). These sonnets are unsurpassed in their own peculiar vein. They are vivid realistic portrayals of Roman popular life in all its panoramic variety, presented with a truth and sincerity and a profound comic insight which makes each poem a masterpiece of its kind. They were mostly written between 1827 and 1839 and reflect occasionally the political turmoils of that time, usually from a conservative and Catholic point of view. Belli himself was much stimulated by the previous work of the Milanese poet Carlo Porta. His own success gave great impetus to the modern dialect school, represented by Luigi Ferretti, Augusto Marni, Renato Fucini, and Salvatore di Giacomo, of whom the two latter with Belli enjoy international fame. Consult for biography, D. Gnoli, *Studi letterari* (Bologna, 1883).

BELLIARD, bel'yar', AUGUSTIN DANIEL, COMTE (1769-1832). A French diplomat and soldier, born at Fontenay-le-Comte (Vendée). He served with distinction in the French army during the Revolution and was appointed brigadier general at the battle of Arcola. He was chief of staff under Murat, fought in the principal engagements of 1805, 1806, and 1807, and afterward became Governor of Madrid. He distinguished himself at Borodino and upon his recovery from a wound received at the battle of Leipzig was appointed commander in chief of cavalry. Although elevated to the peerage upon the accession of Louis XVIII, he rallied to the support of Napoleon upon the return of the latter from Elba and was sent as Ambassador to Naples, where, however, owing to the mistakes of Murat, he was able to accomplish little. After a varied career under the monarchy, he became the Ambassador of Louis Philippe to Brussels, where he signed the treaty separating Belgium from Holland. He also contributed greatly to the reorganization of the Belgian army. In 1836 a monument to him was unveiled in the city of Brussels. His autobiography was published in Paris, in 1842, under the title, *Mémoires du général Belliard écrits par lui-même*.

BELLIGERENT (Lat. *belligare*, to wage war, from *bellum*, war + *gerere*, to carry). In international law, a government actually at war. It is not necessary that a political community shall be independent in order to have the status of a belligerent, but it must be maintaining itself by regular hostilities or otherwise under a de facto government. When a state of war exists between sovereign powers, the rights and duties of the several parties, both as be-

tween themselves and as to neutral powers, are in general clearly defined. Modern usage requires that the existence of a state of war shall be made known to neutral powers by public proclamation (See DECLARATION OF WAR). As between the belligerent powers, the rules of modern warfare require that the lives and property of non-combatants shall be respected, forbid undue cruelty and the use of barbarous weapons and methods of warfare, and dictate that no more damage shall be inflicted than is necessary to obtain victory. Where an enemy's territory is occupied, the hostile authority may require the submission of the inhabitants and may lawfully exercise over them the police and taxing powers of the government. As regards neutrals, the tendency of modern international law is to relieve them, their ships, their goods, and their trade, as far as possible, from the dangers and inconveniences of the war and, on the other hand, to hold them strictly to a policy of complete abstention from the concerns of the warring states.

A more difficult question is presented when both parties to the struggle are not sovereign political communities, but one a colony in rebellion against the parent state, or a revolutionary section or party waging war against the general government. Unless the conditions are such as to bring about the international recognition of the rebellious party as a belligerent, it has no standing in international law, and its acts of war are technically acts of piracy. It has no belligerent rights and is not entitled to have its blockades respected or its vessels received in foreign ports. It is the recognition of an insurgent government as a belligerent by neutral powers which brings it within the protection of the laws of war. But this act must be carefully distinguished from recognition of the independence of the insurgent government. This implies that the parent state is unable to coerce the rebellious subject and carries with it a recognition of the latter as a sovereign power.

For the neutral state the question of the recognition of belligerency is one of expediency. Such recognition cannot be claimed by an insurgent as a matter of right. It may be conceded on purely selfish grounds, if the trade or other interests of the neutral call for such action, or it may be granted in response to the demands of humanity or of general international policy. But in order to be justifiable in international law, the recognition must rest upon certain accomplished facts, viz., the existence, in the rebellious community, of a stable, well-organized civil government, exercising de facto authority in a definite territory, and the existence of actual and serious hostilities, carried on by such constituted authority for a considerable period of time, though these need not be regular in character nor general in extent. If, in addition to all this, the insurrection is of a formidable character, and especially if it is of such a nature as to threaten the interests of neutral states, the case for recognition of belligerency may become so strong as to be conclusive. When an intestine struggle presents the aspect of a war between federated states, belligerent rights are usually accorded to both the contending parties impartially. The recognition of the Southern Confederacy by Great Britain and France in 1861, though strenuously opposed by the government of the United States, was undoubtedly proper and necessary.

The grant of belligerent rights to an insurgent government is not an unmixed blessing, even to the recipient, and it carries with it certain benefits to the other party to the contest. Its principal advantage to the former is the powerful moral support which it gains from international recognition. In addition to this, it acquires the substantial benefits, already alluded to, of protection by the laws of war, the recognition of its flag, the right to negotiate loans abroad, and, in general, a quasi-political status, though without diplomatic standing. On the other hand, the status of belligerency carries with it the obligation to observe the rules of civilized warfare, and it shifts the responsibility for damage caused to neutral commerce and to the citizens of neutral states from the sovereign party to the party in insurrection. Accordingly, in the American Civil War, Great Britain and France, having recognized the Southern Confederacy as a belligerent power, were unable to charge the Federal government with liability for injuries to their subjects inflicted by the Confederate government or by its citizens in the territory occupied by it, whereas the government of Turkey, which did not recognize the Southern States, was able to hold the United States responsible for the acts of its rebellious citizens.

Certain acts of war on the part of the sovereign or parent states in connection with rebellious subjects—as the establishment of a blockade of the insurgent ports, an exchange of prisoners, the enforcement of the rules of war as to the carriage of contraband goods by neutrals—constitute in international law an implied recognition by the former of the belligerent status of the latter, but this affects only the character of the struggle between the parties and does not in itself alter the relations of the insurgent government to neutral states, though it may afford a moral ground for international recognition. In practice, such recognition is usually effected by issuing a proclamation of neutrality, in which the rights of the combatants and the duty of neutrals in relation to them are briefly indicated. Consult Snow, *Manual of International Law* (2d ed., Washington, 1898), Wheaton, *Elements of International Law* (8th ed., Boston, 1866, 4th ed., London, 1904), and authorities referred to under the titles INTERNATIONAL LAW, NEUTRALITY, WAR.

BELLINCIONI, bel'lén-cho'ná, GEMMA (1866—). A celebrated Italian singer. She was born at Como, Aug. 18, 1866, and received her first instruction from her father, showing herself a most apt and promising pupil. After a few lessons from Corsi she made her debut at the age of 15 in Pedrotti's *Tutti in Maschera* at Naples (1881). Here the famous tenor Tamberlik heard her and was so much struck with her remarkable powers that he engaged her as prima donna for his extended tours of Spain and Portugal. Upon her return to Italy she soon was recognized as the greatest singer of her time and was in constant demand in all the principal cities. Her appearances all over Europe became a series of uninterrupted triumphs. With a soprano voice of unusual range and power, she came to be considered equally great as a coloratura and dramatic singer. In 1890 she created the part of *Santuzza* in Mascagni's *Cavalleria Rusticana* and contributed considerably to the sensational success of that work. Subsequently she was in special

demand by the more prominent Italian composers for the creation of new rôles, and in this capacity her name was associated with the success of many new operas. Various offers from managers for an American tour she refused.

BELLING, WILHELM SEBASTIAN VON (1710-79) A Prussian cavalry officer, born at Paulsdorf (East Prussia). He attained distinction in 1759-61 by his defensive operations against the Swedish army in Pomerania and Mecklenburg. In 1762 he became a major general, in 1776 lieutenant general, and 1778 appeared prominently in the War of the Bavarian Succession. It was by him that Blücher, then a cornet in the Swedish army, was taken prisoner at Kavelpass and persuaded to enter the Prussian service.

BELLINGHAM A city, port of entry, and the county seat of Whatcom Co., Wash., 97 miles north of Seattle, on the Great Northern, the Northern Pacific, and the Bellingham and Northern railroads, and on Bellingham Bay (Map Washington, C 2). It is the seat of a State normal school, has a parochial and two high schools, two business colleges, two free libraries, and two hospitals. The city is noted for its extensive lumber interests, and has large saw and shingle mills, logging companies, and wood-working factories. Salmon canning and brewing, milk condensing, and the manufacture of cement and cans are also important industries. Bellingham has an excellent natural harbor, which is entered by all Oriental and Pacific coast lines. The water works are owned by the municipality. The first settlement here was made in 1853. The city was founded in December, 1903, by the consolidation of Fairhaven and Whatcom. Pop., 1900, 11,082, 1910, 24,298.

BELLINGHAM, RICHARD (1692-1672) A Colonial Governor of Massachusetts, born in England. He was recorder of Boston (Lincolnshire, England) from 1625 to 1633, and in 1634 emigrated to America and settled in Boston, Mass. In 1635, and 12 times thereafter, he was Deputy Governor of the Colony, and for some time was Treasurer. He was elected Governor over Winthrop in 1641 and was reelected in 1654 and in 1665. In 1664 he was also chosen major general. In the same year he stoutly resisted the royal commissioners, who had ordered him to London to undergo an examination with regard to his official conduct, but he secured the good will of the King by the present of "a shipload of masts." He was a shrewd administrator, just and upright. In religious matters he was stern and intolerant, especially towards the Quakers. In his will he provided that his property should eventually be devoted to the support of "godly ministers and preachers," but this provision was annulled as being unjust to his family. He was the last survivor of the original patentees of the Charter. His sister, Anne Hibbens, was executed as a witch at Salem in June, 1656.

BELLINGSHAUSEN, bel'lingz-hou'zen, FABIAN GOTTLIEB VON—In Russian, FADDEI FADDEYEVICH BELLINGSHAUSEN—(1778-1852) A Russian admiral and explorer, born on the island Osel (belonging to Livonia). He was appointed an officer of the fleet stationed at Reval in 1797 and in 1803 participated in the first Russian circumnavigation of the globe. In July, 1819, he was assigned by the Emperor Alexander to the command of an exploring expedition to the south polar regions. With two corvettes, the *Vostok* and the *Murvy*, he

traversed the Antarctic Circle, discovered the island which he named Traversay, in December, 1816, and thence penetrated to lat 70° S, where he discovered and named Peter Island and Alexander Land. The expedition arrived at Cronstadt Aug 5, 1821. He took part in the military operations against Varna in 1828, was advanced to the rank of vice admiral, and was placed in command of the Russian Baltic fleet. Afterward he became admiral and military governor of Cronstadt, where a fine bronze statue, designed by Schroder, was erected to his memory in 1860. An account of his explorations was published in St. Petersburg in 1831.

BELLINI, bel'le-né A celebrated family of Venetian painters which exercised a determining influence on Venetian art.—Jacopo (c. 1400-70), the founder of the family, was the son of Niccolotto, a tinsmith of Venice. His master in painting was Gentile la Fabbrano (qv), then employed on the decorations of the Ducal Palace. In 1423-25 he accompanied his master to Florence, where he adopted the principles of the Renaissance, then just beginning its glorious course. Recent studies in the Venetian archives have removed the obscurity surrounding the remainder of his life. In 1436 he finished his vast fresco of the "Crucifixion" in the cathedral of Verona, which was destroyed in the eighteenth century. In 1437 he became a member of the "Scuola" (social religious guild) of St. John the Evangelist at Venice, of which he was dean in 1441. The guild assisted in providing a suitable dowry for his daughter Niccolosa, who married Andrea Mantegna in 1453 and gave him a commission for a cycle of 18 paintings in their great hall representing the life of Christ and the Virgin, for which he received final payment in 1465. In 1441 he was active at Ferrara and while there engaged in the celebrated contest with Pisanello (qv) for the best portrait of Lionello d'Este. Jacopo received the prize. Among other important commissions were the figure of St. Lorenzo Giustiniani (1456), the recently canonized Patriarch of Venice, in San Pietro di Castello, and the great altarpiece for the Gattamelata Chapel in Sant' Antonio, Padua (completed in 1460), in which he was assisted by his two sons. In 1466 he contracted for a wall painting in the Scuola di San Marco, and he is mentioned as dead in 1471. Only three signed pictures of Jacopo survive. "The Crucified One" in the Archbishop's palace in Verona, an early "Madonna" in the Venetian Academy, and a later one at Lovers. The best of all his Madonnas is one recently discovered by Ricci and now in the Uffizi. Another in the Louvre with a kneeling donor, perhaps Lionello d'Este, is supposed to be the portrait which won the contest at Ferrara. There is also an "Annunciation" in Sant' Alessandro, Brescia. From his sketchbooks have been identified a "Crucifixion" in the Museo Correr, Venice, "Christ in Limbo" in the Gallery of Padua, and an "Adoration of the Kings" in private possession, Ferrara. By far the most interesting of Jacopo's surviving works are two admirable sketchbooks, left as a precious heritage by his widow to his eldest son Gentile, and by him to his brother Giovanni. The earlier of these is in the British Museum, and the later and better preserved is in the Louvre. They show him as a good draughtsman and as an eager student of antique, perspective, and anatomy.

GENTILE, BELLINI (1429-1530), unquestion-

ably the elder son of Jacopo (though this has been disputed), was born in the early part of 1429, as appears from his mother's testament. His earliest works resemble those of his father in technique and in conception, but they also show strong influence of the Paduan school through his brother-in-law Mantegna. He assisted his father at Padua in 1460 and was commissioned to decorate the organ shutters of St Mark's, which still survive, in 1465 to paint a full-length portrait of the Patriarch Lorenzo Gustiniani, now in the Academy, and in 1466 two large pictures for the Scuola di San Marco, of which he afterward became dean. In 1469 he was made a count palatine of the Empire, and in 1474 official painter to the Venetian state, with the income of a broker's stall as salary, and commissioned to restore the decorations of Gentile da Fabbriano in the Ducal Palace. In response to the request of the Sultan that the Venetian government send him their best painter, he went in 1479 to Constantinople. He lived on intimate terms of intercourse with the Sultan, who on the painter's departure in 1480 created him *Bay* (*equus auratus*)—a title which henceforth appears on his paintings. Artistic mementos of this journey are still to be seen in his portrait of Mohammed II in the Layard collection, Venice, in the Oriental types and costumes which he thenceforth delighted to introduce into his pictures, and in a delightful water color portrait of a scribe, now in Mrs Gardner's collection in Boston. After his return to Venice he labored for many years on the great historic decorations of the Ducal Palace, representing in 20 or more paintings the important rôle played by Venice in the conflict between Pope Alexander III and Frederick Barbarossa. In these epoch-making pictures oil painting was for the first time used in Venetian mural decoration. At least six were by Gentile, these were all destroyed by fire, along with the portraits of the reigning doges, which it was his duty as state painter to depict. But replicas were often painted for the families of the doges, and of these, two, the portraits of Doges Mocenigo and Foscari, survive in Museo Correr, Venice. His chief surviving works, dating from the last years of his life, are pageant pictures, of which he was the first great painter in Venice. Three of these, painted for his father's guild, the Scuola di St John the Evangelist, representing the miracles wrought by a relic of the True Cross, are now in the Venetian Academy. Of especial interest is one showing St Mark's Place in its pristine glory in which is seen a stately procession of the guild members,—the doges, senators, and other Venetian dignitaries,—and another depicting how the holy relic miraculously floated in the water of the canal. His last work was the "Preaching of St Mark" (Brera, Milan), completed after his death by his brother Giovanni. All these pictures are filled with admirable specimens of contemporary portraiture, in which branch Gentile especially excelled. Other important portraits by him are Caterina Cornaro (Pesth) and "A Mathematician" (London). To a fine feeling for line Gentile united harmonious coloring, and he was especially strong in composition. He was a keen realist, and for his day the open-air effects of his pageant pictures are very remarkable.

GIOVANNI BELLINI (?-1516), the younger and seemingly illegitimate son of Jacopo, was the most important and influential member of

the family. Although he received his first instruction from his father, even his earliest works show a greater influence of his brother-in-law Andrea Mantegna and reveal a careful study of the sculptures of Donatello at Padua. Among these works are several Madonnas in private collections of Milan and three in the United States—in the Johnson collection of Philadelphia, the Davis collection, Newport, and the Metropolitan Museum, New York, "Christ on the Cross" and the "Transfiguration" in the Museo Correr, Venice, and, best of all, the "Agony in the Garden," National Gallery, London. At this time he painted many versions of the *Pieta*, the best of which are in the Ducal Palace, Venice, and in the Brera, Milan. The works of his early period are characterized by an austere and powerful realism and by profound depth of religious feeling, but after 1460 the characteristics of true Venetian painting prevail increasingly in his works. The color is softer and richer, and both line and sentiment are less austere. The *Pieta* continued to be a favorite subject, as may be seen in the three versions at Rimini and in the examples of the Berlin Gallery, the Mond collection, London. Of the Madonnas of this period the best is in the church of the Madonna dell'Orto, Venice. But the most important work of this second manner is the altarpiece of San Francesco, Pesaro (c 1470), now in the local Museum. The central panel represents the "Coronation of the Virgin," the sides four powerful saints, and the predella certain scenes from Holy Writ depicted in delightful landscapes.

This is the first of the great altarpieces to which he owes his principal fame. Most of them were painted between 1480 and 1490. In all the composition is similar: the Madonna enthroned in the apex of a church or else against the blue sky, on either side saints, and at the base angels. The decorative elements, even of the frames, are of great charm and in the purest Renaissance style. Such pieces are the great altar of Santi Giovanni e Paolo with 10 saints and angels, which was destroyed by fire in 1867, of San Giobbe, now in the Venetian Academy, with particularly fine angels, an oblong composition representing the Madonna with the Doge Barbarigo in San Pietro Martire, Murano, and the well-known triptych in the church of the Frati, Venice. The Madonna of this picture is one of his noblest and most ideal types, while the four admirable saints, Benedict, Nicholas, Peter, and Paul, vie in nobility of conception with Durer's four Temperaments (qv), and the frame is beautiful and harmonious. To the same period belong a number of his similar Madonnas, particularly the Madonna degli Alberti and the oblong Madonna with Saints Catharine and Margaret, three charming types of female beauty, both in the Venetian Academy. To this period also belong the delightful examples in Berlin and London.

Giovanni often worked in conjunction with his elder brother, and when in 1479 Gentile was sent to Constantinople, he took his place in the decoration of the Ducal Palace. In the earliest of these paintings (c 1479) he seems to have first tried the oil medium, used to such great advantage in the great altarpieces mentioned above. Most of his work in the Ducal Palace was done in the decade following 1490. He painted at least six subjects besides finishing one by Vivarini, all of which were destroyed by the calamitous fire of 1577. To the last years of

GIOVANNI BELLINI
THE "DOGE LEONARDO LOREDANO," FROM THE PAINTING IN THE NATIONAL GALLERY, LONDON

the fifteenth century belong also the charming allegories called the "Tree of Life," Venetian Academy, and "Santa Conversazione," in the Uffizi, with lovely landscape.

Early in the sixteenth century he resumed his great altarpieces with the "Baptism of Christ" in Santa Corona, Vicenza (1500-02), in that of San Zaccaria, in which the grand old master's art is rejuvenated in the new style of Giorgione (qv), and in the altar of San Giovanni Crisostomo, Venice, in the same new style. Mention should also be made of his last smaller Madonnas, like those in San Francesco della Vigna (1506) and in the Brera, Milan (1510), and of the only surviving example of his celebrated portraits, viz., Doge Loredan, in the National Gallery, London.

Giovanni Bellini is the most important figure in early Venetian painting and stands out most prominently as the head of the school. The qualities of painting known as distinctly Venetian—the combination of nobility of form with beautiful golden tone and soft melting color—first appear in his works. Throngs of pupils issued from his studios carrying his influence throughout the wide domains of the Venetian state, such as Bissolo, Catena in Italy, and Prevatali of the older generation, and among the younger practically every painter of importance, during the early High Renaissance, Giorgione, Titian, Palma Vecchio, and even those, like Lorenzo Lotto, who did not study under him.

Bibliography. The subject is ably treated in the following general works: Berenson, *Venetian Painters of the Renaissance* (New York, 1897), Venturi, *Le origini della pittura veneziana* (Venice, 1907), Gronau, "Jacopo, Gentile and Giovanni Bellini," in *Kunstlermonographien* (Bielefeld, 1909), a brief but excellent monograph. Jacopo's sketchbooks have been published with admirable comments by Ricci (2 vols., Florence, 1908), and also by Golubev (2 vols., Brussels, 1908). For Gentile and Giovanni Bellini the researches of Dr. Ludwig are important, published in the *Jahrbucher der koniglich preussischen Kunstsammlungen* (1902-1904), and elsewhere. For Gentile see Thuaume, *Gentile Bellini et le sultan Mohammed II* (Paris, 1888), for Giovanni the monographs by Fry (London, 1899) and Meynell (New York, 1906).

BELLINI, LORENZO (1643-1704). An Italian anatomist and physician. He studied medicine under Redi, was professor of anatomy at Pisa, and in Florence was physician to the Grand Duke Cosmo and also senior consulting physician to Pope Clement XI. Among his discoveries were the action of the nerves on the muscles and the uriferous ducts known as Bellini's tubes and described in his *De Structura et Usu Renum* (1662). He left also an original and curious book of poetry, the *Buccheriede* (1729).

BELLINI, VINCENZO (1801-35). A famous Italian operatic composer. He was born at Catania, Sicily, Nov. 3, 1801, and died at Puteaux, near Paris, Sept. 24, 1835. Born of a musical family, he entered the conservatory of Naples (1819), where he studied under Zingarelli. After writing various instrumental and choral compositions, he produced *Adelson e Salvini* (1824), the success of which was duplicated by that of *Bianca e Fernando* at the San Carlo, Naples (1828), and Bellini was engaged to write an opera for La Scala at Milan. After *Il Pirata*

(1827), he became one of the most popular composers in Europe, and his fame grew with each of the following operas: *La Straniera* (1828), *Capuleti ed I Montecchi* (1830), *Sonnambula* (1831), *Norma* (1831), *Beatrice di Tenda* (1833). He settled in Paris and gave himself up to the study of French music, diction, and verse, and then produced *I Puritani* (1835) at the Théâtre Italien, Paris. Its success eclipsed that of all his previous efforts. He was preparing for another work when death came unexpectedly at Puteaux, near Paris. All Europe mourned for him, and his funeral was an impressive pageant. A monument to Bellini was erected in Naples in 1836 and another in Catania in 1868, where his remains now rest. In 1901 the centenary of his birth was celebrated throughout Italy and in many European cities. A man of wide culture and deep refinement, of the elegant and sentimental type of Chopin, he had not the personal sorrows of the Polish master to make his grief morbid. His melancholy nature came into the world at the most opportune moment. Italy was groaning under foreign masters, *Norma* was but a lament over his country's bondage. His Druids and Gallic warriors were thinly disguised Italians of his time. The opera was a great advance on his previous works, which were criticised for the thin orchestration and lack of structural unity. He heeded the critics, and *Norma* may fairly be called a classic production. Wagner viewed it as such for its heroic grandeur, tragic power, and pathos, combined with an unequalled flow of melody and striking orchestration. *Norma* has been the favorite part of the greatest dramatic singers, such as Pasta, Viardot-Garcia, Jenny Lind, Burde-Ney, and Lilli Lehmann, the famous Wagnerian soprano. Bellini's muse is particularly grateful to the voice, and all famous singers, from Pasta and Viardot, through Schröder-Devrient and Johanna Wagner, down to Patti, Nilsson, and Sembrich, have kept his operas in their repertoires. Consult A. Pougin, *Bellini, ac vie, ses œuvres* (Paris, 1868), A. Amore, *Vincenzo Bellini* (Catania, 1892-94), G. T. Ferris, *Great Musical Composers* (New York, 1887), P. Voss, *Vincenzo Bellini* (Leipzig, 1901), W. A. Lloyd, *Vincenzo Bellini A Memoir* (London, 1908).

BELLINZONA, bël'in-tso'na, or **BELLENZ**, bël'lents. The capital of the canton of Ticino, Switzerland, on the left bank of the Ticino (Map Switzerland, D 2). The town is most picturesquely situated at an elevation of 775 feet above sea level and commands the St. Gotthard route. It was fortified by the Visconti in the Middle Ages, and modern defenses have been built near the entrance to the pass to protect the position of the town at the junction of the St. Gotthard Railroad with that to Locarno. Pop. 1910, 10,773.

BELLMAN, KARL MIKAEL (1740-95). A Swedish lyric poet. He was born in Stockholm, the son of a professor at Upsala, and began to write poetry at an early age, often composing the melodies for his songs. The favor of Gustavus III. relieved him from care, but he suffered from ill health, and on the murder of the King (1792) he was for a time a prisoner in the castle where he had been a frequent guest. His poems express the joy of life and occasionally a coarse revelry, but there is usually a cynic or pathetic undertone. Many of his poems were improvised at table, when Bellman would fall

into a sort of poetic trance. His more important works are collected in *Fredmans epistlar* (1790) and *Fredmans sänger* (1791). The best edition of his works is that of Carlen (Stockholm, 1861). His works are difficult to translate, but attempts have been made in German by Winterfeld (1865), Willatzen (1892), and recently by H. von Gumpenbug, *Bellman-brevier* (Jena, 1909). Consult Erdmann, *Carl Michael Bellman* (Stockholm, 1900), and F. Niedner, *Bellman, der Schwedische Anacreon* (Berlin, 1905), *C. M. Bellman* (Berlin, 1905).

BELLO, bé'lyó, ANDRÉS (1781-1865). A Spanish-American author, born at Caracas. In 1802 he was appointed Undersecretary of the government of Venezuela, and five years later, as a reward for his brilliant services, the King of Spain made him Venezuelan Commissioner of War, an honor at that time without a parallel. In 1810 he accompanied Bolívar and López Méndez in the capacity of secretary to London, to solicit aid for the South American insurgents. Here he held the position of Secretary of the Colombian, Venezuelan, and Chilean legations until 1829, when he returned to Caracas. Afterward he removed to Chile, where in 1834 he was appointed Secretary of State, and in 1843, when it was established, he became rector of the University of Santiago. In 1864 the United States submitted to his arbitrage a question pending in its relations with Ecuador, and in 1865 the republics of Peru and Colombia chose him as arbiter in a similar matter. His numerous and valuable works include the following: *Principios de derecho internacional* (1832, 1833), *Gramática de la lengua castellana, dedicada al uso de los Americanos* (1st ed., 1847, latest revised author's ed., annotated by R. J. Cuervo, Paris, 1874, with frequent subsequent revisions and reprints). This is the leading authority on the subject. His best creative work is a poem, *Selas americanas*, written while he was in England. His complete works were published by the Chilean government in 1881-03 (*Obras de Andrés Bello*, 15 vols., Santiago de Chile, reprinted in Madrid in the *Colección de escritores castellanos*). For an excellent biography, consult Miguel Luis Amunátegui (*Santiago de Chile*, 1882), A. Balbín de Unguera, *Andrés Bello, Su época y sus obras* (Madrid, 1910).

BELLOC, be-lók', HILAIRE (1870-) An English author, born in France of French and English parentage, educated in England at Edgoston Oratory School, and at Balliol College, Oxford. He served for a time in a French cavalry regiment. In 1906 he was elected to Parliament. Strong Roman Catholic convictions permeate his work, the most important part of which, well exemplified in *Danton* (1899, 1911), *Robespierre* (1901), *Marie Antoinette* (1912), and his continuation of Lingard's *History of England*, is historical. His books of travel, combining learning, sentiment, and a love of the open road, at once entertain and instruct, witness *The Path to Rome* (1902, 1910), and *Esto Perpetua* (1906, 1911). In his numerous essays—*On Nothing* (1908), *On Anything* (1910), *On Something* (1910), *This and That* (1912)—he is a writer of sound and sometimes brilliant prose. His novels have both merit and favor. The quality, quantity, and variety of his achievement make him a notable figure in contemporary letters. To works of this author named above, may be added *The Bad Child's Book of Beasts* (1896), *Paris* (1902, 1907), *The Pyre-*

nees (1909), *A Change in the Cabinet* (1909), *Veises* (1910), *The Green Overcoat* (1912), *The Book of the Bayeux Tapestry* (1913).

BELLOC, MARIE ADELAIDE. See LOWNDEN, MARIE ADELAIDE.

BELLO HORIZONTE, bel'lo ór'e-zón'ta. A city of Brazil. See MINAS.

BELMONT. See BELLAMONT.

BELL'ONA (Lat. from *bellum*, war). The goddess of war among the Romans. She was described by the poets as the companion, sister, wife, or daughter of Mars, she was also represented as armed with a bloody scourge and as inspiring her votaries with a resistless enthusiasm in battle. In the war with the Samnites, 296 B.C., the Consul Appius Claudius vowed a temple to Bellona, which was erected afterward on the Field of Mars. In this temple the Senate gave audience to embassies from foreign powers and also to consuls who had claims to a triumph which would have been nullified by entrance into the city. The priests of another (Asiatic) goddess of the same name were styled *Bellonari*, and practiced sanguinary rites, such as cutting their own arms or feet, and offering (or even drinking) the blood in sacrifice. Consult Fowler, *Roman Festivals* (London, 1899).

BELLONA'RII. See BELLONA.

BELLOT, bé'ló', JOSEPH RENÉ (1826-53). A French Arctic explorer, born in Paris. He was a lieutenant in the navy, distinguished himself in the French expedition against Tamatave in 1845 and joined an expedition in search of Sir John Franklin in 1851. During this expedition he accompanied a sledge party that reached the strait now bearing his name. In the expedition fitted out by the British Admiralty under Captain Inglefield, he sailed as a volunteer in HMS *Phaena*, but never returned, having been carried by a violent gust of wind, March 21, 1853, into a deep fissure in the ice. His *Journal d'un voyage aux mers polaires*, edited, with a notice of his life, was published at Paris in 1854.

BELLOT STRAIT. A narrow passage in the Arctic regions which separates North Somerset from the peninsula of Boothia Felix, and connects Prince Regent's Inlet with Franklin Channel (Map Arctic Region, E 7). Its east entrance was discovered by Kennedy during his search for Franklin, and named after his companion, the French Lieutenant Bellot, who lost his life there. The channel was later explored by McClintock. It is about 20 miles long and, at its narrowest part, about 1 mile wide, it lies nearly on the parallel of 72°, between granite shores, which, everywhere high, rise here and there to 1500 or 1600 feet. Through this funnel-shaped passage both the winds and the permanent currents and flood tides which come from the west have full play. **BELLOTTO**, bel-lót'tó, BERNARDO. See CANALOTTO.

BELLONS, bel'lóns. See BLOWING MACHINES.

BELLOWS, bel'vz, GEORGE (1882-). An American landscape, genre, and portrait painter. He was born at Columbus, Ohio, graduated from the State University in 1905, and studied painting in New York under Chase, Kenneth Miller, and Robert Henri. By the National Academy he was elected an associate at the age of 27. Though known chiefly as a landscape painter, he interested himself also in portraiture and the painting of figure subjects. His work, that of one of the younger and more radical group of American

painters, is characterized by breadth and boldness of handling. Among his most successful paintings are such subjects as "Up the Hudson," "Coast of Maine," "Club Night," and "Forty-Two Kids," a swimming scene. He is represented in the Metropolitan Museum of Art, New York, and the galleries of Brooklyn, Toledo, Cincinnati, and others of note throughout the United States. In the 1913 exhibition of the National Academy of Design he was awarded the first Julius Hallgarten prize.

BELLOWS, HENRY WHITNEY (1814-82). A well-known American clergyman. He was born in Boston, Mass., graduated at Harvard in 1832, and at the Divinity School in 1837, and in 1839 became pastor of the First Congregational Church (Unitarian, now All Souls) in New York. He acquired a great reputation as a pulpit orator and as a writer, and in 1846 established the *Christian Enquirer*, to which he was the chief contributor until 1850. With unusual literary taste and skill he combined practical and administrative ability of a high order, and as the chief promoter and president of the United States Sanitary Commission from 1861 to 1878, rendered a service of almost incalculable value to the country. (See *SANITARY COMMISSION*.) During the war he directed the expenditure of more than \$5,000,000 and the distribution of more than \$15,000,000 worth of supplies. He aided Peter Cooper in his plans for Cooper Union. The most noteworthy of his writings are *The Treatment of Social Diseases* (1857), *Restatements of Christian Doctrine* (1860), *The Old World in its New Face, Impressions of Europe in 1867-68* (2 vols., 1868-69).

BELLOWS FALLS. A village in the town of Rockingham, Windham Co., Vt., 114 miles northwest of Boston, Mass., on the Boston and Maine and the Rutland railroads, and on the Connecticut River (Map Vermont, D 7). The village is surrounded by mountains and is noted particularly for its falls, which, descending about 40 feet, generate an enormous amount of power, utilized by the various manufactories of the village. The principal of these are paper of many kinds, paper machinery, dairy tools and machinery, baskets, wall plaster, boxes, and men's shirts. Lumbering and general farming are also engaged in quite extensively. The village owns and operates its water works and contains the public library of the town, the Vermont Academy, a State armory, a hospital, a town meeting house, built in 1787, and a public playground. Settled in 1753, Bellows Falls was organized as a town in 1761 and incorporated as a village in 1833, it is now governed under a charter of 1906. The officers, elected annually, include a president, four trustees, a clerk, and a treasurer. Department officers are appointed by the trustees. "The Great Falls" was the scene of a great salmon-fishing industry among the Indians in Colonial days. They came here in large numbers at certain seasons of the year, and many battles between rival tribes resulted. Pop. 1900, 4337, 1910, 4883.

BELLOWS-FISH, bē'lūs-fish' See *GLOBE-FISH, SNIFE-FISH*.

BELLOY, bē'lwā', PIERRE LAURENT BUIRETTE DE (1727-75). One of the first French dramatists who ventured to introduce on the stage native, instead of classic heroes. He was born at Saint-Flour, in Auvergne, and educated for the law, but became an actor, under the name of Dormont de Belloy. For some years he re-

sided in St. Petersburg, where the Empress Elizabeth interested herself in him. In 1758 he returned to France, to superintend the production of his tragedy *Titus*. The piece proved a failure, and he returned to St. Petersburg. Afterward, however, he obtained a decided success in Paris by his tragedy of *Zelmire* (1762). In 1765 appeared *La Siège de Calais*, an historical and patriotic drama, which was immensely popular and is even yet held in esteem. In 1772 he was admitted to the French Academy, after the production of his *Gaston et Bayard*. This was followed by *Pierre le cruel*, which, though it failed at first, was afterward successfully revived. His collected works were published in 1779, edited by his friend Gaillard, who wrote his life. Consult *Godefroy, Histoire de la littérature française*, "XVIII^e siècle poètes" (Paris, 1879).

BELL RINGING. The ringing of bells in changes of regular peals is largely a European practice. It was early brought to a high degree of proficiency in the Netherlands. In some of its church towers the striking, chiming, and playing of bells is incessant, including the playing of regular tunes. In some instances, for this latter purpose, the bells are sounded by means of a cylinder, on the principle of a barrel organ, in others they are played with keys by a musician. The ringing of bells has become a distinct art also in Great Britain. According to the English method, the bell at each pull revolves round a complete circle and is under the full command of the ringer. The first known writer on the subject is the author of a book called *Tintinnalogia* (1668), said by some to have been Fabian Stedman, a Cambridge printer, who printed his changes on slips of paper in a notation of his own invention and taught them to his company in the tower of St. Benedict's Church, Cambridge. According to his account, there was no idea of change ringing until the beginning of the seventeenth century, though there certainly seem to be traces of it in the earliest English comedy, Udall's *Ralph Roister Doister* (1553). The art made rapid progress, and rings of bells increased from 5 or 6 to 10 or 12, the latter being the greatest number ever rung in peal. The variety of changes increases enormously with the increase in the number of bells. Six changes can be rung on 3 bells, on 4, four times as many, and so on until with 12 bells the enormous number of 479,001,600 different changes can be rung.

Bell ringing has an interesting system of nomenclature. The simplest peals are those called *grandsvre* on an odd number of bells, and *bob* on an even number. Changes on 3 bells are called *rounds*, on 4, *changes* or *singles*, on 5, *doubles* or *grandsvres*, on 6, *bobs minor*, on 7, *grandsvre triples*, on 8, *bobs major*, on 9, *grandsvre caters*, on 10, *bobs royal*, on 11, *grandsvre cinqueques*, on 12, *bobs maximus*. A bell is *set* when its mouth is turned upward, at *hand stroke* when set up so far that only the *tuffing* or *sallao* is held by the ringer, at *back-stroke* when rung so far round that the end of the rope is held. The *treble* bell is the highest, the *tenor* the lowest, of a set. Five thousand changes are a *peal*, any smaller number constitutes a *touch* or *flourish*, i. e., a practice rather than a performance.

It may be interesting to note here that the old-fashioned bell ringer has been banished from one of the most notable church chimes in Amer-

ica by those most modern of methods of power transmission, electricity and compressed air. The chimes of St Patrick's Cathedral in New York City consist of 19 bells, weighing from 270 pounds to 6000 pounds, and having a musical range from lower C to upper D, with the accompanying sharps and flats. These chimes were first played on Jan 1, 1901, from a keyboard in the sacristy, by means of a combination of electricity and compressed air, devised and constructed by Mr H C Champ, of Brooklyn, N Y. Consult Lomax, *Bells and Bellringers* (London, 1879), Ellacombe, *Practical Remarks on Belfries and Ringers* (London, 1859-60), Tyack, *A Book about Bells* (London, 1899), North, *English Bells and Bell Lore*, Raven, *The Bells of England* (London, 1906). See BELL.

BELL ROCK, or INCH CAPE. A reef of Old Red Sandstone rocks in the North Sea, 12 miles southeast of Arbroath, Scotland, nearly opposite the mouth of the Tay. The reef is 2000 feet long, at spring tides part of it is uncovered to the height of 4 feet, and for 100 yards around the sea is only 3 fathoms deep. Since 1810 it has been marked by a lighthouse 120 feet high. It was formerly a fruitful cause of shipwreck, and, according to tradition, the Abbot of Aberbrothock (Arbroath) placed a bell on it in the twelfth century. It is the scene of Southey's poem, *The Inch Cape Rock* (q v).

BELLS. A term used on shipboard, and nearly equivalent to the "o'clock" of ordinary life on land. The day is divided into 6 periods of 4 hours each, beginning at midnight. At half-past twelve 1 bell is struck, at one o'clock 2 bells, at half-past one 3 bells, and so on up to 8 bells at four o'clock. At half-past four it is 1 bell again, at five, 2 bells, and so on up to eight o'clock. Half-past eight is 1 bell, etc. The 6 periods nearly coincide with the *watches* (see WATCH) into which the day is divided, but not exactly, for the 4 hours from four to eight P.M. are divided into dogwatches of 2 hours each.

BELLS, THE. 1 The title of a poem by Edgar Allan Poe. 2 The name of the drama adapted by Leopold Lewis from Erckmann-Chatrian's *Le Juif polonais* and frequently presented by Sir Henry Irving. It deals with the murder of a Polish Jew by an innkeeper, from whose tavern he has just driven off in his sleigh. The innkeeper, Mathias, is so haunted by the recollection of his crime that the sound of the sleigh bells begins to ring in his ears and eventually drives him mad.

BELL-SMITH, FREDERIC MARLETT (1846-) A Canadian painter. He was born and educated in London, England, and afterward studied painting in Paris. In 1867 he came to Canada, settling at London, Ont., where he lived until 1888, when he removed to Toronto. He became successful not only in figure and portrait painting, but also in landscape work, his pictures of Rocky Mountain scenery taking high rank. In 1886 he was appointed a member of the Royal Canadian Academy of Arts, and in 1906 was elected president of the Ontario Society of Artists. Among his best-known works are "Lights of a City Life", "Landing of the *Blenheim*", with Sir John Thompson's Remains", "Queen Victoria's Tribute to Canada".

BELL'S PALSY. See FACIAL PARALYSIS.

BELL-TAINE. See BELTANE.

BELL-THE-CAT. A name given to Sir

Archibald Douglas, who, when certain Scottish lords were considering how to remove the upstart mason, Cochrane, from James III's favor, answered "That will I," to the inquiry, "Who will bell the cat?"

BELL TOWER. A tower built to contain one or more large bells in connection with religious or civil structures, a campanile (q v). The use of bells for calling religious or political gatherings, or announcing times and seasons, does not seem to have obtained in antiquity, public criers and heralds serving for that function. Small bells, rung by hand, were used, however, by the early Christians. It is certain that, while large towers were erected in connection with churches as early as the fifth and sixth centuries, the use of large bells suspended in towers did not become general until much later. Pope Stephen III (768-772) erected a bell tower with 3 bells at St Peter's, and Leo IV (847-855) did the same for St Andrew's at Rome, but at that time, and until the thirteenth century, bells were only of small or moderate size (See BELL). Even after bells were placed in towers, the latter continued to be designed, not primarily as bell towers, but rather as watchtowers, as in the original plan for the Monastery of St Gall. And even as late as the twelfth and thirteenth centuries there was a watchman's story or crow's-nest in church towers, above the belfry story. The mediæval bell tower was either a separate structure, as the round and square towers of the fifth and sixth centuries at Ravenna, or it was part of the façade, like the one or two towers at the end or ends of the façade at Shakka, Turmanin, and other churches of Syria. The type of the separate tower prevailed in Italy in its *campanili* (see CAMPANILE), the attached towers in the rest of Europe. The comparative freedom allowed in designing such structures, the rivalry in regard to their size and richness between monasteries and cathedrals, make of the church towers of the Romanesque and Gothic eras in some respects the most characteristic and finished product of each school. The pinnacled spires which are the most striking feature of the Gothic steeples, rising to a height of over 400 feet (Salisbury, Strassburg) and even 500 feet (Cologne, q v), are as typical of northern and western Europe as the square brick bell towers of Rome, Florence, Venice, and other Italian cities, flat-topped or crowned with a square pyramid of moderate height. The Renaissance developed types of its own, both for civic bell towers and steeples, among the most beautiful of which were those of Wren and Gibbs in England (1666-1754) and of the Colonial churches in America. See TOWER.

There are several other terms in use for constructions supporting bells *belfry* (q v), which is either a civic bell tower or the wooden frame supporting the bell, *bell gable*, a flat piece of wall or gable pierced with an opening for a bell, *bell cote*, a small steeple that does not break out much from the general design, *bell turret*, usually octagonal or circular, and of high, slender proportions, on a small scale.

BELLUNO, *bél-lū-nō* (anciently *Belunum*). An Episcopal city, capital of the province of Belluno, north Italy (Map. Italy, G 1). It is situated on a high tongue of land, at the confluence of the Ardo and Piave, 72 miles north of Venice. Noteworthy among its churches is

the cathedral, containing some excellent paintings. The campanile is 217 feet high. The chief manufactures are silk, straw, leather, and wax, the principal trade is in silk, lumber, wine, and fruit. Pop., 1881, 16,000, 1901, 18,747, 1911, 22,342.

BELLUNO, DUKE OF. See VICTOR, CLAUDE PERRIN.

BELL/WORT. See CAMPANTULA.

BELMONT. A village in Mississippi Co., Mo., on the Mississippi River, opposite Columbus, Ky., and on the St. Louis, Lion Mountain, and Southern Railroad (Map Missouri, G 5). In the summer of 1861 Belmont became the site of a Confederate camp. On November 7 General Grant, then in command at Cairo, Ill., moved upon it with about 3000 troops, and after four hours of fighting captured and destroyed it. Meanwhile General Polk sent General Pillow with a Confederate reinforcement across the river, and Grant was forced to fight his way back to his transports. The total Confederate force engaged was about 7000. The losses in killed, wounded, and missing were, for the Federals, 485, and for the Confederates, 642.

BELMONT. A village and the county seat of Allegany Co., N. Y., 93 miles west by north of Elmira, on the Erie and Buffalo and Susquehanna Railroad, and on the Genesee River (Map New York, B 6). It is the centre of an agricultural community and has flour mills and manufactures of jewelry and condensed milk. The city also contains a public library and a high school which includes a school of agriculture, maintained by the State. The water works are owned by the village. Pop., 1890, 950, 1900, 1190, 1905, 1207, 1910, 1094.

BELMONT, AUGUST (1816-90). An American financier. He was born in Alzey, Germany, was for several years employed in the banking house of the Rothschilds at Frankfurt and Naples and removed to New York as their representative in 1837. He was Consul General for Austria from 1844-50 and in 1853 was appointed by President Pierce chargé d'affaires at The Hague, where he afterward became Minister Resident, resigning in 1858. He was interested in politics and was chairman of the Democratic National Committee from 1860 to 1872. He was prominent on the turf and as a patron of art and owned a fine collection of paintings.

BELMONT, AUGUST (1853-). An American banker, born in New York City. He graduated at Harvard and immediately became associated with the New York banking firm of August Belmont & Co., founded by his father. Upon the formation of the Interborough Rapid Transit Company of New York City he became its president. He was chosen president of the National Civic Federation, in 1905, to succeed Senator Hanna (qv) and was reelected in 1906. In November, 1905, he was appointed treasurer of the Democratic National Committee.

BELMONT, PERRY (1851-). An American lawyer, son of August Belmont. He was born in New York, graduated at Harvard in 1872, and at the Columbia College Law School in 1876, was admitted to the bar and practiced law in New York until 1881. He was a member of Congress as a Democrat in 1881-87, was chairman of the Committee on Foreign Affairs in 1885-87, and was United States Minister to Spain in 1887-88.

BELMONTET, bel'mon'tá, LOUIS (1799-1879). A French poet and publicist. He was

born at Montauban, of Italian parents, and was educated at the Lyceum of Toulouse. In consequence of several eulogistic verses written by him on Napoleon I he was banished from Toulouse in 1819 and went to Paris, where he obtained a position as tutor. He later became one of the most ardent promoters of the Bonapartist propaganda, in which cause he in 1830 established the *Tribun du Peuple*. He was a member of the legislature from 1852 until the fall of the Empire. His most celebrated poetic productions are *Les tristes*, a collection of elegies (1824), *Le souper d'Auguste* (1828), *Une fête de Néron*, a tragedy performed more than 100 times at the Odéon in 1820.

BELOCH, ba'log, JULIUS (1854-). A German-Italian historian, born at Petschendorf, near Luben. He became professor in the University of Rome in 1879. His works include *Campamen* (2d ed., 1890), *Der italische Bund unter Roms Hegemonie* (1880), *Die attische Politik seit Perikles* (1884), *Die Bevölkerung der griechisch-römischen Welt* (1886), *Storia greca* (2 vols., 1893-97).

BELOIT. A city and the county seat of Mitchell Co., Kans., 184 miles west of Atchison, on the Missouri Pacific and the Union Pacific railroads, and on Solomon River (Map Kansas, D 2). It is the seat of the State Industrial School for Girls and contains a fine county courthouse, an opera house, a handsome post-office building, and a library. The city has a large trade in live stock, building stone, agricultural produce, grain, and flour. There are grain elevators and a large flour mill. The water works and electric light plant are owned by the city. Pop., 1900, 2359, 1910, 3082.

BELOIT. A city in Rock Co., Wis., 67 miles (direct) southwest of Milwaukee, on Rock River, and on the Chicago, Milwaukee, and St. Paul and the Chicago and Northwestern railroads (Map Wisconsin, D 6). It has paper mills, foundries, and extensive manufactures of iron, gasoline engines, windmills, agricultural implements, tools, wood-working and paper-mill machinery, scales, shoes, etc. Beloit has a public library and is the seat of Beloit College (Congregational), organized in 1847. The first settler on the site of Beloit came in 1824, and a city charter was obtained in 1856. The government, under a charter of 1896, is vested in a mayor, elected biennially, and a council. Pop., 1890, 6315, 1900, 10,436, 1910, 15,125.

BELOIT COLLEGE, at Beloit, Wis., was founded in 1848, graduates of Yale being prominent in its organization. The value of buildings and grounds is about \$610,000, the endowment amounts to \$1,240,000, and the annual income is about \$105,000. The number of volumes in the library is 50,000. In 1913-14 the faculty numbered 35 and the student body 387. No special students are admitted, and there is no academy in connection with the college. Aaron L. Chapin, D.D., LL.D., was president of the college from 1850 to 1886, Edward Dwight Eaton, D.D., LL.D., after 1886.

BEL/OMAN/CY. See SUPERSTITION.

BELON, be-lon', PIERRE (1517-64). A French naturalist. He was born at Soulethère, studied medicine in Paris, and traveled extensively. He published accounts of his travels in the following works: *Les observations de plusieurs singularités et choses mémorables trouvées en Grèce* (1551), *Judée, Egypte, Arabie, et autres pays étranges, rédigées en trois livres* (1553-58),

Histoire naturelle des étranges poissons marins (1551), *Histoire de la nature des oiseaux, avec leurs portraicts gravés en bois, plus, la vie peinture et description du Dauphin et de plusieurs autres rases de son espece* (1555) This last-named book is the most important treatise on ornithology of the sixteenth century. Belon paved the way for modern comparative anatomy.

BELOOCHE See BALUCHI

BELOOCHISTAN, be-loo'che-stan' See BALUCHISTAN

BELOS/TOMATIDÆ A family of predaceous water bugs. See FISH KILLER

BELOT, be-lô', ADOLPHE (1829-90) A French novelist and dramatist. He was born at Ponte-à-Pitre, Guadeloupe, Nov. 6, 1829, and early began to devote himself to writing. He was a most prolific and sensational author, and in addition to original plays he dramatized, often in collaboration with others, nearly all of his own novels. Among his best-known novels are *Le diamant de la Rue de la Paix* (1867), *La Venus de Gordes* (1867), in collaboration with Ernest Daudet, *Mademoiselle Guélaud, ma femme* (1870), a study in perverse pathology and highly meretricious, *La femme de feu* (1872), *La Venus naute* (1878), *Fleur de crime* (1881). His comedies, *Le testament de César Guodot* (1859), written with Edmond Villette, *Les mœurs d'un système* (1882), and *Les indifférents* (1883), were widely popular, but Belot will perhaps be longest remembered by his dramas *Paricide* (1874), and *Saphô* (1885), written in collaboration with Alphonse Daudet. He died in Paris, Dec. 17, 1890.

BELOVED DISCIPLE, THE A name given to St. John, called in John xiii 23, "one of his disciples, whom Jesus loved."

BELOVED PHYSICIAN, THE A title of St. Luke in Col. iv 14.

BELPER (corrupted from *Fi bel, beau*, beautiful + *repaire*, retreat) A market town of Derbyshire, England, on the Derwent, 7 miles north of Derby (Map England, E 3). It is well built, in great part of gritstone, which is obtained in the neighborhood. Belper owes its prosperity to the establishment of cotton works in 1776, and these are run by water power. There are also manufactures of silk and cotton hosiery, linen, and pottery. Coal and lead are found in the vicinity. Belper was at one time the residence of John de Gaunt. Pop., 1891, 10,400, 1901, 10,900, 1911, 11,640.

BELPHEGOR (Gk *Βελφεγγορ*, *Beelphegor*, for Heb *Bagl-Peor*, lord of Peor mountain.) The name of an arch demon who entered into a marriage with a mortal, but was not able to endure the society of the woman and fled. La Fontaine treated this subject in one of his *Contes*, and Wilson produced an English tragedy, *Beelphegor, or the Marriage of the Devil*, in 1691. Two other plays of this name have been brought out since. In the pantheon of the Moabites a deity of this name was worshipped with peculiarly disgusting rites.

BELPHEGE (Fr *belle*, fem of *beau*, OF *bel*, beautiful + *Lat Phœbe*, Gk *Φοῖβη*, *Phoibe*, Diana.) A character in Spenser's *Fæerie Queene*, who sums up Elizabeth's womanly attributes. The virtues of the Queen are set forth under the other name of Gloriana.

BELSHAM, THOMAS (1750-1829) An English Unitarian clergyman, one of the ablest expounders of that system of theology. He was born at Bedford, was educated in the principles

of Calvinism, and was pastor of the Dissenting congregation and head of the theological academy at Daventry from 1781 to 1789, when he resigned, on embracing Unitarian views, and shortly after received the charge of a new theological academy at Hackney. After the collapse of that institution for want of funds in 1796, he took private pupils. In 1805 he removed to London as the successor of Dr. Disney, where he continued till his death, Nov. 11, 1829. Most of his works are controversial, his doctrine regarding the person of Christ represents the purely "humanitarian" view, as distinguished from the more nearly Arian sentiments of men like Channing. He published also a work on mental and moral philosophy, following Hartley, and a memoir of his predecessor, Theophilus Landsey (1812, reprinted Boston, 1873). Consult *Memoirs*, ed. by J. Williams (London, 1883). His brother, WILLIAM (born 1752, died 1827), was an active and voluminous writer of history and political tracts on the side of the Whigs. He wrote *History of Great Britain from 1688 to 1830* (14 vols., London, 1805-24).

BELSHAZZAR (Babylon *Bel shar-usur*, O Bel, protect the king, from *shar*, lord, king + *usur*, to protect). According to the Book of Daniel (chap. v), the son and successor of Nebuchadnezzar, and the last King of Babylon, who was slain, the Empire passing into the hands of Darius, the Mede. He is warned of his doom by a mysterious handwriting that appears on the wall of his palace. Those who accept the results of modern biblical criticism maintain that the Book of Daniel was composed in 165 B.C. If this is granted it is hardly astonishing that in a composition made several centuries after the fall of Babylonia historical events should have become confused in the mind of a writer who merely introduces Babylonian personages as a disguise, and is interested, not in Babylonian, but in Hebrew events. As a matter of fact, the last King of Babylonia was Nabonidus, in the seventeenth year of whose reign (B.C. 539) Babylon was taken by Cyrus. The inscriptions of Nabonidus, however, make mention of a son, Bel-shar-usur, and this name also occurs as that of the son of Nabonidus in several contract tablets, and since, in an inscription of Cyrus, "a son of the King" is spoken of as in control of the army in northern Babylonia, it is reasonable to conclude that Bel-shar-usur was associated with his father in the government. Thus the tradition could arise which would make him the actual last King of Babylonia. The association of Belshazzar with Nebuchadnezzar rests upon a further confusion which can be easily accounted for, if it be borne in mind that a Jewish writer of the second century B.C. would not be at great pains to distinguish one Babylonian King from another. Nebuchadnezzar, as the destroyer of Jerusalem, was the chief representative, in the eyes of a Jewish writer, of the Chaldean monarchy, and so appears throughout the Book of Daniel.

Consult A. Bevan, *The Book of Daniel* (1892), J. D. Prince, *The Book of Daniel* (1899), K. Marti, *Das Buch Daniel* (1901), S. R. Driver, *The Book of Daniel* (1900), R. H. Charles, *The Book of Daniel* (1911), A. Bertholet, "Das Danielbuch" in *Die Religion in Geschichte und Gegenwart* (1909).

BELT See GIRDLE

BELT (AS *belt*, allied with OHG *bale*, Lat *balteus*, girdle, belt) In engineering machinery

and the mill, a flexible cord or band passing about the periphery of wheels or drums for the purpose of transmitting motion or power from one to another. Commonly the name 'belt' is given only to broad, flat bands of leather, rubber, or woven fabric, ropes, chains, etc., although serving similar purposes, being classed separately as rope drive, chain drive, etc. (See POWER, TRANSMISSION OF.) The best leather belts are made from the back strips of all oak-tanned leather, curried with the use of cod oil and tallow. To form the lengths of leather into the long endless belt, they are connected end to end by lacing, riveting, or cementing and lacing. The strength of leather belts in the body of the belt is from 2000 to 5000 pounds per square inch, at the joints only about from 1000 pounds to 1500 pounds, for lacing, and from 1000 pounds to 2500 pounds for riveted joints, the safe working strain is taken generally at not over one-third the strength at the joint. Leather belts should be protected from steam, vapor, water, oil drippings, and moisture, and should not be submitted to a heat of over 110° F. They are usually run with the grain side next to the pulleys since this side is smoother and gives better surface adhesion, it stands the wear better, and the flesh side is stronger and the part least subjected to wear. This arrangement gives the belt longer life and greater propelling power. Leather-chain or leather-link belting consists of short sections of leather joined by metal rivets. Rubber belts are made of two or more layers of canvas connected together with a rubber composition and then heated until the rubber vulcanizes. The advantages claimed for rubber belting are its practically unlimited length without jointing, its perfect uniformity in width and thickness, ability to endure greater degrees of heat or cold safely, less danger of injury from moisture and steam vapor, great durability and strength, and greater adhesion to the pulleys than is afforded by leather belting. Grease, or any other solvent of rubber, rapidly deteriorates and destroys rubber belts. Besides leather and rubber belting, cotton, hair, and most of the more common textile fibres are used for manufacturing them.

Transmission of power by belts is more common in the United States than in European countries, but of late years there has been an increase in the use of belts outside of the United States. There is a variety of woven fabric belts employed. The great favor with which power transmission by belting is received is due to the fact that the belt is relatively silent and elastic and will slip without injury to the machinery if unduly strained. Ordinarily, flexible belts transmit power by the adhesion due to their tension or pressure on the contact surface, which develops friction between them and their pulleys if they start to slip. The pulley which communicates motion is the driving pulley, that which receives, the driven pulley, that part of the belt which runs from the driven pulley to the driver is the driving part of the belt, since it is pulled by the driver, and in turn pulls on the driven pulley, the part of the belt which runs from the driver to the driven pulley is the tight or slack belt. If the pulley is higher at one side than at the other, the belt will creep towards the lowest part, for this reason the surface of the pulley is usually not made cylindrical, but of greater diameter at the centre. If this be overdone, the belt does not pull with

its whole cross-sectional strength, but mainly along its central part. The pulleys usually lie in the same plane and with their axes parallel, but this is not necessary, provided that the course of each part of the belt—the driving and the slack part alike—be in the plane of the pulley towards which that part of the belt runs, the belt being always delivered by one pulley into the plane of the other.

Chains of flat metal links which hook or are riveted into one another are now extensively used and are often loosely called belts, under the commercial designation of link belts or drive chains. The links are all alike, and no tools are required to assemble certain designs. They run on sprockets or on the toothed surfaces of gears, and furnish a positive drive. Belts are made in a great variety of sizes, some of them being very large. As extreme cases, may be noted: A leather belt of the New Jersey Zinc Works, 4 thicknesses, 48 inches wide and 102 feet long, a rubber belt in Chicago, 6-ply, 48 inches wide and 320 feet long, a leather belt for a paper mill in Wilmington, Del., 60 inches wide and 186½ feet long. For a summary of modern practice in belts and belting consult Kent, *Mechanical Engineer's Pocket-Book* (New York, 1914).

BELT, GREAT and **LITTLE**. Names given to the two straits of eastern Denmark which, with the Sound, connect the waters of the Kattegat with the Baltic (Map Denmark, C and D 3). The Great Belt, which includes the Store Belt and the Langeland Belt, is about 70 miles long and varies from 8 to 20 miles in width, in fact broadening to 30 miles towards the south in Vordunborg Bay, it separates Seeland and Langeland on the east from Funen and Langeland on the west. The Little or Lille Belt, which is shallow, is about 50 miles long and varies from less than a mile in width at the north to an extreme width of 30 miles, its average width being less than 10 miles, it separates Funen on the east from Jutland and Schleswig on the west. Both straits are difficult to navigate on account of currents and sand banks and ice adds another impediment in winter, the smaller route is little used.

BELTANE (Scottish Gael. *Bealltanne*), **BELLTAINE**, or **BELTINE**. A pagan Celtic festival, traces of which have survived to this day. The name is still used for May Day in Gaelic Scotland. The etymology and original meaning are uncertain. "*Cormac's Glossary*," an Irish text of the tenth century, contains the earliest mention of the institution (spelled *belltaine* and *beltime*), and two different explanations are there given of its meaning. In one place it is said to mean "lucky fire," and in another "fire of Bel," who is declared to be "an idol god." The second of these interpretations has been commonly accepted, but without any sufficient evidence. The identification of *bel* as the name of a god is doubtful, and even the connection between the second element and Irish *teine*, 'fire,' is open to question. In any case, however, the Semitic Baal has nothing to do with the matter.

Cormac's description of Beltine is very brief. He simply says that the Druids used to make two fires with great incantations and drive their cattle between them as a safeguard against disease. This custom of driving domestic animals through fire is still known in Brittany and the islands of Arran, and in certain May-day festi-

ties it was practiced until recently in Scotland. A young man, selected by a prescribed ceremonial, was similarly compelled to leap three times through fire. Both these ceremonies look like symbolical sacrifices, and there may have been a time when the victims were actually burned. The whole set of observances, like the German *Johannisfeuer* at the summer solstice, is usually explained (and doubtless correctly) as a branch of sun worship.

Consult, for the statement in Cormac, *Glossary*, the edition by O'Donovan and Stokes (London, 1862), for the Scottish Beltane, Jamieson, *Scottish Dictionary* (Edinburgh, 1808), for the significance of the ceremonies, A. Bertrand, *La religion des Gaulois* (Paris, 1897), MacCulloch, *The Religion of the Ancient Celts* (Edinburgh, 1911). Rhys makes some comparisons with the Athenian Thargelia in his *Hübner Lectures* (London, 1887).

BELTON. A city, and the county seat of Bell Co., Tex., 56 miles (direct) north by east of Austin, on the Leon River, and on the Missouri, Kansas, and Texas and the Gulf, Colorado, and Santa Fe railroads (Map Texas, D 4). It has a county courthouse, a Carnegie library, and jail buildings, and is the seat of Baylor Female College (Baptist), opened in 1845. Building stone, quarried in the vicinity, and cotton constitute an extensive export trade, and among the industrial establishments are cotton, cotton-seed oil, and flour mills, foundries, lumber yards, marble works, and an ice factory. The water works and sewage system are owned by the city. Pop., 1890, 3000, 1900, 3700, 1910, 4167.

BELTRAFFIO, bĕl-traf'yo, or **BOLTRAF-FIO**, GIOVANNI ANTONIO (1467-1516). A Milanese painter of the High Renaissance. He was born of noble parentage, studied painting with Leonardo da Vinci, whose favorite pupil he was, and practiced his art as an amateur. His earliest works are quite in the manner of Leonardo and often after his designs, such as "Madonna Handing the Christ Child a Flower" in the Salting Collection, London, and the Creppi Collection, Milan, "St Sebastian" in the Frizzoni Collection, Bergamo, and "Narcissus" in the Uffizi, Florence. He gradually evolved an independent style, harder in line and smoother in finish, but more important in content. His paintings, usually of small form, are most numerous in the galleries of Milan and Bergamo. Among the best examples are the "Madonna with the Vase of Flowers" in the Poldo-Pezzoli Collection, Milan, esteemed by Morelli his finest work, and two others in the National galleries of London and Budapest, the "Madonna Casio" in the Louvre, and the "Resurrection of Christ" (wrongly attributed to Leonardo) in the Berlin Gallery. In portraiture Beltraffio is one of the very finest of Leonardo's school. The best examples of his work of this type are the Giovanni Casio in the Brera and Frizzoni collections, Milan, "A Scholar," in the Isola Bella, probably, also, the celebrated "La Belle Ferronnière," usually attributed to Leonardo, in the Louvre, and the "Lady with the Weasel," at Cracow. Among his excellent drawings the best known are two pastels of a young man and woman in the Ambrosiana, Milan.

BELTRAME, bĕl-tra'mă, GIOVANNI (1824-1906). An Italian philologist and missionary, born at Valeggio, in north Italy, and educated

at the American monastery of San Lazzaro Venice. In 1854 he was sent to Khartum and Fazogl by an Austrian missionary society, and in 1858 he accompanied Knoblicher to the newly established missionary station, "Holy Cross" on the White Nile. He returned to Europe in 1862 and became professor at Verona. In 1878 he was elected to the Venetian Institute. The following are his principal publications: *Grammatica della lingua Denka* (1880), *Vocabolario Italiano-Denka e Denka Italiano* (1880), *Il Sennar e lo Scwangallah* (2 vols., 1880), *Il fiume bianco e Denko* (1881), *In Palestina* (1895).

BELTRAMI, bĕl-tra'mĕ, EUGENIO (1835-1900). An Italian mathematician. He was born at Cremona and taught mathematical physics at the University of Rome and at several other Italian universities. The Lincei, a celebrated academy of Rome, honored Beltrami by electing him president. His contributions to mathematics are largely on the subject of non-Euclidian geometry. (See GEOMETRY.) He reached the remarkable conclusion that the propositions of non-Euclidian geometry relate to figures lying upon surfaces of constant curvature. The conclusion that there are three geometries—the hyperbolic on a surface of constant negative curvature, the elliptic on a surface of constant positive curvature, and the Euclidian on a surface of zero curvature—rests upon the researches of Beltrami, Helmholtz, and Riemann. Thus Beltrami has taken a conspicuous part in laying the foundation of modern geometry. The most important among his numerous essays is the monograph, "Saggio di interpretazione della geometria non-euclidea," published in the *Giornale di Matematica VI* (Rome). The following theorem is known as Beltrami's: "The centre of a circle circumscribing a triangle is the centre of gravity of the centres of its inscribed and escribed circles." Besides his work in pure mathematics, his contributions to mathematical physics deserve mention, his original publications in the latter field including papers on electricity and magnetism, elasticity, etc.

BELTRAMI, GIOVANNI (1779-1854). An Italian lapidary, born at Cremona. With the exception of a preliminary course with Giacomo Guerrini, he was self-taught. His fine work secured for him a patron in Eugène Beauharnais, for whom he executed 16 cameos, representing episodes from the story of Psyche. At the request of the Empress of Austria he prepared, in 1815, a cameo portrait of her father, the King of Bavaria, and 10 years afterward a similar portrait of her husband, Francis I. Such was his skill that on one occasion he reproduced "The Lord's Supper," by Leonardo da Vinci, upon a single topaz.

BELUCHISTAN, bĕl'uch'chĕ-stăn'. See BALUCHISTAN.

BELUGA. See WHITE WHALE.

BELUGA, or **BIELAGA** (Russ. *byeluga*, from *byely*, white) A Russian sturgeon. See STURGEON.

BELUS (Lat., Gk. *Bēlos*, *Bēlos*). 1 The name of the Babylonian god Bel (q.v.) was given by Greek writers as Belos, and in Latin as Belus. Herodotus identifies Belos with Zeus (1, 181). 2 Passing into Greek mythology, the god of Babylon became a hero and found his place in various genealogical schemes. He appears as the son of Poseidon and father of Danaos and Ægyptus, as the son of Alcæus,

son of Hercules, father of Ninus, the first King of Assyria, and grandfather of Agron, the first King of Sardinia, as father of Cepheus, whose daughter Andromeda bore to Perseus Perseus, the eponymous hero of the Persians, and as father of Dido, the founder of Carthage.

BELUS The name of a river in Syria famous for the fish found there in abundance from whose shells the ancient Phoenicians obtained the Tyrian purple, and for the fine sand from which glass was made. The modern name of the river is Nahr Na'mem. It empties into the Mediterranean near Acre.

BELVEDERE, bĕl'vĕ-dĕr, *It pron* bĕl'vā-dā'rā (It *bel*, beautiful + *vedere*, to see, a view). An Italian term, applied originally to an erection like a loggia on the top of a house, or a detached summerhouse or terrace set upon an eminence, for the purpose of commanding a view. It is also sometimes used of a large inclosed—usually glassed-in—structure, for example, that part of the Vatican Palace (qv) in Rome known as the Belvedere, which is now part of the sculpture gallery. The name is also given to an arcaded summerhouse of the royal palace at Prague, to a loggia or open hall in the Imperial gardens of Schonbrunn, near Vienna, and to the entire palace of Prince Eugene in Vienna.

BELVEDERE, bĕl'vā-dā'rā, *CORTILE DEL*. A court in the Vatican, about which are placed some of the most famous works of ancient sculpture—the Torso of Hercules, the Laocoon, the Apollo Belvedere, and the Sarcophagus of Lucius Cornelius Scipio Barbatus.

BELVIDERE, bĕl'vĭ-dĕr' A city and the county seat of Boone Co., Ill., 76 miles (direct) north-west of Chicago, on the Kishwaukee River, and on the Chicago and Northwestern Railroad (Map Illinois, D 1). It contains a public library, city park, a fine opera house, and a courthouse and county-record building. The city is noted as a manufacturing centre, producing extensively sewing machines, corsets, safety razors, bicycles, automobiles, boilers, condensed milk, butter, screen doors, and flour. It is surrounded by a fertile agricultural district and has important dairying and sheep-raising interests. Settled in 1836, Belvidere was incorporated first in 1857. The government is administered under a charter of 1881, which provides for a mayor, elected every two years, and a city council. The water works are owned and operated by the municipality. Pop., 1900, 6937, 1910, 7253.

BELVIDERE A town and the county seat of Warren Co., N. J., 62 miles by rail north-west of Trenton, on the Delaware River, and on the Pennsylvania and Lehigh and Hudson River railroads (Map New Jersey, B 2). It derives good water power from Pequog Creek, which here empties into the Delaware, and has a large silk mill, a felt factory, flour mills, and furniture and hosiery factories. Pop., 1890, 1768, 1900, 1784, 1905, 1869, 1910, 1764.

BELZONI, bĕl'tsō'nĕ, GIAMBATTISTA (1778-1823). An Italian explorer and archaeologist. He was born in Padua and was educated in Rome for the priesthood, but, having a natural inclination for mechanics, and especially hydraulics, he abandoned his theological studies and returned to Padua when Rome was occupied by the French troops. He went to Holland in 1800 and to England in 1803. There he lived for nine years in great poverty, being often

compelled to earn a living by giving athletic performances at the theatre. Later, he traveled to Spain, Portugal, and Malta, and in 1815 went to Egypt in order to construct a hydraulic engine for Mohammed Ali, to raise the waters of the Nile. In Egypt he met Burckhardt and Salt, through whose advice and encouragement he began the exploration of Egyptian antiquities. In 1817 he cleared away the sand from the entrance to the great rock-hewn temple of Abu Simbul (qv), and in the same year discovered the finest of the royal tombs (that of Seti I) at Thebes. It is still known as "Belzoni's tomb." At Gizeh he found the entrance to Khafra's Pyramid (1818) and made the first thorough examination of the great pyramids. He also explored the desert between the Red Sea and the Nile and visited the oasis of Siwa. The discovery of the ancient emerald mines at Gebel Zabara is often ascribed to him, but erroneously, as the place had previously been visited by Bruce and Caillaud. Belzoni engraved his name upon many ancient monuments in commemoration of his discoveries.

In 1819 he returned to Italy and thence to England, bringing with him, for exhibition and for sale, a valuable collection of antiquities, among them the splendid alabaster sarcophagus of Seti I (now in the Kensington Museum), and the upper half of a colossal statue of Rameses II (now in the British Museum), found at the Ramesseum. Two years later he published his *Narrative of the Operations and Recent Discoveries within the Pyramids, Temples, Tombs, and Excavations in Egypt and Nubia, and of a Journey to the Coast of the Red Sea in Search of the Ancient Berenice, and Another to the Oasis of Jupiter Ammon* (London, 1821). In 1823 Belzoni undertook a journey to Timbuktu, in Central Africa, but was attacked by dysentery at Benin, and died at Gato, Dec. 3, 1823. Belzoni's skill as a draftsman was of great service to him in his archaeological investigations. His fine drawings of the royal tombs at Thebes were published in 1829 by his widow.

BEM, JOZEF (1795-1850) A Polish revolutionist and Hungarian patriot. He was born at Tarnow, in Galicia, fought under Napoleon in the campaign of 1812, and entered the Polish army, serving till 1825. He distinguished himself in the Polish revolution of 1830-31, rising to the position of commander in chief of the artillery. On the collapse of the revolution he took refuge in France. He took a prominent part in the insurrection of October, 1843, in Vienna. He succeeded in escaping and joined the Hungarians. He was intrusted with the command of the Army of Transylvania, amounting to 8000 or 10,000 men. Checked at first, he defeated the Austrians at the Bridge of Piski, and finally succeeded, in March, 1849, in driving both them and their Russian allies into Wallachia. After expelling the troops under Puchner from the Banat, Bem, with his army increased to 40,000 men, returned into Transylvania, where the Russians had defeated the Hungarians. Here he endeavored unsuccessfully to prevent the union of the Russians with the Austrians. On July 31 he was defeated by vastly superior forces at Schassburg. At Kossuth's request he now hastened into Hungary, where he took part in the battle near Temesvár. Retreating into Transylvania, he there defended himself for some days against

overwhelming numbers and then made his escape into Turkey. There he embraced Islam, took the name of Amurath Pasha, and received a command in the army. He was wounded while suppressing an anti-Christian riot at Aleppo. He died there of the fever. Bem was a man of unselfish character, of great zeal and devotion, and possessed fine military talents. He wrote a work on mnemonics, the *Exposé général de la méthode mnémonique polonaise*, etc. Consult N. N. Lajos, *Le général Bem* (Paris, 1851) and Czetz, *Bems Feldzug in Siebenburgen* (Hamburg, 1850).

BEMA (Gk βῆμα, *bēma*, a step, raised place). The sanctuary of a church, so called by the Greek church because the sanctuary end was raised above the rest of the pavement. It begins at the outer edge of the choir and is separated from the body of the church by the *iconostasis*, or *icteos*, or choir screen. See CHANCEL, CHOIR, CHURCH.

BEMAN, WOOSTER WOODRUFF (1850-) An American mathematician, born in Southington, Conn. He graduated from the University of Michigan in 1870, becoming in the same year instructor in Greek and mathematics at Kalamazoo College. By the University of Michigan he was appointed instructor (1871), assistant professor (1874), associate professor (1882), and professor (1887) in the department of mathematics. With David Eugene Smith he wrote *Plane and Solid Geometry* (1895), *Higher Arithmetic* (1897), *Famous Problems in Elementary Geometry* (1897), *New Plane and Solid Geometry* (1899), *Elements of Algebra* (1900), *A Brief History of Mathematics* (1900), *Academic Algebra* (1902). From the German of Dedekind he prepared *The Nature and Meaning of Numbers* (1901).

BENBA. See BANGWEOLO.

BENBERG, BAN'BAR', HENRI (1861-) A French composer and conductor, born in Paris. He studied at the Conservatory of that city, among his teachers being Dubois, Franck, and Massenet. He is widely known by many successful songs and piano compositions, but in France is chiefly recognized as a dramatic composer. His principal works are *Le baiser de Suzon*, a one act opera, which met with but moderate success when first presented at the Opéra Comique, Paris, in 1888, and the more ambitious and successful four-act *opéra-légende*, *Elaine*, which was first heard at Covent Garden Theatre, London, in 1892 and afterward in New York (1894).

BEMBICIDÆ, bēm-bis'ī-dē (Neo-Lat., from Gk βέμβη, *bembē*, a spinning top, a buzzing insect, probably from the loud, whirling sound which accompanies their flight). A family of fossorial Hymenoptera, which, with the Sphecidae, are popularly known as sand wasps (q.v.).

BEMBO, PRINCE (1470-1547). One of the most celebrated and influential writers of his century. Born of a powerful Venetian family, his life was passed in the most elegant and learned circles of Florence (1479), Ferrara (1498), Urbino (1506-12), Venice (1500-06, 1520-30) and Rome (1513-20, 1539-47). At Rome he was first secretary to the Pope and later a Cardinal, at Venice he acted as historiographer of the Republic and curator of St Mark's Library. Bembo's influence was deeply felt in the literature of Italy during the following three centuries. In his own time he played much the

rôle that Petrarch had filled before him. His *Prose della volgar lingua* (1525), supported by the rigorous example of his own correspondence and published works, brought about the triumph of the classic tradition in the Italian language, which came to be modeled rigidly on the language of Dante, Petrarch, and Boccaccio. In poetry he aroused a tremendous interest in Petrarch, and in application of the pseudo-Aristotelian doctrine of imitation he fastened the direct imitation of Petrarch upon Italian poetry for a long time to come. The resulting style, which avoids the vagaries of the earlier Petrarchism, has been known as *bembism*. Its dignified sterility is exemplified in Bembo's own *Rime*. His dialogues entitled *Gl'Asolani* are an interesting exposition of that idealism in the concept of love which exerted much influence on the sophisticated social life of Italy. Bembo was equally renowned in his own age as a humanist, editor, and historian. Consult Symonds, *Renaissance in Italy* (London, 1881), Spingarn, *History of Criticism in the Renaissance* (2d ed., New York, 1906), J. B. Fletcher, *The Religion of Beauty in Woman* (New York, 1911), Trialetta, *Storia della grammatica italiana* (Padova, 1908).

BEMIDJI, bē-mid'jī. A city, and the county seat of Beltrami Co., Minn., 180 miles west by north of Duluth, on the Great Northern, the Minneapolis, Red Lake, and Manitoba, the Minneapolis, St. Paul, and Sault Ste. Marie, and the Minnesota and International railroads (Map Minnesota, C 3). Situated on a lake, Bemidji is a popular summer resort, and has a State normal school, a fine Federal building, and a public library. It is the centre of a considerable lumbering industry, and manufactures crates and axe handles. Bemidji was settled in 1892 and was incorporated as a city in 1905. The city owns its water works. Pop., 1900, 1213. 1910, 5009.

BEMIS, EDWARD WEBSTER (1860-) An American political economist. He was born in Springfield, Mass., and graduated at Amherst College in 1880. He was professor of history and political economy at Vanderbilt University (1889-92), assistant professor of political economy at the University of Chicago (1892-95), assistant statistician of the Bureau of Labor Statistics for the State of Illinois (1896), and professor of political science at the State Agricultural College, Kansas (1897-99). He was involved in a controversy with President Harper when he left the University of Chicago. Professor Bemis charged that he was persecuted because of his radical attacks on corporations in his extension lectures. He was director of the department of municipal monopolies in the Bureau of Economic Research, New York, in 1899-1901, when he became superintendent of water works at Cleveland, Ohio. His publications include *History of Cooperation in the United States* (1888), *Municipal Monopolies* (1899), *Municipal Ownership of Gas-Works in the United States* (1891), and magazine articles on similar subjects. In 1913 was published his *Report on the Investigation of the Chicago Telephone Company*.

BEMIS HEIGHTS. See SARATOGA, BATTLES OF.

BEMONT, bē-mōn', CHARLES (1848-) A French scholar, born Nov. 16, 1848, in Paris. His writings comprise the results of his researches into English and European history, and

his most important works are *Les chartes des libertés anglaises* (1892), and, with G. Monod, *Medieval Europe from 395 to 1270* (New York, 1906). In 1896 he produced a supplement to the first volume of the *Gascon Rolls* which Francisque Michel had begun, and in 1900 issued the second volume, covering the years 1273-90. This was followed in 1906 by the third volume for the years 1290-1307. In 1909 the University of Oxford conferred upon him the honorary degree of Litt D.

BEN. The Hebrew word for "son." It is sometimes used as a part of a name, e.g., Benhadad, translation of Bar Hadad, son of Hadad, the chief deity of the Arameans, Benjamin, son of the right hand, etc. 1 The plural, *Bene*, is used to indicate a combination of families into a clan or tribe, or of clans into a confederation—Bene Ammon, Bene Israel. 2 In Arabic one finds the corresponding word *Ibn* similarly used, which sometimes appears modified in European languages as Ebn, Aben, or Aven. Its plural, *Banu* or *Beni*, is found in the names of many Arab tribes—as Banu Umayya, the sons of Umayya, the family known in history as the Umayyads, and sometimes in the name of places—as Beni-Hassan.

BEN, BEINN, or BHEIN. A Gaelic word signifying "mountain" or "mountain head." It is prefixed to the name of a great many mountains in Scotland—as Ben Nevis, Ben Macdui, Ben Cruachan, etc. The corresponding term in various parts of Europe is *Pen*, which is found in the names in Cornwall and Wales, in the Pennine Alps, and also in the word "Apennines," and probably in the Cevennes of France.

BEN, OIL OF (Ar *bān*, name of the tree). A fixed oil used in perfumery in extracting the fragrant principles of various plants. It is itself odorless and does not readily decompose. It is obtained by expressing the seeds (called *ben* or *ben nuts*) of several species of *Moringa*, a genus of trees growing in northern Africa, Arabia, and the East Indies. The ben oil of commerce is derived mainly from the *Moringa aptera*.

BENACUS, LACUS (Lat *Benacus Lake*). The Roman name of the Lake of Garda (*Lago di Garda*), a long stretch of water in Venetian territory, which in 1859 formed part of the boundary line between Austria and Italy.

BENADIR, ben'a-der' An administrative division of Italian Somaliland, on the east coast of Africa, extending from the mouth of the river Juba to lat 20° 30' N. Originally the territory now included in the Benadir coast was leased from the Sultan of Zanzibar in 1892 and was purchased outright for about \$700,000 in 1905, the administration being taken over by the government from the Benadir Company. There is a police corps and troops to the number of about 3500. Cattle raising and the growing of cotton are the leading occupations. The principal towns are Brava, Merka, Mereg, Warsheik, and Mogadisho, the last mentioned with a population of about 10,000 and the seat of the civil government of the colony.

BENALCÁZAR, bā'nāl-ka'thar, SEBASTIAN DE, properly SEBASTIAN MOYANO (c.1499-1550). A Spanish conqueror, born in Benalcázar, Estremadura. He accompanied Pedrarias to Darien in 1514, came to stand high in the confidence of Francisco Pizarro, and in 1533 defeated the Peruvian army of the plains of Riobamba.

and took the city of Quito. Subsequently he proceeded to the invasion of Popayan, a region comprising the southwestern portion of the present Colombia. He was appointed Governor of Popayan Province in 1538.

BÉNARD, bā'nar', HENRI JEAN EMILE (1844-) A French architect, born at Goderville. He studied at the Ecole des Beaux-Arts in Paris and was awarded the Prix de Rome in 1867. For some time he practiced in Havre and Paris in the employ of the government. In the international competition for plans for the University of California in 1899 he won the first prize against a hundred competitors. His plans, which call for the expenditure of \$10,000,000, are being followed with somewhat material changes of detail.

BENARES, bēn-ā'ez A division in the Northwest Provinces of British India. Area, 10,423 square miles, pop., 1891, 5,368,600, 1901, 5,032,500, 1911, 4,809,478.

BENARES (Skr *Vārāṇasī*, of unknown etymology, its ancient Skr name was *Kāśī*). The holy city of the Hindus, capital of the Benares division, Agra, United Provinces of Agra and Oudh, British India, situated on the left bank of the Ganges, by rail 479 miles from Calcutta and 941 from Bombay. The Ganges here varies, according to the season, between 50 and 90 feet in depth, and in width between 600 yards and a little more than half a mile (Map India, D 3). Since 1887 the river has been spanned at Benares by the Dufferin Railway Bridge, 3518 feet long. The city is in lat 25° 18' N and long 83° 1' E. The native city extends for 4 miles along the in-curving river and from 1 to 2 miles back. The river bank, which is comparatively steep, is chiefly occupied by 47 flights of steps, or ghats, where crowds of all classes spend the day in business, amusement, or devotion. Backed by hundreds of temples, the white minarets of Aurangzeb's mosque rising above the rest, this scene presents a picturesque appearance. On closer inspection, however, the city, as a whole, is disappointing. The streets, or rather alleys, impracticable for carriages, barely afford a passage to individual horsemen or single beasts of burden, and these thoroughfares, besides being shut out from sun and air by buildings of several stories, are shared with the sacred bulls that roam about at will. As the central seat of Hinduism, Benares attracts immense crowds of pilgrims. West of the native city lies the suburb of Sigra, the seat of the principal missionary institutions, and to the north is the Sikraul cantonment, with the official establishment and European residences.

In the traditions of the country Benares is believed to have been coeval with creation, and tolerably authentic history assigns to it a high antiquity. In its actual condition Benares is a modern city. In extent and in embellishment it owes much to the influence of Mahratta ascendancy, and it possesses, perhaps, not a single structure that reaches back to the close of the sixteenth century.

The Benares College was opened in 1791. It is maintained by the government and includes the Sanskrit college, with over 400 students, and the English college, with about 100. It occupies a fine building, completed in 1852, and is attended by Hindus and a few Mussulmans and native Christians. Benares is industrious and wealthy as well as sacred. Besides

manufactures in cotton, wool, silk, and ornamental brass work, its commanding position on the grand line of communication—road, river, and rail alike—renders it the principal emporium of the neighboring regions. It is the great mart for the shawls of the north, the diamonds of the south, and the muslins of the east, while it circulates the varied products of Europe and America over Bundelkhand, Gorakhpur, Nepal, etc. The municipal institutions include fourteen hospitals, dispensaries, asylums for lunatics, lepers, and the blind, jail, swimming bath, fine public gardens, water works, and a sewerage system. Pop., 1891, 219,500, 1901, 213,079, 1911, 203,804. After Lucknow it is the largest city in the United Provinces. Benares was ceded to the East India Company in 1775. The fanatical character of the inhabitants was a cause of anxiety in the mutiny of 1857, but a rising was promptly suppressed, and the population was kept in check by the frequent passage of troops from Calcutta to the north. Consult Shearing, *The Sacred City of the Hindus* (London, 1868), and Ralph, "The Sacred City of the Hindus," in *Harper's Magazine*, vol. c (New York, 1900), Havell, *Benares, the Sacred City* (London, 1911), Rajani Rajan Sen, *The Holy City* (London, 1912).

BENARES A division, a district of the division, and a city in the district, in Agra, United Provinces of Agra and Oudh, British India. Outside of the city the district is devoted to agriculture and stock raising. The chief crops are rice, barley, wheat, maize, gram, and other varieties of grain. About 50 per cent of territory is irrigated by wells and canals. The area of the division is 10,431 square miles, pop., 1901, 5,068,618, 1911, 4,809,478 (about 90 per cent Hindu). District, 1008 square miles, pop., 892,084 and 897,035. See **BENARES (city)**.

BEN BOLT A song by Thomas Dunn English (1843), first published in the *New York Weekly Mirror* and widely reprinted. It owed its popularity largely to the old German air to which it was set. The song was revived in recent years through figuring in the extraordinarily successful *Trilby* of Du Maurier.

BENBOW, JOHN (1653-1702) A famous English admiral. He was born at Shrewsbury, entered the navy in 1678 and first distinguished himself as captain of a merchantman in a bloody action with Sallee pirates in 1686. He attracted the notice of James II, but he does not seem to have reentered the royal navy until June, 1689. His progress was rapid, and in the course of a few years he was made rear admiral by William III. The most memorable of his gallant sailor's exploits was his last, where his stubborn valor contrasted nobly with the dastardly behavior of his captains. Off Santa Marta, in the West Indies, on Aug. 19, 1702, he came up with a superior French force under Admiral Du Casse. For four days he kept up a running fight with the enemy, almost deserted by the rest of his squadron. On the morning of the 24th his right leg was smashed by a chain shot. His officers consoled with him "I had rather have lost them both," said the sturdy admiral, "than have seen this dishonor brought upon the English nation. But, hark ye—if another shot should take me off, behave like men, and fight it out!" As soon as his wound was dressed, he was carried to the quarter-deck and directed the fight while it lasted. The

enemy sustained severe loss, but the infamous cowardice of the other captains, who refused to obey the admiral's signals, made the contest hopeless, and Benbow sailed away to Jamaica. He died of his wound on November 4. The recusant officers were tried by court-martial and two captains were shot. Benbow's employment of explosive vessels at St. Malo seems to have been an anticipation of Lord Dundonald's method at Basque Roads. Consult Clowes, *Royal Navy*, vol. II (London, 1897), Fletcher, "Admiral Benbow," in *Macmillan's Magazine*, vol. LXXXIV (London, 1901).

BENCH As a legal term, originally the seat occupied by judges when holding court, later, the court or tribunal itself, and, then the judges as a class, in contradistinction to the bar. The Court of Common Bench is another name for the Court of Common Pleas. The *King's Bench* (called the Queen's Bench during the reign of a queen) was formerly the highest court of common law in Britain. During the Commonwealth it was known as the *Upper Bench*. It is now, by virtue of the Judicature Act of 1875, included in the High Court of Justice. See **BANC**, **COURTS**, **CURIA REGIS**, **KING'S BENCH**.

BENCH, BENCH MARK A mark made on some permanent body and used in tidal observations and leveling surveys. The bench is an assumed datum level to which the reading of the tide gauge or height of level plane is referred. A *bench mark* is a reference mark made upon some durable material, as the stone foundation of a building or a pier, its height above the zero of the tide gauge or other datum plane is determined and made a matter of record, so that by its means any desired level which has been once determined may be reestablished. In tidal observations a bench mark should be made and its height above the zero of the gauge ascertained as soon as the latter is put up, should the gauge then be injured or destroyed before the completion of the observations it may, by means of the bench mark, be set up again with its zero at the same level as before, and, if renewed observations are desired after a lapse of time, the bench mark enables them to be referred to the original plane of reference. In the ordinary leveling of the engineer or surveyor bench marks are extensively employed and all levels measured are referred to them. See **LEVELING**.

BENCH'ERS The name given to the governing bodies of the four great law societies of England—Inns of Court, Lincoln's Inn, Inner Temple, and Middle Temple. They are generally King's counsel or barristers of distinction. They have the entire management of the property of their respective inns and the power of admitting to the bar as well as of punishing a barrister guilty of misconduct, by disbarment or otherwise. Their presiding officer is called the *treasurer*. He is elected annually and takes the chair at their corporate meetings, speaking and acting in their name. See **BAR**, **INNS OF COURT**.

BENCH WARRANT. In England, a warrant issued by a court of record for the arrest of a person who has been indicted, or against whom articles of the peace have been exhibited. If it proceeds from a court of assize, it is signed by one judge; if from quarter sessions, by two justices of the peace. It is rarely used now. In the United States its use, its form, and the

officer by whom it may be issued are generally regulated by statute. In some States it may be issued by the clerk of the court or by the district attorney. It is also employed in some jurisdictions for the arrest of one guilty of contempt of court. See ARREST WARRANT.

BENCOOLEN See BENKULEN.

BENCZUR, ben'tsūr, GYULA (1844-) An Hungarian painter. He was born at Nyiregháza and studied with Hiltensperger, Anschütz, and Piloty. In 1880 he became professor at the Academy of Munich and afterward director of the Academy of Painting in Budapest. His distinction was recognized by his nomination as a member of the Hungarian House of Magnates. Benczur is, perhaps, the most faithful disciple of Piloty. His paintings show originality of conception and splendid coloring. The following are among the most noteworthy examples of his art: "Farewell of Ladislas Hunyady" (1897, Museum of Budapest), "Arrest of Rákóczy in 1701" (1869, Rumanian Court), "Louis XV in the Boudoir of Dubarry" (1870), "Family of Louis XVI during the Assault on Versailles" (1872, D O Mills, New York), "Baptism of St Stephen" (1875, Museum of Budapest), "Bacchante" (1881), "The Reconquest of Buda by Charles of Lorraine" (1888, Museum of Budapest).

BEND (OF *bende*, *bande*, Fr *bande*, of Eng *band*). One of the honorable ordinaries, or more important charges in heraldry (q v).

BENDA, GEORG (1722-95). A German musician. He was born at Jungbunzlau, Bohemia, and studied with his father, Hans Georg Benda. He became kapellmeister to Duke Frederick III of Saxe-Gotha in 1748, and in 1764 went to Italy at the Duke's expense for the purpose of study. He returned to Gotha in 1766, and devoted himself to composition, writing, in all, about 10 operas, several operettas, and the stirring melodramas *Aradne auf Nawos*, *Medea*, *Almansor*, and *Nadine*. In 1776 he resigned his position and visited Hamburg, Vienna, and other cities, and finally settled at the little hamlet of Kostritz. The important place which he holds in the history of German opera is due to his introduction of the music drama with spoken text. In other words, he was the originator of the pure melodrama, in which the whole musical part is confined to the orchestra, while the dialogue is spoken. Consult F Bruckner, *Georg Benda und das deutsche Singspiel* (Rostock, 1904).

BENDAVID, ben-da'vit, LAZARUS (1762-1832). A German-Jewish philosopher and mathematician. He was born in Berlin, studied at Berlin and Göttingen, and for a number of years lectured very successfully in Vienna in exposition of the Kantian philosophy. Expelled thence by a general decree against foreigners, he continued to lecture and write in Berlin. His publications include *Versuch über das Vergnügen* (2 vols, 1794), *Vorlesungen über die Kritik der reinen Vernunft* (1795), *Vorlesungen über die Kritik der praktischen Vernunft* (1796), *Philosophie oder über den Ursprung unserer Erkenntnis* (1802), *Selbst biographie* (1804).

BENDEMAN, ben'de-mán, EDUARD JULIUS FRIEDRICH (1811-89). A German historical and portrait painter. He was born in Berlin, the son of a cultured Jewish banker, Dec 3, 1811, and went at 16 to Dusseldorf with his master, Schadow, who had been chosen direc-

tor of the Academy. Together they went to Italy in 1829, and Bendemann remained till 1831. On his return he began his first great picture, "The Jews Mourning in Exile," which was exhibited the following year at Berlin, and, as the work of a youth of 21, created a sensation. It is now in the Museum at Cologne. With it may be classed two other important pictures on kindred subjects, "Jeremiah amid the Ruins of Jerusalem" (1834), belonging to the German Emperor, and "The Departure for Exile" (1872), in the National Gallery, Berlin. After practicing at Dusseldorf and Berlin Bendemann went to Dresden in 1838, as professor of painting at the Academy, and was soon commissioned by the King of Saxony to decorate some of the principal rooms in the royal palace there. For the throne room he designed a frieze depicting the course of human life, in one continuous design, and in the ball-room and concert hall he glorified the life and civilization of the Greeks. This exacting work occupied the greater part of his time for the next 15 years. From 1859 to 1867 he was director of the Academy at Dusseldorf, where he resided until his death. Bendemann was one of the founders and principal representatives of the Dusseldorf school. His art is essentially romantic in character, lacking in real pictorial elements, without truth to nature, and only valuable as illustrations. Far better than his historical paintings are portraits, like those of his wife, the poet Remich (Dantzig Museum), the historian Droysen (National Gallery, Berlin), his master Schadow (Academy, Dusseldorf), and his charcoal heads of celebrated contemporaries. He illustrated, among other works, the *Nibelungenlied*.

BENDER, or BENDERY, ben-dya'ri (Ar, Turk, market, harbor). A district town in the government of Bessarabia, Russia, situated on the right bank of the Dniester, 53 miles from its mouth, and 36 miles from Kishinev, the capital of the government (Map Russia, E 5). It is poorly built, but contains a number of churches, synagogues, a mosque, and a gymnasium for women. The trade is in grain, timber, cattle, animal products, and wine. The fort, situated near the town, was abandoned in 1897. Pop, 1885, 44,700, 1897, 31,800, 1900, 33,800. A large portion of the population is Jewish, and the rest consists of Russians, Armenians, and Tatars. In 1770 the Russians captured the place and put the garrison and inhabitants, then amounting to about 30,000, to the sword. After changing hands repeatedly between the Turks and the Russians, Bender was finally ceded to the latter by the Peace of Bucharest, 1812. Charles XII of Sweden lived from 1709 to 1712 at Varmitza, a village near Bender.

BENDER, WILHELM (1845-1901). A German theologian and philosopher. He was born at Münzenberg, in Hesse, Jan 15, 1845. He studied at Göttingen and Giessen, became professor of theology at Bonn, 1876, and was transferred to the philosophical faculty, 1888. An address he gave at the Luther celebration of 1883 made a great sensation (*Reformation und Kirchenthum*, Bonn, 1884), because of its extreme rationalistic tone, and he renewed the sensation by his later publications, *Das Wesen der Religion und die Grundgesetze der Kirchenbildung* (1886, 4th ed, 1898), and *Der Kampf um die Seligseligkeit* (1888), in which he explains religious phenomena by purely naturalistic evolu-

lutionary philosophy In 1899 he published the first volume of *Mythologie und Metaphysik Grundlinien einer Geschichte der Weltanschauungen* (Stuttgart)

BENDER ABBAS, bën'dēr ab'bas (Ar, Pers, harbor of Abbas) A seaport of Persia on the Strait of Ormuz, opposite the islet of Ormuz (Map Persia, F 7) It is very poorly built, and its former commercial importance has diminished considerably The roadstead is exposed to south and southeast winds, but there is still some trade, the chief exports being opium, fruit, tobacco, wool, and carpets The annual imports amount to about \$2,250,000, and the exports to about \$900,000 The town is connected by lines of steamships with Abushehr, Muscat, Bombay, and Basia The population, estimated between 10,000 and 20,000, is made up of Persians, Armenians, Kurds, and Arabs The most flourishing period in the history of the town was during the seventeenth century, after the exclusion of the Portuguese by Shah Abbas in 1622 Owing to the disturbed state of the country, the trade was transferred to Abushehr and the northern ports

BENDERY See BENDER

BENDIGO, formerly **SANDHURST** The capital of Bendigo Co, Loddon district, Victoria, Australia, on Bendigo Creek, 101 miles north-northwest of Melbourne, and on the railway between Melbourne and Echuca (Map Victoria, D 4) The town is the centre of a mining district, many important deposits of gold being at considerable depth The surrounding region is fertile, and much grain and fruit is raised There are manufactures of wine, carriages, and pottery, and breweries, tanneries, foundries, and brick and tile yards It is well built, has fine government buildings and offices, a very fine townhall, churches, a mechanics' institute, a hospital, fine public parks, botanical gardens, and owns a good water supply Founded in 1861, it became a municipality in 1855, a borough in 1863, and a city in 1871 The district has been created a bishop's see in connection with the Roman Catholic denomination Pop, 1901, 31,020, including 290 Chinese, 1911, 39,417

BENDIRE, bën dē'rē, CHARLES EMIL (1836-97) An American ornithologist He was born in Darmstadt, Germany, April 27, 1836 He came to the United States in 1852, and two years later entered the army as a private He retired April 24, 1886, with the rank of captain In 1890 he was made brevet major for distinguished services rendered in 1877, while fighting the Indians at Cañon Creek, Mont He died in Jacksonville, Fla., Feb 4, 1897 During his many campaigns, and while stationed at various remote army posts in the West, Southwest, and Northwest, he was most active in improving roads, surveying and constructing telegraphic lines so as to better military service, made independent explorations, and availed himself of the excellent opportunity to study birds It is supposed that he began to collect the nests and eggs of birds about the year 1870 In all he published about 50 papers and books, the majority of which relate to birds, especially with reference to nidification His largest work, *Life Histories of North American Birds, with Special Reference to their Breeding Habits and Eggs* (Smithsonian Contributions, Washington, 1892 and 1896), was left incomplete at the time of his death His large collection of birds' eggs,

15,000 in all, he presented to the United States National Museum

BEN'DIS A female divinity of Thiaee, identified by the Greeks with Artemis and later with Hecate She was probably a moon goddess In Plato's time a festival in her honor, called Bendideia, was celebrated with processions and torch races at the Piræus

BENDS See CATSKON DISEASE

BENDZIN, ben'jén (Polish) The capital city of a district in the government of Piotrków, Russian Poland, on the banks of the Black Przemsza, 264 miles from Warsaw, and near the Warsaw-Vienna Railway (Map Russia, A 4) The industrial activity of the population of Bendzin is centred in the large government zinc works, and there is considerable manufacture of fireproof bricks In the neighborhood are the rich Ravier coal mines The interesting ruins of an ancient castle (built in the thirteenth century) are a feature of the town Pop, 1897, 21,200, more than one-half of which is Jewish By the "Pact of Bendzin," concluded here in 1859, Sigismund IV was recognized by Austria as King of Poland, and the Archduke Maximilian, brother of Rudolph II, renounced his claims to the throne

BENE, bën'ē See SESAMUM

BENECKE, bā'ne-ke, ERNST WILHELM (1838-) A German geologist He was born in Würzburg and studied at the universities of Halle, Würzburg, Berlin, and Heidelberg He was extraordinary professor at Heidelberg University from 1869 to 1872, when he became full professor at Strassburg His chief researches have been upon the invertebrate fossils of the Mesozoic rocks of Germany He has been a member of the commission for the geological investigation of Alsace-Lorraine Among his principal works are the following *Ueber Flus und Jura in den Sudalpin* (1866), *Geognostisch-paläontologische Beiträge* (2 vols, 1868-72), *Abriss der Geologie von Elsass-Lotharingen* (1879), *Geognostische Beschreibung der Umgegend von Heidelberg* (1880), *Geologische Führer durch den Elsass* (1900)

BENECKE, GEORG FRIEDRICH (1762-1844) A German philologist He was born at Münchroth, in the former principality of Oettingen, and studied at the University of Göttingen, where he became professor of philosophy in 1814 and chief librarian in 1829 He was the first academic lecturer on Old-German literature and ranks with Grimm and Lachmann as an authority on Middle High German His editions of mediæval poetry include Bomer's *Edelstein* (1816), Wirtz von Grafenberg's *Wingalors* (1819), Hartmann von Aue's *Iwein*, with Lachmann (1827)

BENEDEK, bā'ne-dék, LUDWIG VON (1801-81) An Austrian general, son of a physician of Odenburg, Hungary He received his military education at the Academy Wiener-Neustadt and entered the army as ensign in 1822 In 1846 he had reached the rank of colonel and distinguished himself in suppressing the insurrection in Galicia In 1847 he was sent to Italy, where he fought with bravery in the campaign of 1848, especially at Cusatoine The following year he took a conspicuous part in the capture of Mortara and in the battle of Novara (March 23), and in April was sent as major general to Hungary, where he also served with gallantry In the Italian campaign of 1859 Benedek commanded the Eighth Corps of the Austrians and

was the last to leave the field at Solferino. was Military Governor of Hungary in 1860 and soon afterward was given the command of the Austrian army in Venetia. He led the Austrians in the war with Prussia in 1866 until he was disastrously defeated at Sadowa. He was removed, placed on the retired list, and withdrew to Gratz, where he died in 1881. See SEVEN WEEKS' WAR.

BENEDEN, bā'ne-dēn, PIERRE JOSEPH VAN (1809-94). A Belgian zoologist, born in Mechlin. He was appointed director of the Museum of Natural History in Louvain in 1831, professor at the University of Ghent in 1835, and professor of zoology and paleontology at the Catholic University of Louvain in 1836. In 1842 he was made a member of the Belgian Academy of Sciences, of which institution he was elected president in 1881. His principal works are: *Zoologie médicale*, with Gervais (2 vols., 1859), *Ostéographie des céteacés vivants et fossiles*, with Gervais (1868-80), *La vie animale et ses mystères* (1863), *Les commensaux et les parasites dans le règne animal* (1875), *Die Schmarotzer des Tierreichs* (1876).

BENEDETTI, bā'ne-dēt'tē, VINCENT, COUNT (1817-1900). A French diplomatist of Greek origin, born in Corsica. He was French Consul at Cairo and Palermo, Secretary of Legation in Constantinople, held office in the French Department of Foreign Affairs, and was secretary during the negotiation of the Treaty of Paris in 1856. In 1860 he went to Turin to negotiate the cession of Nice and Savoy to France, and in 1864 he was Ambassador to Berlin. Benedetti was personally concerned in the affair of the protest of Napoleon III against the candidacy of the Prince of Hohenzollern for the throne of Spain, and forced himself upon King William in the public walk at Ems, July 13, 1870, in so offensive a manner that he was informed that the King had nothing further to communicate to him. It is a moot question how far he was really responsible for precipitating war with Prussia. Certainly Bismarck used Benedetti's blunder to the best advantage in carrying out his own plans, and six days after the incident at Ems France declared war. Benedetti accused Bismarck of having in 1866 originated a Franco-Prussian treaty for the partition of Belgium and Luxemburg, but Bismarck showed that France herself had originated the scheme. Benedetti sought to justify his diplomatic activity in *Ma mission en Prusse* (Paris, 1871), and also published *Essais diplomatiques* (Paris, 1895).

BENEDETTO DA MAJANO, bā'nā-dēt'tā da ma-ya'nō (1442-97). One of the principal Florentine sculptors and decorators of the early Renaissance, also a distinguished architect. He was born at Florence, the son of a stonecutter and carpenter, and labored at first as assistant to his older brother Giuliano da Majano (q.v.), a well-known architect and wood carver. Benedetto was chiefly active as a sculptor in marble, and he also excelled in terra cotta. His earliest known work is the large marble altar of St. Savinus in the cathedral of Faenza (1471-72). In 1475 he designed and carved the beautiful marble altar of St. Fina in her Collegiate Church in San Gimignano, at the same time a tabernacle and a shrine. His other masterpieces include the ciborium on the high altar of San Domenico, Siena, the tabernacle in the badia of Arezzo, and especially the pulpit of Santa

Croce, Florence, adorned with marble reliefs from the life of St. Francis—the finest example of marble pictorial relief in Italian sculpture. Another masterpiece in decoration is his marble door frame in the Palazzo Vecchio, Florence. About 1480 the two brothers, in conjunction with the third, founded a chapel near Prato, the beautiful sculptures of which were unfortunately dispersed, some surviving in the cathedral of Prato. His later works are in the cathedral of Lucca (1484-87), the church of Monte Oliveto (c.1489), Naples, in San Gimignano, and include the well-known tomb of Filippo Strozzi (1491) in Santa Maria Novella, Florence. He died May 27, 1497.

Of his Madonnas the most attractive is a seated terra-cotta statue in the Museum of Berlin—one of the very few examples of such sculpture in which the colors are perfectly preserved. His portrait busts unite tenebrous realism with fine characterization. The best known are those of Pietro Mellini (1474) and Filippo Strozzi, the more expressive clay model of the latter is in Berlin, the finished marble in the Louvre. Benedetto's masterpiece in architecture is the Palazzo Strozzi, Florence, one of the finest and strongest specimens of Florentine palace architecture. The cornice and the court were completed after his death by Cronaca. He was one of the ablest marble and terra-cotta sculptors of the later fifteenth century. In his best work the figures are charming and characteristic, his decoration is always tasteful and, though rich, is never overloaded, but clear and harmonious. From about 1480 his art declined. Consult, for reproductions and comments on his sculpture, Bode, *Denkmäler der Renaissance Skulptur Toskanas*, vol. vii (Munich, 1892-1905), for his architecture, Stegmann and Von Geymüller, *Architektur der Renaissance in Toscana*, vol. iv (Munich, 1885-1908).

BENEDICTITE, bēn'e-dī't-tē. A song of the "Three Children" in the fiery furnace, given in the Old Testament Apocrypha, an expansion of Ps. cxlviii, was sung in the Christian Church as early as the time of St. Chrysostom and is used in the Anglican morning prayer, when the Te Deum is not sung, from Septuagesima to Easter and also during Advent, and in the office of lauds in the Roman Breviary. The name originated in the opening sentence, *Benedicite omnia opera Dei* ('Praise ye all the works of God!').

BENEDICK. A cynical, witty lord of Padua, in Shakespeare's *Much Ado About Nothing*. He rails at marriage, but falls an easy prey to the plot to unite him and Beatrice. Hence the term "a Benedick" for a newly married man.

BENEDICT. The name of 14 Popes. BENEDICT I, Pope 574-578, during the Lombard devastation of Italy, grief at which is said to have killed him.—BENEDICT II, Pope 684-685, canonized for his virtues. He decided the English controversy in favor of Wilfrid of York (q.v.) and labored in vain to reclaim Macarius, the Patriarch of Antioch, who was living in exile in Rome, from his Monothelite belief.—BENEDICT III, Pope 855-858. His election was opposed by the Emperor Lothair, but he was finally acknowledged, and did much during his short reign for the building and adornment of churches in Rome.—BENEDICT IV, Pope 900-903, famous for his charity to the poor and other virtues only too rare in the unhappy tenth century.—BENEDICT V, Pope 964-965, elected

against the will of the Emperor Otho I, who took him off to Germany, where he died a prisoner in Hamburg —BENEDICT VI, Pope 972-974 He met with a similar fate, at the hands of the Consul Crescentius, son of the notorious Theodora —BENEDICT VII, Pope 974-983 He was a promoter of monasticism and ecclesiastical discipline and summoned a synod for the suppression of simony His later years, like those of Benedict I, were saddened by the devastation of Roman territory, this time by the Emperor Otho II —BENEDICT VIII, son of Count Gregory of Tusculum, was elected in 1012, but the Antipope Gregory, who had been elected at the same time, fled to the court of the Emperor Henry II to get his assistance, but Henry decided in favor of Benedict, who a little later crowned him in Rome (1014) Benedict afterward defeated the Saracens and took from them, with the help of the Pisans and Genoese, the island of Sardinia, and also various places in Apulia from the Greeks, by the help of Henry He distinguished himself as a reformer of the clergy and interdicted, at the synod of Pavia, both clerical marriage and concubinage He died in 1024 See his *Life* by P G Wappler (Leipzig, 1897) —BENEDICT IX, a nephew of the preceding, named Theophylact, was elected Pope while merely a youth, in 1033, but a little later the Romans banished him He was reinstated by Conrad II (1038), again formally deposed by the Consul Ptolemaeus, who set up Sylvester III in his place (1044), and after three months was once more installed as Pope By a new compact John Gratianus was declared Pope under the name of Gregory VI (1045) The Emperor Henry III deposed all the three Popes—Benedict, Sylvester, and Gregory—and caused Suigdis, Bishop of Bamberg, to be elected as Clement II (1046), but on his death, in 1047, the deposed Benedict IX again regained the papal see, and held it eight months, until 1048, when he was displaced, first by Damasus II and afterward by Leo IX According to one report he died in the Convent of Grotta Ferrata, near Rome, in 1056 See his *Life* by Giovagnoli (Milan, 1900) —BENEDICT X, a disputed Pope, 1058-59 —BENEDICT XI, Pope 1303-04 —BENEDICT XII, Pope 1334-42, one of the Avignon Popes —BENEDICT XIII (born Pietro Francesco degli Orsini), Pope 1724-30, was a learned and well-disposed man, of simple habits and pure morals, though rather strict in his notions on the papal prerogative He unfortunately yielded himself to the guidance of Cardinal Corcia, a greedy, unscrupulous personage, who greatly abused the confidence reposed in him Benedict always exhibited great moderation in politics and an honorable love of peace, and was instrumental in bringing about the Seville Treaty of 1729 During this pontificate a remarkably large number of saints, chiefly from the monastic orders, including Pope Gregory VII and John of Nepomuk, were added to the calendar The name Benedict XIII was also claimed by the Antipope Pedro de Luna (q v) from 1394 to 1409 —BENEDICT XIV (Prospero Lambertini), Pope 1740-58—the most worthy to be remembered of all the pontiffs so named He was born in Bologna in 1675 Before his elevation he had distinguished himself by extensive learning and by ability in the several offices of *promotor fidei* Bishop of Ancona (1727), Cardinal (1728), and Archbishop of Bologna (1731) Succeeding Clement XII, he began his pontificate in 1740, with

several wise and conciliatory measures, founded chairs of physics, chemistry, and mathematics in Rome, revised the Academy of Bologna, and instituted others, dug out the obelisk in the Campus Martius, constructed fountains, rebuilt churches, caused the best English and French books to be translated into Italian, and in many other ways encouraged literature and science His piety was sincere, enlightened, and tolerant, and his doctrines were well exemplified in his practice He was extremely anxious that the morals of the clergy should be untainted, and to that effect established a board of examiners for all candidates to vacant sees In proof of his toleration he showed the frankest kindness to all strangers visiting his capital, whatever the nature of their religious opinions The only accusation brought against him by his Roman subjects was "that he wrote and studied too much, but ruled too little," or left affairs of business too much in the hands of Cardinal Valentine After a painful illness, Benedict XIV died May 3, 1758 His most important works are that *On the Doctrinal Synod*, *On the Sacrifice of the Mass*, and *On the Beatification and Canonization of Saints*, a standard work, of which a part was translated under the title *Heroic Virtue* (3 vols, London, 1850) An edition of his writings was published under the care of the Jesuit Azevedo (12 vols, 1747-51), but more completely at Venice (15 vols, 1767), and at Prato (17 vols, 1839-46) His letters, written in Italian, to Carmo Peggi between 1729 and 1758, were published by F X Klaus (Freiburg, 1884, 2d ed as a biography by F Scusselli, with a bibliography, 1888) Some more of his letters, edited by B Manzoni, appeared at Bia in 1890 See also Pastor, *The History of the Popes* (London, 1906-1912), McWilliam, *A Chronicle of the Popes* (London, 1912)

BENEDICT OF ANIANE, or WITHIA (750-821) A French monk, born in Languedoc He entered the Benedictine Order in 774 and five years later founded a monastery on the banks of the river Anianus He devoted himself chiefly to the task of restoring the original principles of the order, and Louis le Debonnaire appointed him supervisor of all Frankish monasteries and decreed that the adoption of the rules advocated by Benedict should be binding upon the Benedictine Order throughout France He was canonized upon his death in 821, the 12th of February being dedicated by the Roman Catholic church to his memory

BENEDICT, DAVID (1779-1874) An American Baptist historian He was born at Norwalk, Conn, Oct 10, 1779 He graduated from Brown University, 1806, and was pastor at Pawtucket, R I, from 1806 till 1831, and then carried on an active ministry at large till his death there, Dec 5, 1874 He is remembered for his researches in Baptist history embodied in his *General History of the Baptist Denomination in America and Other Parts of the World* (New York, 1848) and *Fifty Years among the Baptists* (1860)

BENEDICT, FRANK LEE (1834-1910) An American novelist Of his numerous stories, the more noteworthy are *John Worthington's Name*, *Miss Van Kortland* (1870), *Her Friend Laurence* (1879), *The Price She Paid* (1883) His verses are collected in *The Shadow Worshipper and Other Poems* (1857) Mr Howells regards Benedict as having given evidence of

true genius. Consult Howells, *My Literary Passions* (1897), where Benedict is set almost in the front rank of American authors.

BENEDICT, SIR JULIUS (1804-85). A German-English musician and composer, born of Jewish parents in Stuttgart. He studied under Abbeille, Hummel, and finally Weber, who procured for him (1824) the post of music director of the Kärntnertheater in Vienna. In 1825 he obtained a similar position in the San Carlo theatre, Naples. Here he produced an opera buffa, *Giacinta ed Ernesto*, and in Stuttgart (1831) a serious opera, *I Portoghesi a Goa*. Both were failures. He appeared, however, with great success as a pianist in Paris in 1835, and later in London, where he settled, directing opera buffa at the Lyceum, in 1836. He was conductor of English opera at Drury Lane (1838), where his works, *The Gypsy's Warning* (1838), *The Bride of Venice* (1843), and *The Crusaders* (1846), were produced. After conducting opera in Covent Garden and at festivals, he went to America (1850) with Jenny Lind and, returning in 1852, resumed his work as teacher of the piano, composer, and conductor of the opera at Covent Garden, where his operatic masterpiece, *The Lily of Killarney*, created a furore in 1862. He wrote two symphonies and several cantatas (*Undine*, *Richard Cœur de Lion*, *Saint Cecilia*). His oratorio, *Saint Peter*, written for the Birmingham Musical Festival, 1870, met with extraordinary success. His operas have much dramatic and melodic beauty and in style and feeling are singularly English for compositions by a foreigner. He was knighted in 1871 and received many foreign decorations. Weber's biography, in Hueffer's *Great Musicians*, was written by Benedict.

BENEDICT, SAINT (480-c.543). The founder of monachism in the West. He was born of a rich and respected family at Nursia (now Norcia), 70 miles northeast of Rome, in 480 A.D. At an early age Benedict was sent to the schools of literature and jurisprudence in Rome, but soon grew dissatisfied with the sterile character of the instruction dispensed. Only in the devotions of religion, in the holy silence of solitary meditation, did Benedict see a safe refuge from the sins of the time, and the possibility of realizing a spiritual strength which would enable him to stem the tide of corruption that was setting in. He resolved to leave the city and betake himself to some deep solitude, and in pursuance of this resolution, he departed from Rome, at an early age (14, tradition says, 19 or 20, later studies make probable), and retired to a deserted country near the ruins of Nero's palace at the artificial lake of *Sublacum* (now Subiaco). Here, in a cavern (afterward known as the *Sacro Speco*), he dwelt for three years, until his fame spread over the country, and multitudes came to see him. He was now appointed abbot of a neighboring monastery, but soon left it, as the morals of the half-wild monks were not severe enough for his taste. This, however, only excited a livelier interest in his character, and as he lived in a period when the migration and interfusion of races and nations were being rapidly carried on, he could not fail to draw crowds of wanderers about him. Wealthy Romans also placed their sons under his care, anxious that they should be trained for a spiritual life. Benedict was thus enabled to found 12 cloisters, over each of which he placed a superior. He now sought another retreat, and, together with a few

followers, founded about 529 a monastery on Monte Cassino, afterward one of the richest and most famous in Italy. In 615 he is said to have composed his *Regula Monachorum*, in which he aimed, among other things, at repressing the irregular and licentious life of the wandering monks by introducing stricter discipline and order. It eventually became the common rule of all Western monachism. The monasteries which Benedict founded were simply religious communities, intended to develop a high spiritual character, which might beneficially influence the world. To the abbot was given supreme power, and he was told to acquaint himself in all his relations with the wisdom of God and of his Master. The discipline recommended by St. Benedict is, nevertheless, milder than that of Oriental monachism with regard to food, clothing, etc., but enjoins continual residence in the monastery and, in addition to the usual religious exercises, directs that the monks shall employ themselves in manual labors, imparting instruction to youth, copying manuscripts for the library, etc. By this last injunction St. Benedict, though this was not directly intended, preserved many of the literary remains of antiquity, for the injunction, which he gave only with regard to religious books, was extended afterward to many secular productions. It is remarkable that the founder of the most learned of all the monastic orders was himself so little of a scholar that St. Gregory the Great described him as being *scienter nesciens, et sapienter indoctus*—learnedly ignorant and wisely unlearned. St. Benedict died probably in 543. See MONASTICISM.

Bibliography. For editions of his rule, consult German, E. Wollfin, *B von Nursia und seine Monchsregel* (Leipzig, 1895), English, G. F. Henderson, *Historical Documents of the Middle Ages*, pp. 274-314 (London, 1892). In general, consult E. Spreitzenhofer, *Die historische Voraussetzungen der Regel des heiligen Benedict von Nursia* (Vienna, 1895), and for his biography, F. C. Doyle, *The Teachings of St. Benedict* (London, 1887), Lechner, *Life and Times of St. Benedict* (London, 1900), also his *Life* by Gregory the Great (Old English translation, edited by P. W. Luck, London, 1880) and J. G. Waitzmann (Augsburg, 1835).

BENEDICT, WAYLAND RICHARDSON (1848-). An American author, educator, and clergyman, born at Rochester, N. Y., and a graduate of the University of Rochester (A.B. 1865, A.M. 1868). After finishing his undergraduate studies he spent several years as a teacher in various secondary schools, was trained for the Baptist ministry at the Rochester Theological Seminary, and spent an additional year of study abroad at the University of Gießen. It was not, however, to pastoral but to educational work that he devoted the greater part of his active life, for after two years as minister of a Mt. Auburn, Ohio, church, he accepted a chair in the University of Cincinnati (1875). There he remained for 32 years, at various times during his service acting as professor of philosophy, history, psychology, and logic, and as dean. In 1907 he retired as professor emeritus. Among his numerous works on a variety of subjects are *The Nervous System and Consciousness* (1885), *Theism and Evolution* (1896), *Outlines of the History of Education* (1888), *Ethics and Evolution* (1889); *New Studies in the Beatitudes* (1890), *Religion*

as an *Idea* (1903), *Greek Thought Movements and their Ethical Implications* (1905)

BENEDICT ACCOLTI, ak-kôl'tâ See ACCOLTI BENEDETTO

BENEDICT BIS/COP (c 620-690) An English ecclesiastic of the seventh century, who exercised a most important and beneficent influence on Anglo-Saxon civilization and learning. He was born about the year 620, of a noble Northumbrian family (his patronymic, according to Eddius, being Baducing), and until about his 25th year was a courtier of Oswiu, King of Northumbria. About that time he gave up his court life and accompanied Wilfrith to France, whence he went on to Rome (654), where he spent about 10 years in study and whence he seems to have returned soon after the Synod of Whitby in 664. In 665 he was in Rome a second time, being sent on a mission by Alchfrith, King of Northumbria. After a stay in Rome of a few months he proceeded to the island of Lerins, where he became a monk and spent about two years, thus acquiring a knowledge of monastic discipline. He returned to Rome in 667, came to England with Theodore and Adrian, and was made abbot of the Monastery of St Peter (afterward that of St Augustine) in Canterbury. This charge he resigned two years later and went to Rome for a third time, for the purpose of bringing home the literary treasures which he had already collected. He returned about 672, bringing with him a large collection of valuable books, and repaired to Northumbria, where he founded the famous Monastery of Wearmouth. Workmen were brought from France to build and glaze the church and monastery, this being one of the earliest instances of the use of glass for windows in England. He also introduced from Gaul and Rome (which he visited again in 687) church utensils and vestments, relics, pictures, images, and again a vast number of books. He also introduced the Roman choral service. Benedict made his fifth and last journey to Rome in 687 and, as on former occasions, came home laden with books and pictures. Shortly after his return from Rome he was seized with palsy, under which he languished three years, dying on the 12th of January, 690. During his long illness he often anxiously exhorted his monks to look carefully after his books and to preserve them from loss or injury.

The benefits conferred by Benedict on Anglo-Saxon civilization and the impulse given by his labors to Anglo-Saxon learning, were greater than can now be estimated. It is not certain that he wrote any books, and those ascribed to him are of little value, but by his personal teaching, and especially by his founding at Wearmouth such a valuable and for the time extensive library, he implanted in the nation a taste for literature and learning, which soon was fruitful in results and continued to be so for many centuries. Bede, a pupil, wrote his life.

BENEDICT COLLEGE A coeducational institution for negroes at Columbia, S C, conducted under the auspices of the American Baptist Home Mission Society. It was founded as an institute in 1871 and incorporated as a college in 1894. It provides elementary, high school, and collegiate instruction, and courses for the ministry. All work on the campus is performed by students, and the courses are designed to make the students self-supporting.

The college occupies 11 buildings and has an endowment of \$127,000. Its student enrollment in 1913 was 626, when the instructors numbered 30 and the library contained 8000 volumes. President, Rev. B. W. Valentine.

BENEDICTINE, bèn'e-dik'tin A liqueur distilled at Fecamp (qv) in France. It gets its name from the fact that it was originally manufactured by the Benedictine monks. Since the French Revolution, however, the preparation has been in the hands of a secular company, and the components entering into its preparation are considered a trade secret. It is believed by some that the volatile constituents of cardamom seeds, arnica flowers, angelica root, lemon peel, thyme, nutmegs, cassia, hyssop, peppermint, and cloves enter into its composition. Several firms doing business with essential oils and other volatile plant constituents prepare and sell mixtures which are supposed to contain the essential principles of benedictine. These mixtures, or so-called extracts, go to make up the bulk of the imitations of benedictine which are sold in various parts of the world, especially in those countries where the food, drug, and beverage laws are lax or not rigidly enforced. See LIQUEUR.

BENEDICTINE EDITIONS OF THE FATHERS Scarce and costly volumes containing the works of Barnabas, Lanfranc, Bernard, Anselm, Augustine, Cassiodorus, Ambrose, Hilary, Jerome, Athanasius, Gregory of Tours, Gregory the Great, Hildebert, Irenæus, Lucius Cæcilus, Chrysostom, Cyril of Jerusalem, Basil, Cyprian, Justin Martyr, Origen, and Gregory Nazianzen—in all, 61 volumes. So called because edited by scholars of the Benedictine Order of monks in the seventeenth and eighteenth centuries.

BENEDICTINES The general name of the monks following the rule of St Benedict. The first Benedictine monastery was founded at Monte Cassino, in the Apennines about midway between Rome and Naples, by St Benedict himself, about 529. It was partly modeled on what he had learned of the earlier Eastern monasticism, but differed from that in giving greater prominence to the community idea, while the monks of the East had tended more to live a solitary life. In Benedict's idea the monastery was to be to the monk what the family was to persons living in the world—an ordered home, with reciprocal duties and claims. Each monastery formed a separate community, with its own internal organization, the founder did not legislate for a world-wide organization, like the mendicant orders or the Jesuits. In fact, strictly speaking, he did not found an order, but laid down a rule by which to govern a state of life. The earlier monasticism differed from the later in having no relation to the clerical state, most of the monks and even some abbots were laymen at the first. The vows taken by those who joined a Benedictine monastery were originally three—of stability, i.e., to remain attached to the monastery, not to wander at will, of conversion of life, i.e., to labor until death to attain the perfection of the state to which they were called, and of obedience to their superiors.

The order increased so rapidly that after the sixth century the Benedictines must be regarded as the main agents in the spread of Christianity, civilization, and learning in the West. The provision of the rule for incessant industry resulted, among other things, in the

promotion of systematic agriculture and the reclaiming of large tracts of land which would otherwise have lain waste. Without them the continuity of Christian art, like that of Christian literature, would doubtless have been broken in the West. In the Dark Ages between the seventh and eleventh centuries, when confusion and barbarism prevailed in the political and social spheres, the artistic tradition which had been carried on by the bishops was taken up by the great monasteries of this order, and they also afforded the only common meeting ground for sharply distinct social classes, thus exerting a unifying influence upon the new nationalities then springing into life.

Each of these establishments was a world in itself. It included not only fully professed monks, but lay brothers, or *conversi*, who had greater freedom of movement and occupation. The high wall of the monastery inclosed a great variety of structures centring around the church, to which were attached, generally on the right side, the principal group of monastic buildings—the dormitories above (one for choir brothers and one for *conversi*) and the refectory, chapter house, and general hall, library, kitchen, storerooms, etc., all grouped about a main cloister. Then there were other groups, one in particular with a hospital, a chapel and cloister for convalescents, doctor's quarters, and the like, another group for the schools and for teaching of arts and trades, sometimes another devoted to the external laity with a hospice, refectory, chapel, stable, and barns. A drawing of about the year 820 shows the plan of the projected buildings at Saint Gall (q.v.), altogether the most elaborate known, where everything is labeled with a detailed description, even to the garden devoted to growing herbs and simples for the doctor's pharmacopoeia, and the workshops assigned to the different arts and trades. The weaving and dyeing of cloth, the curing and tanning of skins, were followed by the work of the tailor, the shoemaker, and the embroiderer. The preparation of vellum led up to writing, illuminating, and binding of manuscripts. Glass blowing was practiced from its commonest to its most artistic developments. Carpentry and joinery, masonry in brick and stone, were taught practically in construction. Then came the more purely artistic occupations of bronze casting and hammering, work in gold, silver, and silver gilt, ivory, wood, and gem carving, enameling and inlaying, layer sculpture, fresco painting, and sometimes mosaic work. No known branch of art or industry was neglected. One monk was usually at the head of this entire department, with others in charge of the subdivisions, but often lay brothers were at the head—all were admitted equally in these branches.

It cannot be said that the Benedictines accomplished any great progress in architecture. They adhered to the old basilican style (see BASILICA), often replacing the antique columns, which had become scarce, by plain square piers or built-up shafts. They showed a certain poverty of architectural detail and of sculptured ornament, except at the very close, in the eleventh and twelfth centuries. On the other hand, they always maintained a mastery of fresco painting.

While, as has been said, the order had the very greatest influence on the preservation of learning throughout the West, its chief literary glories are associated with the Congregation of

Saint-Maur in France, founded by letters patent of Louis XIII, in 1618, which had later its chief seat at Saint Germain-des-Près, near Paris. When the Order of the Benedictines was suppressed, with the other religious orders, by the Revolution in 1792, its splendid conventual buildings were destroyed. Numbering among its monks such scholars as Mabillon, Montfaucon, Sainte-Martha, D'Achezy, Martene, Durand, Rivet, Clemencet, Carpentier, Toussaint, Constant, and Tassin, it rendered services to literature which would be difficult to overestimate. Besides admirable editions of many of the Fathers (see BENEDICTINE EDITIONS OF THE FATHERS), the world of letters owes to these men the *Art de vérifier les dates* (3 vols., fol., 1783-87), a much enlarged edition of Ducange's *Glossarium Mediae et Infimae Latinitatis* (6 vols., fol., 1733-36), a supplement (1760, 4 vols., fol.), the *De Re Diplomatica* (1681 and 1709, fol.), the *Nouveau traité de diplomatique* (6 vols., 4to, 1750-65), *L'antiquité expliquée* (15 vols., fol., 1719-24), the *Monuments de la monarchie française* (5 vols., fol., 1729-33), the *Acta Sanctorum Ordinis S. Benedicti* (9 vols., fol., 1688-1702), a new and much improved edition of the *Gallia Christiana* (14 vols., fol., 1715-56), the *Annales Ordinis S. Benedicti* (6 vols., fol., 1713-39), the *Vetustum Scriptorum Spicilegium* (13 vols., 4to, 1653-77), the *De Antiquis Monachorum Ritibus* (2 vols., 4to, 1690), the *De Antiquis Ecclesiarum Ritibus* (3 vols., 4to, 1700-02), the *Vetustum Scriptorum et Monumentorum Amplissimum Collectio* (9 vols., fol., 1724-33), and the *Histoire littéraire de la France* (9 vols., 4to, 1733-49). Since the Revolution the revived French Benedictines, until troubled by recent government interference, had resumed some of the unfinished labors of the Congregation of Saint-Maur: that of Solesmes, established in 1837, under the direction of Dom Guéranger, Cardinal Pitra, and others, has entered on literary enterprises of its own, such as the *Spicilegium Solesmense* (10 vols., 4to), and has also been famous for its revival of the ancient ecclesiastical music in all its purity.

By degrees, however, corruption of manners began to accompany increasing wealth, until it became the practice in many places to receive almost exclusively the sons of noble and wealthy persons as novices among the "black monks." Several of the Popes attempted to regulate these disorders, and reforms of great consequence sprang from within the bosom of the order itself. The first serious inroad into the influence of the regular Benedictines was made by the reform of Cluny (q.v.), under Abbot Odo, in 927, but as it did not break away from the order, it really gave it new life and splendor. The mother house of Cluny was an immense establishment with a church, destroyed at the Revolution, larger than any Gothic cathedral, a superb specimen of Romanesque. The patronage of the arts by this house and the 800 or more monasteries affiliated with it was offensive to St. Bernard, who objected to the lavish expenditure for great church towers, elaborately sculptured façades and capitals, rich hangings and vestments, and treasures filled with sacred vessels of gold and silver. From him came the spread of the reform of Cîteaux (see CISTERCIANS) in 1098. The new spirit was less literary, less exclusive, the arts and industries were not so thoroughly cultivated within the precincts. Greater opportunity was offered to lay

artists, the *conversi* were encouraged to break loose and form associations of artists who competed with the monastic artists. This culminated during the twelfth century, which witnessed not only the transition to the Gothic style of art, but the transference of artistic supremacy from monastic to secular hands. Another famous reform on stricter lines was that of the Tappists (qv), in 1664, an offshoot from the Cistercians.

At one time the order is said to have had no less than 37,000 monasteries, in the fifteenth century 15,107 are enumerated, of which the Reformation abolished a great many. In England, at the Dissolution under Henry VIII, there were (as given by Tanner, *Notitia Monastica*, 1695) 113 abbeyes and priories for monks, and 73 houses of Benedictine nuns. They now have less than a score in that country. In the United States the order was introduced in 1846, by a colony from the famous Abbey of Metten, in Bavaria, St Vincent's Priory, Latrobe, Westmoreland Co., Pa., made an abbey in 1855, being the first foundation. In the older days the most important monasteries for wealth, possessions, and patronage of art and literature were in Italy, Monte Cassino, Cava de' Tirreni, Farfa, Bobbio, Nonantula, and Subiaco, in Germany, Fulda, Corvey, Saint Gall, Hirsau, and Reichenau, in France, Saint-Denis, Saint-Martin of Tours, Corbie, Fontenelle, Saint-Bénigne of Dijon, in England, Jarrow and Wearmouth. Before the Reformation many of the mitred abbots in the last-named country sat in the House of Lords with the bishops. The abbot of St Augustine's, Canterbury, was the first to obtain these rights of *pontificalia* from Pope Alexander II in 1063. See ABBOT.

For the history of the order, consult the *Annales Ordinis S. Benedicti et Acta Sanctorum Ordinis S. Benedicti* already referred to, Koyner, *Apostolatus Benedictinorum in Anglia* (Douai, 1626), the *Bullarium Cassinense* (2 vols., fol., Venice, 1650), Tassin, *Histoire de la Congrégation de Saint-Maur* (Paris, 1770), *Ordo del orden de San Benito* (7 vols., fol., Salamanca, 1609-15), Montalembert, *Monks of the West* (Eng. trans., 6 vols., by Gasquet, London, 1895), Gasquet, *English Monastic Life* (London, 1904), Taunton, *The English Black Monks of the Order of St. Benedict* (London, 1897), Dantier, *Études sur les Bénédictins* (Paris, 1864), *Les monastères bénédictins de l'Italie* (Paris, 1866). For the artistic side, consult more particularly Schlosser, *Die abendlandische Klosteranlage des fruhen Mittelalters* (Vienna, 1889), Lenoir, *L'architecture monastique* (Paris, 1852), Springer, *Klosterleben und Klosterkunst* (Bonn, 1886). The methods of the monastic schools for all branches of art except architecture are best recorded in the interesting technical manual of the eleventh century called *Diversarium Artium Schemata*, by a monk named Theophilus. Many contemporary annals of the monasteries are published in the *Monumenta Germaniae Historica* of Pertz and in Muratori's *Scriptores Rerum Italicarum*. For a vivid picture of life in an English monastery, consult Carlyle, *Past and Present*.

BENEDICTION (Lat. *benedictio*, a praising, blessing, from *bene*, well + *dicere*, to speak). A solemn invocation of the divine blessing upon men or things. The ceremony in its simplest form may be considered almost coeval with the earliest expressions of religious feeling. In the Eastern as well as the Western church it is a

common ceremony. The benediction, however, is not confined to a form of prayer, but is accompanied with sprinkling of holy water, the use of incense, the sign of the Cross, etc. The chief cases in which a benediction is bestowed are the coronation of kings and queens, the confirmation of all church dignitaries, and the consecration of church vessels, bells, and sacred robes, the nuptial ceremony, the absolution, and the last sacrament. The most solemn form of benediction in the Roman Church is that "with the most holy sacrament," which is administered by the bishop or priest with the monstianse or ostensorio containing the consecrated elements. Besides these, lands, houses, cattle, etc., often receive a benediction from the priest. In the Greek church, when the benediction is being pronounced, the priest disposes his fingers in such a manner as to convey symbolically to the faithful who are close enough to observe the arrangement the doctrine of the Trinity and the twofold nature of Christ.

BENEDICTISSON, VICTORIA MARIA. See AHLGREN, ERNST.

BENEDICTUS (Lat. *blessed*, praised). A portion of the service of the mass of the Roman Catholic church, also the so-called "canticle of Zachary" (Luke 1:68-79) used in the Roman breviary at lauds and adopted into the Anglican morning service.

BENEDIX, bē'ne-diks, RODERICH JULIUS (1811-73). A German playwright. He was born in Leipzig and had a wandering career with the celebrated Bethmann troupe—by turns actor, opera singer, dramatic author, theatrical manager, and editor of a literary journal. His dramatic works fill 27 volumes (Leipzig, 1846-74). Of his one-act comedies and monologues, 46 are collected in his *Haustheater* (2 vols., 10th ed., 1891). The best of the longer plays are *Das demooste Haupt* (1841), *Der Liebesbrief*, and *Di IVespe*. Of the shorter comedies, *Der Prozess*, *Der Weiberfeind*, *Gunstige Vorzeichen*, and *Die Sonntagsjäger* are favorites in Germany and America. Benedict's plays are healthy in tone, simple in structure, lively in wit, and robust in humor, usually farcical and frequently burlesque, showing always an intimate knowledge of stage technique that contributed greatly to their lasting success. After his death appeared *Die Shakespearmanie* (1873), in which he challenges the adulation of the English poet. For his autobiography, see the *Gastelauho* (1871).

BENEFICE, ben'e-fis (ML. *beneficium*, a fief, Lat. *beneficium*, favor, from *bene*, well + *faceri*, to do). In the feudal system of land tenure (see FEUDALISM) a grant of land by the lord to a vassal to be held by the latter on certain terms of service, in its later history the term was identical in meaning with fief (qv), or feud (qv). In this sense it has become obsolete, however, and it is now in England used almost exclusively to denote an ecclesiastical preferment or living. It has no reference to the dignity or office of the incumbent, but describes the beneficial property right enjoyed by him by virtue of his office. The right to appoint a curate or vicar to a benefice is in itself a species of property and is enumerated by Blackstone among incorporeal hereditaments. See ADVOWSON, PATRONAGE, also consult Phillimore, *Ecclesiastical Law of the Church of England* (2d ed., London, 1895).

BENEFICIARY, ben'e-fish'1-a-ri (Lat. *bene-*

ficiarius, pertaining to a favor. See BENEFICE. A legal term applied to the holder of a benefice or fief (qv). The word is employed to a large extent in American and later English law as a substitute for *cestui que trust*, a technical term of equity jurisprudence derived from the Norman French, to denote a person in the enjoyment of an interest or estate held in trust by others. The legal title to a trust estate being vested in the trustee, the interest of the beneficiary therein is variously described as the 'beneficial estate' or the 'equitable estate.' It is in this sense of a person entitled to the benefits of a trust estate that the term "beneficiary" is technically used in the law of Scotland. As a term in the law of insurance, the beneficiary is the party entitled to the benefit or proceeds of the policy. Patent rights and copyrights are sometimes denominated beneficiary privileges. See TRUST.

BENEFICIUM See BENEFICE

BENEFIT OF CLERGY (ME *bienfet*, OF *bienfet*, from Lat *bene*, well + *factum*, something done, a deed, act), or PRIVILEGIUM CLERICALE. The privilege, claimed by the Medieval Church for its clergy, of exemption from the process of the secular courts when charged with crime. The privilege was generally accorded by the Christian nations of Europe, and it operated to render the clergy amenable, especially in cases involving barbarous punishments, only to the authority of the Church. The ancient usage was, says Blackstone, "for the bishop or ordinary, to demand his clerks to be tried in the bishop's instead of the King's court." This exemption, enjoyed by all persons in holy orders, from the jurisdiction of the secular or ordinary tribunals, was a privilege highly valued and stoutly defended by the clergy. This sentiment was powerfully supported by the growing sense of the sanctity attaching to the priestly office, and the result was the creation of a priestly caste owing allegiance primarily to the Church and subject only to her penalties.

In England the privilege was conceded in all cases of felony, except that of treason against the King, but not in cases of misdemeanor nor in civil litigations. Originally available only in the case of persons in holy orders, it was extended in 1330, by a statute of Edward III to all clerks, whether religious or secular, the last class comprehending all persons who could read. The gradual amelioration of the penal laws and the spread of education rendered the benefit of clergy more and more of an anachronism, and it was, by successive acts of Parliament, gradually shorn of its privileges and finally, in 1827, abolished. It survives only in the statute forbidding the judicial impeachment of archbishops or bishops for crime without the consent of the King, and in the exemption of the clergy from arrest while in the performance of the services of the Church.

The process whereby the benefit was claimed varied with the growing power of the ordinary tribunals. Originally the bishop was entitled to demand the person of the clerk immediately upon his apprehension, whereupon the jurisdiction of the secular authority ceased. Later the courts asserted the right to compel the presence of the accused, in order to inquire into the question of his guilt or innocence, as well as his right to the privilege, and finally the courts took full jurisdiction and proceeded against him as in the case of an ordinary criminal, until a verdict was

rendered, when he was allowed to plead his benefit in arrest of judgment. (See ARREST OF JUDGMENT.) The test of the prisoner's ability to read was thereupon made in open court, and if his claim was sustained, he was turned over to the bishop, or ordinary, to make his purgation. (See COMPROGATION.) The punishment of branding on the thumb, which the secular court was authorized to inflict before discharging the convicted clerk from its custody, was mitigated and finally abolished by Statute of 19 Geo III (1779).

In the United States the right was recognized in a few early cases in the Colonies of North Carolina, South Carolina, and Virginia. It was expressly forbidden by an Act of Congress passed April 30, 1790, in all cases of conviction of capital crime. The early history of the practice in England is fully given in Pollock and Maitland, *History of English Law* (2d ed., Boston, 1890). For its later history, consult Hale, *History of the Pleas of the Crown*, Blackstone, *Commentaries on the Law of England*; Stephen, *History of the Criminal Law of England* (London, 1883).

BENEFIT OF INVENTORY A term of the civil law denoting the privilege which the heir obtains of being released from liability for the debts and obligations of his ancestor beyond the value of the assets coming to him, by making and filing an inventory of these assets within the time and in the manner prescribed by law. By the earlier Roman law the heir (*heres*), whether inheriting property or not, was absolutely liable for the debts of his ancestor. It was not until the time of Justinian that this liability was restricted to the value of the assets received by him in the manner above stated. Benefit of inventory is still employed in the practice of Louisiana, which inherited the civil law through the Code Napoleon. It was formerly of importance also in Scotch law, but by the abolition of the *annus deliborandi* and other liberal provisions of the statutes 10 and 11 Vict., c 47, secs 23 and 25, its value has been minimized. See HEIR, INHERITANCE, INVENTORY.

BENEFIT SOCIETIES Associations formed to provide for a cheap form of insurance, which secures to their members, through regular dues or special assessments, a provision for old age, funeral expenses, death payments to widow and orphans, or sick allowances. Societies exist with this beneficial feature as their primary object, but more often it is added to the work of special associations in order to make membership more attractive. The associations formed by men in the same business or profession, trade organizations, philanthropic societies, and churches frequently provide for such a fund. Certain trades unions tend to emphasize the benefit feature, sometimes paying out-of-work allowances. Women are permitted to belong to some societies. Since the success of all such societies depends upon the financial management, the funds have been occasionally dissipated by ignorance, incompetence, or fraud. In England, societies with beneficial features are called "friendly societies," and "benefit societies" are associations entered into for the purpose of raising by periodical subscriptions a fund to assist members in buying land and erecting buildings upon it. The latter societies have been very successful, and they have invested large sums in bonds and mortgages. See BUILDING AND LOAN ASSOCIATIONS, SECRET

BENEKE, bá-ne-ke, FRIEDRICH EDUARD (1798-1854) A noted German psychologist He was born in Berlin, Feb 17, 1798 He studied theology at Halle and afterward philosophy at Berlin In 1820 he began lecturing at the latter university, but two years later his lectures were interdicted by the Minister Altenstein Beneke then held a position as lecturer at Göttingen for three years until in 1827 he was allowed to resume lecturing in Berlin Upon the death of Hegel in 1832 he was appointed assistant professor of philosophy On March 1, 1854, he disappeared from his home, and his corpse was discovered in the canal at Charlottenburg in June 1856

Beneke's most important works were his psychological treatises His standpoint throughout was empirical, opposed to Hegelian speculation, and closely allied to British associationism He believed that a true psychology, which is the basis of all knowledge, must be formulated in accordance with the rigid methods of physical science and that the genetic method is most valuable Despite this empirical vein he found the elements of mind in certain formal capacities, termed the "primal faculties" His work is often theoretical and inexact

His principal works are *Erfahrungssocielenlehre, als Grundlage alles Wissens, in ihren Hauptzügen dargestellt* (1820), *Neue Grundlegungen zur Metaphysik* (1822), *Psychologische Skizzen* (1825-27), *Lehrbuch der Psychologie als Naturwissenschaft* (1833, 4th ed, 1877), *Erziehungs- und Unterrichtstheorie* (2 vols, 1835-36, 4th ed, 1876), *System der Logik als Kunstlehre des Denkens* (2 vols, 1842), *Pragmatische Psychologie, oder Seelenlehre in der Anwendung auf das Leben* (2 vols, 1850) Consult C H T Kuhn, *Die Sittenlehre F E Benekes* (1892), Brandt, *Beneke, the Man and his Philosophy* (New York, 1895), H Renner, *Benekes Erkenntnistheorie* (Halle, 1902), A Wandschneider, *Die Metaphysik Benekes* (Berlin, 1903)

BENEGELI, bá-nén-íá-él, CID HAMET The name of the old chronicler whose work Cervantes pretends to have used in his *Don Quixote*

BEN'ET, STEPHEN VINCENT (1827-95) An American soldier, born in St Augustine, Fla He graduated at the University of Georgia, and in 1849 at West Point, where he was assistant professor of geography, history, and ethics from 1859 to 1861, and was instructor of ordnance and the science of gunnery from 1861 to 1864 He was appointed assistant to the chief of ordnance in 1869, and from 1874 until his retirement in 1891 was chief of the department with the rank of brigadier general He translated Jomini's *Political and Military History of the Campaign of Waterloo* (1853), and in 1862 published *Military Law and the Practice of Courts-Martial*

BEN'EVEN'TO (for derivation, see below) An archiepiscopal city in south Italy, capital of the province of Benevento (Map Italy, J 6) It is situated on a hill between the rivers Calore and Sabato, on the winding Naples-Poggia Railway, 60 miles by rail northeast of Naples, but only 32 miles by direct route The walls are constructed almost entirely from Roman ruins, and on the north side of the town is Trajan's

triumphal arch, the Porta Aurea, one of the best-preserved Roman structures in south Italy, erected in 114 A D in expectation of the Emperor's return from the East, where he died in 116 It is 50 feet high, and is built of Greek marble The twelfth-century Lombard-Saracenic cathedral contains beautiful paintings and has a bronze door adorned with reliefs of New Testament subjects and said to have been made in Constantinople in 1150 There are several fine palaces, a castle, erected in the fourteenth century, and several churches, among which may be mentioned that of Santa Sofia, a circular edifice of the Lombard period In the cathedral is a relief showing the Calydonian boar adorned for sacrifice Egyptian obelisks have been set up in many of the public squares The principal manufactures are of gold and silver-plated ware, leather and parchment, and the trade in grain is important

According to tradition, the Samnite *Maleventum* (Lat ill wind, or ill-come), the name of which was changed to *Beneventum* (fair wind, or well-come) after the Roman victory over Pyrrhus in 275 B C, was founded by Diomedes During the Punic wars Beneventum remained faithful to the Romans and was plundered by Hannibal after his victory at Cannae 216 B C It was destroyed by Totila in 545 A D, and was rebuilt by Narses In the sixth century the Lombards made it the capital of an independent duchy, of which Pope Leo IX in 1049 had the possession guaranteed to him by Emperor Henry III Frederick II partly destroyed it in 1241 From 1806 to 1815 Benevento was the capital of a principality granted to Talleyrand by Napoleon In 1815 it was restored to the Pope and in 1860 became part of the Kingdom of Italy Five councils were held here in the eleventh and twelfth centuries Pop (commune), 1881, 22,000, 1901, 24,647, 1911, 23,767 Consult Boigia, *Memorie storiche della pontificia città di Benevento* (Rome, 1763-69), A Mommius, *Monumenti e Opere d'Arte di Benevento* (Benevento, 1899)

BENEVENTUM. See BENEVENTO

BENEVOLENCE (Lat *benevolentia*, good will from *bene*, well + *velle*, to wish) In English legal history, a compulsory contribution levied by certain kings, without other authority than the pretense of piety The designation dates from 1473, when Edward IV asked it "as a mark of good will towards his rule" Benevolences were declared illegal by Parliament in 1484, but nevertheless were resorted to with considerable success by Henry VII and Henry VIII Subsequent kings tried the expedient with ill success, and Charles I declined to resort to it The people protested against it in the Petition of Rights, etc, and it has been made illegal without grant of Parliament Consult Hallam's *Constitutional History of England*, and Stephen's *Commentaries*, vol 1 (4 vols, New York, 1843-46)

BEN'EZET', ANTHONY (1713-84) An American philanthropist who defended the interests of the negroes and Indians He was born in France, but emigrated to America, and in 1731 settled in Philadelphia Among his tracts were *A Cautron to Great Britain and Her Colonies, in a Short Representation of the Calamitous State of the Enslaved Negroes in the British Dominion* (1767), *Some Historical Account of Guinea, with an Inquiry into the Rise and Progress of the Slave-Trade* (1774), *A Short*

Account of the Society of Friends (1780), and *Observations on the Indian Natives of this Continent* (1784). Consult Roberts Vaux, *Memoir of the Life of Anthony Benzeet* (Philadelphia, 1817).

BENFEY, lén'fi, THEODOR (1800-81). A German Orientalist, born at Norten, Hanover. He studied at Gottingen and Munich, from 1834 was a lecturer at the former university and from 1848 professor. His researches in the Sanskrit language and literature were particularly extensive and valuable. In the introduction to his translation into German (2 vols, 1859) of the collection of fables known as *Pancatantra* (qv), he began a most interesting study of the influence of ancient Indian material upon the folklore of Asia and Europe. This investigation he continued in his periodical *Orient und Occident* (published at Gottingen in 1863-65, 3 vols), and in his introduction to G. W. H. Bickell's edition and translation into German (Leipzig, 1876) of the Syrian *Kahilag* and *Damag*. He thus opened to other scholars a most profitable field. In English he published a *Practical Grammar of the Sanskrit Language* (1863, 2d ed, 1868), and a *Sanskrit-English Dictionary* (1866), by which he is probably best known. His writings further include an etymological dictionary of the Indo-Germanic languages (in 2 vols), a valuable edition, with a glossary and a translation into German (1848), of the *Sāmaveda*, and a *Vollständige Grammatik der Sanskritsprache* (1852), supplemented by a *Chrestomathie* (1853-54). His *Kleinere Schriften*, edited by Adalbert Bezzenberger, appeared in Berlin in 1890-91 (2 vols).

BENGAL, bēn-gn' (Hind *Baṅgālā*, Skt. *Tāṅgalam*, from *Vaṅga*, one of the five Aryan kingdoms). A province of India forming a presidency since 1912. It is bounded on the north by Bhutan and Assam, on the east by Assam and Burma, on the south by the Bay of Bengal, and on the west by the province of Bihar and Orissa (Map India, E 4). Radical changes in boundary occurred in 1905 and 1912. An unofficial estimate of the province as newly constituted places the area at about 70,000 square miles and the population at about 42,000,000. Prior to Oct 16, 1905, the province (then a lieutenant governorship) had an area of 196,408 square miles, of which 157,796 square miles were British territory and 38,612 square miles native states, it consisted of the four sub-provinces—Bengal proper, Bihar, Orissa, and Chota Nagpur (including the native states of Cooch Behar, Sikkim, Hill Tippera, and the tributary states of Orissa and Chota Nagpur), and the total population, according to the census of 1901, was 78,493,410. This territory was about the same as the Diwani grant of 1765. The area of the lieutenant governorship before and after the territorial division of 1905, with the 1901 census population, was as follows:

	BEFORE OCT 16, 1905		AFTER OCT 16, 1905	
	Sq. m.	Pop 1901	Sq. m.	Pop 1901
Bengal proper	84,728		35,576	
Bihar	44,259		43,524	
Orissa	24,306		41,789	
Chota Nagpur	43,115		27,703	
Total	196,408	78,493,410	148,592	54,662,529
British territory	157,796	74,744,866	115,819	50,722,067
Native States	38,612	3,748,544	32,775	3,940,462

These changes of boundary were made to lighten the excessive burden imposed upon the Bengal government by increasing population, commerce, and complexity of administration. It was decided that relief could be afforded, not by organic governmental change, but only by actual transference of territory. Hence a new province, Eastern Bengal and Assam, was erected, to it was assigned Eastern Bengal, i. e., the territory generally east of the Madhumati River and the Ganges and including the Bengal divisions of Dacca, Chittagong, and Rajshahi (except Darjeeling), the district of Malda, and the native state of Hill Tippera. At the same time the five Hindi-speaking native states of Jashpur, Surguja, Udaipur, Korca, and Chang Bhakar were transferred to the Central Provinces, while the district of Sambalpur (except two zamindaris) and the Oriya-speaking native states of Patna, Kalahandi, Bania, Sonpur, and Raurakhol in the Central Provinces were attached to Bengal. Minor territorial changes (as the detachment of Sikkim), aggregating no very considerable alteration in area or population, took place between 1905 and 1911, the returns by divisions of the census taken on March 10 of the latter year, as compared with the adjusted returns of the 1901 census (for the same territory), together with the percentage of increase, are shown below:

	Pop 1901	Pop 1911	Inc.
British Territory			
Burdwan Division	8,240,076	8,467,314	2.8
Presidency	8,983,818	9,445,321	5.1
Patna "	5,847,371	5,634,780	-0.2
Tirhut "	9,888,018	9,973,359	1.1
Bihar "	5,063,940	5,410,371	3.9
Orissa "	4,489,142	5,131,763	3.0
Chota Nagpur Division	4,900,429	5,605,362	14.4
Total	50,715,794	52,668,269	3.8
Native States			
Cooch Behar	566,974	592,952	4.6
Orissa Feudatory States	3,173,395	3,796,563	19.6
Chota Nagpur States	141,079	148,646	5.4
Total	4,881,448	4,538,161	16.9
Grand total	54,597,242	57,206,430	4.8

Of the total population of the province as constituted in 1901, about 63 per cent was returned by the census of that year as Hindu and about 33 per cent as Mohammedan. Hindus were most numerous in Bihar (except Malda and East Purnea), Orissa, and West Bengal, and Mohammedans in the districts east of the Bhagarathi and the Mahananda. In British territory Hindus numbered 46,737,543, Mohammedans 25,265,342, and Animists 2,242,770. The Mohammedans of the old province formed over two-fifths of the total number in India. The 1901 census showed that in the British territory of the old province Bengal was spoken by 40,714,099 persons, Hindi 26,151,361, Oriya 4,561,323, and Santali 1,510,881.

Of the total population of the province as constituted at the 1911 census, 52,668,269 in British territory and 4,538,161 in native states. Hindus numbered 40,289,843 and 3,797,979, Mohammedans, 9,885,763 and 199,133, Animists, 2,005,992 and 499,952, Christians, 319,384 and 38,530.

The province as reconstituted Oct 16, 1905, for administrative purposes, by the division of

old Bengal and other changes mentioned above, did not prove satisfactory to the inhabitants, the division was regarded as an attempt to weaken the national political and religious feeling, and it had considerable bearing on the native "unrest" of the ensuing years. A new shifting of boundaries was determined upon. On April 1, 1912, in accordance with the announcement of the Emperor at the Delhi Durbar (December, 1911), and under a subsequent act of Parliament, Eastern Bengal was reunited to Bengal (Assam becoming again a separate province), while Bihar, Chota Nagpur, and Orissa were separated to form a new province (lieutenant governorship), and the new province of Bengal was at the same time raised to the rank of a presidency, under a governor with powers and privileges similar to those of the governors of Madras and Bombay. The legislative council was enlarged to consist of 52 members, including 25 elected by variously constituted constituencies, in the total were 20 Hindus and 7 Mohammedans. Calcutta (which was superseded by Delhi as the capital of India) remained the capital of Bengal, with Darjeeling as the summer residence of the governor, and it was provided that Dacca, former capital of Eastern Bengal and a centre of Islam, should be the administrative headquarters for a certain period each year. As stated at the beginning of this article, a statistical treatment of the new presidency was not feasible in 1913.

In its topographical conformation Bengal before the division of 1905 was considered as consisting of two river valleys, the western part forming the basin of the Ganges, and the eastern part of the Brahmaputra. While in the northern part the surface partakes to some extent of the mountainous character of the neighboring regions, the central, and especially the southeastern part around the vast delta of the Ganges and Brahmaputra, is a low plain whose character is determined by the two great water arteries of the region, and the soil is mostly alluvial. Except Egypt, there is hardly another country in the world in which the hydrographic system is such a determining factor in the agricultural and general economic conditions as it is in Bengal. This is especially true of the Ganges. After a long and swift course it is checked by the more level surface of Bengal, and the immense quantities of silt brought by the current are deposited through numerous canals upon the surrounding level country. This process of natural manuring and periodic rejuvenation of the soil results in extraordinary fertility. In the southeastern part, where the country for hundreds of miles is overflowed by the waters of the vast number of streams, streamlets, and creeks forming the complicated delta of the Ganges, numerous embankments have been erected to check excessive inundation.

Agriculture. Whether the old province be considered or the province as constituted in 1905 or in 1912, Bengal is a distinctively agricultural country. In the old province more than 56 millions, or 71 per cent of the entire population, were supported by agriculture. Of every 100 agriculturists 89 were rent-paying tenants, 9 were laborers, and 2 lived on their rents. In 1903-04 52.5 per cent of the total area was cropped, 7.2 per cent was fallow, 13.3 per cent was cultivable waste other than fallow, 24.1 per cent was not available for cultivation, and 3 per cent was forest. Food crops occupied

82 per cent of the gross cropped area, and oil-seeds 6 per cent. Of all crops rice is by far the most important, covering 71 per cent of the net cropped area. There are many varieties, each possessing special characteristics which adapt its cultivation to particular localities, but they may all be classified, according to the harvesting season, under three main heads: winter rice (the principal crop), early rice, and spring rice. Various other cereals and pulses are grown, and jute is a very valuable crop. In 1908-09 the area under leading crops was, in thousands of acres: food grains and pulses, 32,833 (including rice 22,519, maize 1815, wheat 1252, barley 1118, gram 856, millet 815, great millet 95, spoked millet 79, other 4283), oil-seeds, 1723 (including linseed 548, sesamum 207, rape and mustard 655, other 313), sugar cane, 368, other sugar, 47, condiments and spices, 83, fibres, 691 (including jute 549, cotton 67, other 76), indigo, 135, other dyes, 5, opium, 116, tea, 64, tobacco, 144, other drugs and narcotics, 2, fodder crops, 66, orchard and garden produce, 882, miscellaneous food crops, 607, miscellaneous non-food crops, 547,—total cropped area, 38,303, area cropped more than once, 5771, net area cropped, 32,532.

The manufacturing industries of Bengal have not kept pace with the agricultural development of the country. Many of the native industries, such as the manufacture of dyes and the finer silks, as well as minor articles of general consumption, have almost disappeared, and the local demand for these articles is supplied largely by British manufactures. In some of the cities there are a number of large mills equipped with modern machinery. In the rural districts, however, a large part of the population, formerly engaged in industrial pursuits, have turned their attention to agriculture. The decline of the native industries is due largely to the development of railway transportation which has enabled the machine-made goods of Great Britain to compete with the local hand-made articles.

The foreign commerce of Bengal, which is increasing, is largely with the United Kingdom. The great bulk of the trade passes through Calcutta. The imports consist mostly of cotton piece goods and cotton twist and yarn, which come almost exclusively from Great Britain, metals, mineral oil, machinery, and sugar. Of the exports, about one-fifth consists of opium and rice, and the rest of seeds, indigo, wheat, cotton, etc. Internal communication is facilitated by numerous navigable rivers as well as by roads and railway lines. Of roads, Bengal had, in 1903-04, 53,038 miles, of which only about one-eighth were macadamized. The railway system included three main lines—one leading from Calcutta toward the northwest, a second eastward, the third to Madras. In 1904 the total length of railways in the province was 4578 miles, of which 3805 miles were owned by the State, in the same year the railways in the territory which was constituted as the province in 1905 had a length of 3485 miles, of which 3041 miles were owned by the state.

Education. Instruction is provided partly by public (government and government-aided schools) and partly by private institutions. In 1908-09 the public institutions numbered 42,305, with 1,368,280 scholars (of whom only 159,562 were female), of these the primary schools numbered 37,509 (1,108,543 scholars),

secondary schools, 1545 (167,077), arts colleges, 31 (4655), professional colleges, 13 (2070), training schools, 232 (4063), and all other special schools, 2975 (81,572). In the same year there were 3148 private elementary schools, with 40,533 scholars, and 1132 private advanced schools, with 12,576 scholars. Grand total, 46,585 schools, 1,421,398 scholars. The census of 1911, out of a total population of 52,668,269 in British territory, showed 3,305,821 literate (of whom 220,311 were female) and 412,706 literate in English (29,822 female), in the native states, out of a total of 4,538,161, only 134,366 (of whom 6092 were female) were returned as literate and 5135 literate in English (178 female).

The "Bengal Army" was the term applied to the troops raised in Bengal for service with the Indian native army. The cavalry troops of the Bengal Army, and particularly the lancer regiments, are world-famous. When in 1904 under Lord Kitchener the Indian army was reconstituted, the Bengal Army was abolished, its successor is called the Eastern Command.

The Imperial revenue is derived chiefly from the opium monopoly (over 35 per cent), land rent (about 22 per cent), the salt monopoly, and customs. The Imperial expenditures amount usually to less than one-fourth of the revenue. The cost of the administration of the province is covered by the provincial and municipal taxes.

Bihar, formerly the northern part of Bengal, and anciently a powerful Sanskrit monarchy, was conquered about 1197 A.D. by the Mohammedans. So-called Mohammedan governors of Bengal ruled from 1202 till 1339, then followed independent Mohammedan kings, and from 1576 to 1765 the country was ruled by governors under the Delhi (Mogul) emperors. The first British commercial settlement was made about 1620. In 1686 the British bought, from the grandson of Aurangzeb, the site of the present Calcutta. In 1757 Clive's victory, gained against odds of 20 to 1, transferred Bengal from the Mogul's governor to the English East India Company, which was secured in its possession by the Mogul's own grant of 1765. Warren Hastings consolidated the British power in Bengal (1772-85). Under him and his successors the civil administration was thoroughly organized and important land legislation enacted. After the treaties of 1765, which placed Bengal, Bihar, and Orissa under British administration, the history of Bengal merges with that of British India.

The province of Eastern Bengal and Assam (a lieutenant governorship), which existed from Oct. 16, 1905, to April 1, 1912, had an area of 106,130 square miles, including the native states of Manipur and Hill Tippera. The population of British territory in 1911 was 34,018,527, as compared with 30,510,344 for the same territory in 1901, the increase being 11.5 per cent, native states, 575,835 in 1911 and 457,790 in 1901, the increase being 25.8 per cent. Mohammedans in British territory numbered 20,157,345 in 1911, and Hindus 12,093,940, in the native states, 79,457 and 359,480. The capital was Dacca. See ASSAM, INDIA.

BENGAL, BAY OF. A part of the Indian Ocean, of almost triangular form, projected northward between India and Farther India. It receives many large rivers—the Ganges and the Brahmaputra on the north, the Irawadi on the east, and on the west the Mahanadi, the

Godavari, the Krishna, and the Kaveri. On the western coast there is hardly anything worthy of the name of harbor, while on the east there are many good ports, such as Akyab, Cheduba, Negrais, Syriam, Martaban, Tavoy River, King's Island, besides several more in the islands between Pegu and Sumatra. The Andaman and Nicobar islands are in the eastern part of the bay. The northeastern and southwestern monsoons prevail, respectively, in summer and winter over the whole of the northern part of the Indian Ocean, which includes the bay, and also over the maritime tracts of Bengal.

BENGAL-LESE, bēn'ga-lēz'. See BENGAL. **BENGALI (bēn-ga'lē) LANGUAGE AND LITERATURE.** The Bengali language is a modern Indian dialect, akin to the Ūriya, the Assamese, the Bihari, and the Hindustani (q.v.). Like all the modern Indian languages, it is analytic in type, and the structure of its grammar thus resembles that of modern Persian or English. According to the census of 1901 Bengali is spoken by 44,624,048 souls. There are numerous dialects, but the Calcutta dialect may be regarded as the standard, although the literary language differs from any of its vernaculars, on account of the introduction of Sanskrit words, which are employed more freely in Bengali than in any other modern Indian language. The Bengali uses a peculiar but beautiful character derived from the Devanagari or Sanskrit alphabet.

The vernacular literature of Bengal is intimately connected with the religious history of that country. So intimate is the bond which links together poetry and religion, that even purely erotic literature has come to be interpreted as an allegoric exposition of religious precepts. The basis for such a view of poetry was furnished by the stories current in India about the love adventures of Krishna, and Krishna himself came to be regarded by the theological poets of India as an incarnation of the Love attribute of Vishnu. One of the earliest of these Krishnaitic poets was Chandi Das, who flourished about 1403 A.D. The poetic school headed by him was strengthened by the religious movement inaugurated by Chaitanya in the sixteenth century, which occasioned numerous theological works, many of which were, however, written in Sanskrit. Another impetus was given to Bengali literature by the translation, in the fifteenth century, of the *Mahabharata* and the *Ramayana*. In the seventeenth century a Sivaite tone was imparted to the literature. The female deities Sakti, Manasa, and Chandi share, however, in the praise of the Bengali poets. To this period belongs the poem written in the honor of Sakti by Mukunda Ram (1589). Bharata Chandra (1722-60), is another poet famous for his mastery of poetic form. His *Vidya Sundar*, an episode of an epic poem describing the conquest of Bengal by Man Singh, is one of the most popular Bengali poems. Rama Prasada Sen (1718-75), a follower of the goddess Kali, was the great religious poet of this epoch. The modern period of Bengali literature is marked by the struggle of two opposing schools, the one drawing its inspiration from the Sanskrit classics and the other working in sympathy with European ideals. Several novels have been produced under this new inspiration in Bengali, and an attempt has also been made to revive the Bengali plays, or

yatras In 1913 the Bengali poet, Rabindranath Tagore (qv), received the Nobel prize for literature

BENGAL LIGHT See BLUE LIGHT

BENGAZI, bèn-gā'ze (anciently, *Berenice*). A seaport town, the capital of Barca (qv), on the coast of North Africa, finely situated on the Gulf of Sidra (Map Africa, F 1). It has a ruined castle, a pretentious bazaar, and a Franciscan monastery. Its harbor is exposed, but of considerable commercial importance. The chief exports are bailey, sponges, ivory, and ostrich feathers, although much of the commerce in the last mentioned has been diverted to Tripoli. Bengazi is the centre of a fertile region and controls an important trade with the interior by caravans. The population, estimated between 25,000 and 35,000, includes Maltese, Greeks, and Italians. Bengazi is the ancient Hesperides, which was named Berenice by Ptolemy III, in whose time it was a flourishing town. In the Turco-Italian War Bengazi was occupied by the Italians, Oct 20, 1911, and was the scene of numerous skirmishes.

BENGEL, bèn-g'el, JOHANN ALBRECHT (1687-1752). A German theologian and commentator. He was born at Winnenden, in Württemberg, June 24, 1687. After completing his theological curriculum in 1707 at Tübingen, he became curate of Metzingen, a year after he was appointed tutor in theology at Tübingen. Later in life he held several high offices, among others that of consistorial counselor and prelate of Alpnach, in Württemberg, where he died Nov 2, 1752. He was the first Protestant author who treated the exegesis of the New Testament in a thoroughly critical and judicious style. He did good service also in the identification of the text of the Bible and in paving the way for classifying the biblical manuscripts into families. The short notes in his *Gnomon Novi Testamenti* (Tübingen, 1742) have been generally regarded as valuable and translated into various languages (Eng ed., Philadelphia, 1862). They were especially made use of by John Wesley in his *Notes on the New Testament*, which forms one of the standards of Wesleyan Methodism. Indeed, Wesley's work may be regarded as little more than an abridged translation from Bengel. In *Erklärte Offenbarung Johannis* (Stuttgart, 1740), and a chronological work, the *Ordo Temporum a Principio per Periodos Economicae Divinae Historicae atque Propheticae* (Tübingen, 1741), he calculated on the basis he supposed to be laid down in the Apocalypse, that the world would endure for the space of 7777 7-0 years, and that the "breaking loose and the binding of Satan" would take place in the summer of 1836. For his biography, consult H P Burk (Stuttgart, 1831, Eng trans, London, 1837), Oscar von Wachter, *Bengel, Lebensabriss* (Stuttgart, 1865).

BENGOUGH, JOHN WILSON (1851-) A Canadian cartoonist and poet. He was born in Toronto and received a grammar-school education. In 1873 he founded *Grip*, a comic weekly, and during 10 years his generally good-natured but sometimes caustic caricatures of public men and social foibles in that paper were a feature of Canadian life. After 1892 he contributed to other Canadian publications, and during 1903 his cartoons appeared in the *London Daily Express*, *St James's Gazette*, and *Morning Chronicle*. A Liberal in politics, he often satirized the members of his own party for their faults and failures. He lectured throughout Canada, Great Britain, Australia, and New Zealand, and in many cities of the United States. In 1880, when the Royal Canadian Academy was constituted, he was appointed an associate. His verse is excellent, and some of his didactic poems have attracted attention. Among his publications are *A Concise History of Canadian Politics* (1886), *Motley Verses Grave and Gay* (1895), *In Many Keys* (1902).

BENGUELA, bèn-gā'la, or **BENGUELLA**. One of the six districts into which the Portuguese colony of Angola (qv) is divided (Map Belgian Congo, B 5). It is situated between Loanda and Mossamedes, in the most mountainous part of that colony. Minerals are found extensively. Chief towns are Lobito Bay and the capital, Benguela.

BENGUELA, or **BENGUELLA**. A seaport town, the capital of the district of the same name (Map Belgian Congo, B 5). Situated in about lat 12° 34' S, and long 13° 20' E, it lies in an exceedingly unhealthy region, near the mouth of the Kavako River, on the Baía das Vacas. It has an open roadstead, and exports rubber, ivory, wax, and skins. Tobacco, fruit, and vegetables are grown. Pop., 1911, about 3600, of which between 1000 and 1500 are whites. Benguela was founded in 1617 as San Felipe de Benguela. Before the suppression of the slave trade it had a greater population than at present, and was of considerable importance as a slave-trade centre. A railway connects it with Lobito, where there is a good natural harbor with docking facilities greatly improved in 1903.

BENGUET-IGOROT, bèn-g'et ig'ō-ōt. The pagan inhabitants of Benguet, Amburayan, and Lepanto subprovinces, and the mountains of Union Province, Luzon. They are of lower stature than the Bontoc Igorot, from whom they also differ in language and customs. They understand the working of iron, and also mine copper, which they smelt by a secret process and make into howls. See PHILIPPINES.

BENHADAD. The Hebrew translation of Bar Hadad, 'son of Hadad,' the name of two kings of Damascus. See BAR HADAD.

BENHAM, bèn-əm, ANDREW ELLICOTT KENNEDY (1832-1905). A United States naval officer. He was born in New York State and became a midshipman in 1847. He served in the East Indies until 1851, became a lieutenant in 1855, and in 1861 commanded the *Brenville*, in the South Atlantic Blockading squadron and participated in the capture of Port Royal, S C. He commanded the gunboat *Penobscot* in 1862 and served in the Western Gulf Blockading squadron until the close of the war. He served at the Brooklyn Navy Yard (1868-69), was lighthouse inspector (1870-71 and 1884-88),

and was made commodore in 1886, and rear admiral in 1890. In 1893 he won commendation by his firmness in protecting American interests at Rio de Janeiro during a revolution.

BENHAM, HENRY WASHINGTON (1816-84) An American soldier, born at Cheshire, Conn. He graduated at the United States Military Academy in 1837, was connected with various government works as a member of the Engineer Corps, and served in the Mexican War in 1847-48. From 1849 to 1852 he was superintending engineer of the sea wall for the protection of Great Brewster Island, Boston (Mass.) harbor, and from 1852 to 1853 of the Washington (D. C.) Navy Yard. In 1861 he was appointed engineer of the Department of the Ohio, in the same year was promoted to be brigadier general of volunteers, and commanded a brigade at New Creek, and from 1863 to 1865, with rank of lieutenant colonel, was in command of the engineer brigade of the Army of the Potomac. He was mustered out of the volunteer service with rank of brevet major general, U. S. V. and U. S. A. Promoted to be colonel in 1867, he was in charge of the Boston harbor sea wall from 1866 to 1873, and of the defenses of New York harbor from 1877 to 1882. He was an expert in the construction of pontoon bridges.

BENHAM, WILLIAM (1831-1910) An English clergyman and author. He was born at West Meon, Hampshire, where both his father and his grandfather had occupied the position of village postmaster. He was educated at King's College, London, and in 1864 became editorial secretary to the Society for Promoting Christian Knowledge, and professor of modern history at King's College. In 1865 he was selected by Archbishop Longley as his private secretary, and in 1872 was appointed one of the six preachers of Canterbury and vicar of Margate by Archbishop Tait. He became vicar of Maiden in 1880, rector of the Church of St. Edmund the King in 1882, and honorary canon in Canterbury Cathedral in 1888. In 1897 Bishop Creighton appointed him Boyle Lecturer. From 1903 to his death he was rural dean of East City. He was editor of Griffith and Farran's *Library of Ancient and Modern Theology* and published the following, writing for some time under the pseudonym of "Peter Lombard": *English Ballads, with Introduction and Notes* (1863), *Readings on the Life of Our Lord and His Apostles* (1880), *Companion to the Lectionary* (1872), *A New Translation of Thomas a Kempis's "Imitatio Christi"* (1874), *Memoirs of Catherine and Craufurd Tait* (1879), *A Short History of the Episcopal Church in America* (1884), *The Dictionary of Religion* (1887), *Life of Archbishop Tait*, in collaboration with the Bishop of Winchester (1891), *Medieval London* (1901), *Tower of London* (1906). Consult *Letters of "Peter Lombard,"* with a memoir by his daughter (1911).

BEN-HUR (Heb. *ben*, son + *Hur*, a proper name *Oph*, *Hur*, or *Ἰσλ*, *Hōs* in the Greek version of the Bible) The Jewish hero of a very popular novel of that name by Gen. Lew Wallace (1880), a story of Judea in the days of Christ. In dramatic form its spectacular features have made it very popular.

BENÍ, bá-né' or *bá-né* A small town on the south coast of the Dominican Republic, about 40 miles southwest of the town of Santo Domingo (Map West Indies, E 3). It dates from 1764, has a healthful climate, and is noted as being the

birthplace of several famous men, of whom was General Gomez, the so-called Liberator of Cuba.

BENÍ, bá-né One of the largest departments of Bolivia, occupying the northeastern part of the Republic, and bounded by Brazil on the north and east, by the departments of Cochabamba, La Paz, and Santa Cruz on the south, and La Paz on the west (Map Bolivia, D 6). Its area is estimated at 107,744 square miles, a large portion of which has not yet been explored. The surface is mostly flat and the soil very fertile, producing cacao, coffee, sugar cane, tobacco, tropical fruits, etc. The natural resources comprise also a heavy growth of valuable timber, including vast rubber forests, and deposits of gold. The climate is healthful, though hot and moist. Pop., mostly Indians, 1900, 32,188, 1910 (est.), 37,300. The capital and chief town of the department is Trinidad, with a population of 4810.

BENÍ A river of Bolivia, South America (Map Bolivia, D 6). It rises in the Bolivian Andes in about lat. 17° S., and flows first northwest, then north, and then northeast, and finally unites with the Mamore to form the Madeira at Villa Bella, on the northern Bolivian frontier. It is really a part of the Amazon system and drains the eastern slope of the Andes between lat. 17° S. and 12° S. It receives many tributaries from the west, the largest of which is the river Madre de Dios, but it has few tributaries from the east. It has a length of 900 miles and is navigable for half this distance, but just above its mouth it is obstructed by rapids. The river formerly received the overflow of Lake Titicaca, but the gradual desiccation of the region has put an end to this contribution to its waters.

BENICARLÓ, bá-né-kar-ló' A walled town in the province of Castellón de la Plana, Spain, at the mouth of the Benicarló River, on the Mediterranean, 42 miles northeast of Castellón de la Plana (Map Spain, F 2). It contains an old castle and a fine church, distinguished by an octagonal tower. Vine culture is a leading industry, and much of the red wine manufactured in the town and district is exported to Bordeaux. Grain, oil, vegetables, and oranges are produced, and spirits are manufactured. Pop., 1897, 7900, 1910, 7200.

BENICIA, bé-nish-i-a A city in Solano Co., Cal., 24 miles (direct) northeast of San Francisco, on the Strait of Carquinez, between Suisun and San Pablo bays, and on the Southern Pacific Railroad (Map California, C 4). It has a good harbor and boat service with San Francisco. There are tanneries, iron works, creameries, manufactories of farm implements, wagons, etc., shipyards, and fruit and fish packing houses. The city contains a United States arsenal and barracks. Benicia (named for the wife of the Mexican general, Vallejo) was founded in 1848 and until 1850 was the chief rival of San Francisco. In May, 1853, it was made "the permanent seat of government," but in March, 1854, it was supplanted by Sacramento. The city was incorporated in 1861 and is now governed by a board of five trustees, elected every four years. Pop., 1900, 2751, 1910, 2360.

BENICIA BOY A nickname popularly applied (from his residence in California) to John C. Heenan, the pugilist, whose indecisive fight with Tom Sayres, the English champion,

at Farnborough, England, in 1860, is memorable in the history of pugilism and incidentally was the cause of putting an end to bare-knuckle prize fighting in England. See BOXING.

BENI-HASSAN, bā'ne-has'san, or **HASAN** (Ar *bani*, sons, descendants, tribe + *Hassan*). A small village in central Egypt, lat 27° 53' N, long 30° 55' E, on the right bank of the Nile. The place is famous for the rock-hewn tombs, 39 in number, which are cut in the calcareous stone of the mountain, in the vicinity, and are fine examples of Egyptian architectural art. They are sepulchres of the ancient monarchs who ruled the district under the Middle Empire (about 2000 B.C.). The walls of some of the larger tombs are covered with paintings and hieroglyphic inscriptions. The former represent varied scenes of ancient Egyptian life, while the inscriptions form a most important source of information for the history of the twelfth dynasty. In recent years the mural decorations have been much injured by relic hunters. All that remains has been carefully copied, under the auspices of the Egypt Exploration Fund, and published in the *Publications of the Archaeological Survey of Egypt*, vols 1, 11, v (London, 1892, 1893, 1896).

BENI-ISRAEL, bā'ne-iz'ra-əl (Heb Sons of Israel). The name of a group of people of Jewish origin, settled in the west of India, who, while acknowledging the law of Moses, conform in many respects to the religious customs of the Hindus, by whom they are surrounded. They abstain from the flesh of unclean animals and are strict observers of the Sabbath. A few of them learned men know Hebrew, but the great majority are ignorant of the Old Testament. Their whole number is estimated at 6000. Their original settlement was at Navagaum, about 30 miles from Bombay, where they were protected by the native princes, they have spread through the maritime parts of the Konkan, and some of them are now to be found in Bombay itself. Their features exhibit a resemblance to those of the Arabian Jews. Of their early history and the time of their settlement in India little is known, though it is probable that they came to India before the Jews of Cochin. They had no doubt been for many centuries in India when about 1000 A.D. David Rahabi appeared as a reformer among them. Benjamin Tudela heard of them in the twelfth century and Marco Polo in the thirteenth. It has been said that they assumed the name Beni-Israel because that of Jehudim (Jews) was distasteful to Mohammedans, while the former name is mentioned with respect in the Koran (11, 110), but these and similar stories which make them out to be descendants of the supposed lost tribes have no historical value. Their communities are governed by a *mukaddam*, or 'head man,' of their own number, and their religious assemblies are presided over by a *cadi*, who also performs circumcision and other rites. Consult II Samuel, *Sketch of Beni Israel* (1889), and Joseph Ezekiel, in *The Jewish Encyclopedia* (1902).

BENI-ISRAEL. A diminutive antelope (*Neotragus saltianus*), allied to the duikerboks, and common in Abyssinia and along the Red Sea. It is variously called *omidigig*, *madoqua*, *hegoleh*, and *Salt's antelope*. In southern Abyssinia (Somaliland) a closely related species, Kirk's antelope (*Neotragus kirkii*), is ex-

ceedingly numerous. They run by long bounds, utter shrill cries, and their flesh has an unpleasant, musky flavor.

BENIN, ben'en' (from Lat *benignus*, kind, good, benign). A country, river, and city in the British colony and protectorate of Southern Nigeria (Map Africa, E 4). The country, formerly ruled by the King of Benin City, is in the Central Province between Lagos and the Niger River. At one time the city, which now has about 10,000 inhabitants, was the capital of a powerful monarchy, notorious for human sacrifices carried out by fetishistic priests. The area of the kingdom was extensive, and formerly the name "Benin" was applied to the stretch of country between the Volta River and the Rio del Rey, which includes the Slave Coast, the great Niger delta, and some territory to the eastward. The shores of this country are swampy and unhealthy. The interior is well wooded. In the Benin of to-day the soil is fertile and yields rice, yams, and other products characteristic of upper Guinea. Since the suppression of the slave trade the principal export is palm oil. The inhabitants are little advanced beyond the savage state, and the sacrifice of human beings as a religious custom has been of frequent occurrence. Benin is supposed to have been discovered by the Portuguese navigator, Diogo Cam, in 1482. Benin became the centre of the slave trade, which was suppressed by the British. Benin was placed under British protection in 1885, but for a long time the authority of the British was merely nominal. At the beginning of 1897 the British acting consul general and several Europeans who were traveling to Benin on a peace mission were massacred, with the result that a punitive expedition captured the city in February. The city and country were incorporated in the Niger Coast Protectorate, now included in Southern Nigeria. Government is administered by a council of chiefs presided over by a British resident. Consult Roth, *Notes on Benin Customs* (Leyden, 1898), "Primitive Art from Benin," in No. 15 *The Studio* (London, 1898), Roth, *Great Benin* (Halifax, 1903).

BENIN, BIGHT OF. A name applied to that portion of the Gulf of Guinea (q.v.) which extends along the so-called Slave Coast of Africa, from Cape Formosa, the chief mouth of the Niger, westward to Cape St. Paul, a distance of 500 miles by coast line. The Forcados River emptying into the Bight is the main water route between the ocean and the Niger above the Delta.

BENIOWSKY, bēn'yōf-skē, COUNT MORITZ AUGUST VON (1741-86). A Hungarian adventurer, born at Verbó. He served in the Austrian army during the Seven Years' War, joined the Polish Confederation, was captured by the Russians, and was exiled to Kamchatka, whence he escaped to France. Sent by the French government to establish a colony in Madagascar, he caused himself to be proclaimed King in 1776 by several native tribes, and was subsequently killed in a battle with troops sent against him by the Governor of the Ile de France. His *Memoirs and Travels*, edited by Nicholson and Magellan, appeared at London in 1790.

BENI-SUEF, bā'nē-swe'f. A town of central Egypt, capital of the province of Beni-Suef (area, 400 square miles, pop, 1907, 372,500).

It is situated on the right bank of the Nile, 62 miles by rail south of Cairo (Map Egypt, C 2). It is the entrepôt of all the produce of the fertile valley of Fawm and has cotton mills operated by the state. Pop, 1897, 18,220, 1907, 23,357.

BENITIER, ba'ne'tyá' See HOLY-WATER VASE.

BENITOITE, be-nít'o-ít (from San Benito Co, Cal.) A gem mineral of a deep purple-blue color which often surpasses sapphire in fire and brilliancy. It is a titano-silicate of barium occurring in hexagonal crystals which establish a new crystallographic group. Benitoite was discovered in 1907 in San Benito Co, Cal.

BENJAMIN The eponymous ancestor of the tribe of Benjamin. According to Gen xxxv 18, he is the younger son of Jacob and Rachel, named by his mother Benoni ('child of my sorrow'), but renamed Benjamin by his father. The second element of the name is parallel with the Arabic term Yemen, 'right,' 'south,' (southern Arabia), as opposed to Shamal, 'left-north,' and therefore some biblical scholars consider it probable that Benjamin was originally a geographical name for a group settled in the southern portion of the Ephraimic highland (Sam ix 10-16). The stories told of Benjamin in Genesis seem to illustrate the predictions of both Judah and Ephraimic writers for this tribe. After Joseph was sold into Egypt Benjamin was the pet of his father, and Jacob could only with difficulty be persuaded to allow him to accompany his brothers into Egypt during the famine (ib xlii 36, xlii 6-14). At the time of the migration of Jacob to Egypt Benjamin appears as the head of a family of 10 (ib xlii 21), and is already depicted as the ancestor of the tribe of Benjamin. The territory of this tribe in Palestine was between Judah and Ephraim and included among its important cities Jericho, Bethel, Ophrah, Gibeon, and Ramah, all of which were also important sanctuaries (Josh xviii 11, 21-25). Jerusalem seems to have been on the border between Judah and Benjamin. The tribe was one of the most warlike of the whole 12 and, considering that it was a small tribe, played a most important part in Hebrew history. It produced such men as Ehud the Judge (Judges in 15 ff) and King Saul (1 Sam ix 1-2). After Saul's death it joined in the revolt of his son Ishbosheth (2 Sam ii 15), and Sheba, the Benjamite, later led a revolt against David (2 Sam xx 1). The strength of the tribe in war proves that its almost total destruction by the rest of Israel for its conduct in connection with the outrage at Gibeon (Judges xix-xxi) had no permanent effect, and the account of their destruction is exaggerated. When the kingdom was divided, Benjamin joined with Judah in forming the southern kingdom, or Kingdom of Judah (1 Kings vii 21, etc.). Some scholars regard the tribe of Benjamin as having originally, with Ephraim and Manasseh, formed the tribe of Joseph (cf 2 Sam xix 16, with ib xix 20, and note the expression, "house of Joseph," in 1 Kings xi 28), and according to the view that the stories in Genesis are the echoes of tribal history, this explains the fact that Benjamin is there spoken of as the full brother of Joseph, as it also accounts for the favorable opinion of Benjamin held in general by northern writers, despite the fact that it joined

Judah in establishing the southern kingdom. For the history of the southern kingdom, composed of Judah and Benjamin, see JEWS. Esther and Mardochei (Esther ii 5, 7) and the Apostle Paul (Rom i 11, Phil iii 5) belonged to this tribe.

BENJAMIN OF TUDELA, tū dā'la (Benjamin ben Jonah). A Jewish traveler. He was born at Tudela in Navarre, Spain. He was the first European who gave information respecting the distant East. He made a journey from about 1160 to 1173 (in which year he died) from Saragossa, through southern France, Italy, and Greece, to Palestine, Persia, and the borders of China, returning by way of Khuzistan, the Indian Ocean, and Yemen to Egypt, Sicily, and Spain. His notes—translated into Latin, English, German, Dutch, and French—are exceedingly valuable, but, like so many early travelers, he readily accepted miraculous stories which were told him, and his accounts are not always trustworthy. The latest edition, by Asher (London and Berlin, 1840-41), contains the original text, with an English translation and annotations. He took notes during his travels, and these were published with a preface by an unknown author under the title *Mas'oth shel Rabbi Benjamin* ('Travels of Rabbi Benjamin'). The Hebrew text was printed at Constantinople in 1543, and often since, the latest edition being that of Grunhut published in Jerusalem, 1903. It was translated into Latin by Arias Montanus in 1575, and subsequently into Dutch, German, and French. Asher published the Hebrew text with an English translation in London, 1840, and M N Adler a part of it in the *Quarterly Statement of the Palestine Exploration Fund*, October, 1894 from a manuscript in the British Museum. Consult E Carmoly and L Lekwel, *Notice Historique sur Benjamin de Tudela* (1852).

BENJAMIN, ASHER An early American architect of the end of the eighteenth century, and the author of the earliest American books on architecture and building—*The Elements of Architecture, Town and Country Builder's Assistant* (1797), and *The Practical House Carpenter*. He practiced chiefly in Massachusetts.

BENJAMIN, CHARLES HENRY (1856-) An American mechanical engineer, born at Patten, Me. He graduated from the University of Maine with the degree of M E in 1881, and as instructor, and later professor, of mechanical engineering, taught at his alma mater from 1880 to 1886. After three years as mechanical engineer for the McKay Machine Company of Boston, he resumed educational work, accepting (1889) the professorship of mechanical engineering at the Case School of Applied Science. In 1907 he was called to Purdue to become dean of the engineering school in that university. In addition to articles in technical journals and monographs on engineering subjects, he published *Modern American Machine Tools* (1906), *Steam Engine* (1909), *Machine Design*, with J D Hoffman (1913).

BENJAMIN, JUDAH PHILIP (1811-84) An American lawyer and statesman, one of the leaders of the Southern Confederacy, during the Civil War. He was born of English-Jewish parentage, in the island of St Croix, West Indies, removed with his parents to Wilmington, N C, in 1815, studied for three years at Yale, and in 1832 was admitted to the bar in New Orleans, where two years later he pub-

lished a valuable work, entitled *Digest of Reported Decisions of the Supreme Court of the Late Territory of Orleans and of the Supreme Court of Louisiana*. He soon acquired an extensive practice, became a member of the law firm of Shidell, Benjamin, and Conrad in 1840, made a celebrated argument in connection with the "Creole Case" (qv) in 1841, and in 1847 was retained as counsel by the United States commission appointed to adjudicate the Spanish land titles in California. In 1848 he was admitted to practice before the Supreme Court and subsequently spent much of his time in Washington. He was United States Senator from Louisiana from 1852 to 1861. In February, 1861, he withdrew from the Senate and soon afterward was appointed Attorney-General in President Davis's provisional cabinet. On the resignation of L. Pope Walker, in August, he became Secretary of War, but soon resigned, owing to congressional charges of incompetence and negligence, and in February, 1862, accepted the position of Secretary of State. In this capacity he served with remarkable energy and efficiency until the close of the war. Upon the surrender of Lee at Appomattox, Benjamin fled from Richmond, and after undergoing many hardships finally reached England in September, 1865. He then entered as a student at Lincoln's Inn, London, was called to the English bar in June, 1866, and in 1868 published *A Treatise on the Law of Sale of Personal Property* (3d ed., 1883), which came to be regarded as a legal classic in England. Benjamin gradually acquired an enormous practice, at first in *mis prius* cases, and afterward in cases of appeal before the Privy Council and the House of Lords, but in 1883 he was forced by failing health to retire from the bar. Consult Pierce Butler, *Judah P. Benjamin* (Philadelphia, 1907).

BENJAMIN, LEWIS S., pen name, LEWIS MELVILLE (1874-) An English author, born in London and educated privately in England and Germany. From 1896 to 1901 he was chiefly known as an actor, though part of his time even then was devoted to literature. Several biographies and descriptions of English social life at important periods were written by him, his publications including *In the World of Mimes* (A Theatrical Novel) (1902), *The Thackeray Country* (1905), *Victorian Novelists* (1906), *Bath under Beau Nash* (1907), *The Beau of the Regency* (1908), *William Makepeace Thackeray: A Biography* (1909), *The Life and Letters of Laurence Sterne* (2 vols., 1911, Am ed., 1912), *The Life and Letters of William Cobbett* (2 vols., 1912, Am ed., 1913). He also edited Thackeray's works (20 vols., 1901-07).

BENJAMIN, PARK (1809-64) An American journalist and poet. He was born in British Guiana, Aug. 14, 1809, but was early sent to New England, and graduated from Trinity College, Hartford, Conn. He practiced law in Boston, but abandoned it for editorial work there and later in New York. In 1840 he helped to found *The New World* and after other brief editorial ventures became a lecturer, public reader, and periodical writer. He is now known only through his shorter poems, of which "The Old Sexton" is a favorite of the anthologist.

BENJAMIN, PARK (1849-) An American patent lawyer and writer. He was born in New York City, graduated at the United States

Naval Academy in 1867, resigned from the navy in 1869, and graduated at the Albany Law School in the following year. He was associate editor of *The Scientific American* from 1872 to 1878 and subsequently edited Appleton's *Cyclopadia of Applied Mechanics and Cyclopadia of Modern Mechanism*. Besides numerous magazine articles dealing for the most part with scientific subjects, he published *Shakings or Etchings from the United States Naval Academy* (1867), *Wrinkles and Recipes* (1875), *The End of New York* (1881), *The Age of Electricity* (1886), *The Voltaic Cell* (1892), *The History of Electricity* (1895), *A History of the United States Naval Academy* (1900), *Modern Mechanism* (1903).

BENJAMIN, SAMUEL GREEN WHEELER (1837-) An American author and artist. He was born at Aigos, Greece, studied at the English College in Smyrna, and in 1859 graduated at Williams College. He was assistant librarian in the New York State Library in 1861-64, served in hospitals, studied law, and for several years art, and was United States Minister to Persia in 1883-85. He contributed frequently to periodical literature, and was editor of the *American Magazine of Art*, an admirable periodical. He wrote *Art in America* (1879), *Troy Its Legend, Literature, and Topography* (1881), *A Group of Etchers* (1883), *Persia and the Persians* (1886), *Sea Spray* (1888). He became known also as an illustrator and marine painter.

BENJAMIN - CONSTANT, bən'zhā'mān' kōn'stān', JEAN JOSEPH. See CONSTANT.

BEN'KELMAN. A village and the county seat of Dundee Co., Neb., 337 miles west by south of Lincoln, on the Republican River, and on the Chicago, Burlington, and Quincy Railroad (Map Nebraska, C 4). Agriculture and stock raising are the principal industries. The water works and electric light plant are owned by the village. Pop., 1900, 357, 1900, 206.

BENKERT, bēn'kērt, KARL MARIA. See KERTENY, KARL MARIA.

BENKULEN, or **BENCOOLEN** (Dutch, *Benkoelen*), bēn-kō'len. A picturesque little town, and the capital of the residency of the same name, on the western coast of Sumatra, situated in lat. 3° 48' S and long. 102° 16' E (Map East Indies, B 5). During the occupation of the British, by whom it was founded in 1685, it rose to some eminence as a centre for trade and coffee growing. It was ceded to the Dutch in 1825 and has since then gradually lost its commercial importance. Pop., estimated to be 12,000.

BEN LEDI. A mountain of Perthshire, Scotland, 4 miles west-northwest of Callander, with an elevation of 2875 feet (Map Scotland, D 3). It received its name from the Druids, who celebrated the Beltane mysteries on its summit—the Gaelic words *Benn le Dia* signifying "hill of God." This mountain is celebrated in Scott's *Lady of the Lake*.

BEN LOMOND (Gael. *ben*, mountain + *lake Lomond*). A mountain in the northwest of Shirlingshire, Scotland, on the east side of Loch Lomond, 27 miles west-northwest of Stirling (Map Scotland, D 3). It forms the southern extremity of the Grampians or Central Scottish Highlands, is 3192 feet high, and consists of mica slate, with veins of quartz, greenstone, and feldspar porphyry. From the summit a sheer precipice of 2000 feet descends on

the north side, and a gentle declivity on the southeast, it is covered with vegetation almost to the top and is much frequented by tourists. It is the source of Duchray Water, one of the feeders of the Forth.

BEN MACDHUI, māk-dōv'ē (Gael *Beinn-na-mac-dubh*, the mountain of the black sow.) A mountain on the border of southwestern Aberdeenshire and Banffshire, Scotland, one of the Cairngorms, and, after Ben Nevis, the loftiest in the country (Map Scotland, E 2) Height, 4296 feet.

BEN'MORE' HEAD See FAIR HEAD.

BENN'DORF, OTTO (1838-1907) A German archaeologist. He was born at Greiz, studied philology at Erlangen and Bonn (1857-62), and traveled in Italy and Greece (1864-68), largely for the German Archaeological Institute. He occupied the chair of archaeology at Göttingen (1868), Zurich, Munich, Prague, and Vienna, where he became director of the Archaeological Institute in 1898. He was a member of the archaeological expeditions to Samothrace (1875) and of that to Asia Minor (1881-82). Among his numerous works are the following: *Die antiken Bildwerke des lateinischen Museums*, in collaboration with R. Schöne (1867), *Antike Gesichtshelme und Sepulchralmasken* (1878), *Reisen im südöstlichen Kleinasien* (1884), *Reisen in Lykien und Karien* (1884).

BEN'NET, HENRY, EARL OF ARLINGTON See ARLINGTON.

BEN'NETT, ALFRED ALLEN (1850-) An American chemist, born at Milford, N. H. He graduated at the University of Michigan in 1877, and took the degrees B.Sc. and M.Sc. at the same institution 10 years later. He was for a time professor of chemistry and physics at Iowa Wesleyan University and the University of Chicago. In 1885 he was appointed professor of chemistry in the Iowa State College. He wrote *Inorganic Chemistry* (2 vols., 1895) and several articles for scientific publications.

BENNETT, ALFRED WILLIAM (1833-1902) An English botanist, born at Clapham. He studied at University College, London, and was appointed examiner in botany to the University of Wales. Subsequently he became lecturer on botany at St. Thomas's Hospital, London. He was at one time vice president of the Linnæan Society. His publications include a *Handbook of Cryptogamic Botany*, with G. Murray (1880) and *Flora of the Alps* (1896). He also translated several works from the German, including the third edition of Julius Sachs's *Lehrbuch der Botanik* (1875).

BENNETT (ENOCH) ARNOLD (1867-) An English writer who stands in the front rank of contemporary novelists. Born at Hanley-in-the-Potteries (one of the "Five Towns" made famous by his pen), and educated at Newcastle Middle School and at the University of London, he was early a clerk in lawyers' offices, later editor of a woman's magazine, and finally in 1900 gave himself entirely to literary work. The best of his miscellaneous writing is included in *The Truth about an Author* (1903), *How to Live on Twenty-four Hours a Day* (1908), and *Literary Taste and How to Form It* (1909). Of his plays, two were performed in New York with success—*Milestones* in 1912, and *The Great Adventure* (a dramatization of his novel, *Buried Alive*) in 1913. Mr. Bennett's claim to distinction, however, rests upon a

group of the novels produced by him: *Anna of the Five Towns* (1902), *The Old Wives' Tale* (1906), *Clayhanger* (1910), *Hilda Lessways* (1911), *The Matador of the Five Towns* (1912)—these are unromantic studies of commonplace people in the commonplace setting of a string of dingy manufacturing towns, but their psychological insight, their fine workmanship, their impassive, long-drawn, and minute realism place them among the most notable English novels of their times. Other works are: *A Man from the North* (1898), *A Great Man* (1904), *Sacred and Profane Love* (1905), *Whom God Hath Joined* (1906), *The Reasonable Life* (essays, 1907), *The Grim Smile of the Five Towns* (1907), *The Card* (1911), plays—*Cupid and Common Sense* (1908), *What the Public Wants* (1909), and *The Honeymoon* (1911). An idea of Mr. Bennett's facility in writing may be gained from the fact that in 1913 he published four books—*The Old Adam*, considered one of the notable novels of the year, *Your United States*, one result of an "impressionistic" tour of America, *Paris Nights*, more impressions, and *The Plain Man and His Wife*, an amplified essay.

BENNETT, CHARLES EDWIN (1858-) An American classical scholar, born in Providence, R. I. He graduated at Brown in 1878, studied at Harvard (1881-82) and in Germany (1882-84), was professor of Latin at the University of Wisconsin in 1880-91, of classical philology at Brown, 1891-92, and of Latin at Cornell after 1892. He wrote *A Latin Grammar and Appendix* (1895), *Latin Composition* (1896), *Foundations of Latin* (1898), *Latin Lessons* (1901), *Preparatory Latin Writer* (1905), and edited *Cæsar's Gallic Wars, books i-v* (1903), *Cicero's Selected Orations* (1904), *Vergil's Æneid, i-vi*, *Cicero's De Amicitia and De Senectute*. The *Appendix* to his *Latin Grammar* he revised, in 1907, under the title of *The Latin Language*. The *Latin Grammar* itself is noteworthy for its brevity and clearness, it was the first brief Latin Grammar in the United States made independently, that is, not as an abbreviation of a larger grammar. Professor Bennett's best work has been done in the field of syntax. In 1910 he published, under the title *Syntax of Early Latin*, vol. i—*The Verb*, the first half of a monumental work on the syntax of Latin down to 100 B.C. His "Critique of Recent Subjective Theories," in *Cornell Studies in Classical Philology*, vol. ix (1898), is also of great value. He contributed to various philosophical journals.

BENNETT, CHARLES WESLEY (1828-91) An American scholar and educator, born at East Bethany, N. Y. He graduated in 1852 at Wesleyan University and in 1856 became principal of the Genesee Wesleyan Seminary at Lima, N. Y. In 1860 he was appointed superintendent of public schools in Schenectady, N. Y., and in 1861 became principal of the Louisville (N. Y.) Academy. He was ordained to the ministry of the Methodist Episcopal church in 1862. From 1866 to 1869 he traveled and studied at the University of Berlin and in 1871 was called to the chair of history and logic in Syracuse University. From 1885 until his death he was professor of historical theology in the Garrett Biblical Institute, Evanston, Ill. He published a *Digest of the Laws and Resolutions of Congress Relative to Pensions, Bounty-Lands, etc.* (1854), a *History of the Philosophy of Ped-*

gogics (1877), *National Education in Italy, France, Germany, etc* (1878), and *Christian Archaeology* (1888)

BENNETT, EDWARD HALLARAN (1837-1907) An Irish surgeon, born in Cork. He graduated at Trinity College, Dublin, and was appointed professor of surgery in the University of Dublin in 1873. In 1897-1900 he was president of the Royal Academy of Medicine in Ireland. Becoming an authority on bone fractures he described, in 1881, a form of fracture of the metacarpal bone of the thumb that has since been known by his name. He published *Ankylosis of the Hip* (1874), *Fractures of the Rib* (1878), and other surgical works.

BENNETT, JAMES GORDON (1795-1872) An American journalist, born at Newmills, Banffshire, Scotland. He studied for the Roman Catholic priesthood at the seminary of Aberdeen and in 1819 emigrated to Halifax, N. S. Thence, after a brief and highly unsuccessful career as an instructor in bookkeeping, he proceeded to Boston, where he became a proof reader in the establishment of Wells & Lely, then publishers of the *North American Review*. In 1822 he was appointed Spanish translator and general assistant in the office of the Charleston (S. C.) *Courier*. Subsequently he appears as a paragraphist in New York and in 1827-32 as Washington correspondent of the *Enquirer*. For 30 days, in 1832, he published the *Globe*, and in 1833-34 was part owner and principal editor of the Philadelphia *Pennsylvanian*. Through both journals he was a vigorous partisan of Jackson and Van Buren, by whom he was totally and irritatingly ignored. On May 6, 1835, from a cellar at No. 20 Wall Street, he issued the first number of the *New York Herald*—a lively little sheet of four four-column pages. On June 13 he included in the *Herald* the first Wall Street financial article printed in any newspaper in the United States, and in December introduced modern American reportorial methods by his graphic accounts of the great fire, to which were added a picture of the burning Exchange and a map of the devastated district. He obtained the transmission by telegraph of the first speech ever thus reported in full—that of Calhoun on the Mexican War. He wrote trenchant, often cynical editorials, which made enemies for the writer, but increased the circulation of his paper. But his chief aim was the collection and dissemination of contemporaneous intelligence, in illustration of which may be cited the fact that during the Civil War he maintained an extra staff of 63 correspondents at an expense for four years of \$525,000. He continually added new specialties to his newspaper until he had originated practically all the features now common to modern journalism. In doing so he made the *Herald* at the time of his death the most important and the most valuable newspaper property in the United States, with yearly profits not far from \$750,000. He was frequently accused of utter lack of conviction. James Parton wrote, in 1867, that "his paper is generally read and its proprietor universally disapproved." It may at least be said that his civic principle was not lofty, who declared "We have never been in a minority, and we never shall be." Consult Parton, *Famous Americans of Recent Times* (Boston, 1867); Frederic Hudson, *Journalism in the United States from 1890-1872* (New York, 1873).

BENNETT, JAMES GORDON (1841-)

An American newspaper proprietor and yachtsman, son of the preceding. He was born in New York and was educated abroad privately. On his father's death in 1872 he assumed control of the *New York Herald*, and thereafter he directed the policy of the paper largely by cable, early taking up his residence in Paris. For a time he published a London edition, the practice of reporting in England storm warnings transmitted from the United States being begun by him, he also instituted the *Herald's* Paris edition. Mr. Bennett displayed much interest in exploration, at his own expense sending out Henry M. Stanley to Africa to find Livingstone (1874-77), and in 1879 equipping the *Jeannette* Polar Expedition. With John W. Mackay he established the Commercial Cable Company. His sustained interest in yachting dates back half a century, when 25 years old he won a yacht race from Sandy Hook to the Isle of Wight with his schooner *Henrietta*.

BENNETT, JOHN HUGHES (1812-75) An English physician and physiologist. He was born in London, and entered the University of Edinburgh in 1833, where J. H. Balfour, Edward Forbes, and John Reid were among his fellow students. After his graduation, in 1837, he studied two years in Paris, where he founded the Parisian Medical Society and became its first president. On his return to Edinburgh in 1841 he published his famous *Treatise on Cod-Liver Oil as a Therapeutic Agent in Certain Forms of Gout, Rheumatism, and Scrofula*. It was not until the publication of this pamphlet and that of Dr. C. B. Williams (1848), that the oil was generally introduced. As lecturer on histology at Edinburgh Dr. Bennett was the first to give systematic instruction in this subject. He was also one of the pioneers in the employment of the microscope in clinical pathology. In 1843 he was chosen professor at the Institute of Medicine in Edinburgh, and he held this position until his resignation in 1874. The remarkable decrease in the mortality of pneumonia was also due to his efforts and was largely the result of his revelation of the dangers attending the so-called antiphlogistic method of treating this disease. He published in all 105 papers and memoirs, most of them of great importance. Especially celebrated among his larger works are the *Clinical Lectures on the Principles and Practice of Medicine* (1850-56). Six editions of this work were, prior to 1875, published in the United States alone, and translations of it have been made in French, Russian, and Hindu.

BENNETT, WILLIAM COX (1820-95) An English poet. He was born at Greenwich, where he continued the business of his father, who was a watchmaker. His first productions were published anonymously in 1843 and 1845. They were followed by *Poems* (1850), *Vociferals* (1852), *War Songs* (1855), *Queen Elcanor's Vengeance, and Other Poems* (1850), *Baby Mity* (1859), *Songs for Sailors* (1872), *Sea Songs* (1878), *Songs for Soldiers* (1870), *Prometheus the Fire-Giver* (1877), *The Lark, Songs, Ballads, and Recitations for the People* (1885).

BENNETT, SIR WILLIAM STERNDALE (1816-75) An eminent English pianist and composer, born at Sheffield. He studied under Holmes, Potter, and Crotch in the Royal Academy, London, attracted the notice of Mendelssohn at the Dusseldorf Musical Festival in 1836, appeared with success at Leipzig in the

winters of 1837-38 and 1838-39, and was received with great applause when he returned to London. In 1838 he was elected member of the Royal Society of Musicians. He visited Germany again in 1842 and became well acquainted with both Mendelssohn and Schumann. He had a prominent share in the foundation of the Bach Society in 1849, was appointed conductor of the Philharmonic Society in 1855, succeeding Richard Wagner, and in the following year was elected professor of music at Cambridge. In 1868 he was appointed principal of the Royal Academy of Music and was knighted in 1871. He stood foremost among contemporaneous English musicians, was a pianist of the first rank, and a composer of exquisite grace and refinement. His principal works are *The May Queen*, a cantata, the overtures *The Naiads*, *Wood Nymphs*, *Parisina*, and *Paradise and the Peri*, the oratorio, *The Woman of Sumatra*, music to the *Ayas* of Sophocles, four concertos for pianoforte, and a symphony. Consult V J Bennett, *The Life of William Sterndale Bennett* (London, 1907).

BENNETTIALES, bĕn'ĕt-jā'lĕz. An extinct order of Gymnosperms very abundant during the Mesozoic. They were long known as 'fossil Cycads,' but recent investigations have shown that they deserve to be recognized as a distinct order. Their remains have been found in western Europe and in India, but by far the richest display has been found in the United States and Mexico. The three prominent localities in the United States that have yielded material are in Maryland, in the Black Hills of South Dakota, and Wyoming, and in the Freezeout Hills of Wyoming, while the Mexican locality is in the mountains of western Oaxaca. These American forms have been investigated chiefly by Dr G R Wieland. These gymnosperms mostly resembled the Cycads in appearance, the trunks being tuberous or columnar and bearing a crown of large fern-like leaves. Perhaps the most striking feature of the group is that the cones, which were borne upon short branches along the trunk, were "bisporangiate," i.e., included both "stamens" and "carpels." In the other orders of Gymnosperms there are two kinds of cones—one made up of the stamens, and the others made up of the carpels. See Plate of GYMNOSPERMS.

BENNETT'S GAZELLE, ga-zĕl'. See GAZELLE.

BEN'NETTSVILLE. A town and the county seat of Maïlboac Co, S C, 106 miles northeast of Columbia, the State capital, on the Atlantic coast line and the Bennettsville and Cheraw railroads (Map South Carolina, F 2). The town contains a sanitarium and a public library, and owns its water works and electric light plant. It is in a highly fertile cotton and corn belt and has manufactures of cotton goods and fertilizers. Pop, 1890, 978, 1900, 1920, 1910, 2646.

BEN NEVIS (Gael probably *bēn*, mountain + *nevis*, snow, Lat *nix*, gen *nivis*, snow, of Sp *Sierra Nevada*, snowy range, and Eng *Knawdon* = snow + down). The highest mountain in Great Britain, in Inverness-shire, Scotland (Map Scotland, D 3). It has a height of 4406 feet, with a precipice of 1500 feet on the northeast side. Granite and gneiss form the base of the mountain, which exceeds 24 miles in circumference, the upper part is composed of porphyry. A road leads to the summit, where

a meteorological observatory was erected in 1883.

BENNEWITZ, bĕn'ne-vits, or **BIENEWITZ**, PETER. See APIANUS, PETRUS.

BENNIGSEN, bĕn'nik sĕn, LEVIN AUGUST THEOPHILUS, COUNT (1745-1826). A Russian general. He was born in Bunswick, entered the Russian service in 1773, and distinguished himself in the wars against the Turks, in Poland, and at Derbend in Persia. Bennigsen was one of the leaders of the conspiracy against the Emperor Paul (1801). He fought with considerable success in the battle of Pultusk (1806) and held the chief command in the obstinate and murderous struggle at Eylau (1807). In 1812 Bennigsen commanded the Russian centre at Borodino and gave his voice for fighting a second battle before the walls of Moscow. Before the French began their retreat he gained a brilliant victory over Murat at Taratino, October 18. Differences with Kutusoff, who would not adopt Bennigsen's plan to prevent the French from crossing the Beresina, made him retire from the army, but after Kutusoff's death he took the command of the Russian army of reserve, which entered Saxony in July, 1813, and fought victoriously at the battle of Leipzig. He was created a count by Emperor Alexander on the field. He participated in the pursuit of the French army and besieged Hamburg. Failing health made him retire from the Russian service in 1818 to his paternal estate in Hanover.

BENNIGSEN, RUDOLF VON (1824-1902). A German statesman. He was born at Luneburg, Hanover, and at an early age became prominent and influential in the political life of his native land. After the annexation of Hanover to Prussia in 1866, he was elected to the North German Diet and the Prussian Assembly and became vice president of both bodies. In 1871 he was elected to the German Reichstag, where he became leader of the National Liberal Party. He was conspicuous in the Prussian Assembly, over which he presided from 1873 to 1879. He was for years a warm supporter of Bismarck, but after 1878 opposed the laws against the Socialists and equally the economic policy of the government. After the more liberal wing of the National Liberals seceded (1880), Bennigsen continued to lead the party on a more conservative basis. He resigned his mandate in the Prussian Assembly and the Reichstag in 1883, but reentered politics in 1887, and once more became the leader of the National Liberal Party, thenceforth generally in accord with the government. He became president of the province of Hanover in 1888, but resigned his position in 1897. Consult Hermann Oncker, *Bennigsen und die Epochen des parlamentarischen Liberalismus in Deutschland und Preussen* (Munich, 1900).

BEN'NINGTON. A township with three incorporated villages, and the county seat of Bennington Co, Vt, 52 miles (direct) south by west of Rutland, on the New York Central Railroad (Map Vermont, A 8). It is noted as a manufacturing centre, producing extensively knit goods, woollens, hosiery, machinery, needles, paper, scales, shirts, collars, cuffs, etc. Bennington is the seat of a State Soldiers' Home and owns its water works. The town, through its selectmen, has complete control of the more important matters, but each village manages its own local affairs and controls its public utilities. The town was settled in 1761, and named in honor of Governor Benning Wentworth of

New Hampshire Vermont was for many years—before its recognition as a State—claimed both by New York and New Hampshire, and a council of safety, organized at first chiefly by citizens of Bennington, was largely instrumental in making it a separate State. It was the home of Seth Warner and Ethan Allen and on Aug 16, 1777, was the scene of the Battle of Bennington (qv). A battle monument over 300 feet high, commemorative of this event, has been erected in Bennington Centre. Pop., 1890, 3971, 1900, 5656, 1910, 8698. Consult Merrill and Merrill, *Sketches of Historic Bennington* (Cambridge, 1898).

BENNINGTON, BATTLE OF A battle fought on Aug 16, 1777, during the American Revolution, between a force of Hessians, British Loyalists, and Indians, under Colonel Baum, and a superior force of New Hampshire militia, under General Stark. On the 13th Burgoyne had sent Baum with a detachment of 700 (including 150 Indians) to capture the depot of supplies at Bennington, and on the 15th had sent Colonel Breyman with a reinforcement of 640 Hessians. Baum was attacked at 3 P.M. on the 16th by Stark, at the head of about 2000 militia, and before the arrival of Breyman nearly his whole force had been killed, wounded, or captured, he himself being mortally wounded early in the engagement. Stark, reinforced by 500 men under Seth Warner (qv), then turned upon Breyman, and by nightfall had almost annihilated his army. The British loss is estimated at 207 killed and 700 captured (including the wounded), the American at 40 killed and 42 wounded. The victory greatly weakened Burgoyne by withdrawing almost a seventh of his effective force and by causing the desertion of a large body of Indians and Canadians, while it greatly strengthened the Americans, particularly by causing the enlistment of large bodies of militia for service under General Gates. (See SARATOGA, BATTLES OF). Consult Tyler, *Bennington, the Battle of* (Worcester, 1878), and Carrington, *Battles of the American Revolution* (New York, 1877).

BENNO, SAINT (1010-1106) Bishop of Meissen. He was a son of the Count of Woldenberg and became Bishop of Meissen in 1066. His vacillating policy during the conflict between the Emperor Henry VI and Pope Gregory VII led to his frequent imprisonment. He was deposed in 1085 by the Synod at Mainz, but was reinstated two years afterward through the mediation of Pope Clement III and thenceforth devoted himself solely to his clerical duties and to the conversion of the Wends. He was placed among the saints by Pope Adrian VI in 1523. Luther attacked him in the writing entitled *Wider den neuen Abgott und alten Teufel der zu Messen soll erhoben werden*, and at the beginning of the Reformation his body was disinterred, but finally found a resting place at Munich in 1576, which city had chosen Benno as its patron saint. Consult Joannes Kirsch, *Beilage zur Geschichte der heilige Benno* (Munich, 1911).

BENOIT, be-nwa', PIERRE LÉONARD LEOPOLD (1834-1901) A Flemish composer. He was born at Harlebeke, Belgium, and studied with Fétis at the Brussels Conservatory (1851-55), and afterward at Leipzig, Dresden, Munich, and Berlin. In 1862 he conducted the orchestra at the Bouffes Parisiens, Paris, and in 1867 he received an appointment as director of the Conservatory at Antwerp. He was the most active promoter of a strictly national school of music

for Belgium. His important compositions include *Het Doorp in't Gebergte*, comic opera (1856), the operas *Isa* (1867), *Pompeja* (1896), the oratorios *Lucifer*, *The Scheldt*, *Drama Christi*, *Childien's Oorlog*, *The Rhine*, incidental music to Vander Ven's *Charlotte Corday*, and Goethem's *Vallem de Zwyer* (William the Silent), the cantatas *De Oorlog* (War), and *Vlaanderen's Kunstboom*, a *Missa Solemnis*, a *Te Deum*, a *Requiem*, a choral symphony, *De Maasiers* ('The Mowes'), a *concerto for piano and orchestra*, several choral works with orchestra, piano pieces, and songs. He was also a voluminous and influential writer on musical subjects. Consult L. Mortelmans, *Pierre Benoit* (Antwerp, 1911).

BENOIT DE SAINTE-MORE, be-nwa' de sânt' mor', or DE SAINTE-MAURE (twelfth century) A French troubadour, born in the little village of Sainte-Maure, in Touraine. He was attached to the court of Henry II of England (1154-89), and in 1160 composed, at the request of Queen Eleanor, the *Roman de Troie*, (2 vols., 1869-71). His *Chronique des ducs de Normandie* (3 vols., 1837-42), composed about 1180 (probably at the request of Henry II), and consisting of about 45,000 octosyllabic verses, strongly eulogizes the Plantagenet dynasty. Benoit's other works include *Le Roman d'Enlais*, a continuation of the *Roman de Troie*.

BENRATH, bën'rat, KARL (1845-) A German Protestant theologian. He was born in Düren and studied at the universities of Bonn, Berlin, and Heidelberg. In 1871 he went to Italy, where for several years he devoted himself to scientific research. He became professor at the universities of Bonn (1879) and Königsberg (1890). Benrath was one of the founders of the *Rivista cristiana*. Among his theological writings, most of which are devoted to the history of the Reformation in Italy, the following are especially noteworthy: *Geschichte der Reformation in Venedig* (1887), *Bernardino Ochino von Siena* (1892), *Geschichte des Hauptvereins des Gustav-Adolf Stiftungs für Ostpreussen* (1894), *Julia Gonzaga* (1900), *Luther im Kloster, 1505-1525* (1905).

BENSERADE, ban's'-rad', ISAAC DE (1613-91) A French poet, born at Lions-la-Forêt (Normandy). He wrote verses for the interludes performed at the French court, a translation of the *Metamorphoses* of Ovid, and some formal tragedies. He is best known, however, for a sonnet on Job, written to accompany his paraphrase of the Book of Job. This sonnet was declared by many to rival Voltair's *Uranie*, and for a time the court was divided into "Jobelins" and "Uranins." Benserade's collected works appeared in 1697 (2 vols.). Octave Uzanne prepared a new edition of the poems (1875).

BENS'SHEE See BANSHÉE.

BENSLEY, ROBERT (?-c.1817) An English actor, chiefly remembered for his acting of the part of Malvolvo and for Charles Lamb's admiration of him. The facts of his history are very imperfectly recorded, though from 1765 till 1796 he was a well-known performer at the Drury Lane, Covent Garden, and Haymarket theatres. His first appearance, so far as known, was in *Venice Preserved*, his last was in *The Grecian Daughter* in 1796. The closing years of his life appear to have been spent in the quiet enjoyment of an inherited fortune. Consult Lamb, *Essays of Elia* (London, 1853).

BEN'SON A city in Douglas Co, Neb, 5 miles northwest of Omaha, on the Missouri River (Map Nebraska, H 3) It contains the St James Orphanage, Kiug Park, and a county club The surrounding region is fertile, agricultural land, producing corn, wheat, oats, flax, fruit, and vegetables The water works are owned by the city Pop, 1900, 610 1910, 3387

BENSON, ARTHUR CHRISTOPHER (1862-) An English essayist, biographer, literary critic, and novelist, son of Edward White Benson, a former Archbishop of Canterbury, and brother of Edward Frederick and Robert Hugh Benson Educated at Eton and at King's College, Cambridge, he became a fellow of Magdalen College, and was a master at Eton from 1885 to 1903 As a familiar essayist of rare refinement and charm he is at his best in *The Upton Letters* (1905) and *From a College Window* (1906) The critical biographies, *Rossetti* (1904), *Fitzgerald* (1905), and *Pater* (1906), well represent him as literary critic and biographer, and are marked by care, scholarship, and a generous yet discriminating appreciation Like his other works, they bespeak a spirit reverent to tradition, gentle, compromising, to which the crude and the radical are repugnant His poetry, finished and fine in form, is pensive and charged with a sentiment that can slip into sentimentality His novels, little given to action or incident, are brooding, meditative, and introspective In addition to the books named, and among many other works, he wrote *Memoirs of Arthur Hamilton* (1886), *Archbishop Laud* (1887), *Fasts Etonenses* (1899), *Life of Archbishop Benson* (1899), *Beside Still Waters* (1907), *At Large* (1908), *Poems* (collected, 1909), *Rushin* (1911), *The House of Quiet* (4th ed, 1910), *Joyous Gard* (1913)

BENSON, EDWARD FREDERICK (1867-) An English novelist, son of Edward White Benson, late Archbishop of Canterbury, and brother of Arthur Christopher Benson and Robert Hugh Benson He was educated at Marlborough, and at King's College, Cambridge Shortly after leaving the university he went to Athens and worked there for the British Archaeological Society from 1892 to 1895 Subsequently work for the Hellenic Society took him to Egypt While in Athens his career as a novelist began with the publication of *Dodo* (1893, 1912), a light irresponsible story that took the public fancy This novel gave him a place among the writers of clever fiction which he has since maintained Later novels, more substantial in form and treatment, have followed *Dodo* E F Benson is the author of a play, *Aunt Jeanne* (1912) He also published, among other books *Six Common Things* (1893), *Rubicon* (1894), *Limitations* (1896), *The Babe, B.A.* (1897, 1911), *The Relentless City* (1903), *The Chaloners* (1904, 1912), *An Act in a Backwater* (1905), *The Angel of Pain* (1906, 1912), *Sheaves* (1907), *The House of Defense* (1907, 1911), *The Chamber* (1908), *Daisy's Aunt* (1910, 1912), *Mrs Ames* (1912), *Bensoniana* (1912), *The Weaker Vessel* (1913), *Thorley Weir* (1913), *Dodo the Second* (1914)

BENSON, EDWARD WHITE, D.D. (1829-96) Archbishop of Canterbury He was born near Birmingham, England, July 14, 1829 He was graduated at Cambridge in 1852 and entered holy orders For some years he was a master at Rugby and held the head mastership of Wellington College from its opening, 1858, until

1872, when he was appointed a chancellor of Lincoln Cathedral In 1877 he was made the first Bishop of Truro, and on the death of Archbishop Tait (1882) was appointed his successor, being consecrated Archbishop of Canterbury, Primate of all England, March 29, 1883 He was one of the ablest in the long line of prelates His publications were mostly sermons, charges, and contributions to periodicals, but he completed just before his death at Hawarden, Oct 11, 1896, an elaborate study on *Cyprian, His Life, Times, and Work* (London, 1897), and indicative of his fine spirit are *Prayers, Public and Private, Compiled, Written, or Translated* (1899) Consult his *Life* by his son, Arthur Christopher Benson (London, 1899, abridged ed, 1901)

BENSON, EGBERT (1746-1833) An American jurist and author He was born in New York City, and in 1777 became a member of the first New York State Legislature He served in Congress (1784-88, 1789-93, and 1813-15), and was judge of the State Supreme Court from 1794 to 1801, when he became judge of the United States Circuit Court He was a regent of the University of New York (1789-92), first president of the New York Historical Society (1817-20) and the author of *A Vindication of the Captors of Major Andre* (1817) and *A Memoir on Dutch Names of Places* (1835)

BENSON, FRANK WESTON (1862-) An American portrait, figure, and landscape painter He was born at Salem, Mass, and studied in the art school of the Boston Museum, 1880-83, and under Boulanger and Lefebvre in Paris until 1885 In that year he established himself at Salem, at the same time giving instruction in Portland, Me In 1889 he became instructor in drawing and painting in the art school of the Boston Museum, in which position he has exercised a wide and wholesome influence upon painting Among his many honors are the gold medals of the Carnegie Institute, Pittsburgh (1903), St Louis Exposition (1904), and the Potter Palmer medal and prize, Chicago (1910) He also received the Shaw, Clark, and Hallgarten prizes of the National Academy of Design, New York, the Ellsworth prize in Chicago, etc He is a member of the National Academy and one of the "Ten American Artists" Benson is especially known as a painter of women and children, whom he depicts in bright and sunshiny scenes, usually out of doors with the sunlight falling through quivering leaves His paintings, in a high key and concerned largely with the rendition of light, include seven decorations in the Congressional Library, Washington, representing the "Seasons" and "The Three Graces" (1896), "My Little Girl" (1897), "In the Spruce Woods," "My Daughter," "Pomona" (1905), "Head of a Young Girl," "Against the Sky" (1907), "Eleanor" (1908), "Moonlight at Sea" (1908), "Portrait of Professor Clark" (1908)

BENSON, LOUIS FITZGERALD (1855-) An American hymnologist, born at Philadelphia He graduated at the University of Pennsylvania in 1877, studied law, and was admitted to the bar After a few years of legal practice he became a student in the Princeton Theological Seminary and in 1888 was ordained to the Presbyterian ministry During the following six years he was pastor of the Church of the Redeemer at Germantown, then resigning to devote himself to the subject of hymnology He made a collection of more than 6000 volumes relating to

his specialty, lectured on liturgies at the theological seminaries of Auburn (1902) and Princeton (1907 and 1910), and edited hymnals. Besides his contributions to reviews and to dictionaries of hymnology, he is author of *Hymns and Verses* (1897), *The Best Hymns—A Handbook* (1899), *Studies of Familiar Hymns* (1903), and editor of *The Hymnal* (1895), *The Chapel Hymnal* (1898), *The Revised Hymnal* (1911).

BENSON, ROBERT HUGH (1871–) An English Roman Catholic prelate and writer, son of Edward W. Benson, former Archbishop of Canterbury, and brother of Arthur Christopher and Edward Frederick Benson. He was born at Wellington College and was educated at Eton and at Trinity College, Cambridge. After leaving Cambridge he read for orders with Dean Vaughan, and became associated with the Community of the Resurrection at Mirfield. He was received into the Roman Catholic church in 1903 and in 1904 was ordained priest. After a year spent in further reading at Cambridge, he was appointed assistant priest at the Catholic church in that city. In 1911 he received the appointment of private chamberlain to Pope Pius X. He wrote much on religious subjects and also published several novels. His writings include, besides many articles in magazines and newspapers, *The Light Invisible*, *The King's Achievement*, *Richard Raynal*, *Solitary*, *The Queen's Tragedy*, *St Thomas of Canterbury*, *Non Catholic Denominations*, *Christ in the Church*, *The Dawn of All* (1911), *The Coward*, *The Friendship of Christ*, *Come Rack! Come Rope!* (1912), *Confessions of a Convert*, *Pardames of Catholicism*, and *An Average Man* (1913).

BENT, THEODORE (1852–97) An English traveler and archaeologist. He was born near Leeds and studied at Wadham College, Oxford. He made archeological journeys to Greece, Asia Minor, Abyssinia, Arabia, the Bahrein Islands, and South Africa, chiefly under the direction of the Royal Geographical Society. In 1891 he went to Mashonaland to examine and partially to excavate the ruins of the Great Zimbabwe, discovered by Mauch in 1871. His interesting report on the results achieved assigns to the ruins an Arabian origin. In 1894 he explored a portion of the southeastern coast of Arabia. His works include *The Oyclades, or Life among the Insular Greeks* (1885), *The Ruined Cities of Mashonaland* (1892), *The Sacred City of the Ethiopians* (1893). He also edited for the Hakluyt Society a volume on *Early Travels in the Levant*.

BENT, SILAS (1820–89) An American naval officer who first delineated and described the Kuro Shiu, the great equatorial and northward stream of the Pacific, which distributes the hot water of the tropics into northern regions. He was born in St. Louis, entered the United States navy as midshipman in 1836, served in the Seminole War, voyaged in the South Pacific, and was especially active on survey work. He was on the brig *Peble*, under Commander Glynn, who, in February, 1849, at Nagasaki, Japan, procured the release of 18 American sailors, who had been kept prisoners. He served as captain and flag lieutenant under Commodore M. C. Perry from 1852 to 1856. In this expedition he had charge of those hydrographic surveys which ultimately became the basis of the later work by the Japanese navy. He piloted the fleet into Napha, in the Lu-Kiu

(Loo-choo) Islands, and was a commissioner for the United States in making a treaty with the Regent.

BENTANG See **ERIODENDRON**

BENT GRASS (AS *beonet*, found in composition only, OS *brunt*, OIH *bruz*, Ger *Banse* rush, possibly OHG *bi*, by *† naz*, Ger *nass*, wet, literally that which grows in wet places). *Agrostis*. A genus of grasses, the species of which are numerous and are found in almost all countries and climates. All of them are grasses of a slender and delicate appearance. Some are very useful as pasture grasses and for hay on account of their adaptation to certain kinds of soil. The species *Agrostis alba*, *Agrostis vulgaris*, and *Agrostis stolonifera* are often separated, although the last two are little more than varieties of *Agrostis alba*. The common bent grass or red top (*Agrostis vulgaris*) forms a principal part of the pasture in almost all the elevated districts of Great Britain and is equally abundant in many parts of the continent of Europe and in the northern part of the United States. It resists drought better than almost any other grass, but is usually only sown by agriculturists on soils unsuitable for the more luxuriant grasses. It is also regarded as very suitable for lawns. It is as frequent on wet as on dry soil and varies much in size and appearance. The marsh bent grass (*Agrostis alba*), also very common in Great Britain, forming a large part of the natural pasture in many moist situations, is very similar to the species just described, but generally taller and stouter. It is a useful grass in moist grounds, newly reclaimed bogs, or land liable to inundation. The first three or four joints of the culms lie flat on the damp soil, emitting roots in abundance, and it was formerly propagated by chopping these into pieces and scattering them, but now generally by seed. Creeping bent grass, cultivated for lawns, is *Agrostis stolonifera*. Brown bent grass (*Agrostis canina*), a common perennial British grass, abundant in moist heaths and marshy grounds, is valuable for mixing with other grasses to form permanent pasture on poor, wet, peaty soils. In the United States it is commonly known as Rhode Island bent grass and is considered one of the best of lawn grasses. Silky bent grass (*Agrostis spica venti*) is a beautiful grass, with very slender branches to its ample panicle. It is a rare native of sandy grounds in England, common in southern and central Europe, it is an annual grass, occasionally sown in spring to fill up blanks in grass fields.

BENTHAM, bēn'tam or bēn'tham, GEORGE (1800–84) An English botanist, a nephew of Jeremy Bentham (q.v.). He was born at Stoke, near Plymouth, and studied law at Lincoln's Inn until 1832, but afterward devoted himself to botany. In 1861 he became president of the Linnean Society and held this position continuously for 13 years. Besides his interest in botany he was a profound student of jurisprudence and logic as well. His *Outline of a New System of Logic, with a Critical Examination of Dr. Whately's Elements of Logic* (1827) was an important contribution to the science, but owing to the failure of his publishers, the book passed unnoticed until 1850. Some of his other works are *Labradorum Genera et Species* (1832–36), *Handbook of the British Flora* (1858 and 1865), *Flora Hongkongensis* (1861), *Flora Australensis*, in collaboration with Ferdinand von Müller

(5 vols, 1863-70) *Genera Plantarum*, with Sir Joseph Hooker (1862-83)

BENTHAM, JEREMY (1748-1832) An English jurist and philosopher. He was the son of a wealthy solicitor in London, received his early education at Westminster School, and when yet a boy, being little more than 12 years of age, went to Queen's College, Oxford, where he took his bachelor's degree in 1763 and his master's degree in 1766. Before entering it, he had already, by his precocious tendencies to speculation, acquired the title of "the philosopher." In 1763 his father, who expected his son to become Lord Chancellor, sent him to the study of the law at Lincoln's Inn, but soon afterward he went back to Oxford, attracted by the fame of Blackstone's (qv) lectures. In 1767 he left Oxford to begin a legal career, but, much to the disappointment of his father, he had no relish for it and took no pains to succeed in it. He studied chemistry and physics when he was expected to be working up cases. Turning from the practice of law to its theory, he became the greatest critic of legislation and government in his day. In 1776 he published *A Fragment on Government*, which was an acute criticism of some views contained in Blackstone's *Commentaries*. The *Fragment* abounds in fine, original, and just observation, it contains the germs of most of his later writings. In 1778 he published *View of the Hard Labor Bill*, recommending an improvement in the mode of criminal punishment. His views on this subject were more fully expressed in a work written about this time, but not published in English till 1825, the *Rationale of Punishment and Rewards*. Bentham did more than any other writer of his time to rationalize the theory of punishments by consideration of their various kinds and effects, their true objects, and the conditions of their efficacy. He published in 1789 *Introduction to the Principles of Morals and Legislation*; in 1791, *The Panopticon, or the Inspection House, Manual of Political Economy* was written; in 1793, *Poor Laws and Pauper Management* was published; in 1797, *Introductory Views of the Rationale of Evidence* was printed in part; in 1812 *The Rationale of Judicial Evidence* (edited by J S Mill, London, 1827) was another and a fuller presentation of the same subject. Many works of various dates bear upon the subject of codification of the laws. His *Constitutional Code*, one of his most important works, was published in full in 1841, under the editorial supervision of R Doane. The subject of logic also interested Bentham, and he wrote a treatise on it, *Deontology, or the Science of Morality*, was edited and published by Bowring in 1834. His works were collected and edited by Bowring, and published with life and correspondence in 11 volumes (Edinburgh, 1843). A great mass of unpublished manuscript from Bentham's pen is to be found in the library of University College, London. Much of what came to light in Bentham's lifetime was edited by his friends, and some of it appeared first in French under the supervision of Dumont. Bentham had a habit of writing on various subjects at the same time, the result was an aggregation of manuscripts that required sifting, and he was fortunate in finding men of ability like Dumont to undertake his work. In his early works Bentham's style was clear, free, spirited, and often eloquent, but in his later works it became difficult, through being overloaded and

darkened with technical terms. In regard to these latter works more especially, M Dumont has most materially served his master by arranging and translating them into French, through the medium of which language Bentham's doctrines were propagated throughout Europe, till they became more popular abroad than at home. James Mill, himself an independent thinker, did much in his writings to extend the application in new directions of Bentham's principles—a work in which, apart from his original efforts, he has achieved a lasting monument of his own subtlety and vigor of mind. Another valuable contribution in English to Bentham's reputation is perhaps *Benthamiana*, by John Hill Burton (Edinburgh, 1843), containing a memoir, selections of the leading and important passages from his various writings, and an appendix embracing an essay on his system and a brief, clear view of all his leading doctrines.

In all Bentham's ethical and political writings the doctrine of utility is the leading and pervading principle, and his favorite vehicle for its expression is the phrase "the greatest happiness of the greatest number," which Bentham attributed to Priestley (qv), but which really dates back to Hutcheson's (qv) *Enquiry into the Original of Our Ideas of Beauty and Virtue*, which appeared as early as 1725. "In this phrase," Bentham says, "I saw delineated for the first time a plain as well as a true standard for whatever is right or wrong, useful, useless, or mischievous in human conduct, whether in the field of morals or of politics." It need scarcely be remarked that the phrase affords no guidance as to how the benevolent end is to be attained and is no more than a blanket name for the objects of true benevolence. In order to compass these objects, Bentham demanded nothing less than the immediate remodeling of the government, and the codification and reconstruction of the laws, and insisted, among other changes, on those which came at a later day to be popularly demanded as the points of the "charter," viz, universal suffrage, annual parliaments, vote by ballot, and paid representatives. However impossible some of these schemes then were, it cannot be denied that Bentham did more to rouse the spirit of modern reform and improvement in laws and politics than any other writer of his day. Many of his ideals have been, and many more are in the course of being, slowly realized. The end and object of them all was the general welfare, and his chief error, apart from his overstatement of the value of some changes which he proposed, lay in conceiving that organic changes are possible through any other process than that of growth and modification of the popular wants and sentiments. It was this error that led the philosopher, in his closet in London, to devise codes of laws for Russia (through which country he made a tour in 1785), America, and India, the adoption of which would have been equivalent to revolutions in those countries, and then bitterly to bewail the folly of mankind when his schemes were rejected. In ethics, as in politics, he pressed his doctrines to extremes. See UTILITARIANISM, HEDONISM.

By the death of his father in 1792 Bentham succeeded to property yielding from £500 to £600 a year. By a life of temperance and industry, with great self-complacency, in the society of a few devoted friends, Bentham attained to the age of 84. Consult C B R Kent, *The*

English Radicals (London, 1899), W. Graham, *English Political Philosophy, from Hobbes to Maine* (London, 1899), J. S. Mill, "Bentham," in *London and Westminster Review* (August, 1838), L. Stephen, *English Utilitarians* (London and New York, 1900), Albee, *History of English Utilitarianism* (London, 1902), C. M. Atkinson, *Jeremy Bentham His Life and Work* (London, 1905, 2d ed., 1909).

BENTHOS (Gk *βένθος*, *benthos*, the depth of the sea). In botany, the fixed vegetation of the sea or of great lakes, in contrast with the floating vegetation or plankton (qv). Benthonic plants are in large part attached to rocks, in which case they are called lithophytes. The lithophytic members of the benthos are chiefly algae, and it is here that the wonderful display of marine plants of our ocean coasts is found. The benthos may be subdivided into the regions above and below the low tide line. Above this line the vegetation is relatively sparse, and is composed of plants which are able to endure strong exposure during the period of low tide. Along the North Atlantic coast the rockweed (*Fucus*) is one of the most characteristic plants of this zone. Below low tide is the zone of constant submergence, and here the benthos finds its richest development. Red, brown, and green algae, and sometimes other plants, grow in vast profusion. In the upper parts of this zone the brown and green algae often dominate, while red algae dominate at greater depths. Deeper in the water all of these large plants cease.

The ecology of the benthos has been studied by Berthold and Kjellman. In the Mediterranean there are seasons which are determined by light, surface forms vegetating early in the year, while the algae of deeper waters vegetate in summer. One of the surprises of the northern seas is the rich development of plant life, the brown algae being particularly common. Here the seasons depend rather upon heat than light. Most of the benthonic lithophytes have well-developed holdfast organs ("hapteria") attaching them to rocks, and many forms are provided with bladders which permit free floating in the water.

Less conspicuous than the rock plants are the plants attached to loose soil. A few algae like *Caulerpa* are classed here, but perhaps the most prominent plant of this group is the eelgrass (*Zostera*), which often forms vast submarine meadows. The benthos of fresh waters is not well developed, or, if present, has a different ecology. See **HYDROPHYTES**, **ECOLOGY**.

BENTINCK, LORD WILLIAM CAVENDISH (1774-1839). A British army officer and Governor General of India. He was born Sept. 14, 1774, the second son of the third Duke of Portland, and became an ensign in the Coldstream Guards in 1791. He was, in 1803, appointed Governor of Madras, where he advocated several useful reforms. His proscription of beards and wearing of turbans and earrings by the sepoys when on duty was said to have caused the mutiny and massacre at Vellore, and he was recalled. In August, 1808, he was placed on the staff of the army in Portugal under Sir Harry Burrard. Selected to proceed on an important mission to the supreme Junta of Spain, he accompanied the army under Sir John Moore in its retreat and at Corunna commanded a brigade. He next commanded a division of Wellington's army and shortly after was sent as

British Minister to the court of Sicily and commander in chief of the British forces in that island. At the head of an expedition he landed in Catalonia in July, 1813, penetrated to Valencia, and afterward laid siege to Tarragona, but was repulsed at Villa Franca. Early in 1814, quitting Sicily, he repaired to Tuscany, published at Florence a proclamation inviting the Italians to shake off the French yoke, and afterward made himself master of Genoa. At the end of the war he lived in retirement during thirteen years. In 1827 he was appointed Governor General of India, where, profiting by his prior experience, he pursued a peaceful and popular policy, his administration being especially marked by the abolition of suttee (qv) and by the opening up of internal communications, as well as by the establishment of the overland route. After his return to England, in 1835, he was elected a member of Parliament for Glasgow. He died in Paris, June 17, 1839. Consult Boulger, *Lord William Cavendish Bentinck* (Oxford, 1892).

BENTINCK, LORD WILLIAM GEORGE FRÉDÉRIC CAVENDISH (1802-48). An English statesman and sportsman, widely known as Lord George Bentinck. The third son of the fourth Duke of Portland, he was born at Welbeck Abbey, Feb. 27, 1802, and entered the army when young. For three years after Canning became Premier, Lord George was his private secretary. He was distinguished for his skill in every sport and became famous for the purification that ensued in the corrupt practices of the turf, through the reforms that he instituted. In 1826 he was elected member of Parliament for Lynn-Regis and sat for that borough till his death. At first, attached to no party, he voted for Catholic emancipation and for the principle of the Reform Bill. A determined opponent of Sir Robert Peel, on the formation of that statesman's ministry in December, 1834, he and his friend Lord Stanley, afterward Earl of Derby, with some adherents, formed a separate section in the House of Commons. On the resignation of Sir Robert Peel in April following, Lord George openly joined the great Conservative party, which acknowledged that statesman as its head, and he adhered to it for nearly 11 years. When Peel introduced his free-trade measures in 1845, a large portion of his supporters seceded, and Lord George became the leader of the Protectionists. Although a poor speaker, he was a master of figures and detail. His acute logic was damaging to the government of Sir Robert Peel and contributed in no small degree to hasten its downfall. A champion of religious liberty, Lord George supported the bill for the removal of the Jewish disabilities and recommended the payment of the Roman Catholic clergy by the landowners of Ireland. He died suddenly from rupture of the heart, Sept. 21, 1848, while crossing the park at Welbeck Abbey. Consult B. Disraeli, *Lord George Bentinck. A Political Biography* (London, 1851).

BENTIVOGLIO, bēn'tā-vō'lyō, GIOVANNI (1443-1508). An Italian ruler, born at Bologna. He usurped the control of the Republic of Bologna, which he held from 1462 to 1506. Like many of the despots of the time, he was cruel, but a patron of the fine arts. Consult M. Creighton, *History of the Papacy* (London, 1897).

BENTLEY, JOHN FRANCIS (1839-1902). An English architect, born at Doncaster. He began

independent practice in 1802, and was in full sympathy with the Gothic revival in England. His best works were Catholic churches, in which the accessories were especially successful. In 1894 he began the erection of the new Roman Catholic cathedral in Westminster, the structural part of which only was finished at his death.

BENTLEY, RICHARD (1662-1742) An English critic and classical scholar. He was born at Oulton, in Yorkshure, Jan 27, 1662. In 1676 he entered St John's College, Cambridge, as subsizar. On leaving the university he was appointed head master of the grammar school of Spalding, Lincolnshire. About a year afterward he resigned this situation to become tutor for six years to the son of Dr Stillingfleet, then dean of St Paul's, and subsequently Bishop of Worcester. During this period Bentley had the advantage of access to the books of Dr Stillingfleet, who had one of the largest private libraries of the time. Bentley accompanied his pupil to Oxford, where he had full scope for the cultivation of classical studies, and that he succeeded in acquiring there some local reputation is evinced by his having been twice appointed to deliver the Boyle Lectures (qv) on the evidences of natural and revealed religion (1692-94). He was on intimate terms with such famous scholars as John Mill, Humphrey Body, and Edward Bernard. He entered the Church, and owed to the patronage of Dr Stillingfleet, now the Bishop of Worcester, various good ecclesiastical appointments, and through the same influence became librarian of the Royal Library at St James's. In 1691, when Mill edited the *Chronicle* or Compendium of Universal History down to 650 A.D. of John of Antioch, called John Malalas, he invited Bentley to read the proofs. As an Appendix to the edition was printed, finally, the *Epistola ad Miltum*, in which Bentley emended, with great skill, corrupt passages in the *Chronicle*, and at the same time corrected many passages in more than 60 authors, Greek and Latin, especially in the Attic dramatists. In this short piece of less than 100 pages, his first published work, Bentley may be said to have founded, for England, the science of text criticism. In this treatise, too, he proclaimed the doctrine of synaphea in anapestic systems, i.e., that scansion in these systems is continuous, and not interrupted at the close of each verse. In 1697 Bentley appended to the edition of Callimachus by Grævius a series of 420 fragments of that author, with notes, a marvel of critical skill. In the famous *Battle of the Books* (qv) Bentley sided with Wolton, assuring him that the so-called Epistles of Phalaris, on which Temple had largely relied in asserting the superiority of the ancients, were neither old writings nor good. As a result of the activities of Boyle (qv) in the *Battle of the Books*, Bentley brought out, first in 1697, then in 1699 in revised form, his *Dissertation on the Epistles of Phalaris*, in which he showed conclusively, on chronological grounds, that the Epistles were not written till centuries after Phalaris' time. He pointed out, too, that the language of the Epistles was Attic Greek, whereas a King of Agrigentum would have written in Doric Greek. In this *Dissertation* he discussed also the so-called fables of Æsop, proving that many of them, at least, belonged to a day much later than that commonly assigned to Æsop. (See

BABRIUS.) Though the Dissertation was not at first rated in England at its true value, it presently established for all time Bentley's reputation as a master of critical method and as a scholar of profound learning.

In 1700 Bentley was appointed master of Trinity College, Cambridge, and in the following year he married Mrs Joanna Bernard, the daughter of a Huntingdonshire knight. The history of Bentley's mastership of Trinity is the narrative of an unbroken series of quarrels and litigations due to the fact that between Bentley, self-confident and arrogant by nature, devoted primarily to the cause of truth and sound classical learning, and the indolent and luxurious Fellows of his time, sympathy was impossible. In 1710 charges were put in against him, before the visitor, Dr Moore, nothing, however, came of them. In 1718 he was deprived of his degrees by the University, but these were restored to him by legal process in 1724. In 1733 charges were again preferred against him, and the feud lasted till 1740. He contrived, nevertheless, to get himself appointed regius professor of divinity. Though at one time the Bishop of Ely, the visitor of Trinity, pronounced sentence depriving him of his mastership, and though at another the senate of the university pronounced a similar sentence depriving him of his academic honors, he remained in full possession of both the former and the latter till his death. This stormy life did not impair his literary activity. In 1709 he added an appendix to the edition of Cicero's *Tusculan Disputations*, by John Davies, in this he proved his knowledge of the philosophical works of Cicero and of the metres of the Latin dramatists, from whose plays many quotations appear in the *Tusculans*. In 1711 he published his edition of Horace, famous for his bold though seldom successful handling of the text, it was in this book he declared that "nobis et ratio et res ipsa centum codicibus potiores sunt." In 1726 he issued an edition of Terence, containing 1000 emendations more or less, largely on metrical grounds. In this work appeared his famous *Schediasma* on the metres of Terence. While working on an edition of Homer (1732-34), he called attention to the importance of the digamma, in correcting the Homeric text and in explaining the metre. He produced, finally, a recension of the Latin poet Manilius (qv).

Bentley's greatness was speedily recognized on the continent of Europe. He was on terms of friendship with Grævius and for a time with Pieter Burman. In the seventeenth and eighteenth centuries Dutch classical scholarship owed much to Bentley. Modern German classical scholars know him as they know no other Englishman.

Great as Bentley's actual achievements were (only part of his writings has been considered above), he is as much celebrated for what he proposed as for what he actually performed. The proposal to print an edition of the Greek New Testament in which the received text should be corrected by a careful comparison with all the existing manuscripts was then singularly bold and evoked violent opposition. He failed in carrying out his proposal, but the principles of criticism which he maintained have since been triumphantly established and have led to important results in other hands. He is to be regarded as the founder of that school of classical criticism

of which Poison afterward exhibited the chief excellences as well as the chief defects, and which, though it was itself prevented by too strict attention to minute verbal detail from ever achieving much, yet diligently collected many of the facts which men of wider views have since grouped together, to form the modern science of comparative philology. Consult. Monk, *Life of Richard Bentley* (London, 1833), Jebb, 'Bentley,' *English Men of Letters Series* (New York, 1882), Sandys, *A History of Classical Scholarship*, vol. II (Oxford, 1908), Bartholomew and Clark, *Bibliography of Bentley* (Cambridge, 1908).

BENTLEY, ROBERT (1821-93) An English botanist, born at Hitchin (Hertfordshire). He studied medicine and botany at London University and was professor at King's College and the London Institution. He was also associate editor of the *Pharmaceutical Journal* and collaborator on the English edition of Pereira's *Materia Medica and Therapeutics* (1854-55). His principal works are the following: *A Manual of Botany* (1861, frequently republished), *Principal Plants Employed in Medicine* (1875 et seq., profusely illustrated), *The Student's Guide to Structural, Morphological, and Physiological Botany* (1883), *A Text-book of Organic Materia Medica*.

BENTON A city and the county seat of Franklin Co., Ill., 125 miles southwest of Springfield, on the Illinois Central, the St. Louis, Iron Mountain and Southern, and the Chicago and Eastern Illinois railroads (Map Illinois, D 5). The city contains a branch station of the Illinois Mine Rescue Service, and the old homestead of Gen. John A. Logan. It has important coal-mining interests and manufactures of stoves. Benton adopted the commission form of government in 1913. Pop., 1890, 939, 1900, 1341, 1910, 2675.

BENTON, ANGELO AMES (1837-) An American clergyman, born at Canaan, Crete. He graduated at Trinity College, Hartford, Conn., and at the General Theological Seminary, New York. He was professor of dogmatic theology at the University of the South (1887-94), and rector at Albion, Ill., in 1905. He published *The Church Cyclopædia* (1884) and *The Tome of St. Leo* (1890).

BENTON, FRANK (1852-) An American apiculturist, born at Coldwater, Mich. He graduated at the Michigan Agricultural College in 1879 and later studied abroad at Munich and Athens. After spending 11 years in the investigation of bees in Asia, Africa, and Europe, he became assistant entomologist and special agent of the United States Department of Agriculture (1891). In this position he remained for 10 years. While investigator for the government, in charge of apiculture (1901-07), he spent some time in making investigations in the Caucasus, Persia, India, and the Philippine Islands. After serving as naturalization examiner in 1907-08, he became editor and translator for the Department of Commerce. Benton was the first American to import Oriental bees, and he also invented many apian appliances. In addition to his magazine articles dealing with his specialty, he is the author of *The Honey Bee* (1896) and *Bee Keeping* (1897, rev. ed., 1905).

BENTON, GUY POTTER (1865-) An American educator and clergyman, born at Kenton, Ohio. He was educated mainly at Ohio,

Wesleyan, and Baker universities, but studied also at the University of Wooster and in Berlin. After being superintendent of schools at Fort Scott, Kan., and assistant superintendent of public instruction in that State, he became professor of history and sociology at Baker University (1896), and then in turn president of Upper Iowa University (1899), Miami University (1902), and the University of Vermont (1911). The degrees of D.D. and LL.D. were conferred upon him by several universities. He published *The Real College* (1909).

BENTON, JAMES GILCHRIST (1820-81) An American soldier and inventor. He was born at Lebanon, N. H., and was graduated at West Point in 1842. He was commandant of the Charleston (S. C.) arsenal in 1853 and for several years was instructor in ordnance and gunnery at West Point, where he perfected a wrought-iron gun carriage for seacoast service, the first of its kind constructed in America. This carriage was immediately adopted by the Federal government. Upon the outbreak of the Civil War Benton was transferred to the Ordnance Department at Washington and in 1863 was placed in command of the Washington arsenal. In 1866 he was transferred to the national armory at Springfield, Mass., where he remained as commandant until his death. The use of the electro-ballistic machine or chronograph for determining the velocity of projectiles was introduced by Benton, and the successive improvements in the Springfield rifle were also mainly due to his inventive skill. Among his other inventions were improved calipers for inspecting shells, a velocimeter, a spring dynamometer, an electro-ballistic pendulum, a cap-filling machine, and a reinforcing cap for cartridge cases. He published *A Course of Instruction in Ordnance and Gunnery* (1860).

BENTON, THOMAS HART (1782-1858) An American statesman of the Jacksonian epoch. He was born, of good family, near Hillsborough, N. C., and on the death of his father, his mother, a woman of character and of ambition for her son, took the boy to Tennessee. Here he studied law and was soon elected to the Legislature, where he did work as a reformer. Andrew Jackson became his friend, but in 1813 they had a remarkable encounter, Jackson getting a ball in his shoulder from Benton's brother, and Benton being thrown downstairs. Jackson and Benton were reconciled many years later. In the War of 1812 he was given a lieutenant colonelcy, but did not serve effectively. Shortly after the secession agitation of the Hartford Convention, Benton became a pronounced Union man, and he held to this position. In 1815 Benton settled in St. Louis, and established the *Missouri Inquirer*, a journal that occasioned for him a number of duels, in one of which he killed his opponent. He advocated the admission of Missouri as a slave State, and after the famous compromise in 1820 was chosen United States Senator. He was regularly reelected, so that he was Senator for 30 successive years. One of his long-prosecuted plans was to amend the Constitution so that the people could vote directly for President or come as near as possible to such a system. One of his hardest fights was in opposition to the rechartering of the United States Bank. He advocated instead the establishment of a currency of gold and silver only, for which idea he was long called "Old Bullion." After Jackson's removal of Secretary Duane in the fight

against the Bank, the Senate adopted a resolution censuring the President but Benton, who in many ways was Jackson's lieutenant, not long after moved to expunge that resolution from the record and carried his point after a long and fierce contest. Among other measures advocated by Benton were the preemption of public lands, a railroad to the Pacific, the abolition of the salt tax, and opening mineral lands to settlement. In the Oregon boundary dispute with Great Britain he took a leading part against the "fifty-four-forty or fight" advocates, and his influence greatly conduced to the retreat of Polk's administration from an extreme position. He was of service to Polk during the Mexican War, and it was actually proposed at one time to put him in command of the forces in the field. He opposed Calhoun's proslavery propaganda and the compromise measures of Henry Clay in 1850. As a result of his hostility to Calhoun and the proslavery Democrats he lost his senatorship. Two years after his long service in the Senate ended, he was chosen to the other House, where he opposed the Kansas-Nebraska bill and failed of reelection on that account. In 1856 he was a candidate for Governor of Missouri, but lost through the presence of a third ticket in the field. At the same election he supported Buchanan for President, although his son-in-law, J. C. Fremont, the husband of Miss Jessie Benton, was the opposing candidate, so that the Republican catchword in this campaign was "John and Jessie." His *Thirty Years' View* (1856) is a well-known and valuable political retrospect of his experiences and observations in the Senate. He also made a notable *Abridgment of the Debates in Congress from 1789 to 1850*, in 15 large volumes (1857). Consult W. M. Meigs, *Life of T. H. Benton* (Philadelphia, 1904), J. M. Rogers, *Thomas H. Benton* (Philadelphia, 1905), Roosevelt, *Thomas Hart Benton* (Boston, 1887).

BENTON GROUP. See CRETACEOUS SYSTEM.

BENTON HARBOR. A city in Berrien Co., Mich., about 60 miles by water east-northeast of Chicago, Ill., on the St. Joseph River, and on the Pere Marquette, the Cleveland, Cincinnati, Chicago and St. Louis, and the Michigan Central railroads (Map Michigan, C 6). It is $1\frac{1}{2}$ miles from Lake Michigan, with which it is connected by a ship canal, has a good harbor on the lake, with steamboat lines to Chicago and Milwaukee, and exports large quantities of fruit, grain, and lumber. The manufactures include fruit packages, furniture, flour, spray pumps, planed lumber, machinery, etc. In the city and the vicinity are mineral springs with medicinal properties, which make it popular as a place of resort. The water works are owned by the city. Bottled water is shipped in considerable quantities. Pop., 1900, 6562, 1910, 9185.

BENTONVILLE. A city and the county seat of Benton Co., Arkansas, about 72 miles (direct) north by east of Fort Smith; on the St. Louis and San Francisco Railroad (Map Arkansas, A 1). It contains the Ouachita Baptist Academy and several springs, three of which have medicinal properties. The city is the center of one of the most productive apple-growing regions in the United States; it also carries on a considerable trade in fruit, timber, grain, and live stock, and has extensive fruit-evaporating works and fruit-brandy distilleries, a cold storage plant, barrel factories, a rolling mill, a cider and vinegar factory, and brick works.

Bentonville owns its water works and electric light plant. Pop., 1900, 1843, 1910, 1956.

BENTONVILLE. A village in Johnston Co., N. C., where, on March 19, 1863, a Confederate force of about 15,000, under Johnston, vigorously attacked the left wing of Sherman's army, under General Slocum, but was repulsed, with the aid of Kilpatrick's cavalry, after several hours of stubborn fighting. Substantial Federal reinforcements from the main army having arrived during the day, Johnston did not renew the attack, and on the night of the 21st hastily retreated towards Raleigh, while Sherman proceeded to Goldsboro to effect a junction with Schofield. The Federal loss in killed, wounded, and missing was about 1600, the Confederate about 2700. Consult Johnson and Buel, *The Battles and Leaders of the Civil War*, vol. iv (New York, 1887).

BENTZEL-STERNAU, bën'tsel stér'nou, KARL CHRISTIAN ERNST, COUNT (1767-1840). A German statesman and author, born at Mainz. He was successively Minister of the Interior of the Grand Duchy of Baden (1808), president of the Supreme Court at Mannheim (1810), and Minister of State and Finance of the Grand Duchy of Frankfurt (1812). He became famous as a humorist and close student of human nature through his anonymous novel, *Das goldene Kalb* (4 vols., 1803-04), in which he imitates the romanticism of Jean Paul. This was followed by *Der steinerne Gast* (1808), *Pignambriefe* (1811), and *Der alte Adam* (1819-20). The dramatic works of the author were less successful, while his *Bayenbriefe* were characterized by political insight and patriotism. He also translated Young's *Night Thoughts*.

BENTZON, bän'tsôn, THÉRÈSE. The pseudonym of Marie Thérèse Blanc (1840-1907). A French journalist, essayist, and novelist, for many years on the staff of the *Revue des Deux Mondes*. She was born at Seine-Port, traveled widely in the United States, and wrote wisely of American literature and social conditions. Among her essays are *Littérature et mœurs étrangères* (1882) and *Les nouveaux romanciers américains* (1885). Her novels include *La vocation de Louise* (1873), *Sang mêlé* (1875), *Un remords* (1878), *Cette histoire d'une jeune Gréole* (1880, 1882), *Yvonne* (1881), *Tony* (1884), crowned by the French Academy, *Contes de tous les pays* (1890), *Jacqueline* (1893), *Une double épreuve* (1896), *Au dessus de l'abîme* (1905). She also wrote *Nouvelle France et Nouvelle Angleterre*, *Notes de Voyage* (1899), *Choses et gens d'Amérique*, *Questions Américaines*, and *Femmes d'Amérique*, and translated works by Dickens, Bret Harte, Ouida, Aldrich, and other novelists.

BENUE, bën'we, or **BINUE**. A river of West Central Africa and the largest tributary of the Niger (Map Africa, E 4). It rises in southern Adamawa, in about lat. 7° $30'$ N. and long. 13° $45'$ E. It flows generally westward and after a course of about 900 miles joins the Niger 300 miles from the coast, in about lat. 8° N. Its width in its lower course varies from about 1600 to 3200 feet, and its navigable length exceeds 600 miles during the wet season, but during the dry season, January to May, it is very shallow. Its chief tributaries are the Mayo Kebbi, Gongola, Kadera, Tarabba, and Faro. The Benue River was known to Europeans as early as 1831 and was then supposed to be connected with Lake Chad. In 1851 it was partially explored by Barth, who made an investigation of

its upper stream and exploded the theory of its being connected with Lake Chad. In 1854 another expedition under Baikie explored the river as far as Dulti, about 350 miles above its confluence with the Niger. In 1879 the explorer Robert Hegel journeyed along the Benue through its entire navigable length and explored some of its tributaries. The expedition of Mizon, in 1892, made our knowledge of the river very complete. By an agreement between Germany and Great Britain the freedom of navigation on the Benue was guaranteed. The Niger and the Benue rivers together form the only navigable route in Africa from the ocean to the far interior.

BENWELL AND FENHAM A municipality in Northumberland, England, on the Tyne, $2\frac{1}{2}$ miles west of Newcastle. Coal mining is the leading industry. Pop., 1891, 10,500, 1901, 18,350, 1911, 17,265.

BENWOOD A town in Marshall Co., W. Va., on the Ohio River, adjoining Wheeling, and on the Baltimore and Ohio and the Pittsburgh, Cincinnati, Chicago, and St. Louis railroads (Map West Virginia, D 1). The principal manufactures are iron and steel skelp and pipe. About a mile south of the town is a government dam, built to hold the Ohio River in a navigable condition during dry periods. Benwood was settled about 1800. Pop., 1900, 4511, 1910, 4976.

BENZALDEHYDE, or **OIL OF BITTER ALMONDS**, C_6H_5CHO . The cake which is left after the expression of the fixed oil from bitter almonds contains, among other matters, two substances called, respectively, amygdalin and emulsin or synaptase. When the cake is bruised and made into a paste with water, the emulsin acts as a ferment upon the amygdalin, splitting it up into the volatile oil of almonds, hydrocyanic (prussic) acid, and grape sugar. The oil is not originally present in the bitter almonds, in fact, the latter do not contain a trace of the oil ready formed, so that the oil is purely a product of the fermentation of amygdalin. This action takes place very rapidly and is complete in 24 hours. The paste yields, by distillation, a product containing benzaldehyde, partly combined hydrocyanic acid, and water. The hydrocyanic acid may be removed from this by means of ferrous chloride and lime. It is colorless, has an agreeable odor, and an acid, bitter taste. It is soluble in water to the extent of 1 part in 300 parts of water, but mixes in all proportions with alcohol and ether. It is a highly refractive liquid, of specific gravity 1.05 at $15^\circ C$, it boils at $179^\circ C$. It is usually prepared by boiling benzyl chloride with an aqueous solution of lead nitrate. The crude product thus obtained is shaken with a solution of acid sodium sulphite, which forms a crystalline compound with benzaldehyde, while the impurities remain in solution. Pure benzaldehyde is obtained from the crystalline compound by the action of dilute acids. The oil is used by confectioners and perfumers and also in the manufacture of various dyes, etc. Exposed to the air, benzaldehyde gradually changes by oxidation into benzoic acid. Strong potassium hydroxide changes it partly into benzoic acid, partly into benzyl alcohol.

BENZENE, or **BENZOL** (for derivation see **BENZOIN**), C_6H_6 . One of the most important of the compounds of carbon. Large quantities of it are industrially converted into nitrobenzene,

from which, in turn, all of the aniline or commerce is manufactured. The luminosity of a coal-gas flame is partly due to the presence of benzene in the gas. Benzene is an excellent solvent for fats, resins, iodine, and other substances. The importance of benzene in pure chemistry is due to the fact that a very large number of substances are derived from it, the derivatives constituting the so-called *aromatic compounds*. Benzene may be obtained in a variety of ways. It is produced by passing the vapors of ordinary alcohol, ether, and many other organic substances through a tube heated to redness, it is one of the constituents of the tar obtained by heating wood, peat, and shale out of contact with air. Faraday first discovered it (1825) in oil gas, and in 1845 Hofmann found it in coal tar, from which all the benzene of commerce is at present obtained. The process by which benzene is obtained industrially was first worked out by a pupil of Hofmann's, Charles Mansfield, whose death was caused (1856) by a large quantity of benzene taking fire during distillation. Most of the benzene produced by the destructive distillation of coal forms a constituent of illuminating gas, while the remaining benzene is found in the portion of the coal-tar that distills over below $170^\circ C$. When this portion, called *light oil*, is redistilled, a liquid consisting mainly of benzene and a similar substance called toluene passes over between 82° and $110^\circ C$. This portion is purified by washing consecutively with sulphuric acid, water, and soda, it is then subjected to further fractional distillation. In this manner somewhat impure benzene is obtained. To purify it, the liquid is cooled to crystallization, and the benzene crystals are separated and again distilled. Thus benzene is rendered pure enough for all practical purposes. It still contains, however, a small quantity of thiophene (C_4H_4S) whose presence may be best demonstrated by the so-called indophenol reaction, causing a blue coloration to appear when a little sulphuric acid and isatin are added to ordinary benzene. As thiophene is more readily soluble in sulphuric acid than benzene, it may be eliminated from the latter by repeatedly agitating with the concentrated acid at the ordinary temperature. A more convenient way of freeing benzene from thiophene consists in boiling it for some time with anhydrous aluminum chloride. Pure benzene is a light, colorless liquid, having a peculiar odor and a burning taste. At low temperatures it solidifies, forming colorless crystals that melt at $6^\circ C$ and boil at $80.5^\circ C$. The vapors burn with a smoky flame, owing mainly to the high percentage of carbon contained in benzene. Benzene floats on water, but mixes readily with ether, anhydrous alcohol, petroleum, and many other organic liquids. When treated with strong nitric acid, it is converted into nitrobenzene.

The French chemist Berthelot succeeded in converting acetylene gas into benzene by heating the former at a dull-red heat, the conversion taking place according to the following simple chemical equation

As acetylene (q v) can be made directly from carbon and hydrogen, it may be said that ben-

zene, too, can be made from its elements. For an account of the chemical constitution of benzene and its derivatives, see CARBON COMPOUNDS.

BENZER/TA See BIZERTA

BENZIDINE, $\text{H}_2\text{N}-\text{C}_6\text{H}_4-\text{C}_6\text{H}_4-\text{NH}_2$. A valuable organic substance derived from benzene. In the pure state it forms crystals that melt at 123°C . Benzdine and its derivatives are now used in making many beautiful coloring substances, including the well-known *Congo red* and the *benzopurpurins*. The dyes have the remarkable property of combining with cotton without the aid of mordants and are at present manufactured in very large quantities.

BENZINE (for derivation see Benzene)
One of the products of the fractional distillation of crude petroleum. It is a mixture of volatile hydrocarbons of the marsh-gas series, containing chiefly hydrocarbons that are represented by the two formulae, C_4H_{10} and C_5H_{12} . It is often used as a cleaning fluid for household purposes as well as for removing ink from printing presses. It is a very good solvent for fats, gums, and resin, and is employed in making many varnishes. It also finds employment for enriching coal gas and for certain other purposes. At ordinary temperatures it is a limpid, colorless liquid, much lighter than water, with which it does not mix, and readily catching fire. It boils between the temperatures of 70° and 90° C. (158° and 194° F.), its vapor forming with air a highly explosive mixture. It should not be confounded with the much more important substance called benzene (qv) that is obtained as a product of the fractional distillation of coal tar. See also PETROLEUM.

BENZOATE OF SODA, SODIUM BENZOATE, has replaced salicylate of soda as a preservative agent in food products. While the Federal government allows the use of this substance in quantity not greater than one-tenth of 1 per cent, it is gradually going out of use among the best packers of food products. The few firms that still use this or some other form of preservative claim that it is added simply to protect their goods against careless handling in the household. At the same time preservatives will protect these goods against decomposition resulting from poor manipulation in processing or slight air leaks in packages. See ADULTERATION

BENZOIC ACID (for derivation, see BENZOIN), C_6H_5COOH . An organic substance used in medicine and the arts and largely for scientific purposes. It may be manufactured by one of the following three methods (1) From benzoil, by subliming or boiling the gum with caustic soda solution (2) From the urine of herbivorous animals, by evaporating to a small bulk, filtering and adding hydrochloric acid to acid reaction, on standing, crystals of hippuric acid separate out, these crystals are transformed into benzoic acid by boiling with strong hydrochloric acid, the hydrochloride of amido-acetic acid (glycine) being formed at the same time, according to the following equation

Finally, (3) benzoic acid may be made from benzyl chloride by oxidizing the latter with

VOL III-11

nitric acid, the transformation taking place according to the following chemical equation

The crude benzoic acid obtained by one of these methods may be purified by recrystallization from water. The pure acid melts at 120° C and boils at 250° C. It readily sublimates, however, long before melting. Though but sparingly soluble in cold water, it dissolves readily in hot water, as well as in alcohol, ether, and other organic liquids.

The acid employed for medicinal purposes is obtained exclusively by subliming gum benzoin and retains the balsamic odor of the gum. When introduced into the body, it is converted (probably in the kidneys) into hippuric acid, which appears in the urine, of course increasing its acidity. For this reason benzoic acid, or its salts, are administered whenever the urine undergoes alkaline decomposition—for instance, in cystitis and pyelitis. Benzoic acid is also used as a disinfecting expectorant in phthisis and bronchitis, when the expectoration is foul

In the arts, benzoic acid is employed in making the dyes known as aniline blue, anthracene brown, etc.

Among the *benzoates*, or salts of benzoic acid, may be mentioned the benzoate of ammonium and the benzoate of sodium, both of which are used in medicine. They are prepared by adding benzoic acid, respectively, to solutions of ammonia and of sodium carbonate. These benzoates are much more readily soluble in cold water than the free acid.

Benzoic acid has been known since the beginning of the seventeenth century. In 1824 Wohler discovered the relationship between benzoic and hippuric acids, and in 1832 Liebig and Wohler determined the true chemical composition of benzoic acid and established its relation to the other benzoyl compounds.

BENZON (ben-zoin) **GUM**, or **GUM BENJAMIN** (earlier *benjoin*, *Fr benjoin*, Ger *Benzoe Sp bewit*, from Ar *lubān-jāwa*, incense of Java, which is the Arabic name for Sumatra, as the syllable *lu* was lost though mistaking it for the Arabic definite article *al*, *el*). A fragrant resinous substance, the dry juice of a large tree, *Styax benjoin*, a native of Sumatra and Java. The tree was introduced into Siam and other places in the East, and the finest gum to be found in the market comes from Siam. Gum benjoin yields a pleasant odor when burned, and is used as incense in the Roman and Greek churches, very large quantities of it are used for a similar purpose in the East. It is used, to some extent, in perfumery, and is sometimes administered medicinally, owing to its properties as a stimulant and emetic, as a good antiseptic it is one of the ingredients of court-plaster. Druggists sometimes add a little benjoin to pomade, to prevent the fat of the latter from becoming rancid. A little of the tincture of gum benjoin added to washes imparts to them a milk-white color and an odor resembling that of vanilla. Benjoin comes to us in reddish-yellow transparent pieces. It is obtained by making longitudinal or oblique incisions in the stem of the tree, the liquid which exudes soon hardening by exposure to the sun and air. Different products, the quality of which depends mainly on the age of the trees from which they

are obtained, differ considerably in price. The gum yielded by trees from 5 to 8 years old is supposed to be of the finest quality, it is almost white and possesses a particularly strong odor. The gum of trees 16 to 18 years old is almost worthless. Chemically, gum benzoïn is a mixture of three different resinous substances soluble in alcohol and alkalies, it contains, besides, a considerable quantity of benzoic acid and often some cinnamic acid.

BENZOIN ODORIFERUM See **FEVER BUSH**

BENZOL See **BENZENE**

BENZOYL, bē'zōil, C_6H_5CO An organic radical, i. e., a group of atoms that forms part of the molecules of many compounds, but cannot exist independently.

BEOTHUK, bē'ō-thuk An extinct tribe formerly inhabiting the interior of Newfoundland. The name is of Micmac origin and is said to signify "red people," in allusion to their custom of painting their bodies with red ochre. They were called "Red Indians" by the white settlers. They lived in very large teepees covered with bark or skins and built a peculiar, crescent-shaped canoe. Owing to their implacable hostility to the whites, they were hunted down like wild beasts until about 1820, when a handful of survivors crossed the straits and found a hiding place in the frozen wilds of Labrador, where some of their descendants may still exist. From an investigation of the few words of their language that have been preserved, Gatschet comes to the conclusion that they constituted a distinct stock. In 1911 Prof. F. G. Speck found an old woman, claiming Beothuk descent, from whom he obtained a few words suggesting the Algonquin stock, however, the data are not decisive.

BEOTHY, bē'ē-thi, **ZOLTÁN** (1848-) An Hungarian novelist and writer on aesthetics. He was born in Komorn, Sept. 4, 1848, and in 1882 became professor of aesthetics in the University of Budapest. His novels, praised for their realistic treatment and clever analysis of character, include *Bezdelyek* (short stories, 1871), *A nyelvelenek*, *Kálódró Béla* (1875), *Rajzok* (sketches, 1879). A collection of his critical and dramatic essays appeared in Budapest in 1881. He is also author of a history of Hungarian literature (*A magyar irodalom története*, 1877, new illus. ed., 1899-1900), an important work upon tragedy (*A tragikum*, 1885), and a history of Hungarian prose fiction (*A szépirodalom elbocsátása*, 1886).

BEOWULF, bē'ō-wulf An Old English poem, epic in theme and in tone, and one of the most interesting literary monuments of the Germanic race. The unique MS. of the poem, now in the British Museum, is usually assigned to the tenth century. The composition of the poem, in its present form, is placed as early as the eighth century, but it is based upon poetry of a period when the Anglo-Saxons were still on the Continent. The scene is Denmark, apparently Zealand, and the opposite coast of Sweden. The monster Grendel—half man, half fiend—comes every night from the fens into the splendid hall of Hrothgar, King of the Danes, and carries off to his subterranean dwelling a number of the King's thegns and devours them. Beowulf, a prince among the Geats (of south Sweden), hearing of this, crosses the sea with 14 companions to rid Hrothgar of the sea fiend. In a mighty struggle in the hall at night Beowulf

performs his exploit. Grendel, after having an aim wrenched from the socket, flees to the fens to die. The next night Grendel's mother comes to the hall to avenge the death of her son and bears away one of Hrothgar's counselors. Beowulf, who is absent, is sent for in the morning. He descends to the caves of the sea, and slays the water demon with a sword wrought by the giants. Beowulf returns to his country, where he becomes King and rules for 50 years. Then a dragon, having been robbed of a cup from an immense hoard which he had guarded for 300 years, becomes enraged and devastates the land. Beowulf, though weakened by his great age, puts the dragon to death with the aid of a kinsman. But, severely wounded, he dies after viewing the treasures. Besides these three adventures, there are several episodes, and throughout graphic scenes of the social life of our ancestors before they left their ancient homes for Britain.

Bibliography The literature on *Beowulf* is most extensive. For an account of the poem, with bibliographies of editions and dissertations and other articles upon it, consult Morley, *English Writers*, vol. 1 (London, 1887), *Beowulf*, translated by Gairnet (Boston, 1885), later translations—those of J. Earle (Oxford, 1892), W. Morris (1898), J. L. Hall (Boston, 1892, 1900), C. G. Child (New York, 1904), Ten Brink, *Early English Literature*, translated by Kennedy (New York, 1883), *Beowulf*, translated into English prose by C. B. Tinker (New York, 1902). For text, consult a facsimile of the MS, with transliteration and notes by Zupitza, made for the Early English Text Society (London, 1882). For editions of *Beowulf* consult Thorpe (London, 1875), Arnold (London, 1876), Wulker-Grein, *Bibliothek der Angelsächsischen Poesie*, vol. 1 (London, 1883), Wyatt (Cambridge, 1898), also edition by F. Holthausen (Heidelberg, 1906), Lang, *English Literature from Beowulf to Swinburne* (London, 1912). The editions by Thorpe and Arnold contain translations. See **ENGLISH LITERATURE**.

BEPPPO. A satirical poem on Venetian social life, by Lord Byron, published in 1818.

BEPPU, bē'p'pū A small seaport and celebrated sea-bathing and health resort, situated on the northeastern coast of the island of Kjusiu, Japan, 7 miles by rail from Oita (Map Japan, B 7). It is celebrated for its hot baths of alkaline water, whose temperatures range from 100° to 132° F. There is here a sanitarium for consumptive railway employees. The place is also a port of call for steamers.

BEQUEATH, bē-kwēn' (*AS* *beocwīpan*, to say, affirm, leave by will, from *prei* bē + *cwēpan*, to say, of Eng. *quoth*). To leave personal property by will or testament to another, the gift so made being known as a bequest, or legacy (qv.). In the law of real property, the corresponding term is *devise*, but the two expressions are in practice used interchangeably, and in English and American law with similar effect. In the Scotch law the terms "bequeath" and "bequest" are appropriate only to personal estate and will not operate as a gift of real property. See **WILL**.

BEQUEST See **BEQUEATH**

BERANE, bē-ra'nē A town of Turkey in the vilayet of Kosova, about 60 miles north of Scutari. It is on the Lim River and near the border of Montenegro (Map Turkey in Europe, B 3). A massacre of Serbs by the Turks in this and neighboring villages in 1912 was re-

sented by the Montenegrins, and the district was the scene of considerable fighting during the Balkan War. Berane was stormed by the northern army of Montenegro and was occupied by them Oct 16, 1912.

BÉRANGER, ba'ran'zhá', PIERRE JEAN DE (1780-1857). A popular French lyric poet of Royalist parents and Republican principles. He was born in Paris. Neglected in childhood, he watched from a roof the storming of the Bastille and imbibed Republican prejudices from an aunt at Peronne, where he became president of a boys' Republican club. He helped his father in business until bankruptcy and was for a time reduced to great straits. The patronage of Lucien Bonaparte relieved him in 1804 and procured for him a clerkship in the university. Gratitude was thus joined to admiration for Napoleon, though he gently satirized the despotic Emperor in his *Roi d'Yvetot* ('King of Yvetot,' 1813), a song that first made Beranger popular. His earliest collection of songs (1815) cost him his clerkship for its liberalism and praise of Napoleon, but earned him distinction. A second collection (1821) brought fame, imprisonment, and a fine. A third collection appeared in 1825, and a fourth in 1828, for which he was fined 10,000 francs, which sum was paid by eager friends. He was also imprisoned for nine months, only to find his cell a reception room for the most eminent men of the time. Two years later the Bourbons fell, but, rejecting the honors proffered by the Orleanists, Beranger retired to Passy, published a fifth collection of songs in 1833, and nothing further. He accepted the honor of an election to the Constituent Assembly of the Second Republic, took his seat, but immediately resigned it. Honors from the Second Empire he steadfastly refused. He died July 16, 1857, and was buried at public cost and with great distinction. Béranger was a worthy man, a good patriot, and eminently the poet of the masses. He continues the song writing of the eighteenth century in his Gallic mocking spirit, but, on the other hand, he is a thoroughgoing democrat whose belief in the wisdom of the majority is his creed. A volume of poems written between 1834 and 1851 appeared as *Deuxième Chansons* ('Last Songs') after his death, also an autobiography (*Ma biographie*, 1858). *A Vie de Béranger* was written and his *Correspondance* edited by Paul Boiteau (5 vols., 1860-61), Jules Janin, *Béranger et son temps* (1866), is also useful. Consult also *Sainte-Beuve, Portraits contemporains*, 1, Brunetiere, *Poésie lyrique* (Paris, 1894), Peyrat, *Béranger et Lamennais* (1861), Nivalet, *Souvenirs historiques et étude analytique sur Béranger et son oeuvre* (Paris, 1892), *Les chansons de Béranger, morceaux choisis*; preface de Comte Berge Fleury (Noel Ramère) (New York, 1911).

BÉRAB, bá-rá', or the HYDERABAD ASSIGNED DISTRICTS. A commissionership of British India, lying to the north of the Nizam's dominions (Map India, C 4). It lies between lat 16° 20' and 21° 40' N., and between long 76° and 78° 2' E. Area, 17,710 square miles. Pop., 1891, 2,897,491. 1901, 2,754,016. 1911, 3,057,162. It is well watered by tributaries of the Tapti and Godavari. The soil is peculiarly suitable to the cultivation of cotton, although millet and wheat are important products. The only manufactures of importance are in connection with the cotton industry. Berar came under British

administration in 1853 and was "assigned" to the British to maintain a force called the Nizam's contingent." The arrangement continued until 1902, when Berar was leased to the British in perpetuity, and it is now attached to the Central Provinces for administrative purposes. Capital, Ellichpur.

BÉRARD, bá-rá', JOSEPH FRÉDÉRIC (1789-1828). A French physician and writer on physiology. He was educated at Montpellier and was employed in Paris on the *Dictionnaire des sciences médicales*. He was professor of hygiene in Montpellier, where he died at the age of 39. His most important work is *Doctrines des rapports du physique et du moral pour servir de fondement à la physiologie dite "intellectuelle" et à la métaphysique* (1823), in which he holds that the manifestations of will and of instinct cannot all be attributed to a single active cause, the "vital principle" of Barthez (qv). From the different phenomena of life he infers the existence of a purely spiritual substance—a soul—besides the principle of life, the two coexisting and exercising constant reciprocal action in the living and thinking being.

BERAT, bá-rat' (corrupted from Slav *Belgrad*, white fort). A fortified town in the principality of Albania, situated on the banks of the Ergene or Osum, about 30 miles northeast of the seaport of Valona (Map Turkey in Europe, B 4). The valley in which Berat stands is very fertile, producing large quantities of grain, oil, and wine. The town is picturesque and contains several quaint churches and mosques. Pop., about 15,000, including 5000 Greeks.

BER/BER (evidently from Gk *βάρβαρος*, *bar-ba-ros*, stammering, uncivilized, of which the *Ar Ratana* or *Ertana* is an equivalent, *Amazurg*, 'the free,' is the native name). A name applied to the early Hamite peoples of northern Africa and the Sahara west of Egypt. They are called Tuaregs in the desert, Shilluhs (Shilluhs) in Morocco, Kabyles in Algeria and Tunis, and Amazurg or Mazys in their own speech. They have been mixed with negro peoples in some places, in others with Semites, as well as with Romans, Vandals, and later Europeans, to whom they are closely akin. Their color varies from that of the blonde descendants of the fair Libyans of the monuments to very dark, their stature also varies from tribe to tribe, the Mzabite Berber averaging 1.620 m., those of Tunis 1.663 m., of Biskra, 1.663 m., of Algeria 1.680 m., the cephalic index is 77.3. They are agriculturists and herdsmen and live in tents, adobe huts, or stone houses, according to locality. In textile, leather, and metal work they excel, though their mechanical appliances are antiquated. Their government is patriarchal.

BÉRBER, El MEKHEB, or El MESHREIF. A town in upper Nubia on the east bank of the Nile, a short distance below the confluence of the Atbara, about lat 18° N., long 34° E. (Map Egypt, C 4). It was one of the main stations on the direct route from Khartoum to Cairo, and a starting place for caravans going to Suakin, on the eastern coast, and is still of commercial importance, but the opening of a railway line in 1906 to take the place of the caravan route has diverted much of the Red Sea trade elsewhere. Pop., estimated between 6000 and 10,000.

BER/BERA. The chief seaport of British Somaliland, situated on the Gulf of Aden, about 170 miles south of Aden (Map Egypt, E 5).

The town has a sheltered harbor and is the scene of an annual fair, lasting for some months, during which the population of the town is greatly increased and an extensive trade in coffee, gold dust, ostrich feathers, skins, ivory, cattle, etc., is carried on. The climate is healthful and the surrounding country very fertile. The population varies with periods of trade activity from 10,000 to about 30,000.

BERBERIDACEÆ A family of dicotyledonous plants, of which the different species of barberry (q.v.) afford the best-known examples. Many of the plants of this order are spiny shrubs, some are perennial herbaceous plants. Their leaves are alternate, often with dilated bases or stipules, their flowers sometimes solitary, sometimes in racemes or panicles. The calyx consists of three, four, or six deciduous sepals, the corolla, which arises from beneath the ovary, consists of petals either equal in number to the sepals and opposite to them, or twice as numerous, the stamens are usually equal in number to the petals and opposite to them, the anthers are two-celled, each cell opening by a valve which curves back from bottom to top, except in *Podophyllum*, in which the anthers split lengthwise, the carpel is solitary and one-celled, the fruit is either a berry or a capsule. The family contains 20 genera and about 200 species, chiefly belonging to the temperate parts of the northern hemisphere and of South America. The principal genus is *Berberis*, which includes about 100 species. The common American representatives are *Podophyllum* (May apple or mandrake), *Jeffersonia* (twinleaf), *Caulophyllum* (blue cohosh), and *Berberis* (barberry).

BERBERINE, bër'bër in. See BARBARA.

BERBERINI. See ALKALOIDS.

BERBERIS. See BARBERRY.

BERBICE, bër-bës'. The eastern division of British Guiana (Map Guiana, F 3). The capital, Berbice, or New Amsterdam, is situated on the estuary of the Berbice River, has a population of about 10,000, and is an important commercial centre. Its citadel, Fort York, and numerous intersecting canals, give it the aspect of a mediæval Dutch town. See GUIANA.

BERCEO, GONZALO DE. See GONZALO DE BERCEO.

BERCEUSE, bär'séz (Fr. cradle song). A lullaby, a cradle song, a vocal or instrumental piece of music with a soft and swinging melody. The German equivalents are *Wiegenlied* and *Schlummerlied*. Chopin's *Opus 57* is a most beautiful berceuse. The name may be applied also to some of the cradle songs familiar in England and the United States, such as "Sleep, Baby, Sleep," and "Sweet and Low."

BERCHEM, bër'çem. A fortified suburb of Antwerp, Belgium, with a population, in 1900, of 22,000. 1904, 26,383. 1910, 30,274.

BERCHEM or **BERGHEM**, CLAES (NICOLAËS) PIETERZ (1620-83). A Dutch landscape painter. He was born at Haarlem, the son of Pieter Claesz (the origin of the name Berchem, by which he is generally known, is uncertain). Of the four painters under whom he is said to have studied only Claes Mojaert of Amsterdam exercised a perceptible influence upon his work. This is evident in his earliest landscapes, in which the figures represent religious subjects. But by far the most of his paintings are Italian landscapes with shepherds as figures. From these as well as from a well-founded tradition,

it seems certain that he visited Italy before 1642, in which year he entered the Haarlem Guild. He practiced chiefly in Haarlem, but also in Amsterdam, to which city he removed in 1677. He excelled especially in sunny atmospheric effects, but continued reputation caused his paintings to degenerate into mannerism. They are found in all the principal public and most of the private collections of Europe. His etchings, of which about 50 survive, show unsurpassed ability for rendering sunshine.

BERCHET, bë'shà', GIOVANNI (1783-1951). An Italian patriotic poet and one of the leaders of the Romantic school in Italy. Born in Milan, a centre of aggressive liberalism in the first years of the century, Berchet won some recognition with a translation of the "Bard" of T. Gray (1807), of ballads from Goldsmith's *Vicar of Wakefield* (1808), and other poems. But he achieved fame in 1816 with his *Lettera semiseria di Grisostomo*, in which, as a commentary on his prose translations of the famous ballads of Burger, "Eleanora" and "The Wild Chase," and as a contribution to the polemic around Madame de Staël's attack on Italy, he defined the notions of the Italian Romantics on aesthetics. Here he was one of the first aestheticians to systematize the theories of the unity of substance and form, the artificiality of literary genres, the inadequacy of rules as the test of art, the idea that art is as limitless as nature, and that the prerequisite of æsthetic judgment is the penetration into the mental state and intention of the artist. The organ of Berchet and his friends was the biweekly *Conciliatore* (1816-19). The political tendencies of the journal led to its suppression, and the persecutions of the liberals of 1821 sent Berchet into exile, where, till 1847, he lived alternately in England, France, and Germany. From Paris (1823) he hurled his fiery ballad "I profughi di Parga" against the cession of Parga by England to the Turks. In London (1824-26) he published, in application of his theory that poetry must be of popular inspiration, his *Poesie*, of which the most celebrated ballad is "The Hermit of Mont Cenis." In 1820 came the patriotic "Fantasia." To his struggling compatriots in 1831 he sent the poem "All'armi, all'armi," dear to every soldier of the revolution. His most extensive collection of ballads, *Vecchie romanze spagnuole*, was published in Bruxelles in 1837. The high estimate of Berchet's poetical production made by De Sanctis (*Storia della lett. ital. nel secolo XIX.*), defended by B. Croce (*Critica*, 1910), has been offset by a general inclination to depreciate him. It must be admitted that his patriotic verse, while appealing to emotions of struggles now past, admirably fulfilled its purpose. His ballads contain at least one acknowledged gem and, though overshadowed by Manzoni's work, helped toward that enlargement of the artistic vision of Italy, for which the Romantics fought. In 1848 Berchet returned to Italy, took an active part in the revolution of that year, and was appointed Minister of Public Instruction by the provisional government of Milan. After the suppression of the revolution he retired to Turin and was at the time of his death, in 1851, a member of the Sardinian parliament. The best edition of his writings is the *Opere*, edited by E. Bellorini (Bari, 1911-12). For the biography, consult Cusani's introduction (Milano, Pirotta, 1863), G. Mazzoni, *Glorie e memorie* (Firenze, 1906), and the arti-

cles of E Bellorini in *Giornale storico della lett ital* (1910-12)

BERCHOUX, bër'shou', JOSEPH (1765-1839) A French poet, born at Lavi-Saint-Symphorien (Loire). His first work was a satire, *Les Grecs et les Romains* (1797), but it is as the author of *Gastonomie* (1800) that he is best known. Portions of this book have passed into proverbs and have given its author the reputation of a gourmet, which, it is said, was undeserved.

BERCHTA, bër'k'ta or **PERCHTA** (according to E Mogk, in Paul's *Grundriss der germanischen Philologie*, vol iii, p 278, from Goth. *Laugan*, OHG *beigan*, Old Eng *beorgan*, Mod HG *bergen*, to conceal, cover, protect) In German mythology, the name given in the south of Germany and in Switzerland to a spiritual being, who was apparently the same as the Hulda (whose name is itself derived from OHG *helan*, to hide, whence Eng *hell*, Mod Ger *Hölle*) of northern Germany. This being represented originally one of the kindly and benign aspects of the unseen powers, and so the traditions of Hulda (qv) in the north continued to represent her. But the Berchta of the South, in the course of time, became rather an object of terror, and a bugbear to frighten children, the difference probably arising from the circumstance that the influence of Christianity in converting the pagan deities into demons was sooner felt in the South than in the North. Lady Berchta has the oversight of spinners. The last day of the year is sacred to her, and if she finds any flax left on the distaff that day, she spoils it. Her festival is kept with a prescribed kind of meagre fare—oatmeal gruel, or pottage, and fish. If she catches any persons eating other food on that day, she cuts them open, fills their paunches with chopped straw and other such agreeable stuffing, and then sews up the wound with a plowshare for a needle and an iron chain for a thread. In some places she is the queen of the crickets. She is represented as having a long iron nose and an immensely large foot. That she was once an object of worship is testified by the numerous springs, etc, that bear her name in Salzburg and elsewhere. It is likely that many of the sagas of Berchta were transferred to the famous Berthas of history and fable. The numerous stories of the "White Lady" who appears in noble houses at night, rocks and nurses the children while the nurses are asleep, and acts as the guardian angel of the race, have doubtless their root in the ancient heathen goddess Berchta.

BERCHTESGADEN, bër'k'tes-ga'den. A government district of Upper Bavaria, in the southeastern corner of the kingdom. Its area is 154 square miles. It has a rocky, mountainous surface, is noted as one of the most picturesque portions of the Bavarian Alps, and is a favorite tourists' resort. There are a number of mountain lakes, among which the Königssee is the best known. The district is rich in salt, marble, and wood, and the exploitation of these natural resources and wood carving and cattle raising constitute the chief occupations. The chief settlement is the village of Berchtesgaden, situated a short distance from the Königssee, pop, 1900, 2634, 1910, 2928, mostly Roman Catholics. It has two churches of interesting architecture and a royal castle. Berchtesgaden constituted an ecclesiastical principality of the old German Empire, which was secularized in 1803.

BERCHTOLD, bër'k'tolt, LEOPOLD ANTHONY

JOHANN SIGMUND, COUNT VON (1863—) An Austro-Hungarian statesman, born in Vienna. He entered the diplomatic service at an early age and in 1895 was appointed secretary of the Austrian Embassy in Paris. In 1899 he became counselor of the Embassy in London and in 1903 was appointed to the same position at St Petersburg. Three years later he received the appointment of ambassador at St Petersburg. In 1912 he was appointed foreign minister of the Dual Monarchy, to succeed Count von Aehrenthal. See AUSTRIA HUNGARY, History.

BERCK, bër'k, A fishing village of the department of Pas-de-Calais, France, on the English Channel, 28 miles south of Boulogne. A mile distant is Berck Plage, a summer bathing resort. This latter has a fine sandy beach, a kusaal, and two hospitals for children. Pop, 1896, 7039, 1901, 7799, 1906, 9636, 1911, 11,597.

BERCKHEYDE, bër'k'hē'de, GERRIT (1638-98) and JOB (1630-93), Dutch painters of landscape, architectural, and genre subjects—GERRIT, the elder and more important of the two, studied with Jacob Dewet, but not under Frans Hals, as has been assumed. Accompanied by his younger brother, he traveled all along the Rhine, practicing especially at Cologne and Heidelberg, where the Elector held him in high honor. In 1654 he was admitted to the Guild of Haarlem, in which city he lived and worked with his brother until his death. His architectural subjects are the very best of their kind, and he is also considered one of the best genre painters of Holland. Among his favorite architectural subjects are the Bourse of Amsterdam (Museums of Amsterdam, Rotterdam, Frankfurt, Brussels), and the church of St. Bavon in Haarlem (Dresden, Haarlem). Good examples of his genre pictures are "At Breakfast" (Schwerin), "Soldiers on Guard" (Dessau), and "A Courtier's Room" (Rotterdam)—JOB, his younger brother and pupil, was more prolific but also more restricted in subject, confining himself mostly to oft-repeated views of the streets and public places of cities. Although he was far more popular than his brother, and contemporary poets sang his praises, he was a less able artist, failing particularly in the treatment of light.

BERDIANSK, bër-dyansk' (from the river Berdyanka, near the mouth of which it is situated). A seaport in the Russian government of Taurida, situated on the north shore of the Sea of Azov (Map Russia, E 5). It has a good harbor and exports grain, wool, hides, fish, and salt. This town is the centre of a district in which the manufacture of agricultural implements and machines is extensively carried on. There are three churches, a gymnasium, and a seminary for teachers. Pop, 1897, 27,247, 1900, 29,000.

BERDITCHEV, bër-dyě'chēf. The capital of a district in the government of Kiev, Russia, about 180 miles southwest of Kiev (Map Russia, C 5). It is famous for its four annual fairs. At these, cattle, corn, country produce, carriages, and harness are sold in large quantities. The principal manufactures include tobacco, oil products, and leather. The population in 1897 was 53,700, including many Jews. It advanced to 76,896 in 1910. The town is the private property of Count Tishkevitch, which fact is proclaimed by an inscription on a single over the city gate. The ground is leased to the

owners of the buildings. It was in 1320 that the Grand Prince of Lithuania, Gedimin, made a gift of Berditchev, then an insignificant settlement, to the Tishkevitchs, and it has remained the patrimony of the counts till the present day. At the close of the sixteenth century Yanush Tishkevitch, the waywode of Kiev, built a castle here, to which he added a monastery in 1627. This was surrounded soon with strong walls and a moat as a protection against the frequent invasions of the Tatars and Cossacks. In 1647 Khmelnitsky successfully stormed Berditchev and robbed the monastery. The town figures prominently in subsequent conflicts between the Poles, the Cossacks, and the Russians.

BEREA. A town in Madison Co., Ky., 53 miles by rail south by east of Lexington, on the Louisville and Nashville Railroad (Map Kentucky, F 4). It is the seat of Berea College (q.v.). It contains also a college chapel, erected by the students, a Carnegie library and a stove factory. The water works, ice, and electric light plants are owned by the college. Pop., 1910, 1510.

BEREA. A village in Cuyahoga Co., Ohio, 12 miles southwest of Cleveland, on the Cleveland, Cincinnati, Chicago, and St. Louis, the Lake Shore and Michigan Southern, and the Cleveland, Lorain, and Wheeling (Baltimore and Ohio system) railroads (Map Ohio, G 3). It is the seat of Baldwin University (Methodist Episcopal), opened in 1846, and of German Wallace College (Methodist Episcopal), established in 1864, and contains the German Orphan Asylum (Methodist Episcopal). Stone quarrying and the manufacture of grindstones, pumps, nuts and bolts, topeodes, and foundry products are the chief industries. The village owns its water works and electric light plant. Pop., 1910, 2609.

BEREA. See **BEREFA**.

BEREA COLLEGE. A coeducational institution at Berea, Ky., in the edge of the Cumberland Mountains, organized as a school in 1855. Its great distinction has been in discovering the need and worth of the people of the southern mountains and in adapting educational methods to the extreme rural conditions of this vast region, to which it has given the name "Appalachian America." The institution embraces a college of standard rank, a normal school, an academy, a group of vocational schools, and a foundation school, the combined faculties with executive officers numbering 87. The students come chiefly from the mountain sections of Kentucky, Tennessee, North Carolina, and the Virginias, numbering, in 1913, 1430 (104 collegiate, 310 normal), besides 306 pupils in the model schools. An extension service of traveling libraries and lectures and industrial exhibits is also maintained. Berea is a religious school, exempt from sectarian control. It has an educational plant, buildings, forest reserve, etc., valued at \$650,000, and an endowment of approximately \$1,000,000. The library numbers 26,000 volumes. The students can pay only small fees, and the extension service is almost wholly gratuitous, so that from \$50,000 to \$75,000 has to be raised each year to carry on the work. From 1867 colored teachers also were trained at Berea. This was interdicted by state law in 1904 and the work transferred to an independent school, the Lincoln Institute of Kentucky, near Shelbyville.

BEREA GRIT. See **STONE**.

BERE'ANS. An almost extinct sect of

Christians, who originated in Scotland in the eighteenth century. Their name is derived from their claim to imitate the Bereans (Acts xvii 11) in accepting only the Bible as authority. The founder of the Bereans was the Rev. John Barclay, a native of Perthshire (born 1734, died 1798). From him they also received the name of Barclayans. They believe that the knowledge of God's existence and character is derived from the Bible alone, and not from reason or nature, that the Psalms of David do not relate to David at all, but exclusively to Christ, that assurance is of the essence of faith, and that unbelief is the unpardonable sin. In the ordinary points of doctrine they are Calvinistic. See **BARCLAY**, JOHN.

BEREK-BOSZORMENY. See **BOSZORMENY**.

BERENDT, b'ä'rent, KARL HERMANN (1817-78). A German ethnologist. He was born in Dantzig, studied medicine, taking his degree at Königsberg, and in 1843 settled as a practicing physician at Breslau, where he also lectured at the university. In 1851 he came to America, his political attitude during the preceding revolutionary period having rendered his stay in the fatherland undesirable. He went first to Nicaragua, where he devoted himself to the study of ethnography and natural history, and then, from 1855 to 1862, lived at Vera Cruz, in Mexico. Retiring from the practice of medicine, he devoted himself entirely to scholarly pursuits and made a special study of the ethnology and linguistics of the Mayan tribes. In 1863 he came to the United States and soon afterward made a journey to Yucatan, at the request of the Smithsonian Institution, which published the results of his investigations in its report for 1867. Two years later he was in Tabasco, Mexico, searching the ruins of Ceutla, and in 1874 went to Guatemala and settled at Coban, where his time was divided between the study of the Mayan dialects and the raising of tobacco. Besides numerous contributions to scientific periodicals, he published, among other works, *Analytical Alphabet of the Mexican and Central American Languages* (1860), *Los escritos de Don Joaquín García Icazbalceta* (1870), *Los trabajos lingüísticos de Don Pro Pérez* (1871), *Cartilla en lengua Maya* (1871), *Los indígenas de la América central y sus idiomas* (1878).

BERENGAR, b'ä'ren-gär, I (?-924). King of the Lombards from 888, and Roman Emperor after 915. He was originally Margrave of Friuli, and on the death of Charles the Fat (q.v.), in 888, he was crowned King of the Lombards. In the following year, however, he was defeated by Guido, Duke of Spoleto, who succeeded him as King. On the death of Lambert, son of Guido, in 898, Berengar was restored to his title, and in 915 he was crowned Emperor. Throughout his reign the nobles of Tuscany and Spoleto were opposed to him and summoned to them aid northern princes who aspired to the imperial dignity. In despair, Berengar called in the dreaded Hungarians, and for this act, probably, he was assassinated in 924. Consult Gregorovius, *Rome in the Middle Ages*, vol. II (London, 1895).

BERENGAR II (?-966). The grandson of Berengar I and King of Italy after 950. His enemies summoned to their aid Otto I of Germany, and Berengar was obliged to become his vassal. After the death of Albeic, the ruler of Spoleto and patrician of the Romans, Berengar became very powerful. Again his enemies summoned Otto. Berengar was dethroned in 961.

and imprisoned at Bamberg, where he died in 966

BERENGARIA, ba'rên-ga'ri-a (?-c 1230) The Queen of Richard the Lion-hearted, King of England. She was the daughter of Sancho VI of Navarre and was betrothed to Richard soon after his succession to the throne, joining him in March, 1191, at Reggio in southern Italy, where the English King had arrived on his way to the Holy Land. She was married to him on May 12 at Limasol in Cyprus and accompanied him to Acre, where the Queen remained while Richard was carrying on his campaigns against the Saracens. The English sailed from Acre in October, 1192. While Richard was a prisoner in Germany, Berengaria took up her residence in Poitou. After Richard's release from captivity an estrangement arose between him and Berengaria, and it is doubtful whether she ever rejoined the King. She died at Le Mans, in Maine, soon after 1230, and was buried in the church of Pietas Dei at Espan, which she had founded. Berengaria was of remarkable beauty and exceedingly accomplished for her age.

BERENGARIUS OF TOURS, tūr (c 1000-1088). A French scholastic theologian. He was born at Tours and became a canon there. About 1040 he became preceptor of the school of St Martin in Tours, and archdeacon of Angers. Here he continued to deliver his metaphysico-theological prelections and drew upon himself the charge of heresy, in reference to the doctrine of transubstantiation. He held the doctrine of Scotus Erigena, that the bread and wine in the sacrament of the Eucharist remained bread and wine, and that the faith of the believer who recognized their symbols meaning transformed them only subjectively into the body and blood of Christ. This interpretation was condemned by Pope Leo IX (1049-50), and also by King Henry I of France. In 1054 he retracted his opinion before the Council of Tours, but what Berengarius meant by "retraction" it is not easy to see, for he immediately returned to his conviction and recommenced the advocacy of it. For this he was cited to appear at Rome, where he repeatedly abjured his "error," but never seems to have really abandoned it. Hildebrand, who was then Pope, treated him with great moderation, and at last, when he discovered how hopeless it was to bind down Berengarius by abjurations or declarations, he conceived it best to let him alone. Harassed and weakened by the attacks of the orthodox party, headed by Lanfranc of Canterbury, Berengarius finally retired to the Isle of St Cosmos, near Tours, in 1080, where he spent the last years of his life in devotional exercises. He died Jan. 6, 1088. The greater number of his works are lost. Such as are extant have been collected and published by A. F. and F. T. Vischer (Berlin, 1834). Chief is his *De Sacra Cena*. Also in Migne, *Pat. Lat.* CLXXVIII. Cf. H. Sunderdorf, *Berengarius Turonensis oder seine Sammlung ihn betreffender Briefe* (Berlin, 1850). Consult Harnack, *History of Dogma* (Boston, 1895), Gore, *Dissertations on Subjects connected with the Incarnation* (New York, 1895).

BERENICE, bër'è-nî'sè (named in honor of Berenice, Gk. Βερενίκη, *Bereniké*, mother of Ptolemy II). An ancient town of Egypt, situated on a bay of the Red Sea, in about the same latitude as Assuan. It was founded by Ptolemy II, Philadelphus, in 275 B.C., as an emporium for

the trade with Arabia and India. It was still very important in Roman times, as temple ruins bearing the name of Tiberius attest. The modern town is called Sikket Bender el-Kebir, and now, owing to the formation of a sand bar at the entrance of the harbor and the filling up of the harbor itself, the port is practically accessible only to small boats, the valley in which it is situated is called Wady Sakket. The old fortified caravan road of about 10 days' journey through the land of the Bisharin (q.v.) and Abadbe is still traceable. The deserted ancient emerald mines north of Berenice were discovered by Bruce.

BERENICE (Bérnice), the name of five Egyptian and two Jewish princesses. 1 The daughter of Lagos and wife, first of a Macedonian soldier and later of Ptolemy Soter. She had come to Egypt as the attendant to Eurydice, Ptolemy's bride, but her son Ptolemy Philadelphus was made heir over Eurydice's children. 2 The daughter of Ptolemy Philadelphus and wife of Antiochus Theos of Syria. She is referred to in Dan xi 6 ff. 3 The daughter of Magas, King of Cyrene, and wife of Ptolemy III, Euergetes. The name *Coma Berenices* has been given to a certain constellation to commemorate the dedication of her hair while her husband was absent in Syria. The mysterious disappearance of her hair from the temple of Venus, where it was dedicated, led Conon of Samos to say that it had been carried to heaven. 4 The daughter of Ptolemy X. She was murdered by her second husband, Alexander II. 5 The daughter of Ptolemy Auletes and the eldest sister of Cleopatra. 6 The daughter of Salome, sister of Herod I. By Aristobulus she was mother of Herod Agrippa I. 7 The eldest daughter of Herod Agrippa I, sister of Agrippa II, and wife of her uncle, Herod, King of Chalcis. After the death of her husband (48) she married Polemon, King of Cilicia, but soon deserted him and returned to live with her brother. She was accused by court scandal of incest with him, and it was before the pair thus besmirched that Paul made his defense (Acts xiv 23, xxvi 30). Her younger sister, Drusilla, she made unhappy by her petty tyranny. In 68 she attracted the attention of Titus, later the Roman Emperor, who received her when she came to Rome in 75. Their contemplated marriage was, however, so unpopular that Titus gave it up and discarded her (79). Her death was at a time and place unknown.

BERENSON, BERNHARD (1865-) An American writer and art critic. He was born at Wilma, Russia, whence his parents emigrated to the United States. He received his education at the Boston Latin School and at Harvard University, graduating with the degree of A.B. in 1887. He then proceeded to Italy, with the avowed purpose of becoming an authority on Italian painting. In this he succeeded to such an extent that he is now regarded as probably the most eminent authority on the subject, and his attributions of pictures are generally accepted. He took up his residence in Italy at Settignano, near Florence. His principal works, besides many contributions to French, Italian, German, and English art periodicals, are *Venetian Painters of the Renaissance* (1894), *Lorenzo Lotto A Study in Constructive Art Criticism* (1895), *Florentine Painters of the Renaissance* (1896), *Central Italian Painters of the Renaissance* (1897), *Study and Criticism of*

Italian List (1901, 2d series, 1902), *Drawings of Florentine Painters* (1903), his masterpiece, *North Italian Painters of the Renaissance* (1907), *A Siennese Painter of the Franciscan Legend* (1910). Most of his books were published in the United States and have gone through many editions. His wife, MARY LOGAN BERENSON, is also a well-known writer and critic on Italian painting.

BERESFORD, bér'es-fôd, LORD CHARLES WILLIAM DE LA POER (1846-) A British naval officer and parliamentarian, born in the county of Waterford, Ireland. He was educated at private schools and entered the school ship *Britannia* as cadet in 1859. He was made a sublieutenant in 1866, lieutenant in 1868, commander in 1875, captain in 1882, and rear admiral in 1897. In 1896-97 he was aide-de-camp to Queen Victoria. At the bombardment of Alexandria in 1882 he was in command of the gunboat *Condor* and succeeded in silencing one of the most formidable of the Egyptian batteries, under circumstances demanding the utmost skill and bravery. After the bombardment, and during the temporary occupation of the city, he acted as chief of police. In 1884 he served with the Nile column of the Gordon Relief Expedition, and commanded the *Safieh*, whose action, handicapped by a temporarily repaired boiler, saved the entire column. He was in command of the naval brigade at the battles of Abu Klea, Abu Kru, and Metemneh. He served as member of Parliament for Waterford (1874-80), East Maylebone (1885-90), and York (1897-1900), which latter seat he resigned to go into active service. In 1902 he was a member of Parliament for Woolwich, being at that time on the retired list. In 1898 Beresford went to China as the representative of the Associated British Chambers of Commerce, and returned by way of the United States, where he made important speeches advocating the "open-door" policy in China and a closer union of the United States, England, and Germany with regard thereto. He was commander in chief of the Mediterranean fleet in 1905-07, and, with the rank of admiral, of the Channel fleet in 1907-09. He retired owing to friction with the Naval Board. The trouble came to a head through his outspoken criticism of the policy of Sir John (now Lord) Fisher, First Lord of the Admiralty, and of his colleague, Sir Percy Scott. He found vent for his strong views on British naval affairs in his book *The Betrayal* (1912), in which he condemned the shipbuilding policy of Great Britain from 1902 to 1909. At the request of the British government the first edition was withdrawn and its criticisms modified. The publication of this book led to the formation of the British Naval War Staff. Lord Charles took a firm anti-home rule stand on the Ulster question. He was created G.C.V.O. in 1906 and G.C.B. in 1911. His publications include *Life of Nelson and His Times* (London, 1898-1905), *The Break-up of China* (1899), *The Betrayal, being a Record of Facts Concerning Naval Policy and Administration from the year 1902 to the Present Time* (London, 1912), and many minor articles and essays on naval and imperial questions, besides his numerous contributions to the *Times*.

BERESFORD, WILLIAM CARR, VISCOUNT (1768-1854) A British general. He was the natural son of the first Marquis of Waterford,

and was born Oct. 2, 1768. He entered the army in 1785. After serving in India and elsewhere, he bore a conspicuous part in the reconquest of the Cape of Good Hope in 1806, and subsequently, with the rank of brigadier-general, was with the British filibustering force that surprised and took possession of Buenos Aires. The population, however, on seeing the smallness of the force, banded together under the leadership of the French Chevalier de Liniers, and after a desperate resistance made the survivors prisoners of war. After six months' imprisonment Beresford escaped and reached England in 1807. In August, 1808, he joined the British army in Portugal and proceeded into Spain with Sir John Moore's force, was present at the battle of Corunna, and, after covering the embarkation of the troops, returned with them to England. Ordered a second time to Portugal, in February, 1809, to take command of the Portuguese army, he succeeded in improving its discipline so greatly as soon to render it highly efficient for active service. Appointed marshal of Portugal in March, at the head of 12,000 men he attacked the French in the north of that kingdom, crossed the river Douro, drove Loison's division to Amarante, and uniting with the force under Sir Arthur Wellesley, pursued it in its retreat till it was utterly disorganized. For his services at the battle of Busaco, Sept. 27, 1810, Beresford was nominated a Knight of the Bath. He commanded at the bloody battle of Albuera, May 16, 1811, and for the victory there gained over Soult he received the thanks of Parliament. He was present at Badajoz, at Salamanca, where he was severely wounded, and at various engagements in the Pyrenees. In 1814 he distinguished himself at the battle of Toulouse. In 1814 he was created Baron, and in 1823 Viscount, Beresford. He also bore the Spanish title of Duke of Elvas, and the Portuguese, of Conde de Trancoso. He received rich rewards from the British government, and in the Wellington administration (1828-30) he was appointed to the high office of master-general of the ordnance.

BERESINA, bér-vá'zè-nà A river of Russia, tributary of the Dnieper, rising in the northern part of the government of Minsk, in a low, marshy region, near the town of Beresina (Map Russia, E 4). It flows in a southeasterly direction and joins the Dnieper after a course of about 335 miles. It is navigable for the larger part of its course, but its commercial importance has considerably decreased on account of the adjacent railway lines. The Beresina is connected by canal with the Dvina.

The Beresina is memorable for two military passages. The first one was effected by the troops of Charles XII of Sweden in June, 1708, for the purpose of invading Little Russia. The second and the more famous occurred on Nov. 26-29, 1812, during Napoleon's retreat from Moscow. On the 26th and 27th the corps of Oudinot, Ney, a part of the artillery, and the Guards succeeded in crossing the river. On the 28th the Russian artillery began to bombard the bridge, and in the panic which ensued among the crossing troops it is estimated that over 10,000 Frenchmen, many of whom were sick and wounded, were lost, and that about 15,000 were made prisoners.

BERETTA See COSTUME, ECCLESIASTICAL.
BERETTINI, bér'et-tè'nà, PIETRO See CORTONA, PIETRO DA.

BEREZIN, bér'já'zen, ILYA NIKOLAYEVICH (1818-96). A Russian Orientalist and traveler. He was born in the government of Perm and studied Oriental philology at the University of Kazan, receiving in 1841 the degree of master of Oriental philology. In 1846 he was appointed professor at the University of Kazan and after 1848 spent some time in Siberia, where he continued his studies in philology and ethnology. From 1842 to 1845 he held, from the University of Kazan, a fellowship, on which he traveled to Persia, Asiatic Turkey, and Egypt. In 1855 he was appointed extraordinary professor of the Turkish language and literature at the University of St. Petersburg. His more important works (in Russian) include *Library of Oriental Historians* (3 vols., 1849-51), *Tour through Daghestan and Trans-Caucasia* (1850), *A Grammar of the Persian Language* (1853), *The First Mongol Invasion of Russia* (2 vols., 1852), *Popular Turkish Sayings* (1857). In French he wrote *Recherches sur les dialectes Musulmans* (1848-53). He also edited Rashid Ed-Din's *History of the Mongols*, vols. I-III (1858-65), and the *Russian Encyclopedic Dictionary* (16 vols., 1872). He also worked on, but did not complete, a *Turkish Anthology* and a *New Russian Encyclopedic Dictionary* (8 vols.).

BEREVOZ, bér'yá'zof. A district town of the Siberian province of Tobolsk, situated on the Sosva, a branch of the Obi, about 700 miles from Tobolsk. It lies in a rough country, covered with thick forests, and has a severe climate. Among the noted personages exiled to this place in the eighteenth century were Menshikov, who died here in 1729, and Dolgoruk, Pop, 1897, 1073.

BERG, bér'k. A former duchy of Germany, now comprised in Prussian Westphalia, and situated on the Rhine between Cologne and Coblenz. Anciently a countship, it became a duchy in the fourteenth century. By the Treaty of Cleves in 1666 it was placed under the control of Neuburg. Napoleon bestowed the duchy on Murat in 1806, but in 1815 it was ceded to Prussia by the Congress of Vienna.

BERG, FRIEDRICH WILHELM REMBEET, generally known as FEODOR FEODOROVITCH BERG (1793-1874). A Russian field marshal. He was born at the castle of Sagnitz, Livonia. He became a captain in the Russian army after the entry of the Allies into Paris, was advanced to the rank of colonel, and from 1822 to 1824 commanded several expeditions against the Kirghiz tribes. As major general he took a conspicuous part in the Russo-Turkish campaign of 1828-29 and in that against the Poles in 1831. He was successively advanced to the rank of lieutenant general, general of infantry and quartermaster general on the Imperial General Staff. In 1849 he was Minister Plenipotentiary of the Russian government to the court of Austria. During the Crimean War he defended Revel and Esthonia against the Allied fleets, and in 1854, as governor general of Finland and commander in chief of the troops stationed there, he repulsed (August 8-10) a vigorous attack upon Sveaborg. For this service he was elevated to the nobility in 1856. Owing to his strenuous opposition to a liberal policy for Finland, he was compelled, in 1861, to resign his position as governor general of that province, and was transferred in the same capacity to Poland in 1863, where he soon succeeded in quelling the insurrection. He became field marshal in 1865 and in 1872, in com-

memoration of his 60 years' service as an officer, received the medallions of the reigning Czar and his predecessor, set in gems. Berg was for years a member of the Czar's advisory council and president of important military organizations.

BERG, bér'g, JOSEPH FREDERICK (1812-71). A Dutch Reformed clergyman, born at Grace Hill, Antigua, West Indies, June 3, 1812. He was the child of Moravian missionaries, and so was educated by Moravians in England and the United States, to which country he came in 1825. He served in the ministry of the German Reformed church, 1835-52, but from that date on was in the Dutch Reformed church, and from 1861 till his death, July 20, 1871, was professor of didactic and polemic theology in the theological seminary in New Brunswick, N. J. His reputation rests upon his intense opposition to the Church of Rome as a theological, ecclesiastical, and political organization. Many are his translations and original works upon this theme. The best known, perhaps, is his translation of the *Synopsis of the Moral Theology of Peter Dens*, as *Prepared for Romish Seminars and Students of Theology* (Philadelphia, 1842, new ed. 1856). He was a man of wide learning and considerable controversial power. For a sketch of Berg, with bibliography, consult Cowwin, *Manual of the Reformed Church in America* (New York, 1870).

BERG-ADDER. The South African puff-adder (q.v.).

BERGAGNE, bér'gá'n'y', ABEL (1838-88). A French Sanskrit scholar. He was born at Vimy, Aug. 31, 1838, and died Aug. 6, 1888. His name is a prominent one in the field of Sanskrit philology, in which he won distinction, especially by his contributions to the interpretation of the Veda. He was professor of Sanskrit at the Sorbonne, and among his published works, *La religion védique* (3 vols., Paris, 1883) is the most important. He made excellent translations of the Sanskrit dramas *Nágánda* (Paris, 1870) and *Sacountalá* (Paris, 1884).

BERGAMA, bér'ga-ma (anciently, Gk. Πέργαμος, Pergamon). A city of Asiatic Turkey, viayet of Smyrna, situated in a beautiful and fertile valley, on the right bank of the Caicus, about 40 miles north-northeast of Smyrna (Map Turkey in Asia, B 3). In early times the city was the capital of the Kingdom of Pergamus (q.v.). Many ruins still exist to attest the former magnificence of Bergama. The modern town contains several kháns and numerous mosques. There is trade in wool, cotton, and opium, and leather is manufactured. The population is about 7500, including a number of Greeks, who have established excellent schools.

BERGAMASCO, bér'ga-mas'kò, IL. See CASTELLO, GIOVANNI BATTISTA.

BERGAMO, bér'ga-mò (the town on the hill, from Celt *brig*, Ger *Berg*, hill). A city, the capital of the province of Bergamo, north Italy, 33 miles northeast of Milan (Map Italy, D 2). It consists of two distinct sections, the upper city and the lower city, connected by the Via Vittorio Emanuele, an avenue of chestnut trees. The appearance of the upper city, with its hilly streets, its ancient buildings, and its girdle of lofty ramparts, now turned into promenades, is picturesquely medieval, that of the city on the plain, with its factories and shops, is entirely modern. In the old city, grouped around Garibaldi Place, which contains a bronze statue

of the Liberator, are mediæval palaces, one of which is now the seat of Victor Emanuel Institute of Technology, with a fine museum. The first story of another palace is an open colonnade, containing a statue of Torquato Tasso, and in this palace is a civic library of 150,000 volumes. In addition there are the cathedral, the interior of which was restored in the seventeenth century, the beautiful twelfth-century church of Santa Maria Maggiore, which contains the monuments of the musicians, Donizetti and Mayr, the Colleoni chapel, with its art treasures, and the city hall. In the new town there are monuments to Cavour, and Victor Emmanuel II, a number of churches, and an art school, the Accademia Carrara, in which there is an important collection of paintings. In industry and commerce Bergamo is one of the busiest cities in Italy, and was the first to introduce the culture and the manufacture of silk. Other manufacturers are those of clothing, hats, iron implements, pottery, and organs. The railway put an end to the importance of the once famous fair of San Alessandro. The ancient Bergamum was a Gallic settlement, which received civic rights from Caesar. The town became part of the Venetian dominion in 1428. Pop., 1881, 40,000, 1901, 47,772, 1911, 53,857.

BERGAMOT (from the Italian city *Bergamo*), *Citrus aurantium bergamia*. A variety of lime or lemon with a very aromatic rind, yielding, either by expression or distillation, the volatile oil of Bergamot (known in the perfumery trade as *essence of bergamot*). The oil is a product chiefly of southern Italy and is much used in perfumery. It is a thin, greenish liquid with a bitter taste. Its peculiar aromatic odor is due probably to linalol acetate, $\text{CH}_3\text{COOC}_{10}\text{H}_{19}$, of which it contains about 20 per cent.

The name "bergamot" (evidently a corruption of Turk *beg armada*, a lord's pear) is also applied, in Great Britain and upon the continent of Europe, to various kinds of pears, to which, however, no common distinctive character can be assigned. The proper bergamot pear is a flattish, rough-skinned pear with a long stalk. It has a very soft and juicy pulp of an extremely pleasant flavor and is esteemed as one of the best dessert pears. Metzger, in his work on the pomaceous fruits of the south of Germany (Frankfort, 1847), described no less than forty-seven kinds of pears that bear the name of "bergamot," although some of them are very different from one another.

Finally, "bergamot" is also the popular name of several labiate plants, as in England of *Mentha citrata*, and in the United States of *Monarda fistulosa* and *Monarda didyma*.

BERGEDORF, bër'c'e-dôrf. A town of northern Germany, situated on the Bille, 10 miles southeast of Hamburg, and connected with the Elbe by a navigable canal. It gives its name to the surrounding agricultural territory, and its most important industry is the manufacture of glass and enameled ware. Lesser productions are cane chairs, brushes, and buttons, and there are tanneries and brick yards. The town is the seat of a district court and has a *real schule* and an institution for the blind. It is the birthplace of the composer, Johann Adolf Hasse. Pop., 1890, 6957, 1900, 10,243, 1910, 14,907. Bergedorf was held jointly by Lubeck and Hamburg until 1867, when Lubeck resigned its rights to Hamburg on payment of 200,000 thalers.

BERGEN, bër'gen (Ger *Berg*, hill, referring to its position). A seaport city of Norway, forming a separate prefecture (amt), situated on a promontory at the head of a deep bay, called Vaagen, on the Atlantic coast, in lat 60° 24' N, long 5° 18' E (Map Norway, A 6). The land area is 5 square miles. Except on the mountainous northeast side, Bergen is surrounded by water. It is walled, and additionally protected by several forts, now used merely as barracks and depots for supplies. The entrance to the harbor is dangerous without a pilot, but within the harbor is safe and commodious. Though Bergen lies farther north than St Petersburg, its climate is very mild and moist, winter being of short duration. The temperature is seldom below 18° F, but the rainfall is heavy, averaging 72 inches. Bergen is built in a semi-circular form round the harbor and has a picturesque appearance from the sea. It is generally well and substantially built, the older houses being of wood, and the streets being intersected by open spaces as a precaution against fires. A portion of the city, burned in 1855, has been rebuilt very regularly. Electric tramways traverse the principal streets. Its chief buildings are the cathedral, the naval academy, the public library with 90,000 volumes, the observatory, and the general museum. Bergen's principal industries are shipbuilding and barrel making. The city's chief importance is derived from cod fishing, it being the great fish market of Norway. Twice a year the Norlandmen come to Bergen with their fish. In March and April several hundred vessels are to be seen in the harbor at once, laden with the produce of the winter fishing and with skins and feathers. The summer fishing is not quite so productive. Codfish for salting, fish roe, blubber, skins, herrings, and cod-liver oil are the chief exports, amounting to two-fifths those of the entire country. A fair, attended by fishermen of all nations, is annually held. A fishery museum was established here in 1881. The chief imports are brandy, wine, corn, cotton, woollens, hemp, sugar, coffee, etc. Bergen is second only to Christiania in the export and shipping trade of Norway, and her citizens own one-third of the shipping of the country. The United States is represented by a consul. There is a marine biological station here. Bergen was founded about 1070, by Olaf Kyrre, who made it the second city in his kingdom, and it was soon raised to the first rank. The first treaty entered into by England with any foreign nation was made with Bergen in 1217. But the English and Scottish traders were soon displaced by the merchants of the Hanse towns, who made Bergen one of their four depots, compelled the fishermen to trade here exclusively, and continued to exercise and abuse their monopoly until their supremacy was broken by an act issued by Frederick II of Denmark in 1560. In 1763 their last warehouse fell into the hands of a citizen of Bergen. Pop., 1860, 28,758, 1890, 53,684, 1901, 72,251, 1910, 76,867.

BERGEN. The capital of the island of Rugen, Pomerania, Prussia, and of the neighboring islands (Map German Empire, E 1). It has a fine twelfth-century Romanesque church, with a lofty tower. There is a museum of local antiquities in the Rathaus. A fine view is obtained from the Rugard, 320 feet high, near the town, this hill is crowned by the ruins of a fortification destroyed in 1316 and by a com-

memorative tower to Arndt the poet Bergen has domestic and fishing industries, and manufactures leather and pastry Pop, 1900, 4005, 1910, 4200 Consult Haas, *Geschichte der Stadt Bergen auf Rugen* (Bergen, 1893)

BERGEN, bër'gen, JOSEPH YOUNG (1851-) An American scientist, born at Red Beach, Me He graduated in 1872 at Antioch College (Yellow Springs, Ohio), and was for a time successively a member of the Ohio Geological Survey and professor of natural sciences in Lombard University (Salsbury, Ill.) In 1883 he became principal of the Peabody (Mass.) high school and subsequently an instructor in the English high school of Boston (1889-1901) His publications include a text-book of *Physics* (with Prof E H Hall, 1891), *Elements of Botany* (1896), *Principles of Botany* (with B M Davis, 1906), *Practical Botany* (with O W Caldwell, 1911), *Introduction to Botany* (id, 1914)

BERGENGREN, ANNA (FARQUHAR) (1865-) An American novelist Her books include *A Singer's Heart* (1897), *The Professor's Daughter* (1899), *Her Boston Experiences* (1900), *The Devil's Plough* (1901), *Her Washington Experiences* (1902), *An Evans of Suffolk* (1904) She married the cartoonist, Ralph Wilhelm Bergengren, in 1900

BERGEN-OP-ZOOM, bër'ën-öp-zôm' (Dutch, 'the hill-fort on the Zoom', Ger *Berg* hill) A town in the province of North Brabant, Netherlands, about 20 miles north of Antwerp, on the river Zoom, at its mouth in the east branch of the Scheldt (Map Netherlands, C 3) It contains several fine parks, an old castle, the old Gothic "Great Church," the Margrave's palace, which has been converted into barracks, and the townhall Bergen-op-Zoom's industries include the making of cloth, pottery, and bricks, and it raises and exports considerable quantities of oysters and anchovies The town is connected by a canal with Antwerp and has railway communication with other cities Bergen-op-Zoom originally belonged to the margravate of Stryen It was taken by the Dutch in 1576 and successfully held against the Spanish all through the War of Independence, during which it sustained five sieges It was strongly fortified by the engineer, Coehoorn, but was, nevertheless, taken by the French under Lowendal in 1747 In 1794 it capitulated to the French under Pichegru Pop, 1899, 13,668, 1910, 15,000

BERGENROTH, bër'ën-rôt, GUSTAV ADOLF (1813-69) A German historian He was born at Oletzko (East Prussia) and studied at the University of Königsberg He entered the diplomatic service, from which he was dismissed for participation in the Revolution of 1848, and in 1850-51 was in America In 1857 he settled in England, there to pursue in the state archives investigations concerning the times of the Tudors To this end he also visited Simancas, Spain, and in 1862-68 published in London his *Letters, Dispatches, and State Papers Relating to the Negotiations between England and Spain* (3 vols.)

BERGER, bër'zhâ', GEORGES (1834-1910) A French critic and essayist, born in Paris and educated at the Lycée Charlemagne His early success as proprietor of a vineyard made it possible for him to give undivided attention to his chief interest, the study of art Widely versed as he came to be in everything that would be covered

under the head *objets d'art*, his services were found especially valuable in connection with the great exhibitions of 1867, 1878, and 1889, for their arts sections he was virtually responsible He was professor of aesthetics and the history of art in the National Fine Arts School during a long period, acted as an officer of public instruction, and served as a member of the Chamber of Deputies from the department of the Seine It was through his influence that the French government was induced to concede the Pavillon de Marsan in the Louvre to the Society of the Central Union of Decorative Arts Berger was chosen a member of the Institute of France, the Higher Council of Fine Arts, and the Council of National Museums He made many contributions to the *Journal des Debats* and wrote an important work called *The French School of Painting from its Origin down to the Reign of Louis XIV* (1879)

BERGER, bër'ër, LUDWIG (1777-1839) A German pianist and composer, born in Berlin, where he studied with Gurrlich and Clementi He followed Clementi on his concert tours to St Petersburg (1805), Stockholm, and London (1812) Afterward he returned to Berlin, where he became the instructor of Mendelssohn, Taubert, Henselt, and many other rising artists of the day His pianoforte works, such as the *Toccata*, the *Studies*, and the *Rondo*, are still popular

BERGER, PHILIPPE (1848-) A French Orientalist, born at Beaucourt, Alsace He studied at Strassburg and Paris and was assistant librarian of the Institute and professor of Hebrew at the Sorbonne He succeeded Renan as professor of Hebrew, Syriac, and Chaldean at the College de France He published *L'Ecriture et les inscriptions sémitiques* (1880), *L'Arabe avant Mahomet* (1885), *Histoire de l'Ecriture dans l'antiquité* (1892), *Etudes sur les renseignements fournis sur le gnosticisme par les Philosophoumena* (1893), *Le Musée Saint-Louis de Carthage, antiquités phéniciennes* (1900) Numerous memoirs and articles on archaeology and Phœnician inscriptions in scientific magazines are by him Berger's later writings include *Un nouveau tarif des sacrifices a Carthage* (1910), and *Le culte de Mithra a Carthage* (1912)

BERGER, VICTOR L (1860-) An American Socialist leader and editor He was born in Nieder Rebbuch, Austria-Hungary, and was educated in a gymnasium and at the universities of Budapest and Vienna After his family's removal to the United States he first worked at various trades in Milwaukee, then became a teacher in the public schools Later his literary ability and interest in the cause of Socialism brought him into prominence From 1892 to 1896 he was editor of the *Milwaukee Daily Vorwaerts*, and later he edited *Wahrheit*, a German Socialist paper, the *Social Democratic Herald*, and, as editor in chief, the *Milwaukee Leader* (a Socialist daily) Berger was a delegate to the People's Party Convention at St Louis in 1898, and helped to found the Social Democracy and the Social-Democratic party in the United States By the Social-Democrats he was chosen in 1904 candidate for mayor of Milwaukee and also for member of Congress In 1911, after a year as alderman in Milwaukee, he was again nominated for Congress, and this time was elected, the first Socialist ever chosen to a seat in the House of Representatives In addition

to editorials, his writings include numerous pamphlets and essays on social questions

BERGERAC, bâi'zhrak' (*Brageracum* of the Middle Ages) A town in the department of Dordogne, France, about 25 miles south-south-west of Périgueux (Map France, S, E 4) It is situated in a fertile plain on the right bank of the river Dordogne, which is here crossed by a fine bridge of five arches It has a fine Gothic church, Notre Dame, built in 1856, a court-house, and is the seat of a Protestant Consistory Its industries comprise brewing, tanning, flour and paper milling, extensive production of serges, iron, copper ware, hats, and hosiery It has a large trade in fish, wine, brandy, etc., being in fact the entrepôt of trade in the department, which is celebrated for its wine, known as Bergerac, or "small champagne" Pop., 1901, 13,966, 1906, 15,623, 1911, 16,162 Bergerac was taken and fortified by the English in 1345, who, after being driven out by Louis of Anjou, again got possession of it and retained it until 1450 The town suffered greatly in the religious wars It was dismantled by Louis XIII in 1621

BERGERAC, bâi'zhrak', CYRANO DE A tragedy by Edmond Rostand, in five acts, based on the life of Savinien Cyrano de Bergerac and the stories concerning him The title rôle was first played in Paris, by Coquelin, at the Porte Saint-Martin Théâtre, on Dec 28, 1897, and in New York, by Mansfield, on Oct 3, 1898 See ROSTAND

BERGERAC, SAVINIEN CYRANO DE (1619-55) A French novelist and dramatist, important in the development of realism in the novel and on the stage He was born in Périgord and educated at the Collège Beauvais, whose principal was the butt of his satire in *Le pédant joué* (1654) Later he derived from Gassendi an interest in science, and from Campanella some astrological lore He divided his young manhood between literature and gay adventure, served two years in the Guards (1639-41), and was twice wounded He had through life the reputation of a reckless duelist He traveled in England and Italy, possibly also in Poland He died as the result of an accident after an illness of 14 months, during which it is claimed that his manuscripts were mistreated and altered by the Jesuits He had published during his short and restless life a volume of letters largely satirical, a political satire on Mazarin as *Le ministre d'état flambé*, *Agrippine*, a tragedy (1653), and *Le pédant joué*, a comedy (1654) His most famous book, *Histoire comique des états et empires de la lune*, appeared in 1656 (possibly in 1650), followed in 1661 by *Histoire comique des états et des empires du soleil* These books were suggested indirectly by Lucian, Dante, and Ariosto, but immediately by the English Godwin's *Man in the Moon* (1638), and Wilkins's *Discovery of a New World*, i.e., the moon (1638) Thus Bergerac was one of the first in France to show the influence of English fiction His stories furnished suggestions to Fontanelle, Voltaire, Restif de la Bretonne, Edgar Allan Poe, and Jules Verne, undoubtedly, also, to Swift in the inferior part of *Gulliver's Travels*, but the only editions known have evidently passed through a bungling censorship, probably that of the Inquisition, for Bergerac was a freethinker, who had dared to write "Reason alone is my queen," even in the day of Bossuet What is left is verbally orthodox, but mockingly ironical Even so, the books reveal a

mind of great originality and power Both Comic Histories involve much of the science of the day, much superstition ironically introduced, a keen satire on the Inquisition in Galileo's case, a defense of Copernicus, many fine descriptive passages, and some startling forecastings of modern discoveries (like the phonograph), of a universal language (Volapuk, Esperanto), and of the Wagnerian tone-drama Through all runs a gasconading humor His own large nose is justified by the moon-children, who tell him that it is the infallible sign of "a witty, courteous, affable, generous, open-minded man" Such little personal touches and a rare power of relating the impossible with logically and mathematically consistent detail give an air of probability to his most whimsical fancies, as was the case in English literature with both Swift and Defoe His narratives are planless, and as works of literary art their place is low, but Bergerac was the first to use the novel to teach natural science, and so was a forerunner of the encyclopædists of the next century, and of Jules Verne and H G Wells in the nineteenth and twentieth, just as in the drama he had been first to break definitely with the unities in tragedy, which were not to be wholly done away till 1830 His *Pédant* is almost the first French comedy of character in prose The *Comic History of the States and Empires of the Moon and of the Sun* is reprinted with a scholarly introduction by Paul Lacroix (Bibliophile Jacob, 1858) There are two English contemporary translations and a modern partial one, called forth by the popularity of Rostand's (qv) drama, *Cyrano de Bergerac* (1892) Consult the *Life and Study*, by Biun (1893) Bibliographical details and an appreciative critical essay are in Kortring's *Geschichte des französischen Romans in XVII Jahrhundert*, vol II, pp 160-205 (Leipzig, 1885-87)

BERGERAT, bâi'zhra', EMILE (1845-) A French author He was born in Paris and was educated by the Jesuits and at the Lycée Charlemagne He first devoted himself to painting and afterward to journalism He became widely known through his *Biographies contemporaines* (1875), his biography of Théophile Gautier (1884), and above all by his admirable *feuilletons* in *Figaro*, to which journal, under the pseudonym of "Caliban," he regularly contributed caricature sketches These *feuilletons* have been collected under the following titles: *Vie et aventures du Sieur Caliban* (1886), *Le livre de Caliban* (1887), *Figarismes de Caliban* (1888), *Le rire de Caliban* (1890), *Les soirées de Caliban* (1892) He also published *Poèmes de la guerre* (1871), a novel, *Familias malgré lui* (1883), a dramatic poem, *Enguerlande* (1884), *La lune comique* (1889), *La terre est le domaine de l'humanité* (1903), *Le petit morcan* (1908), *Ballades et sonnets* (1910), *Souvenirs d'un enfant de Paris* (vol I, 1911, vol II and vol III, 1912, vol IV, 1913)

BERGH, bérgh, HENRY (1820-88) An American humanitarian He was born in New York and educated at Columbia University He was Secretary of Legation at St Petersburg and acting vice consul, 1862-64, but resigned, owing to the severity of the climate In 1865 he became interested in the treatment of domestic animals, and in the face of much opposition and ridicule succeeded, in 1866, in getting an incorporation of the American Society for the Prevention of Cruelty to Animals The work of the society,

covering all cases of cruelty to all sorts of animals, commended itself to the better class of the people, and its growth, aided by numerous gifts, was rapid and substantial. In 1886 the laws which Bergh had procured for the State of New York had been adopted by thirty-nine States of the Union, also in Canada, Brazil, and the Argentine Republic. Bergh was also the founder of the Society for the Prevention of Cruelty to Children, which is now established in nearly every State and Territory of the Union. He wrote several plays, among them *Lois's Alternative*, a drama, also *The Streets of New York*, a volume of tales and sketches.

BERGH, JOHAN EDVARD (1828-80). A Swedish landscape painter. He studied at the academy of his native city, Stockholm, where he received the first prize in 1853. Afterward he pursued his studies with Gude at Dusseldorf and with Calame at Geneva. After a tour through Italy (1856-57) he became member of, and in 1861 professor in, the Stockholm Academy. He may be said to have founded a new school of landscape painting in Sweden—a school characterized by accuracy of drawing, faithful interpretation of nature, and a marked spirit of nationalism, manifested both in choice of subjects and method of treatment. Among the most popular paintings of Bergh are the following: "Wood Interior" (Stockholm Museum), "Beech-Wood" (Sothenburg), "View of Stockholm" (owned by the King of England), "View in Dalecarlia" (Amsterdam).

BERGH, BÉRK, LAURENT PHILIPPE CHARLES VAN DEN (1805-87). A Dutch historian. He was born at Dusseldorf and studied at Utrecht. He was archivist of the government of The Hague from 1865 to 1887. His numerous and valuable publications include the following: *Verslag der historischen nasporingen op oecan van het gouvernement in 1838 in Fiankrijk gedaan* (1840), *Gedenkstukken tot opheldering der nederlandsche geschiedenis, opgezameld uit de archieven te Rijssel en op gezag van het gouvernement uitgegeven* (1842-47), *Register van hollandsche en zeeuwsche oorkonden* (1861), *Oorkondenboek van Holland en Zeeland* (1866-73).

BERGH, PIETER THEODOR HELVETIUS VAN DEN (1799-1873). A Dutch poet. He was born at Zwolle and lived successively in Paris, Brussels, and Vienna. Afterward he became blind and returned to The Hague, where, in collaboration with Weland, he edited the *Magazijn voor Toon en Schilderkunst*. His comedy, *De Neven* (1837), was very favorably received and is ranked among the best modern works of its class. Among his other works may be mentioned *De Nachten* (1841) and *Proza en Poëzij* (1853).

BERGHAUS, BÉRK'HAUS, HEINRICH (1797-1884). A German geographer, born in Cleves, Prussia. In 1816 he was made "geographical engineer" in the War Department in Berlin and was employed on the trigonometrical survey of Prussia. In 1825 he became professor of applied mathematics in the Architectural Academy of Berlin and in 1839 director of a school of geography in Potsdam. The best known of his cartographical works is his *Physikalischer Atlas* (90 plates, Gotha, 1838-48), which forms the basis of Johnston's work of the same title, published in Edinburgh. He published *Was man von der Erde weiss* (1856-60), *Atlas der österreichischen Monarchie* (1855-60), *Landbuch der Mark Brandenburg* (3 vols., 1853-56), *Land-*

buch von Pommern (1882), *Briefwechsel Alexander von Humboldts mit H. Berghaus* (1863).

BERGHAUS, HERMANN (1828-90). A German cartographer, nephew of Heinrich Berghaus. He was born at Hreford, Westphalia. From 1872 he was employed in the Geographical Institute of Justus Perthes at Gotha, and besides the widely known *Chart of the World* (1863), which has passed through 11 editions, he published *Physikalische Karte der Erde* (1874), *Physikalische Wandkarte von Europa* (1875), *Karte der Alpen* (1878), *Physikalische Wandkarte von Afrika* (1881), and the revised edition of his uncle's great *Physikalischer Atlas* (1886), in which he was aided by a number of noted specialists.

BERGHEM, CLAES. See **BERCHEM, CLAES**.

BERGISCH GLADBACH. See **GLADBACH**.

BERGK, THEODOR (1812-81). A distinguished German classical scholar. He was born in Leipzig, and from 1842 to 1869 was professor of philology at Marburg, Freiburg, and Halle. In 1869 ill health forced him to resign, and the remainder of his life was spent in the preparation of his *Geschichte der griechischen Litteratur*, of which he finished only the first volume in 1872, the other two being edited by G. Hinrichs and R. Peppmüller (1883-87). It is a work of great importance. Bergk's chief complete work is his *Poetae Lyrici Graeci* (3 vols., Leipzig, 1843, 4th ed., 1878, vol. 1 in 5th ed. by Schroeder, 1900). He also published numerous philological papers and several editions of individual Greek poets. Consult Sandys, *A History of Classical Scholarship*, vol. III (Cambridge, 1908).

BERGMAN, BÉRK'MAN, TORBERN OLOF (1735-84). A Swedish chemist and mathematician. He was born at Katharberg. He was sent to the University of Upsala, with a view to prosecuting studies qualifying him either for the Church or the bar, but disliking both, he devoted himself to natural history, physics, and mathematics, and soon made some interesting discoveries in entomology and distinguished himself as an astronomical observer. In 1758 he was made professor of physics, and several years later, after publishing an excellent work on the manufacture of alum, professor of chemistry and mineralogy, at the University of Upsala. Bergman published a vast number of dissertations, a collection of which, in six volumes, appeared at Upsala in 1779-81, under the title *Opuscula Torberni Bergmani, Physica, Chemica, et Mineralia*. His celebrated essay on *Elective Attractions* was translated into English by Dr. Beddoes.

BERGMANN, BÉRK'MAN, ERNST VON (1836-1907). A German surgeon, born at Rügen, Livonia, Russia. He studied at the universities of Dorpat, Vienna, and Berlin, was connected with the hospital service in the War of 1866 and the Franco-Prussian War, and in 1871-78 was professor of surgery at Dorpat. From 1878 to 1882 he was professor at the University of Würzburg and in the latter year was appointed professor of surgery at Berlin. His publications include the following treatises: *Zur Lehre von der Fettembolie* (1863), *Die Resultate der Gelenkresektionen im Kriege* (1872), *Die Lehre von den Kopfverletzungen* (1880), *Die chirurgische Behandlung von Hirnkrankheiten* (1898), *Handbuch der speziellen Chirurgie* (3 vols., 1899-1901).

BERGMANN, JULIUS (1840-1904). A Ger-

man philosopher. He was born at Opherdike, Westphalia, and studied philosophy and mathematics at the universities of Göttingen and Berlin. In 1872 he became professor of philosophy at Königsberg, and in 1875 was called to Marburg in the same capacity. The following are among his principal works: *Grundlinien einer Theorie des Bewusstseins* (1870), *Zur Beurteilung des Kriticismus* (1875), *Reine Logik* (1879), *Sein und Erkennen* (1880), *Die Grundprobleme der Logik* (1882, rev. 1895), *Geschichte der Philosophie* (2 vols., 1892-94), *Untersuchungen über Hauptpunkte der Philosophie* (1900), *System des objektiven Idealismus* (1903).

BERGMANN, KARL (1821-78). An American musician. He was born at Ebersbach, Saxony, studied at Zittau and Breslau, and came to America in 1850 as a member of the Germania Orchestra, the leader of which he afterward became. From 1862 until his death he was conductor of the Philharmonic Orchestra in New York City and in this capacity contributed greatly to the advancement of good music in America.

BERGMEHL, BÉR'MAL. See DIATOMACEOUS EARTH.

BERGONZI, BÉR-GŌN'tsé, CARLO (flourished c. 1715-55). A famous violin maker of Cremona. Of his life nothing is known beyond the fact that he was a pupil of Stradivari, when the latter was in his golden period. There are but a few violins of Bergonzi in existence, and they are very valuable, not only because of their rarity, but also because of their great beauty and remarkable tone.

BERGSOE, BÉR'sé, JØRGEN VILHELM (1835-1911). A Danish naturalist, novelist, and poet, born in Copenhagen. In the course of biological researches at Messina he became partly blinded by excessive use of the microscope and so was diverted to fiction. His first novel, *Piazza del Popolo* (1866), was very successful and was followed by many others, of which *Who Was He?* ('Hver var han?' 1878) is the best. A volume of poems, *Now and Then* ('I ny og nae,' 1807), is inferior, but all his work shows a marked originality, an exuberant imagination, close observation, and a delicate touch. Bergsoe also wrote an historical work, *Rome under Pius IX* (1877).

BERGSON, BÉR'sŏn', HENRI LOUIS (1859-) A French philosopher of Jewish extraction. He was born in Paris, educated in the public schools, and in 1881 graduated from the École Normale. After some years of teaching he was appointed to the chair of philosophy in the Collège de France in 1900. He was elected to the Institute in 1901 and to the Academy in 1914. In 1913 he lectured at Columbia University and there received the degree Litt. D. In the same year he was elected president of the Society for Psychological Research. He has published the following books: *Quid Aristoteles de loco senserit* (1889), *Essai sur les données immédiates de la conscience* (1889, Eng. trans., under the title *Time and Free Will*, London and New York, 1910), *Matière et mémoire, essai sur la relation du corps avec l'esprit* (1896, Eng. trans., London and New York, 1911), *Le rire, essai sur la signification du comique* (1900, Eng. trans., New York, 1911), *L'Évolution créatrice* (1907, Eng. trans., New York, 1911), *La Perception du changement* (Oxford, 1911), and a number of articles in journals, one of which has

been translated into English (*Introduction to Metaphysics*, New York and London, 1912).

For Bergson time is the fundamental reality, but real time (*la durée réelle*) is not time as conceived in science: pure duration is "nothing but a succession of qualitative changes, which melt into and permeate one another, without precise outlines, without any tendency to externalize themselves in relation to one another, without any affiliation to number." Science and common sense, for the practical purposes of life, externalize this time and separate it into discrete moments, setting them out in a line. To get an experience of real time we must withdraw ourselves from our practical interests, as when we dream. Then "we no longer measure duration, but we feel it." "Pure duration is the form which the succession of our conscious states assumes when our ego lets itself live, when it refrains from separating its present from its former states." It is enough that in recalling these states, it does not set them alongside its actual state as one point alongside another, but forms both the past and the present into an organic whole, as happens when we recall the notes of a tune, melting, so to speak, into one another. Time, as thus experienced, is "the continuous progress of the past, which gnaws into the future and which swells as it advances." The future is not yet and is unpredictable. This real time is the time of which true freedom consists. "The free act takes place in time which is flowing and not in a time which has already flown." Such a time is memory. Memory "is not a faculty of putting away recollections in a drawer or of inscribing them in a register. There is no register, no diawer, there is not even, properly speaking, a faculty, for a faculty works intermittently, when it will or when it can, whilst the pling up of the past upon the past goes on without relaxation. In reality the past is preserved by itself, automatically. In its entirety, probably, it follows us at every instant." Such a flowing time, carrying its past along with it, is life, is spirit. The appearance of the new in such a time is an evolution which is creative. The intellect is unable to do justice to the nature of life and of spirit, because the intellect is a function of life which has developed to deal with what is spatial and with that alone. Instinct would enable us to understand life except for the fact that instinct does not aim at understanding. It is always directed towards a particular concrete object. What is needed is intuition, which has the directness of instinct and the broad scope of intellect. Intuition is "instinct which has become disinterested, self-conscious, capable of reflecting on its object and of enlarging it indefinitely." Almost all previous philosophies, Bergson thinks, have been constructed by intellect alone or by intellect preponderantly. Bergson's philosophy is anti-intellectualistic in that it attempts to escape the limitations of intellect, it relies upon intuition.

The literature on Bergson's philosophy is already very extensive. Consult Lindsay, *The Philosophy of Bergson* (New York, 1911), Stewart, *Critical Exposition of Bergson's Philosophy* (London, 1911), Kitchin, *Bergson for Beginners* (New York, 1913). For a bibliography fairly complete up to the year 1910 see the English translation of *Time and Free Will*.

BERGSTROM, BÉR'ström, HJALMAR (1868-) A Danish playwright. After obtaining his

Ph.D. in 1893 he was a teacher in the Brockske Commercial School until 1905. He became one of the directors of the Danish Dramatic Society and a member of the commission for the conservation of the neglected manuscripts and writings of Danish playwrights. His dramatic works include *Tuning-points*, *Pictures of Many Colors*, *Burnt Ships*, *When King David Grew Old*, *Idas Bryllup*, *Ida's Wedding* (1902), *Montgairde 39*, *Mint Street 39* (1904), *Lynggaard & Co* (1905), *Karen Borneman* (1907), *Together in the Dance*, *Det gyldne Skind*, *The Golden Fleece* (1908), *Dame Te*, *The Birthday Party* (1910), *Med i Dansen*, *In the Swim* (1910), and *Fegen til Gud*, *The Way to God* (1912). These were played in the Royal Theatre. Much of his work is iconoclastic and shows a tendency toward humor of a rather coarse type. When *Karen Borneman* was produced in 1907, it aroused such a storm of protest that it had to be withdrawn and was subsequently forbidden. The ban on it has since been taken off. *Karen Borneman* and *Lynggaard & Co* were published in an English translation by Edwin Bjorkman in the *Modern Drama Series* (New York, 1913).

BERGUES, berg (probably from Ger *Berg*, hill, fort). A fortified town of France, in the department of Nord, about 34 miles north of Lille (Map France, N, H 2). It is situated on the Colme, at the foot of a hill, and has facilities for laying the valley under water, as a defensive measure in war time. It is situated at the confluence of three canals, one of which admits vessels of 300 tons' burden and connects Bergues with Dunkirk and the sea. This circumstance, united with its central position, makes it the entrepôt of the adjoining country. It has manufactures of beer and oil, and also sugar and salt refineries. Pop., 1901, 4750, 1906, 5032, 1911, 4856. Bergues was first walled and fortified by Baldwin II, Count of Flanders, and Baldwin IV erected a splendid abbey, of which two towers only remain, in honor of St. Winoc, who retired here in the beginning of the tenth century. Bergues has suffered all the vicissitudes of a frontier fortress, it was finally taken by Louis XIV in 1667, and Vauban so effectively fortified it that the English found it impregnable in 1793.

BERGYLT, bergylt (Norweg *berggylta*, from *berg*, hill, cliff + *gylta*, low). A European name for the rosefish (q.v.).

BERHAMPUR, berham-poor'. The name of two towns in British India. 1 A military station and capital of the district of Ganjam in Madras, in lat 19° 20' N and long 84° 50' E, 525 miles northeast of Madras, and 325 miles southwest of Calcutta (Map India, D 5). There is a college and a cantonment which has been abandoned. It is situated on a rocky ledge, and commands on the south and east a plain of considerable extent, on the near edge of which is the native town, noted for its manufactures of gold, embroidered turbans, and tussah-silk cloths. Sugar is also manufactured and exported. Pop., 1901, 25,729, 1911, 31,456. 2 A town of Bengal, in the district of Murshidabad, on the left bank of the Bhagirathi, the first great offset of the Ganges, in lat 24° 5' N and long 88° 17' E, distant from Calcutta, by land and water respectively, 118 and 161 miles (Map India, E 4). It was formerly one of the principal military stations in British India. The grand square, inclosing a spacious

parade ground, is particularly striking, and the quarters of the European officers form handsome ranges of brick-built and stuccoed edifices. There are here a college, hospitals, and mission churches. Berhampur is the seat of a civil establishment and the houses of its chief members, erected in convenient spots in the neighborhood, give the place an air of grandeur and importance. Berhampur, though at one time extremely unhealthy from its low and moist site on the delta of the Ganges, has been so much improved by sanitary measures as to be second to no spot in Bengal in salubrity. The first outbreak of the Sepoy Mutiny occurred at Berhampur in the spring of 1857. Pop., 1901, 24,397, 1911, 22,777.

BERIBERI. A disease prevalent in tropical and subtropical countries, particularly in the Far East, and classed as a neuritis of infectious origin. It is well distributed over Japan, China, the Dutch East Indies, and the Philippine Islands, but occurs sporadically in all parts of the world. Baelz and Miura in 1905 estimated that 50,000 cases occurred annually in Japan (where the disease is called *Kakke*), and during the Russo-Japanese war over 50,000 cases occurred in the Japanese army alone. Beriberi was mentioned by Chinese physicians in the second century and described in the sixth century, while Japanese accounts go back to the seventh century A.D. The precise cause of beriberi has not been settled, in spite of a vast deal of investigation by students of tropical diseases in recent years. Two principal theories are advanced—the parasitic or infectious, and the dietetic. Although a number of parasites have been found in association with the disease, none have yet been shown to cause it. On the other hand, diet has been proved, by abundant observation, to have at least a powerful causative influence. Fish and rice are the foods most commonly implicated. In the Philippines the rice theory has been carefully tested by the United States medical service, and certain important premises laid down. It has been observed (1) that populations living on rice milled in the crude native way (which retains the bran or pericarp of the rice kernel) are little troubled with the disease, (2) that such populations, if fed on polished rice, became susceptible, (3) a return to unpolished rice controlled the disorder, (4) nurslings developing beriberi from sick mothers were cured by the addition of an extract of rice polishings added to their milk, (5) fowls fed exclusively on polished rice developed a neuritis similar to that of beriberi and recovered on returning to an unpolished rice diet. A phosphorus body which no one had been able to isolate up to 1912, in the pericarp of the grain, is thought to be necessary to preserve the nutritional balance in people whose diet is largely restricted to rice. While these observations do not positively disprove the infectious theory, and may only show that a low state of nutrition renders the individual susceptible to infection, yet they have been applied with success in combating the disease. At the 1912 meeting of the Far Eastern Association of Tropical Medicine, the views of American, English, French, and Japanese sanitarians were practically unanimous in favor of the dietetic origin of the disease. Beriberi occurs in several clinical forms, three of which are well defined and all of which have the common symptoms of peripheral neuritis, with advancing

paralysis "Wet" and "dry" forms are distinguished, depending on the presence or absence of swelling and edema of the limbs. There is also a pronounced form, in which the victim rapidly succumbs to exhaustion and heart failure.

The mortality in recent years has been 2 to 6 per cent. There is no specific treatment. Change of diet and hygienic measures have given the best results. In Japan and Java the adsuki bean (*Phaseolus sradatus*) is considered both prophylactic and curative, while in the Philippines the mungo bean (*Phaseolus mungo*) enjoys a similar reputation. Consult Scheube, *Die Krankheiten der warmen Lander* (Jena, 1903), for history and literature up to that date, and the various numbers of the *Philippine Journal of Science* and the *Journal of the American Medical Association* for later investigations. See NEURITIS.

BERING, b'ring, *Dan pron b'ring*, sometimes **BEHRING**, *Virus* (1680-1741). A Danish navigator, born at Høien, in Denmark. He entered the service of Russia, and was employed on the great northern expedition planned by Peter the Great to determine the unknown limits of Asia. On Feb. 4, 1725, he started from St. Petersburg to cross Siberia, with orders to discover whether Asia and America are connected. After three years of preparation at Okhotsk and Kamchatka, he made a seven weeks' voyage as far as a point from which he could see no land toward the north or east. This northeasterly point of Asia had already been visited by Simeon Deshneff, a Cossack voyager, in 1648. Being wet back to St. Petersburg in the spring of 1730. A year later a vessel commanded by Michael Gvozdeff was driven from Cape Serde Kamen by a storm across to the Alaska coast, along which Gvozdeff sailed for two days. The Empress Anne ordered Bering to carry out his previous instructions, and in the spring of 1733 he returned to Okhotsk. He delayed there until September, 1740, when he sailed to Petropavlovsk, where he stayed until June 15, 1741. He sailed eastward, and on July 26 his lieutenant, who had separated from the commander during a fog, reached the North American coast near Cross Bay. Bering made land north of Cape St. Elias, July 29. When he started to return, he was driven about by storms until November 16, when his vessel was wrecked on the desert island still known by his name. He died there of exposure and disappointment, Dec. 19, 1741. His companions built a vessel, in which they returned to Kamchatka with more than \$100,000 worth of furs captured on the island. A life of Bering, by Lamidsen, was published in Chicago in 1890.

BERING ISLAND. A somewhat isolated island of the Commander group, lying west of the Aleutian group, in the northern Pacific, about lat. 55° N. and long. 166° E. (Map Asia, Q. 3). Here the navigator Bering died (1741) and was buried. It is rocky and desolate, population composed of natives and seal fishers.

BERING RIVER COAL FIELDS. See ALASKA.

BERING SEA. The extreme northern part of the Pacific Ocean, from which it is partly cut off by the Alaska Peninsula and the Aleutian Islands (Map The World, West Hem. D. 2, vol. 1, frontispiece). It is connected by Bering Strait with the Arctic Ocean and extends from Alaska to the shores of Asia. It has a north and south

extent of about 1000 miles and an east and west extent of over 1500 miles. It receives from Alaska the waters of the Yukon and other rivers. The islands are not numerous, the chief ones being the Pribylov, Nunivak, St. Matthew, and St. Lawrence. The northern half of the sea is shallow, with a depth of less than 600 feet (and much of it under 200 feet), but the southern half is from 6000 to over 10,000 feet deep.

BERING SEA CONTROVERSY. An international dispute, in which Great Britain and the United States were the principal parties concerned, arising out of the depredations of unlicensed Canadian sealers on the seal fisheries of the north Pacific.

The Pribylov Islands in the Bering Sea are the largest seal rookery in the world. The seals congregate upon these islands for about eight months in the year, leaving for a day or two at a time to seek food in the surrounding waters within a radius of 50 or 100 miles. In the winter the entire herd scatters far to the south and west in the Pacific Ocean. For ninety years the seals had been preserved under the supervision of the Russian government, and this was continued by the United States after the cession of Alaska in 1867, the business being leased to the North American Commercial Company and the slaughter carefully restricted to 100,000 seals annually. This represented in 1885 a capital of about \$30,000,000, and at a royalty of \$10 per skin, yielded the government a yearly revenue of \$1,000,000. In 1886 a fleet of vessels was fitted out in British Columbia by Canadian and American capital to hunt seals while feeding in the water beyond the territorial three-mile limit. This business increased rapidly, until in 1893 there were about 70 craft engaged in it. The number of seals captured was estimated at 30,000, and the depredations on the herd necessitated the reduction of the licensed slaughter to 21,000. This pelagic sealing was especially destructive, because the majority of the animals killed were females.

Secretary Manning, of the Treasury Department, ruled that Bering Sea, to the western limit covered by the Russian cession, was *closed*, or under the exclusive jurisdiction of the United States, and seizures of Canadian schooners were made by the American patrols. This occasioned protests from Sir Lionel Sackville-West, then British Minister. Meanwhile Secretary Bayard sent a circular letter to Great Britain, France, Germany, Japan, Russia, and Sweden, asking for cooperation to prevent destruction of the industry. Negotiations conducted between Great Britain and the United States resulted finally in the Blaine-Pauncefote Treaty of 1892, providing for an arbitration of the questions at issue.

The Court of Arbitration, composed of Baron de Courcel (France), Marquis Emilio Visconti-Venosta (Italy), Judge Grogers W. W. Giam (Sweden and Norway), Lord Hannen (England), Sir John Thompson (Canada), and Justice John M. Harlan and Senator John T. Morgan (United States), met in Paris, March 23, 1893.

The United States based its case upon three grounds. First, a prescriptive right of territorial jurisdiction over the Bering Sea, second, a right of private property in the seals, third, the common interest of mankind in the preservation of the species and the prevention of its ultimate annihilation for temporary gain. On August 15 the tribunal rendered a decision mainly unfavor-

able to the American contention, to the effect that Russia did not assert or claim exclusive jurisdiction over Bering Sea or rights in seal fisheries beyond the three-mile limit, that the body of water known as Bering Sea was included in the phrase "Pacific Ocean" in the Treaty of 1825, by which Russia granted Great Britain commercial privileges in those waters, that the United States had no right to protection of property in seals frequenting the islands of the United States beyond the three-mile limit. But regulations were adopted establishing a close season from May 1 to July 31, forbidding pelagic sealing within 60 miles of the Pribylov group, and prohibiting the use of steam vessels or explosive weapons, and provided for licensing of the vessels and proper qualifications of the parties engaged in the business, these regulations to be enforced by the governments of the United States and Great Britain acting concurrently.

These restrictions proved ineffectual, and after much friction between the two powers a meeting of experts was arranged for November, 1897. The American offer to suspend seal killing for a year meantime, provided the Canadian government would prevent pelagic sealing, was refused unless the Canadian vessels received compensation. Congress retaliated by prohibiting sealskin importation unless the skins were from the Pribylov Islands. The rapid depletion of the herd that had taken place was claimed by the British experts to be due to unscientific killing on the islands. Meanwhile, in accordance with the Treaty of 1896, a commission in 1897 had assessed the damages to Canadian shipowners by reason of American seizures at \$473,151.26, which was accepted by Congress and was paid in the following year. The whole question was finally referred to the Anglo-American Commission, which had reached no conclusion upon its indefinite adjournment in February, 1899, because of the deaths of Lord Herschel and Mr. Dingley. All efforts to restrict the wholesale destruction of seals have thus far proved unavailing, and the species bids fair to be exterminated. Consult Henderson, *American Diplomatic Questions* (New York, 1901), Snow, *Treaties and Topics in American Diplomacy* (Boston, 1894), and Stanton, *The Bering Sea Controversy* (New York, 1892).

BERING STRAIT A water passage separating Asia from America, and connecting the Pacific with the Arctic Ocean (Map America, N, B 2). It was first discovered and explored by a Cossack named Deshnev, in 1648, again explored by Bering in 1728, later by Cook and Beechey. The narrowest part is near lat 66°, between Cape Deshnev (East Cape) in Asia and Cape Prince of Wales in America. The distance between the two capes is about 40 miles. About midway are three uninhabited islands. The greatest depth, from 150 to 250 feet, is toward the middle, the water being shallower toward the American coast than the Asiatic.

BERINGTON, JOSEPH (1746-1827). An English Roman Catholic theologian. He is remembered for his *Faith of Catholics* (3 vols., London, 1813, 3d ed., 1840), and *Literary History of the Middle Ages* (1811, 3d ed., 1883).

BÉRIOT, bā'rē ō', CHARLES AUGUSTE DM (1802-70). A Belgian violinist and composer, born at Louvain. He was a precocious and original musician, remarkable for pure tone and refined taste. In 1836 he married the famous singer, Malibian. In 1842 he was made pro-

fessor in the Conservatory of Music in Paris, and later in that of Brussels, but he resigned his position nine years afterward, in consequence of failing eyesight. He was the author of a complete manual for the violin and of seven concertos, besides a great number of popular compositions for that instrument, all distinguished for noble sentiment, melodiousness, and brilliancy, showing great progress in the treatment of the instrument, as compared with his predecessors. By dint of his admirable technique and his eminence as a composer, he became the head of the Belgian school of violinists, which through him and his pupils, Vieuxtemps and Leonard, attained well-deserved fame.

BERISLAV, by'e-re-laf', or BORISLAV (Russ., take glory, referring to its capture from the Turks). A fortified town in the Russian government of Kherson, on the right bank of the Dnieper, 46 miles northeast of Kherson (Map Russia, D 5). It is the centre of the grain trade for the neighborhood. Berislav is supposed to have been founded in 1450 by the Turks, by whom it was called Kızı-Kermen. It was taken in 1696 by Peter the Great, and its name was later changed to Berislav. Pop, 1897, 12,000.

BERKELEY, bērk'li or bārk'li (AS Buice, Ger *Buke*, Eng *burch* + *leth*, Eng *lea*, *ley*, district, meadow, field). A small town of Gloucestershire, England, 15 miles southwest of the town of Gloucester, on the Avon, a mile and a half east of its junction with the estuary of the Severn (Map England, D 5). It is situated in a fertile valley, which has long been noted for its dairies and manufactures of cheese. In Berkeley Castle, which contains an interesting collection of portraits and relics, Edward II was murdered in 1327 by Maltravers and Gourney. Dr. Edward Jenner, the discoverer of vaccination, was a native of Berkeley. Pop, 1901, 6277, 1911, 6558.

BERKELEY, bērk'li A city in Alameda Co., Cal., adjoining Oakland, the county seat, 10 miles from San Francisco, on the Atchison, Topeka and Santa Fe and the Southern Pacific railroads (Map California, C 5). It has a fine location on heights overlooking San Francisco Bay and the Golden Gate, and is the seat of the University of California (q.v.), which has several notable buildings and occupies 250 acres of beautiful grounds, of the State Agricultural and Mechanical College, the California School of Arts and Crafts, three theological seminaries, and the State Institution for the Deaf and Blind. It also contains the Boone University Academy, Head Preparatory School for Girls, Snell Seminary for Girls, St. Joseph Academy, and a public and several school libraries. Berkeley has manufactures of coconut oil, refined petroleum, soaps, health foods, pianos, elevators, carbonic gas, aeroplane motors, pumps, etc. It also has important fishing interests. Berkeley, named after Bishop Berkeley, was settled in 1868 and was incorporated as a town in 1873. It adopted the commission form of government in 1909. The city is developing rapidly, more than \$2,000,000 being spent annually in building. Pop, 1900, 13,214, 1910, 40,434.

BERKELEY, bērk'li or bārk'li, GEORGE (1685-1753). Bishop of Cloyne, a distinguished philosopher. He was born near Thomastown, county of Kilkenny, Ireland, and was the eldest son of William Berkeley, a younger son of the family of the Earl of Berkeley. As a boy he

studied at Kilkenny School, at which Swift also received his early education, and in his fifteenth year he followed his great countryman to Trinity College, Dublin, where in 1707 he obtained a fellowship. At Trinity he enjoyed the society of Swift, who patronized him, as he did almost everybody, and who subsequently had a great deal to do in shaping his fortunes, while his philosophical views were formed upon the basis of Locke's.

Berkeley's career as an author began in 1707 (the year in which he obtained his fellowship) by the publication of a work written three years before, at the age of 19, entitled *Arithmetica abæque Algebra aut Euclide Demonstrata*. This was followed in 1709 by the celebrated *Essay Towards a New Theory of Vision*, in which he propounded the doctrine of the ideal character of visual space. Locke had already championed the view of the subjective character of the secondary qualities (qv), but "solidity, extension, figure, motion, or rest, and number," the primary qualities, were for him ideas whose "patterns do really exist in the bodies themselves." Berkeley, in his *Essay*, left solidity and number unquestioned, but reduced the remaining primary qualities to subjectivity, making the distance of any object mean the succession of muscular feelings that must be experienced before a tactual sensation of that object can be obtained. Space as the form of outness is thus explained as nothing but a way of looking at time. In his *Treatise Concerning the Principles of Human Knowledge* (1710), Berkeley went much further with his idealism. He maintained that matter cannot be conceived to exist, the only possible substance being mind. The material world is nothing but a complex of ideas, which come and go with an "order and coherence," that constitute the laws of nature. The ideas which are characterized by this coherence, by involuntariness, and by being involuntary, constitute what we call the "real" world. This doctrine is epitomized in the sentence *esse est percipi*, i. e., to be is 'to be perceived or known,' or 'existing is "being perceived"'. Berkeley's object was to undermine the materialism of the age by denying the reality of the external world. If there is no external world, he argued, the phenomena of sense can be explained only by supposing a deity continually necessitating perception. Common sense has tried to refute Berkeley by kicking a stone and pointing to the reality of the effect produced, but common sense does not realize that the effect is in that case evidently a sensation and an affection. In his rejection of abstract matter Berkeley has been upheld by many succeeding philosophic thinkers, although the crudeness of his idealism is quite generally recognized. Especially unfortunate, from the philosophical point of view, was his dogmatism in assuming the existence of a God to give permanence to the fleeting sensations of human experience. The procedure was a vicious circle. He set out to prove the existence of a God, and then at last assumed that existence in order to make his philosophical view tenable. And history has avenged itself for this illogicality, for Hume, working in the same philosophical spirit, came to an opposite theological conclusion.

In the *Introduction to the Principles*, Berkeley broached a doctrine that has proved of revolutionary significance in modern philosophy, viz., that there are no abstract general ideas. To be

sure, this thesis had been maintained by the Nominalists of the Middle Ages (see NOMINALISM), but Berkeley's statement of the position gave it its classical expression. "If any man has the faculty of framing in his mind such an idea of a triangle," as had been described by Locke, a triangle "neither oblique nor rectangular, neither equilateral, equiangular, nor scalenon, but all and none of these at once, it is vain to pretend to dispute him out of it." But "I cannot by any effort of thought conceive the abstract idea above described." And since Berkeley's day more and more thinkers have confessed to a similar inability. See ABSTRACTION.

In 1713 Berkeley went to reside in London, where in the same year he published a defense of his idealistic system, *Three Dialogues Between Hylas and Philonous*, which are remarkable, as indeed all his writings are, for the clearness and beauty of the style. Shortly after this he was appointed chaplain and Secretary of Legation under Lord Peterborough, whom he accompanied to Italy, but his first stay there was short. In 1716 he went abroad again, to stay four years. Upon his return he wrote, in 1721, an *Essay Towards Preventing the Run of Great Britain*, which was called forth by the craze in connection with the South Sea scheme. In 1721 he returned to Ireland, and in 1724 he became Dean of Derry, with an income of £1500, and resigned his fellowship.

Berkeley was not a man to remain in the enjoyment of leisure and opulence. The Dean of Derry set to devising schemes of usefulness, fixing at last on one by which his deanery and income were to be exchanged for exile and £100 a year. This was the Bermuda College scheme for training pastors for the Colonies and missionaries to the American Indians. Swift, failing to induce him to give up the project, made influence with ministers to support it, which they promised to do. Full of hope, Berkeley prepared for his exile. He married, in August, 1728, Anna, daughter of the Right Hon. John Foster, Speaker of the Irish House of Commons, and soon after sailed for Rhode Island. In that State, not far from Newport, he wrote the larger part of *Alciphron*, or, *The Minute Philosopher* (1732), his favorite resort being a natural recess in the rocks on the seashore. In 1733 he published his *Theory of Visual Language Vindicated*. The support promised by the government was never given to him, and he returned to England in 1732. In 1734 he received the bishopric of Cloyne, as a mark of favor from Queen Caroline. He was now once more in the enjoyment of leisure, of which he availed himself to write many works. In 1744 he gave the world his notions of the virtues of tar water, and his revised philosophical ideas, in a book entitled *Siris: A Chain of Philosophical Reflections*, etc. In this work he made an attempt to do philosophical justice to the element of permanence in experience, but it cannot be said that he succeeded in doing more than setting a problem for subsequent idealism. His last work was *Further Thoughts on Tar Water*, published in 1752. He was hypochondriacal for many years before his death, which occurred at Oxford, whither he had gone to live with his son, who was studying at Christ Church. A genial companion, an affectionate and steady friend, he was loved by all of his contemporaries who enjoyed his society, a graceful writer, a subtle philosopher, and an active churchman, his whole

life was devoted to usefulness and ennobled by the purity of his aspirations. On Berkeley's visit to America, consult M C Tyler, *Three Men of Letters* (New York, 1895). The best edition of his works is that of Fraser (2d ed, Oxford, 1902), one volume of which is devoted to his biography, consult also for a briefer biography, Fraser, *Berkeley* (London, 1881), and for philosophical criticism, Frederichs, *Ueber Berkeleys Idealismus* (Berlin, 1870), Spicker, *Kant, Hume, and Berkeley* (Berlin, 1875), Janitsch, *Kants Urtheil ueber Berkeley* (Strassburg, 1879), Penjon, *Etudes sur la vie et les œuvres philosophiques de Berkeley* (Paris, 1878), Sir L Stephen, *English Thought in the Eighteenth Century* (1902), G S Fullerton, *System of Metaphysics* (1904).

BERKELEY, MILES JOSEPH (1803-89) An English botanist. He was educated at Cambridge and was subsequently a curate at Margate and rural dean of Oundle and Welford. He wrote *British Algae* (1833), the concluding volume of *English Flora*, articles on diseases of plants and on vegetable pathology, an *Introduction to Cryptogamic Botany* (1857), *Outlines of British Fungology* (1860).

BERKELEY, SIR WILLIAM (*1610-77) A Colonial Governor of Virginia. He was born near London, and graduated at Oxford in 1629. He was appointed commissioner to Canada in 1632 and was considered to have had valuable Colonial experience in that capacity. In 1641 he was commissioned Governor of Virginia, and during the Civil War in England kept that Colony loyal to the King until 1651, when the adherents of Cromwell gained the ascendancy. A portion of the fleet sent to the Barbadoes was sent to Virginia in that year, Berkeley and his followers were forced to acknowledge Cromwell's rule, and Richard Bennett was appointed to succeed Berkeley. He remained in the Colony, however, and in 1660 was chosen Governor by the General Assembly, receiving his commission for the office from Charles II. He soon completely lost favor with the people by his arbitrary policy, his obstinacy, and his persistent refusal to furnish protection against the Indians, and a rebellion against him led by Nathaniel Bacon (qv) failed only because of the sudden death of its leader. His extreme severity to Bacon's followers attracted the attention of the King, a royal commission condemned his policy, he was forced to resign the governorship, and in 1676 returned to England. He was the author of *A Discourse and View of Virginia* (1683) and a drama, called *The Lost Lady* (1838).

BERKELEY (bér'li) DIVINITY SCHOOL. A Protestant Episcopal theological seminary. It was organized in 1851 by John Williams, fourth Bishop of Connecticut, when president of Trinity College, Hartford, Conn., as a theological department of the college. In 1854 the seminary was put upon an independent basis and established in Middletown, Conn. The chapel was built in 1851, and the library in 1866. The graduates on the roll of the seminary number (1913) 525, of whom 335 survive, including 20 bishops and many of the best-known clergymen of the Episcopal church. The value of the buildings and grounds is about \$100,000, and the endowment fund aggregates \$485,000. There are about 30,000 volumes in the library. Samuel Hart, dean.

BERKELEY SPRINGS. A town and the county seat of Morgan Co, W Va, 103 miles

northwest of Washington, D C, on a branch of the Baltimore and Ohio Railroad (Map West Virginia, F 2). It is a popular resort, frequented for its warm (74° F) mineral springs, which have medicinal properties. The town contains Mount Wesley Academy. Silica sand is extensively mined in the vicinity, and there are a sand pulverizing plant, a planing mill, handle and canning factories, and a large storage warehouse. Other industries of the town include the raising of tomatoes and fruit. Berkeley Springs was settled as early as 1775 and was incorporated in 1872. Pop, 1900, 781, 1910, 864.

BERKHAMPSTEAD, GREAT. See **GREAT BERKHAMPTSTEAD**.

BERKLEY. A town in Norfolk Co, Va, annexed in 1906 to Norfolk (qv).

BERKSHIRE (shorter *Berks*, the birches, AS *burc*, *beorc*, birch). A midland county of England, bounded north by Gloucester, Oxford, and Bucks, east by Oxford and Bucks, south-east by Surrey, south by Hampshire, and west by Wiltshire (Map England, E 5). Its area is 722 square miles, about three-fourths under cultivation. There is some excellent woodland, especially in the vicinity of Windsor. Other towns of importance are Reading, the capital, Maidenhead, and Newbury. The population is chiefly engaged in stock raising and agricultural pursuits. Pop, 1801, 176,119, 1901, 180,354, 1911, 271,009. Consult *Graves, The Way about Berkshire* (London, 1898).

BERKSHIRE HILLS. The name applied to the hill country of western Massachusetts (Map Massachusetts, A 3). The region is famed for the beauty of its scenery and is a favorite outing place in summer. The mountains, which are a continuation of the Green Mountains of Vermont, are intersected by rivers and valleys, which give variety to the scenery. The chief rivers on the west are the Hoosac and the Housatonic, and on the east the Deerfield and the Westfield. Few of the summits are over 2000 feet above sea level, but Greylock in the north rises to 3535 feet, and Mount Everett at the south rises to 2624 feet.

BERLAD, bér-lád'. A town in the district of Tutova, Rumania, situated on the river of the same name and on the Tecuci-Basul Railway (Map Balkan Peninsula, F 1). It is regularly built, and contains a hospital and a number of institutions for secondary education, and a theatre. It has a considerable trade in grain and timber and a number of distilleries. Pop, 1904, 24,404, 1912, 25,381.

BERLEBURG, bér'le-búrk, or **BERLEBURGER** (bér'le-búrk'ér) **BIBLE.** A translation of the Bible published by unknown editors at Berleburg, in Germany, 25 miles northwest of Marburg (8 vols, 1726-42). It is an original translation, with a running exposition, giving the literal, spiritual, and hidden or mystical interpretation. It has the characteristic excellences and defects of pietism.

BERLICHINGEN, bér'lik-ing'en, Gortz or GOTTFRIED VON (1480-1562). A German feudal knight and soldier of fortune. He was born at Jegsthausen, Wurttemberg, and was initiated into feudal warfare at an early age. He first served the Elector Frederick of Brandenburg, but soon took up the cause of Albert of Bavaria. In 1504, at the siege of Landshut, he lost his right hand, and having had it replaced by an iron one, he was thenceforth known as Gortz of

the Iron Hand. He lived in constant feuds with his neighbors and waylaid passing merchants, varying these pastimes with deeds of chivalry. His disregard for the edict against private warfare caused Goetz to be twice put under the ban of the Empire, first in 1512 and again in 1518. He was a staunch supporter of Luther. In 1525 the revolted peasants, according to his story, came to the castle of Berlichingen and insisted forcibly on his assuming command over them. The revolt was soon put down, and Goetz taken prisoner, and only released after two years' captivity and on promise of abstaining from further warfare. After a long period of inactivity he reappeared on the scene in 1542 and took part in the campaign in Hungary against the Turks, and in 1544 fought for Charles V against Francis I. Goetz died at his castle, July 23, 1562. While living in retirement he wrote his famous autobiography, which first appeared in 1731 and has since been edited by Schonhuth (Heilbronn, 1859) and by Muller (Leipzig, 1882). Goethe chose the famous knight as the hero of one of his best known dramas, *Goetz von Berlichingen*, which Sir Walter Scott translated, and in the eyes of historians generally Goetz represents the typical feudal knight. The best biographies of him are Goetz, Graf von Berlichingen-Rossach, *Geschichte des Ritters Goetz von Berlichingen mit der eisernen Hand* (Leipzig, 1861), Pallman, *Der historische Goetz von Berlichingen* (Berlin, 1894). The family of Berlichingen-Rossach are descendants of the famous knights.

BERLIN, bër-lin', *Ger* pron bër-lën' (commonly explained as a word of the Wendish Slavs, which meant 'free or open space'). The capital of the German Empire and of the Kingdom of Prussia (Map German Empire, E 2). It is one of the finest and most important cities of Europe, the largest after London and Paris, and is situated on the river Spree, in lat 52° 30' N, long 13° 24' E. The city is 150 miles from Hamburg and 84 from Stettin. The Spree, at this place about 200 feet wide, with a sluggish current, flows through the city in a northwesterly direction, dividing it into two nearly equal parts, and it is connected with the Oder and the Baltic by canals.

Streets, Buildings, and Monuments. The divisions of Berlin are marked by the course of the natural waterways intersecting the city. Three of the older parts of the city, viz., Alt-Kölln, with its royal castle, Alt-Berlin, with the city hall, and Friedrichswerder and Neu-Kölln, with the arsenal and state bank—form the first circle around the centre which constituted the original city. Next follows a second concentric circle of seven parts, viz., Dorotheenstadt, Friedrichstadt, Friedrich-Wilhelmstadt, Königstadt, Spandauer Viertel, Stralauer Viertel, and Luisenstadt. A third circle is formed around the famous Thiergarten as a centre, and includes Moabit, Wedding, and the Oranienburg and Rosenthal suburbs on the north, and the Friedrich, Schöneberg, and Tempelhof suburbs on the south. Berlin is distinguished by a large number of imposing modern public edifices and by numerous splendid public monuments. Its most celebrated street is Unter den Linden (so called from its double avenue of linden trees), one of the finest and most spacious streets in Europe. It is entered from the Thiergarten through the celebrated Brandenburg Gate, the only one of the city gates left since the demolition of the city walls, erected in 1789-93 by

Langhans, in imitation of the Propylaea at Athens. It is 201 feet broad and nearly 65 feet high, it is supported by a double portico of 12 Doric columns, forming five passageways for carriages, and is surmounted by a Quadriga of Victory. An addition to the gate consists of two lateral colonnades, each supported by 16 columns. After Unter den Linden, the principal thoroughfares are the Friedrichstrasse, Leipziger Strasse, Potsdamer Strasse, Wilhelmstrasse, Königstrasse, and Kaiser-Wilhelmstrasse. Among the church edifices the new cathedral in Italian Renaissance, built in 1894-1905 on the site of the old cathedral, is the largest and most imposing. Its cost was 10,500,000 marks. The Gothic Klosterkirche, built by the Franciscans at the end of the thirteenth century, is one of the best-preserved specimens of mediæval architecture. Of modern churches, the Kaiser Wilhelm Memorial Church, in late Romanesque, erected in 1891-95, with its main tower 370 feet high, and the new cathedral (Der Dom), a sandstone edifice in Italian Renaissance (which replaces the old building demolished in 1893), with a dome and lantern rising to a height of 380 feet, are the loftiest structures in Berlin. Two other noteworthy ecclesiastical buildings are the Roman Catholic Church of St Michael, erected in 1853-56 as a garrison church, and the New Synagogue in a modified Oriental style, built in 1859-66, with a seating capacity of 3000, and distinguished for its interior decorations.

The most notable secular building is the Royal Palace, erected in the reign of Frederick the Great, and since the accession of William II the Imperial residence. It contains more than 600 rooms, of which the Old Throne Room, with its gorgeous rococo decoration, the White Salon, the Palace Chapel adorned with frescoes on a gold ground, and the Picture Gallery are the most beautiful. Opposite the palace is the Old Museum, a noble structure in Greek style, erected by Schinkel in 1824-28, in the rear and connected with it is the New Museum, in Renaissance style, built by Stüler in 1843-55. East of this rises the National Gallery in the form of a Corinthian temple. The arsenal, a square structure in late Italian Renaissance, built in 1694-1706, is remarkable for the fine sculptures adorning its exterior, notably the famous heads of Dying Warriors, executed by Schlüter. In its vicinity are situated the Königsruhe (Royal Guardhouse), in the form of a Roman *castrum*, and the Academy of Architecture, both by Schinkel, the latter one of his most original creations. In its skillful blending of mediæval structural forms with Greek details, it makes a happy combination, which may also be observed in the Schauspielhaus (Royal Theatre) by the same architect. In the centre of the city the imposing Rathaus (City Hall) attracts attention, and among other structures of more recent date may be mentioned the Exchange, the Deutsche Reichsbank in Renaissance, with fine color effects due to the judicious combination of sandstone and brick, the handsomely adorned Anhalter Railway Station, and the new Reichstags-Gebäude, so far the foremost architectural achievement in Berlin.

The city is adorned throughout with numerous statues of military heroes, the equestrian statue of Frederick the Great, the master creation of Rauch, being the most remarkable (see Plate RAUCH). Next in importance is that of the Great Elector,

BERLIN
THE ROYAL PALACE (UPPER)
THE BRANDENBURG GATE (LOWER)

an impressive work by Schluter, and among more recent works are the equestrian statue of Frederick William III by Woll, and the imposing national monuments to Emperor William I and to Prince Bismarck. Among the other public monuments the Column of Victory on the Königs Platz, commemorating the great victories in the campaigns of 1866 and 1870-71, is the most conspicuous. On the Schlossbrücke (palace bridge), the handsomest of the 73 bridges in Berlin, the eight marble groups of heroic size, illustrative of a warrior's life, are worthy of notice, so are the five statues of Prussian generals, by Rauch, adorning the square before the Opera House, and the Luther Monument on the Neue Markt. Of art treasures the Old Museum, which formerly housed the national gallery of paintings, contains a large collection of sculptures and a collection of northern antiquities. In the New Museum, which is one of the finest buildings in Berlin, there is a comprehensive and valuable collection of casts of ancient, mediæval, and modern sculptures, of importance also are the Egyptian Museum in this building, scarcely equalled by any similar collection, and the Cabinet of Engravings. The upper wall of the superb staircase, which occupies the centre of the building, is adorned with the famous mural paintings by Kaulbach, representing six great epochs in the history of mankind. The National Gallery contains over 1100 modern German paintings and cartoons, 233 sculptures, and 30,000 drawings and water colours. Near these buildings is the Pergamum Museum, which contains the collection made by Humann in his excavations at Pergamum. The Kaiser Friedrich Museum (1904) contains many of the treasures formerly housed in the Old and New museums, including the numismatic collection, sculptures of the Christian Era, and one of the finest collections of paintings in Europe. Other collections of interest are found in the Ethnological and Art Industrial museums. In the Ravene Picture Gallery, containing a series of choice works by modern French and German masters, and in the Hohenzollern Museum.

The educational institutions of Berlin, which is becoming the centre of Germany's intellectual life, are numerous and of a high order. Among the higher institutions of learning, in addition to the University of Berlin (see article), are the Institute of Technology, with its departments of Architecture, Architectural Engineering, Mechanical Engineering, Naval Engineering, Mines, Chemistry, and General Science, and nearly 4000 students, the Military Academy, the Artillery and Engineering School, the Royal School of Agriculture, the Royal Academy of Arts, Royal School of Music, School of Oriental Languages, etc.

Industry and Commerce. Of first importance are the cloth-printing and dyeing establishments, the iron and steel industry, and the manufacture of clothing, especially women's cloaks. In addition to these, railway cars and wagons, sewing machines, dynamos and all kinds of electrical apparatus, gold, silver, and bronze wares, pianos, musical instruments, toys, carpets, porcelain and earthen ware, beer, and nearly every article of domestic and industrial use are produced in Berlin's busy factories. The geographical position of Berlin makes it the natural emporium for the agricultural products coming from East Prussia, Austria, and Russia. It is the centre of the North German

railway system, 12 main lines of railway enter the city. The chief articles of commerce are grain, cattle, wool, timber, and coal.

Government and Administration. In the administrative system of Berlin the municipal council, composed of 144 members, is elected for a term of six years. The council elects the chief mayor (Oberbürgermeister) and the mayors, and is in general the source of governmental authority for the municipality except in those branches of administration which are under the direct control of the Prussian government. (For further details see *PRUSSIA, Local Government*.) The police organization is under the control of the Minister of the Interior, and is subdivided into six departments, as follows: general police, factory inspection, building inspection, criminal police, passport and labor bureau, market and mounted police.

The steady growth of the city and the increasing number of functions performed by the municipality have led to an increased city budget, which amounted to more than \$25,000,000 in 1900-01, to over \$33,000,000 in 1904-05, not including the income and expenditure of various city works, amounting to over \$12,000,000, and in 1910-11 it was about \$75,000,000. The total debt of the city amounted to \$351,000,000 in 1904. The numerous city improvements offset these items of expense and indebtedness. There is an extensive system of asphalt pavements. Two abattoirs erected in Berlin in 1883 at a cost of \$5,000,000 have supplanted about 1000 private slaughterhouses and make it possible to enforce every regulation for health under a very efficient and cheap service, besides yielding a net income to the city. The civic water works yielded in 1904 a net income of 5,000,000 marks (in addition to supplying what is used for public needs), after defraying all the costs of operation. The sewerage system is on the most modern hygienic plan, all the city sewage being conducted by means of a comprehensive system of sewers, to 18 sewage farms, each of which is under careful sanitary supervision. The chief product of the farms is milk. Berlin has a perfect system of street cleaning, thoroughly organized under municipal control. The city owns its gas plant. Its system of municipal market halls recently introduced supplements the other municipal institutions which enable the city officials to enforce strictly all the sanitary measures and protect the poor against impure food and extortionate prices. A system of parks and squares, 87 in number, provides breathing space for the most crowded portions of the city.

The rapid growth of the city led to great overcrowding of the poorer classes of the population in large tenements. Many were forced to live in cellars, which were damp and shut off from light. As a result there was an extremely high death rate, varying in different parts of the city with the nature of the dwellings. In 1873 the rate was 28 per 1000, and it continued to grow. In 1885 an exhaustive investigation was made into the connection between the death rate and the number of rooms occupied by a family. The results were startling, showing an extraordinary increase of the death rate with the crowding into narrow quarters. This caused the municipality to adopt a new code of building regulations in 1888, which has been instrumental in greatly improving the condition of the tenements and diminishing the

death rate, as seen from the following statistics of mortality 1885, 29 98 per 1000, 1890, 27 55, 1898, 18 16, 1903, 17 41. Total deaths in 1910, 30,152, 14 64 per 1000, 1911, 32,307, 15 59 per 1000 The decline in the birth rate of the city is notable In 1876 there were 240 3 births to 1000 married women, in 1880, 205, in 1890, 163 7, in 1900, 127, in 1903, 113 1, in 1904, 111 5 The birth rate of Berlin per 1000 was as follows

Year	Total	Living
1906	25 98	25 04
1907	25 56	24 63
1908	24 78	23 88
1909	23 29	22 42
1910	22 31	21 45
1911	21 04	20 84

A system of municipal lodging houses enables the authorities both to control the floating homeless population and to provide sanitary and cheap lodgings for the needy The poor-relief service is thoroughly organized under municipal control Berlin is divided for that purpose into 250 districts, with as many local committees to take charge of the work

The population of the city has increased with great rapidity From 202,000 in 1820, it grew to 411,000 in 1840, to 826,000 in 1871, 1,579,000 in 1890, 1,889,000 in 1900, and 2,071,257 at the census of Dec 1, 1910 Of the last number 1,089,118 were returned as Evangelicals, 243,020 Roman Catholics, and 90,013 Jews The city has an area of 63 41 square kilometers (24 43 square miles) Greater Berlin has an area of 356 465 square kilometers (137 631 square miles), and its population at the 1910 census was 3,974,300, in addition to Berlin, it consists of the Stadtkreise Charlottenburg, 23 43 square kilometers and 305,978 inhabitants, Neu-Kölln (formerly Rixdorf), 11 88 and 237,289, Schöneberg, 9 47 and 172,828, Deutsch-Wilmersdorf, 8 36 and 109,716, Spandau, 92 31 and 84,855, and the Landkreise Lichtenberg, 10 23 and 81,199, Niederbarnim, 1733 56 and 445,265, and Teltow, 1612 00 and 438,918 Of the total population, Evangelicals numbered 3,286,855, Roman Catholics 425,787, and Jews 144,527 The population of Berlin, April 1, 1912, was stated at 2,082,440

There is little authentic known of Berlin before the middle years of the thirteenth century. At this time on the site of the modern city were two towns, Berlin and Kölln They were united for a few years, beginning 1307, and then remained separate until 1432, and the union then effected was only short-lived Already, at the beginning of the fifteenth century, Berlin was one of the leading cities of the Middle Mark of Brandenburg, possessing extensive trading privileges, an independent mint, and its own courts of justice From the close of the fifteenth century it was permanently the residence of the margraves of Brandenburg The introduction of the Reformed religion in 1530, under the elector Joachim II, was the cause of many civil tumults, and the Thirty Years' War, in the course of which Berlin was besieged by the Swedes and the Imperialists, destroyed the growth of the town Its population declined from 12,000 at the beginning of the war to 6000 at the end, and its trade was practically brought to a standstill The town received new life from the Great Elector, Frederick William (1640-88), who rebuilt the deserted places, laid

out suburbs, and surrounded the town with strong fortifications By the construction of a canal from the Spree to the Oder, he made Berlin an important centre of foreign commerce and shipbuilding, and he laid the foundation of its industrial prosperity by encouraging the settlement of immigrants from other countries, and especially of Huguenot refugees from France The population at the time of his death was about 20,000 The work of extending and beautifying the city was carried on by Frederick I, the first King of Prussia, and his successors In 1709 Kölln, together with the suburbs, Friedrichstadt, Friedrichswerder, and Dorotheenstadt, was united to Berlin Under the patronage of Frederick the Great large manufactures of silk and cotton grew up, and toward the end of the eighteenth century Berlin, from a garrison town and royal residence, had become rather an industrial centre Its growth continued steady in spite of its occupation by the Austrians in 1757, the Russians in 1760, and the French from 1806 to 1808 Under Frederick William III and Frederick William IV the limits of the city were extended, many public buildings erected, and numerous public institutions founded, chief among them the University of Berlin (1809). The last quarter of the nineteenth century was a period of tremendous growth in wealth and population, due in part to the great industrial development of the city, and in part to its position as the capital of the new and powerful German Empire This growth continued in the twentieth century and with it the most complete application of the science of civic government and public order

BERLIN, bär'lin The county seat of Waterloo Co, Ontario, Canada, 62 miles west by south of Toronto, on the Grand Trunk Railroad (Map Ontario, C 4) It is the seat of St Jerome's College (R C), founded in 1865, and there are tanneries, button factories, a brewery, foundries, and manufactories of furniture, pianos, shoes, collars, shirts, etc. Pop, 1901, 9747, 1911, 15,196

BERLIN A town in Hartford Co, Conn., 11 miles (direct) south of Hartford, on the New York, New Haven, and Hartford Railroad (Map Connecticut, E 3) There are manufactories of paper goods and bricks Pop, 1890, 2600, 1900, 3448, 1910, 3728

BERLIN A city in Coos Co, N H, 98 miles northwest of Portland, Me., on the Androscoggin River, and on the Grand Trunk and the Boston and Maine railroads (Map New Hampshire, H 3) It is 16 miles from the base of Mount Washington and is surrounded by rugged mountains It has valuable water power, developing almost 20,000 horse power The principal industries are the manufacture of paper

BERLIN
UNTER DEN LINDEN (UPPER)
THE NATIONAL GALLERY (LOWER)

and sulphite pulp and lumbering. The city contains a public library, two theatres, a hospital, parochial and public schools, and a fine municipal building. Pop., 1890, 3729; 1900, 8886; 1910, 11,780.

BERLIN. A city in Green Lake Co., Wis., 97 miles, by rail, northwest of Milwaukee, on the Fox River, and on the Chicago, Milwaukee, and St. Paul Railroad (Map Wisconsin, E 5). It has granite quarries, dairy and cranberry interests, and manufactures of brooms, washboards, gloves, mittens, fur coats, shoes, bricks, and dairy and apary supplies. Settled in 1847, Berlin was first incorporated in 1856. It is governed under a charter, which provides for a mayor, elected biennially, and a city council. Pop., 1905, 4638; 1910, 4636.

BERLIN, CONGRESS OF. The European diplomatic conference which met at Berlin, June 13, 1878, to settle the Eastern Question (q.v.), and especially those phases of it which grew out of the Russo-Turkish War (q.v.). Temporarily restrained by the Crimean War and the Treaty of Paris of 1856, Russia had resumed, after the downfall of Napoleon III., her historic policy of intervention in the affairs of the Turkish Empire for the purpose of reaching the Mediterranean. The result was the Russo-Turkish War of 1877-78. The overwhelming success of Russia's armies filled with consternation the rivals of that Empire, and especially Austria-Hungary and Great Britain, with their interests in the Balkan States and the eastern Mediterranean respectively. When Russia wrung from the Porte the Treaty of San Stefano, Great Britain and Austria united in declaring it unsatisfactory, and in demanding a European congress to revise its provisions. Germany had hitherto kept out of the Eastern imbroglio, but her Chancellor, Prince Bismarck, now came forward with an invitation to the Powers to hold the congress in Berlin. The meetings were held at the Radziwill Palace, Bismarck's residence, and under his presidency. The delegates from Great Britain were Lord Beaconsfield, Lord Salisbury, and Lord Russell, from Russia, Prince Gortchakoff, Count Shuvaloff, and Baron d'Oubril, from Germany, Prince Bismarck, Prince Hohenlohe, and General von Bulow, from Austria-Hungary, Count Andrassy, Count Károlyi, and Baron Haymerle, from France, M. Waddington and the Comte de Saint-Valler, from Italy, Counts Corti and De Launay, and from Turkey, Karatheodori Pasha, Sadoullah Bey, and Mehemet Ali Pasha. Delegates from Greece, Rumania, Servia, and Montenegro attended the sessions in which their states were concerned, but were not members of the congress. Russia had been compelled to concede that the whole of the San Stefano Treaty should be taken up for consideration, and the congress revised or eliminated 18 of its 29 articles—all that had any political significance—and effected a rearrangement of the Eastern situation, using as a foundation the treaties of Paris (1856) and of London (1871). It reaffirmed the principle that the status of the Turkish Empire was to be decided by the Powers jointly, and not by any one of them. The provisions of the earlier treaties that were retained related to commercial questions. On the political side a new procedure was adopted, reaffirming emphatically the principle of nationality so far as the Balkan peoples were concerned. Rumania, Servia, and Montenegro were declared independent principalities. The tribu-

tary principality of Bulgaria and the autonomous province of Eastern Rumelia were carved out of the Turkish territory.

The first 12 articles related to Bulgaria (q.v.), which Russia had sought at San Stefano to erect into a state reaching from the Danube to the Aegean. The congress greatly reduced the area of the new state, but granted to Bulgaria autonomy and guarantees against Turkish oppression. The next 10 articles concerned Eastern Rumelia, a part of the proposed Greater Bulgaria. This was made a Turkish province, to be ruled by a Christian governor, but it soon took its destiny into its own hands and effected a union with Bulgaria. By Articles XXIII and XXIV the Porte agreed "scrupulously to apply in the island of Crete the Organic Law of 1868, with such modifications as may be considered equitable," and to rectify the Greek boundary. Article XXV placed Bosnia and Herzegovina under the administration of Austria-Hungary, although they remained under Turkish sovereignty. The independence, delimitation, and external relations of Montenegro were treated in seven articles, eight were taken up by a similar adjustment for Servia, and nine for Rumania. The Dobruja was given to Rumania, Servia received large accessions of territory (including Nish), Montenegro obtained Nikitch, Podgoritz, and Antivari. It was provided that the five fortresses in Bulgaria which had been the bulwark of Turkey against Russia—Shumla, Varna, Silistria, Rustchuk, and Vidin—should be dismantled. The Danube below the Iron Gate was neutralized, and Rumania was given a place upon the Danube Commission, which had been instituted in 1856. The congress allowed Russia to retain most of her conquests in Turkish Armenia—including Kars and Ardahan—as well as Batum, and reinstated her in the possession of the strip of Bessarabia which had been taken from her at the close of the Crimean War. It had been recognized that Russia would probably not yield the fruits of conquest in Asia, and on June 4, 1878, Great Britain had entered into a defensive alliance with Turkey, to take effect if Russia retained Batum, Ardahan, or Kars. Under this treaty Great Britain holds Cyprus for Turkey as a guarantee against further aggression by Russia in Asia. The fact of the practical acquisition of Cyprus by Great Britain and of Bosnia and Herzegovina by Austria-Hungary, while Russia was robbed of the fruits of her victory, has been a source of international bitterness not without effect on political relations since 1878. The remaining articles of the Treaty of Berlin imposed certain obligations upon the Porte, such as the guaranteeing of civil rights to non-Mohammedan subjects, and provided for sundry evacuations, confirmations, and ratifications. Russia opposed as strenuously as possible the course taken by the powers of Berlin, but to no avail. Bismarck and Germany were accused of having abandoned their traditional friendship for Russia.

Consult Hertlets, *The Map of Europe by Treaty*, vols. iii and iv (London, 1891), Holland, *The European Concert in the Eastern Questions* (Oxford, 1885), and *Studies in International Law* (Oxford, 1885).

BERLIN, RUDOLF (1833-97). A German oculist, born at Friedland (Mecklenburg-Strelitz). He studied at Göttingen, Berlin, and other universities, was connected as an instructor with the University of Tübingen and the Technical

Institute of Stuttgart, and in 1889 was appointed professor of ophthalmology at the University of Rostock. The results of his investigations concerning the presence of foreign bodies in the vitreous humor, the anatomy and pathology of the lachrymal gland, and other subjects, appeared in technical journals. He was among the first to make a systematic comparative study of the diseases of the eye, and in 1882 established a *Zeitschrift für vergleichende Augenheilkunde*.

BERLIN, UNIVERSITY OF One of the most important, though one of the youngest universities of the world. After the disasters of 1806 and 1807 in the war with Napoleon, King Frederick William III, in September, 1807, established in Berlin an academy or university, to which he called many of the most noted of German scholars, including some who had been connected with the University of Halle, suppressed by Napoleon. The brilliant success of the new university was due chiefly to Wilhelm von Humboldt (elder brother of Alexander von Humboldt), a scholar, statesman, and administrator. As first Minister of Education in 1808, he brought the direction and support of the university into the hands of the Ministry of the Interior and greatly enlarged its scope, and in 1809 the King, by royal order, finally established the university on its present basis. The chief feature of the new organization was the stress laid on securing men of the first order of ability to fill the professorial chairs. A yearly income of 150,000 thalers and the royal palace of Prince Henry were assigned to the foundation, and the university began its brilliant career. Its faculties comprise theology, jurisprudence, medicine, and philosophy (arts and science). It had in 1912 more than 14,000 students, of whom over 8000 were matriculated. These were divided as follows: theology, 415, jurisprudence, 2226, medicine, 1872, philosophy (philosophy proper, philology, and history), 4637, mathematics and science, 982, finance and administration, 308, pharmacy and dentistry, 222. The university also includes several "institutions," comprising the seminars, the institutes of physics and physiology, clinics, museums, and observatories. The university is supported by the state and is under control of the Minister of Education. The administration is in the hands of the rector and senate, the so-called "plenum" or full body of professors, and the faculties. A full account of the organization may be found in the article **UNIVERSITY**, section *German*, etc. It is enough to say here that the university is practically a self-governing body, with corporate freedom and responsibilities. It has police and judicial powers over its members, exercised by the administration and a university court. Men and women of all nationalities are admitted. The choice of professors for distinguished excellence is still maintained, and the long list of great scholars connected with the university includes, among others, the Grimm brothers, Hegel, Scherer, Bopp, Ranke, Niebuhr, Savigny, Lepsius, Karl Ritter, Dove, Gneist, Trendelenburg, Helmholz, and many more still on the roll of active teachers. The University Library consists of over 200,000 volumes and more than that number of university and school "theses," etc. The chief library facilities for students are to be found, however, in the Royal Library, which contains over 1,260,000 volumes and 33,700 MSS., including a collection of over 13,000

Oriental MSS. The libraries of the Reichstag (153,000 volumes), of the Royal War Academy (94,000 volumes), of the Royal Wilhelm Academy (62,000), and the Royal Prussian and Royal Secret Archives, and other collections, are also accessible. Since 1906-07 the University of Berlin has been exchanging professors with Columbia and Harvard universities, a system by which it maintains permanent chairs at these universities in return for an American professorship at home. The arrangement is in the hands of the Prussian government. The American chair at Berlin is known as the Theodore Roosevelt Professorship and the German chair at Columbia as the Kaiser Wilhelm Professorship. The *Academische Auskunftsstelle* was recently established as a bureau of information particularly for foreign students.

BERLIN DECREE See **CONTINENTAL SYSTEM**.

BERLINE An old-fashioned, four-wheeled covered carriage, with a suspended body, seating two persons, having a seat behind covered with a hood. It owes its name to the fact that it was first made about the year 1670 in Berlin, Prussia, from designs furnished by the architect of the Elector of Brandenburg. The term is now applied to a form of closed body for the passenger motor vehicle, derived and expanded from the limousine, and having the front two seats enclosed and entrance to them effected through a full hinged door. The tonneau part is usually specially luxurious, and for five passengers. See **MOTOR VEHICLE**.

BERLINER, Ger. *pron* bëi-lë'nër, **EMILE** (1851-) A German-American inventor, born in Hanover. He studied in Wolfenbüttel, came to the United States in 1870, and in 1879-82 was chief instrument inspector of the Bell Telephone Company. In 1877 he invented the telephone transmitter, or microphone, known by his name, and constructed on principles independently arrived at by Hughes in England later in the same year. He also invented the gramophone or disc talking machine and a method of duplicating disc records. He planned and was a member of the Washington Milk Conference of 1907.

BERLIN PHIL/HARMONIC See **PHIL-HARMONIC SOCIETIES**.

BERLIOZ, bër-lë'öz, Hector (1803-69) A French composer. He was born at La Côte-Saint-André, Dec. 11, 1803. His father, a physician, sent him to Paris to study medicine, but he entered the Conservatory, which he soon left, finding the teaching too pedantic. He gave himself up heart and soul to the romantic movement and became the champion of "programme music"—which endeavors to tell a story in music. Of his earlier attempts in this line, the *Symphonie fantastique, épisode de la vie d'un artiste* (1828), a page of musical autobiography, is the most remarkable. Coveting the Prix de Rome, he resumed study in the Conservatory under Lesueur (qv) and gained the prize with the cantata *Sardanapale* (1830). Life in Italy furnished inspiration for a new unfolding of his gifts, and he wrote the overture to *King Lear*, and the symphonic poem *Lélio, ou le retour à la vie*, a companion piece of the *Fantastic Symphony*. He now took up journalistic work in the *Correspondant*, then in the *Courrier de l'Europe*, in the *Revue Européenne*, and finally in the *Gazette*

musicale de Paris and the *Journal des débats*. His brilliant and powerful style, iconoclastic tendencies and unswerving honesty and candor, made him the principal figure in French musical life. Though made conservator in 1830 and librarian in 1852, he never became professor at the Conservatory. His symphony, *Harold en Italie* (1834), his *Messe des morts* (1837), his *Caraval romain* (overture), and the dramatic symphony, *Roméo et Juliette* (1839), all elicited high praise from the critics, but his first opera in two acts, *Benvenuto Cellini* (1838), was a failure. In 1843, encouraged by Liszt's propagation of his music, Berlioz undertook a tour of Germany, which was so successful that for some ten years he traveled through Austria, Hungary, Bohemia, Russia, and England, everywhere meeting with enthusiastic receptions. In Hungary the "Rákóczy March," from his *Damnation de Faust* (1846), is said to have aroused the people to a patriotic frenzy. In London he conducted the New Philharmonic Concerts and in 1853 his own *Benvenuto Cellini* at Covent Garden. He was elected to the Academy in 1856. His masterpiece, *Les Troyens*, consisting of *La Prise de Troie* (three acts) and *Les Troyens a Carthage* (five acts), proved a failure (Paris, 1863), which broke down the composer, and he was feeble throughout the rest of his life. In 1890 *Les Troyens* was produced in Karlsruhe, in 1899 in Moscow, and in 1900 in Paris, with signal success. His writings on musical matters and the art of music are among the most treasured works in this line. His *Traité d'instrumentation* was the theoretical exposition of his views on instrumentation, which he applied in practice, and until the last years of the century was the best work of its kind. In 1905 Richard Strauss edited a new German translation copiously annotated and enlarged so as to include the most recent instruments. Only after his death his compatriots came to think that he had not received his due honor, and they tried to make amends, which brought upon them the accusation of desiring to form a Berlioz cult. Berlioz lacked one essential—melodic invention—and all his ingenuity and art could not conceal the poverty of his musical ideas. But he was a great master in all else. His grandiose fancy conceived images that are often sublime. He possessed an accurate knowledge of the possibilities of every instrument, which enabled him to produce new and wonderful combinations, enchanting, dazzling, weird, bizarre, or elf-like (as, e.g., the "Queen Mab Scherzo" in *Roméo et Juliette*, or in the *Danse des sylphes*), and he is now the acknowledged father of modern orchestration. In spite of the enthusiasm and devotion on the part of some eminent conductors (notably Lamoureux, Colonne, and Mottl) the public has always maintained a respectful aloofness towards the works of Berlioz. Yet this master's place in the history of music is one of the greatest importance. His influence on the advance in orchestral technique cannot be overestimated. The subsequent progress in the art of instrumentation made by Wagner, Liszt, and Richard Strauss has been entirely on the solid foundation laid by Berlioz. The Fantastic Symphony is the first work of Programme Music (qv) in the modern acceptance of the term. Liszt's form of the Symphonic Poem was consciously evolved on the principles laid down by Berlioz. Thus it is seen that the Tone Poems of Richard Strauss—the last word in instru-

mental music, and, as it now seems, the highest possible development of programme music—are the result of a direct evolution beginning with Berlioz. His collected writings appeared in Geiman translation by Richard Pohl in four volumes (1864). Under the editorship of Charles Malherbe and Felix Wengartner, Breitkopf, and Hartel of Leipzig are bringing out a complete edition of the compositions and literary writings in 17 volumes. Consult A. Julien, *H. Berlioz* (Paris, 1888), Hippeau, *Berlioz, l'homme et l'artiste* (Paris, 1883-85) and *Berlioz et son temps* (Paris, 1892). Pohl, *H. Berlioz: Studien und Erinnerungen* (Leipzig, 1884), and Hector Berlioz, *Leben und Werke* (Leipzig, 1900), the autobiography, *Mémoires* (Paris, 1870, Eng. trans. Rachael and Eleanor Holmes, London, 1884), J. G. Prodhomme, *Hector Berlioz, 1803-1869* (Paris, 1905).

BERM. *berm* (Fr *berme*, probably of Germanic origin, cf Ger *Breme*, border, Eng *brim*). In fortification, a ledge or pathway constructed at the bottom of the exterior of the outwork or rampart, where it joins the scarp or inner side of the ditch. It is from 3 to 8 feet in width and is almost on a level with the natural surface of the ground. Besides serving as a passageway for troops manning the defenses, it serves in part to prevent the filling up of the ditch with earth and debris, when the rampart is battered by the besiegers. (See **FORTIFICATION**.) In civil engineering the bank of a ditch or canal, especially if elevated, is sometimes referred to as the berm.

BERMEJO, *ber-má'ho* (the "id" river owing to the color of its waters). A river of South America which rises in southeastern Bolivia and flows through Argentina toward the Paraguay, which it joins near Nuevo Timbo at a short distance above its junction with the Paraná (Map Argentina, E 9). Its total length, including windings, is nearly 1300 miles, and it is navigable in its middle course for over half this distance for small steamers at all seasons, and for heavier craft for only about six months of the year. A United States government boat, the *Waterwitch*, commanded by Thomas Page, explored its course in 1883 after arduous navigation up the Paraguay River. Since the middle of the last century the waters of the Bermejo have in their middle course mainly flowed through the parallel channel—the Río Teneo—about 10 miles south of the old channel.

BERMONDSEY, *ber-mond-zí* (AS *Beormondstg*, Beormond's island). A district of Greater London (qv).

BERMONDSEY SPA (*spa*) **GAR'DENS**. A fashionable resort near London in George II's reign. The principal industry is that of tanning, the whole borough being densely populated.

BERMUDA. See **BERMUDA ISLANDS**.

BERMUDA GE'DAR. See **JUNIPER**.

BERMUDA GRASS (so called by reason of its southern origin, of its other name, Bahama grass), *Cynodon dactylon*. A perennial grass, probably a native of India, which has become introduced throughout the warmer portions of the globe. It is a low, creeping plant, rooting at the joints. In poor soils the leaves are short, and it sends up short flower stalks, which divide into from 3 to 7 slender divergent spikes. In good soil it is often 1 to 2 feet high. The rootstocks run everywhere, soon making a dense sod. It is extremely resistant to

heat and drought, and is valued in warm regions for grazing, since it remains green after all other species are dry. It grows readily on sandy soils and is valuable in the Southern States as a lawn grass. The plant tuns blown with the first frosts, although it is hardy in the latitude of Philadelphia. Its rooting habit makes it very difficult of eradication when once established. Bermuda grass will grow in almost any soil, unless too wet, but does not stand shade. It does not mature its seed in the United States, except in the extreme Southern States. It is also propagated from the rootstocks.

BERMUDA HUNDRED. A peninsula in Chesterfield Co., Va., formed by the confluence of the James and the Appomattox rivers. The population of the district of this name was 2044 in 1800, 2105 in 1900, and 2554 in 1910. Bermuda Hundred was the scene of much sharp fighting during the Civil War. General Butler landed here with a Federal force of about 35,000 (the "Army of the James") early in May, 1864, in order to cooperate with Grant against the Confederate army of Northern Virginia under General Lee. He was confronted by General Beauregard, however, with an almost equal force, and on May 16 fought with him the battle of Drury's Bluff, in which the Federal loss was about 4000 and the Confederate about 3000. Though no other engagement of any consequence occurred in this vicinity, there was almost continual skirmishing until the 30th. Meanwhile Butler sent part of his troops to reinforce Grant and was himself kept closely confined at Bermuda Hundred. For an account of the battle of Drury's Bluff, consult Johnson and Buel (ed.), *Battles and Leaders of the Civil War*, vol. iv (New York, 1887).

BERMUDA (named after their discoverer), or **SOMERS** (sūm'ez), **ISLANDS.** A group of small islands and reefs in the west Atlantic, belonging to Great Britain and situated between lat 32° 14' and 32° 25' N and long 64° 38' and 64° 52' W, about 675 miles southeast of New York, and about 500-600 miles east-southeast of Cape Hatteras, North Carolina (Map America, North, M 6). It lies on the route from Europe to the West Indies and derives additional importance from its position midway between the West Indies and the British possessions in North America. The group, including the uninhabited islets and reefs, numbers about 350 islands, of which, however, only about 20 are inhabited. The total area of the group is about 12,000 acres, of which Bermuda, or the main island (about 9000 acres), St. George, Somerset, and Ireland occupy the larger part. The islands are of coralline formation, composed mostly of white limestone, and are surrounded by numerous reefs, which make navigation dangerous. The highest point of land is 260 feet. There are no streams, and the fresh-water supply is dependent on rains. Beautiful scenery, luxuriant vegetation, and other varied attractions, combined with a healthful and equable climate, make the islands favorite summer and winter resorts with Americans. During the winter the temperature ranges from about 50° in the morning to about 70° at midday. In the summer 87° is about the maximum. Frosts are unknown, and the ocean winds are tempered by the Gulf Stream. The soil is of remarkable fertility, and the climate is very favorable to vegetation. The chief products are sweet potatoes, onions, and other early vegetables, bananas, arrowroot, and some corn. The agricultural

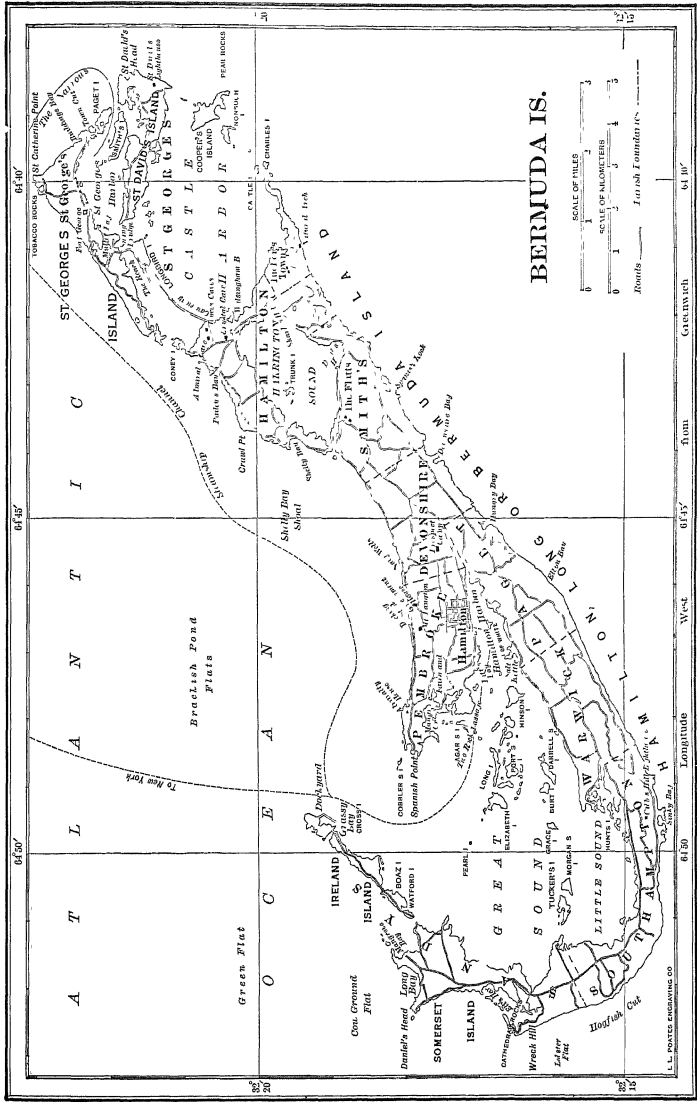

products go mostly to the United States and Canada, the value of the total exports having been £134,033 in 1911, and of the imports, £845,540. The islands produce also large quantities of lily-bulbs and lilies, which are shipped to the United States. Revenue and expenditure amounted for 1911 to £79,248 and £90,100, respectively.

The group is regarded as of considerable strategical importance and is strongly fortified. It is the winter naval station for the British North Atlantic and West Indian squadron and has a garrison of over 2500 men. The capital is Hamilton, on Bermuda, with 2627 inhabitants in 1911. The extensive naval establishment, dockyards, and floating dock are on Ireland Island. St. George, once the seat of government, is still of considerable importance as a trade centre. The administration of the group is in the hands of a governor, who is assisted by two councils, appointed by the crown, and by an assembly of 36 elected members. The total population of the group in 1911 was 18,944 (not counting the military)—6691 white, 12,303 colored. The Bermudas were discovered by the Spaniard Juan Bermudez, in 1515, and were first settled by Sir George Somers in 1609. They were colonized chiefly from Virginia and received additional immigrants from the United States during the Civil War. During the South African War (1899-1902) a number of Boer prisoners were held there.

BERMUDEZ, bër-moŭ'däs. A maritime state of Venezuela. (q v.)

BERN, bër'n, *Ger. pron bër'n* (according to local tradition, many bears, *Ger. Bärn*, were killed on the day of the founding of the city). The capital of the canton of the same name and Federal capital of Switzerland since 1848. It is situated on a lofty sandstone promontory nearly 1800 feet above sea level, formed by the winding Aar, 80 miles northeast of Geneva (Map Switzerland, B 2). The river surrounds it on three sides and is crossed by several bridges, one of which is a magnificent stone structure, upward of 900 feet long, with a central arch 150 feet wide and 93 feet high. The fourth side was defended by fortifications, but these have been converted into public walks. It is one of the best and most regularly built towns in Europe and the finest city in Switzerland. Many of the houses are massive structures of freestone, resting upon shop-lined arcades, which furnish covered walks on both sides of the street. Rills of water flow through the streets, which are also adorned with numerous fountains. There are many fine public promenades in the environs. The minster terrace, supported by walls 100 feet high, is planted with trees and has a statue of the city's founder, Berthold von Zahringen. Among the principal public buildings are a Gothic minster, founded in 1421, with some interesting tablets and relics, fine stained windows, and a tower over 300 feet high, completed in 1894, the theatre, natural history, his-

torical, and art museums, the Municipal and University Library of over 200,000 volumes, the Bundeshaus, or Federal Palace, an edifice in Florentine architecture, the Swiss National Library of 120,000 volumes, a magnificent domed structure, designed to accommodate the archives of the Swiss Diet and administration, the mint, several hospitals, and the university (See BERN, UNIVERSITY OF.) There are various scientific, musical, and social societies, and benevolent institutions. An immemorial usage has decreed that the municipality maintain several bears, which are kept in the Buengraben, or Bears' Dens, on the right bank of the Aar. The city gets water for its drinking supply, and for the motive power of its electric plants, by means of a dam 1000 feet long across the Aar. There is little industrial activity, but the manufactures include woollens, silks, and cotton goods, scientific instruments, machinery, chocolate, etc. It has two great annual fairs and a large cattle and horse market. There are street railroads with compressed air and electricity as motive power. Steam roads run to the suburbs. The streets are lighted by electricity. Pop., 1900, 65,300; 1910, 85,264. At Bern is located the central office of the International Postal Union, and in 1909 in the Kleine Schanze there was erected a monument to that organization.

The Franks subdued the present canton of Bern in the early part of the sixth century. The region became part of the Kingdom of Transjurane Burgundy in 888, afterward formed part of the Kingdom of Arles, and about 1034 was united with the German Empire. In 1191 Berthold V, Duke of Zähringen, founded the town of Bern, and upon his demise without issue in 1218, it attained the position of a free Imperial city. From the beginning the inhabitants of the city showed themselves bold in the defense of their rights and the extension of their power. They fought against the Hapsburgs and the Burgundians, and succeeded in finally establishing their ascendancy by victories in 1298 and 1339. By conquest and purchase the burghers of Bern increased their possessions until, at the height of its power, toward the end of the sixteenth century, Bern ruled over one-third of the present territory of Switzerland and held the leading place in the Swiss Confederacy, which it had joined in 1353. The government of the town from early times was democratic in character, with the legislative and executive authority vested in councils elected by the burghers, but about the middle of the sixteenth century a decided tendency toward aristocratic domination set in, the right of citizenship was restricted, and the power of the state finally came to rest with a small number of wealthy families and the privileged guilds. Toward the rural districts which it ruled the town adopted a policy of consistent selfishness. It refused them all political rights and repressed insurrections among its disaffected subjects with great cruelty. The invasion of Switzerland by the French in 1798 overthrew the aristocratic régime and freed Vaud and Aargau from the domination of Bern. The struggle that went on throughout the nineteenth century between the Liberals and Conservatives resulted in the substantial victory of the former party. The power of the Church was limited, the state constitution was repeatedly revised in a democratic sense, and after 1870 the principle of

the referendum was developed with great completeness. Consult Muhlen, *Bern's Geschichte, 1191-1891* (Bern, 1891), and Haendcke and Mueller, *Das Münster in Bern* (Bern, 1894).

BERN, *bër'n*, *Ger. pron bër'n* (Fr. *Beune*). The second in area and the most populous of the cantons of Switzerland, situated in the northwestern part of the country, bordering on France on the north and west (Map Switzerland, B 2). Its area is 2558 square miles. The capital is Bern. The canton belongs geographically to two mountain systems. The Jura ranges cover its northeastern part, while the Alps traverse the southern portion. Bern belongs to the basin of the Rhine and is watered chiefly by the Aar and its tributary, the Emme. The chief lakes are Thun, Brienz, and Bienna. The canton is essentially agricultural and is one of the best cultivated portions of Switzerland. In the lower parts wine, grain, and fruit are grown, while in the mountain regions more attention is paid to cattle raising and to dairy industries. The mineral products include iron, granite, gypsum, and turf. Mineral springs are abundant, and there are numerous mountain resorts in the southern part of the canton. Among the most important industries are the manufacture of textiles, watches, and metal ware. In spite of the mountainous character of its surface the canton has good transportation facilities.

The form of government is purely democratic. The Grossrath, elected by the people at the rate of one member to every 2500 inhabitants, is the sole legislative body, while an executive council of nine members, since 1906 elected by direct popular vote, is intrusted with the executive part of the administration. Members of both houses serve four years. Every financial transaction involving more than 500,000 francs must be submitted to a referendum. For administrative purposes the canton is divided into 30 districts, administered each by a prefect elected by the voters of the respective districts. The supreme court of the canton consists of 15 members appointed by the Grossrath for four years. Primary education is compulsory, and the expenses are borne by the communes. The university of Bern (*q v.*), a polytechnical school, and a number of gymnasia and pro-gymnasias provide higher and secondary education. Pop., 1900, 590,914, *de facto* (*de jure*, 589,433), census of Dec 31, 1910, 647,235 (645,877). Nearly 90 per cent of the inhabitants are Protestants, and the remainder Catholics, with the exception of a few Jews. The German language is spoken by about 85 per cent of the population, and French and Italian by the majority of the remainder. For history, see BERN (*city*).

BERN, CONFERENCE OF, or DISPUTATION OF. A conference held in 1528, which led to the establishment of the Reformation in Bern. Some years before the Bishop of Lausanne demanded the indictment of certain preachers of Reformed doctrines, but the city council refused to interfere. The conflict increased steadily until, on Nov 27, 1527, the great council of the city decided to settle the disputes by appeal to the Word of God. Invitations were sent to the bishops of Constance, Basel, Lausanne, and Valais, and all the Swiss cantons were asked to send delegates and learned men. The bishops declined, and Charles V advised trust and recourse to the anticipated general council. But the Bern Council was held, Jan 5-26, 1528, and

as the result Bern went definitely over to the side of the Reformation. The local reformers were Francis Kolb and Beithold Halle, who drew up the 10 theses for the debate, but Zwingle was present and helpful.

BERN, UNIVERSITY OF. Originally a local school, enlarged about 1528 by the addition of advanced classes, particularly in theology, to meet the increased demand for such instruction made by the Reformation. Early in the eighteenth century chairs in science, medicine, and law were added. The Napoleonic period seriously affected the university, as it did others near to the French frontier, but in 1834 it was reorganized and is now a state institution. It has an income of about 900,000 francs and an endowment of 1,000,000 francs. Its 1800 students include over 300 women and are divided among the faculties of evangelical theology, Catholic theology, philosophy, law, medicine, and veterinary medicine. The library was incorporated in 1905 with the city library of Bern, and numbers over 200,000 volumes.

BERN CONVENTION. See LITERARY PROPERTY.

BERNACCHI, LOUIS CHARLES (1876-) An English scientist and explorer, born in Tasmania and educated at Melbourne University. After serving as physicist to the Southern Cross Antarctic Expedition in 1898, he came to England in 1900, and in the following year became physicist to the Discovery Antarctic Society. He traveled in British Namaqualand and German Southwest Africa in 1905, and in 1906 explored the upper Amazon basin in Peru. In 1910 he was a candidate for Parliament from Lancashire. He is the author of various scientific articles and also of *To the South Polar Regions* (1901).

BERNADOTTE, *Pi prou* bër'na-döt'. See CHARLES XIV JOHN, KING OF SWEDEN.

BERNALILLO, bër'na-lé'yó. A town, and the county seat of Sandoval Co., N. M., 16 miles north of Albuquerque, and on the Atchison, Topeka, and Santa Fe Railroad, on the Rio Grande (Map New Mexico, C 3). It has a convent and academy for girls and a Christian Brothers school. Near by are the Indian pueblos of Sandia and San Felipe. Fruit growing is the leading industry of the surrounding region, and there are important mining interests. Flour is the principal manufactured product. Pop., 1900, 790, 1910, 970.

BERNARD, bër'naid or bër'naid'. *Pi prou* bër'na'r', SAINT (1091-1153). A learned Roman Catholic ecclesiastic. He was born of noble parents at Fontaine, near Dijon, in Burgundy, 1090 or '91, was educated at court, but withdrew with his four brothers and some friends into seclusion for six months, and then became a monk of Cîteaux, in 1113, founded a new monastery, of that order, which was called the Cistercian, at Clairvaux in Champagne, lived in the monastery, and himself became its first abbot, in 1115. His ascetic life, solitary studies, and stirring eloquence made him during his lifetime the oracle of Christendom. He was honored with the title of the "Mellicious Doctor," and his writings were termed "a river of paradise." Although a mystical theologian, he was a man of eminently practical mind. He was consulted largely by the potentates of his day upon politics of state and exercised great influence with the Popes of his time. In 1128 he gave the rule to the Knights Templars and

was then ardent advocate. He took a deep interest in the Christian occupation of the Holy Land, and so, when disaster came upon the Christians there, he preached a second Crusade, which started in 1147. Charged by the Pope to excite the religious zeal of the people of France and Germany, he accomplished his mission with fatally memorable success. Fields, towns, cities, and castles were in many places almost depopulated, and innumerable legions, fired by his prophetic eloquence, hurried to the East, nine tenths of whom never saw their homes again. He prophesied their success, but when, instead, the news of the failure of the Crusade reached Europe, he fairly sank under the weight of the depression which fell upon him. He died Aug. 20, 1153, and was canonized by Alexander III in 1174.

Bernard's writings are regarded as among the most exalted in the whole range of mystical theology. He is one of the most notable exponents of the contemplative theology of the Mediaeval Church, and he ranks in this regard with Hugh and Richard of St. Victor and St. Bonaventure. He was a stalwart opponent of the rationalism of Abelard. Luther says of St. Bernard: "If there ever lived on earth a God-fearing and holy monk, it was St. Bernard of Clairvaux." He was one of the most enthusiastic advocates of monasticism. His writings are exceedingly numerous. They consist of epistles, sermons, and theological treatises. Of the first, we possess 439, of the second, 340, and of the third, 12. They are all instinct with genius, though it is difficult for us now to appreciate their extraordinary influence. Several of his hymns, e.g., "Jesus, the Very Thought of Thee," "O, Sacred Head, Now Wounded," are found in our hymn books. The best edition of the works of St. Bernard is that of Mabillon, printed in Paris in 1890 (2 vols.), reprinted in Venice (6 vols.), in Paris in 1835-40 (4 vols.), and again in 1854 (4 vols.). The monks of the reformed branch of the Cistercians, which he instituted, are often called, after him, Bernardines. He gave name also, in France, to the nuns of the Cistercian Order, which his sister, St. Humbeline, is said to have founded.

A complete French translation of his works appeared in Paris (8 vols.), 1873. His letters were translated into English by Samuel J. Eales, D.C.L. (2 vols., London, 1889), as the opening volumes of a complete English translation, *M. Eales also published a translation of Bernard's Cantica Cantorum*, 86 sermons on the Song of Solomon (1895), from these 31 sermons were selected and published in English translation, *The Song of Songs* (1901). Other modern English translations are *The Holy War*, by S. R. Maitland (Gloucester, 1827), *Four Homilies upon the Incarnation* (1843), *Letter on Conversion* (London, 1850), *Sermons for the Seasons of the Church* (1861), *The Jubilee Rhythm on the Name of Jesus* (1867), *The Glories of the Virgin Mother and Channel of Divine Grace* (Boston, 1867), *How to Live Well* (Oxford, 1886). For the biography of St. Bernard, consult Neander (Berlin, 1813, new ed., Götting, 1889), Eng. trans., London, 1843), Morrison (London, 1893), S. J. Eales (London, 1890), Ratisbonne (Paris, 1841, Eng. trans., New York, 1878), R. S. Storrs (New York, 1892), E. Vacandard (Paris, 1895), W. J. Sparrow-Simpson (London, 1895), T. Halusa (Regensburg, 1898).

BERNARD OF CLUNY, *klun'ē* (c 1122-56) A Benedictine monk, under Peter the Venerable He was born of English parentage at Morlaix, in Brittany, hence he is called sometimes Bernard of Morlaix, or, in Latin form, Bernardus Morlanensis. No details of his life are known. Yet he has attained immortality in hymnology, owing to the circumstance that, in the opening of his Latin poem "De Contemptu Mundi," he gives a description of heaven, which in the translation of John Mason Neale became the three beautiful hymns, "Jerusalem the Golden," "The World is Very Evil," "For Thee, O Dear, Dear Country." The poem itself is by no means heavenly in its general contents, but is a fierce castigation of the sins of the mediæval Roman church. It is 3000 lines of dactylic hexameters of such extraordinary difficulty that the author says he was only enabled by divine help to produce them. There are several early and scarce editions of the original text, and one modern one in the Rolls series in the second volume of Thomas Wright's *Anglo-Latin Satirical Poets of the Twelfth Century* (2 vols., London, 1872). For the translations referred to, consult J. M. Neal, *The Rhythm of Bernard de Morlaix on the Celestial Country*, Latin and English (London, 1859, 7th ed., 1866), Jackson, *Source of "Jerusalem the Golden"* (Chicago, 1910).

BERNARD, CHARLES DE (1804-50) (Pierre Marie Charles de Bernard du Gail de la Villotte) A French author, born on February 25, 1804, at Besançon. He at first studied for the law, but later entered the field of journalism. His work in connection with a critical review of Balzac's *Peau de chagrin* brought him to the favorable attention of that author, who advised him to develop his literary talent. Bernard then wrote many striking narratives dealing with French provincial life, chief among which was *Geifaut*, published in 1838. A volume of his short stories (*Le Nœud*) contained *Une aventure de magistrat*, which furnished Sardou with the material for his comedy of the *Pommes du voisin*. *Les ailes d'Icare* (1840), *La peau du lion* (1841), and *Le gentilhomme campagnard* (1847) are among the best of Bernard's other writings. He collaborated with C. H. L. Laurenot in the production of two comedies, which were included in the 12 volumes of his *Œuvres complètes*, published after his death. An appreciative criticism of Bernard appears in Thackeray's *Paris Sketch-Book*, as does also one by Henry James in his *French Poets and Novelists* (1878).

BERNARD, bër'nar, CLAUDE (1813-78) A French physiologist. He was born at Saint-Julien, near Villefranche, in the department of Rhône, July 12, 1813. He studied medicine in Paris, was admitted in 1839 as a surgical interne in one of the hospitals, and in 1841 became one of Magendie's assistants at the Collège de France. He was graduated in 1843 a doctor in medicine, and 10 years later a doctor in science, and was appointed in 1854 to the chair of general physiology in connection with the Faculty of Sciences in Paris. The same year he was chosen member of the Academy of Sciences, and in 1855 he succeeded Magendie as professor of experimental physiology in the Collège de France. Bernard's first researches were devoted to the physiological study of the various secretions of the alimentary canal. His memoir, published in 1844 in the *Gazette médicale*, treats

of the origin and functions of the gastric juice. To the *Comptes rendus* of the biological society he contributed papers on the saliva, on the intestinal juice, on the influence of the nerves on the digestive apparatus, and on the respiratory and circulatory systems. In his first original paper, *Researches on the Function of the Pancreas*, he showed that organ to be the true agent of the digestion of fats. This essay obtained in 1849 the grand prize of the French Academy in experimental physiology and was printed in the *Comptes rendus* of the Academy of Sciences in 1856. In 1849 appeared his first researches on the glycogenic function of the liver, proving that the blood which enters the liver does not contain sugar, while blood which leaves that organ by the hepatic vein is charged with it. He also showed that the formation of sugar in the liver could be interrupted by division of the pneumogastric nerve, and that a puncture of the floor of the fourth ventricle of the brain produced diabetes. For these discoveries, then keenly criticised, but now accepted, he obtained, in 1851, the grand prize of the French Academy in experimental physiology. In 1852 he published his experimental researches on the great sympathetic system, and on the influence exerted by division of the sympathetic nerve on animal heat. This paper procured him for the third time the prize of experimental physiology, in 1853. From 1854, when he succeeded Roux as member of the Institute, he continued his researches on the glycogenic function of the liver and also published his courses of lectures at the Collège de France on *Experimental Physiology in its Application to Medicine* (1855-56), on *The Effects of Toxic and Medicated Substances* (1857), on *The Physiology and Pathology of the Nervous System* (1858), on *The Physiological Properties and the Pathological Alteration of the Various Liquids of the Organism* (1859), on *Nutrition and Development* (1860), and his *Introduction to the Study of Experimental Medicine* (1865). In 1862 he became an officer in the Legion of Honor, in 1867 a commander, and in 1869 he was made a member of the Academy. He was a founder of the Société de Biologie and its president from 1867 to the time of his death in Paris. His obsequies were conducted at the public expense, an honor never before conferred on a scientific man.

BERNARD, bër'närd, SIR FRANCIS (1714-79) An English lawyer, a Colonial Governor of Massachusetts and New Jersey. He graduated at Oxford in 1736, distinguished himself at the bar, and in 1758 was appointed the Governor of New Jersey, whence, after two years, he was transferred to the Colony of Massachusetts Bay. During the early part of his administration he enjoyed the good will of the people, but on the division of the two parties he favored the crown, and by his harsh measures contributed greatly towards hastening the Revolutionary War. On the strength of his unfavorable representations regarding the designs of the colonists, troops were ordered to Boston, and the indignation aroused by this act was increased by his proroguing the General Court because that body refused to vote supplies for the soldiers. In 1769 he was recalled, and his departure was made an occasion of general public rejoicing. He took a special interest in Harvard College, and when its library was destroyed by fire in 1764 he raised funds for re-

placing it. He published *Letters to the Ministry* (1769), *Select Letters on the Trade and Government of America* (1774), etc., and his *Letter Books* are now in the library of Harvard University, as the bequest of Dr. Jared Sparks, who bought them in 1848.

BERNARD, JOHN HENRY, BISHOP OF OSSORY, FERNS, AND LEIGHLIN (1860-) An English clergyman and author. He was born in India and was educated at Trinity College, Dublin, becoming chaplain to the Lord Lieutenant of Ireland in 1886. He was made dean of St. Patrick's Cathedral, Dublin, in 1902, and Bishop of Ossory, Ferns, and Leighlin in 1911. He translated several of the philosophical works of Kant, and published *From Faith to Faith. University Sermons* (1895), *Tra Domini Cathedral Sermons* (1898), *The Irish Liberator Hymnorum* (1898), *The Second Epistle to the Corinthians* (1903), *The Odes of Solomon* (1912).

BERNARD, MONTAGUE (1820-82) An English lawyer, born at Tibberton Court, Gloucestershire, and educated at Trinity College. He was appointed to the newly established chair of international law and diplomacy at Oxford in 1859. He was one of the commissioners who came to the United States and signed the Treaty of Washington (1871) and in 1872 represented the British government at Geneva. In 1874 he resigned his professorship at Oxford, because of the pressure of his public employments, but he afterward was active in bringing about the compromise by which the interests of the college and the university were identified. He published *Four Lectures on Subjects Connected with Diplomacy* (1868), and *Historical Account of the Neutrality of Great Britain During the American Civil War* (1870).

BERNARD, SAINT, OF MENTHON (Menthon) (923-1007) The founder of the hospices upon the Great and Little Mount St. Bernard. He was born at Menthon, near Annecy, Savoy, was well educated, as his parents were titled people, early embraced a priestly life at Aosta and became archdeacon of the city. Later on he took up the monastic life and founded the hospices (962). He died at Novara, probably May 28, 1007. For his biography, consult L. Buigener (Lucerne, 2d ed., 1870).

BERNARD, BERNARD, SIMON (1779-1839) A French military engineer and for 14 years an officer in the United States corps of engineers. He served in the Army of the Rhine under Napoleon, who made him his aid-de-camp in 1813. In the retreat after the battle of Leipzig (1813) he was severely wounded, and in the same year was conspicuous for defending Torgau during a siege of three months. Having joined Napoleon on his return from Elba, he found it necessary after the 100 days to leave France. Upon the invitation of President Monroe in 1816 he came to the United States to become senior member of the Board of Engineers having charge of the construction of a new system of coast defenses. The most distinguished military engineer of his time, Bernard had a very important influence on the military works of the United States. Fort Monroe, constructed from his plans, is a splendid example of his work along the line of old French fortifications. His plans not only covered a system of Atlantic and Gulf coast defenses, but included as a part of the scheme for national protection an elaborate system of national roads, interior canals,

and waterways. He contributed particularly to the construction of such works as the Chesapeake and Ohio Canal, and the Delaware Breakwater. When the Revolution of 1830 in France broke out, he returned to that country, was restored to the French corps of engineers, and was made lieutenant general and aid-de-camp to King Louis Philippe. He also prepared plans for the fortification of Paris. In 1834 he became inspector general of engineers and from 1836 to 1839 he was Minister of War. Consult the biographical sketch by Gen. W. H. Carter, U.S.A., in *Journal of the Military Service Institution of the United States*, vol. 11 (1912).

BERNARDIN DE SAINT-PIERRE, bér-nar'dîn' de sîn pyër. See SAINT-PIERRE.

BERNARDINE, or BERNARDIN, OF SIENA, bér-nar-dên', sê-nâ, SAINT (1380-1444) An Italian Franciscan friar, born at Massa di Carrara. He entered the Franciscan Order in 1404, and was appointed vicar-general of the order in 1438. The strictness of the earlier monastic rule was restored by him. He was famous as a preacher and wrote several mystical works. He was canonized in 1450. His writings were published in Lyons in 1501 and in Venice in 1745. Consult Paul Thureau-Dangin, *Un prédicateur populaire dans l'Italie de la Renaissance. Saint Bernardin de Sienne* (Paris, 1896, English trans. by G. von Hugel, London, 1906).

BERNARDO DA VENEZIA, bér-nar'dô da vî-nâ'tsé-a (?-1436) An architect of the closing period of Italian Gothic. He was court architect to Gian Galeazzo Visconti, Duke of Milan, who founded the *Certosa* (q.v.) at Pavia. He was consulting architect of the cathedral of Milan and constructed the church of Santa Maria del Carmine, the finest Gothic church in Milan after the cathedral. Its superb façade is in five divisions, with rich details. He also erected the castle of Pavia. His Venetian origin explains a certain resemblance in the interior of the *Certosa* to Venetian churches.

BERNARDO DEL CARPIO, dêl kar'pê-ô. A Spanish warrior. He was the son of Don Sancho, Conde de Saldaña and Ximena, the sister of Alfonso II of Leon, who had been secretly married. On learning of the marriage the King imprisoned Don Sancho and had his eyes put out and sent his wife to a convent. The boy was brought up at court, gained early renown in the wars against the Moors, and became one of the most famous soldiers of the ninth century. Incensed because he could not obtain his father's liberty, Bernardo went over to the Moors and established himself in the strong castle of Carpio, whereupon the King promised to release the father if Bernardo would surrender the fortress. It is uncertain what became of Don Sancho, but, according to one version, the King put him to death, mounted him on a horse, and presented him thus to Bernardo. Another version has it that Don Sancho died before the King could fulfill his promise, but that in order to fulfill it as far as possible Alfonso mounted the corpse on a horse and presented it to Bernardo. According to some chronicles Bernardo went to France, where he became a wonderful knight-errant. His name occurs frequently in romances, ballads, and plays, and is the title of an epic poem of 1624. Lope de Vega makes him a national hero and conqueror of Roland at Roncesvalles. Mrs. Hemans has also made poetic use of him.

BERNARDO DELLA GIRANDOLE, dē'la jē'ran dō'la See BUNFALANTI, BERNARDO

BERNAUER, bē'nou-ēr, AGNES (c. 1435) A beautiful girl of Augsburg, whom Duke Albert of Bavaria loved and married (1432) His father, Duke Ernest, intent upon gaining for his son the hand of Anna of Brunswick, caused Agnes to be accused of witchcraft and drowned (1435) Albert in his grief and resentment made war upon his father, but was finally reconciled, erected a monument to the memory of Agnes, and married Anna of Brunswick The story of Agnes Bernauer has been made the theme of a number of poems, novels, and plays Consult Count Torring, *Agnes Bernauerin* (Stuttgart, 1891).

BERNAY, bē'r'nā'. The capital of an arrondissement of the same name in the department of Eure, France, on the Charentonne, 17 miles southeast of Lisieux (Map France, N, F 3). It has two fine churches, those of Sainte-Croix and Notre Dame, dating from the fourteenth century, and remains of an abbey of the eleventh century, now fitted up for public offices, and the abbey church as a market A noted horse fair, one of the most important in France, is held annually during the fifth week in Lent The leading industries are connected with the cotton and woolen cloth manufacture Pop, 1901, 6789, 1906, 8115, 1911, 7883

BERNAYS, bē'r'nās, AUGUSTUS CHARLES (1854-1907) An American surgeon He was born at Highland, Ill., and was educated at McKendree College, Lebanon, Ill., and at the University of Heidelberg After studying a year at the Royal College of Surgeons, England, he began to practice surgery in St Louis, Mo., where in 1883 he was appointed professor of anatomy and clinical surgery in the College of Physicians and Surgeons Afterward he was appointed to the same position at Marion Sims College and at Woman's Medical College During his life he ranked among the leading surgeons of the United States He was one of the earliest exponents of antiseptic surgery and performed successfully several important operations previously considered impossible These are treated in the work entitled *Kolpohysterectomy, a New Operation for the Treatment of Retroflexion of the Uterus, and The First Successful Case of Cesarean Section for Placenta Prævia*

BERNAYS, bē'r'nās, JAKOB (1824-81) A German philologist, of Jewish parentage He was born in Hamburg and was educated at the University of Bonn, where he was professor extraordinary and librarian from 1866 until his death He published *Die Lebensbeschreibung des J J Scaliger* (1855), *Die Dialoge des Aristoteles im Verhältniss zu seinem übrigen Werken* (1863), *Die Heraklitschen Briefe* (1869), *Zwei Abhandlungen über die Aristotelische Theorie des Dramas* (1880) His complete works, which deal chiefly with Greek philosophy, were edited by Usener (2 vols, Berlin, 1885) In classical philology his most important production is an edition of Lucretius (1856) Consult C Schaarschmidt, *Biographisches Jahrbuch* (Berlin, 1881)

BERNAYS, LEOPOLD JOHN (1820-82) An English divine, translator, and author He was born in London and was a son of Adolphus Bernays (1794-1864), professor of the German language and literature at King's College, London, from 1831 to 1863 He was educated at St John's College, Oxford, was head master of Els-

tree School from 1847 to 1860, and rector of Great Stanmore, Middlesex, from 1860 until his death With the exception of an ephemeral translation of *Faust*, comprising in all 50 copies, and published in London in 1838, Bernays's English translation of Part II of the famous German drama was the first to appear, being published in London in 1839, under the title *Faust a Tragedy, Part II, Translated from the German, Partly in the Metres of the Original and Partly in Prose, with Other Poems, Original and Translated* (1842)

BERNAYS, MICHAEL (1834-97) A German literary historian, brother of Jakob Bernays, born in Hamburg He studied at Bonn and Heidelberg and was professor of the history of literature at Munich from 1873 to 1890 His works treat chiefly Goethe and Shakespeare and include *Briefe Goethes an F A Wolf* (1868), *Zur Entstehungsgeschichte des Schlegelschen Shakespeare* (1872), *Goethe und Gottsched* (1880)

BERNBURG, bērn'bōrk A town in the German Duchy of Anhalt, till 1863 capital of Anhalt-Bernburg, situated on the Saale, 23 miles south of Magdeburg (Map German Empire, D 3) The town is divided into three sections—the Altstadt and the Neustadt, with the suburb of Waldau on the left bank of the river, the Bergstadt on the right, connected by a stone bridge Bernburg is well built, has several educational and charitable institutions, and manufactures of porcelain, paper, lead, zinc, cement, and starch It also has breweries, distilleries, mills, and iron foundries It is the centre of a fertile district and has considerable river traffic in grain and farm products Old Bernburg was a fortified town as early as the tenth century Pop, 1890, 28,328, 1900, 34,418, 1910, 33,703

BERNE-BELLECOUR, bērn' bēl'kōr, ETIENNE PROSPER (1838-1910) A French painter, born in Boulogne He was a pupil of Picot and Barrias and at first painted landscapes and portraits His reputation was, however, achieved with accurate and spirited pictures of episodes of the Franco-Prussian War His works, many of which are in private collections in the United States, include the following list "Cannon Shot," "Battle of Malmaison," depicting the artist and his comrades in arms, "Attack on the Château of Montbehard," and "To Arms!" The Metropolitan Museum of New York possesses his "Soldier in the Trenches" and "The Intended"

BERNER, bē'nēr, ALBERT FRIEDRICH (1818-1907) A German jurist and criminologist He was born at Strassburg, Brandenburg, and studied at the University of Berlin, where in 1848 he was appointed professor of law His best-known work is a *Lehrbuch des deutschen Strafrechts* (1857, 18th ed, 1895), which was translated into several foreign languages He also wrote a number of other works, including *Lehrbuch des deutschen Pressrechts* (1870) and *Judentum und Christentum und ihre Zukunft* (1891)

BERNERS, or **BARNES**, LADY JULIANA (b 1388?) Though little is known about Dame Juliana, she is said to have been the daughter of Sir James Berners, beheaded on Tower Hill in 1388, and to have become in the fifteenth century prioress of Sopwell nunnery, in Hertfordshire To her is attributed, on the authority of a colophon, one of the first books printed in England, *The Boke of Saint Albans*

(1486), comprising treatises on hawking, hunting, and heraldry. The book was printed at St Albans, but the name of the printer is unknown. In 1496 Wynkyn de Worde published a second edition, to which was added a treatise on fishing. In this continuation there is a quaint woodcut of a fisherman which has become celebrated. During the sixteenth century the book was extremely popular, as is evidenced by the numerous editions. Consult facsimile of first edition, with introduction by Blades (London, 1881), facsimile of the treatise on fishing, Watkins (London, 1880) and a version of the latter treatise from manuscript, made for the London Dialect Society, vol. xiv, Satchell (London, 1883).

BERNHARD, bérn'hart, COUNT OF ANHALT and DUKE OF SAXONY (1140-1212). The founder of the present ducal dynasty of Anhalt. He was the youngest son of Albert the Bear, the first Margrave of Brandenburg, who died in 1170. In addition to inheriting part of his father's dominions, out of which arose the little state of Anhalt, he came into possession of a portion of the Duchy of Saxony. When the country was partitioned by Henry the Lion, he also received a portion of the Dukedom of Saxony. His last political action was the forcible reinstatement of Archbishop Waldemar, at Bremen, in the face of the determined opposition of the Pope and of the Danish King.

BERNHARD, DUKE OF SAXE-MEININGEN (1649-1706). The founder of the present ducal dynasty of Saxe-Meiningen. He was a son of Duke Ernest the Pious, of Saxe-Gotha, and received his education at the University of Tübingen. After the death of his father (1675) he ruled in conjunction with his six brothers, until a settlement was effected whereby the Duchy of Meiningen was assigned to him as a separate possession, June 20, 1681.

BERNHARD, DUKE OF SAXE-WEIMAR (1604-39). A celebrated German general. He was born in Weimar, the youngest of the eleven sons of John III, Duke of Saxe-Weimar. On the outbreak of the Thirty Years' War he took the side of Protestantism against the Emperor and first distinguished himself in 1622 at Wimpfen. Subsequently he became colonel in the army of Christian IV of Denmark and took part in the bold expedition of Mansfield through Silesia to Hungary. He joined Gustavus Adolphus in 1630 and became one of the most famous leaders in the Thirty Years' War. He was conspicuous in the attack upon Wallenstein's position at Nuremberg in 1632 and won the indecisive victory at Lützen, having assumed the command after the death of Gustavus Adolphus. One of his most splendid achievements was the taking of Ratibon in 1633. In 1634 Bernhard and the Swedish general, Horn, suffered a terrible defeat at Nordlingen. When Richelieu took up the cause of the Protestants, Bernhard was enabled to maintain a large force by means of a French subsidy. In 1638 he opened the most brilliant campaign of his military career, the crowning success of which was the conquest of Breisach. He died suddenly at Neuenburg on the Rhine.

BERNHARDT, Fr. pron bérn'art', Ger. pron bérn'hart, ROSINE, called SARAH (1845-). A noted French actress, born in Paris of French and Dutch parentage. She is of Jewish descent, but at the age of 12, in accordance with her father's wish, was baptized into the

Christian faith and entered a convent to be educated. In 1858 she entered the Conservatoire, where she gained second prize for tragedy in 1861 and for comedy in 1862. At her debut at the Comédie Française in 1862, in a minor rôle in Racine's *Iphigénie*, she attracted little notice, and soon left the Comédie for the Porte Saint-Martin and the Gymnase, where she appeared in burlesque without success. In 1867 she joined the company at the Odéon and made her first notable success as Cordelia in a French version of *King Lear* and as the queen in Victor Hugo's *Ruy Blas*. She achieved a triumph there two years later by her remarkable creation of the rôle of Zanetto in François Coppee's *Le passant*. In 1872 she was recalled to the Comédie Française, where in 1874 she achieved brilliant successes as Berthe de Savigny in *Le sphinx* and as Phèdre in Racine's play of that name. The following year she was elected "sociétaire," and from this time on by a series of remarkable performances, chief among which was the rôle of Dona Sol in Victor Hugo's *Herminie* (1877), she steadily increased her reputation till she became the best-known actress of her time. In 1879 she appeared with notable success at the Gaiety Theatre in London. Returning to Paris, she began an engagement in Emile Augier's *L'aventurière*, but, owing to unpleasant relations with other "sociétaires" and unfavorable criticism of her acting, she abruptly severed her connection with the Comédie and left after the first performance. For this breach of contract she was condemned to pay a forfeit of 100,000 francs. After leaving the Comédie Française she returned to London, where she gave a series of performances, appearing with great success in *Adrienne Lecouvreur* and *Frou-frou*. During 1880 and 1881 she made tours in Denmark, Russia, and America, relying chiefly on *Adrienne Lecouvreur*, *Frou-frou*, and *La dame aux camélias* for her repertoire. In 1882 she returned to London and married Jacques Damala, a Greek actor, from whom she separated the following year. On her return to Paris she achieved another signal triumph in the *Fédora* of Sardou, and thus began her long connection with this popular author. He wrote for her *Théodora* (1884), *La Tosca* (1887), and (in collaboration with Moreau) *Oléopâtre* (1890). She appeared in these, and in Jean Richepin's *Nana Sahib* (1883), Jules Barbier's *Jeanne d'Arc* (1890), and many other plays produced at the Porte Saint-Martin, of which she was proprietress from 1883 to 1893. During this decade she made visits to America in 1886-87 and 1888-89, and between 1891 and 1893 she made a tour of the world, including North and South America, Australia, and the chief European countries. In 1893 she opened the Théâtre de la Renaissance in Paris, where she appeared in *Les rois et Sylvestre* (1893), *Izyl* and Sardou's *Gismonde* (1894), Rostand's *La princesse lointaine* and a French translation of Sudermann's *Itimat* (1895), an adaptation of Alfred de Musset's *Lorenzaccio* (1896), and Rostand's religious drama *La Samaritaine* (1897). In 1896, during an elaborate public fête held in her honor, she received congratulations from almost every country in the civilized world. She left the Théâtre de la Renaissance in 1899 and moved to a larger house, the Théâtre des Nations, which she renamed the Théâtre Sarah-Bernhardt, and opened with a revival of *La Tosca*. Here also she appeared as the weak-

willed son of Napoleon I in Rostand's *L'Aiglon*. Her success in this led her to attempt a French production of *Hamlet*, in which she played the title rôle. She repeated both these performances in London the following year (1901). In 1900 she appeared in America in *L'Aiglon* with Constant Coquelin, for whom the play was originally designed. She visited America again in 1911, appearing in a repertoire of her best-known rôles, and in the spring of 1913 returned and played a short engagement, her repertoire consisting of single acts selected from *Phedre*, *Lucio Bojia*, *La dame aux camélias*, *La Tosca*, and a new one-act play entitled *Une nuit de Noël, sous la tenture*, written by her son Maurice Bernhardt in collaboration with Henri Cain. Owing to a slight accident, she was unable to walk without assistance during this engagement, but her matchless voice was unimpaired, and she received an ovation at every performance. Her position as the first actress of her day is undisputed. She has never been able, as Modjeska was, to portray the highest inspirations of poetry, and she lacks Duse's serenity and sincerity and her ability to suggest unutterable emotions, but she is mistress of every item of stagecraft, and where inspiration fails her she triumphs by sheer technical efficiency. With the exception of Coquelin no actor or actress of her time has approached her in the perfection of her art. Before age destroyed her panther-like grace, her every pose and movement were so artfully contrived that they appeared inseparable from the character she was portraying. In addition to her extraordinary gifts as an actress, she has shown considerable talent in sculpture, painting, and writing. She has exhibited both painting and sculpture at the Salon, where her piece entitled *Après la tempête* (1876) received honorable mention. In 1878 she published a prose sketch, *Dans les nuages, les impressions d'une chaise*, and in 1907, a volume of *Mémoires*. She has written two plays, a one-act comedy *L'aveu*, produced at the Odéon in 1888, and a longer piece entitled *Adrienne Lecouvreur* (1907), based on the play of that name by Scribe and Legouvé. She was made a member of the Legion of Honor in 1914, and in the same year, in Paris, won one of her greatest triumphs in Tristan, Bernard's *Jeanne Doré*. Consult Jules Huret, *Sarah Bernhardt* with a preface by Edmond Rostand (Eng. trans., Philadelphia, 1909), and her own *Mémoires* (Paris, 1907).

BERNHARD VON NORDALBINGEN, bérn'hart fön nót'al'bl'ng-en. See BASEDOW, JOHANN BERNHARD.

BERNHARDY, bérn'har-dé, GOTTFRIED (1800-75). A German classical scholar, born at Landsberg, Brandenburg. He held a professorship at the University of Berlin from 1825 until 1829. He was professor in the University of Halle and director of the Philological Seminary from 1829 until his death. Among his chief publications are *Wissenschaftliche Syntax der griechischen Sprache*, first published in 1829, but enlarged by supplements in 1854 and 1862; *Grundriss der römischen Literatur* (1830, 5th ed., 1872); *Grundriss der griechischen Literatur* (2 vols., 1836-45), and a great edition of Suidas (4 vols., 1834-53). Consult R. Volkmann, *Gottfried Bernhardt* (Halle, 1887).

BERNI, bér'né, FRANCESCO (1497 or 1498-1535). An Italian humorist and satiric poet.

VOL. III—13

He was born at Lamporecchio and was successively in the service of his relative, Cardinal Bibbiena, of Ghisberti, Bishop of Verona, and of the Cardinal Ippolito de' Medici, who in 1533 appointed him a canon at Florence. He died in 1533, poisoned, according to the one story, by the Cardinal Innocenzo Cibo, because he would not lend himself to a plot to kill a certain Cardinal Salviati. Berni is one of the greatest Italian humorists. His *Rime* pass in review all the intimacies of Italian popular life and manners, with a keen sense of the comic, which he expresses at times with depth, always with brilliancy and elegance. He enlarged immensely the field previously traversed in satire by Antonio Pucci and Burchiello, bringing also into his work serious artistic effort and great originality in form. His favorite comic device was to treat trivial subjects in majestic style, as, for instance, in his erudite commentary on a poem describing a game of cards. His most famous satire, *Al Fracastoro*, describes an uncomfortable night passed at a friend's house. Berni has given his name to the *poesia bernesca*, the rollicking bulesque manner, where Grazzini (Lasca) is his most celebrated imitator. Berni's remodeling of Boiardo's *Orlando innamorato*, which he regarded as his chief title to fame, is now considered an aesthetic blunder, though it has qualities in the humorous parts which brought out Berni's real genius. The edition of the *Riformamento* of Florence (1827-28), contains a biography by Corniani. The *Rime poesie latine e lettere*, were last edited by Virgili (Florence, 1885). Consult G. Mazzoni, *Vita libri e carte* (Roma, 1887), and P. Micheli, *Saggi critici* (Città di Castello, 1906). Parts of Berni's version of the *Orlando innamorato* were translated by R. Alsop (New York, 1806).

BERNICE, bér-ni'sé. See BERENICE.

BERNIER, bér'nyá', FRANÇOIS (c.1620-88). A French physician and traveler, born at Angers. He took his degree of doctor at Montpellier, departed for the East about 1654, and visited Syria, Egypt, Arabia, and India, in the last of which countries he resided for 12 years in the capacity of physician to the Great Mogul. On his return to France he published an account of his travels in India, *Les voyages de Bernier contenant la description des Etats du Grand Mogul, de l'Hindoustan* (1699). This work is delightful in style and accurate in the delineation of manners and customs as well as in the description of places.

BERNINA, bér-né'na. A mountain of the Rhetian Alps in the southeastern part of the Swiss Canton of Grisons (Map Switzerland, D 2). It attains an altitude of 13,300 feet in its highest peak and is covered with numerous glaciers, among which the Morteratsch and Roseg are the largest. The Bernina Pass, situated at an elevation of about 7700 feet, over which a carriage road has been constructed from Samaden to Tirano, unites the valley of the upper Engadine on the north with the Valtellina on the south and is much frequented during seasons of good grade harvest.

BERNINI, bér-né'né, GIOVANNI LORENZO (1598-1680). The most celebrated Italian sculptor of the Baroque period, also renowned as an architect. The son of a Tuscan sculptor employed at Naples, he was born in that city Dec 7, 1598. Under his father's careful training he carved creditably at the age of eight. After

their removal to Rome the boy's remarkable endowments procured him, in his tenth year, an audience with Paul V, who prophesied that he would be the Michelangelo of his century. The boy studied for three years with tireless energy among the antiques of the Vatican and in his teens executed groups which placed him in the foremost rank of his day. In the best known of these, the "David," his own portrait, "Apollo and Daphne" (both in the Villa Borghese), and the "Rape of Proserpine" (Villa Ludovisi), all the characteristics of his fully developed style appear. He was made a Knight of the Order of Christ by Gregory XV, and, with the accession of his friend and preceptor, Urban VIII, Barberini, became the practical dictator of all artistic undertakings. After two years' study in painting and architecture, required by the Pope for the great project, he designed and erected the colossal baldacchino with its twisted columns under the cupola of St Peter's. The bronze for this vast structure was secured by the flagrant destruction of the ancient casseted ceiling of the portico of the Pantheon. On the death of Maderna in 1629, he became architect of St Peter's and completed the Barberini Palace, himself designing the grandiose façade and elliptical staircase. His most attractive statue of this period is "Santa Bibbiana" in St Peter's. Two years before Urban VIII's death he began his celebrated tomb in St Peter's, with the highly characteristic bronze statue of the Pope. His chief works under Innocent X were the "St Theresa" group in Santa Maria della Vittoria, and the celebrated fountain of the Piazza Navona. The Fontana Trevi was also executed later after his design. Under Alexander VII (1655-67), he designed the colonnade of St Peter's and the Scala Regia connecting the church with the Vatican—works of the highest architectural order. Of less artistic importance is the celebrated "Cattedra di San Pietro" in the apse of the church, designed to support the traditional chair of the first Roman bishop. On a journey to Paris, where he furnished a design of construction for the Louvre to Louis XIV, he was received like a royal personage. After his return to Rome, he conducted the restoration of the Bridge of Sant' Angelo, designing and in part carving the 10 colossal angels upon it. After having for 50 years dictated the artistic taste and achievements of the papacy, during which time he designed or executed 37 busts, 58 statues, and 50 architectural works, he died in Rome, Nov 28, 1680. Never during his lifetime has an artist received greater honor and appreciation. His conceptions dominated the sculpture of Europe for over 100 years. To modern taste they are far less pleasing, for, while his work displays great technical ability and fine decorative quality, it is exaggerated in form and theatrical in action. His portrait busts, however, are unequalled in realistic power and characterization. His biography was written by a relative, Domenico Bernini (Rome, 1713); consult also Dohme, *Kunst und Künstler* (Leipzig, 1879); De Chantelou, *Journal du voyage de chevalier Bernini en France* (ed Lalanne, Paris, 1885); Fiaschetti, *Il Bernini* (Milan, 1899).

BERNIS, bĕr'nĕs', FRANOIS JOACHIM DE PIERRES DE (1715-94). A French prelate and diplomatist, born at Saint Marcel, Ardèche. He was educated for the priesthood, but turned first to diplomacy and became Ambassador to Venice

in 1751. He represented France in the negotiations preceding the Seven Years' War and became Foreign Secretary. In 1758 he was made a Cardinal, but offended the King and was banished from court. In 1764 he recovered the royal favor and was made Archbishop of Albi. On the election of Clement XIV he became Ambassador to Rome and carried out the wishes of Choiseul, his successor as Foreign Secretary, in urging the suppression of the Jesuits. He lost his dignities at the Revolution, refusing to take the oath of allegiance to a constitution "of which an essential feature was the destruction of the ancient discipline of the Church," and died a pensioner of Spain. Consult his *Mémoires et lettres* (Paris, 1878, ed Frederic Masson. Eng trans, New York, 1902), also his *Correspondence avec Voltaire* (Paris, 1799). Consult Leon Cahen, "Le mémoires du Cardinal de Bernis," in *Revue d'histoire moderne et contemporaine*, vol. xii (1909).

BERNOULLI, bĕr'nō'yĕ, or **BERNOULLI**. The name of a family famous for the successful cultivation and extension of mathematical and physical science. Its original habitat was Antwerp, but the attachment of the founder of the family (Jakob) to the Reformed religion forced him to seek an asylum in Frankfurt-on-the-Main. Later on the family established itself at Basel, where several of the family acquired great distinction. The relationship between the most important members of the family was as follows: Nicolas Bernoulli (1623-1708) had 11 children, including Jakob (1654-1705), Nicolas, and Johann (1667-1748). Famous among their descendants are a son of Nicolas, likewise named Nicolas (1687-1759), and three sons of Johann, named Nicolas (1695-1726), Daniel (1700-82), and Johann (1710-90). Two sons of the last named are celebrated: Johann (1744-1807) and Jakob (1758-89). See the following articles.

BERNOULLI, DANIEL (1700-82). He was born at Groningen and was the second son of Johann (Jean) Bernoulli. After having studied mathematics with his father, he studied medicine. He occupied successively a chair of mathematics at St Petersburg (1725-32), a chair of anatomy and physics at Groningen, and chairs of anatomy, botany, and physics at Basel. He was a member of several academies and took numerous prizes in Paris. Daniel Bernoulli was extremely versatile. His principal work is the *Hydrodynamica*, in which he first developed the kinetic theory of gases.

BERNOULLI, JAKOB, JACQUES, or JAMES (1654-1705). A celebrated mathematician. He was born at Basel. Destined by his father for a chair of theology, he early showed his preference for science, and, after visiting France, Holland, and England, he was made professor of mathematics in the University of Basel (1687). He and his younger brother, Johann (q.v.), were among the first to understand and use the new method of Leibnitz. He solved the latter's problem (1687) of the isochronous curve, proposed and solved the problem of the catenary, solved that of the brachistochrone proposed by Johann, contributed to the theory of isoperimetry, and, in general, was one of a famous group of problem solvers, including his brother, Leibnitz, l'Hôpital, and Huygens. The result of the disputes over these problems was a serious estrangement between his brother and himself. He was a voluminous writer, his principal works including *Conamen Novi Systematis Cometarum*

(Amsterdam, 1682), suggested by the appearance of the comet of 1680, *Dissertatio de Gravitate Aethæris* (Amsterdam, 1683), and his contributions to the *Acta Eruditorum*, in one of which (May, 1690) the word "integral," as applied to a differential equation, is used for the first time, although Leibnitz had already used the symbol \int . The best known of his works, *Arts Conjectandæ* (1713), published posthumously (by Nicolas Bernoulli), extended the doctrine of probabilities to moral, political, and economical subjects.

In connection with the effort to prove that the number of times an event can happen in n trials lies between definite limits, Bernoulli proved the celebrated proposition, according to which "it is always possible to increase the number of trials till it becomes a certainty that the proportion of occurrences of the event will differ from p , its probability on a single trial, by a quantity less than any assignable."

His works were published under the title *Jacobi Bernoulli Basileensis Opera* (2 vols, Geneva, 1744). At his request, recalling the example of Archimedes (qv), a logarithmic spiral was engraved on his tomb, with the motto *Eadem Mutata Resurgo*, and this is still to be seen in the cloisters of the cathedral at Basel. Consult Saalschutz, *Vorlesungen über die Bernoullischen Zahlen* (Berlin, 1893) and Cantor, *Geschichte der Mathematik* (2d ed, Leipzig, 1898).

BERNOULLI, JAKOB, or **JACQUES** (1758-80). He was born at Basel. At the age of 21 he undertook the duties of the chair of experimental physics at Basel, his uncle Daniel having resigned the post on account of old age. A little later he became professor of mathematics at St. Petersburg and married a granddaughter of the great mathematician Euler. He was shortly after drowned in the Neva. Several of his memoirs were published in the *Nova Acta Academiae Petropolitanae*.

BERNOULLI, JOHANN, or **JEAN** (1667-1748). He was born at Basel. He and his brother Jakob were the first two foreigners honored by an election to the academies of Paris and Berlin. At the age of 23 he was appointed professor of mathematics at Groningen and on the death of his brother, 10 years later, succeeded him in a similar chair at Basel. As a teacher of mathematics he had no superior in his day. Among his pupils was Euler, whom he encouraged in his first efforts, and among his friends was Leibnitz, whose cause he always championed. Unfortunately he had a very jealous disposition, which showed itself not only in his relations with his brother, but even with his own son (Daniel). His *Opera Omnia*, in 4 vols, quarto, were published at Geneva in 1742, and his correspondence with Leibnitz, in 2 vols, at Lausanne in 1745. He proposed the problem of the brachistochrone and that of the minimum line between two points on a given surface, founded, jointly with his brother Jakob, the theory of isoperimeters, and was one of the pioneers in the work of constructing an exponential and an integral calculus, and to recognize completely the legitimacy of the real results from calculations involving the imaginary.

BERNOULLI, JOHANN, or **JEAN** (1710-90). He was born at Basel and was a brother of Daniel and the third son of Nicolas Bernoulli. He occupied successively the chairs of eloquence

and mathematics at Basel. The Academy of Sciences of Paris honored him three times for his contributions to the theory of heat and light. He was also a member of the Berlin Academy. His two sons, Johann and Jakob, were likewise famous men of science.

BERNOULLI, JOHANN, or **JEAN** (1744-1807). He was born at Basel. He received the degree of doctor of philosophy at the age of 13 and was made astronomer to the Academy of Berlin at the age of 19. His later works did not fulfill his youthful promise. His principal contributions were *Recueil pour les astronomes* (3 vols, Berlin, 1772-76, with a supplement in 1779), and *Lettres astronomiques* (1781).

BERNOULLI, NICLAUS, or **NICOLAS** (1695-1796). He was born at Basel and, like several other members of his family, was a youthful prodigy. At the age of 8 he could speak German, Dutch, French, and Latin, at 16 he took the degree of doctor of philosophy at Basel, and at 20 he received the degree of doctor of laws. He was professor of jurisprudence at Bern, and professor of mathematics at St. Petersburg, where he died. He wrote a history of the problem of trajectories. His important papers were published in an edition of his father's works in 1742.

BERNOULLI, NICOLAS (1687-1759). He was born at Basel. He was a friend of Newton and Halley, whom he visited in England, was a corresponding member of the principal academies of Europe, and professor of mathematics at Padua, and of law and logic at Basel. He edited the *Arts Conjectandæ* of his uncle Jakob. His own contributions relate chiefly to differential equations.

BERNSTEIN, BERNSTEIN, AARON (1812-84). A German publicist and author. He was born at Danzig, of Jewish parentage, and studied in Berlin. His admirable translation of the *Song of Songs* (published under the pseudonym of A. Rebenstein, 1834) and his publication of the work entitled *Das junge Deutschland* established his fame as a writer among the literary circles of Berlin. In 1849 he founded the *Urwählerzeitung*, in which (in 1851) he published some ultra-democratic articles which brought about his imprisonment. The paper was finally suppressed in 1853, when Bernstein established the *Volkszeitung*, a journal devoted, like its predecessor, largely to the dissemination of democratic views. His numerous and varied publications include *Revolutions- und Reaktionsgeschichte Preussens und Deutschlands von den Marztagen bis zur neuesten Zeit* (3 vols, 1883-84), and *Aus dem Reiche der Naturwissenschaft* (1856), later republished under the title *Naturwissenschaftliche Volksbücher* (1880, and frequently reprinted), a valuable work, which has been translated into nearly all the languages of Europe.

BERNSTEIN, EDUARD (1850-) A German social-democratic leader, born in Berlin. From 1881 to 1890 he was editor of the *Sozialdemokrat*. His socialistic views made it desirable for him to withdraw to London in 1888, after the publication of his criticism of Marxist doctrines he was permitted to return to Germany, where in 1902 he became editor of the *Dokumente des Sozialismus*. He also became editor of a weekly paper, *Welt am Montag*. Bernstein is one of the ablest critics of the doctrines of Karl Marx. He rejects the materialistic conception of history as inadequate

to explain modern social evolution, he regards the Marxian labor theory of value as untenable, and through careful statistical studies he endeavors to show that the prediction of Marx regarding the extinction of the middle class through concentration of wealth in fewer and fewer hands has been disproven by the course of events. The conquest of political society by the proletariat through mere increase in mass he regards as an illusion, he therefore urges all the democratic elements in society to work together for the democratization of the German state and the securing of social reforms. He was elected to the Reichstag in 1902, failed at the elections of 1907, but was again returned in 1912. His published works, besides an edition (1891-93) of the speeches and writings of Lasalle (translated into English, 1893, by E. Aveling), include *Die Voraussetzungen des Sozialismus und die Aufgaben der Sozialdemokratie* (1899, 1909), Eng. trans. by E. C. Harvey (1909), *Zur Geschichte und Theorie des Sozialismus* (1900, 1904), *Die heutige Sozialdemokratie in Theorie und Praxis* (1905), *Parlamentarismus und Sozialdemokratie* (1906), *Die Geschichte der Berliner Arbeiterbewegung* (1907-10).

BERNSTEIN, GEORG HEINRICH (1787-1860) A German Orientalist. He was born Jan. 12, 1787, at Cospeda, near Jena. He studied at the universities of Jena, Leipzig, and Göttingen, and in 1812 became assistant professor of Oriental literature at the University of Berlin and in 1821 full professor at Breslau. He made many journeys to the great libraries of Europe, visiting Oxford, London, Cambridge, Florence, Rome, Naples, and Venice, and gathering scientific material drawn chiefly from manuscript sources. His greatest philological activity was displayed in the publication of Syriac texts, the most noteworthy being the *Chronicle of Bar-Hebraeus* (1822) and portions of the same author's *Horæum Mysterium* (1858). In the domain of Arabic literature he is known for his edition of the *Poem of Saïf ad-dîn* (1816). He also published a new and entirely revised edition of Kirsch's *Chrestomathia Syriaca* (1832-36). It was his intention to publish an elaborate Syriac dictionary, of which, however, only the first part appeared (1857). He died at Lauban on April 5, 1860.

BERNSTEIN, HENRY LEON GUSTAVE CHARLES (1876-) A French dramatist, born in Paris of Jewish parents. His first play, *Le marche*, was produced at the Theatre Antoine in 1900. *La détour* and *Joujou* appeared in 1902, *Frère Jacques*, written in collaboration with P. Vabre, in 1903, *Le bœuf*, in 1904, *La griffe*, in 1905, *La rafale* and *Le voleur*, in 1906. *Samson, Israël, après moi*, and *L'assaut* followed at intervals of a year each between 1907 and 1911. English versions of *Le voleur*, *Samson, Israël*, and *L'assaut* have been produced in America and England, and *Le secret* was presented in New York, 1913-14. Bernstein's work is characterized by technical skill in plot construction, vigor and boldness in execution, and intense and violent emotion.

BERNSTEIN, JULIUS (1839-) A German physiologist, born in Berlin. He became professor of physiology at Heidelberg in 1869, at Berlin in 1871, and at Halle, 1872 to 1911. The character of his researches is expressed in the titles of such works by him as *Untersuchungen über den Erregungsvorgang im*

Nerven- und Muskel-system (1871), *Die fünf Sinne des Menschen* (2d ed., 1899), *Elektrobiologie, die Lehre von den elektrischen Vorgängen imorganismus auf moderner Grundlage* (1912). He wrote also several texts including *Lehrbuch der Physiologie* (3d ed., 1910).

BERNSTORFF, BERNSTOIF, ALBRECHT, COUNT (1809-1873) A Prussian diplomatist and statesman, born at Drelutzwitz (Mecklenburg-Schwerin). He was Secretary of Legation at St. Petersburg and Paris, and in 1840 was sent as envoy to Naples. He was appointed Ambassador at Munich in 1845, at Vienna in 1848, at Naples in 1852, and at London in 1854. As Minister of Foreign Affairs in 1861-62, he concluded commercial treaties with China and Japan. He was Ambassador at London, successively of Prussia, the North German Confederation (1867), and the German Empire (1871).

BERNSTORFF, ANDREAS PETER, COUNT (1735-97) A Danish statesman, Minister of Foreign Affairs in Denmark from 1772 to 1780 and from 1784 to 1797. He was born in Hanover and was the nephew of Johann Bernstorff. He was instrumental in securing the emancipation of the Danish peasantry begun by his uncle, took an active part in concluding the negotiations for the "armed neutrality" (qv) and arranged for the abolition of serfdom in Schleswig-Holstein. He was a steadfast champion of liberal principles and energetically opposed every restriction of the press. Consult A. Fins, *Andreas Peter Bernstorff og Ole Boegh Guld, 1772-1780* (Copenhagen, 1899) and id., *Andreas Peter Bernstorff und die Herzogtümer Schleswig und Holstein, 1773-1780* (Kiel, 1900).

BERNSTORFF, JOHANN HARTWIG ERNST, COUNT (1712-72) A Danish statesman, born in Hanover. He represented Holstein at the Diet of Regensburg in 1838, and became Minister of Foreign Affairs in 1751. To his policy was due the neutrality of Denmark during the Seven Years' War, and he contributed in every way to the prosperity of the country, promoting commerce, industries, art, and science. He emancipated the peasants on his estates. Frederick the Great styled him the "Oracle of Denmark." Consult Ahleman, *Ueber das Leben und Charakter des Grafen Bernstorff* (Hamburg, 1777) and P. Bedel, *Den ældre Greve Bernstorffs Ministerium* (Copenhagen, 1882).

BERNSTORFF, JOHANN HEINRICH, COUNT (1862-) A German diplomat, born in London, a son of Count Albrecht Bernstorff. He was educated at the gymnasium of Dresden, and at Ratzburg. From 1881 to 1889 he was an officer of the First Regiment Artillery Guards at Berlin, but after that was known entirely in a diplomatic connection—in earlier years (1880-92) as attaché of the German embassy at Constantinople and in the foreign office at Berlin, later (1892-1902) as Secretary of the Belgrade, Dresden, and Munich legations and of the St. Petersburg embassy, still more recently as counselor of the embassy at London (1902-06) and Minister at Cairo (1906-08), and, after 1908, as Ambassador of Germany to the United States. The degree of LL.D. was conferred upon him by a number of American universities.

BERNWARD, BERNVART (?-1022) A German ecclesiastic, Bishop of Hildesheim from 993 to 1022. He was at first court chaplain of Emperor Otto III. He greatly promoted the

welfare of his bishopric. He founded the cloister of St Michael and began the erection of St Michael's Church. He surrounded Hildesheim with walls and developed art and industry. He was canonized in 1193. Consult the biography by Thankmar, in *Monumenta Germaniae Historica*, vol. v (Berlin, 1893), and Sommerwerck, *Der heilige Bernward* (Hildesheim, 1885).

BEROALDO, bē'rō-āl'dō, FILIPO (1453-1503). An Italian scholar, born at Bologna. He gave lectures at Parma, Milan, and Paris, and was afterward professor of ancient literature at the University of Bologna. He published valuable annotated editions of Plautus, the Elder Pliny (the first commentary on Pliny), Lucan, Suetonius, Aulus Gellius, Propertius, and other Latin authors, thus contributing much to the literary renaissance. Consult Buckhardt, *Die Kultur der Renaissance in Italien* (Leipzig, 1899).

BEREA, or **BERE'A** (Gk Βέροια, *Beroia*). 1. A place in Palestine, possibly to be identified with Beeroth (Josh ix 17) or Beioth (1 Es v 19), the modern *Bireh*, some 10 miles north of Jerusalem, where Judas Maccabeus fought his last battle and lost his life 161 B.C. (1 Mac ix 4, 18). 2. A city in northern Syria, the modern Aleppo, where Menelaus, the ex-high priest, was put to death by Antiochus Eupator (2 Mac xiii 4). 3. A city of Macedonia, in Greece, founded by Theron (Beron) or by Berea, daughter of Beros, the modern *Verria*. It is mentioned in Acts xvii 10-15 as visited by Paul after he left Thessalonica. Here the Apostle, with Silas and Timothy, founded a Christian community. It was the most populous city of Macedonia in the first century of the Christian Era. In the ninth century it was destroyed by an earthquake.

BEROSUS (Gk Βήροδος, *Bērosos*, probably the Assyrian *Bērosu*). An historian and priest of Belus at Babylon. He was a native of Bithynia and so acquainted with Greek. He wrote, about 280 B.C., three books on Babylonian history (Βαβυλωνικά), dedicated to King Antiochus I Soter, in which he made use of the temple chronicles at Babylon. This work interested especially the Jews and later the Christians for its close agreement with the early Jewish records. It has come down to us only in fragments preserved by Josephus, Eusebius, Syncellus, and others, who, however, drew upon Berossus not directly, but through Alexander Polyhistor and Apollodorus. Besides this history, he wrote a special work on Chaldean astrology (Χαλδαϊκά). Fragments were edited by Richter (1825), Muller, *Fragmenta Historicorum Graecorum* (Paris, 1848). The work, *Antiquitatum Libris Quinque cum Commentariis Ioannis Anni*, first published (Rome, 1498) in Latin as a work of Berossus, was actually written by the Dominican Giovanni Nanni, of Viterbo.

BERQUIN, bēr'kīn', ARNAUD (c.1749-91). A French author, born at Langorain. He won his first success with his *L'ami des enfants* (6 vols., 1782-83), which was crowned by the French Academy (1784), and supplied him with a popular surname. He was an editor of the *Monteur* and a contributor to the *Feuille villageoise*. His *Oeuvres complètes* appeared in Paris (20 vols., 1803).

BERRUQUIN, LOUIS DE (1489-1529). A French Huguenot, born at Passy. He studied law and was appointed a counselor of Francis I. He was a friend of Erasmus and, having been conspic-

uous in his defense of the new doctrine, was imprisoned and called upon to retract. Rescued by the intervention of the King, he retired to Amiens, but was again imprisoned, and was burned alive in Paris. He was the first French Protestant martyr. He published *Enchiridion viar du chevalier chrétien* (1529) and other works.

BERRÉDO E CASTRO, bē'rē-dō ē kās'trō, BERNARDO PEREIRA DE (c.1680-1748). A Portuguese historian, born at Seipa. He entered the army and fought at the battle of Saragossa (1710), where his bravery gave him the appointment of Governor-General of the Province of Maranhão, Brazil. In 1718 he became captain general of Mazagão. The history to which Berrédo devoted the rest of his life has acquired great value by reason of the destruction of many of the documents in the Portuguese archives, upon which it was based. It is entitled *Annaes historicos, do estado do Maranhão, em que se da noticia do seu descobrimento e tudo o mais que n'elle tem succedido desde o anno em que foi descoberto até o de 1718* (1749).

BERRIEN, bēr'ri-ēn, JOHN MACPHERSON (1781-1856). An American lawyer and politician. He was born in New Jersey, and graduated at Princeton in 1796. He was judge of the eastern district of Georgia from 1810 to 1821, was a United States Senator from 1825 to 1829 and again from 1840 to 1852, and was Attorney-General in Jackson's first cabinet from 1829 until 1831, when he resigned.

BERRUGUETE, bēr'rōō-gē'tā, ALFONSO (c.1483-1561). A Spanish sculptor, painter, and architect, one of the most important of the Renaissance. He was born at Paredes de Nava in Old Castile, and was a pupil of his father, Pedro Berruguete, a distinguished painter. In 1504 he proceeded to Florence, where he became a pupil of Michelangelo, he remained in Italy until 1520. On his return to Spain he became the pioneer of the High Renaissance in his native country. At Valladolid he won the favor of the Emperor Charles V, who in 1523 bestowed upon him a judicial sinecure (which the painter sold many years afterward for 5000 gold ducats) and who named him court sculptor, painter, and court chamberlain. Among his works were the high altar of San Benito, the sculptured remains of which are still in the Museum of Valladolid, the retablo of the Colegio Mayor de Santiago in Salamanca (1529-31), with eight large pictures from the life of Christ, the alabaster altar of the Holy Trinity in the cathedral of Jaca (1538), and his most celebrated work, the 35 choir stalls which, together with the bishop's throne, he executed for the cathedral of Toledo. The backs of these stalls are adorned with wooden reliefs illustrative of the Old and New Testaments, and above the cornice are alabaster figures of the patriarchs, prophets, and saints. At Toledo, where Berruguete resided, is also the retablo of the church of Carceres. Mention should also be made of his sepulchral monuments, the finest of which are the mausoleum of the Marqueses de Poza in the Dominican church at Palencia (1553-57), and the tomb of Cardinal Tavera in the hospital of San Juan de Afuera in Toledo, his last and one of his best works.

Berruguete was considered by his contemporaries the greatest artist of Spain, and many important works of painting, sculpture, and architecture have been incorrectly ascribed to

him. He is most important as a sculptor, in which art he is one of the foremost representatives of the Renaissance in Spain, although his art is often exaggerated in form and in movement. The only authentic examples of his paintings, which are at Salamanca and Valladolid, are mannered and show a bizarre though clever reproduction of Raphael's forms. His activity as an architect was confined to purely decorative features, such as retables, portals, etc. The important buildings formerly ascribed to him, such as the Town Hall of Seville and the royal palace at Granada, are now known to be the work of other men. The best account of Berrugete was written by Karl Justi in various numbers of the *Jahrbuch der königlich preussischen Kunstsammlungen*.

BERRY, or **BERRI** (anciently, Lat *Biturica*, inhabited by the *Bituriges*, a Gallic tribe). One of the old French provinces, now forming the departments of Indre and Cher. In ancient times it formed part of the Roman province of Aquitania, and passed under the domination of the Franks in the sixth century. Later it enjoyed its independence under a line of hereditary counts. In 1360 it was made a duchy and in 1601 annexed by the French crown. It gave title at various times to French princes, the younger son of Charles X being the last to hold it. George Sand in her *Légendes Rustiques* and other novels of her later life gives very good pictures of the country and life of the present day Berry.

BERRY (AS *berie*, *berige*, Ger *Beere*, Goth **basi* in *Weinbas*, grape, literally, 'wine-berry', probably originally 'edible fruit,' cf. Skr *bhas*, to chew). A fleshy fruit which is pulpy throughout and has a thin skin, such as the grape, currant, tomato, etc. See **FRUIT**.

BERRY, *Fr* pron. bɛʁʁi, CHARLES FERNAND, Duc DE (1778-1820). The second son of Charles X of France. He was born in Versailles, Jan. 24, 1778. An émigré of the Revolution, he served under Condé until the armistice of Leoben, when he entered the Russian service. After his discharge he visited England and married a Miss Brown, whom he soon abandoned on the ground that Louis XVIII disapproved of the marriage. In 1815 he was appointed to an important post by the King, and in 1816 he married Marie Caroline Ferdinande Louise, Duchess of Naples. One daughter, Louise Marie Thérèse d'Artois, was born of this marriage in 1819, and a posthumous son, Henri, on Sept. 29, 1820. Berry was assassinated in February, 1820, by one Louvel.

HENRI, at first styled Duc de Bordeaux and later Comte de Chambord (qv), was heir to the French throne after the death of Charles X, but though called Henri V by his partisans, he was excluded from the throne by the July Revolution of 1830. His mother, a woman of great ambition and courage, entered into a project for reinstating the Bourbons, but she was arrested after landing in France in 1832 and was imprisoned in the citadel of Blaye. Her confession that she had formed a second marriage with the Neapolitan Marquis Lucchesi-Palli destroyed her political importance, and she was set at liberty. She died in 1870. Henri died without heirs in 1883. Consult Chateaubriand, *Mémoires sur le duc de Berry* (Paris, 1820), which is royalist and eulogistic in tone, and Chateaubriand, *Complete Works*, vol. III (Paris, 1834).

BERRY, **HIRAM GEORGE** (1824-63). An

American soldier. He was born in Rockland (then a part of Thomaston), Me., and in early life served several terms in the State Legislature. At the beginning of the Civil War he joined the Union army as colonel of the Fourth Maine Volunteers. He participated in both the first and second battles of Bull Run, was made brigadier general in 1862, and in November of the same year became major general, but was killed while leading a bayonet charge on the second day of the battle of Chancellorsville.

BERRY, **MARY** (1763-1859). An English author, born at Kirkbridge, Yorkshire. She and her sister Agnes (who was 14 months her junior) had a remarkable association with Horace Walpole, beginning in 1788. In his letters Walpole spoke of both in terms of the strongest affection and endearment, in one instance addressing them as his "twin wives." It was solely for their amusement that he wrote his *Reminiscences of the Courts of Georges I and II* (1789). He established the sisters at Teddington, in 1789, and two years later he induced them to make their home at Little Strawberry Hill, the sometime residence of his friend Kitty Clive. It was said that Walpole was willing to marry either sister. His will provided for them by a bequest to each of £4000, and to both the house and property at Little Strawberry Hill. Mary Berry's literary productions include the comedy, *Fashionable Friends, England and France, a Comparative View of the Social Conditions in both Countries* (1844), and an edition of the *Works of Horace Walpole* (1798), collected and edited by her.

BERRYBONE FISH. A fish of the Scottish Devonian rocks representing a group (order *Arthrodra*, family *Coccosteidae*) allied to the lung fishes, but having the forepart of the body "protected by large bony plates, of which one pair is articulated by a hinge to the hinder part of the skull." These bones bear a pustular or berry-like sculpture. "The fore limbs were either rudimental or wanting, but a pair of pelvic fins was developed." See **DIPNOI**, and **PLATE OF DIPNOI AND CHILMERA**.

BERRYER, bɛʁʁiɛʁ, ANTOINE PIERRE (1790-1868). A French advocate, political leader, and orator. He was born in Paris and first distinguished himself by his defense of victims of the Restoration. In 1830 he was chosen deputy and ever afterward steadily represented the rights and policy of the elder Bourbons, at the same time he adhered to liberal principles and repeatedly undertook the defense of persons prosecuted by the government. It was he who defended Louis Napoleon after the Boulogne *attentat*. With the elder Bourbons he was in constant communication and was one of the heads of the Legitimist party who made a pilgrimage to the Comte de Chambord in London, in 1843. After the Revolution of 1848 he was elected to the National Assembly. He became a member of Louis Napoleon's privy council, but he nevertheless went to Wiesbaden in 1850 to do homage to the Comte de Chambord. When Changarnier was removed from his command, Berryer united with Thiers and others to oppose the pretensions of the President and boldly protested against the coup d'état. In 1854 he was elected a member of the French Academy. Berryer added greatly to his reputation as an orator by his defense of Montalembert (qv) against the government prosecution in November, 1858. In 1863 he was induced to enter the Corps Législatif. Berryer

was wonderfully effective both as a political orator and as an advocate

BERRYVILLE, A town, and the county seat of Clarke Co., Va., 60 miles west by north of Washington, D. C., on the Norfolk and Western Railroad (Map Virginia, G 2). It is in a fertile agricultural region, of which it is the commercial centre, has large deposits of iron ore, and carries on an extensive apple-raising industry. The town contains an excellent high school and library and owns its water works. Originally known as Battletown, Berryville occupied a place of considerable interest in the early history of the State. Pop., 1900, 938.

BERSAGLIERI, bër'sa-lyà-rè (It. pl of *bersagliere*, sharpshooter, from *bersaglio* a mark). A corps of infantry in the Italian army. They were originally formed and organized as a corps of riflemen or sharpshooters by Victor Emmanuel in 1850. Their first active service was with the Allies against the Russians in the Crimean War. In the battle of the Tchernaya, Aug. 16, 1855, the Russian attack was successfully and brilliantly repelled, largely by the gallantry of the Bersaglieri. At the naval battle of Lissa, July 20, 1866, where the Austrians under Tegetthoff defeated the Italians under Persano, a detachment of these riflemen were serving on one of the latter's ships, the *Re d'Italia*, which eventually was sunk. It is recorded that the Bersaglieri kept up an effective fire on the enemy until actually engulfed with their ship beneath the water. Their uniform is of dark green, with a felt hat, on one side of which is displayed their distinguishing badge of a full plume of cock feathers. Their strength in 1912 was given as 12 regiments, each regiment consisting of 3 battalions of 4 companies each, making a total of 14,072 under arms, 36,235 on unlimited leave, 18,764 mobile militia, and 32,391 territorial militia. The Bersaglieri regiments are noted for fast and sustained marching, excelling in this respect all other infantry in the world.

BERSEK, or **BER/SERKER** (Icel *berserkr*, cf. Eng. *bear + sark*, shirt, referring to the skins of animals which the ancient heroes wore). The name of a redoubtable hero in Scandinavian mythology, the grandson of the eight-handed Starkad and the beautiful Alfhilde. He despised mail and helmet and, contrary to the custom of those times, went always into battle without armor, his fury serving him as a coat of mail. By the daughter of King Swafurum, whom he had slain in battle, he had 12 sons, who inherited the name of Berserker, along with his warlike fury. The name "Berserker," among the early Norse people, was applied to a combatant whose love of fighting induced a frenzied state called the "berserker's course," in which he was dangerous to both friend and foe. In later times the title was given to companies of hard fighters who were retained as bodyguards or special champions of renowned Scandinavian leaders.

BERSEZIO, bër-sà'tsè-zì, VITTORIO (1830-1900). An Italian author, born at Peveragno (Piedmont). He was long active as an editor and was a voluminous writer of fiction, drama, and works of history. In his dialect play *Le miserie d'monsù Traoet* he realizes a genial creation of Piedmontese traits, the charm of which has a universal appeal. This play still survives on the Italian stage and in a German translation enjoyed great popularity in Berlin. One other

play, *La bolla di sapone*, has entered definitely into literature. Consult D. Orsi, *Il teatro in dialetto piemontese* (Milan, 1890).

BERSIER, bër'syà', EUGÈNE ARTHUR FRANÇOIS (1831-89). A pulpit orator of the Reformed Church of France. He was born at Morges, near Geneva, studied at Geneva, Göttingen, and Halle, and became a preacher in Paris in 1855. He died there Nov. 19, 1889. He was much admired as a preacher, and many of his sermons were published and translated into different languages. Besides these his publications embrace *Histoire du Synode de 1872* (2 vols., 1872), *Coligny avant les guerres de religion* (1884, Eng. trans., 1885), *La revocation, Projet de révision de la liturgie des églises réformées de France* (1888), *Histoire d'une petite fille heureuse* (1890), in English, *Sermons* (London, 1881-1901, with personal sketch of the author 1885-91). Consult J. F. B. Tilling, *Bersier's Pulpit. An Analysis of the Published Sermons of Pastor Eugene Bersier* (1901).

BERSOT, bër'sò', PIERRE ERNEST (1810-80). A French philosopher and publicist. He was born at Sverges (Charente-Inférieure), studied at the Normal School, Paris, and later taught philosophy at Rennes, Paris, Bordeaux, Dijon, and Versailles. He refused to take the oath after the coup d'état of 1851 and was dismissed from his post. In 1866 he entered the Academy of Moral and Political Sciences and in 1871 was appointed director of the Normal School. His works are profound and are written in an elevated style. They include *Essai sur la providence* (1853), considered his most important work, *Littérature et morale* (1861), and *Libre philosophie* (1868). His educational reports are also of interest. Consult E. Scherer, *Un moraliste, études et pensées d'Ernest Bersot* (2d ed., Paris, 1887).

BERT, bër', PAUL (1833-86). A French scientist and politician, born at Auxerre. He was professor of physiology in Bordeaux and afterward in Paris and was a member of the Academy of Sciences, was elected to the National Assembly in 1874 and was reelected in 1877 and became noted for extremely radical opinions. He advocated compulsory education and endeavored to exclude all religious teachings from the schools. In the short-lived Gambetta cabinet (1881-82) he was Minister of Public Instruction. Bert carried out many broad and interesting investigations in physiology, including researches on skin grafting, in the effects of increase and of diminution of atmospheric pressure upon the living organism, on respiration and asphyxia on the action of anesthetics, and on the toxic properties of oxygen. He published numerous scientific works, among which may be noticed *De la greffe animale* (1863), *La pression barométrique* (1878), *Discours parlementaires* (1881), *De l'éducation civique* (1883), *La morale des Jésuites* (reprinted, 1909). Consult Berillon, *L'œuvre scientifique de Paul Bert* (Paris, 1887).

BERTAUT, bër'tò', JEAN (1552-1611). A French ecclesiastic and poet, born at Caen. He early became connected with the Church and was largely instrumental in converting Henry IV to Catholicism, as a result of which he filled various important posts at court, such as secretary to the King and almoner to Marie de' Medici, Queen of Henry IV. During this period he wrote numerous pastorals, elegies, and other poems, many of which were translated into

Latin and Greek. But when he became Bishop of Sees, in 1606, he ceased to produce the light verse for which he was noted, and the poems that he wrote in his later years lacked the life and concert which marked his earlier efforts when he was a disciple of Desportes. He did prepare, however, in 1606, a new edition of his *Recueil de quelques vers amoureux*. He is the subject of a critical study in Sainte-Beuve's *De la poésie française au seizième siècle*, while his works have been edited by Cheneviers (1891).

BERTEAUX, bër'tô', HELENE HEBERT, MADAME LÉON (1825-1909). A French sculptor, born in Paris. She was the pupil of her father, the painter and engraver Pierre Hebert, and of Dumont. She was the founder and president of the Société de l'Union des Femmes Peintres et Sculpteurs, which since 1881 has held an annual exhibition in Paris, and for 15 years was a member of the jury on sculpture in the Société des Artistes Français. Among the most noteworthy of her works are a bronze group for a public fountain at Amiens, a "Young Gallic Prisoner" (1867, Museum of Nantes), an allegorical statue of sculpture (1869, Grenoble), the statue of Chardin (1881) on the façade of the Hôtel de Ville, Paris, and her masterpiece, "Psyche in the Realm of Mystery," which was awarded the gold medal at the Paris Exposition of 1889 and is now in the Museum of Cete.

BERTEAUX, HENRI MAURICE (1852-1911). A French statesman born at Saint-Maur-les-Fossés. He engaged in the business of stockbroking and made a fortune early in life. After serving as mayor of a small town, Chatou, he was in 1893 elected to the Chamber of Deputies as a Radical-Socialist and, having made a special study of military affairs, was chosen to head that committee of the chamber which presented the war budget in 1902. Two years later, when General André resigned the portfolio of the Ministry of War in the Combes cabinet, Berteaux was selected to fill the office. In the same capacity he continued to serve under Rouvier, but subsequently retired as minister. Thereafter he was reelected several times a deputy, was made president of the army commission of the chamber, and in 1905 vice president of the chamber itself. Again in 1911 he became Minister of War, this time in the cabinet organized by Monis, but on May 21 of the same year he was struck by a falling aeroplane and killed.

BERTHA. The name of several women, real and legendary, of the Middle Ages. St. Bertha, whose day is observed on July 4, was the beautiful and pious daughter of Charibert King of the Franks. She married (560 A.D.) Ethelbert, King of Kent, and became the means of his conversion and of the spread of Christianity among the Anglo-Saxons. In the romances of the Charlemagne cycle a Bertha with the Big Foot figures as the daughter of Count Charibert of Laon, wife of Pepin the Short, and mother of Charlemagne. In the romances of the Round Table another Bertha is a sister of Charlemagne and mother of the renowned Roland. Bertha, daughter of Burkhard, Duke of the Alemanni, and wife of Rudolph II, King of Transjurane Burgundy, after her husband's death, in 937 acted as regent for her infant son, Conrad. Subsequently she married Hugo, King of Italy, and died toward the close of the tenth century. She enjoyed the reputation of being an excellent housekeeper and is represented on monuments

of the times seated upon her throne with her spinning wheel by her side.

BERTHELOT, bër'tlô', PIERRE EUGENE MARCELLIN (1827-1907). A French chemist. He was born in Paris. He received his education at the Collège Henri IV and devoted himself to research in organic chemistry. In 1854 he received his doctor's degree in science, on presenting a remarkable thesis giving an account of his artificial reproduction of natural fats. The fact that fats are mixtures of glycerides, i.e., compounds of glycerin with the so-called fatty acids, had been known since 1823, when Chevreul effected the decomposition of fats into their chemical constituents. Berthelot, however, was the first to produce those important organic products synthetically. In the same thesis he showed that glycerin, which is capable of combining with three equivalents of a monobasic acid, is an alcohol, and thus the idea of polyatomic alcohols was first introduced into chemistry. A large number of diatomic, triatomic—in general, polyatomic—alcohols have since been prepared and form an important class of organic compounds (See ALCOHOLS). In 1851 Berthelot became assistant to Balard at the Collège de France, in 1860 he was made professor of organic chemistry at the Ecole de Pharmacie, and in 1865 a new chair of chemistry was founded for him at the Collège de France, where he was lecturer on theoretical chemistry. In 1873 he was elected member of the Institute, and in 1889 perpetual secretary of the Academy of Sciences. In 1876 he was made inspector general of higher education, in 1881 a life member of the Senate, in 1886-87 he was Minister of Public Instruction and in 1895-96 Minister of Foreign Affairs.

Berthelot was one of the most brilliant experimental chemists of our time. One of the pioneers of organic synthesis, he contributed to our knowledge of almost every class of carbon compounds, and the importance of his experimental researches on explosives and dyestuffs cannot be overestimated. He also furnished an immense number of experimental data concerning the phenomena of heat, which accompany chemical transformations, and the science of thermochemistry is largely based on his observations, although his theoretical interpretation of those phenomena has been proved to be erroneous. According to Berthelot, the heat evolved during a chemical reaction measures the power that causes the reaction. It has, however, been proved, both theoretically and experimentally, that while this principle holds good in many cases, it is by no means a general law, "a third principle of thermodynamics," as Berthelot to the end claimed it to be (See, however, NERNST'S HEAT THEOREM). Berthelot's published works include *Chimie organique fondée sur la synthèse* (2 vols., 1860), *Leçons sur les principes sucrés* (1862), *Leçons sur les méthodes générales de synthèse* (1864), *Leçons sur l'isomérisie* (1865), *Traité élémentaire de chimie organique* (1st ed., 1872, 4th ed., with Jungfleisch, 2 vols., 1898), *Sur la force de la poudre et des matières explosives* (1871, 1872, and 2 vols., 1883), *La synthèse chimique* (8th ed., 1897), *Essai de mécanique chimique fondée sur la thermochemie* (2 vols., 1879), *Les origines de l'alchimie* (1895), *La chimie au moyen âge* (3 vols., 1898), *Traité pratique de calorimétrie chimique* (1893), *Thermochemie, données et lois numériques* (2 vols., 1897), *Recherches expérimentales* (3 vols., 1901). He also published

many papers, on various scientific topics, in the *Comptes rendus de l'Académie des Sciences* and in the *Annales de chimie et de physique*. For his life, consult the *Popular Science Monthly*, May, 1885.

BERTHIER, bër'tya', ALEXANDRE (1753-1815) Prince of Neuchâtel and Wagram and marshal of the French Empire, born at Versailles. He fought under Lafayette in the American War of Independence. At the outbreak of the French Revolution he was appointed major general of the National Guard of Versailles, and rose to be a general of division and chief of staff in the Army of Italy, 1795, and three years later, in the absence of Bonaparte, proclaimed the Republic of Rome. He was Napoleon's chief of staff in the Egyptian campaign, and was Minister of War from 1799 to 1808. He was made Prince of Wagram for his part in the battle of that name. Berthier was Napoleon's proxy in the marriage of Maria Louisa in Vienna, 1810. Until 1814 he was constantly at Napoleon's side and was very valuable in superintending the movements of armies because of his activity, system, and insight. Napoleon recognized his good qualities, but claimed that Berthier was incapable of leading the smallest army corps alone. When the tide turned against Napoleon, Berthier's course was vacillating. After his surrender at Neuchâtel he made his peace with Louis XVIII, who gave him high positions. He retired to Bavaria on Napoleon's return from Elba. The manner of his death is uncertain. One story is that he committed suicide in a fit of insanity, another, that he was murdered by members of a secret society. He wrote *Relation des campagnes du général Bonaparte en Egypte et en Syrie* (1800) and *Relation de la bataille de Marengo* (1806). His *Mémoires* were published in Paris in 1827.

BERTHOLD VON REGENSBURG, bër'tolt fon rä'gens-buurg (c.1220-72). A German Franciscan preacher. He seems to have been born at Regensburg, where he received his education under David of Augsburg, a well-known teacher in the Franciscan monastery there. After 1250 he preached as an itinerant in South Germany, Switzerland, Austria, Bohemia, and Moravia, and after several years returned to Regensburg. He is buried in the cathedral there. In his preaching he departed from the Latin homily and formed his style largely on the best French models of the day. His sermons were usually preached in the open and were attended by great throngs of people. The best edition of Berthold's sermons is that by Pfeiffer and Strobl (2 vols., Vienna, 1862-80). There is also an edition in modern German by Gobel (Regensburg, 1873, revised, 1884). For his life, consult Unkel (Cologne, 1882).

BERTHOLET, bër'tô'la', ALFRED (1868-). A Swiss theologian, born at Basel. He studied at Basel, Strassburg, and Berlin universities. He became secretary of the Second International History of Religions Congress at Basel in 1904. His religious works include *Die Stellung der Israeliten und der Juden zu den Fremden* (1896), *Kommentare zu Leviticus, Deuteronomium, Ezechiel, Ruth, Esra, und Nehemia* (1897-1902), *Die Gefühle der Seligen* (1903), *Seelenwanderung* (1904), *Daniel und die Griechen Gefahr* (1907), *Ästhetische und Christenliche Lebensauffassung* (1910), *Die Jüdische Religion von dem Zeit Esras bis zu Zeitalter Christi* (1911).

BERTHOLET, bër'tô'la', COUNT CLAUDE LOUIS (1748-1822). A distinguished French

theoretical chemist. He was born at Talloire, a village of Savoy, near Annecy. He studied at the University of Turin and obtained a medical degree there in 1768. He afterward went to Paris, where he was appointed physician to the Duke of Orleans. He now applied himself with great assiduity to chemistry, in 1780 he was elected a member of the Academy of Sciences, and, some time after, the government made him superintendent of dyeing processes. In this situation he published a very valuable work on dyeing. In 1785 he announced his adherence to the antiphlogistic doctrines of Lavoisier, though he did not admit oxygen to be the acidifying principle, and herein he has proved to be right. In the same year he published a paper on "dephlogisticated marine acid"—now called chlorine—pointing out its use for bleaching purposes, and following up the experiments of Priestley, he showed ammonia to be a compound of three volumes of hydrogen gas and one volume of nitrogen. During the early part of the French Revolution Berthollet traveled through the country, giving instruction as to the best means of extracting and purifying saltpetre to be used in the manufacture of gunpowder, and also as to the process of smelting and converting iron into steel. In 1794 he became professor at the Ecole Normale. His joining the expedition of Napoleon to Egypt led to the formation of the Institute of Cairo. On his return from Egypt he was made a senator by Bonaparte, who also conferred on him several marks of honor and made him a count. Notwithstanding, he voted for the deposition of Napoleon in 1814. On the restoration of the Bourbons he was made a peer, but in spite of all these honors he remained simple, modest, and unassuming. In collaboration with Lavoisier and others, he devised the system of chemical nomenclature which is still, in its main features, employed to day. Berthollet was the first to introduce the idea of equilibrium into chemical philosophy. Since the time of Bergman it had been believed that the only factor determining the course of a reaction is the mutual chemical affinity of the reacting substances. Thus, when common salt (sodium chloride) is acted on by sulphuric acid, the latter takes up the sodium of the former, and hydrochloric acid is set free. According to Bergman's teaching, the cause of this phenomenon lies in the fact that sodium has a stronger affinity for sulphuric than for hydrochloric acid. Berthollet, however, advanced the view that, besides chemical affinity, there is another important factor upon which the course of a chemical reaction depends, viz., the relative masses of the reacting substances and of the products of the reaction. If hydrochloric acid, which is a gas, was not allowed to escape during the reaction and a certain mass of it would remain in the reacting mixture, then only part of it would be driven out of combination with sodium, so that when the reaction would reach the state of equilibrium, the mixture would contain, on the one hand, both sulphuric and hydrochloric acids in the free state, and, on the other hand, both the sulphate and the chloride of sodium. The development and application of Berthollet's idea form one of the most important chapters of theoretical chemistry and have thrown much light on chemical combination. Berthollet's principal work, *Essai de statique chimique*, in two volumes, appeared in Paris in 1803. Consult Cuvier, *Eloge de Claude Louis Berthollet* (Paris, 1826), and Muller, *Berthollet's Leben* (Erlangen, 1828).

BERTHOLLETTA, bër'thòl-lè'sh'i-a See BRAZIL NUT

BERTHOUD, bër'tòv', SAMUEL HENRI (1804-1891) A French author. He was born at Cambrai, where he edited the journal published by his father, entitled *La Gazette de Cambrai*. Afterward he removed to Paris, where he collaborated on *Le Monde* and on the *Revue des Deux Mondes*. He contributed to *La Patrie* a number of essays on natural science, under the pseudonym of *Sam*, which were subsequently collected in book form under the titles *Fantaisies scientifiques* (4 series, 1861) and *Petites chroniques de la science* (1867-71). He published several historical works, such as *Chroniques et traditions surnaturelles de la Flandre* (1831-34), a number of novels and many entertaining books for children, such as *La France historique, industrielle et pittoresque* (1835-47), and *Histoires pour les petits et pour les grands enfants* (1863).

BERTI, bër'tè, DOMENICO (1820-97) An Italian scholar and statesman. He became professor of ethics in the University of Turin in 1849. From 1870 to 1877 he was professor of philosophy in the University of Rome. He was Minister of Education in the La Marmora (1866) and Ricasoli (1867) cabinets, and Minister of Commerce from 1881 until 1884. He was a deputy almost continuously after 1849. He wrote numerous historical and critical studies, especially on Cavour, and on the Italian philosophers of the Renaissance. He also founded the papers *Rivista Italiana*, *Le Alpi*, and *L'Istituto*.

BERTILLON, bër'tè'yòn', ALPHONSE (1853-1914) A French anthropologist and criminologist, born in Paris. He devoted many years to the study of methods for the identification of criminals, and became head of the identification department of the Prefecture of Police, of Paris. In 1880 he founded his system of mensuration (See BERTILLON SYSTEM). He was made a chevalier of the Legion of Honor. His published writings on ethnology and criminology include *Ethnographie moderne, les races sauvages* (1883), *L'anthropométrie judiciaire à Paris en 1889* (1890), *La photographie judiciaire* (1890), *De la reconstitution du signallement anthropométrique au moyen des vêtements* (1892), *Identification anthropométrique (Instructions signalétiques, 1893)*, *La comparaison des écritures et l'identification graphique* (1897), *Anthropologie métique et photographique*, with Dr. A. Chervin (1909).

BERTILLON SYSTEM The name applied to a method of identifying criminals. Until very recently only general descriptions and photographs were employed, the result being that by slight disguises the appearance was so changed that criminals frequently escaped detection.

In March, 1870, Dr. Alphonse Bertillon, of Paris, invented and in 1885 published a plan for securing absolute identification. Three sorts of "signallements" (descriptions) are employed. A. Anthropometrical, based upon (1) the almost absolute immutability of the human frame after the twentieth year of age, (2) the extreme diversity of dimensions which the human skeleton presents when compared in different subjects, (3) the facility and precision with which certain dimensions of the skeleton may be measured. B. Descriptive, a general description. C. Peculiar marks, scars, deformities, etc. Of these marks an exact measurement is taken and their location accurately noted. The color of the eyes

is important, as this cannot be changed. Two photographs—one of the full face, the other of the profile—are taken by a camera screwed to the floor, and from a chair likewise fastened so that the relative proportion of height and size are exactly preserved in all pictures. The main reliance, however, is placed on the anthropometrical signalments, as these are never identical for two persons. The measurements taken are (the metric system is always used)

Body	{	Height (person standing)	
		Reach (outstretched arms—finger-tips to finger tips)	
		Trunk (height sitting)	
Head	{	Length and width	Length and width of right ear
		Length of left foot, left middle finger, left little finger, left forearm	

The measurements, with the other descriptions and the photographs, are put on cards of uniform size. These cards are classified, first according to sex. The cards are then distributed in three tiers of drawers, each tier made up of three drawers, according to the length of the head. The upper tier contains head lengths of 187 millimeters and less, the middle, those between 187 millimeters and 194 millimeters, the third, all above 194 millimeters. Ninety thousand cards would thus be roughly divided into tiers of 30,000 each. Each of these groups is subdivided according as the width of the head is narrow, medium, or broad, each division having about 10,000 cards. A further division, according as the length of the left middle finger is small, medium, or large, will reduce them to groups of 330 cards. Further analysis soon lowers the number of cards to something like 12 in each group. Thus to locate any card requires but a moment's effort.

The Bertillon system was introduced into the United States in 1887 by Major R. W. McClaughry. It met with a favorable reception and is rapidly being adopted in the larger penal institutions.

Such a system of absolute identification is a "necessary adjunct to the scientific administration of criminal law." It has a deterrent effect upon criminals, who know that if they are caught no disguise can conceal their identity. It enables the officers to distinguish the new from the old offender. It makes impossible the mistaking of an innocent person for some criminal to whom he bears a superficial resemblance. With the increased sentences for repeated offenses, this possibility of identification becomes of vast importance. That local institutions, police courts, etc., should keep such records is, however, not enough. Efforts are now being made to have the national government establish a central bureau for the collection of all the signalments of the criminals of the country. If the various nations adopted such a plan, the criminal would not escape detection by changing his abode. The discovery of the identity of the assassin of King Humbert through the Bertillon system is a striking proof of its utility. Penologists claim that the influx of foreign criminals in the United States in recent years is partly due to the adoption of the Bertillon system in European countries. It is stated that the larger proportion of the graver crimes are committed by persons not resident in the locality. Consult A. Bertillon, *Identification anthropométrique* (Paris, 1893), *The Bertillon System of Identification*, R. W. McClaughry, editor (Chicago,

1896), Boies, *The Science of Penology* (New York, 1901). See FINGER PRINTS

BERTIN, bër'tîn', ANTOINE (1752-90) A French poet, born on the Isle of Bourbon. He became a protégé of Marie Antoinette and of the Count of Artois and was styled by his contemporaries "the French Propertius." Toward the close of 1789 he undertook a journey to San Domingo, where he died on the day of his marriage to a young Creole girl, to whom he had long been attached. The latest complete edition of his works, containing his elegies, love poems, the famous *Voyage de Boulogne* (1777), was published in Paris in 1879, under the title of *Poésies et œuvres diverses*.

BERTIN, LOUIS FRANÇOIS (1766-1841) A French journalist known as Bertin aîné. He was born in Paris, began writing for the press in 1793, and in 1800, with his brother (also called Louis François), assumed the management of the *Journal des Débats*, founded in 1789 by Gaultier de Biauzat. Bertin's Royalist principles offended Napoleon and caused his banishment to Elba. With great difficulty he obtained permission to live in Italy until 1804, when he returned to Paris and resumed the editorship of the *Débats*, but was much hampered by Napoleon, who imposed on the paper the title of *Journal de l'Empire*, and by subjecting it to police revision, gave it almost an official character. When Bertin, in 1814, became free to follow his own bent, the journal reverted to its Royalist principles. During the Hundred Days it fell into other hands, till the return of the Bourbons restored it once more to Bertin, who, in the meantime, had taken part in the *Mouvement de Gand*. Though he did not join in the protest of the Liberal journals against the *ordonnances*, he gave his adhesion to the July Monarchy, and continued faithfully to support it.

BERTIN, LOUISE ANGELEQUE (1805-77) A French poet and composer, a daughter of Louis F. Bertin. She was born at Les Roches, near Bièvres, and cultivated successively painting, poetry, and music. She wrote the operas *Guy Mannering*, *Le Loupgarou* (Opéra Comique, 1827), which was well received, *Faust* (Italiens, 1881), and *Esmeralda* (text by Victor Hugo, Grand Opera, 1836). According to Halévy, she had "an abundance of ideas and often revealed a rare power of expression." Two volumes of poems from her pen, respectively entitled *Les Glanes* (1842) and *Nouvelles Glanes* (1876), were published. The former collection received the prize of the Academy.

BERTINI, bër-tî-nê, GIUSEPPE (1825-98) An Italian historical painter. He was born in Milan, where he studied with his father, a well-known designer of stained glasses, and attended the Academy of Art, he studied also at Rome and Florence. Of his paintings on glass, that representing Dante and the Divine Comedy, exhibited in London in 1853, and bought by subscription for the Ambrosian Library, is considered especially fine. Of his frescoes we note those of the Poldo-Pezzoli Museum, Milan, of his decorative pieces, the great curtain of the Scala Theatre, of his canvases "The Vision of St Francis of Assisi" (Santa Babila, Milan), "The Death of St Joseph" (Parochial Church of Palermo), "Torquato Tasso Introduced to the Duke of Ferrara." From 1859 he was professor in the Academy of Milan and director of the Brera Gallery.

BERTINI, HENRI JÉRÔME (1798-1876) A pianist and composer, born in London. He

played in public at the age of 12 and studied composition in Paris, where, from 1821 on, he devoted himself to teaching with signal success. In 1836 he retired to Meulan, France, where he lived in seclusion until his death. He is remembered for his valuable studies for the pianoforte in 29 sets, which have been edited by Hans von Bulow.

BERTOLONI, bër'to-lô-nê, ANTONIO (1775-1869) An Italian botanist. He was born at Saazana, Liguria, and studied medicine and botany at the University of Pavia. He became professor of physics at the Imperial Lyceum of Genoa in 1811 and remained there until 1816, when he was appointed to the same position at the University of Bologna. In addition to his principal work, *Flora italica* (10 vols, Bologna, 1833-54), and its continuation, *Flora italica, cryptogama* (1858-62), he wrote the following: *Prælectiones in herbaria* (1827), *Miscellanea botanica* (1842-63), *Plantæ novæ asiaticæ* (1864-65).

BERTON, bër'tôn', PIERRE MONTAN (1727-1780) A French musician. He was born in Paris, and at the age of 12 composed several motets, which were performed at the cathedral of Sens. He afterward became church organist and musical director at the Theatre of Bordeaux. Upon the death of Boyer, in 1755, he was called to Paris as director of the Royal Opera, where he contributed largely to the successful performance of the works of Gluck (qv) and Piccini. He is said to have given the impetus to the improvement of the modern orchestra. He wrote several operas and rearranged others by Gluck, Lullu, and Rameau.

BERTRAM. See RATRAMNUS

BERTRAM 1 A character in Shakespeare's *All's Well That Ends Well*. He is the haughty husband of Helena, who wins back his love first by disguising herself as his mistress, Diana, and then by exculpating him from the charge of her own murder. 2 The minstrel in Scott's *Castle Dangerous*, who makes a doughty guide for his charge.

BERTRAND, bër'tran', ALEXANDRE (1820-1902) A French archaeologist, born in Paris. He studied at the Normal School, and subsequently at the French College at Athens, and in 1862 was appointed director of the Museum of Saint-Germain. He is best known for his prehistoric studies. For a time he was an editor of the *Revue archéologique*, and he published *Essai sur les dieux protecteurs des héros, grecs et troyens dans l'Iliade* (1857), *Les voies romaines en Gaule* (1863), *La Gaule avant les Gaulois* (1891), and, with S. Remach, *Les Celtes dans les vallées du Pô et du Danube* (1894). Consult Henri Potez, *L'épique en France avant le romanisme* (1897).

BERTRAND, HENRY GRATIEN, COUNT (1773-1844) A French general. He was born in Châteauroux and entered the corps of engineers. He accompanied the expedition to Egypt and directed the fortification of Alexandria. Returning with the rank of general of brigade, he distinguished himself at Austerlitz and became the Emperor's adjutant, and after the battle of Aspern, in 1809, for establishing bridges over the Danube, he was created Count and Governor of Illyria. After sharing with credit in the subsequent campaigns he followed the Emperor to Elba, returned with him to France, and finally shared his banishment to St. Helena. After Napoleon's death Bertrand returned to France,

where, though sentence of death had been pronounced upon him—a sentence which Louis XVIII had revoked—he was restored to all of his dignities, and in 1830 was appointed commandant of the Polytechnic School. His sons published, in 1847, the memoirs dictated to him at St Helena by Napoleon.

BERTRAND, JOSEPH LOUIS FRANÇOIS (1822–1900) A French mathematician. He was born in Paris. After graduating at the Polytechnic School, he was attached (1842) to the Service of Mines and later became professor of mathematics and mathematical physics at the Polytechnic School, the Normal School, and the Collège de France, and a member of the Academy of Sciences (1856). In 1874 he was elected perpetual secretary of the Academy of Sciences and in 1884 a member of the French Academy. In 1867 he was appointed officer, in 1881 commander, of the Legion of Honor. He wrote treatises on arithmetic (1849), algebra (1850), calculus (1864), thermodynamics (1887), probabilities (1880), and a number of memoirs in the scientific journals.

BERTUCH, bër'toog, FRIEDRICH JUSTIN (1747–1822) A German author, bookseller, and publisher, born at Weimar. He studied theology and law at Jena, in 1775 was appointed cabinet-secretary at Weimar, and in 1785 Councillor of Legation. With Wieland and Schütz he planned the *Jenaische allgemeine Literaturzeitung*, to which he contributed from 1785 to 1805, and with Kraus he edited the *Journal des Luxus und der Moden*. His original writings, such as the tragedy *Elfrida* (1775), were of slight value, but he published a good translation of *Don Quixote* (6 vols, 1775–76), and a popularly successful compilation, *Bilderbuch für Kinder* (12 vols, 1790–1822). He made a world-wide reputation as a publisher of maps and geographical works. Consult Wilhelm Feldmann, *F. J. Bertuch* (Saarbrucker, 1902).

BÉRULLE, bër'ruł', PETER DE (1675–1629) A French Cardinal and statesman. He was born at the Château de Serilly, near Troyes, and first became conspicuous during the conference at Fontainebleau regarding the Protestants (1600). In 1613 he introduced into France the Carmelite Order, and founded the Congregation of the Oratory. He obtained a dispensation from the Pope sanctioning the marriage of Henrietta, the sister of Louis XIII of France, and the Prince of Wales (afterward Charles I), and subsequently accompanied the Princess to England (1625). As Ambassador to Spain he negotiated the Treaty of Mongon (1626), was created Cardinal in the following year, and afterward became Minister of State, a position which the jealousy of Richelieu soon made untenable for him. Bérulle freely bestowed his patronage on rising authors, and the publication of Lejay's *Bible Polyglotte* is ascribed to his influence. He was one of the first to appreciate Descartes. Bérulle's writings, several of which have been frequently republished, include the famous treatise entitled *Les grandeurs de Jésus*.

BERVIC, bër'vek', CHARLES CLÉMENT (properly BALVAY) (1756–1822) A French engraver. He was born in Paris, and studied under Le Prince and Wille. In 1784 he won fame by his engraving of Louis XVI, from the picture by Callet, one of the finest works of the French school. The engravings of the "Laocoon," of Regnault's "Education of Achilles," and of Guido's "Rape of Deianira" display equal

beauty of manipulation and higher power. In spite of the small number of his works, he is to be credited with having raised his art from the decay into which for the moment it had fallen in France.

BERWALD, bër'wäld, JOHAN FREDERIK (1788–1861) A Swedish violin virtuoso and composer. He was born in Stockholm and was a pupil of the Abbe Vogler. He traveled as a juvenile prodigy and was famous in Russia, Poland, Austria, and Germany, before he was 10 years old. In 1819 he became conductor in Stockholm and occupied this position until his death. Among his principal compositions may be mentioned three polonaises for pianoforte and violin, op. 1 (1791), a symphony for the orchestra (1790), three quartets for stunged instruments (1808), and several songs.

BERWICK A borough in Columbia Co., Pa., 27 miles southwest of Wilkesbarre, on the Delaware, Lackawanna, and Western Railroad, and on the Susquehanna River (Map Pennsylvania, J 4). It has iron works, flour, silk, and planing mills, and manufactories of pipe, cars, caskets, and pottery. Pop., 1910, 5357.

BERWICK, JAMES FITZ-JAMES, DUKE OF (1670–1734) A French marshal. He was the natural son of James II of England, by Ariabella Churchill, sister of the Duke of Marlborough. He was born in France, where he was educated and entered the army. After serving in Hungary under Charles of Lorraine, he returned to England shortly before the Revolution of 1688, which he evaded himself to prevent. In 1689 he accompanied his father in his Irish expedition, and after the death of St Ruth had the nominal chief command. He next served in Flanders under Marshal Luxembourg and afterward under the Duke of Burgundy and Marshal Villeroi. In 1705 he put down a rising of the Camisards of Languedoc with great cruelty. In 1706 he was created a marshal of France and sent at the head of an army to Spain, where he established the throne of Philip V by the decisive victory of Almanza. He fought all through the War of the Spanish Succession and led an army against Philip V in 1718. He received the command, in 1733, of an army intended to cross the Rhine. While besieging Philipsburg, he was killed by a cannon ball. Berwick possessed some of the best qualities of a great commander. His defensive campaign in 1709, in Provence and Dauphiné, was a triumph of strategy. His *Mémoires* were published in Paris in 1778. Consult also Wilson, *Duke of Berwick, Marshal of France* (London, 1883).

BERWICK, MISS MARY. A pen name used by Adelaide Anne Procter.

BERWICKSHIRE. A maritime and border county in the southeast division of Scotland, bounded north by Haddington, south and southeast by Roxburgh, Northumberland, and Durham, east by the North Sea, and west by Midlothian and Roxburgh (Map Scotland, F 4). Area, 457 square miles. Agriculture is the most important industry, and there are excellent fisheries. The manufactures include cloth, leather, beer, etc. The chief trade is in agricultural products. Berwickshire is naturally divided into three districts—the Merse, Lammermuir, and Lauderdale. The principal towns are Duns, the county town, Lauder, Eyemouth, a prosperous fishing station, Coldstream, Ayrton, and Earlstoun, the Ercildoune of Thomas the

Rhymer Pop 1801 30,200 1891, 32,200, 1901, 30,800 1911, 29,643

BERWICK-UPON-TWEED, bër'ik- (shortened from *iberwich*, from Celt *aber*, confluence of waters + Teut *wich*, Scand *wich*, dwelling, village) A seaport town in Northumberland, England, at the mouth of the Tweed, 58 miles south-southeast of Edinburgh (Map England, E 1) It is the frontier town of England and Scotland, and with its liberties comprising an area of about 8 miles, forms an independent borough and county, known since the Municipal Reform Act of 1835 as the "county of the borough and town of Berwick-upon-Tweed" For election purposes it is considered a part of Northumberland, and as such sends one member to Parliament The town has an antiquated and somewhat picturesque appearance It is girded with old fortifications and has large barracks Among its notable public buildings are the town-hall, dating from 1700, with a spire 150 feet high, and the Corn Exchange, built in 1858 Tweedmouth and Spittal (the latter a favorite watering place), on the south side of the Tweed, both within the municipality of Berwick, are reached by an old stone bridge, and a magnificent viaduct of 28 arches spans the river Its principal exports are grain, coal, ale, whisky, and fish, especially salmon Its principal imports are timber, iron, staves, salt, bone, tallow, oil, and hemp There are shipyards, and coal mines are worked near the town The town contains an iron foundry, in which mill machinery and steam engines are manufactured For the manufacture of agricultural implements, Berwick-upon-Tweed stands high Pop, 1891, 13,377, 1901, 13,437, 1911, 13,075

The history of Berwick-upon-Tweed is full of interest, especially in regard to the Border Wars Its authentic records begin in the reign of Alexander I, in the twelfth century, when it was the principal seaport of Scotland In 1296 Edward I captured the town and massacred 8000 of the inhabitants It was retaken in 1297 by the Scots, but the English soon regained it, and it remained in their hands throughout Edward's reign It was captured by Bruce in 1318, but was recaptured by Edward III after a siege in 1333 For over a century it suffered occasional attacks from the Scots, who held it for brief intervals, but in 1482 it passed finally into the possession of England

BERWYN, bër'win A city in Cook Co, Ill, 10 miles west of Chicago, on the Chicago, Burlington, and Quincy and the Illinois Central railroads (Map Illinois, E 2) Berwyn is purely a residential city and owns its water works Pop, 1910, 5841

BERYL (Lat *beryllus*, *berillus*, Gk βήρυλλος, *berýllos*, probably from Skr *barādārya*, originally brought from Vidura) A glaucum-aluminum silicate, which crystallizes in the hexagonal system It has a vitreous lustre and varies in color from an emerald-green to lighter shades of that color, and into light-blue, yellow, white, and sometimes rose-red There are two distinct varieties of this mineral The first is of a clear, bright, emerald-green color, which is due to the presence of a small amount of chromium, and is called emerald, this variety, however, must not be confounded with the Oriental emerald, which is a green variety of sapphire The finest specimens are found in isolated crystals and in geodes with calcite, quartz, and other minerals They come from New Granada,

Brazil, and Siberia, and from Alexander Co, N C, in the United States When cut, they are highly prized as gems Among the ancients the emerald was greatly esteemed as a prophylactic against epilepsy and a cure for dysentery It was supposed to guard the chastity of the wearer and to resent any trespass by breaking into pieces The emerald mines of Cleopatra are believed to have been in the mountain range that extends for a long distance parallel with the Red Sea and a few miles west of its coast, on the Nile The transparent varieties of beryl are called *aquamarine* They are found in various colors, and of a quality suitable for gems, in Brazil and Siberia, at Royalston, Mass., and at Stony Point, N C Large, coarse specimens of crystallized beryl, mostly hexagonal prisms, have been found at Acworth and Grafton, N H One specimen from Grafton weighed 2900 pounds The rose-red variety has recently received the name of *morganite* and is now cut into gems of considerable beauty See GEMS

BERYLLIUM See GLUCIUM

BERYX, bër'iks A genus of deep-sea fishes of tropical oceans, typical of a group *Berycoidei* and family *Berycidae* (See SILENT HEAD) One species, the "Alphonsine a costa cumpida" (*Beryx splendens*), is regarded as the most beautiful of Cuban fishes It is deep red with bright streaks See PLATE OF MULLETES AND ALLIES

BERZELIUS, *Swed* pron bër-tsi'll-i-us, JOHNS JAKOB, BARON (1779-1848) A Swedish chemist He was born at Westelösa, in Östergötland When a mere boy, he developed a liking for the experimental sciences, and after receiving his general education at the Gymnasium of Linköping and his professional training in medicine and chemistry at the University of Upsala, he devoted himself specially to investigations in chemistry In 1802 he went to Stockholm, teaching medicine and chemistry until 1806, when he was appointed lecturer on chemistry in the military academy In 1807 he became professor of medicine and pharmacy in Stockholm Shortly after, he was chosen member of the Stockholm Academy of Sciences, and from 1818 till his death held the office of perpetual secretary of the Academy The King raised him to the rank of baron, other honors from learned societies were conferred on him, and the directors of the Swedish iron works, in consideration of the value of his researches in their particular branch of industry, bestowed on him a pension for life In 1838 he was made a member of the Upper Chamber of the Diet, after having served in the Lower, but he took little part in politics The field of his activity lay in his laboratory, where he acquired a name of which his country is justly proud The science of inorganic chemistry rests in a great measure upon the discoveries and views of Berzelius His multiplied and accurate analyses established the laws of combination on an incontrovertible basis, and to him we owe the system of chemical symbols He discovered the elements selenium, cerium, and thorium, and first exhibited several elements, including columbium, tantalum, and silicon in the isolated state The blowpipe in the hands of Berzelius became a powerful instrument for the analysis of inorganic substances By methods of his own invention he analyzed large classes of compounds and accurately determined the equivalent weights of their chem-

real elements His celebrated electro-chemical theory was for many years universally considered as explaining the true cause of chemical combination It had been known since 1803 that, when an electric current is passed through the solution of a salt, the latter is decomposed and two substances are produced—a base and an acid, the former separating at the negative, the latter at the positive pole This suggested the idea that chemical combination might be due to electrical attraction In 1812 Berzelius consequently advanced a general theory of chemical combination based on the assumption that the atoms of the several elements, as well as certain groups of atoms, are charged with electricity, some being electro-positive, others electro-negative To hydrogen was assigned a central position among the elements, since by combining with other elements it was capable of yielding both electro-negative and electro-positive substances, further, the extreme electro-positive position was assigned to the metal potassium, the extreme electro-negative position to the “non-metal” oxygen Different compounds formed by the combination of chemical elements were, according to this theory, capable of exercising further electrical attraction upon one another and therefore of combining into relatively complex substances Thus, the electro-negative SO_2 (then called *sulphuric acid*) could combine with the electro-positive group K_2O (potassium oxide), to form the salt known as potassium sulphate Similarly, the group SO_2 combined with the group MgO (magnesium oxide) to form magnesium sulphate Again, potassium sulphate is more electro-positive than magnesium sulphate, since the metal potassium is more electro-positive than the metal magnesium, the two sulphates could therefore combine to form potassium-magnesium sulphate This dualistic electro-chemical theory was abandoned in the thirties However, the theory of electrolytic dissociation, developed within recent years, may lead to a revival of Berzelius' views, though probably in a considerably modified form (See DISSOCIATION) Berzelius' published works include *Nova Analyse Aquarium Medeviensium* (Upsala, 1800), *Foreläsningar i djurkemi* (2 vols, Stockholm, 1806-08), *Öfversigt af djurkemien framsteg* (Stockholm, 1812), *Afhandlingar i fysik, kemi och mineralogi* (6 vols, Stockholm, 1806-18), *Om bildorsets användande i kemi och mineralogi* (Stockholm, 1820) His celebrated *Larobok i kemi* was originally published at Stockholm in three volumes (1808-18), a second edition, in six volumes, was published between 1817 and 1830, the work has been translated into most of the European languages The multitude and accuracy of Berzelius' researches in every branch of chemical inquiry make it difficult to conceive how one man could have accomplished so much Consult his “Obituary,” in *American Journal of Science*, November, 1848, Louyet, *Notice sur la vie et les travaux de J J Berzelius* (Brussels, 1849), Soderbaum, *Berzelius, Werden und Wachsen* (Leipzig, 1899)

BERZSÉNYI, bé-zh'nyí, DANIEL (1776-1836) A Hungarian poet, born at Hetye, county of Eisenburg His *Verses* appeared in 1813, without his consent, under the editorship of Helmecci These poems, an authorized edition of which was published under the direction of the author in 1816, were cordially greeted,

especially by the younger patriots, and have become classic in the literature of Hungary The most recent edition is that by Toldy (2 vols, Pesth, 1864)

BES An Egyptian divinity, presiding over art, music, the dance, and childbirth, represented as a grotesque, deformed dwarf and formerly identified with Typhon He is of foreign origin, appearing chiefly after 1500 B.C.

BESANCON, be-zan'son' (LL *Besantio*, Lat *Vesontio*) The capital of the French department of Doubs, and formerly of Franche-Comté, a fortress of the first class and seat of an archbishopric, situated on the river Doubs, 57 miles east of Dijon (Map France, N, M 5) The city proper lies on a peninsula which is almost entirely surrounded by the Doubs, on the height which forms the neck of the peninsula lies the citadel Besancon has many remarkable buildings and Roman remains There is a Roman amphitheatre in ruins, whose vast proportions suggest the ancient importance of the city The cathedral is a striking structure, dating from the eleventh century The Prefecture belongs to the year 1697, and the palace of Cardinal Granvella, the minister of Charles V, is an interesting example of half-Gothic, half-Romanesque architecture The gate of Mars, or Porte Noire, is a triumphal arch, built in 167 A.D. by Marcus Aurelius Besancon was strongly but irregularly fortified by Vauban in the seventeenth century, the citadel being considered impregnable Since that time the fortifications have been extended and strengthened The present fortifications consist of the citadel of Vauban, with recent additions, which occupies the site of the ancient Roman stronghold, 1200 feet above sea level Forts are also built on the neighboring heights The city is an important industrial centre, the principal product being hardware, but there is great activity in the weaving of silk, linen, and cotton One-fifth of the population is engaged in the manufacture of timepieces Pop, 1901, 48,178, 1906, 56,163, 1911, 57,978 Vesontio, or Visontium, the capital of the Segunni, was a considerable place in the time of Caesar, who in 58 B.C. expelled its inhabitants and in the neighborhood of the city gained a victory over Ariovistus It then became an important Roman military station Marcus Aurelius made it a *colonia* with the name of *Colonia Victoria Sequanorum* In modern times, after undergoing many changes, it finally came into possession of France in 1674 Consult A Castan, *Besancon et ses Environs* (Besancon, 1887), *Besancon et la Franche-Comté, notices historiques* (Besancon, 1893), T Rice Holmes, *Caesar's Conquest of Gaul* (Oxford, 1911)

BESANT', or **BEZANT'** A circular piece of bullion, generally gold, without any impression, supposed to represent the old coinage of Byzantium brought home by the Crusaders and hence of frequent occurrence as heraldic charges It was current in England and on the Continent long after the Crusades Besants are generally introduced into the arms of banks, and also into those of individuals who have been specially connected with money Similar figures, when not colored or ('gold'), or *argent* ('silver'), are known in heraldry by the general term of *roundels* A *bezanty cross* is a cross composed of besant, and bezanty, or *besante*, is a term used when the shield or any particular charge is strewn with besants

BESANT, bes'ant, Mrs ANNIE (1847-) An English theosophist. She was born in London, Oct. 1, 1847, began life as a devout ritualist, married the Rev. Frank Besant, 1867, but soon afterward became an avowed free-thinker, was separated from her husband in 1873 and in 1874 joined the National Secular Society. Here she met Charles Bradlaugh, with whom she published a pamphlet, *The Fruits of Philosophy* (1877), which led to the arrest of the authors for alleged immorality, because they discussed plans for controlling the increase of population. After much litigation they were acquitted. In 1889 she joined the Theosophical Society and became an ardent disciple of Madame Blavatsky, and since then has devoted herself to the propaganda of theosophy throughout the world, president of the Theosophical Society (1907). In 1898, she founded the Central Hindu College in Benares, India. With Herbert Burrows she compiled a *Petit glossaire de termes théosophiques* (Paris, 1894). In 1893 she made a lecturing tour in the United States and published her autobiography under the title *Through Storm to Peace*. Her later works include *The Building of Kosmos* (1894), *The Self and its Sheaths* (1895), *Four Great Religions* (1897), *Esoteric Christianity, or, the Lesser Mysteries* (1902), *Theosophy and the New Psychology* (1904), *The Wisdom of the Upanishads* (1906), *Legends and Tales* (1913), *Essays and Addresses* (vol. 1, 1911, vol. 2, 1912, vols. 3 and 4, 1913).

BESANT, bez'ant, SIR WALTER (1836-1901). An English novelist and critic. He was born in Portsmouth, Aug. 14, 1836, the son of William Besant. He was educated at King's College, London, and at Christ's College, Cambridge, and was appointed senior professor in the Royal College of Mauritius (1861-67). Returning to London on account of ill health, he formed a successful literary partnership with James Rice. They produced together many excellent novels, beginning with *Ready Money Mortiboy* (1872) and ending with *The Seamy Side* (1881). After the death of Rice (1882) Besant wrote a large number of novels, of which the most notable is *All Sorts and Conditions of Men* (1882), dealing with the social conditions in the East Side of London. This novel presented so clear a picture of the real life and limited opportunities of the common people of East London that it led to the establishment of the People's Palace. The work gave an impetus to many other attempts at social reform and assisted its author to an abiding place among the social reformers of his generation. Among his other novels are *Dorothy Foster*, *Children of Gibeon*, *Armored of Lyonesse*, *The City of Refuge*, *The Demoniac*, a striking study of hereditary dipsomania, and *The Orange Girl*. Besant also did an immense amount of miscellaneous writing, which included a valuable historical work on London. He founded the Society of Authors, becoming its first chairman (1884-85), and the editor (1890) of the *Author*, official organ of the society. In 1895 he was knighted. He died at Hampstead, June 10, 1901. (See PEOPLE'S PALACE.) Consult *Autobiography* (New York, 1902).

BESIDE/ THE BONNIE BRI'AR BUSH A collection of tales of Scotch life (1894), by Ian Maclaren, the pen name of the Rev. John Watson, which excited wide interest and made the author famous. The types of lowly life in

these stories have been developed in other stories by the same author.

BESIKA BAY, bë-së'ka. An inlet of the Aegean Sea, of strategic importance, on the northwest coast of Asia Minor, a little south of the entrance to the Dardanelles (Map: Turkey in Asia, B 3). The island of Tenedos lies at the mouth of the bay. The English fleet was stationed there during the crisis of the Russo-Turkish War in 1853-54 and again in 1877-78.

BESKOW, bë'sköv, BERNHARD VON (1796-1868). A Swedish poet and dramatist, born in Stockholm. He was appointed private secretary of the Crown Prince Oscar in 1825 and subsequently held several offices at court. His more important works include the poems *Karl XII* (1819) and *Steniges anor*, and the tragedies *Erik den Fjortonde* (1827-28), *Torhel Knutsson* (1830), and *Birger och Lars Att* (1836-38).

BESNARD, bas'nar' (PAUL) ALBERT (1849-) One of the prominent French contemporary painters. He was born at Paris, June 2, 1849, and studied with Jean Bremond, and with Cabanel in the Ecole des Beaux-Arts. In 1874 he won the Roman prize, and thereupon spent the customary four years in Italy. From 1879 to 1881 he practiced portrait painting in London, among his sitters being Lord Wolsley and other prominent representatives of the British army and navy. He then took up his residence in Paris. His earliest portraits, like that of Legros (1881, Musée de Luxembourg) and that called "Madame Lerolle and her Little Daughter" (1883), are in the grayish white tone of Bastien-Lepage (qv), but he speedily took up the problems of light then occupying the Impressionists and solved them in his own individual manner. Among his most important works of his character are the portrait of Madame Roger Jourdin, which was epoch-making in his art, a "Nude Woman Warming Herself" (1887, Luxembourg), "The Artist's Family" (1890), the "Harbor of Algiers" (1895, Luxembourg), "Madame Réjane" (1898), "Noon Women Bathing", "Princess Mathilde" (1904), the "Caryatides" (1907, Brussels Museum), "An Evening" (1908). An admirable treatment of light and color is evident also in his mural decorations. Through them he gained the reputation of being the first painter to express adequately the great achievements of modern science. Among the most prominent of his decorations, all mentioned being in Paris, are a whole series for the Ecole des Pharmacies (1887 et seq.), "Life Reborn from Death" in the chemical amphitheatre of the Sorbonne (1888), "Truth attended by the Sciences Enlightening Man," a ceiling decoration in the Hôtel de Ville (1890-91), "The Happy Isle," etc., in the Musée des Arts Décoratifs, and (1913) a decoration for the ceiling of the Théâtre Français.

Besnard was a wide traveler and brought from Spain and Algiers admirable specimens of his art, but his greatest undertaking was his journey to India in 1911. He brought back incomparable pictures of the exotic color and the interesting life of that country. They are masterpieces of most intense color, often in a single tone, such as his "Weeping Woman," painted entirely in red. Other excellent examples are the "Steps at Benares," "Indian Dancing Girl," "The Bracelet Merchant," "The Rock-Cut Temple of Trichinopoly," "A Palace on Lake Udaipur." The exhibition of his Indian works

in Paris in 1912 attracted international attention. A large and representative exhibition of his works was held early in 1913 in the Boston Museum of Fine Arts and afterward in other American museums. The artist was engaged in 1914 upon mural paintings for the Peace Palace at The Hague. He is also a pastelist and engraver of note.

Besnard enjoys the distinction of having satisfactorily united the achievements of the Impressionists in light and color with whatever is really sublime and permanent in classic tradition, he has resumed the historic mission of French painting to express in form and color the intellectual and spiritual achievements of the nation. His clear and precise drawing is directed to reveal continuous change of form, his color is powerful and striking, he is a clear-headed thinker as well as a painter, and his profound knowledge of human psychology and life is especially shown in his portraits. Consult Marx, *The Painter Albert Besnard* (Paris, 1893), and Mouney, *Albert Besnard* (ib., 1906), with 100 illustrations and literary contributions by the artist.

BESS, GOOD QUEEN The rather indulgent name applied to Queen Elizabeth of England.

BES'SARABIA (after the family Bessarabia, which gave Vorodes to Wallachia). A government in the extreme southwest of Russia, bordering on Rumania on the west and south, and the Black Sea on the southeast (Map Russia, E 5). It is bounded on the east by the Dniester, on the west by the Pruth, and on the south by the Danube. It covers an area of 36,825.3 square versts (16,181 square miles) without the greater internal waters, and is country mostly flat, except for some well wooded offshoots of the Carpathian Mountains in the northwest. It is intersected by several streams, which add to its fertility. The chief occupations are cattle breeding and gardening, especially vine growing, and the production of wine. Wheat, barley, and corn are raised to some extent, as well as tobacco, flax, and hemp. The manufactures of the province are insignificant, but its commerce, owing to its proximity to the frontier, is considerable, consisting largely of exports of cattle, wool, tallow, etc. The population, which is very heterogeneous and composed of Moldavians, Little Russians, Poles, Rumanians, Bulgarians, Jews, Armenians, Greeks, and Tatars, numbered 2,490,200 in 1911 (estimate of January 1), of whom 2,125,000 were rural. The capital is Kishinev. Bessarabia, alternately in the power of the Turks and the Nogais after 1503, suffered heavily in all the wars with Russia previous to the nineteenth century. It was ceded to Russia in 1812. By the Treaty of Paris of 1856, the portions of Bessarabia lying along the Pruth and the Danube, 4250 square miles, were assigned to Moldavia, but at the Berlin Congress of 1878, 3580 square miles were restored to Russia.

BESSARION, JOHANNES, or BASILIUS (1395-1472). A Greek scholar. He was born at Trebizond, on the Black Sea, 1395. He is remembered as one of the earliest of those scholars who in the fifteenth century transplanted Greek literature and philosophy into the West and rescued the mind of Christendom from the trammels of scholasticism. Bessarion imbibed his love of Plato's writings from his tutor, Gemistus Pletho. He became a Basilian monk, in 1437 Archbishop of Nicæa, and in

1438 accompanied the Greek Emperor, John VII Palæologus, to Italy, and effected, at the Council of Florence in 1439, a union between the Greek and Roman churches, which, however, was of short duration. Soon afterward he joined the Roman church, but always retained a glowing love of his native land. He was made Cardinal by Pope Eugenius IV in 1439. Ten years after Nicholas V created him Cardinal Bishop of Sabina, and in the same year Bishop of Fiasecati. He was papal legate at Bologna (1451-55). After the fall of Constantinople (1453) Bessarion visited Germany, and at the diets of Nuremberg, Worms, and Vienna endeavored to promote a crusade against the Turks. In 1463 he was made titular Patriarch of Constantinople by Pius II. In philosophy he professed to be a follower of Plato, but without depreciation of Aristotle. His writings consisted of Latin translations of Greek authors, etc. He died at Ravenna, Nov. 19, 1472. Consult *Inventaire des manuscrits grecs et latins donnés à Saint-Maro de Venise par le cardinal Bessarion en 1468* (Venice, 1894), and for his life, Henri Vast (Paris, 1878). His works are in Migne, *Pat. Gr.*, clxi.

BESSEGES, bē'sēzh'. A town in the department of Gard, France, on the Ceze River, 34 miles northwest of Nîmes (Map France, S, J 4). It is in an important coal field and has foundries, funaces, and glass works. Pop., 1901, 9040. 1911, 8030.

BESSEL, FRIEDRICH WILHELM (1784-1846). An eminent German astronomer. He was born at Minden, in Westphalia. He was destined by his father for a commercial life, but at a very early age he exhibited an unconquerable fondness for astronomy. Though he yielded to his father's wishes and entered a mercantile house in Biemen, he worked continually at astronomy, and it was not long before it became evident that no career but that of an astronomer would suit him. His undivided attention once turned to science, he achieved speedy success. In 1810 he was director of the observatory at Königsberg and professor of astronomy. Realizing the necessity of a systematic revision of the observations of his predecessors, he worked out his theory of instrumental errors and applied it to the reduction of the observations made by Bradley at Greenwich from 1750 to 1762. His results were embodied in his *Fundamenta Astronomiæ*, published in 1818, a work which marks an epoch in the progress of astronomy. His final improvements in reduction methods appeared in 1830 in his *Tabula Regiomontana*. His important contributions are too numerous to mention here. The most startling was perhaps his determination of the parallax of 61 Cygni. By this remarkable achievement, which was the first measurement of a star's distance from the solar system, Bessel inaugurated a new era in sidereal science. His industry as an observer was such that during the years 1821-33 he brought the number of accurately known stars up to 50,000, and thus laid the foundation for the great *Bonn Durchmusterung*, which was carried out by his pupil and successor, Argelander.

It is not too much to say that Bessel was the father of modern observational astronomy, and there is scarcely a department of this science that was not improved or perfected by him, and in mathematical astronomy his work was almost equally important. Among other achieve-

ments, he added Bessel's Functions to the resources of the mathematical physicist, and he was one of the first (1823) to consider scientifically the personal equation of observers. Besides the works mentioned above, his writings include *Astronomische Untersuchungen* (2 vols, 1841-42) and *Abhandlungen* (4 vols, 1875-82). Consult Herschel, *A Brief Notice of the Life, Researches and Discoveries of F W Bessel* (London, 1847), Durege, *Bessels Leben und Wollen* (Zurich, 1861).

BESSELS, bés'sels, EMIL (1847-88) A German scientist. He was born at Heidelberg and studied at the universities of Jena and Heidelberg. In 1869 he made his first polar journey, in the course of which he demonstrated the existence of the Gulf Stream to the east of Spitzbergen. In 1871 he accompanied the expedition under C F Hall (qv), as ship's physician and chief of the scientific department. His collections were lost in the wreck of the *Polaris*. He published *Scientific Results of the United States Arctic Expedition* (1876) and *Die amerikanische Nordpolexpedition* (1878).

BESSEMER A city in Jefferson Co, Ala, 13 miles by rail southwest of Birmingham, on the Queen and Crescent, the Atlantic, Birmingham and Atlanta, the Illinois Central, the Frisco Lines, the Seaboard Air Line, the Birmingham Southern, the Louisville and Nashville, and the Southern railroads (Map, Alabama, B 2). Iron and coal mines are in the vicinity, and the city is noted for the number and variety of its works devoted to the production of iron and steel in various forms. The manufacture of fire and building brick is another important industry. The city contains a Carnegie library and the Elizabeth Duncan Hospital. Bessemer is governed by a mayor, elected biennially, and a board of aldermen, elected on a general ticket. Pop, 1900, 6358, 1910, 10,864.

BESSEMER A city and the county seat of Gogebic Co, Mich, 47 miles east of Ashland, Wis, on the Chicago and Northwestern, the Duluth, South Shore, and Atlantic, and the Minneapolis, St Paul, and Sault Ste Marie railroads (Map Michigan, F 2). It has a picturesque location and contains a fine high school, city hall, and brownstone courthouse. The city is the centre of the productive Gogebic iron range and is engaged principally in iron mining and lumbering. The surrounding region is adapted to the raising of grain, hay, and some fruit. Pop, 1900, 3911, 1910, 4583.

BESSEMER, SIR HENRY (1813-98) An English inventor, who originated and successfully developed the process for making steel known by his name. He was born at Charlton, near Hitchin, England, and acquired his early education in the schools of the neighborhood. His father, a mechanical engineer and inventor, owned a type foundry, and in this establishment the son received a mechanical training. He inherited from his father artistic talent and was skillful at modeling, designing, and painting. He early turned his attention to mechanical inventions, and his first successful scheme was a method of impressing on deeds and other documents the stamps of the internal revenue office, which at that time could be forged readily. Of such marked excellence was this invention that it was straightway appropriated by the revenue office, without compensation to the inventor, in spite of his strenuous efforts to se-

cure justice. Later in life, when he had achieved success and honor, he brought this matter to the attention of the government and was knighted (1879) as a tardy recognition of the value of his early invention. Bessemer's next work of importance was that of a new method of producing bronze powder, or "gold" paint, which was successful from a commercial point of view, and supplied him with resources to carry on his metallurgical researches. He was greatly interested in the production and manipulation of alloys, doubtless on account of his father's business as a type-founder, and though without a scientific training, he was a careful, ingenious, and determined investigator. During the Crimean War, in common with many other inventors, he was engaged in experiments looking to the improvement of cannon, and designed an elongated projectile so shaped and perforated as to revolve in its flight through the passage of air and powder gases. For the discharge of such a projectile he found that the cannon of that period would not resist the strain, and accordingly he determined to carry on experiments with a view to producing iron of greater strength. Working in Paris, with the encouragement of the Emperor Napoleon, he produced an improved form of cast iron and was then led to further refine the iron until steel was produced. Patents were taken out in connection with these ideas in 1855, and the experiments were continued, so that Bessemer soon (in his own words) "became convinced that if air could be brought in contact with a sufficiently extensive surface of molten crude iron, the latter would rapidly be converted into malleable iron." As a result of numerous experiments followed the "converter" (qv), which, along with the other apparatus, was installed in 1856 at his bronze factory in London, and steel ingots were produced which were successfully rolled into rails without hammering. After the process was developed, the Bessemer Steel Works in Sheffield were erected, and were soon producing a large output, as well as training competent workmen to carry on similar factories in other parts of the world. On Aug 13, 1856, Bessemer read a paper at the Cheltenham meeting of the British Association, on "The Manufacture of Malleable Iron and Steel without Fuel," and in 1865, at the Birmingham meeting, he read another important paper "On the Manufacture of Cast Steel, its Progress and Employment as a Substitute for Wrought Iron." The growth of this process (see IRON AND STEEL, METALLURGY OF) was not only marked in itself, but it had a widespread effect in greatly cheapening the price of steel and making it available for railway and other engineering work.

In addition to his success in steelworking, which brought him renown and fortune, Bessemer had other inventions to his credit, among which were a method for compressing into a solid block the graphite used in the manufacture of lead pencils, which is still in use, a method for casting type, using a force pump to drive the metal into the mould, a system of rollers for embossing and printing paper, a machine for embossing velvet, and a ship with a cabin which would remain in a level position. The latter, on which Bessemer spent much money, was, however, a complete failure, though Bessemer claimed that his appliance was never given a fair trial. In 1859 Bessemer

received his first honor, in the form of the Telford medal of the Institute of Civil Engineers, and in 1872 he received the Albert medal of the Society of Arts. In 1871-73 he was president of the Iron and Steel Institute of Great Britain, and in 1879 he was made a fellow of the Royal Society. He was on honorary member of many foreign engineering and scientific societies, including the American Society of Mechanical Engineers, before whom, in December, 1896, he presented a paper on "The Origin of the Bessemer Process," which was printed in the *Transactions* of that society. Consult his *Autobiography*, with a concluding chapter by his eldest son (London, 1905).

BESSEMER-STEEL PROCESS See IRON AND STEEL, METALLURGY OF

BESSENYEI, bé'shén-yéi, GYORGY (c 1747-1811) An Hungarian dramatist. He was born at Bercezl, county of Szabolcs. After a brief and fragmentary course of study he led an idle life until 1765, when he was chosen, with other young nobles, to form Maria Theresa's Hungarian bodyguard at Vienna. In the brilliant and cultured world into which he was thus suddenly introduced, Bessenyei soon realized his own deficiencies and applied himself day and night to studies. With the knowledge of other languages and literature came also the realization that his race had been surpassed by other nations, both in culture and refinement. Spurred by this thought, he soon formed within the royal bodyguard a literary circle which was rooted in French classicism and bore the seeds of the modern Hungarian renaissance. Bessenyei was an enthusiastic admirer of Voltaire and took upon himself to imitate him. Bessenyei himself was surprisingly prolific and versatile. His earliest work was a tragedy, *Agas*, drawn from Spaitan history (Vienna, 1782), with which the historians of Hungarian literature are wont to begin its period of modern Renaissance. Other tragedies followed, based upon Magyar traditions, then came comedies, imitated from the French, one of which, *The Philosopher* (1777), was the first true comedy written in the Hungarian language, an epic, *King Matthias*, and a series of prose works in the field of history and philosophy, including a *Life of John Hunyadi* and a *Philosophic History of Hungary*. Until 1784 Bessenyei lived in Vienna, where he had charge of the court library. After that year he retired to his small country seat, where he lived quietly, paying small heed to the development of literary tendencies which he himself had set in motion, yet not wholly ceasing from his labors until his death, in 1811. Many of his works have remained in manuscript form, as the censorship of Francis I could not tolerate Bessenyei's cult of liberty and reason.

BESSEY, bé'ssé, CHARLES EDWIN (1845-) An American botanist, born at Milton, Ohio. He graduated in 1869 at the Michigan Agricultural College, studied at Harvard under Prof. Asa Gray, in 1872 and 1875-76, and was professor of botany at the Iowa Agricultural College from 1870 to 1884. In 1884 he was appointed professor of botany and in 1909 head dean at the University of Nebraska. He published *The Geography of Iowa* (1876), *Botany for High Schools and Colleges* (1880), *The Essentials of Botany* (1884), *Elementary Botany* (1904), *Plant Migration Studies* (1905), *Synopsis of Plant Phyla* (1907), *Outlines of*

Plant Phyla (1909). The ninth edition of his *New Elementary Agriculture* (written with others) was published in 1911.

BESSIÈRES, bé'syâr', JEAN BAPTISTE (1768-1813) Duke of Istria and marshal of the French Empire. He was born at Preissac, in the department of Lot, and after serving for a short time in the "Constitutional Guard" of Louis XVI, entered the Army of the Pyrenees as a private soldier in November, 1792. In less than two years he had attained the rank of captain, and, passing into the Army of Italy, he distinguished himself greatly in the battles of Roveredo and Rivoli. He was made chief of a brigade in 1798 and in that year accompanied Bonaparte to Egypt and gained distinction at the siege of Acre and at the battle of Abukir. Afterward he took a prominent part in the greatest battles of Napoleon—Marengo, Austerlitz, Jena, Friedland, Eylau, Eckmühl, Aspern, and Wagram—and within five years (from 1800 to 1805) he was made successively general of brigade, general of division, and marshal of France. For his gallant behavior in Spain he was in 1809 created Duke of Istria. In the Russian campaign he commanded the cavalry of the Guard, and during the disastrous retreat from Moscow the services he rendered were of the utmost importance. In 1813 he received the command of the whole of the French cavalry. On the morning of the battle of Lützen, while reconnoitring the field from the defile of Rippach, he fell mortally wounded. Napoleon justly mourned his loss as one of his ablest generals and truest friends. Bessières was a great leader, beloved by his soldiers and even by his Spanish opponents.

BEST, WILLIAM THOMAS (1826-97). An English organist, born at Carlisle. He received his first appointment at Pembroke Chapel, Liverpool, and in 1849 was appointed organist of the Liverpool Philharmonic Society. Subsequently he was organist of the Panopticon, London (1852), of Lincoln's Inn Chapel (1854), and of St George's Hall, Liverpool (1855). Best was practically his own instructor, and in the course of his long and extremely active career he succeeded in carrying his art to a point of perfection unsurpassed by any other man. His repertory is said to have numbered 5000 pieces. He composed numerous anthems, fugues, sonatas, prepared very many arrangements for the organ, and published *The Modern School for the Organ* (1853) and *The Art of Organ-Playing* (1869).

BESTIARIES (Fr. *bestiaires*, from Lat. *bestiarum*, pertaining to wild beasts, from *bestia*, wild beast). The name given to a class of written books of great popularity in the Middle Ages, describing the animals of creation, real or fabled, and generally illustrated by drawings. They were most in fashion during the eleventh, twelfth, and thirteenth centuries. They served as encyclopedias of the zoology of those ages, but they had also another use. The symbolism which was then so much in vogue fastened spiritual meanings upon the several animals, until every quality of good or evil in the soul of man had its type in the brute world. It is in this way to the Bestiaries that we must look for explanation of the strange grotesque creatures which are found sculptured on the churches and other buildings of the Middle Ages. There were Bestiaries both in prose and in verse, in Latin and in the vernacular. A few sentences from *Le bestiaire divin de Guillaume, clerc de Nor-*

mandie, trouvere du XIIIe siecle (Caen, 1852) may help to give some notion of the class of works of which it is a fair example 'The unicorn,' he writes, "has but one horn in the middle of its forehead. It is the only animal that ventures to attack the elephant, and so sharp is the nail of its foot, that with one blow it rips up the belly of that most terrible of all beasts. The hunters can catch the unicorn only by placing a young virgin in the forest which it haunts. No sooner does this marvelous animal descrie the damsel than it runs toward her, lies down at her feet, and so suffers itself to be taken by the hunters. The unicorn represents our Lord Jesus Christ, who, taking our humanity upon Him in the Virgin's womb, was betrayed by the wicked Jews, and delivered into the hands of Pilate. Its one horn signifies the Gospel truth, that Christ is one with the Father," etc. The source of the mediæval Bestiaries is to be found in the Greek work *Physiologus*, probably written about the second century A.D., at Alexandria. It immediately became very popular, but in 496 was censured by a synod. It was translated into Latin, Ethiopic, Armenian, Syriac, Old English, Icelandic, etc., numerous additions and changes being made. The original number of symbols is 49. Consult F. Lauchert, *Geschichte des Physiologus* (Strassburg, 1890), Nover, *Die Tiersage* (Hamburg, 1893), Zell, *Tierfabeln und andere Irrtümer in der Tierkunde* (2d ed., Stuttgart, 1904), Class, *Auffassung und Darstellung der Tierwelt im französischen Roman de Renart* (Tubingen, 1910), Keller, *Die Antike Tierwelt* (2 vols., Leipzig, 1909-13), Goldstaub and Wendtner, *Ein Tosco-Venezianischer Bestiarus* (Halle, 1892), Goldstaub, *Der Physiologus und seine Weiterbildung, besonders in der lateinischen und in der byzantinischen Literatur* (Leipzig, 1901).

BESTIARI. See GLADIATOR

BESTUZHEV, be-stŭzh'ev, ALEXANDER ALEXANDROVITCH (1797-1837) A Russian novelist and critic. He was captain in a dragoon regiment and adjutant to Alexander, Duke of Württemberg. Having been involved with his friend Ryleev, in the political conspiracy of 1825, he was degraded to the ranks and exiled to Yakutsk, but after long entreaty was permitted to enter the Army of the Caucasus as a private in 1829. He fell in a skirmish with the as yet unconquered mountaineers. He began his literary activity in 1819 and two years later published his first book, *A Trip to Revel*. Two years before his exile he, together with Ryleev, had published the Russian almanac, *The Polar Star*, a very unique literary production which drew about its authors many contemporary writers, including such poets as Pushkin. Bestuzhev's later works, consisting chiefly of novels and sketches, written after 1830 under the pseudonym of "Cossack Malinsky," were based on his experiences in the Caucasus. They excel in depicting the wilder aspects of nature and the excitements of a soldier's life, but fail in the delineation of character, and are often exaggerated and sometimes absurd. Among his principal works are the tale of *Mullah Nur* and the romance of *Ammalat Bek*, which last relates the treachery of a Circassian chief and gives interesting pictures of the scenery of the Caucasus. Bestuzhev was a romanticist like Victor Hugo, whom he greatly admired. In the great literary controversy of the day, "Classicism vs Romanticism," Bestuzhev took a most prominent

part, and even such a critic as Belinsky (qv) acknowledged his great services to Russian literature. Several of his novels were translated into German by Seebach (Leipzig, 1837), and his collected works appeared at St. Petersburg (5 vols., 1835, 3d ed., 12 vols., 1839, and 4th ed., 1847) under the name of *Malinsky's Tales*.

BESTUZHEV-RYUMIN, ryŭm'én, KONSTANTIN NIKOLAYEVICH (1829-97) A Russian historian, born at Kudresh (government of Nizhni Novgorod). He took great interest in literature and history during his gymnasium training, studied law at the University of Moscow, taught school, and in 1856-59 assisted in the editorship of the *Moscow Gazette*. For a time he was editor of the *Moscow Review*, which contained original contributions from his own pen, notably his essays on Russian history, but he soon moved to St. Petersburg and became a regular contributor to the *Annals of the Fatherland*. In 1863-64 he edited the *Journal of the Geographical Society*, from 1865 to 1882 occupied the chair of Russian history at the University of St. Petersburg, and from 1878 to 1882 was president of the Slave Benevolent Society, while also editing its official reports and papers. The Imperial Academy of Science elected him to membership in 1890. He contributed numerous articles to periodicals, helped to edit Kravetsky's *Encyclopædic Dictionary*, and translated (with Tikhin) Buckle's *History of Civilization*. His original work includes *The Christianization of Russia* (1864), *The Black Days of Tatarism* (1864), and several other books and numerous monographs. Of considerable literary note is his collection of essays published in 1882 under the title *Biographies and Characteristics*, but by far his most important work is his *Russian History*, of which but two volumes were completed (vol. 1, 1872, vol. 11, 1885), and which gives a good general view of the leading factors in Russian history to the close of the reign of Ivan the Terrible, treated in a most scholarly and impartial manner.

BETANZOS, bá-tan'thós (anciently, *Bragantium Flavum*) A city of Spain, in the province of Coruña, 11 miles east-southeast of the city of the same name (Map Spain, A 1). It contains remains of a Moorish castle and ancient granite gateways. The town manufactures linen, leather, and earthenware, and carries on a trade in wine and grain. Betanzos is one of the oldest towns of Galicia, and early in its history formed a city or republic with Coruña, which was its port. Henry IV, in 1465, made it a city in its own right. Pop., 1900, 9948, 1910, 8826.

BETA RAYS, bê'tá, or bá'tá, rāz See RADIUM

BETEL, or **BETLE** (Sp., Portug. from Tamil *vettile*, betel, literally, a mere leaf), or **PAWN** A narcotic stimulant, much used in the East and particularly by all the tribes of the Malay race. It consists of a leaf of one or other of certain species of pepper, to which the name of betel pepper is indiscriminately applied, plucked green, spread over with moistened quicklime (*chunam*), generally procured by calcination of shells, and wrapped around a few scrapings of the areca nut (see ARECA), sometimes called the betel nut, and also known as *pinang*. This is put into the mouth and chewed. It causes giddiness in persons unaccustomed to it, excoriates the mouth, and deadens for a time the sense

of taste. It is so acrid that Europeans do not readily become habituated to it, but its consumption in the East Indies is prodigious. Men and women, young and old, indulge in it from morning to night. The use of it is so general as to have become a matter of etiquette, the Malays rarely go out without their betel boxes, which they present to one another as Europeans did at one time their snuffboxes. The chewing of betel is a practice of great antiquity and can certainly be traced back to at least the fifth century B.C. It gives a red color to the saliva, so that the lips and teeth appear covered with blood, the lips and teeth are also blackened by its habitual use, and the teeth are destroyed, so that men of 25 are often toothless. Whether the use of betel has any advantages except the mere pleasure afforded to its habitues, to counterbalance its obvious disadvantages, is a question upon which difference of opinion exists. By some it is believed to promote the secretion of saliva, strengthen the digestive powers, and ward off attacks of fever, others condemn it unqualifiedly. Sir James Emerson Tennent, in his work on Ceylon, expresses the opinion that it is advantageous to a people of whose ordinary food flesh forms no part, and that it is at once the antacid, the tonic, and the carminative which they require.

The name "betel" is often given to the species of pepper of which the leaves are chewed in the manner just described, which are also called betel pepper or pawn. Some of them are extensively cultivated, particularly *Chavica betle*, *Chavica snaboa*, and *Chavica malamu*, climbing shrubs with leathery leaves, heart-shaped in the first and second of these species, and oblong in the third. They are trained to poles, trellises, or the stems of palms, and require much heat with moisture and shade, in the north of India, where the climate is unsuitable, they are cultivated with great attention in low sheds, poles being placed for their support a few feet apart. The genus *Chavica* is one of those into which the old genus *Piper* (see PEPPER) has been divided. The requisite qualities of betel are probably found in the leaves of numerous species not only of this but of other genera of the same family. The leaf of the ava (q v) is sometimes used.

BETEL NUT See ARECA, Plate of ANEMONES, ETC.

BETERRAE See BEZIERES

BETERRA SEPTIMANORUM. See BEZIERES

BETH (Heb house) A word frequently introduced as an element in the name of places, as Beth-el, house of God, Beth Shemesh, house of Shemesh, the sun god, Beth Anath, house of Anath, the goddess, Beth Lehem, house of the god Lehem, etc. The corresponding word in Arabic, which is similarly used, is *Beit* (q v).

BETHABARA See BETHIANY

BETHAM-EDWARDS, MARILDA (1836-) An English novelist and writer (particularly on French rural life), who was born at Westerfield in Suffolk. Her mother was the little Barbara Betham, to whom Mary Lamb penned "as charming a letter as was ever addressed to a child." Miss Edwards received her education, which was purely literary, at home and by foreign travel, especially in France. She became *Officier de l'instruction publique de France* in 1891. Her literary career as a poet began with the contribution to *Household*

Words, then edited by Charles Dickens, of a poem called "The Golden Bee," for which she received only a sovereign (\$5). The poem was republished in a volume of poems (ballads) in 1855 and again in 1885. At the age of 19 she published her first novel, *The White House by the Sea* (1855), and thenceforth devoted herself to literature, contributing to the leading magazines. Her publications include novels, poems, and miscellaneous works on travel and literature. Her novels are *John and I* (1862), *Dr Jacob* (1864), *Kitty* (1869), *The Parting of the Ways* (1888), *A Romance of Dyon*, *The Lord of the Harvest*, *A Suffolk Courtship* (1900), *Mock-Beggar's Hall* (1901), *Barham Broodleban*, M.D. (1904). Her poems are *The Golden Bee* (1907). Among her miscellaneous works are an edition of *Arthur Young's Travels in France*, *Sea Life-Studies of Famous Women* (1880), *France of To-Day*, *Anglo-French Reminiscences* (1890)—all of which are very entertaining, *East of Paris* (1902), *Home Life in France* (1905), *Literary Rambles in France* (1907), *French Men, Women, and Books* (1910).

BETH'ANY (Gk Βηθάνια, *Bethania*, of uncertain Aramaic etymology, the Talmud giving it as *beth*, house + *anech*, or *hine*, dates) 1. A village on the Mount of Olives, about 1½ miles from Jerusalem, on the road to Jericho, frequently referred to in the Gospels (Map Palestine, C 4), to be identified with the modern El-Azariyeh (= 'from Lazarius'). It was the home of Lazarius and his sisters, where Jesus was always a welcome guest (John x 1 with Luke x 38-42). Here also was the house of Simon the leper, where Jesus was entertained on his arrival at the village on the evening previous to his public entry into Jerusalem (Mark xiv 3 with John xii 1, 2). It was "over against Bethany" that the ascension took place (Luke xxiv 50). Under the ruins of a convent built in 1180 A.D. is the traditional grave of Lazarius, and the popularly supposed house of Martha and Mary is pointed out in the village. 2. According to the best manuscripts (followed in the Revised Version), the name of the place where John the Baptist was baptizing at the beginning of his ministry (John i 28). It is called in some manuscripts and in the Authorized Version Bethabara. The site is not certainly known. Some have supposed it to be the same as Beth-Nimrah, some 1½ miles east of the Jordan from Jericho, identified with the modern Nimrin, others locate it much farther up the valley.

BETHANY A city and the county seat of Harrison Co., Mo., about 65 miles northeast of St. Joseph, on the Chicago, Burlington, and Quincy Railroad (Map Missouri, B 1). It is the centre of an agricultural and stock-raising region, in which also building stone is quarried, and contains flouring mills, canning factories, brickyards, etc. The Neilborn Sanitarium is a noteworthy feature. The electric light plant is owned by the city. Pop., 1890, 1105; 1900, 2093; 1910, 1931.

BETHANY A borough in Brooke Co., W. Va., 16 miles northeast of Wheeling. It is the seat of Bethany College, an institution founded by Alexander Campbell (q v) in 1841, and under the control of the Disciples of Christ. Bethany Mansion, the homestead of Alexander Campbell, is in Bethany. Pop., 1900, 245; 1910, 433.

BETHANY COLLEGE A coeducational

institution at Lindsborg, Kans, under the auspices of the Swedish Lutheran church, founded in 1881. It has preparatory, normal, commercial, collegiate, model school, art, and music departments, with 45 instructors and a student body of about 300, a library of 9000 volumes, and an endowment in 1913 of \$65,732. President, Ernst F. Pihlblad.

BETH'EL (Heb house of God, from *beth*, house + *el*, God). A town of Palestine, the modern Betin, situated in the mountains at a height of 2880 feet above the sea level, 10 miles north of Jerusalem. It is associated with the early traditions and legends of the Hebrews. Abraham pitches his tent near Bethel, builds an altar, and worships there (Gen. xii 8, xiii 3), but it is Jacob who is more particularly associated with the place and to whom the giving of its name is assigned. According to Gen. xxviii, God appears to Jacob at Bethel on his flight to Haran, in Gen. xxxv 3, it is on the return of Jacob from Padan-Aram that he encounters God. The former passage contains the story of Jacob's vision, in which he sees angels ascending and descending a "ladder"—possibly conceived of as a structure like a Babylonian *zikkurat*, or temple tower, with a sloping ascent winding around to the top, with God standing at Jacob's side and repeating the promise made to Abraham. Gen. xxxv lays more emphasis upon the change of Jacob's name to Israel than upon the name Beth-el given to the place because God "spoke" with Jacob there, while according to Gen. xxviii the giving of the name follows Jacob's exclamation, "This is none other than the house of God," i. e., Beth (house) El (God). These traditions bear witness to the antiquity of the sanctuary at Bethel. In later times those ancient sanctuaries are regarded as idolatrous. So Jeroboam is rebuked for erecting a sanctuary at Beth-el (1 Kings xii 29), Hosea going so far as to call the place Beth-aven, 'house of iniquity' (Hos. iv 15). Its earlier name is said to have been Luz (Gen. xxxviii 19, xxxv 6, xlviii 3, Josh. xviii 13, etc.), once (Josh. xvi 2) a distinction is made between Bethel and Luz, according to the received Hebrew text, but some for "Bethel" here read "Bathaveh".

A king of Bethel is mentioned (Josh. xii 9, 16), which may be taken as an indication of the importance of the place. As a frontier town it is sometimes reckoned as belonging to the tribe of Benjamin (Josh. xviii 22), sometimes to Ephraim (Judg. i 22). During the period of the Judges Bethel was, in fact, the central sanctuary of the northern tribes, where the ark was stationed (Judg. xx 18), and when the division of the tribes came, Bethel rose to even greater significance in the Kingdom of Israel, having an elaborate organization of priests and prophets (Amos vii), to which the masses were drawn by the feasts and rites, arranged with great splendor. The worship of Yahweh at Bethel proved a serious rival for a long period to that at Jerusalem and hindered the religious concentration at the latter place until the downfall of the northern kingdom. Josephus (*B. J.* iv, 9) states that Vespasian in 69 A. D. garrisoned Bethel before he went on to Jerusalem. Consult G. A. Smith, *History and Geography of the Holy Land*, pp. 289 ff. (1894).

BETHEL. A town in Oxford Co., Me., 70 miles north-northwest of Portland, on the Grand Trunk Railway and on the Androscoggin River (Map Maine, B 4). It is a summer resort,

noted for its attractive scenery. The town has manufactures of canned goods, chairs, lumber, spools and bobbins, etc., and contains Gould's Academy and several small libraries. Pop., 1900, 1835, 1910, 1930. Consult Lapham, *History of Bethel, 1768-1890* (Augusta, 1891).

BETHELL, RICHARD, first Lord WESTBURY (1800-73). An eminent English judge. He was born at Bradford-on-Avon, Wilts., of a Welsh family of distinction, and was educated at the Bristol Grammar School and at Wadham College, Oxford, where he was entered at the early age of 14. He took his B.A. degree in 1818 and continued for several years in residence as a successful tutor. He then entered the Middle Temple and was called to the bar in 1823. He soon attained prominence as a practitioner in Chancery and in 1840 was made Queen's counsel. His public career may be said to have commenced with his appointment as Vice Chancellor of the Duchy of Lancaster in 1850. From 1852 to his elevation to the House of Lords in 1861 he was a member of the House of Commons. He was a strong supporter of the Liberal party and, on the formation of the Aberdeen ministry in December, 1852, was knighted and appointed to the post of Solicitor-General. In 1856 he became Attorney-General, retiring with the defeat of the government in February, 1858, and being again appointed in its return to power in June, 1860. On June 26, 1861, he succeeded to the office of Lord Chancellor as Lord Westbury. As Chancellor he was celebrated for his learning, acumen, and the soundness of his judgments, and for his power of lucid exposition, which gave him a high place in the list of distinguished men who have held the Great Seal, but his administration of his high office was clouded by charges of corruption which were made the subject of a parliamentary investigation. Though he was acquitted of the accusation of personal corruption, he was nevertheless censured for the laxity of principle and disregard of the public welfare that he had exhibited, and as a consequence he resigned his office in 1865 and retired to private life. But his mind was too active and his interest in public affairs too keen to permit him to remain long in retirement, and he was soon back in his place as a member of the House of Lords and of the judicial committee of the Privy Council.

The last years of his life were perhaps the most active and useful of his whole career. His strong common sense and the penetrating character of his mind, as well as his contempt for stupidity and inefficiency, made him an indefatigable advocate of law reform. Among the many important improvements in legal administration effected by him were the acts which deprived the ecclesiastical courts of the jurisdiction exercised by them in matrimonial and probate causes, the revision and consolidation of the statute law of the kingdom, and a measure for the registration of titles to land. He was also a zealous advocate of codification, and throughout his career fought against the undue reverence for precedent which distinguished the judges of his time.

While still at the bar he was instrumental in the work of improving the methods of legal education, and it was mainly through his efforts that the Inns of Court (*q. v.*) were roused to a sense of their responsibility in the matter. Consult, for an estimate of his judgments as Lord Chancellor, Campbell Smith's *Writings by the*

Way and *The Dictionary of National Biography* (London, 1885)

BETHESDA A pool of water at Jerusalem, where Jesus is said to have cured the man who had waited 38 years to be led into the "troubled water" (John v 2). The name is uncertain, different manuscripts and translations giving Bethesda, Bethzatha, and Bethsaida, and it has been suggested that it originally read Bethzatha, 'place of olives'. Bethesda may have signified 'place of the stream'. It is said to have been 'by the *Probatica*,' which may represent either 'Sheep Gate,' or 'Sheep-Pool,' or 'Baths.' Tradition varies as to its site, the most probable location being the Twin Pools of St Anne's north of the temple area, or the Virgin's Pool. If a natural cause is sought for the phenomenon, the best explanation would perhaps be to identify Bethesda with the Virgin's Pool, the only natural spring in Jerusalem. It is situated on the Ophel slope, southeast of the temple. A cavern below forms a natural siphon, so that the water overflows at definite periods, when people still bathe in the water, because they believe it will cure their diseases. The fact that sheep were watered at this place may have given rise to the name "Sheep-Gate," if that is the meaning of *Probatica*. Otherwise this gate was situated north of the temple. And much may be said in favor of the site near St Anne's, where excavations of the White Friars have disclosed a large vaulted cistern which the Crusaders supposed to be the Pool of Bethesda and over which they built a church. Consult G. A. Smith, *Jerusalem*, pp 564 ff. (1908), and L. Paton, *Jerusalem*, pp 41 ff. (1908).

BETH-HORON (Heb. place of caves). Two villages of Palestine, 9 to 12 miles from Jerusalem, called, respectively, the Upper and Lower Beth-Horon. A late statement, but of no value, ascribes the founding of the place to Sheelah, daughter of Ephraim (1 Chron vii 24). The importance of Beth-Horon is due to its position on one of the most accessible passes leading from the valley of Ajalon to Jerusalem. The Lower Beth-Horon stands on a ridge about 1240 feet above the sea level, the Upper, which is about an hour's climb from the Lower, stands on a mountain spur 1730 feet above the sea. When Joshua defeated the five kings of the Amorites at Gibeon, the road of pursuit passed by Beth-Horon (Josh x 11). In later times the place was often fortified, and Judas Macabaeus here defeated the Syrian Prince Seion (1 Macc iii 13-24, vii 39-40). The present villages are still known as "Upper" and "Lower" Beit-ur.

BETHLEHEM (Gk. *Βηθλεὲμ*, *Bēthleēm*, from Heb. *bēth*, house + *lehem*, bread. 1. The present *Beit Lahm*, a town located on a limestone ridge, some 2550 feet above sea level, about 5 miles southwest of Jerusalem, and about three-fourths of a mile east of the main road to Hebron (Map Palestine, C 4). It was called at times *Bethlehem-Judah* (Judg vii 7 ff., xiv 1 ff., Ruth i 1 f., 1 Sam xvii 12, cf. Matt ii 1, 5 f.), to distinguish it from the similarly named place in Zebulun. The name is significant of the fertility of the valleys near by, which abound in grain fields, olive and fig orchards, and vineyards, though strangely lacking in springs of water. Bethlehem, anciently included in the district Ephraim, became famous in olden times as the birthplace and early home of King David

(1 Sam xvii 12, 15, 58). It was not a place of great importance, though connected with not a little of Old Testament history (cf. Gen xxv 19, xlviii 7, Ruth i 19, etc., 2 Sam ii 32, xxiii 34, 2 Chron xi 6, Jer xli 17, Ezra ii 21). Its special distinction arose from its prophetic designation as the home of the coming Messiah (Micah v 2), in fulfillment of which prediction it appears in the Matthew narrative as the birthplace of Jesus (ii 1-18). As such, it was venerated by Christians as early as the second century. For this reason, probably, Hadrian laid it waste in 132. Constantine the Great, in his zeal for Christianity, revived the place by building there a large basilica, the church of St Mary, near the supposed site of Jesus' birth (c. 330). Since then, Bethlehem has been one of the great pilgrim shrines of Palestine. Its present population is about 8000, mostly Christian, as the Mussulman quarter was destroyed by Ibrahim Pasha after the insurrection of 1834.

The centre of interest in Bethlehem is the famous basilica of Constantine, one of the oldest Christian edifices in the world. The Gospel of Luke states that the infant Saviour was laid in a manger, which is supported by the early tradition that He was born in a cave (cf. *Protev. James*, 18, 19, 21, and Justin Martyr, *Dial. c. Tryph.*, ed. Otto, § 78), and by the ancient custom of using the limestone caves of the hill country of Judaea as shelters for cattle. Justinian (527-565) enlarged Constantine's church, so that the transept covered the supposed Cave of the Nativity. Other crypts under the building are now connected with scenes of the Infancy. Here, also, are the chapel and grave of Jerome, who wrote the Vulgate in a grotto near by. The church was highly esteemed by the Crusaders, who, after its capture in the eleventh century, made it an episcopal see. In 1101 Baldwin was crowned in it. In 1170 the Emperor Manuel Comnenus decorated its walls with mosaics. In 1482 Edward IV and Philip of Burgundy contributed the materials for repairing the roof. At present, Greek, Roman Catholic, and Armenian monastic establishments enclose the church on the two sides and the rear. 2. A small village in Zebulun (Josh xix 15), 7 miles northwest of Nazareth, the modern insignificant *Beit Lahm*, the home and burial place of Ibsan, one of the judges of Israel (Judg. xii. 8, 10). Consult Sanday, *Sacred Sites of the Gospels* (1903), Ramsay, *Was Christ Born in Bethlehem?* (1898), Dory, *Bethleēm, ses sanctuaires, ses habitants, et leurs usages* (Brussels, 1901), Weigand, *Die Geburtskirche von Bethlehem* (Leipzig, 1911).

BETHLEHEM A borough in Northampton and Lehigh counties, Pa., 56 miles north of Philadelphia, on the Lehigh River and Canal, and on the Central of New Jersey, the Lehigh Valley, the Lehigh and New England, and the Philadelphia and Reading railroads (Map Pennsylvania, L 5). Among the more prominent features are two bridges, one about 700 feet long, and the other 1100 feet long, connecting with South Bethlehem (q.v.), the Church of the Nativity, a public library, and St Luke's Hospital. The manufacturing interests comprise extensive iron and steel works, zinc and graphite works, silk and knitting mills, hosiery and paint factories, etc. Bethlehem is governed under a charter of 1851, which provides for a burgess, elected every four years, and a borough council

The water works are owned and operated by the municipality. Pop., 1900, 7293; 1910, 12,837. In 1904 West Bethlehem, with a population (1900) of 3465, was consolidated with Bethlehem. Bethlehem was founded by the Moravians (q v) in 1742 and soon became the headquarters in America of that sect, which maintains here a college and theological seminary, parochial schools, and a seminary and college for women. In 1778-79 the general hospital of the Continental Army was situated here, and in West Bethlehem 500 soldiers were buried. Bethlehem was incorporated in 1845. Consult An article by Jordan, "Bethlehem during the Revolution," in *Pennsylvania Magazine of History and Biography*, vol. xiii (Philadelphia, 1890). Levering, *History of Bethlehem* (Bethlehem, 1903).

BETHLEHEM, MUSICAL OR BACH FESTIVAL Musically, Bethlehem, Pa., is the most remarkable town or settlement in the United States. To a great degree it is a Moravian town, having been founded by the Moravians about 1740 and being still under the influence of the policy then inaugurated. In 1780 the settlement had an orchestra, probably the first in America, which fact, together with the strong musical tendency of the liturgy of the Moravian church, with its realistically religious hymns, undoubtedly led up to the developments of the present day. Early in its church history flutes, horns, violas, and trombones were permanent factors in the church music. The modern festival is frequently referred to as the American musical Oberammergau, or the American Bayreuth. It resembles the latter in many ways and particularly in the employment of a quartet of trombones to summon the people to the performances, as do the trumpets in the German town. Its resemblance to Oberammergau is in the essentially religious character of the festival, the permeating Protestant sentiment of which is admirably expressed in the music of Bach. The festival of 1901 was remarkable for the first performance in America of Bach's *Christmas Oratorio* in its entirety. Besides this great work were given the *Passion* according to St. Matthew and the *Mass in B Minor*, the latter having been presented for the first time in America two years before. J. Frederick Wollé, a pupil of Rheinberger, and the organist of the Moravian church, has charge of the music. The choir consists of 110 members, with a separate chorus of 100 boys, for the chorals, and an orchestra of 60 instrumentalists. When Mr. Wollé in 1906 removed to California, the Bethlehem festivals were discontinued. Mr. Wollé, however, gave annual Bach festivals of the same character at Berkeley, Cal. After his return to Bethlehem in 1912 the annual Bethlehem festivals were immediately reestablished.

BETHLEHEMITES, or BETHLEHEMITE BROTHERS. 1. An order of monks mentioned by Matthew of Paris as being at Cambridge, England, in 1257, and as wearing a red star with five points and a blue disk in the middle on their breasts, in allusion to the Star of Bethlehem, but otherwise being in dress Dominicans. Nothing more is known of them. 2. An order founded in Guatemala by Pedro de Betancourt (1619-67), which grew out of a congregation he collected living under the rule of the Third Order of St. Francis, and caring especially for the sick and educating children. Its constitution was approved by the Pope in 1672, and the congregation was expanded into an order in 1687 and put under the rule of

the Augustinians. They dressed similarly to the Capuchins and carried on their right breast a shield with a representation of the manger at Bethlehem and near it Mary and Joseph. They were specially bound to exercise hospitality and to tend the sick, even though they had infectious diseases. In 1668 a female order of the name was founded in Guatemala, but it never spread. The male order spread in South America, but in 1820 was secularized and in 1845 was extinct. 3. The followers of John Huss were styled Bethlehemites, from the Bethlehem Church in Prague, where their leader preached.

BETHLEM. See BEDLAM.

BETHLEN-GÁBOR, bét'lén gá'bór, or GABRIEL BETILEN, or BETHLEHEM (1580-1629) Prince of Transylvania, 1613-29. He was a member of a prominent Protestant family of upper Hungary, which possessed, also, important estates in Transylvania. In 1613, with the assistance of the Sultan, and in defiance of the Emperor, he was made ruler of Transylvania. In 1619 he took advantage of the Bohemian struggle, and openly took up arms against Austria. He overran Hungary, took Presburg, and spread devastation and terror to the gates of Vienna. The enthusiastic Hungarians elected him King (1620). His allies, the Protestants of Germany, having been crushed in the battle of Prague, Bethlen-Gábor concluded peace with the Emperor Ferdinand II, receiving the town of Kaschau, with seven Hungarian counties adjoining Transylvania, the principalities of Oppeln and Ratibor in Silesia, and the dignity of Prince of the Empire. In 1623 Bethlen-Gábor renewed the war and, raising an army of 60,000 men, invaded Moravia, and obtained the solemn renewal of the former treaty. His marriage with Catharine of Brandenburg in 1625 involved him once more in the Thirty Years' War, but he finally retired from the contest in the following year, and thenceforth devoted himself exclusively to the internal affairs of Transylvania. He died in 1629, after a lingering and painful illness. He was known as one of the "three great Magyars" of his age. Bethlen-Gábor was an able administrator as well as a brilliant general, and his reign was as beneficial to Transylvania on the side of internal progress as it was glorious for its military exploits. He encouraged the sciences and letters and promoted education. His brother STEPHEN succeeded him, but was soon compelled to resign the throne. To the same family of Bethlen belong JOHN and WOLFGANG, both chancellors of Transylvania, the former of whom is celebrated for his work, *Reserum Transylvanicarum Libri IV* (Hermannstadt, 1683), which gives the history of the principality from 1629 to 1663, and the latter of whom wrote a history in 16 books, the manuscript of which, from long neglect, had been much damaged, but which was afterward restored and completed and published (6 vols.) at Hermannstadt in 1792, under the title of *Wolfgangi de Bethlen Historia de Rebus Transylvanicis, 1526-1609*.

BETHMANN-HOLLWEG, bät'man höl'vák, MORITZ AUGUST VON (1795-1877). A German jurist and statesman, born at Frankfurt-on-the-Main. He studied law at Göttingen and Berlin and became professor of civil law at Berlin. He held a similar chair at Bonn from 1829 to 1842 and in 1845 was appointed a counselor of state. From 1849 to 1852 he was a member of the

First Chamber of the Prussian Parliament, and from 1852 to 1855 a member of the Second Chamber. He was Minister of Public Instruction from 1858 to 1862, and was a supporter of the Moderate Constitutional party. His juristic writings are highly esteemed and did much to prepare the way for the sweeping reform of the German law which culminated in the enactment of the German Civil Code in 1896. He published *Grundriss zu Vorlesungen über den gemeinen und preussischen Civilprozess* (1821, 2d ed. 1832); *Ursprung der lombardischen Stgdtfreiheit* (1846); *Der Civilprozess des gemeinen Rechts in geschichtlicher Entwicklung* (6 vols, 1864-74); *Ueber Gesetzgebung und Rechtswissenschaft als Aufgabe unserer Zeit* (1876).

BETHMANN-HOLLWEG, THEOBALD THEODOR FREDERIC ALFRED VON (1850-) A German statesman, born in Hohenflinow, province of Brandenburg, Germany. He was educated at the College of Pforta and at the universities of Strassburg, Leipzig, and Berlin. In 1879 he entered the civil service and in 1885 was appointed Landrat of Oberbarnum, Brandenburg. Thereafter he served, in succession, as provincial President of Potsdam, President of the government of Bromberg, and President of the province of Brandenburg in 1901. While Minister of the Interior (appointed 1905) he also occupied the post of Vice Chancellor of the Empire under Prince von Bulow. In 1907 he was appointed Imperial Secretary of State for the Interior, and Vice President of the Prussian Council, and on July 14, 1909, Chancellor of the German Empire, Prussian President of the Council, and Minister of State for Foreign Affairs, to succeed Prince von Bulow. For the circumstances of his appointment and the more important events in his administration, see *GERMANY, History*. Bethmann-Hollweg showed himself a mild Conservative in politics, but as a minister of the crown he was non-partisan. From early manhood he was a friend and adviser of the Emperor William.

BETH'NAL GREEN A metropolitan borough of Greater London. See London.

BETH-PE'OR (Heb house or dwelling of Peor, i.e., the god of Baal-Peor) A city belonging to Reuben, opposite a ravine, in which Israel is said to have received the Deuteronomic laws (Deut. ii 29), and the locality in which Moses is supposed to have been buried. The exact place cannot be identified, but that it was somewhere in the Nebo-Pisgah Mountains seems certain. If it is on the southern side of Wady Ayun Musa, as some geographers hold, the "ravine" would be Wady Hesban. Ain el-Muneh, on the northern side of the mountain ridge, has also been suggested as a possible location of the city, which has an extended view over the Plain of Shittim. The former, however, would be more accessible from the plain.

BETH-PHAGE (Gk Βηθφαγή, *Bethphage*, from Heb *beth*, house + *pag*, untrodden figs) A village situated on the Mount of Olives, on the road from Jerusalem to Jericho, a short distance from Bethany. It was to this place that Jesus sent his disciples to bring the ass on which he rode in his entry into the city (Matt. xxi 1). The site is identified by tradition with *Abu Dis*.

BETHSA'IDA (Gk Βηθσαϊδά, *Bethsaida*, a name of Syriac etymology—a place of fishing) The name of a place frequently mentioned in the Gospels. It was a Jewish town located on the

north shore of the Sea of Galilee, a little east of where the Jordan enters and near the newer Greek city, which was some distance farther back from the shore and had been built by Herod Philip, by whom it was advanced to the rank of a city and named Julius, in honor of Julia, the daughter of Augustus (Josephus, *Wars*, iii, 10, 7, also *Ant.* viii, 2, 1). It is to distinguish the Jewish from the Greek city that John refers to the home of Philip, the disciple, as "Bethsaida of Galilee" (xvi 21).

It was near this older (Jewish) Bethsaida, which was the home of three of his disciples (John i 41), that Jesus fed the 5000 (Mark vi 31-45, Luke ix 10-17), it was this place that he denounced for its unacceptivity to his ministry (Matt. xi 21, Luke x 13), and it was outside its walls that he took the blind man to heal him of his infirmity (Mark viii 22, 23). There is no certain evidence of the existence of another city of this name on the western side of the lake, to which many have thought Mark vi 45 might refer (Consult Sanday, *Sacred Sites of the Gospels*, p. 48). As to the later history of Bethsaida Julius, nothing is known beyond the fact that it was given by Nero to Agrippa II (Josephus, *Ant.* xx, 8, 4, *Wars* ii, 13, 2).

BETH-SHE'MESH (Heb house of the sun, or the sun god) The name given to several places in the Old Testament, the most important of which was a town situated in Judah given to the Levites (Josh. xxi 16), though subsequently included in the territory of Naphtali (Josh. xix 38). It corresponds to the modern Ain Shems, about 15 miles southwest of Jerusalem, finely situated on the point of a low ridge, commanding an extensive view of the country. It is interesting as the place where the Ark first rested after the Philistines had sent it back (1 Sam. vi 9). According to 1 Sam. vi 19, 50,000 men of this city were slain by Yahwe because "they had looked into the ark of Yahwe." One of Solomon's 12 purveyors resided at Beth-shemesh (1 Kings iv 9), and here was fought the battle between Judah and Israel, in which Jehoash captured Amaziah (2 Kings xiv 11-13, 2 Chron. xxv 21-23). Beth-shemesh was taken by the Philistines during the reign of Ahaz (2 Chron. xxviii 18) and from that time disappears from history. The name indicates that it was a centre of sun worship. In Jeremiah (xlii 13) there is an interesting reference to the "pillars of Beth-shemesh, that is in the land of Egypt," which, as the Greek translation shows, rendering "the pillars of Heliopolis that are at On," is intended for On in Lower Egypt. The pillars refer to the obelisks associated with the worship of Re, the Egyptian sun god.

BETHUNE, ba'tun' A town in the department of Pas-de-Calais, France, built on a rock overlooking the river Brette, and the canals of Laws and Aire, 16 miles north-northwest of Arras (Map France, N. H. 2). It is strongly fortified, the works having been begun by Vauban, who made it one of the strong places of Artois. Its principal public buildings are the Gothic church of St. Vaast, two hospitals, and a communal college. Bethune lies in the richest coal-mining section of France, and its industries are the distillation of oil, salt refining, the manufacture of earthenware, casks, linen, and cloth, and trade in flax, cloth, cereals, and agricultural products. Pop., 1901, 11,370, 1911, 15,309.

BETHUNE, be-thoon', CHARLES JAMES STEWART (1839—) A Canadian clergyman and entomologist. He was born at West Flamboro, Ontario, and studied at Trinity College, Toronto. In 1870 he was appointed head master of Trinity College School. He was founder of the Ontario Entomological Society and the first editor of *The Canadian Entomologist*, the editorship of which he resumed in 1886. He was professor of entomology and zoology in the Ontario Agricultural College from 1906 to 1910. His publications include *Description of some Species of Nocturnal Lepidoptera Found in Canada* (2 vols., 1863-65), *Bibliography of Canadian Entomology for the Year 1900* (1901).

BETHUNE, DAVID. See BLATON, DAVID.
BETHUNE, GEORGE WASHINGTON, D.D. (1805-62). An American clergyman, born in New York and educated at Dickinson College and Princeton Theological Seminary. In 1828 he became pastor of a Dutch Reformed church at Rhinehart, then at Utica, N. Y., and in 1834 in Philadelphia. In 1848 he took charge of a new congregation in Brooklyn, N. Y., 11 years later visited Italy to improve his health, and in 1861 again went to Italy, where he died suddenly from apoplexy. He was an eloquent preacher, accomplished scholar, fisherman, wit, and poet. He published *Lays of Love and Faith* (Philadelphia, 1847), *Orations and Discourses* (1850), *Memoirs of Joanna Bethune* (1864). He edited *Walton's Complete Angler* (London, 1847) and *The British Female Poets* (Philadelphia, 1848). For biography, consult A. R. Van Nest (New York, 1867).

BETHUNE, MAXIMILIAN DE, DUKE DE SULLY. See SULLY.

BETHUNE, THOMAS G. See BLIND TOM.

BETTEL. See BETEL.

BETO'YAN. An important and extensive South American Indian linguistic stock, occupying parts of eastern and southern Colombia and the adjacent regions of Venezuela and Brazil, its tribes being found, now or formerly, on the rivers Japurá, Içá, Uaupes, Negro, Casanare, Apaporis, Tiquié, Caíari, etc., scattered over the country between 3° S. lat. and 7° N. lat. and between 67° and 73° W. long. Among the numerous tribes of this stock the most important are the Kobeyas, Tükanos, Kuretiás Yúpías, Betóyas, Correguages, Piojes, Tamas, etc. Many of the Betoyan tribes are quite primitive, but some have taken up agriculture more or less, others are excellent canoeemen, etc. The Betoyan peoples and their languages have been studied most recently by Rivet and Koch-Grünberg. For details, see Koch-Grünberg, *Zwei Jahre unter den Indianern. Reisen in Nordwest-Brasilien 1903-1905* (Berlin, 1910), and H. Beuchat and R. Rivet, "La famille Betoya ou Tucano," in the *Mémoires de la Société de Linguistique de Paris*, vol. xvii (1911).

BETROTH'AL (from *toth*, a variant of *truth*), or **BETROTH'MENT**. The mutual plighting, or pledging, of *troth*. In modern English and American law, an engagement entered into by a man and woman for their future marriage (qv). This may be, and usually is, a private and informal transaction, constituting a contract obligatory on both the parties, and affording the usual remedy of an action for damages for its breach. See BREACH OF PROMISE, under BREACH. The consideration for the contract is the mutual promises of the parties, and either party may call upon the other to fulfill

the engagement by marriage at the time agreed upon, or, if no date be fixed, then within a reasonable time. In the Middle Ages, however, the betrothal was an important, if not an essential, part of the marriage transaction. It was usually of a ceremonial character, and numerous but ineffectual attempts were made by the Church and the State to compel its celebration with religious ceremonies. Indeed, at one time in the history of medieval society no contract or engagement of marriage, whether present or future, was deemed to be consummated without the subsequent physical union of the contracting parties. Subsequently, however, a distinction was made between a betrothal (*sponsalia per verba de presenti*, which constituted an irregular but valid marriage, though entered into without the sanction of the Church, and *sponsalia per verba de futuro*, which became a marriage, without further words or ceremony, upon its consummation by sexual intercourse. The former has become the so-called common-law marriage, or, where attended with the sanction of the secular or religious authorities, the ceremonial marriage of our own time. The latter, without the physical consummation (which has lost its legal effect), is the betrothal, or marriage engagement, of to-day. It was because Anne Boleyn's previous betrothal to the Earl of Northumberland, though never consummated, was *per verba de presenti*, and therefore something more than a broken engagement, that Henry VIII. was enabled to secure the cancellation of his own marriage to her. The present state of the law on the subject is expressed in the familiar maxim, *Consensus, non concubitus, facit nuptias*—"It is the agreement and not the cohabitation that makes the marriage." Consult Pollock and Matland, *History of English Law* (2d ed., London and Boston, 1899), and the authorities referred to under the title MARRIAGE.

BETROT'ED, bê-trôth', THE. 1. A novel by Scott (1825). 2. A novel by Manzoni (1825-27). 3. An opera by Petrella, produced in 1869, at Lecco.

BETSIMISARAKA, bêt-sé'mé-sa-ra'ka. The mixed Polynesian people of Madagascar living on the eastern side of the island.

BET'SY AND I ARE OUT. A popular poem by Will Carleton (1872), first published in the *Toledo Blade*, and followed by *Betsy and I Made Up*.

BETTELHEIM, bê't'l'-hm, ANTON (1851—) An Austrian author, born in Vienna and educated in that city and in Munich. He published an excellent biographical work on *Beaumarchais* (1886, 2d ed., 1911), and subsequently devoted himself almost exclusively to biographical writing, editing the collection *Führende Geister*, to which he contributed the notable biography of Anzenberger (1891, 2d ed., 1897). He was editor of the *Allgemeine Deutsche Biographie* from 1907 to 1909. Among his later works are *Deutsche Geistesheiden* (1895), *Biographisches Jahrbuch und Deutscher Nekrolog*, vols. 1, 11, and 11 (1898-1900), suspended till 1904 and then resumed, *Louise von François und Conrad F. Meyer* (1905), *Auerbach* (1907), *Prince Hohenlohe* (1910).

BET'TERTON, THOMAS (1635-1710). An English actor. He was born in Westminster and apprenticed by his father to a bookseller, by whose formation of a theatrical troupe Betterton seems to have been introduced to his profession. In 1661 he became a member of Sir William

Davenant's company at the Lincoln's Inn Fields Theatre and quickly became a favorite. The best contemporary judges, such as Steele, Cibber, Pepys, Pope, etc., bear admiring witness to the dramatic power of his impersonations, which overcame the natural disadvantages of a low voice, small eyes, and an ungainly figure. The range of his repertory was wide, including many of Shakespeare's plays and a great variety of contemporary pieces. His Hamlet, to which Miss Sanderson, his future wife, played Ophelia, was considered especially fine. Charles II thought so highly of him that, for the acting of Alvaro in *Love and Honor*, he is said to have lent him his coronation suit. Early in his career he was sent, by the King's wish, to Paris to study the French stage, with a view to improvement in the English—a visit which brought the young dramatist into contact with the work of Molière. His private character was highly estimable, cheerful, modest, and generous. After a retirement of many years it became known that his circumstances were very straitened, and it was determined to give him a public benefit. On April 7, 1709, the spirited veteran (then in his seventy-fourth year) appeared with immense éclat at the Haymarket Theatre in the youthful part of Valentine, in Congreve's *Love for Love*. His last appearance was in a similar benefit three days before his death, as Melantius, in the *Maid's Tragedy*, of Beaumont and Fletcher. He was buried in the cloister of Westminster Abbey—an event which Steele commemorates in the *Tatler* (No 167). As a writer, Bettetton published a number of comedies adapted from earlier plays. Miss Bettetton took almost the same rank among contemporary actresses that her husband did among actors. Consult Howe, "Thomas Bettetton," *Eminent Actor Series* (London, 1891), *The Life and Times of that Excellent and Renowned Actor, Thomas Bettetton*, by the Author of the Lives of Mrs Abingdon, etc. (London, 1888), Doran, *Annals of the English Stage*, vol. 1 (London, 1888), Downes, *Roscius Anglicanus* (London, 1886), Genest, *History of the English Stage*, vol. 1 (Bath, 1832), Galt, *Lives of the Players* (London, 1835), Baker, *History of London Stage and its Famous Players, 1576-1903* (New York, 1901).

BETTINELLI, bet-ti-nel-lē, SAVERIO (1718-1808). An Italian critic and writer on aesthetics. He was born at Mantua, and entering the Society of Jesus taught successively at Brescia, at Venice, at Parma, and at Modena. His principal works were *Il risorgimento d'Italia negli studi nelle arti e nei costumi dopo il mille* (1773-86), on the renaissance of art and literature in Italy, and *Lettere Vespilane*, which aroused much criticism on account of its attacks on Dante. Bettinelli's collected works were published under the title *L'abbate Bettinelli, Opere edite e inedite* (24 vols., 1799-1801). Consult G. F. Napione, *Vita dell' Abbate S. Bettinelli* (Turin, 1819), and Colagrosso, *Gianrico Bettinelli e il "teatro gesuitico"* (Naples, 1890).

BETTING (bet, shortened, from abet, OF abeter, to incite, instigate, deceive, from a (Lat ad), to, + to-bet, Icel, bætta, to bait, to cause to bite). A form of wagering contract in which the payment of a sum of money or the giving of something of value is made to depend on the result of a competition or other uncertain event, as a game, a race, an election, or the like. The

common law did not prohibit such contracts, and they were enforceable like other contracts, though a common gambling house was indictable as a nuisance at common law. While betting, if conducted in an orderly manner and in a proper place, is still generally tolerated by the law, the practice has been much restricted by statute (see GAMBLING), and the right to enforce a betting contract or gambling debt has been taken away by statute.

In 1845 it was enacted by Parliament "that all contracts or agreements, whether by parol or in writing, by way of gaming or wagering, shall be null and void, and that no suit shall be brought or maintained in any court of law or equity for recovering any sum of money or valuable thing alleged to have been won upon any wager, or which shall have been deposited in the hands of any person to abide the event upon which any wager shall have been made" (8 & 9 Vict chap 109, sec xviii). Similar legislation has been enacted in all the United States, and in most of them money loaned for the purpose of making or paying a bet, such purpose being unlawful, cannot be recovered by an action at law. Where a contract, alleged to be a wager, does not show on its face that it is such, it will be presumed to be valid, though the presumption may be rebutted by showing its true character.

While betting has not generally been prohibited, there is an increasing tendency, in the United States (less marked in Great Britain) to attempt its suppression by legal means. Thus most of the States have adopted constitutional provisions prohibiting lotteries under severe penalties (see LOTTERY), while the constitution of the State of New York requires the Legislature by appropriate legislation to prohibit gambling of all kinds. In some of the States, as also in New York, betting on the result of an election for public office disqualifies the bettor from voting at such election.

For wagering contracts deemed lawful, see WAGER, *Wagering Contract*. Consult Rowdace, *Betting and Gambling* (New York, 1905).

BETTS, SAMUEL ROSSITER (1787-1868). An American jurist, born in New Haven, Conn., and graduated at Williams College in 1806. After serving in the War of 1812 he was appointed judge-advocate of the State of New York, and this position brought him prominently before the public. In 1816 he was elected a member of Congress, representing the district comprising Orange and Sullivan counties, and afterward served for several years as district attorney of Orange County. He was judge of the United States District Court from 1823 to 1867. While serving in this capacity he performed the important service of codifying the maritime laws of the United States. Scarcely less noteworthy was the influence of his judicial opinions on the formation of the neutrality and patent laws of the United States. Notwithstanding the enormous volume of business constantly brought to his attention, his decisions during the first 20 years of his term of office were uniformly upheld. Among the distinguished lawyers who conducted cases before him were Hoffmann, Van Buren, Webster, Hall, Emmet, and Choate. His principal publication is a treatise on *Admiralty Practice* (1838).

BETTY, WILLIAM HENRY WEST (1791-1874). An English actor, frequently called "the Young Roscius." In his boyhood he obtained an ex-

traordinary reputation, but failed completely to maintain it as he grew up. He was born near Shrewsbury, but passed most of his childhood in the north of Ireland, where, at Belfast, he appeared upon the stage as Osman in *Zara*, Aaron Hill's adaptation of Voltaire's *Zaïre*, before he was 12 years old. A few weeks later he played in Dublin as Young Norval. He is said to have committed to memory the long rôle of Hamlet in three hours, and popular admiration of his precocious acting was so unbounded that he was thought an easy rival of the greatest tragedians. When he appeared in London, in December, 1804, at both Covent Garden and Drury Lane theatres, the crowds were so great that the troops had to be called out to preserve order. For some time he drew the then unprecedented salary of £100 a night. His social success was equally remarkable. Parliament was once adjourned expressly to see him act Hamlet at Drury Lane, and George III himself presented him to the Queen and princesses. His vogue gradually subsided, however, and in 1808 he left the stage to enter Christ's College, Cambridge. Four years later, at Bath, he resumed his career, which thereafter proved to be quite undistinguished, and in August, 1824, he retired. The rest of his life was passed uneventfully with the fortune he had acquired in his youth. His son Henry Betty (1810-97) was also an actor. Consult Hutton, in *Actors and Actresses of Great Britain and the United States*, vol. II (New York, 1886); Russell, *Representative Actors* (London, 1872?); Doran, "About Master Betty," in *and about Drury Lane and Other Papers* (London, 1881); Graham, *Splendid Failures* (London, 1913).

BETULA. See BIRCH.

BETWA. An unnavigable tributary of the Jumna River in Central India. It rises in the Vindhya Mountains, flows past the towns of Bilhisa and Jhansi, and after a northeastern course of 340 miles, joins the Jumna on the right, about 30 miles to the east-southeast of Kalpi.

BETWEEN WIND AND WATER. That portion of the side of a ship which is in the immediate vicinity of the water line and is sometimes above and sometimes below it as the ship rolls. A shot hole in this locality is dangerous, as it may admit so much water as to cause the loss of the ship, but the close subdivision of the hulls of modern ships near the water line has much minimized the danger.

BETZ, FRANZ (1835-1900). A German operatic barytone. He was born at Mainz, and from 1855 to 1859 sang at Hanover and at various other cities of Germany. From his first appearance in Berlin, in 1859, in the rôle of Don Carlos in Verdi's *Ernani*, until 1897, he was a member of the Royal Opera House, where, prior to May 1, 1870, he had already sung about 850 times. He was selected by Wagner to create the parts of Hans Sachs at Munich in 1868 and of Wotan at Bayreuth in 1876, and thereafter became prominently identified with Wagnerian rôles. He retired in 1897.

BEULÉ, BE'IA', CHARLES ERNEST (1826-74). A French archaeologist and politician, born at Saumur. In 1849 he was sent to Athens as one of the professors of the school of archaeology established there and discovered the propylea of the Acropolis. After his return to Paris he became professor of archaeology at the Bibliothèque Nationale in 1854 and soon won great

reputation by his writings. In 1858-59 he made excavations on the site of Carthage at his own expense. His later years were devoted to politics. In 1871 he was elected to the National Assembly, where he upheld the Orleanist cause. Under MacMahon he was for a short time Minister of the Interior (1873). He committed suicide, April 4, 1874. Among his works are *L'acropole d'Athènes* (2 vols, 1854, 2d ed., 1863), *Etudes sur le Péloponnèse* (1855, 2d ed., 1875), *Les monnaies d'Athènes* (1858), *L'architecture au siècle de Périclès* (1860), *Fouilles à Carthage* (1861), *Phidias, drame antique* (1863), *Histoire de l'art grec avant Périclès* (1868), *Le procès de Césaire* (4 vols, 1867-70). The last-named work dealt with Augustus, Tiberius, Germanicus, and Titus.

BEURMANN, boir'man, KARL MORITZ VON (1835-63). A German African explorer. He was born at Potsdam and studied at the Engineering School, Berlin. In 1860 he made a scientific journey to the Nile, the Nubian Desert, and the Bogos region. He undertook in 1862 an expedition to the African interior, to obtain information about Eduard Vogel (qv), an explorer, murdered—as Nachtigal definitely learned (1873)—in 1856 by order of the Sultan of Wadai. He endeavored to reach Wadai by way of Kanem, but was compelled to turn back. He proceeded to Kuka, capital of Bornu, and thence southwest to Yakoba, capital of Bantshi. In December he once more set out for Wadai, but, robbed and deserted by his servants, had again to return to Kuka. During the following January he started again, but in February was murdered at Mao, on the border between Wadai and Kanem. His *Glossar der Tigris- und Nubien-Sprachen* was published in German and English (1868) by A. Merx, who also wrote a biographical sketch of Beurmann in *Jahresbericht des Leipziger Vereins für Ethnologie* (1866).

BEURNONVILLE, bér'nôn'vel', PIERRE DE RIEL, MARQUIS DE (1752-1821). A French soldier, born at Champignolles (Burgundy). During the Revolution he fought in the Republican army under Luckner and Dumouriez. In 1793 he was appointed Minister of War, and subsequently, when sent by the Convention as one of the commissioners for the apprehension of Dumouriez, was himself taken prisoner and delivered to the Austrians. After his release he was appointed commander of the Army of the North, in 1798 inspector general of infantry, and in 1805 he became Senator. After Napoleon's abdication he declared himself for Louis XVII, whom during the Hundred Days he had accompanied to Ghent. In 1816 he was appointed a marshal of France. Consult A. Chuquet, *Les guerres de la Révolution* (Paris, 1886).

BEUST, boist, FRIEDRICH FERDINAND FRIEDRICH VON (1809-86). A Saxon-Austrian statesman. He was born Jan. 13, 1809, at Dresden and received his university education at Göttingen and Leipzig, after which he entered upon a diplomatic career. After serving at several German courts and at Paris and London, he became, in 1849, Minister of Foreign Affairs in Saxony and in 1853 was made Premier. He represented the German Confederation at the London Conference of 1864 and was the chief exponent of the German national feeling on the question of the incorporation of Schleswig-Holstein with Denmark. An opponent of Bismarck and a friend of Austria, he supported the latter in the crisis of 1866 and ranged Saxony in

opposition to Prussia. After the termination of the Seven Weeks' War he was obliged, at the demand of Prussia, to resign his office. He entered (October, 1866) the Austrian service as Minister of Foreign Affairs, and in the following year was made Imperial Chancellor. It was in this office that his most important work was done, the complete reorganization of the Empire on a dualistic basis. Besides bringing about the *Ausgleich* with Hungary, he carried through important liberal reforms and abrogated the concordat with Rome. The difficulties of procuring harmony between the Germans and Slavs, and the opposition of the Ultramontanes to his plans undermined his influence. In 1871 he was removed and the chancellorship was abolished. He was Ambassador to England from 1871 to 1878, and to France from 1878 to 1882, when he resigned. He died Oct. 24, 1886. Consult his *Memoirs*, Eng. trans. (London, 1887). See AUSTRIA-HUNGARY.

BEUTENMULLER, boi'ten-mul'ler, WILLIAM (1864-) An American entomologist. He was born in Hoboken, N. J., and was educated at a business college in New York City. He was curator of the department of entomology at the American Museum of Natural History from 1889 to 1910, and president of the New York Entomological Society in 1900-01. He was editor of the *Journal of the New York Entomological Society* (vols. 1-11) and is the author of *The Butterflies of the Vicinity of New York City* (1902), *The Insect Galls of the Vicinity of New York City* (1904), *A Manual of American and European Butterflies and Moths* (1906).

BEUTH, boi, PETER CHRISTIAN WILHELM (1781-1853). A Prussian statesman. He was born at Cleve and studied at Halle. In 1801 he entered the Prussian civil service, and in 1810 he was appointed director of the Board of Inland Revenue at Berlin, in which post he did much to improve the condition of finance and industry. After serving in the campaign of 1813, he became a member of the Ministry of Finance. In 1821 he was appointed member of the Council of State, and in 1844 acting privy councillor. He established the Industrial Institute in Berlin, and similar institutes in the provinces, introduced improved methods in manufacturing, and in these and other ways did much to contribute to the furtherance of Prussian trade.

BEUTHEN, boi'ten (generally called Oberbeuthen, to distinguish it from a smaller town of the same name). A town of Prussian Silesia, the capital of a circle of the same name, 50 miles southeast of Oppeln, near the Russian frontier (Map Prussia, II 3). It has manufactures of woollens, marble, and sandstone ware, and bent-wood furniture, but is best known as a mining centre, with zinc, calamine, and coal mines, large smelting works, rolling mills, and iron foundries. It has several Protestant and Roman Catholic churches, a gymnasium, and an ecclesiastical seminary. Beuthen was a Polish town in the twelfth century, but passed to Bohemia, and in 1742 to Prussia. Pop., 1900, 51,409, 1910, 67,718.

BEVEL (Fr. *bivoire*, of unknown origin). 1. In architecture or carpentry, a surface, usually plane, making an angle with the prevailing vertical and horizontal planes of a building. 2. An instrument consisting of two flat, straight-edged legs held by a clamping screw at any desired angle, used for measuring and setting off

bevels or angles of any sort. See CHAMFER, SPALY.

BEVELAND, bā've-lant (land of the open, or beeves), NORTH and SOUTH. Two islands in the estuary of the Scheldt, forming a portion of the Dutch province of Zeeland (qv) (Map Netherlands, B 3). South Beveland is about 22 miles long and 10 miles wide in its widest part. North Beveland is smaller, being only 10 miles long by 3 miles wide. Both islands are thickly inhabited, but have suffered much from inundations of the sea.

BEVEL GEAR. See GEAR WHEEL.
BEVERAGE PLANTS. Plants from whose products the common non-alcoholic beverages are prepared. The principal beverage plants are the tea shrub (*Camellia thea*), the coffee tree (*Coffea arabica*), and the cacao tree (*Theobroma cacao*). Another beverage plant of considerable importance is the *Ilex paraguensis*, whose dry leaves, known as maté, or Paraguay tea, are very extensively used in many localities in South America. The great commercial importance of the principal beverage plants has brought about the introduction of cheap substitutes, some of which are more or less similar in composition to the true products, while others have an entirely different composition and consequently different properties. Among the substitutes for tea may be mentioned on the one hand, maté, guarana, coffee leaves, and kola nut, all of which contain some caffeine (same as theine), and, on the other hand, the leaves of the partridge berry, which contain no caffeine whatever. Other substitutes are enumerated under TEA. The substitutes for coffee include chicory root and the so-called Swedish coffee (*Stragulus baticus*). In some parts of the East Indies the leaves of the coffee tree are generally used instead of the seeds. A tree of the genus *Gymnocladus* (*Gymnocladus canadensis*) is known as the "Kentucky coffee tree," because its seeds were formerly roasted and ground as coffee in Kentucky. See CACAO, CHOCOLATE, COFFEE, MATÉ, TEA, CAFFEINE, THIOBROMINE, ADULTERATION.

BEVERIDGE, ALBERT JEREMIAH (1802-) An American politician and lawyer, born on the border of Adams and Highland counties, Ohio. His family removed to Illinois after the Civil War, and he graduated at De Pauw University in 1835. Afterward he was admitted to the bar. From 1899 to 1911 he was United States Senator from Indiana. He made several impassioned speeches supporting the McKinley Administration's Philippine policy. In 1906 he introduced an amendment to the Agricultural Bill providing for closer inspection of the meat-packing industry. He became one of the leaders of the new Progressive party in 1912. He wrote *The Young Man and the World* (1905), *The Meaning of the Times* (1907), *Americans of Today and Tomorrow* (1908), *Past Prosperity Around* (1912).

BEVERLEY (anciently, *Beevalao*, AS *Befarlic*, from *befer*, beaver + *lao*, lake. The marshes around were the resort of beavers). A market town in the East Riding of Yorkshire, England, 1 mile west of the river Hull (with which it communicates by the Beck Canal, owned by the town) and 8 miles north-northwest of the city of Hull (Map England, F 3). Beverley formerly returned two members to Parliament, but was disfranchised in 1870. The chief architectural feature in Beverley is the superb Gothic

minster, or the Church of St John the Evangelist, ranking next to York Minster among the ecclesiastical structures of the county and exhibiting different styles of Gothic architecture, the oldest part being of the thirteenth century. The choir contains the celebrated Percy shrine, of the most exquisite workmanship. St Mary's Church, a cruciform building, is also a very beautiful structure. Beverley arose out of a priory founded about the year 700 by St John of Beverley, whose shrine there was visited by multitudes of pilgrims in medieval times. Industries include iron founding, brewing, and the manufacture of chemicals of various kinds, and there is considerable trade in farm products. Pop., 1891, 12,500, 1901, 13,200, 1911, 13,654. Consult Oliver, *Histories* (Beverley, 1829), Foulson, *Beverley, an Antiquities and History of the Town of Beverley* (London, 1829), Stephenson, "Beverley in the Olden Times," in *Archæological Journal*, vol. 11 (London, 1895).

BEVERLEY, ROBERT (1675-1716). A Colonial historian of Virginia. He was of a good and wealthy family, was educated in England, and later had charge of the public records of the Colony. In 1705 he published, in London, a *History and Present State of Virginia*. This was something more than the title implied, for it gave an account of the Colonial government from the first settlement. It attracted so much attention that in 1707 a French translation appeared, and in 1722 an enlarged second English edition. A modern reprint, with an introduction by Charles Campbell, was published in Richmond (1855). No writer gives us more intimate details of the daily life in Virginia during the first century of its settlement, and few books published during the Colonial epoch furnish more racy, interesting reading. The historian's name is sometimes spelled *Beverly*. Consult Trent, *American Literature* (New York, 1903) and id., *Southern Writers* (New York, 1905).

BEVERLY. A city in Essex Co., Mass., 18 miles northeast of Boston, on the Boston and Maine Railroad. It is situated on a narrow coast inlet, which is spanned by a bridge joining it with the city of Salem (Map Massachusetts, F 2). The city is a popular summer resort, contains a fine post office and public library, a historical society, Beverly Hospital, the Beverly Industrial School, and the New England Industrial School for Deaf Mutes. The city is the centre of the shoe machinery industry, and also manufactures boots and shoes, belting, oiled clothing, carriages, etc. It is the distributing station for the products of the Texas oil fields, a regular line of steamers running between Beverly and Port Arthur, Tex. First settled in 1626 by Roger Conant, Beverly formed part of Salem until 1668, when it was incorporated as a town under its present name. Beverly was chartered as a city in 1894. The government is vested in a mayor and a unicameral council. Ex-President William H. Taft made Beverly his "summer capital" during his administration. Pop., 1910, 18,650. Consult Stone, *History of Beverly* (Boston, 1843), and Thurd, *History of Essex County* (Philadelphia, 1888).

BEVERLY'S FORD, BATTLE OF. See BRANDY STATION, BATTLE OF.

BEVIS. Lord Marmion's "red-roan charger," in the poem "Marmion," by Scott.

BEVIS MARKS. The name of a street in

St Mary Axe, near Houndsditch, London. Here lived Mr Sampson Brass, Quilp's boon companion, in Dickens's *Old Curiosity Shop*.

BEVIS OF HAMPTON, SIR (also known as Bevis of Southampton, and in French as Beuves d'Hantone). An English knight whose adventures in Britain, Europe, and Palestine are the theme of prose and verse by Old English, French, and Italian writers. The era in which he lived was variously placed by them in the time of King Arthur, of Edgar of Britain, and of Charlemagne. His father, Sir Guy, Earl of Hamptoun, was murdered by Divoun, Emperor of Almayne, and his mother gave him to some merchants, who sold him as a slave to the Paynim. They carried him to Ermony, where he married Josian, a daughter of King Ermyrn. Josian gave Bevis his famous horse, Arundel, which figures in many of the legends about him, and he also had a wonderful sword, Morglay. His exploits included the slaughter of a huge boar, two sea-serpents, and a dragon, and he also conquered the giant Ascapard, who became his squire. Another legend describes his carrying his own death warrant in a sealed letter to the vassal Brademond, his escape after seven years' imprisonment, and his rescue of his wife, who had been forced to marry King Mombraunt. His last great adventure was a fight in the streets of London, in which he slew 60,000 citizens, and forced favorable terms from King Edgar. Consult Kolbing, in Ellis's *Early English Metrical Romances* (1885-94), Robinson, *The Irish Loves of Guy of Warwick and Bevis of Hampton* (Zeitschrift für celtische Philologie, vol. 6, pp. 9-180, 273-338 (Halle, 1907-08)), Wolf, *Das Gegenseitige Verhältnis der germanischen Fassungen des festländischen Bueve de Hantone* (Göttingen, 1912).

BEWICK, BŪTĪK, THOMAS (1753-1828). An English engraver, the founder of modern wood engraving. He was born at Cherryburn House, near Newcastle-on-Tyne, Aug. 12, 1753, and was in 1767 apprenticed to Ralph Beilby at Newcastle. His first work of importance was a series of cuts for children's books, the best of which appeared in the 1775 edition of Gay's *Fables*. At the close of his apprenticeship in 1776 he went to London, but soon returned to Newcastle, where he formed a partnership with Beilby. His most important productions of the following years were another edition of Gay's *Fables* (1779) and *Select Fables* (1784). In these works his designs were based on previous prints, upon which, however, he greatly improved. He obtained a fine opportunity to follow his own designs in the *General History of Quadrupeds* (1790). At this time he also engraved what is regarded by many as his masterpiece, a large print entitled "The Chillingham Bull" (1789). His greatest work, however, is the *History of British Birds* (2 vols., 1797, 1804), in which he displays a close and admirable observation of nature, coupled with intense humor and pathos. Excellent also are his cuts for the *History of English Fishes*, a work which he did not live to complete, which appeared in the eighth edition of *British Birds* (1847). In 1798 his partnership with Beilby was dissolved. Among the many books which he illustrated on his own account were Thomson's *Seasons* (1805), Burns's *Poems* (1808), Ferguson's *Poems* (1818), and especially Aesop's *Fables* (1818), in which he was assisted by his son Robert. His last work, entitled "Waiting for Death,"

represents an old woinout hoise, with great pathos and truth. He died Nov 8, 1828, at Newcastle Bewick, more than any other man, was instrumental in the modern revival of wood-engraving. He was one of the first to cut into the end of the block instead of the side, and, more important than this, he was the inventor of the white line, the essential feature of modern engraving, in which the design is cut into the block instead of being left standing (see WOOD ENGRAVING). Consult his *Memoir* (London, 1846), and especially Thomson, *Life and Works of Bewick* (ib., 1882), Dobson, *Bewick and his Pupils* (ib., 1884), and Linton, *Masters of Wood-Engraving* (ib., 1889), a sound and interesting account of Bewick's artistic activity, written by a great wood engraver. The British Museum possesses an admirable collection of his prints.

BEWLEY, bā'li, ANTHONY (1804-60) An American clergyman and abolitionist. He was born in Tennessee, began preaching in that State as a minister of the Methodist church in 1829, and in 1843 entered the Missouri Conference. When the church divided on the slavery question, he adhered to neither side, but preached independently and earned his living by manual labor. In 1848 the church was organized in Missouri, and he came back to its service. In spite of the universal persecution of "abolition preachers," he was throughout a vigorous assailant of slavery. In 1858 he was sent to Texas, but was soon driven out by threats of violence. In 1860, however, he returned to the work, saying to protesting friends "Let them hang or burn me if they choose, a hundred will rise out of my ashes." Within a few weeks he was again compelled to leave Texas. He was kidnapped in Missouri and hanged at Fort Worth, Texas.

BEX (Lat bex, twice, double + OF *as*, Lat *aqua*, water, referring to the junction of the Rhône and Aarçon) A picturesque village in the canton of Vaud, Switzerland, situated on the Aarçon, a tributary of the Rhône, about 26 miles southeast of Lausanne (Map Switzerland, B 2). It is remarkable for its extensive salt mines, salt works, and sulphur baths. These baths and the mild climate have made the town a popular watering place. Pop., 1900, 4600, 1910, 4817.

BEXAR, *Mex Span* bā-ar', *Castilian Span* bā-ātr', SAN ANTONIO DE See SAN ANTONIO.

BEXHILL A municipal borough and seaside resort in Sussex, England, on the English Channel, 4½ miles west of Hastings (Map England, G 6). It owns the electric lighting plant and a cemetery and maintains a kursaal, or amusement pavilion of the German type. It was incorporated in 1902. The old village is inland and has the fine church of St Peter. Pop., 1891, 5200, 1901, 12,200, 1911, 15,330.

BEY, bā, or **BEG** (Turk *beg*, pronounced bā) A title of rank, rather vague in its import, commonly given in Turkey and elsewhere to superior military officers, ship captains, and distinguished foreigners. More strictly, it applies to the governor of a small district, who bears a horse tail as a sign of his rank. The Governor of Tunis, for example, has this title *Beglerbeg*, or *Beylerbeg*, 'lord of lords,' is the title given to the governor of a province, who bears three horse tails as his badge of honor. See BASILIT.

BEYER, bē'er, SAMUEL WALKER (1805-) An American geologist and mining engineer. He

was born at Clearfield, Pa., and graduated at the Iowa State College in 1889. He became a member of the Iowa Geological Survey in 1892 and of the United States Geological Survey in 1901. He was made professor of geology and mining engineering in 1898 and vice dean of the engineering division in 1908, in Iowa State College. He is the author of *Clay and Clay Industries of Iowa* (1903), *Iowa Quarries and Quarry Products* (1906), *Iowa Peat Deposits* (1908).

BEYEREN, bē'er-en, or **BEIJEREN**, ABRAHAM VAN (1620 or 1621-c 1674) A Dutch painter of still life. He was born at The Hague and practiced chiefly there and at Delft, but also in other Dutch cities, impelled, it would seem, by poverty. This is astonishing, as he was one of the foremost genre painters of Holland. His pictures, excellent in arrangement and charming in color, represent every variety of still life, but he is, par excellence, the painter of fish. His numerous works are found in all the principal European galleries, particularly in those of Holland and Germany.

BEYERLEIN, bē'er-lin, FRANZ ADAM (1871-) A German novelist and playwright, born at Meissen and educated at Freiburg and Leipzig. His *Jena oder Sedan?* (1903, Eng. trans., 1913), and *Zapfenstreich* (1903), a play, both dealing with conditions in the modern German army, created a remarkable sensation. The latter was produced in the United States as *Taps*. He also wrote the tragedy *Damon Othello* (1895) and *Similde Diegswalt* (1904), *Der Grossnecht* (1905), *Stub und weide* (1910), *Das Wunder des heiligen Petrus* (1911).

BEYLE, bāi, MARIE HENRI. See STENDHAL.

BEYLERBEG SERAI, bā'li beg' sā-ir' (Turk *beyler beg*, prince of princes + *sarai*, Aisrāy, sarāya, Hind *serāi*, Pers *serāi*, palace, court, see BEX) A magnificent summer palace in Constantinople, built by Abdul Aziz on the Bosphorus in 1865. It is a fine example of the Moorish style of architecture, the staircase and saloons being especially noteworthy.

BEYRICH, bē'rik, HEINRICH ERNST (1815-96) A German paleontologist and geologist, born in Berlin. He became professor of geology and paleontology at the university in that city and was associate director of the Prussian Geological Survey. As part of his administrative work on the geological survey of Prussia, he directed the preparation of the "Geological Chart of Prussia and the Thuringian States." The researches in paleontology, with which his name is most closely associated, resulted in the publication of several important works, among which are *Beitrag zur Kenntnis der Eiscnerungen des rheinischen Ubergangsgewässers* (1837), *Untersuchungen über die Trilobiten* (2 vols., 1846), *Die Conchylien des norddeutschen Tertiargebirges* (1853-57), *Über einige Cephalopoden aus dem Muschelkalk der Alpen* (1867). Consult Dames, *Gedächtnisrede auf Ernst Beyrich* (Berlin, 1896).

BEYROUT, bā'rut or bā-rut' See BEIRUT.

BEYSCHLAG, bē'shlic, ADOLF (1845-) A German conductor and writer on music. He was born in Frankfurt and graduated from the Technical High School, but chose music as his profession. From 1865 to 1868 he studied with Vincent Lachner in Mannheim. In 1868 he began his career as operatic and concert conductor, filling positions in Cologne, Trier, Frankfurt, and Mayence. He settled in Belfast in

1880, where he directed the Philharmonic Society, but soon accepted an offer from the Leeds Philharmonic Society. In 1902 he returned to Germany, taking up his residence in Berlin. His songs and compositions for pianoforte are remarkable for their thorough mastery of form. His most important and valuable work is *Die Ornamentik der Musik* (1908), the result of original and scholarly research.

BEYSCHLAG, WILLIBALD (1823-1900). A German Protestant theologian. He was born at Frankfurt-on-the-Main and studied theology at Bonn and Berlin from 1840 to 1844. In 1856 he became court preacher at Karlsruhe and in 1860 was called to the chair of practical theology at Halle. With Wolters he founded the *Deutsche evangelische Blätter*, and in 1880 he was a prominent organizer of the so-called Evangelical Alliance, for the safeguarding of German Protestant interests. His works include *Christologie des Neuen Testaments* (1860), *Der Altkatholizismus* (1882), *Leben Jesu* (2 vols, 1885), *Neutestamentliche Theologie* (2 vols, 1891-92, Eng. trans, 1896), *Aus meinem Leben* (1896-98), *Melanchthon und sein Anteil an der deutschen Reformation* (1897), *Christenlehre auf Grund des kleinen lutheranischen Katechismus* (1900).

BEY-SHEHR. See BEG-SHEHR.

BEZA (properly DE BÈZE) THÉODORE (1519-1605). Next to Calvin, the most energetic and influential of the Genevese reformers. He was born of a noble family at Vezelay, in Burgundy, June 24, 1519. He received an admirable education in Orleans and Bourges (1528-35) from Melchior Wolmar, a German, who was especially learned in the Greek language, and also imbued with the principles of the Reformation, which he communicated to his pupil. In 1535 he went back to Orleans, studied law and obtained his degree as licentiate of civil law. He then went to live in Paris, where he appears to have spent several years in a kind of fashionable dissipation, though he does not accuse himself of any gross profligacy. Beza possessed a handsome figure, which, together with his fine talents and good birth, opened to him the most brilliant prospects. Although not a priest, he pocketed the incomes of two benefices, while his income was largely increased by the death of an elder brother. He abandoned the law and took up literature, and distinguished himself as a wit, a scholar, and a poet. In 1548 he published *Juvenilia*, a volume of poems, which gave him high rank among the Latin poets of his day. Only malice and ignorance could twist them into even occasional indecencies, but they were, by the enemies of the Reformation, persistently vilified after their author had become a Protestant leader. Beza himself, in after-life, regretted having published frivolous verses, because he had come to see no value in anything which was not distinctly religious.

It was the desire of his relatives that he should enter the Church, but a private marriage which Beza had contracted in 1544 rendered this impossible. A severe illness attacked him in 1548, during the lapse of which the folly and selfishness of his career vividly presented themselves to his conscience, he repented, and on his recovery, in order to avoid the perils and perplexities of his position, he went to Geneva, along with his wife, October, 1548. In 1549 he was appointed Greek professor at Lausanne, an

office which he held for 10 years. In 1550 he published with success a drama entitled *The Sacrifice of Abraham* and delivered lectures on the Epistle to the Romans and the Epistles of Peter to crowded audiences. Out of these lectures ultimately sprang his translation of the New Testament into Latin. In 1559 he went to Geneva, where he became Calvin's ablest coadjutor and was appointed a theological professor and president of the college. He had already signalized himself by his work *De Haereticis a Civili Magistratu Puniendis*, in which, like many other good but mistaken men, he approved of the burning of Servetus. His diplomatic tact was very pronounced. He induced the King of Navarre to evict his influence on behalf of the persecuted French Protestants and was persuaded by the latter to attend the conference of Catholic and Protestant divines held at Poissy in 1561. Here his courage, presence of mind, and dexterity made a very favorable impression on the French court. While in Paris, he often preached before the King of Navarre and Conde. On the outbreak of the Civil War (1562) he accompanied the latter as a kind of military chaplain and after his capture attached himself to Coligny. In 1563 he once more returned to Geneva. In the following year Calvin died, and the care of the Genevese church now fell principally upon Beza's shoulders. He presided over the synods of French reformers held at La Rochelle in 1571 and at Nîmes in 1572. In 1574 he was deputed by Conde to transact important business at the court of the Palatinate, and in 1586 measured himself with the Wurtemberg divines, especially Jacob Andreae, at the religious conference held at Montbéliard. In 1588 his first wife died, and, although verging on 70, he married again the next year—a circumstance which his enemies, the Jesuits, tried to turn against him, but Beza, who still retained complete mastery over his faculties, retorted with his accustomed liveliness and skill. His first wife was Claudine Denosse, a burgher's daughter, his second was Catherine del Piano, the widow of a Genevese. He had no children by either wife, but he adopted the niece of the first, Genevieve Denosse, and the granddaughter of the second. In 1597 his calumniators spread the report that Beza was dead and at the last hour had returned to the bosom of the Church. The witty patriarch replied in an epigram full of sparkling vigor. He died Oct 13, 1605, at the age of 86.

Beza was thoroughly grounded in the principles of his master, Calvin, in whose spirit he vigorously ruled the Genevan church for 40 years, exercising the influence of a patriarch. By his abundant learning, his persevering zeal, his acute intellect, his great eloquence, and his impressive character he rendered important services to his church. He was the born gentleman among the Reformers, and so was often chosen to represent the French Reformed church in dealing with royalty and aristocracy. His numerous theological writings, however, cannot be said to have proved attractive to posterity. They have almost ceased to be read. The works by which he is best known are his translation of the New Testament into Latin (1556), his editions of the Greek New Testament (1565), largely based upon that of Robert Stephens (1550), and his biography of John Calvin, which was the first written. He presented the University of Cambridge with the uncial New

Testament Manuscript known as "Codex Bezae" or "Codex D." His collected works bear the title *Tractationes Theologicae* (2 vols., Geneva, 1582). He was editor of *Histoire ecclesiastique des églises réformées au royaume de France* (best ed. Baum and Cunitz, 3 vols., Paris, 1883-89). His *Life of Calvin* has been translated by Beveridge (Philadelphia, 1909). For his biography, consult H. M. Baird (New York, 1899).

BEZALIEL, be-zā'li-él. A character representing the Marquis of Worcester, afterward Duke of Beaufort, in Dryden and Tate's satire, *Absalom and Achitophel*.

BEZAN CODEX. See BIBLE.

BEZANT' See BESANT.

BEZBORODKO, byēz'bō-rot'kō, ALEXANDER ANDREYEVITCH, PRINCE (1747-99). A Russian general and statesman. He was born in Little Russia, and, after receiving his secondary education at the clerical academy of Kiev, entered the government service, first in administrative departments and next in military. Rising rapidly in rank, he became second in command to Field Marshal Rumiantsev in the Russo-Russian campaigns, and in 1780 was appointed secretary of the council on foreign affairs. As a favorite of Catherine II, who appointed him her private adviser, he dictated much of her foreign policy, favorably concluded the wars with Gustavus III (1790), and the one with Turkey in the Peace of Jassy (1791). During the American War for independence, Bezborodko participated in framing and passing Russia's neutrality acts. After the coronation of Paul he was appointed (1806) Imperial Chancellor, the highest honorary office in Russia, and two years later was commissioned to effect an Anglo-Russian alliance against France. His influence was largely responsible for the third partition of Poland, for numerous fiscal and other reforms, and for several bold strokes of diplomacy that greatly affected the course of Russian history. His extreme tact and unusual knowledge of men is attested by the fact that he was the only Russian minister who managed to remain in favor with the phlegmatic Czar Paul till the very last. For his biography consult N. G. Ignatievitch, *Chancellor Prince Alexander Andreyevitch Bezborodko* (2 vols., St. Petersburg, 1879-1881).

BEZETH. A place of doubtful situation, but apparently near Jerusalem. It is mentioned in I Mace vii 19, as the place where Bacchides encamped. Josephus calls it Bethzetho (*Ant.* xii, 10, 2).

BÉZIERS, bā'zyā' (from Lat. *Betaria*, see below). A city of France, formerly the seat of a bishopric, in the department of Hérault, situated on the slope of a hill, at the junction of the Orb and the Canal du Midi, about 47 miles southwest of Montpellier (Map France, S, II 5). It contains some interesting buildings, the principal being the cathedral of St. Nazaire, and the ancient episcopal palace, employed since the removal of the see for government offices. The city has a communal college, a society of economies and archaeology, a library and a museum. The old citadel has been destroyed, but the walls still remain and are made use of as a promenade. Béziers has manufactures of silk stockings, woollens, gloves, parchment, glass, soap, leather, and famous confectioneries, and industries connected with the wine trade such as cask and cork making, etc. It has also extensive brandy distilleries and is the centre of most of the trade of the district. The town is

supplied with water pumped up from the Orb. Pop., 1906, 52,268, 1911, 51,042. Béziers was from immemorial times a fortress town, first Gallic, then Roman. It was during the Roman occupation named first *Betaria*, then *Betara Septimanorum*, and was the station of the Seventh Legion, and still contains Roman remains. It is historically interesting in connection with the massacre of the Albigenses, when its inhabitants were indiscriminately put to the sword to the number of over 20,000 by Simon de Montfort and the Pope's legate, for having afforded protection to the fugitives in 1209. Béziers suffered also in the religious wars of the sixteenth century.

BÉZIQUE, bā-zēk' (Fr. *besique*, origin obscure). A game of cards (of which there are many variations) ordinarily played with a double pack, from which the twos, threes, fours, fives, and sixes have been rejected, thus leaving 64 cards. The remaining cards rank aces, tens, kings, queens, knaves, nines, eights, sevens. Eight cards are dealt (first, three, then two, then three) to each player, and the seventeenth is turned up for trumps. If this card be a seven, the dealer scores 10 points at once. Tricks are taken as in whist, except when the cards are equal, such as two tens together, when the leader wins the trick, and that the player need not follow suit even in trumps so long as there are cards in "stock," i.e., remaining over from the deal. After each trick the player draws one card from the stock, the winner taking the top card and the loser the next, the trump card, or the one exchanged for it, being taken up last. The object of the game is to promote in the hand various combinations of cards which, when declared, entitle the holder to certain scores, to win aces and tens, and to win the last trick. If a declaration is made it must be as soon as the trick is taken, and before drawing from the pack, and this is done by placing the declared cards face upward on the table, but they still form part of the hand, and can be led or played, just as though they had not been declared.

The game is usually 1000 points, and the scores vary from 10 for the seven of trumps played or exchanged, to 500 for double bezique.

There are three classes of combinations which may be announced and scored, as follows: (A) Marriages and sequences, (1) king and queen of any plain suit, *marriage*, 20 points, (2) king and queen of trumps, *royal marriage*, 40 points, (3) sequence of 5 highest trumps, *sequence*, 250 points. (B) *Béziques*, (1) spade queen and diamond jack, *bezique*, 40 points, (2) two spade queens and diamond jacks, *double bezique*, 500 points. (C) Fours of a kind, (1) any four aces, 100 points, (2) any four kings, 80 points, (3) any four queens, 60 points, (4) any four jacks, 40 points. The four card cards in class C may include two of the same suit or may include all of different suits.

Another form of the game, which is common, and is called Rubicon *bézique*, is played with four piquet packs of 32 cards each, all cards below the sevens having been eliminated. The cards rank as in straight *bézique*. Nine cards are dealt to each player, but no trump is turned. The combinations which may be made and scored are the same as in straight *bézique*, but of course, are more frequent. Rubicon *bézique* may be said to resemble straight *bézique* as railroad euchre does straight euchre. There are many

other forms of the game, including the following Chinese bezique, chouette bezique, penchant, cinq-cents, four-handed, Polish bezique, three-handed, and bid euche. Consult *Foster's Complete Hoyle* (New York, 1909).

BEZOAR, bē'zōr (through Sp. from Pers *pād zah*, literally, against poison). A concretion found in the stomachs of goats or antelopes, and formerly much valued on account of imaginary medicinal virtues, particularly as an antidote to poisons, though really worthless. Concretions of various kinds are found in the stomachs of herbivorous quadrupeds, very generally having for their nucleus some small indigestible substance which has been taken into the stomach. Sometimes they are of a radiating structure, sometimes formed of concentric layers, sometimes they are principally composed of superphosphate of lime, sometimes of phosphate of ammonia or magnesia, and sometimes they are mixed with hair. Other concretions found in the intestines of various animals are sometimes also called bezoar. See CALCULUS (in medicine).

BEZOLD, bá'tsolt, KARL (1859-) A German philologist, born at Donauworth, Germany. He was educated at the universities of Munich, Leipzig, and Strassburg. In 1883 he became lecturer at Munich, and from 1888 to 1893 lectured at the British Museum, London. In the following year he was appointed professor and director of the Oriental seminars at the University of Heidelberg, and in 1908 he became privy counselor. Besides several translations including *Babylonschen-assyrischen Texte* (2d ed., 1911), and also works from the Arabian and Ethiopian languages, he is author of *Schatz-höhle* (1883, 1888), *Catalogue of the Cuneiform Tablets in the Kouyunjik Collection of the British Museum* (1889-99), *The Tell el-Amarna Tablets in the British Museum* (1892), *Oriental Diplomacy* (1893), *Ninive and Babylon* (3d ed., 1909), *Die Babylonschen-assyrischen Keilschriften und ihre Bedeutung für die Alte Testament* (1904), "Feestschrift für Ignatz Goldziher" in *Zeitschrift für Assyriologie und Verwandte Gebiete* (1912).

BEZOLD, WILLHELM VON (1837-1907). A German meteorologist, born in Munich. He studied at the universities of Munich and Göttingen, in 1866 was appointed professor in the former, and subsequently professor in the Technical Institute of Munich. In 1885 he accepted the chair of meteorology at Berlin and at the same time became director of the new Meteorological Institute. His investigations in thermodynamics are important. His publications include *Die Farbenlehre im Hinblick auf Kunst und Kunstgewerbe* (1874), *Die Koloristikfalle im Mus* (1883), *Zündende Blitze im Königreich Bayern* (1884), *Zur Theorie des Erdmagnetismus* (1897), *Ergebnisse der Meteorologischen Beobachtungen* (48 vols., 1885-1902). Consult Hellman, *Willehm von Bezold, Gedenksrede* (1907).

BEZO'NIAN (It *bisogno*, need, needy fellow, beggar, Fr *besson*, need, want). An Elizabethan term, of continental derivation, applied to either "needy" or "needed" persons, but in both cases denoting a low and useless member of society, needed to fill up mercenary ranks, etc.

BEZOUT, bá'zot, ETIENNE (1730-83). A French mathematician. He was born in Nemours and died in Paris. One of the best-known writers of his day on mathematics, he

made considerable contributions to the theory of elimination and was one of the first to recognize the value of determinants. His *Théorie générale des équations* (Paris, 1779) and his *Cours complet de mathématiques* (Paris, 1780) are his best-known works.

BEZSONOV, býz so'nov, PETER ALEKSEYEVICH (1829-98). A Russian student of folklore. He was born in Moscow, and graduated at Moscow University in 1851. After five years of graduate work in ancient and modern languages, he entered the government printing commission. From 1864 to 1867 he was supervisor of the Vilna Museum and Public Library, besides serving as director of education in the same city. For the two following years he was librarian at Moscow University. Having received an honorary doctor's diploma in Slavonic philology from Kazan University, he became professor of Slavic languages at the University of Kharkov in 1879, remaining in this position till his death. He published *Bolgarskaya Pyesni* (1855), the first great collection of Bulgarian folk songs, a collection of Serbian folk songs, under the title of *Lazavica* (1857), several collections of Russian songs (1861-71), and a number of treatises on the Bulgarian, Serb, and Russian languages and literatures.

BEZZENBERGER, ADALBERT (1851-) A German philologist, born at Kassel. He studied the Indo-Germanic languages at the universities of Göttingen and Munich. In 1874 he became lecturer at Göttingen and in 1879 professor of Sanskrit at Königsberg. In 1890-91 he was rector of the university. His works include *Beiträge zu Geschichte der Litauischen Sprache* (1877), *Litauische Forschungen* (1882), *Letische Dialektstudien* (1885), *Ueber der Sprache der Preussischen Letten* (1888), *Die Kunst der Nahrung und ihre Bewohner* (1889), *Sitzungsbericht der Altertums-gesellschaft Pussia* (1892), *Analysen der vorgeschichte Bronzen Ostpreussia* (1904), *Beiträge zu Kunde der Indogermanischen Sprachen* (1877-1906).

BHAGALPUR, ba'gál-poor', or BOGLI-POOR, bog'li-poor' (Hind *bhagal*, tiger + *Skt. pūr*, city). The capital of a district and division of the same name in Bihar and Orissa, Bengal, British India, lat 25° 11' N, long 87° E (Map India, E 3). It stands on the right bank of the Ganges, which is here 7 miles wide in the rainy season, and is 265 miles northwest of Calcutta by rail. The situation is unhealthy, malaria is endemic and cholera is epidemic. Tejnarayan Jubilee College (established in 1887) is maintained almost wholly by fees. The city is the headquarters of the troops for keeping in check the Sonthal tribes. Coarse silk goods are manufactured. Pop., 1901, 75,760, 1911, 74,349. In the vicinity of the town two round towers, about 70 feet in height, of unknown origin, are objects of interest, as are also the British and native monuments to Augustus Cleveland (1755-84), whose administration did much to advance civilization in this district. Bhagalpur district contains 4220 square miles. Population, 1901, 2,088,953, 1911, 2,139,318. It lies south of Nepal, in lat 24° 17' to 26° 20' N, long 86° 15' to 88° 3' E. About a fifth is covered by hills, which, stretching to the southwest, connect with the Vindhya Mountains, the grand dividing ridge between the Nerbudda and the Ganges (cereals, pulses, tobacco, cotton, indigo, opium, flax, hemp, and sugar cane are the principal products, and there is a large trade by river

and rail with lower Bengal. The division of Bhagalpur, comprising four districts, has an area of 19,776 square miles. Pop., 1901, 7,844,823, 1911, 8,144,821.

BHAGAVAD-GITA, b'ha'gū-vād-gē'ta (Skt., 'the Song of the Blessed,' i.e., rhythmically recited by Krishna, an incarnation of the god Vishnu), or the DIVINE SONG, SONG CELESTIAL, SACRED CANTICLE. The name of a Sanskrit religious and philosophical poem of some 700 double verses, which forms an episode in the *Mahābhārata* (q.v.). The title *Bhagavad gītā*, feminine, is best explained by understanding after it the noun *upaniṣad*, the significance being a philosophical treatise rendered in metre by the Blessed One. This remarkable production, in the form of a colloquy between the divine Krishna and the hero Arjuna, comprises 18 cantos in the sixth book of the *Mahābhārata* (6251—64278 = 11830—1532). The situation is a striking one. The rival armies of the Kurus and Pandus, foemen allied by the ties of family and blood alike, but severed by a fatal feud, are drawn up against each other in battle array. Before the final signal is given, Arjuna, the valiant leader of the Pandu hosts, hesitates to fight, foreseeing the awful slaughter and the bloodshed of kindred that must ensue. The divine incarnation of Vishnu, in the form of Krishna, as Arjuna's charioteer, overcomes his scruples and dispels his doubts by a long discourse on life and duty, and the part which every one must play in fulfilling his obligations in the world. Action is inevitable in the performance of duty, but in devotion to the Supreme Spirit alone is salvation to be found. A vision of the Supreme Spirit is revealed to Arjuna in the transfigured image of Krishna, as described in Canto xi, 15 seq.

This philosophic discourse, hallowed by its association with the most momentous battle of ancient India, which follows at its close, has exercised great influence upon the Hindu thought and mind from the earliest times to the present. The allegorical interpretation of it as bearing upon the contending forces of rival passions is a favorite one with modern theologians, and the *Bhagavad-gītā* has been looked upon for ages as a sacred text-book. The date of the poem, however, and its precise relation to the Great Epic, is a subject of much discussion. Scholars who do not regard this didactic piece as an integral part of the *Mahābhārata*, nevertheless consider it to be undoubtedly one of the older poems in the epic, though not necessarily an old part of it. The critical tendency at present is to place the piece in the centuries preceding the Christian Era rather than following it. Its composition has been assigned to the second century B.C., and its redaction to the second century A.D. Points of resemblance between *Gītā* and the New Testament need not claim any necessary consideration. From the standpoint of philosophy the *Bhagavad-gītā* is generally regarded as combining the Sankhya doctrine of matter and spirit with the Yoga tenets of meditation and Vedānta pantheism, although as a poem it has no really consistent system, and it is regarded by some as probably composed prior to the formal Vedānta and the formal Sankhya as actual schools. Consult the articles under these names.

Editions of the *Bhagavad-gītā*, criticisms and discussions of the poem, especially in India, number scores. The earliest printed edition of

the Sanskrit text is by a Brahman, Baburama (Calcutta, 1808). There are modern versions in most of the Indian vernaculars. For the earliest European translation into English, consult C. Wilkins (London, 1795, revised ed., Bombay, 1887). For later English renderings, consult Thomson (Hertford, 1855), Davies (London, 1882, 3d ed., 1893), Sir Edwin Arnold, *The Song Celestial*, metrical (London and Boston, 1885), M. N. Dutt (Calcutta, 1895), Barnett (in the *Temple Classics*, London, 1905), C. Johnston (New York, 1908), R. Garbe (Leipzig, 1905), and especially Telang, *Bhagavad gītā, Sacred Books of the East*, vol. viii (Oxford, 1898). For full information as to German, French, and Italian, consult Holtzmann, *Das Mahābhārata*, vol. II (Kiel, 1893), and Von Schröder, *Indiens Literatur und Kultur* (Leipzig, 1887), E. W. Hopkins, *Religions of India* (London, 1906), Frazier, *Literary History of India* (London, 1898), Wintomitz, *Geschichte der indischen Literatur* (Leipzig, 1908), Bhandarkar, *Vaishnavism, Saivism, and Minor Religious Systems* (Strassburg, 1913).

BHAMO, ba-mō'. A town of Burma, British India, on the upper Irrawaddy, 40 miles west of the Chinese frontier, and 180 miles north-northeast of Ava (Map Burma, C 2). The former capital of a Shan principality, it was a large and flourishing city, but fell into decay. It is, however, important as the chief mart of the trade with China, through western Yun-nan, a British consulate at Manwyne, Yun-nan, since 1893, greatly facilitating commercial intercourse. The imports are woollens, cottons, and silks, which are brought chiefly by caravans. Bhamo has also a considerable trade with the tribes of the neighborhood, who exchange their native produce for salt, rice, and a sauce made of dried fish. It is at the head of navigation on the Irrawaddy, and steamers ply to Rangoon. Pop., 1891, 10,734, 1911, 9,762.

BEANG, bang (Hind. Skt. *blāncā*, hemp). 1. The Eastern name for the Indian variety of the common hemp. 2. A narcotic made from the Indian hemp. The larger leaves and capsules are used, and the preparation is smoked with or without tobacco, chewed, or made into a drink by infusing in cold water. See HEMP.

BHARAL. See BURNEL.

BHARATPUR, b'ha'rāt-pūr', or **BHURT-PÖRE**, -pōr' (*Bhurat*, the brother of Rama + Skt. *pur*, city). The capital of the native state of the same name in Rajputana, India, in lat. 27° 12' N. and long. 77° 33' E. (Map India, C 3). Pop., 1901, 43,601, 1911, 33,918, about one-half the population for 1881, the decrease in that period having been 48.7 per cent. due to many causes, such as poverty, famine, and emigration. It is historically important owing to the sieges of 1805 and 1827. The strength of the place lay in a mud wall, which was shot-proof, and a surrounding ditch, which might at any time be filled with water from a neighboring lake. The state of Bharatpur is situated in lat. 26° 48' to 27° 50' N. and in long. 76° 54' to 77° 49' E. Its area is 1982 square miles. Pop., 1901, 626,065, 1911, 558,785. The country suffers from want of water, but in many parts the soil is rendered highly productive by means of irrigation. The principal crops of the state are grain, cotton, and sugar.

BHARAVI, b'ha'rā-vā'. A poet of India, belonging probably to the seventh century A.D.

He is known as the author of the *Kuṭāṭ-juniya*, an artificial epic, based upon an episode of the national epic of the *Mahābhārata*. The *Kuṭāṭjuniya* was first published at Calcutta in 1814 and since then has appeared in several editions, of which the best are those of Godabole and Paraba (1885) and of Datta (1899).

BHARS See **DIHARI**

BHARTIRHARI, b'hai'tiē-ha'rē (Skt *Bhartirhari*) The name of a San-krit author and legendary prince of India, whom tradition associates especially with Ujjain, the royal city of King Vikrama (qv). Bhartirhari's name is known to fame through a collection of 300 or more sententious stanzas, written in highly polished Sanskrit verse, with considerable rhythmic variety and comprised under the name of *Satakas*, centuries'. These *Satakas* are divided into three more or less precise hundreds, according to the manuscripts which contain them. The theme of the first 100 stanzas is Good Conduct, the *Niti-sataka*, in which the ethics of human life, rules for conduct and moral behavior are pithily presented in brief metrical proverbs or apt illustrations full of wise thought and Oriental picturesqueness. The second century is devoted to aphorisms on the Passion of Love, the *Śṛṅgāra sataka*. The third century, or *Vaiśiṣṭya-sataka*, deals with Renunciation, the abandonment of worldly desires and pleasures, which are mere vanity.

The question how far these aphoristic sayings, or proverbial wisdom in verse, are directly to be attributed to Bhartirhari as author, or whether the collection may not be regarded as a mere series of apothegms and wise saws drawn from various sources and attached to his name, is a point that has been much discussed. In spite of the fact that a number of the stanzas are found in works ascribed to other authors, the tendency nowadays is to favor the native tradition which upholds Bhartirhari as author of most of these poetical stanzas, so rich in philosophic judgment and sound common sense.

The second point, as to Bhartirhari's personality, whether he was a king, and what may have been his era, has been much debated. According to tradition he actually was King of Ujjain, and elder brother of the renowned Vikramaditya. He is said to have abdicated the throne, after a reign of seven years as an indolent and licentious monarch, in favor of his brother because his life was ruined owing to the infidelity of his favorite wife (compare the traditional interpretation of *Niti-sataka*, 2), and he is reported to have withdrawn from the world, although after long hesitation, to pursue the existence of an ascetic. The inquiring visitor at Ujjain will yet be shown the kingly poet's hermit grave and still will hear numerous legends recounted about Bhartirhari's life. A statement of the Chinese traveler I-Tsang, who visited India in the seventh century of our era, would place the date of Bhartirhari's death at 651 A.D., although native tradition would claim that he lived several hundred years earlier. The same Chinese authority likewise recognizes him as the composer of a grammatical treatise, the *Vakropanaditya*, although its authenticity has been doubted by some Hindu scholars. In such matters it may be well to suspend judgment until more material be gathered, and in all cases due weight must be given to the native tradition. For the present we may be safe in

accepting Bhartirhari as a real personality, a philosophic poet of genuine merit, perhaps likewise as a grammarian, although this has been questioned, and probably also as one of royal estate, who may have been related to Vikrama of Ujjain.

From a literary standpoint the collection of Bhartirhari's *Sententious Wisdom* has real merit, and the stanzas have also the special interest that 200 of them were the first piece of translation from the Sanskrit known to have been published in any European tongue. This version appeared in a book by the Dutch missionary, Abraham Roger, *De Open Dewe tot het Verboigen Heydendom* (Leyden, 1651). Numerous editions, translations, and criticisms of Bhartirhari have since been issued. Consult especially, Purohit Gop-Nath, *Bhartirhari*, edited with Hindi and English translations (Bombay, 1896), Kale and Gurjar, *Niti-sataka and Vaiśiṣṭya-sataka*, edited with notes and an English translation (Bombay, 1898), Trimbak, *Bhartirhari's Niti- and Vaiśiṣṭya-satakas*, Bombay Sanskrit Series (1874), a complete edition of the three *Satakas*, with the native Sanskrit commentary in the Nirṇaya-Sagara Press Series (Bombay, 1892), Von Bohlen, *Bhartirhari Sententiae* (Berlin, 1833), and the same writer's German translation, *Die Sprüche des Bhartirharis* (Hamburg, 1835), Regnaud, *Les stances érotiques, morales et religieuses de Bhartirhari* (Paris, 1875), Tawney, *Two Centuries of Bhartirhari* (London, 1877), Wortham, *Translation of the Satakas of Bhartirhari* (London, 1886), More, *A Century of Indian Epigrams, Chiefly from the Sanskrit of Bhartirhari* (Boston and New York, 1898), Takakusu, *A Record of the Buddhist Religion by I-Tsang* (Oxford, 1898), Pizzi, *Bhartirhari Le Sentenze* (Turin, 1899), L. H. Gray, *The Metres of Bhartirhari* (New Haven, 1899), Kennedy, *Bhartirhari, the Satakas or Wise Sayings* (London, 1913), Pavolini, *Poeti d'amore nell' India* (Florence, 1900), and an edition of the *Vākya-padīya* in the Benares Sanskrit Series, ed. Griffith and Tibbaut (1892).

BHASKARA ACHARYA, b'has'kā-ra a-cha'rya (Bhaskara the Learned, Skt *ācārya*, teacher), born in 1114. One of the best known of the Hindu mathematicians. He was the sixth successor of Brahmagupta, at the head of the college of astronomers of Ujjain. Of his great work, the *Siddhāntasūyamani* ('Crowning of the System'), only three chapters have been translated, the first two, viz, the *Lilavati* and the *Bija Ganita* (treating of arithmetic and algebra), by Colebrook in 1817, the third chapter treats of the sphere. He also wrote the *Karanakutāhala*, as well as mathematical treatises. The *Siddhāntasūyamani* has been edited by Wilkinson (Calcutta, 1842) and Bapu Gastri (ib., 1866), and the *Karanakutāhala* by Divred (Benares, 1881). Following the Hindu custom, Bhaskara wrote in verse, but, unlike his predecessors, he added explanations in prose.

BHATTI, b'hat'tiē. A poet of India, to be assigned probably to the sixth century A.D., and sometimes identified with Bhartirhari (qv). He wrote the *Bhāṭṭakāvya*, an artificial epic celebrating the deeds of Rāma and very skillfully constructed for the purpose of illustrating grammatical and rhetorical rules. The *Bhāṭṭakāvya* was first published at Calcutta in 1828. The best edition is that of Divred (2 vols., Bombay, 1898). An edition of the first five cantos was

refaced with an English version by Kale (ib, 897), and the last five were translated into German by Schütz (Bielfeld, 1837). Consult *Index, Literary History of India* (London, 907).

BHATTIAS, b'hat'té-az, or **BHATNIAR**, b'hat'né ar. A name applied to the natives of the Issar district and the adjacent country in the Punjab. The population is composite, the higher classes, who established themselves in the country about the fourth century of our era, are Rajputs, the lower (agriculturists and cattle breeders) are Jats, who are said to have some Mongolian blood in their veins. The latter, although they have by imitation adopted the Islamic religion of the Rajputs, retain many primitive features of their older heathenism, while their language is less Aryan than the tongue of their supplanted. Some of the Sikh chiefs are of Bhattia origin, and the mother of Feroz Shah, one of the emperors of Delhi, is said to have been a Bhattia. Consult vol. II of Crooke's *Tribes and Castes of the Northwestern Provinces and India* (Calcutta, 1896) and the *Census Reports of the Indian Government* for 1902 and 1903.

BHAVABHUTI, b'ha'va-b'hoō'té. A noted Sanskrit dramatist, who shares with Sudraka, Kalidasa, and Harsha (qv) the honors of the early Hindu stage. He flourished during the latter part of the seventh century A.D. and the beginning of the eighth century. It is judged from his writings that he was a native of south Central India, it is also presumed that part of his life was spent at the city of Ujjain. Three dramas, all of recognized merit, preserve Bhavabhuti's name to fame. The first is the *Mālatī-mādhava*, sometimes called the *Hindu Romeo and Juliet*, the second is entitled *Mahā-nā-chaṛita*, or the fortunes of the great hero Rama, the third, *Uttara-nāma-chaṛita*, the later fortunes of Rama, is a sequel to the second. Here is an edition of the *Mālatī-mādhava* by A. R. Telang (Bombay, 1892), a translation by I. H. Wilson, *Theatre of the Hindus* (3d ed., London, 1871), and by L. Fritz (Leipzig, 1883, Teichm Series), furthermore, *Mahā-nā-chaṛita*, edited by J. H. Pritchett (London, 1848), a translation by J. P. Pickford (2d ed., London, 1892), and *Uttara-nāma-chaṛita*, edited by S. G. Bhambhani (Bombay, 1891), by V. S. Patwardhan (Nagpur, 1895), by T. R. R. Aiyar and K. P. Narayana (Bombay, 1899), translated by C. H. Winternitz (Calcutta, 1874). Consult Lévi, *Le théâtre indien* (Paris, 1890), and Schuyler, *Bibliography of the Sanskrit Drama* (New York, 1906), Frazer, *Literary History of India* (London, 1907), Harnitz, *The Indian Theatre, a brief survey of the Sanskrit Drama* (London, 1912).

BHAWALPUR, b'ha'wāl-poor'. See BAHAWALPUR.

BHEL (bél) **FRUIT**. See *FRUIT*. **BHEL**, bél, or **BHEEL**. Literally, 'boarman' is the name of a Kolarian or Mundra people of central India, in the Vindhya Hills, and to the south of the river Nerbudda, toward Bombay they are the remnant of an autochthonous race of peopled Rajputana and Malwa before theryan invasion and number now about 1,250,000, their language belongs to the Kolarian stock of Indian tongues, but many of them speak a corrupt form of the Aryan Gujarati. In Sanskrit literature their name is mentioned with disdain. They are short, dark-skinned, and have some traces of Aryan and perhaps also of

Dravidian blood. The English, to whom they remained faithful during the Sepoy Mutiny, have made some use of them as soldiers and policemen, and they have latterly paid a little attention to agriculture. A feature of their religion is the worship of Mother Amba Bhavani. Among some of them a harmless relic of widow-burning survives, also tree marriage, and other quaint customs. In some of the states of Rajputana, whenever a Rajput chief ascends the throne, a necessary part of the ceremony is marking his brow with blood drawn from the thumb or toe of a Bhl—this is a recognition of the claim of the Bhlis to former sovereignty in the land. The hill Bhlis, in particular, are noted for their belief in witchcraft and magic. An account of the Bhlis, by Kincaid, appeared in the *Journal of the Anthropological Institute* (London, 1879). Consult also Rowney, *Wild Tribes of India* (London, 1882), Reclus, *Primitive Folk* (New York, 1891), Crooke, *Natives of Northern India* (London, 1907), and other works.

BHIMA, bē'ma, **BEEMAH**, or **BIMAH**. A river of India, a branch of the Kistna (qv), rising in the table-land of the Poona District, in the presidency of Bombay, at an elevation of 3090 feet above the level of the sea (Map India, C 5). It flows in a southeasterly direction and falls into the Kistna, in lat 16° 24' N, long 77° 20' E, after a course of more than 400 miles.

BHIWANA, bē-wa'na. A town of British India, in the district of Ilissai, Punjab, 55 miles west of Delhi (Map India, C 3). It has a considerable trade in metals, sugar, spices, and salt, and is the chief trading center of the district. Pop, 1901, 35,917, 1911, 31,100.

BHOPAL, bō-pal', or -pal' (*Bhoj*, its founder + Hind *pal*, dam). The capital of the British political agency and of the native state of the same name, Central India (Map India, C 4). Pop, 1901, 77,000, 1911, 56,000. It is surrounded by a dilapidated stone wall, about 2 miles in extent. The fort, which is the residence of the Nawab, stands on a huge rock outside the town. Other interesting buildings comprise the Begum's palace, two mosques, the arsenal, and the mint. The town is clean, has fine promenade gardens, is well lighted, and owns and operates its own water works which utilize two immense tanks in the immediate neighborhood—one being 2 miles in length, and the other measuring 4½ miles by 1½. Each sends forth a river, and most probably both were formed by the embanking and damming up of their respective streams.

BHOPAL. A territory and British political agency of Central India, situated within the basins of the Ganges and the Nerbudda, in lat 22° 32' to 23° 16' N and long 76° 25' to 78° 50' E. It comprises 31 native administrations, including the native state, and is under the immediate superintendence of the government. Area, 11,653 square miles, pop, 1901, 1,157,697, 1911, 1,375,117.

BHUJ, bōoj, or **BHOOS** (named after its founder, Bhuj or Bhoj). The capital of the native state of Kach, India, situated at the foot of a fortified hill of the same name, in lat 23° 15' N and long 69° 44' E, about 35 miles from the sea (Map India, A 4). Its mosques and pagodas, interspersed with plantations of dates, give to the town an imposing appearance from a distance. A temple dedicated to the cobra de

capello is an interesting feature Bhuj is celebrated for its manufactures of gold and silver articles Pop, 1901, 26,362, 1911, 21,579

BHUMIJ, bū-mēj' One of the more important of the Kolarian, Munda-speaking tribes of Bengal See KOLARIAN

BHURTPORE See BHARTPUR

BHUTAN, bu-tan' An independent state of India, situated on the southern slopes of the eastern Himalayas (Map India, F 3) It is bounded on the south by Bengal, on the north and east by Tibet, and on the west by Sikkim The area is estimated at 16,800 square miles, and the population at 250,000, though perhaps the latter figure is too high Several of the mountain peaks exceed 20,000 feet, and the height of one is stated at 24,737 The climate varies with the elevation, and extremes of heat and cold may be experienced in a day's journey Some portions of the territory are fertile, and produce corn, rice, wheat, buckwheat, mustard, and cardamoms Cattle and considerable numbers of a peculiar breed of ponies are raised The manufactures, which are primitive and intended for home consumption, include coarse blankets and cotton cloth, swords, daggers, and other weapons, and agricultural implements The Bhotias are a hardy and vigorous race, of Tibetan stock, and their language, which is subject to great local variations, is a dialect of Tibetan They profess to be Buddhists, but their religion, like that of Tibet, partakes largely of the old Bon-po, which preceded Buddhism and consists chiefly of devil worship and propitiatory sacrifice The administration of the state is divided between the secular Deb raja, who in theory is elected for a term of three years by the *penlops*, or magnates, from their midst (in reality the nominee of the predominating chieftains), and the Dharma raja, the presumed reincarnation of Buddha, who is supposed to interest himself solely with the spiritual control of the state The winter capital is Punaka, or Dosen, a strong natural fortress 96 miles east-northeast of Darjeeling, Thashichedzong is the summer capital Bhutan formerly included considerable tracts of territory now included in Bengal and Assam, which were annexed in 1864 and 1866 by the British government in retaliation for outrages committed by the natives In 1805 the Bhotias drove the English out of Dewangiri, and a punitive expedition was sent against them A treaty concluded with the Bhutan government provided for the payment by the Indian government of an annual subsidy in return for formal cession of the annexed territory This subsidy began at £2500 and was gradually increased to £3333, it is conditional upon the maintenance of peaceful relations

BIATRA, bé-a'fra, BIGHT OF An inlet of the Gulf of Guinea (qv) (Map Africa, E 4) The name is usually applied to that portion of the Gulf of Guinea which extends along the western coast of Africa and borders the German possession of Kamerun Its width is about 100 miles The island of Fernando Po lies just off the Kamerun coast, and Prince's Island lies in the broad entrance to the bight The bight of Biafra is often confounded with the Gulf of Guinea, but care should be taken to restrict the appellation to the bay facing the Kamerun coast

BIALYSTOK, byal'l'stók', or BIELOSTOK, byé'ló-stók' A garrison town in the govern-

ment of Grodno, West Russia, on the Bialy, a tributary of the Narew, 45 miles southwest of Grodno (Map Russia, B 4) Bialystok has several churches and a municipal palace and park It has manufactures of woolen goods, leather, hats, soap, silk, etc Pop, 1892, 62,626, 1908, 80,190 The town was founded in 1320 and became part of Russia after the third partition of Poland On June 14-16, 1906, there was a massacre of Jewish inhabitants by the mob aided by the police and the military See RUSSIA

BIANCA, It pron byan'ka 1 In Shakespeare's *Taming of the Shrew*, the younger sister of Katharine 2 In Shakespeare's *Othello*, a flame of Cassio 3 The heroine of Massinger and Fletcher's *Fair Maid of the Inn* 4 In Dean Milman's *Picco*, the wife of Fazio

BIANCAVILLA, byan'ka-vil'la (It *bianca*, white + *villa*, town) A city in Sicily, on the southwest slope of Mount Etna, 20 miles northwest of Catania (Map Italy, K 10) The streets are paved with lava, and in the vicinity are the basaltic grotto of Scilla and the grotto of the Aichi in the lava of 1607, with a tunnel half a mile long at the height of nearly 7000 feet The country produces wine and grain, and the cotton from all this part of Sicily bears the name of Biancavilla The town was founded as an Albanian colony in 1480 Pop, 1881, 13,319, 1901, 13,358, 1911, 16,231

BIANCHI, byan'ke (It the Whites, pl of *bianco*, cf Eng *blank*) A political party in Florence at the beginning of the fourteenth century They were originally one of two conflicting branches of a great family in Pistoia Both parties, Whites and Blacks, being banished to Florence, allied themselves with existing factions there, the Bianchi with the Cerchi family and the Neri with the Donati, and gave their names to the Florentine parties The Neri triumphed in 1301 by the help of Charles of Valois, and the chief men of the Bianchi, including Dante, were banished The name was also applied to certain religious fanatics and vagabonds in Italy about the year 1400, and at the present time it is popularly given in Rome to the supporters of the Italian monarchy

BIANCHI, NICOMEDE (1818-86) An Italian historian, born at Reggio He studied medicine and during the Revolution of 1848 was a member of the provisional government of Modena and Reggio He became professor of history and geography in the naval college at Nice, then professor of history at Turin, and in 1871 superintendent of the archives of Piedmont His most important works are the *Storia documentata della diplomazia europea in Italia dal 1814 al 1861* (8 vols, Turin, 1865-72), an immense repository of imprinted documents, *Storia della monarchia piemontese dal 1773 al 1861* (4 vols, Rome, 1877-85), both written in an interesting style and carefully prepared from original sources, and *Il conte Camillo di Carcar* (5th ed, 1863) Consult De Jubernatis, *Dizionario biografico degli scrittori contemporanei* (1880), and *Rivista storica italiana* (1886)

BIANCHI-FERRARI, -fai-ra'rè, FRANCESCO DE', called IL FRATE (1400-1510) An Italian painter of the early Renaissance, belonging to the Emilian school He was born at Ferrara, was probably a pupil of Sosimo Tura and a follower of Ercole Roberti, and was active chiefly at Modena, in the museums and churches of which city most of his paintings are He was of

mediocre ability. He was reputed to have been the teacher of Correggio.

BIANCHI-GIOVINI, byan'ké jô-vè'ne, ANCIOTO, commonly called AURELIO (1799-1862). An Italian historian and publicist, born at Como. He was at first a journalist in Switzerland. In 1830 he became editor of the *Aurora*, a Swiss political journal, and five years later of the *Repubblicano della Svizzera italiana*. In 1841-47 he wrote a number of historical works in Milan, and in 1848-52 edited the *Opinione*, a Unionist journal, in Turin. During that time he was a member of the Chamber of Deputies. In 1853 he established *L'Unione*, which he transferred in 1861 to Milan and in 1862 he founded at Naples, *La Patria*. His chief works are the *Biografia di fra Paolo Sarpi* (1834), an incomplete *Storia dei Papi* (12 vols., 1850-64), *L'Istoria in Italia* (2 vols., 1854). Consult the biography of Montazio (Turin, 1862).

BIANCHINI, bô-an'kê'nê, FRANCESCO (1662-1729). An Italian antiquarian and astronomer. He was born at Verona. He studied theology, jurisprudence, languages, the mathematical sciences, and botany in Padua, and archeology in Rome, and was appointed by Clement XI secretary to the commission for reforming the calendar. Later he traveled through France, Holland, and England. Bianchini is the author of several memoirs and dissertations on antiquarian and astronomical subjects, and of *Istoria universale porata co' monumenti, e figurata co' simboli degli antichi* (Rome, 1697). An edition of the work of Anastasius, *De Vitis Romanorum Pontificum*, begun by him, was completed by his nephew Giuseppe Bianchini (4 vols., Rome, 1718-34). His nephew also edited his *Astronomica et Geographica Observationes Selectae* (Verona, 1737). A monument was erected to the memory of Francesco Bianchini in the cathedral of Verona.

BIANCO, by-an'kô, ANDREA. An Italian cartographer, active at Venice in the early fifteenth century. Among his charts is one dated 1436, in which he has indicated two islands, called respectively "Antilla" and "De Laman Satanaxio," at the west of the Azores. It has been asserted by some that he thus reveals a knowledge of North and South America. His maps are valued for showing the progress of navigation up to that time, indicating knowledge of the Azores, Madeira, and Canary Islands, exhibiting some notion of the Baltic and Germanic coasts, and sketching an outline of the Mediterranean shores, relatively exact for the period.

BIANDRATA, GIORGIO. See BLANDRATA.

BIARD, byâr. The name of several French Renaissance artists.—NICOLAS BIARD (1460?-?) was one of the architects of the Chateau of Amboise (1499), of the Pont Notre Dame (1499), of the Chateau of Blois (1500-04) and Gaillon (1505-06), and of the tower of the cathedral of Bourges (1508).—PIERRE BIARD (1559-1609). A sculptor, architect, painter, and engraver, who studied in Italy and became a follower of Michelangelo. On his return to Paris he was made royal superintendent of buildings in 1590, in 1600 he executed the magnificent choir screen of St Etienne du Mont, then decorated the Hôtel de Ville with a bronze statue of Henry IV (1605), and the Louvre with statues of two slaves and of "Renown."—His son, PIERRE BIARD, succeeded him as sculptor to the King (Louis XIII).

BIARD, AUGUSTE FRANÇOIS (1798-1882). A French genre and portrait painter. He was born in Lyons, Oct 8, 1798. He was at first destined for the Church, but subsequently educated under Revoil at the school of art of his native city. He traveled in early life in Malta, Cyprus, Syria, and Egypt, where he made sketches and stored his memory with images which he used in after years. In 1839 he visited Greenland and Spitzbergen, and of this journey one of the fruits was his famous picture of a battle with polar bears. In 1858-59 he traveled in Brazil. At the court of Louis Philippe he was very popular as a portrait painter. More famous than Biard's ethnographic and historical paintings are his genre pictures, especially those dealing with comic subjects. The first picture which gained him distinction was his "Babes in the Wood" (1828), and one of his best is the "Beggars' Family," exhibited in 1836. His picture "Strolling Comedians" is in the Luxembourg. Many continental galleries possess examples of Biard's pictures, and in England they were formerly much sought after. Though conscientiously drawn, they are hard and dry in color and of little value as paintings. Consult Goffin, *The Story of French Painting* (New York, 1911).

BIARD, PETER (1565-1622). A French missionary, born in Grenoble. He began to study theology at the age of nine years, in Lyons, and came to America as one of the first two missionary priests sent to New France, arriving at Port Royal on the day of Pentecost, 1611. On June 10, 1611, Biard and his associate, Ennemond Mascé, wrote the first letters ever sent by the Jesuit Order from the Canadian settlement. Soon afterward he began the study of the Indian language by questioning the natives on the meaning of the words *faith, hope, charity, baptism, sacrament, trinity, eucharist, and incarnation*, a study rendered extremely difficult by the unwillingness or the inability of the natives to reply, and by the ridicule and severity which his questions frequently encountered. In 1612 he ascended the Kennebec River and established friendly relations with the Indians, and in 1613 he proceeded as far as the Penobscot and founded a colony on Mount Desert Island, which he hoped to make a permanent settlement. The little hamlet was, however, shortly afterward destroyed by an English force under Samuel Argall, Deputy Governor of Virginia. One of Biard's followers was killed, and he himself was taken prisoner and transported to England. This attack is memorable as resulting in the first actual hostilities between the French and English settlers in America. At the instance of the French Ambassador, Biard was subsequently liberated and returned to Lyons, where, in 1616, he published his *Relation de la Nouvelle France, et du voyage des pères Jésuites dans cette contrée*, the first of that remarkable series of *Jesuit Relations* (10 vols., 1632-72), which constitute one of the most valuable sources of early American history. Another important work is the *Relatio Expeditionis Anglorum in Canadam sursum ab illis Complicis suis*. The *Mission canadiennes* was published in 1870. Consult *Jesuit Relations*, Eng. trans., ed by Thwaites, vols. i-iv (Cleveland, 1896-97), Hughes, *History of Society of Jesus in North America* (Cleveland, 1908-10).

BIARRITZ, byâr'rêts' (Basque *Mairritz*, two rocks). A fashionable watering place in the department of Basses-Pyrénées, France, about 5

miles southwest of Bayonne (Map France, S. C 5) Napoleon III and Eugénie, attracted by its picturesque situation, natural advantages, and salubrity, made it their summer residence. Since then it has been a favorite place for invalids and pleasure seekers, both in summer and in winter. Its industries are of little importance, the town depending upon tourists' patronage for its prosperity. Pop, 1896, 11,869, 1901, 12,812, 1911, 18,200. Consult Laboude, *L'encore le vieux Biarritz* (Bayonne, 1909).

BIAS, bé'as See BE'S

BI'AS (Gk *Bías*) One of four men always classed among the Seven Sages (q.v.) of Greece (the others were Thales, Pittacus, and Solon). He was the son of Teutames, and was born at Priene, in Ionia, Asia Minor, where he became a distinguished advocate and influential citizen. His date is approximately the middle of the sixth century B.C. Many of the stories attached to the name of Bias—such as that he advised the Ionians to settle in Sardinia, at the time of the Persian invasion, and that he dissuaded Cræsus from attacking the Greek islands—have been characterized as of doubtful authenticity. Bias was successful at clothing his wisdom in short sayings, and we have a number of them preserved. Consult F. W. A. Mullach, *Fragmenta Philosophorum Græcorum*.

BIBACULUS See FURIUS, MARCUS FURIUS BIBACULUS

BIBB, GEORGE M. (1772-1859). An American legislator. He was born in Virginia and graduated at Princeton in 1792. He was several times elected Chief Justice of Kentucky and subsequently became Chancellor of the Court of Chancery. He was elected to succeed Henry Clay as United States Senator in 1811 and served until 1814 and again from 1829 to 1835. From 1844 until the inauguration of James K. Polk he served as Secretary of the Treasury in President Tyler's cabinet. He published *Reports of Cases at Common Law and in Chancery in the Kentucky Court of Appeals* (1808-11).

BIBBIENA, bé-byé'na, BERNARDO DOVIZIO or DIVIZIO DA (1470-1520). An Italian ecclesiastic and poet, born at Bibbiena (Arezzo). He was private secretary of Giovanni de' Medici, whose elevation as Pope Leo X. he helped to effect, and who appointed him a Cardinal and papal treasurer in 1513. He conducted successfully an ecclesiastical war against Urbino, and later (1518) was legate to France for the purpose of uniting Christian rulers against the Turks. It is reported by some authorities that he died of poisoning. He was a friend of Raphael, and wrote *La Calandria* (1521), generally accounted the earliest Italian comedy. It was modeled on the *Menachmus* of Plautus. He also translated several plays of Plautus which were played before the Pontifical court. For his biography, consult Bondini (Leighorn, 1878), Canonicini, *Nuovi profili letterari* (Milan, 1875), Graf, *La Calandria* (1878), Wendriner, *Die Quellen von Bernardo Dovizio Calandria* (1895), Flamm, *History of Italian Literature* (New York, 1906).

BIBELOT, bé'b'lot, or bib'lot (Fr.) A name given by collectors to any small ornament or article of taste that can be used to adorn the shelves or the cabinet of the owner, such as bronzes, bits of rare china or porcelain, and antiques.

BIBERACH, bé'be-rach (Ger *Biber*, beaver + Teut *aha*, water). A town of Württemberg,

situated 1750 feet above the sea on the Riss, in a charming valley about 23 miles southwest of Ulm (Map Germany, C 4). Still surrounded by walls and towers, the town has an appearance decidedly picturesque. It has manufactures of machinery, artificial flowers, leather, children's toys, and bell foundries, and its grain and fruit markets are famous. The town owns its water and gas works and has a high school, hospital, and theatre. Pop, 1890, 8200, 1900, 8400. Near Biberach, Oct. 2, 1796, Moreau won a great victory over the Austrian General Latour, and May 9, 1800, Saint-Cyr defeated the Austrian General Kray.

BIBESCO, bé-bés'kó, BARBO DEMETRIUS (1801-69). A Wallachian statesman. He studied in Paris in 1817-21, participated in the revolt of Alexander Ypsilanti, and was successively Minister of Justice and Minister of the Interior. As Hospodar of Wallachia, in 1849-56, he improved education and the finances, and worked for Rumanian unity.

BIBIRI, bé-be'rè, or **BIBIRU**, bé be'ro See GREENHEART

BIBLE. I.—IN GENERAL. 1 *Meaning of the Name*. The word "Bible" is derived from the Latin *biblia*, which was treated as a singular, although it represented the transcription of the Greek neuter plural βιβλία, *biblia*, 'little books,' which is used in 1 Maccabees xii. 9, in reference to the Scriptures. The Greek βιβλος, *biblos*, from which came the diminutive, was in turn derived from *bydlios* or papyrus, the name of the famous material upon which ancient books were written. The name in its singular form emphasizes the unity of the Bible, while in its original plural sense it calls attention to the fact that the Bible is a collection of many books. The title was first used in the Second Epistle of Clement (xiv. 2), written c. 170 A.D.

2 *Extent of the Collection*.—At the end of the second century A.D. the synagogue accepted as canonical 24 books. These were identical with the 39 in the English Bible. But the 12 Minor Prophets were regarded as one book, the books of Samuel, Kings, and Chronicles were not divided into two each, and Nehemiah was considered as a part of Ezra. The Hellenistic Jews, however, had in then canon a number of books in addition to these 24, and the Church received them as part of the Greek Bible. Among them were Judith, Tobit, 1 and 2 Maccabees, Baruch, the Epistle of Jeremy, Ecclesiasticus, and Wisdom of Solomon (See DEUTERO-CANONICAL BOOKS). There were also in the Greek Scriptures many other works, like the Psalter of Solomon, the Translation of Moses, the Testaments of the Twelve Patriarchs, and the apocalypses of Enoch, Baruch, and Ezra (See APOCRYPHA). Most of these were written originally in Hebrew or Aramaic, though some were composed in Greek. With the spread of Christianity they were translated into Latin, Coptic, Syriac, Ethiopic, old Slavonic, and other languages, and have in many instances survived only in these translations. The completest collection of these books will be found in Charles, *The Apocrypha and Pseudepigrapha of the Old Testament* (Oxford, 1913). The number of Old Testament books, therefore, varied greatly in different parts of the early Church. About 200 A.D. the 27 New Testament books found in the English Bible had won a very wide recognition. But in some parts of Christendom such *antilegomena* as 2 and 3 John, 2 Peter, Jude, and Revelation were not

regarded as canonical, and they are not found in the early Edessene Bible. On the other hand, not only early catalogues of biblical books, but also our earliest manuscripts of the Greek Bible contain books which at present are classed as Apostolic Fathers (q.v.) or New Testament Apocrypha. The most complete collection of the latter class is found in Hienneke, *Neutestamentliche Apocryphen* (1904). While their extent still varies in different parts of Christendom, there is a growing tendency to cherish as precious testimonies to the religious life in ancient Israel and in the early Church, and to make available for purposes of instruction and edification, all the books that were once read and revered as Scriptures.

3 *The Original Languages of the Bible* are Hebrew, Aramaic, and Hellenistic Greek. Hebrew, which was used by a majority of the Old Testament writers, is the Semitic language spoken by the inhabitants of Canaan, and adopted, if not originally employed by the Israelites, when they entered that territory. It is characterized by simple constructions and by the absence of the expressive conjunctions and particles which in the Greek make it possible to indicate delicate shades of logical or philosophical thought. On the other hand, its vocabulary and idioms are exceedingly picturesque. In the verb there are, strictly speaking, no tenses, but only modes discriminating between complete and incomplete action, while the different stems indicate simple, intensive, causative, reflexive, and passive action. Its simplicity, vividness, directness, and suggestiveness made it an excellent medium of expression for the storyteller, the poet, the orator, and the ethical teacher. Aramaic (incorrectly called Chaldean or Chaldæan, from the reference in Dan ii 4) was the Semitic dialect spoken originally by the Aramæans (q.v.). The reference in Isa xxxvi 11 indicates that as early as 700 B.C. it was the language of politics in southwestern Asia. From the days of the Babylonian exile it was used as the medium of communication between the Jews and other Semitic peoples, and gradually supplanted Hebrew even in Palestine. Aside from a few sporadic examples (cf. Gen. xxxi 47, Jer. x 11), it appears in the Old Testament only in Ezra iv 8 to vi 18, vii 12-26, Dan ii 4 to vii 28. The composite structure of these books explains its abrupt introduction into Hebrew contexts (See EZRA, DANTON). In Ezra the Aramaic sections represent quotations by the final editor from earlier Aramaic documents. Since his readers were entirely familiar with the Aramaic, he did not deem it necessary to translate these into the already classic tongue, which he preferred to employ. In Daniel, as well as Ezra, it is the Western or Palestinian Aramaic, rather than the form of the dialect in use in the East, which appears, suggesting that the originals were written in Palestine. Hellenistic Greek, the language of the New Testament, is the simplified dialect of Attic Greek, which was in use among the Semitic peoples, Hellenized as a result of the conquests of Alexander. By the beginning of the Christian Era it had become largely the literary language of Jews throughout the Roman Empire. As a consequence of its use by alien peoples, the complex verbal forms and constructions of classical Greek disappeared. Many characteristic Semitic idioms were carried over into the Greek, and its vocab-

ulary enlarged. The result was a simple, direct, expressive language, combining the picturesqueness and concreteness of the Hebrew with the larger and more scientific and philosophical vocabulary of the Greek. Thus the composite dialect used by the New Testament writers was well adapted to their purpose, and, by virtue of its simplicity and force, fitted to express ideas and sentiments that were destined to have an epoch-making influence in the world.

4 *The Bible, Viewed as Literature*, shares the general characteristics of the Oriental and more specifically of the Semitic group to which it belongs. The Occidental student, as in the Koran, feels at once the lack of systematic arrangement. The type of thought is intuitive rather than logical. Scientific method and interest are wanting. Instead, the religious motive is dominant. Concrete pictures and vivid figures are prominent in its prose as well as in its poetry. Almost every form of literature is represented in the Bible, from the war song, the lament, and the lyric, to the rhapsody and the philosophical dialogue (See JOB). Parables, fables, enigmas, proverbs, stories, biographies, epistles, orations, and prayers are all found in this great collection of books. Among the more specific characteristics of biblical literature may be noted its naturalness, its realism, the love of external nature which it reflects, as in the Psalms and Canticles, its practical optimism, which rests upon the recognition of a divine purpose for good realizing itself in all life, and its exalted moral tone. It is also characterized by a remarkable combination of realism and idealism.

Of the two Testaments, the Old undoubtedly contains more that deserves a place among the world's greatest literature. Certain portions of the Gospels, because of their simple directness and vividness, and certain of Paul's wonderful appeals and rhapsodies are accounted great, measured simply by literary canon, but as a rule, the New Testament writers gave little heed to form in their zeal to apply the principles of Christianity to the needs of human life. While the New Testament represents the writings of a religious body, the Old is the literature of a people. It abounds in passages and contains some books which are recognized as unsurpassed for their vigor or dramatic force, beauty, or grandeur. The literary merit of the different books varies greatly, since the Old Testament reflects the different stages in the literary history of Israel. The Song of Deborah, certain of the prophetic narratives, the oracles of Isaiah, the messages of inspiration and comfort in Isa. xl. to lv., certain of the Psalms, the Book of Job, the Book of Jonah and Canticles, represent some of the high-water marks of Hebrew literature.

5 *The Authorship* of the different parts of the Bible is a subject which has received the careful attention of scholars during the last century. Many Jewish and Christian traditions, hitherto accepted without question, have been abandoned in the light of the internal evidence from the books themselves. The Bible is to-day widely recognized as the work of a large number of prophets, priests, sages, psalmists, apostles, and editors, whose names are often unknown to us. Most of its books are regarded as composites, containing citations from earlier and later sources, joined together in their present form by copyists and editors who thus preserved them. The Book of Proverbs, for example,

probably embodies the crystallized experience of many wise men, living at different periods, and studying life from many different points of view. The Bible, therefore, is the expression of the many-sided experiences and revelations vouchsafed to the truth seekers and teachers of Israel. Most of them were intent only upon proclaiming the truth revealed to them, content themselves to sink into oblivion, if their aim were realized, hence a great majority of the writings of the Bible are anonymous.

6 *Periods Represented by the Bible*—Some of the earliest poems of the Old Testament go back to the days of the Judges, at least to 1200 B.C., and certain of the Psalms and the Book of Daniel are in all probability later than 200 B.C., so that its literature represents more than 1000 years. The oldest epistle of the New cannot be dated before 50 A.D., and the latest writing is probably not later than 150 A.D., so that the New Testament represents a brief century of literary activity. Supplemented by the later deuterio-canonical and apocryphal books, the Bible, as a whole, reflects some 14 centuries of literary production.

7 *The Subjects Treated in the Bible* are as varied as the literary forms. In the implied explanation, in connection with the story of man's fall, of the reason why serpents crawl in the dust, instead of being provided with legs, and in the accounts of creation, there is evident the questioning attitude toward natural phenomena which marks the beginning of scientific investigation, but otherwise more important themes commanded the attention of the biblical writers. Aside from the modern department of science, almost every phase of human life and thought was treated by them. Nothing that concerned man was beneath their attention. The prophetic literature is concerned with political, social, moral, and spiritual questions. Its aim is to present the character and will of God and the principles which govern His universe, and to lead humanity intelligently and faithfully to conform to them. The legal literature was intended to provide a norm to regulate the public and private life of the people, so that in attaining their best development they might also realize the divine purpose. The maxims and wise counsels of the sages were calculated to guide the inexperienced in their daily duties and throw light upon individual problems. The psalmists gave expression to the spiritual experiences and attitude of the nation and individual toward God. The epistles of the New, like the prophecies of the Old, contain warnings, exhortations, and illuminating teachings intended primarily to anticipate the needs of those to whom they were addressed, while the apocalypses, though differing widely from the preceding in form, were intended to convey similar messages of comfort and encouragement to those passing through great crises. The Gospels have the one dominant aim of presenting the life and teaching of the Founder of Christianity, and the Book of Acts, the influence of that life and teaching upon the Jewish and pagan world.

8 *Modern Methods of Biblical Study*—During the Middle Ages the traditions and conjectures of early Jewish and Christian teachers regarding the origin, date, and authority of the different books in the Bible satisfied the majority of students, since these were hallowed by age and continued indorsement of the Church

With the new interest in the Bible, inspired by the Renaissance and the Protestant Reformation, came a new spirit of investigation. Careful study of the Scriptures themselves sometimes confirmed, but more often revealed data at variance with the teaching of tradition. As scientific methods of historical and literary study were developed and proved trustworthy, they were adopted in dealing with the vital and often exceedingly complex problem presented by the Bible. That they should lead to conclusions different from those held in earlier ages was inevitable. The traditional views have at all times been upheld by scholars distinguished for their erudition as well as their sincere piety, both in the Roman Catholic and the Protestant churches, and the objections raised by them have often been of great value in testing the results, differentiating established fact from plausible conjecture, enriching our knowledge of the historical and archeological background, and preserving the sense of distinctive worth. But the advance toward the new positions is unmistakable. Their acceptance in the main seems assured, for they represent simply the testimony of the Bible itself, as revealed by methods of investigation which command universal confidence. The importance of the positive results of the critical study of the Bible is beginning to be popularly appreciated, and it is discovered that no essential truths contained in the Bible are lost, while its vital teachings are brought out into clearer relief. Reconstruction in the fields of biblical literature, history, and theology is going on rapidly, with the practical aim of providing a firm foundation for a religious faith which will meet the tests of a critical, scientific age. But the tentative character of many theories held even by a large majority of competent students should be borne in mind. Numerous problems still await a satisfactory solution which can be gained only by an increasing precision of the methods employed, and a gradual advance in our knowledge of the text itself as well as of history, archaeology, folklore, and comparative theology. The new methods and results are the contributions of no one country, church, or school. Germany was for a long time the leader, but eminent scholars in Switzerland, Austria, Italy, Holland, the Scandinavian countries, England, Scotland, and America have joined in the work of critical analysis and reconstruction. Valuable contributions have been made by Roman Catholic scholars as well as by critical students in all the leading Protestant denominations, by Jews, and by theologians, unaffiliated with any religious organization. Various schools of thought have labored from their own distinctive points of view, some more conservative, others more radical, thus securing scientific caution as well as progress. This wide cooperation has tended to give stability to the results obtained.

9 *The Positive Results of Modern Biblical Research* can here be presented only in barest outline. Through the discovery of new manuscripts, great advances have been made in the recovery of the original texts. In the field of literary criticism effort has been centred upon ascertaining the authorship and approximate date of the individual sections and the structure of the different books, with the result that it is now possible to make at least an approximate chronological arrangement of all the literature of the Bible. A new appreciation of the

terary beauty of the Bible has also been roused. On the basis of the oldest sources, supplemented by extra-biblical contemporary information, the history of Israel, the life of Jesus, and the record of the early Christian Church have been restudied. On the same basis the faith of Israel, which reached its culmination in Christianity, is being traced. In every department of investigation the principle of growth and development from the simple to the higher, and with this the fact of the unity of all life and thought, find fullest illustration. With the demonstration that the Bible records actual facts and is the result of impulses and influences which still stir humanity, comes the deeper realization that it has a living, vital, eternal message for mankind.

II. HISTORY OF INTERPRETATION

Of the Old Testament among the Jews. The earliest Jewish commentaries upon selected passages of the Law are apparently found in the writings of Philo (c. 20 B.C. - 50 A.D.) and in the Mishna. Many of the facts that have led modern investigators to recognize the composite authorship and real character of the Pentateuch were already clearly perceived by the Alexandrian philosopher. But by adopting the allegorical method of interpretation then in vogue among rhetoricians he was able to avoid the most obvious inferences and to read into the text his own philosophy. In this he no doubt did predecessors, but it was his work that became epoch-making in its influence upon Jewish aggada, Christian dogma, and Greek philosophy.

On the other hand, the Mishna largely confined itself to the "Halakha," or the rules of conduct authoritatively deduced from the Law. Among its leading interpreters were Hillel and Shammai (first century B.C.), the Gamaliels and Johanan ben Zakcai (first century A.D.). In such Mishnaic works as Mekilta (to Exodus), Sifra to Leviticus), and Sifra (to Numbers and Deuteronomy), likewise written in Neo-Hebraic, the "Haggada," or homiletic exegesis, had a wider field, and the same is true of the Aramaic paraphrases, or Targums. While the two Aramaic *gemasas* are primarily commentaries upon the Mishna, a vast number of passages from all parts of the Bible are introduced and explained in the discussion. The chief amoraic authorities of the Palestinian Talmud are Chya (died c. 230) and Johanan ben Nappacha (died 79), the most eminent exegeses of the Babylonian Talmud are Abba Arika, called Rab (died 247), Chisda (died 300), Ashi (died 427), and Rabina (died 499) of Sura, Samuel (died 37) and Amemar (died 422) of Nehardea, Abba ben Nachmani (died 330) and Abayi (died c. 339) of Pumbedita, and Raba (died 352) of Machuza.

An inestimable aid to the understanding of the Bible was rendered by the scholars who in the eighth century devised systems of vowel notation to preserve the traditional reading of the text. In the same century the Karaites, under the influence of Mohammedan thought, rejected the "oral law," codified in the Mishna and the Talmuds, and fell back upon the Pentateuch itself. Extracts from the works of Nathan ben David (c. 700) and Benjamin ben Isaac Mahawandi (c. 800) render it probable that their lost commentaries were already characterized by that sober exegesis we find in the

writings of Jefet ben Ali (902-990), Aaron ben Joseph (c. 1300), and Aaron ben Elijah (died 1369). The reaction produced a wholesome effect. Without breaking with the historical development, rabbinical scholars began to vie with the Karaites in attention to grammar, lexicon, and literal sense. Eminent among these were Saadia ben Joseph al-Fayyumi (892-942), gaon, or president, of the academy at Sura, who wrote in Arabic translations, commentaries, and grammatical works, Jehudah ben Karish (c. 920), Menahem ben Sarak (c. 950), Jehudah Chayyug of Fez (c. 1000-50), the grammarian, and his younger contemporary, Jonah Abulwalid Marwan ibn Janah, the lexicographer, who was a bold and sagacious textual critic. In opposition to both Karaites and Rabbanites, Chirwawi al-Balki (fl. 875-900) pushed his independent criticism of the Bible itself, known to us partly through Saadia, partly, it would seem, through the Geniza fragments found by Schechter, and published in the *Jewish Quarterly Review*, pp. 345 ff. (1901). With the doubts and questions that occupied Chirwawi's mind, Solomon ben Isaac ("Rashi") of Troyes (1040-1105) had little sympathy. His commentaries, printed in the Rabbinic Bibles, are celebrated for their erudition rather than for any originality. But, according to Ibn Ezra, a Spanish rabbi, Isaac ben Josas, maintained that Genesis 31 was written at the time of Jehoshaphat, and Abraham ben Menahem of Toledo (1088-1167) himself, however cleverly he concealed his heresies, not only revealed his consciousness of the late origin of the vowel points, but also his grave doubts as to the Mosaic authorship of parts of the Pentateuch, and the authorship by Isaiah of the latter part of the book ascribed to him. More deeply influenced by Greek and Arabic philosophy was Moses ben Maimon, of Cordova (1135-1204). His Arabic work, *Dalalat al-hayy*, or "Guide of the Stranger," lays down homoeopathic principles akin to those of Al-Ghazali (died 1111) and Ibn Rushd (Averroes, died 1198), allowing the suppression of the literal sense in the interest, not of theology, but of a philosophical system. David Kameli, of Narbonne (died 1235), wrote commentaries that were particularly valuable because of his excellence as a grammarian. Tanchum of Jerusalem (c. 1250) also produced several commentaries. Levi ben Gerson (died 1370) gave special attention to archeology; his exegesis was much influenced by his philosophy. An original thinker was Chasdai Creska (c. 1410), who conceived of prophethood as within the domain of human power. Joseph Albo (died c. 1444) reflected in a profound manner on the element of divination in prophecy and its ethico-pedagogic value. They were influenced by Christian thought Isaac Abrabanel (died 1508) was perhaps the first Jewish exegete who could approach the historical books with the intelligence of a statesman, his personal experience and the sufferings of his people account for the intense Messianic hope nourished by and reflected in his interpretation of the prophets. The exegesis of Solomon ben Melek, of Fez (c. 1550), was largely philological, leaning heavily on D. Kameli. By his critical edition of the Bible and the Masora (1524-25) Jacob ben Chayim rendered a great service to biblical science. But the two great critics of the sixteenth century were Elijah ha-Levi (Elias Levita, 1472-1540), whose *Masoreth hamasoreth*

literary beauty of the Bible has also been aroused. On the basis of the oldest sources, supplemented by extra-biblical contemporary information, the history of Israel, the life of Jesus, and the record of the early Christian Church have been restudied. On the same basis the faith of Israel, which reached its culmination in Christianity, is being traced. In every department of investigation the principle of growth and development from the simple to the higher, and with this the fact of the unity of all life and thought, find fullest illustration. With the demonstration that the Bible records real facts and is the result of impulses and influences which still stir humanity, comes the deeper realization that it has a living, vital, eternal message for mankind.

II. HISTORY OF INTERPRETATION

Of the Old Testament among the Jews. The earliest Jewish commentaries upon selected passages of the Law are apparently found in the writings of Philo (c.20 B.C.-50 A.D.) and in the Mishna. Many of the facts that have led modern investigators to recognize the composite authorship and real character of the Pentateuch were already clearly perceived by the Alexandrian philosopher. But by adopting the allegorical method of interpretation then in vogue among rhetoricians he was able to avoid the most obvious inferences and to read into the text his own philosophy. In this he no doubt had predecessors; but it was his work that became epoch-making in its influence upon Jewish haggada, Christian dogma, and Greek Philosophy.

On the other hand, the Mishna largely confined itself to the "Halaka," or the rules of conduct authoritatively deduced from the Law. Among its leading interpreters were Hillel and Shammai (first century B.C.), the Gamaliels and Johanan ben Zakkai (first century A.D.). In such Midrash works as Mekilta (to Exodus), Sifra (to Leviticus), and Sifra (to Numbers and Deuteronomy), likewise written in Neo-Hebraic, the "Haggada," or homiletic exegesis, had a wider field; and the same is true of the Aramaic paraphrases, or Targums. While the two Aramaic *gemaras* are primarily commentaries upon the Mishna, a vast number of passages from all parts of the Bible are introduced and explained in the discussion. The chief amoraic authorities of the Palestinian Talmud are Chiya (died c.230) and Johanan ben Nappacha (died 279); the most eminent exegetes of the Babylonian Talmud are Abba Arika, called Rab (died 247), Chiada (died 309), Ashi (died 427), and Rabina (died 499) of Sura, Samuel (died 257) and Amemar (died 422) of Nehardea, Rabba ben Nachmani (died 330) and Abayi (died c.339) of Pumpedita, and Raba (died 352) of Machuza.

An inestimable aid to the understanding of the Bible was rendered by the scholars who in the eighth century devised systems of vowel notation to preserve the traditional reading of the text. In the same century the Karaites, under the influence of Mohammedan thought, rejected the "oral law," codified in the Mishna and the Talmuds, and fell back upon the Pentateuch itself. Extracts from the works of Anan ben David (c.700) and Benjamin ben Moses Mahawendi (c.800) render it probable that their lost commentaries were already characterized by that sober exegesis we find in the

writings of Jefet ben Ali (902-990), Aaron ben Joseph (c.1300), and Aaron ben Elijah (died 1369). The reaction produced a wholesome effect. Without breaking with the historical development, rabbinical scholars began to vie with the Karaites in attention to grammar, lexicon, and literal sense. Eminent among these were Saadia ben Joseph al Fayyumi (892-942), gaon, or president, of the academy at Sura, who wrote in Arabic translations, commentaries, and grammatical works; Jehudah ben Karish (c.920), Menahem ben Sarak (c.950), Jehudah Chayyug of Fez (c.1000-50), the grammarian, and his younger contemporary, Jonah Abulwalid Marwan ibn Janah, the lexicographer, who was a bold and sagacious textual critic. In opposition to both Karaites and Rabbanites, Chitwri al Balki (fl.875-900) pursued his independent criticism of the Bible itself, known to us partly through Saadia, partly, it would seem, through the Geniza fragments found by Schechter, and published in the *Jewish Quarterly Review*, pp. 345 ff. (1901). With the doubts and questions that occupied Chitwri's mind, Solomon ben Isaac ("Rashi") of Troyes (1040-1105) had little sympathy. His commentaries, printed in the Rabbinic Bibles, are celebrated for their erudition rather than for any originality. But, according to Ibn Ezra, a Spanish rabbi, Isaac ben Jasos, maintained that Gen. xxxvi. 31 ff. was written at the time of Jehoshaphat; and Abraham ben Meir ibn Ezra, of Toledo (1088-1167) himself, however cleverly he concealed his heresies, not only revealed his consciousness of the late origin of the vowel points, but also his grave doubts as to the Mosaic authorship of parts of the Pentateuch, and the authorship by Isaiah of the latter part of the book ascribed to him. More deeply influenced by Greek and Arabic philosophy was Moses ben Maimon, of Cordova (1135-1204). His Arabic work, *Dalalat al hahirin*, or 'Guide of the Erring,' lays down hermeneutical principles akin to those of Al Ghazali (died 1111) and Ibn Roshd (Averroes, died 1198), allowing the suppression of the literal sense in the interest, not of theology, but of a philosophical system. David Kamehi, of Narbonne (died 1235), wrote commentaries that were particularly valuable because of his excellence as a grammarian. Tanelum of Jerusalem (c.1250) also produced several commentaries. Levi ben Gerson (died 1370) gave special attention to archeology; his exegesis was much influenced by his philosophy. An original thinker was Chasadi Creska (c. 1410), who conceived of prophethood as within the domain of human power. Joseph Albo (died c.1444) reflected in a profound manner on the element of divination in prophecy and its ethico-pedagogic value. They were influenced by Christian thought. Isaac Abrahamel (died 1508) was perhaps the first Jewish exegete who could approach the historical books with the intelligence of a statesman; his personal experience and the sufferings of his people account for the intense Messianic hope nourished by and reflected in his interpretation of the prophets. The exegesis of Solomon ben Melek, of Fez (c. 1550), was largely philological, leaning heavily on D. Kamehi. By his critical edition of the Bible and the Masora (1524-25) Jacob ben Chayim rendered a great service to biblical science. But the two great critics of the sixteenth century were Elijah ha Levi (Elias Levita, 1472-1540), whose *Masoreth hamasoreth*

to necessitate a continued resort to allegorical methods. Of these Syrian schools, the school of Antioch was of further reaching and more lasting influence, making itself felt to a greater or less extent with such fathers as Chrysostom, Athanasius, and Cyril in the East, and Ambrose, Jerome, and Augustine in the West. This was largely due to its leader, Theodore of Mopsuestia, who has been termed the exegete of the ancient Church. Unfortunately, his opposition to Origen brought him under the ban of orthodoxy, which naturally served ultimately to restate Origen's extreme conception and exaggerated use of allegory in the interpretative work of the Church, where it remained dominant until the Reformation.

(B) *The Medieval Stage*, which may be divided into the following periods: (1) The post-Patristic, represented by Bede (died c 735), Alcuin (died 804), Rabanus Maurus (died 856), and Radbertus (died 865). (2) The Scholastic, represented by John Scotus Erigena (died 801), though in a certain sense he belongs to a much later age of thought, Anselm (died 1109), Abelard (died 1142), Peter Lombard (died c 1164), Aquinas (died 1274), and Occam (died 1347). (3) The pre-Reformation, represented by Nicolas Lyra (died 1340), Lorenzo Valla (died c 1465), Reuchlin (died 1522), and Erasmus (died 1536).

The first of these periods may be safely said to have made no very great contribution to scriptural study, though especially the commentaries of Rabanus Maurus are often of value in the elucidation of the literal sense. Its work was chiefly that of compilation from the Fathers, either in the way of excerpts from their writings or glosses on them, and to support the interests of the Catholic faith was its only object.

The second period differed from the first largely in its intellectual aggressiveness. The object of Scripture study was still the support of the Church's faith, but the work was no longer done by slavish citations of the Fathers, but by speculative reasoning. This change was brought about by the rise of free inquiry, over against which it became necessary to vindicate the faith. This method naturally resulted, when applied to the interpretation of Scripture, in a renewed discarding of the literal sense and a further extravagance of allegorizing.

But with the revival of learning in the third period there came not only a new stimulus to the spirit of inquiry, but a new power to the work of interpretation—a power which showed itself especially in its opening up to the interpreter of the original languages of Scripture, particularly Hebrew, and thus bringing him face to face with its actual words. This naturally brought into prominence the literal sense, emphasizing its importance and increasing thus its influence upon other possible senses. The rule of faith was indeed still the object of Scripture study, but the service which this study rendered to it came now to be based more upon the primary meaning which the original language conveyed, and this in turn led to a weakening of the authority which the rule of faith exercised over interpretation itself. It was, in fact, the beginning of a radical change in the underlying conception of the Church involved in the interpretative process.

(C) *The Reformation Stage*

(1) The Protestant period, represented particularly by Luther, 1483–1546, Melancthon, 1497–1560, and Calvin, 1509–64.

This change in the conception of the Church, begun in the previous period, attained its full issue as men of thought reached the position that it was not the Church which was to decide what Scripture should teach, but Scripture which was to determine what should be taught in the Church. The growth of this idea was helped on the one side by the deepening conviction of the Church's intellectual and moral inability to handle Scripture, and on the other side by the increasing scholarly and religious respect for the Scriptures themselves. The characteristic of the Reformation interpretation was thus its fundamental principle of the sole authority of Scripture in the things of faith.

Along with this change in the conception of the Church went a change in the conception of the inspiration of the Scriptures. They were still held to be inspired, but not in any mechanical or even verbal way. There was a unique qualification that Scripture writers were understood to possess which separated them from all others, so that even the Deutero-canonical books were no longer considered on the same level with the other books, but this qualification was not any magical power which rendered their words infallibly true. The Bible writers were simply illumined by the Spirit in their knowledge of spiritual things, being in the committing of that knowledge to writing subject to the ordinary laws of the human mind. In fact, it was felt that inspiration as a process was always present in the Church.

With such radical alteration of the fundamental judgments regarding Scripture and the Church underlying interpretation, there resulted naturally a complete change in the interpretative method. Not only was the literal sense held to be the primary sense to be considered, but a satisfactory interpretation of it was regarded as perfectly possible with the aid furnished by Scripture itself. In other words, Scripture was considered as its own interpreter, sufficient and complete in all matters pertaining to salvation. As a consequence, the determination of Scripture meaning devolved upon the individual student of Scripture, so that private judgment came to be not only a fact of criticism, but a right of religion.

At the same time, under the continued influence of scholarship, the study of the original languages and other helps was carried on, serving constantly to make the Scriptures clearer to the understanding, while, under the growth of religious fervor, the Scriptures themselves were studied for the aid they could give religious life, serving to make them increasingly impressive to the spiritual sense. The Spirit was recognized not only as having spoken to the writers of Scripture, but as continually speaking to those who come to Scripture in study or in meditation, and so the tendency asserted itself to refer all Scripture in its meaning to Christ, and emphasis was laid upon the need of faith in Christ and general spiritual illumination in order to understand the meaning which Scripture really conveyed.

This tendency to centre everything on Christ, however, naturally opened the way to a return to the old habit of allegory, while the tendency to interpret Scripture in the light of itself led to insistence upon what was called, in the Pauline phrase (Rom xii 5), "the proportion of faith." This idea of proportion was useful primarily in preventing the distortion of

single passages against their context or against the statements of Scripture as a whole, but it shifted its course most easily from the "faith" given by Scripture in its own teachings to that laid down by the teachings of the Church, and in so doing started the whole process of interpretation toward the baneful exaggerations of the scholasticism which followed upon this first period of the Reformation. It should be mentioned, however, that a freer though equally reverent attitude toward the Scriptures was taken by many Baptist teachers and other radicals in this period. Adhering to the doctrine of "the inner light" and a continuous revelation, they were opposed both to the principle of the sole authority of the Scriptures and that of justification by faith alone, which had so strongly influenced Luther's estimate and interpretation of the biblical books. Calistaedt (q.v.) began the scientific inquiry as to canonization; Chataillon introduced the modern interpretation of Canticles; Denek sought for the natural origin of the Christ conception; Tizano and others investigated the integrity and authorship of New Testament books.

(2) The period of the Counter-Reformation, represented by Cajetan, 1509-1534, Bellarmine, 1542-1621, Francis of Sales, 1567-1622, and Jansemus, 1585-1638.

Though the Roman communion did not change its conception of the Church's authoritative relation to interpretation, nor alter its idea of the plenary inspiration of the Scriptures, yet the humanism which had been so influential in bringing Protestantism to life had had its effect also within the Mother Church. In both churches it had emphasized the value of the sources of theology, yet, owing to the fact that with the Roman Catholic church the old belief in ecclesiastical authority and Scripture inspiration still obtained, it was natural, not only that while the Reformers went back for their sources to Augustine and Paul, the Roman Catholic scholars, without any conscious disregard for these earlier teachers, put the emphasis upon the teachings of Thomas Aquinas, but also that such revival of theological learning as their study of the sources brought about did not produce with the latter the same vital change in the methods of interpretation.

In fact, the merits of the Counter-Reformation, which should be freely and fully recognized, were in the purifying of the Church's organization and the spiritualizing of its life, more than in the liberalizing of its methods of interpretation. The decrees of the Council of Trent (1545-63) united ecclesiastical tradition to the Scriptures, including the Deutero-canonical books, as the authoritative sources of the Church's faith, and made the Church itself the sole expounder of the sense they should have. Yet the insistence upon the authority of the living Church in expounding and defining truth, together with the traditional emphasis on the value of the Latin Vulgate, had a tendency to give more freedom in dealing with the Hebrew and Greek text. The scientific impulses not only among the Jesuit Fathers and the Fathers of the Oratory, but also among the educated laity, were strong, and the modern interpretation of the Bible owes a heavy debt of gratitude to such men as Erasmus, Vives, Pereira, Masius, Bonfrère, Morin, and Richard Simon, "the father of introduction."

(3) The Post-Reformation period (a) The

subperiod of Protestant Scholasticism, represented by Gerhard, 1582-1637, J. G. Carpzovius, 1679-1767, and Calovius, died 1686.

It was natural that, having rejected the infallible authority of the papacy, the reformed churches should not only look around for another objective authority to take its place, which they found in the Scriptures, but that, having secured a political right to its peculiar doctrines, and being thus compelled to maintain them against the attacks of opposing Protestant theologians as well as against the teachings of Rome, they should come to make the authoritative Scripture an oracle to serve them in their needs, and so substitute for a scholarly interpretation of the Scriptures a dogmatic distorting of them.

This was the result produced by the Protestant scholasticism, which differed from the Catholic scholasticism of the Middle Ages in being less ingenuous. It professed to base its system only on the Scriptures, but in reality based it on the Scriptures as interpreted by the party creeds in the Church, so that the Scriptures became an armory of controversial proof texts without any recognized difference between the Old Testament and the New, or any understood idea of progress or development in revelation.

(b) The period of Rationalism, represented by Lessing, 1729-81, Michaelis, 1817-91, and Eichhorn, 1752-1827.

Such degeneration in the spirit and life of interpretation was not without protest on the part of those who held equal right to Reformation principles with those who were responsible for the degeneration. It was not, however, until the philosophical movement, which saw its beginning in Descartes and Spinoza, reached its full vigor in Lessing that this protest effected the revolution in interpretative method which is known as rationalism.

The underlying principle of this revolution was its insistence upon reason as the test of revelation and the judge of the meaning of Scripture, which was taken only in its literal sense. It was anti-supernatural in its bias and brought to ridicule the confessional dependence upon a mechanical inspiration by emphasizing the difficulties and discrepancies of Scripture. It emphasized the moral teachings of the Bible and pointed out its high literary qualities, but often sought in an unnatural manner for a natural explanation of the miracles recorded. It lacked historic sense, and its negative attitude led to a general skepticism. There was little in the Church to oppose this movement, since pietism and mysticism had spent their force, and scholarship was all arrayed on the critical side.

(D) *The Modern Stage*, represented by Semler, 1725-91, Schleiermacher, 1768-1834, Bauer, 1792-1860, Meyer, 1800-73, and Ritschl, 1822-89.

It was from scholarship, however, that the first impulse was to come toward the newer interpretation which characterizes the present day. Semler's interpretative work necessarily partook of the rationalistic spirit of his day, though it improved upon the rationalistic method. A more constructive force was needed and was largely supplied by Schleiermacher and his followers, whose attitude to Scripture was one which, in proportion as it rejected all idea of mechanical inspiration, emphasized the practical character of the divine message to the soul, and the results of whose Scripture study were seen not only in constructive work in the field of gos-

pel and apostolic history, but also in a profound quickening of the religious life of the time.

The philosophy of Hegel furnished the fundamental basis for that interpretation of the New Testament which characterized the Tübingen School of biblical criticism, the influence of which on Scripture interpretation in general was in its day well-nigh universal. A reaction set in through Ritschl, whose work had a tendency to show a disagreement of this philosophy of history, in many important respects, with the historical facts given in the New Testament record, and whose followers, in Scripture interpretation, returned practically to the spirit of Schleiermacher's position—that the Scriptures constitute a divine message to the soul. Involved in this position there was not only a denial of all mechanical inspiration, but of all objective authority as attaching to Scripture, and a conception of the Church, not as an ecclesiastical organization whose doctrines were to be proved by Scripture, but as a spiritual community whose religious consciousness interprets for itself the Scripture contents. At the same time, in spite of these spiritual conceptions of Scripture and the Church, the Ritschlian method of interpretation essentially emphasized the historical sense of Scripture to the exclusion of all hidden senses behind it. The extensive influence of Ritschlianism as a school of theology has had its effect upon interpretation, especially in its affirmation of the purely spiritual authority of the Scriptures and the spiritual relation to them of the Church. As a consequence the inspiration of the Scriptures has come quite widely to be considered as of the same kind as that of all religious literature, and the authority of its message as more and more distinctly of a purely spiritual nature. The general acceptance of the scientific doctrine of evolution has in the last generation affected all schools of interpretation, and the exegete recognizes that it is incumbent upon him to explain, as far as possible, the origin and development of every idea, sentiment, custom, and institution found in the Bible.

The principle which universally controls the present interpretative method, both in theory and in practice, is the one brought out by Semler at the beginning of this modern stage of the science, and increasingly dominant ever since—that to be interpreted rightly, and, in fact, to be interpreted at all, every part of the Bible must be considered not only in its literal, grammatical sense, but in the light of the historical surroundings in which it was written.

III THE CANON OF THE BIBLE

Canon of the Old Testament. The word "canon" is a Semitic loan word in Greek, meaning literally 'a rod or pole, a carpenter's rule', figuratively 'a model or standard', and in Alexandrian writers sometimes 'a list of classics.' It was used in the letter of Aristos (c 100 B.C.) to indicate the character of the Law, by the Gnostic Ptolemy (c 200 A.D.) to denote the authority of the sayings of Jesus, and by Athanasius in 367 A.D. to designate the collection of sacred books. In the churches, and probably already in the synagogues of Alexandria, volumes publicly read as sacred and inspired were termed "canonical," in distinction from esoteric or heretical writings withheld from public use. Among the Palestinian Jews such books were at first simply said to be "holy." But in the first

century A.D. the Pharisees maintained that holy books "made the hands unclean," and that consequently an ablution was necessary after contact with them. The Sadducees protested in vain against ascribing to them the same kind of sanctity that attached to heave-offerings and dead bodies. This new ritual naturally tended to fix the limits of the canon. In the case of each book used in the synagogue the question must be raised whether a washing was obligatory. Thus the freedom of introducing new books was necessarily curtailed, and doubts were suggested as to the fitness of some works that had been used.

As in the case of the New Testament, the finally established canon of the Hebrew Bible was the result of a critical process reducing the number of books approved for public reading. Many works that maintained their place in the Alexandrian canon, such as Ecclesiasticus, Judith, Tobit, Baruch, and 1 Maccabees, lost somewhat of the prestige they had when they were first translated from the Hebrew or Aramaic original. Books like the Jubilees, the Psalms of Solomon, the Apocalypses of Enoch, Noah, Baruch, Ezra, and others were crowded out of the synagogue. A sphere of antilegomena was created. Ezekiel, Esther, Canticles, Ecclesiastes, and probably also Daniel, were held by some not to "render the hands unclean," while others deemed them worthy of a place with the accepted writings. This criticism naturally sought likewise to free the text from all supposed later accretions. Thus various additions to Daniel, Esther, and other books were removed. The critical eye was not keen enough to perceive the numerous interpolations in Job, Jeremiah, and elsewhere, and the best guide, the earliest Greek version, was distrusted. But to this critical movement we owe the text, as well as the canon preserved in our manuscripts and editions of the Hebrew Bible.

At the end of the second century A.D. the canon recognized by most synagogues contained 24 books, divided into three parts, viz. (1) The Law, or the five books ascribed to Moses; (2) The Prophets, i.e. Joshua, Judges, Samuel, Kings, Jeremiah, Ezekiel, Isaiah, and the Twelve; and (3) The Writings, comprising Ruth, Psalms, Job, Proverbs, Ecclesiastes, Canticles, Lamentations, Daniel, Esther, Ezra, and Chronicles. These were not all placed on the same level. As the Law had been the first to acquire authority, so it remained at all times the highest authority, and all non-Mosaic books were looked upon in the light of a commentary on the Law, and classed together as *Gabbala*, or "tradition." Among these books, however, the collection of "Prophets" had been more sharply differentiated. In regard to Ezekiel the liberal policy had prevailed, but Daniel was no longer regarded as among the prophets. Ruth and Lamentations were counted as separate books belonging to the third collection, and Canticles, Ecclesiastes, and Esther were permitted to remain in this series. The three divisions evidently mark different degrees of estimation. Of this threefold canon we have no evidence earlier than *Baba bathra*, 13b, 14a (c 200 A.D.).

Toward the end of Domitian's reign the number of canonical books seems to have been reduced to 22 (Josephus, *Contra Apionem*, i 8, written c 95 A.D.), or 24 (Apocalypse of Ezra, xiv 44, 45), if Ruth and Lamentations were copied separately for convenience in use at the

festivals of Shabdoth and 9th Ab. It was natural that the tendency seen in the arrangement of the alphabetic Psalms should also lead to a similar division of the canon. If the number had been fixed as 24 at the so-called Synod of Yamma (c. 90 A.D.), Josephus is not likely to have changed it to 22. Since he counts 13 books as prophetic and 4 as poetic and didactic, it is clear that the attempt had not yet been made to reduce the prophetic collection to the number of 8. Daniel and Ezra were very popular prophets at that time. The reaction came later, as a consequence of Christian apologetics. In 2 Macc. 11:13 Judas Maccabeus is said to have founded a library consisting of "books concerning kings and prophets, the poems of David, and letters of kings concerning gifts." This "library" is not yet a canon, and the author is likely to have known as many "prophets" as Josephus recognized. Ben Sira's grandson, who wrote after 132 B.C., was familiar with "the prophets and the other writings," as well as with "The Law" (Eccles. 1:1 ff.), but what books he counted as "prophets" cannot be determined. The evidence seems to point to the second century A.D. as the period during which a prophetic canon of eight books was definitely fixed, and with it inevitably the third group.

The order of the Prophets and the Hagiographa prescribed in the Talmud represents neither the original order nor the finally prevailing arrangement. In earlier times each book was copied on a separate roll, and the synagogue reader had a certain freedom of choice in his selections. This apparently was still the case at the end of the first century A.D. (Luke iv 17, *Baba bathra*, 13b). It was when larger volumes were produced and a fixed order of the *haptas*, or sections read in the synagogue, had been established, that the question as to the proper succession arose. Chronological and practical considerations then naturally led to conflicting results. It is probable that the Greek version has preserved the earliest attempts to arrange the prophetic books chronologically, viz., the Twelve, Isaiah, Jeremiah, Ezekiel, Daniel. REGARDING the effect of the contexts upon the mind of the reader may, as *Baba bathra*, 14a, suggests, have been responsible for the order: Jeremiah, Ezekiel, Isaiah, the Twelve. Isaiah, Jeremiah, Ezekiel, and the Twelve was the order finally adopted. The order of the *haptas* as probably was not determined until after the prophetic canon had been reduced to its present form, leaving out Daniel. When Ruth was removed from Judges and Lamentations from Jeremiah, the former seems to have been made at first an introduction to the latter, and the latter was given its chronological place between the Solomonite writings and Daniel. Subsequently both were united with the antilegomena to form the Five Rolls (Canticles, Ruth, Lamentations, Ecclesiastes, Esther) read at certain festivals. Psalms, Proverbs, Job, Canticles, Ruth, Lamentations, Ecclesiastes, Esther, Daniel, Ezra, Nehemiah, and Chronicles was the order ultimately prevailing.

The threefold canon of the second century A.D. reveals the gradual growth of the authority of the Hebrew Scriptures. The Covenant Code (Ex. xx 24-xxiii 33), generally supposed by scholars to have been proclaimed by the priesthood of some great Ephraimite sanctuary in the name of Moses, was naturally looked upon with reverence. Still greater authority, however, did the

Deuteronomic Code enjoy. This law, found in the temple in the eighteenth year of Josiah (2 Kings xxi 8), was likewise ascribed to Moses and enjoined upon Judah in 620 B.C. During the Chaldean and Persian periods it grew in importance as the common law of the people. The earlier codes and narratives, together with the annals of the kings, appear to have been subjected to a reduction in the spirit of this Deuteronomic law. But as the theocracy developed, the interest settled on the cult, and numerous regulations concerning sacrifices, rites, and taboos, legends, myths, and genealogical traditions were added. These priestly additions are regarded by many scholars as a separate work compiled in Babylonia, brought to Palestine by Ezra and proclaimed at a great assembly, described in Neh. vii-x, in 444 B.C. It is held by others, however, that they grew up at the sanctuary in Jerusalem, and that Ezra, or some one else, wrote in one book all the material recognized as Mosaic, to inculcate obedience to the law. Additions were probably made to the law even in later times, as the Greek version suggests. Gradually scribes began to feel a certain reluctance to write the further developments of the law. It is no doubt the Maccabean period that gave to the law that central position in the religious life of Israel which it has in the Psalms, and on which the Pharisaic party then began to lay such stress.

This national uprising also lifted the prophetic writings to new importance. The exile which realized the gloomy forebodings of the earlier prophets enhanced their reputation as foretellers of future events. But their words were understood as exhortation to obedience to the law, and consequently could not be given the same authority with the law itself. Joshua, Judges, Samuel, and Kings were plainly written with a didactic purpose to show the dangers of disobedience to the law. Hence they were regarded as "prophetic" books. The publication of Daniel, in 165 B.C., revived the interest in prophecy, and inspired not only imitators, but also editors, to whom we owe the books of Isaiah, Jeremiah, Ezekiel, and the Twelve, in their present form. Apocalyptic visions furnished enthusiasm for the Messianic movements. Disenchanted Judaism, to save its life, fell back upon the Law and the earlier Prophets.

The Psalter is regarded by many scholars as in the main a product of the Hasmonean age, whatever earlier elements may have found their way into its different collections. As it was ascribed to David and numerous hymns were supposed to refer to his greater Son, its influence in an era of Messianic hopes was by no means limited to the temple service. Associated with it as early as in the middle of the first century B.C. were the writings ascribed to Solomon. The attacks upon Canticles and Ecclesiastes, with a view to having them relegated to the limbo of the *genusim*, as unfit for public use, were frustrated. We owe the preservation of the precious love lyrics to an utterly impossible allegorical interpretation, and judicious interpolations saved from destruction the remnants, in Ecclesiastes, of a remarkable philosophy of disenchantment. The survival of Esther is probably due partly to the tenacity of the old ancestral cult, partly to the vindictive spirit prevalent in the people at the time when its canonicity was discussed.

There is no record of any book having ever

been added by a Jewish assembly to a previously existing canon. The history of the canon is a history of the criticism of the canon. Certain books of a religious nature were held in high honor. Their contents suggested a divine origin. Ancient Hebrew critics inquired whether the character of some of these books justified the traditional estimate, and in many instances were forced by their doctrine of inspiration to answer in the negative. Some of them were successfully impugned as works not possessing a sanctity rendering a ceremonial washing necessary after contact with them. Others were not eliminated, though strong efforts were made to withdraw them from public use. Among those that had been regarded as sacred, but had been rejected, some continued in certain circles to be quoted as Scripture, as Ben Sira in *Baba Kama*, 92 et al., or read in certain synagogues, as Baruch in the time of Origen (Euseb., *Hist.*, vi, 25), or copied in the Bible, as Enoch by the Jews of Ethiopia. Among the Hellenistic Jews a large number of these works were preserved and quoted as Scripture, and consequently formed a part of the Greek Bible the Church received from the Synagogue.

Canon of the New Testament. The history of the New Testament canon is the history of the New Testament writings viewed as an authoritative and closed collection. It inquires as to the estimation in which these writings were held by the Early Church, how and when they came to be collected, and the principles upon which and the date when the collection was closed.

(1) *The New Testament Writings in the Apostolic Age*.—During this period the New Testament books came into existence. They were, in the majority of cases, produced independently, with no special reference to each other, by various authors at different times, for the use of different communities or individuals. Each book began its career alone. The answer to the question how they came to be collected, united, and constituted the canon or rule for universal Christian faith and practice, is to be sought first in certain characteristics of the Apostolic age. Christianity was not at first a book religion. The teachings of Jesus were committed to his Apostles, to be reproduced and proclaimed and taught by them, orally, as the Gospel. The Gospel was authoritative, for it was the Gospel of God. Therefore the words of the Apostles, as the accredited teachers and exponents of the Gospel, were accorded the greatest weight. What was true of then spoken words was also true of what they wrote. Hence, when the Gospel took on a written form, whether in an epistle or in a narrative of the words and deeds of Jesus written by an Apostle or an intimate companion and fellow-worker with the Apostles, such writing was sure to be carefully preserved, often read, widely circulated, and highly honored. It was a natural result, untrammelled by any theories whatsoever. The evidence for this is abundant throughout the New Testament. Upon these two principles, the supreme authority of the Gospel itself, and the preeminent right of the Apostles and their intimate associates to teach it, the subsequent career of the New Testament books depended.

(2) *The Sub-Apostolic Age* (to about 140 A.D.) was an intensely practical period. It was a missionary age. The Christian documents

that remain from it only incidentally reveal the state of opinion as to the New Testament books. They do, however, afford us a glimpse into the condition of the Church in nearly all parts of the Roman world then covered by Christian activity. Everywhere there was the same high opinion of the (now dead) Apostles, as the authorized exponents of the faith. There was general uniformity as to the recognition of the supreme authority of the teachings of Jesus. These were naturally placed alongside of the Old Testament, which, nevertheless, continued to be the only generally recognized "Scripture." From the canonization of the words of Jesus contained in the Gospel narratives, it was but a step to the canonization of the Gospels themselves. But this step was not yet formally taken. Collections, more or less complete, of the Pauline Epistles were in the hands of the leading men in the churches of Antioch, Asia Minor, Greece, Rome, and other places. Quotations from the New Testament writings are numerous, but of a free, informal character, in but one instance introduced by the regular formula, "it is written." The Apocryphal Gospels from this period, as a rule, show large dependence on our canonical Gospels.

(3) *From 140-225 A.D.* the Church was engaged in a deadly struggle with foes within and without. Gnosticism threatened to annihilate the primitive Christian faith, while the Roman government put Christianity itself under the ban. The Church was called upon to defend its faith and its position. Hence the more important Christian literature of this period is controversial. From the writings of Justin Martyr, in Rome about 150, we learn that the memos of the Apostles, also called "Gospels," were in common use in the public Sunday services of the Christians, and that these writings, as having been written by the Apostles and their companions, were the main source of the Church's knowledge of the deeds and teachings of Jesus. Nevertheless Justin held no strict theory as to the canon of the four Gospels. The progress of thought in this respect was such that Irenaeus, 30 years later, speaks of the four Gospels as the four foundation pillars of the Church, declaring that the four creatures in Rev. iv 7 symbolized the same Gospels. In Irenaeus we also find the conception that the Gospels, though four in number, were of one Spirit. In writers between Justin and Irenaeus we see the same general high estimation of the Gospels and familiarity with their contents. In reference to the Epistles, especially those of Paul, we find that not only many collections were in existence, but that they were coordinated with the Gospels as a second and essential element in the documents of the New Dispensation, which were now being placed alongside of the Old Testament as belonging to the Church's authoritative Scriptures. The conflict with heresy simply accelerated and sharpened the thought of the Church in these respects. At the outset both heretics and orthodox appealed to the same early documents and traditions. But when heresy began to manipulate these documents, or to forge others as of equal value, or to explain them by fanciful interpretations, such men as Irenaeus, Tertullian, and Hippolytus protested, insisting that only those writings which the Church had always used and received as of apostolic origin were to be accepted as standard and authorita-

tive By 225 the principle of a New Testament alongside of the Old was pretty firmly established and generally adopted throughout the Church. The two great divisions of this New Testament were designated by the terms, almost universally used, "the Gospel" and "the Apostle," corresponding to the Law and the Prophets, and each division was considered inspired. The main elements in "the Apostle" part were the Epistles of Paul, 1 Peter, and 1 John. These were practically universally used. The Acts and the Apocalypse were also quite generally used. In respect to the other New Testament books, though they belonged to the collection in some localities, their use had not yet become universal. On the other hand, in some localities, certain early Christian books, such as 1 Clement, Epistle of Barnabas, and the Didache, were accorded canonical rank. In Rome the principle of apostolic origin was rigorously applied, in Alexandria the spirit was more liberal.

(4) *Period from 225-691 A.D.*—All that now remained was for the Church to come to some agreement as to the differences between the collections in use. As to Alexandria, the writings of Clement and Origen show that doubts as to 2 Peter and 2 and 3 John were freely expressed, while James and Jude were, apparently, not used. A later Alexandrian bishop, Dionysius (c. 250), rejected the Apocalypse. There was much discussion, also, as to the authorship of Hebrews. Finally, however, Athanasius, the great Bishop of Alexandria, in 307, decreed that the canon consisted of the 27 books now included in the New Testament. In the West the question of the disputed books, which there were Hebrews, James, Jude, and 2 Peter, was finally settled by the Council of Carthage in 307, which accepted them as canonical. Usage in Rome and Alexandria and Carthage thus became uniform. In the East, dominated by Antioch and Constantinople, it was long before the question was settled. Eusebius, about 325, had pointed out that seven books were "Antilegomena," i.e., spoken against (by some). Of these, Hebrews and James were generally used in the East. The others, 2 Peter, 2 and 3 John, Jude, and Revelation, were often either unknown or unacknowledged. These were also probably wanting in the earlier Syriac Bibles. Gradually the practice in the East became conformed to that in the West, until at the Council of 691, though not without some inconsistency, the canon of the West—i.e., our present New Testament canon—was recognized. The controversies of the Reformation times left the New Testament canon practically untouched, except in Baptist circles.

IV THE VERSIONS OF THE BIBLE

Versions in Ancient Languages I. *Greek.*

—(1) According to Aristobolus, Pseudo-Hecataeus, and Pseudo-Aristeas, there existed long before Ptolemy II Philadelphus (285-247 B.C.), a translation of the Jewish Law, with which the great legislators and philosophers of Greece became acquainted. While the general character of these writings and the evident desire to magnify Moses throw doubt upon the assertion, it may reflect the confused memory of some translation supplanted by the officially recognized version. If so, it is lost, except as it may have been incorporated in the latter.

(2) The origin of the most important Greek Vol. III —16

version is minutely described in the letter of Aristaeas to his brother, Philocrates. This document relates how Ptolemy II Philadelphus was persuaded by his librarian, Demetrius of Phalerum, to send an embassy to the high priest, Eleazar, with a request for a copy of the Jewish Law and six men from each tribe to translate it. Seventy-two men were dispatched to Alexandria with a copy written in golden letters. They were led to the island of Pharos, where in 72 days they produced a work that greatly delighted Philadelphus as well as the Jews.

The spurious character of this epistle was already recognized by John Louis Vives (1522), Joseph Scaliger (1609), and Richard Simon (1678), and fully demonstrated by Humphry Hody (1684). The author professes to be a Greek, while he manifestly is a Jew. He claims to be employed at the court of Ptolemy Philadelphus, while his ignorance of the King's reign and his familiarity with later conditions render it probable that he lived in the beginning of the first century B.C. His official documents are forgeries, his story is based on mythical and legendary motives, and while it throws light on the Ptolemaic dynasty, and in part on the earlier history of the Jews in Egypt, it can give no aid in determining the origin and date of the version. The name derived from this legend (Septuaginta et duo, Septuagint, LXXII, LXX) is misleading and is used by scholars, if at all, only because of its convenience.

The earliest undoubted external evidence is probably found in Eupolemus. This writer seems to have used a translation of Chronicles. He apparently wrote his *History of the Kings in Judaea* not long before Alexander Polyhistor, who died in 40 B.C. Demetrius, who likewise lived some years before Alexander Polyhistor, seems to have used the Greek Pentateuch. Two books give direct statements as to when and by whom they were translated. A colophon to Esther states that the "letter of Pharaï" or Purnim, by which probably the Book of Esther is meant, was brought to Egypt in the fourth year of the reign of Ptolemy and Cleopatra, by Dositheus and his son Ptolemy, having been translated in Jerusalem by Lysimachus, Ptolemy's son. The year meant is probably either 113 B.C., the fourth year of Ptolemy X Soter II (Lathyrus), or 48 B.C., the fourth of Ptolemy XIV and Cleopatra VII. But the statement itself is unreliable. Of greater value is the preface to Ecclesiasticus (q.v.), in which the grandson of Jesus Siracides refers to books that had already been translated, such as the Law, the Prophets, and some other works, and mentions that he came to Egypt in the thirty-eighth year of Euergetes, who must be Ptolemy IX. Euergetes II (Physcon), consequently in 132 B.C. He does not state how many years he had been in Egypt. The impression is that translations were the order of the day. Many valuable works had already been done into Greek, others remained untranslated. The Law, no doubt, was first translated. This may have been done already in the time of Ptolemy II Philadelphus, as many scholars think. The discovery of the Elephantine papyri (q.v.) has tended to enhance the probability of certain statements in the Aristaeas letter as to Jewish settlements in Egypt in earlier times, and render the ascription of the version to the age of Ptolemy II Philadelphus more plausible. Papyri from the reign of Ptolemy III Euergetes

getes (247-221) also mention a town called Samaria in the Fayum, as well as some Jewish settlers in Pseumis, and this King greatly favored the Jews in Alexandria. The version is likely to have grown out of the necessities of synagogue and temple rather than out of royal curiosity. It was an oral, and then a written, *targum*, or interpretation, accompanying the reading of the text, before it became a substitute for the Hebrew. Such a *targum* to the Law may well have developed in the synagogues of Alexandria. But it is more likely that the Psalter was translated for use in a temple. Particularly in the Temple of Leontopolis (see ONIAS'S TEMPLE) the need of a version of the Psalter for liturgical purposes would be felt. The translation of the whole Bible was probably completed by the beginning of our era.

Our knowledge of the version is derived from printed editions, extant manuscripts, translations made from it, and quotations in early writers. The *editio princeps* appeared in the Complutensian Polyglot (1514-17), based chiefly upon the manuscripts numbered 68, 108, and 248 in Holmes and Parsons's collection, the Aldine, printed in Venice in 1518, was based on Holmes and Parsons's 20, 68, and 121, the Sixtine edition was published in Rome (1587), and was based on Codex Vaticanus, but supplied and altered by other manuscripts, the Grahian edition, based on Codex Alexandrinus, appeared at Oxford, in 1707-20, the magnificent and indispensable edition of Holmes and Parsons, for which 297 separate codices were more or less carefully collated, among them 20 uncials, was published at Oxford, in 1798-1827. Tischendorf was able to use Codex Sinaiticus for his editions (1850 ff.), and Nestle-Corza's facsimile of Codex Vaticanus for the edition of 1887. Saele's Cambridge edition (1887-94 and 1895-99) was based on the Vatican manuscript, but gave the reading of some of the leading uncials. Of the larger Cambridge edition Brooke and McLean have published vols. i-iii (1906-11) containing the Pentateuch. Its textual apparatus is based on a more accurate collation of the manuscripts and a more extensive material than that of Holmes and Parsons, but it does not attempt to present the readings of all manuscripts, ancient versions and patristic quotations, as did the Oxford edition.

The extant manuscripts are in part uncials or majuscules, and in part cursives or minuscules, some are approximately complete Bibles, others give only portions of the Bible. Among the uncials the most important are Codex Alexandrinus (A), written in the fifth century, probably in Egypt, now in the British Museum, published in autotype facsimile in 1881-83, Codex Vaticanus (B), probably written in Egypt after 367 A.D., published in a facsimile by Corza (1881), and in a more accurate photographic reproduction in 1890, Codex Ephraemi Syri Rescriptus (C), written in Egypt in the fifth century, now in Paris, edited by Tischendorf in 1845, Codex Sinaiticus (S), written probably in the fifth century, now in Leipzig and St. Petersburg, published by the discoverer, Tischendorf, partly in Leipzig, 1846, 1855, and 1857, partly in St. Petersburg, 1892 and 1897, Codex Ambrosianus (F), of the fifth century, now in Milan, published by Ceriani in his *Monumenta sacra et profana III* (1864), Codex Sarravianus (G) of the fifth century, now in

Leiden, Paris, and St. Petersburg, published in 1897, and Codex-Marchalianus (Q), of the sixth century, now in Rome, published in heliotype, 1890, are of particular value because of their Hexaplaric notes and signs. Some recently discovered papyri fragments may date from the third century. Of the numerous cursive manuscripts, none is likely to be older than the ninth century, though some may have been made from uncials older than those in our possession. They manifestly belong to different families, but the classification is as yet imperfect. Of especial interest is Codex Chisianus (88), now in Rome, possibly written in the eleventh century, containing a different translation of Daniel from that of the uncials. Mention should also be made of the Codex Washingtonianus of which Deuteronomy and Joshua have been published by Sanders in *The Old Testament Manuscripts in the Pierer Collection* (1910).

No extant manuscript seems to be older than the three recensions of the text undertaken in the beginning of the fourth century by Lucian in Antioch, Hesychius in Alexandria, and Eusebius and Pamphilus in Caesarea. But some codices unquestionably have preserved independent and earlier textual traditions, while others represent later corrupted forms of these standard texts. Among the daughter versions, the Gothic, Armenian, Georgian, and Slavonic appear to have been made from a text of the Lucianic recension, the Bohemian Egyptian seems to reflect the Hesychian recension, while the Sahidic, in part at least, is earlier in origin, the Ethiopic version has in certain books a marked similarity to Codex Alexandrinus, while elsewhere it apparently was based on Greek manuscripts not known to us, the Arabic version of the Prophets also shows kinship to Codex A, the Old Latin is earlier than Origen, the Syriac version of Paul of Tella was made either from a copy of Origen's Hexapla or from the column edited by Eusebius.

Between 220 and 250 Origen wrote his Hexapla, giving in separate columns the Hebrew, the Hebrew in Greek letters, the officially received Greek text, Aquila, Symmachus, and Theodotion, and in some parts a fifth, sixth, and seventh Greek translation. From the critical editors of Homer he borrowed the signs with which he indicated what was found in the Greek, but not in the Hebrew (obelus), what was found in the Hebrew but not in the Greek, and therefore supplied from some other version (asterisk), and the end of each such passage (metobelus). The original work is lost. Part of a copy made in the tenth century was discovered by Mercati in 1806. As no passage attested by Origen is found in the Old Latin, important changes do not seem to have been made in the version for some time before Origen. All the more startling are some of the variations found in Jewish and Christian writers of the first and second centuries. They apparently point to the existence of another version or text recension already at the end of the first century A.D. On the other hand, there is strong evidence that both Origen's text and that represented by the Old Latin exhibited many peculiarities and numerous additions not found in the original translation. As this translation seems to have been produced by many men, in different places, from the middle of the third century to the beginning of our era, the value of its

different parts is naturally not the same, either from a literary point of view or as a means of discovering the original Hebrew and Aramaic text. With all its natural shortcomings, it is on the whole a close and faithful rendering and constitutes our earliest witness to the original. Recent investigation of the Greek papyri found in Egypt has increased our knowledge of the Hellenistic dialect in which it is written.

As the differences between the Greek version and the current Hebrew text, occasioned largely by expansions in the latter, were observed in an age intent upon textual purity, a desire for a more accurate translation, particularly of some books would naturally arise. Thus 2 Esdras appeared in addition to 1 Esdras, an edition revised by Theodotion beside the Chigi Daniel, the much longer Job known to Theodotion beside the shorter, the longer Jeremiah already familiar to New Testament writers beside the shorter, and possibly a new form of Judges. It is quite probable that new versions of certain books were thus produced not long before Josephus at Antioch or Jerusalem.

(3) In the reign of Hadrian (117-138) Aquila of Sinope, in Pontus, a proselyte to Judaism, made a complete version of the Hebrew Bible, known through ancient writers, fragments of the Hexapla, and a portion found in 1897 by Burkitt among material brought from the Genizah of Cairo to Cambridge. This translation was slavishly literal and removed many inaccuracies of the current version.

(4) Theodotion of Ephesus, another Jewish proselyte, probably in the time of Marcus Aurelius (161-180), executed a less literal, yet faithful translation, preserved in part through ancient writers and fragments of the Hexapla, manifestly on the basis of an earlier text revision.

(5) Symmachus, an Ebionite of Samaritan birth, probably in the reign of Commodus (180-192), produced a more elegant version on the basis of already existing translations.

(6) The most elegant of all versions was Quinta, found by Origen at Nicopolis, near Actium, of uncertain age, possibly a relic of the early Christianity of Ephesus.

(7) Decidedly of Christian origin is Sexta, found at Jericho, c.217.

(8) Of Septima little is known.

(9) The Græcæ Venetæ, found in a Venice manuscript of the fourteenth century, is a version of the Pentateuch, Ruth, Proverbs, Canticles, Lamentations, and Daniel, made by a Jewish translator, possibly Elissæus, c.1360. It attempts to reproduce Attic Greek, but uses the Doric dialect for the Aramaic portions of Daniel.

II *Latin*—(1) There probably existed before Jerome a number of Latin versions. Of these the oldest may date from the end of the second century A.D. As Cyprian is the earliest writer acquainted with it, and as northern Africa was the centre of Latin literature at this time, it has been supposed that the version originated in Carthage. The vulgar dialect in which it is written may, however, have been spoken in other parts of the Empire, and it has been suggested that the relations of the version to a type of Greek text prevailing in Syria points to Antioch as its birthplace. Still others think of northern Italy. It is possible that manuscripts and quotations from early Latin writers represent versions produced independently in different centres of Antiochian and

Italian recensions of an original African text. The Old Latin is the most valuable witness to the Greek text before Origen. P. Sabatier published in 1739-49 from quotations in some of the Fathers and such manuscripts as were then available an edition of the text. Many new manuscripts have been discovered since then. The additional material has been published by Munter, Ranke, Belsheim, Burkitt, and others.

(2) Jerome in 382 was requested to revise this Latin Bible. His first revision was followed after 392 by another, in which he used the obelus and asterisk of Origen. But already, in 390, he had begun his direct translation from the Hebrew, which as a version is a masterpiece, and was destined to become the Bible of the Occident. In this Vulgate version the unrevised books of Ecclesiasticus, Wisdom of Solomon, 1 and 2 Maccabees, and Baruch, as well as the first revision of the Psalter, represent the Old Latin, while Tobit and Judith were translated from Hebrew or Aramaic. Only gradually the new translation won its way. It was exposed to corruption, and in spite of the labours of Cassiodorus, Alcuin, Lanfranc, and others, was found by Roger Bacon to be "horribly corrupted." The Mazarin Bible was printed in 1452, Gutenberg's Psalter, 1457. For the improvement of the Latin text the Hebrew and Greek were used in the Complutensian and the Wittenberg Bibles, by Osander and Pellicanus. Good manuscripts were used by Robert Stephanus for his edition (1528), which became the foundation of the Vulgate, officially recognized as the Bible by the Tridentine Council (1546), and printed with the approval of Sixtus V (1590) and Clement VIII (1593). A thoroughly critical edition does not yet exist.

(3) Among the later Latin translations the following are most noteworthy. The very literal version of Sanctus Pagninus (1528), revised by Servetus (1542), by Stephanus (1557), by Arias Montanus (1572), that of Sebastian Munster (1534-35), the excellent but incomplete work of Leo Jude (1541-42), the elegant version of Sebastian Chateillon (1546-54), the faithful rendering of Immanuel Tremellius and F. du Jon (1571-79), the painstaking version of Johannes Fischer—"Piscator" (1601-07), and those by Cocceus (before 1609), Sebastian Schmidt (1696), Jean le Clerc (1693), Charles François Houbigant (1753) for the first time from a critically restored original, J. A. Dathe (1773-94), and Schott and Winzer (1816).

III *Aramaic*—(1) The Peshita, or Syriac Vulgate, is possibly the earliest of the translations that were made into various Aramaic dialects. It is evidently the work of many men. Concerning the Jewish origin of Proverbs and Chronicles there can be no doubt, and there is no indication of a different origin in the case of the Pentateuch. But in the Psalms and the Prophets the Greek version has clearly been used, either by the original translator or by a later editor, who probably was a Christian. The Hebrew text used shows that no part of the version is likely to be older than the first century A.D., and it may not have been completed until the beginning of the third. It became the Bible of the Edessene church, as the Greek version passed from the synagogue to the Greek churches. The text was printed in the Paris (1645) and London Polyglots (1667), by Lee (1824), at Urmia (1852), by Ceram (Codex Ambrosianus, 1876-83), and at Mosul

(1887) A good discussion of the version may be found in Heller's *Untersuchungen über die Peschita zur gesammten hebraischen Bibel* (1911)

(2) A translation into Syriac from the Greek text of Origen's *Hexapla* was made in Alexandria by Paul of Tella for the Monophysite church in 616, published by Ceriani (1874). It is of great value for the restoration of Origen's text

(3) Numerous fragments have been found of a translation made in Syria, and in vogue among Christians, dating from the fourth century. These have been published by Mrs Lewis in *Palestinian Syriac Lectionary* (1897) and Supplement (1907), and Gwynn, *Remnants of the later Syriac Versions* (1909)

(4) Of the two Targums written in Judean Aramaic, though edited in Babylonia, that are ascribed to Onkelos and Jonathan, the former is probably the older. The translation accompanying the reading of the Law was at first given orally, written renderings to aid the memory may have been gathered in the age of Onkelos (= Aquila), but the final edition cannot have been made before c 400 A.D. The Prophets called for and permitted greater freedom in interpretation, written translations may have begun to appear in the time of Jonathan (Theodotus?), but the final edition is likely to have been made after that of Onkelos. The so-called Jerusalem Targums I, II, and III were not edited before the end of the seventh century, as allusions to the wife and daughter of Mohammed show, while some of the material may be very old, as a reference to John Hyrcanus indicates. The Targums to the Hagiographa belong to the seventh century, to Esther there are two, to Ezra, Nehemiah, and Daniel there is none. The Targums are printed in the Polyglot and Rabbinic Bibles, and by Behmer (Onkelos) and Lagarde (Prophets and Hagiographa). Recently discovered Yemenite manuscripts give a more trustworthy supralinear vocalization.

(5) The Samaritan Targum is based on the Hebrew text adopted by the Shechemite community. It has been published in Paris and London Polyglots and by Petermann-Volters (1872-91). Its age is uncertain. As the "Samaritan" quoted in hexaplaic scholia seems to be a Greek translation of this Targum, it probably existed before Origen's time.

IV *Egyptian*.—(1) The Sahidic version, of which pairs have been published by Ciasca, Erman, Maspero and Lagarde, is probably the oldest of the Egyptian translations, and may go back to the beginning of the third century, as it seems to have been made from a Greek text earlier than that of Origen, at least in the case of Job.

(2) Of the Akhmimic, Fayyumic, and Memphitic recensions of a Middle Egyptian version, somewhat later than the Sahidic, fragments have been published by Zoega, Quatremère, and Maspero.

(3) The Bohairic version, of which Lagarde has published the Pentateuch and Psalter, and Tattam the Prophets, is no doubt the youngest of the Egyptian versions. It may belong to the end of the fourth century.

V *Ethiopic*.—The Ethiopic version was made from the Greek. It is probably the work of different translators from the fifth to the seventh centuries; and it is held by some scholars that our manuscripts represent two different trans-

lations. In some places it seems to have preserved a purer text than that of Origen. In addition to the books of the Greek Bible, it included also such works as Enoch, Jubilees, and Fourth E-dias. The Octateuch was published by Dillmann (1853-71) and by Boyd (1900), Joel, by Dillmann (1879), Jonah, by Wright (1857), Obadiah and Malachi (1892), Lamentations and Isaiah (1893), by Bachmann, the Psalter, by Rodiger (1815), Dillmann published the Apocrypha (1894) and edited texts of Enoch (1851), Jubilees (1859), and Ascensio Isaie (1877), Charles edited Jubilees and Ascensio Isaie (1899), Flemming published a critical text of Enoch (1902), and Charles, an edition of Enoch based on a still larger number of manuscripts (1909).

VI *Gothic*.—A few fragments of Ulfilas's translation of the Old Testament have been found and published by Mai and Castiglione (1817), Gabelentz and Loeb (1843), Massmann, Ulfilas *Die heiligen Schriften des alten und neuen Bundes in gotischer Sprache* (1893-97), and Steinberg, *Die gotische Bibel* (1908-10). The version was made from a Greek text of the Lucianic recension, obtained in Constantinople about the year 350 A.D. Consult Steinberg, *Die griechischen Bestandteile der gotischen Bibel* (1911).

VII *Armenian*.—According to Moses of Choren and Lazar of Phazis, who lived in the fifth century, this version was made between 396 and 430 by Mesrop and Sahak. It was translated in part from a Greek Hexaplaic text, whose obeli and asterisks have survived in some manuscripts, in part from a text of the Lucianic recension. The oldest manuscript at Etchmiadzin is dated 1151. This version was printed in Venice in 1805 and 1890. Its history has been written by Movsesyan (St Petersburg, 1902).

VIII *Georgian*.—Moses of Choren affirms that this version was the work of Mesrop. Whether this is correct or not, it existed in the fifth century and was made from a Greek text. A manuscript Psalter dates from the seventh century, and a manuscript of the Bible at Athens dates from 978. The version has been printed in St Petersburg (1816).

IX *Slavonic*.—The translation of Cyril and Methodius was probably into the Old Slavonic of the Balkan Peninsula, made before they went to Moravia, in the middle of the ninth century. A manuscript Psalter in the glagolitic alphabet belongs to the eleventh century. Esther seems to have been translated from the Hebrew, (Chronicles, Ezra, Nehemiah, Jeremiah 1-xxv, xlii-l), and some of the Apocrypha from the Latin Vulgate, the bulk of the Bible from a Greek text of the Lucianic recension. This Old Slavonic Bible was printed at Ostrog (1581). Some important apocryphal books in the Old Slavonic have been published in recent times. "The Secrets of Enoch" is known only in this version.

X *Arabic*.—(1) There is some evidence that the Law and the Prophets were known through Arabic versions at the end of the seventh and in the eighth century, but nothing has been preserved of them.

(2) The first extant version is that of Saadia ben Joseph al-Fayyumi, who was born in Sura and died 942 A.D. Of this translation, written in Arabic with Hebrew letters, the Pentateuch, Isaiah, and Proverbs have been published by Joseph and Hartwig Derenbourg (1893-96). Frag-

ments of other versions also made by Jews have been found. Important are the translations of Japhet ben Ali, the Karaite, of which the Psalter and Daniel have been published.

(3) Abu Said, a Samaritan, made a translation of the Pentateuch c 1070 A.D.

(4) In many Coptic manuscripts the text is accompanied with an Arabic translation, and other Arabic manuscripts have manifestly been translated from the Coptic.

(5) An Arabic version of the Latin Vulgate appeared in 1671.

(6) The Arabic text in the Paris and London Polyglots is, in certain books, a translation of the Syriac Peshita, made in the thirteenth century. Books translated from the Hexaplar Syriac have been edited by Lagarde and Baudissin.

(7) Certain parts of the Arabic Bible in the Paris and London Polyglots are translated from a Greek text similar to Codex Alexandrinus. For versions of the New Testament in ancient languages, see section *The Text of the New Testament*.

Versions in Modern Languages With the development of the different nationalities and languages of modern Europe, versions of the Bible in the vernacular became a necessity. The history of these different versions in most cases exhibits the same general features. In each country one or two out of a number of independent translations became most commonly used and, either formally or informally, adopted by the national Church. Successive revisions of these national versions have been made necessary by the progressive changes in the vernacular and by the constant improvement in biblical scholarship. Furthermore, in nearly all European languages, independent versions, of various grades of accuracy and popularity, have been frequently published. The following account does not register all the very numerous versions that have been made. It attempts to indicate merely the main points in each national version, with only incidental reference to the most important of the many independent private translations.

English Versions—The translation of the Scriptures into the Anglo-Saxon tongue began as early as the eighth century. Caedmon put parts of the Scripture narrative into verse. Bede (died c 735) translated the Gospel of John. Aldhelm and others made metrical versions of the Psalms. In King Alfred's time other portions, as the Commandments and the Psalter, were translated. Ælfrie (c 1000) translated parts of both Testaments. There was, however, previous to the Norman conquest, no complete and generally used Anglo-Saxon Bible. After the Conquest (1066), under the influence of the Normans, the old Anglo-Saxon became English. During the thirteenth century a revival of religious interest in England led to a number of attempts to translate the Latin Bible into the common tongue. Osm, an Augustinian monk, wrote the Ormulum, a metrical paraphrase of the Gospels and Acts. Others treated Genesis and Exodus in the same way. Lator, by William of Shoreham (c 1320), Richard Rolle, and others, prose versions of the Psalter were made. But these efforts did not produce an English Bible. Down to 1300 only the Psalter had been translated. Twenty-five years later the whole Bible was circulating in a popular English version that common people could easily understand. This great achievement was

mainly due to John Wiclif (died 1384). With his fellow-workers, Nicholas of Hereford and John Purvey, Wiclif completed the entire Bible by 1382. The New Testament part was probably Wiclif's own work. In 1388 the whole was revised by Purvey and made public. The work was, of course, based on the Vulgate. Its avowed purpose was that "pore men" might be able to read the truth. It was welcomed by such, and its effect on the religious life of England was profound. Yet it did not become a national version. Its popularity led to attempts to suppress it, and besides the language was changing so rapidly that many words soon became obsolete. But the seed had been sown, and in due time the Reformation was in progress in England. The adherents of the Reformation keenly felt the need of a translation, especially of the New Testament, in the English of the day. But, though printing was invented in 1450, it was not until 1525 that any part of the English Bible was put into type, and this was done on the Continent. In this respect England was far behind Germany and other countries. The printed English Bible began its history with the New Testament of William Tyndale. His evangelical views compelled him to flee from England to the Continent, and during 1524 and 1525 he was at Wittenberg, Cologne, and Worms. His New Testament was published at Worms, 1525-26, after an unsuccessful attempt to bring it out at Cologne. Copies of the edition at once began to find their way into England. Their sale was prohibited by Parliament. Tyndale published a corrected edition in 1534. Before his death, in 1536, five or more reprints had been issued by Antwerp publishers, some of which were quite inaccurate. This large circulation shows how ineffectual was Parliament's prohibition. In 1530 Tyndale published, probably at Wittenberg, a translation of the Pentateuch. He also translated the historical books from Joshua to 2 Chronicles, but did not live to publish them. His translations were made from the Hebrew and Greek originals. He was very careful in his choice of English words, and the value of his version is mainly due to the fact that its English was the English of the people, not Anglicized Latin. It was also truthful, impartial, and fearless. Because of its intrinsic excellence it became a standard or model text by which all subsequent English versions, as well as the English language, have been most profoundly influenced. This version, especially because of its annotations, was heartily disliked by the King and many of the clergy. But something had to be done to meet the demand for an English Bible. Miles Coverdale (1488-1568), a clergyman of character and ability, at the suggestion of friends in high station, undertook a new translation. He began his task in November, 1534, finished the translation in October, 1535, and in the same year published the first complete English Bible, including the Apocrypha. It was dedicated to Henry VIII. Coverdale evidently borrowed largely from the labors of others. His New Testament was little more than a superficially revised Tyndale. In the Old Testament he depended largely on Tyndale and on Luther's German translation. The work was printed on the Continent, but published in England. Succeeding editions in 1537, 1539, 1550, and 1553 showed much care in revision. In 1539, through the King's indirect permission, the way was opened for the wider

circulation of Coverdale's and other versions, Tyndale's alone being strictly proscribed. In 1537 a large folio Bible, bearing the name of Thomas Matthew as translator, appeared, dedicated to the King. It was, in reality, but a reprint, slightly changed, of Tyndale and Coverdale. In this Bible Tyndale's translation of the Old Testament books from Joshua to 2 Chronicles appeared in print for the first time. The whole was, doubtless, the work of John Rogers, Tyndale's friend and literary executor. The printers, Grafton and Whitechurch, cleverly succeeded in obtaining the royal license, with its exclusive privileges for their publication. "Matthew's" Bible thus became, practically, the first authorized English Bible. In 1539 a revision of this Bible was prepared by Richard Taverner and published, the first complete Bible ever printed in England. Meanwhile Thomas Cromwell was planning the publication of a Bible that might be formally authorized and at the same time acceptable to all the clergy. Coverdale was one of several employed by him to prosecute the work. The sheets were first printed in Paris. These were, however, seized and in part destroyed by the Inquisition. The presses, type, and other material were then removed to England, where the work was published in 1539. Copies of this Bible, which was called the "Great" Bible on account of its size, were ordered to be placed in the parish churches, so that any who desired might read. Until 1568 this Bible held the position of an authorized version. The Scripture passages of the English Prayer Books of 1549-52 were taken from it. Its Psalter is still in use in the English church. During the last seven years of Henry's reign his influence and power were directed against any further efforts to popularize the Bible. With the accession of Edward VI (1547), the proscribed editions began to be reprinted and freely circulated. It is estimated that 75,000 copies of the Scriptures were printed during Edward's reign. Then came the reaction under Mary (1553-58), when the Scriptures were again proscribed and the leaders of the Reformation were persecuted, martyred, or compelled to flee to the Continent. Many of the refugees settled at Geneva, where they published an English New Testament in 1557 and the whole Bible in 1560. These were handy editions, in plain type, with chapters divided into verses and a marginal commentary. This Geneva Bible soon eclipsed all others in popularity. In 1568, under the leadership of Archbishop Parker, the "Bishop's Bible," the joint labor of eight English bishops, was published. Though it thus became the authorized version, it was too expensive to be popular.

The Douai Version.—The strength of the Reformation movement in England drove many English Catholics to France. At Rheims and Douai English colleges were established by these refugees for the purpose of educating young men for the priesthood. In 1582 an English New Testament, with annotations, was published at Rheims by John Fegny. The work was completed by the publication of the Old Testament in 1609 at Douai. The English Bible used by Roman Catholics is thus known as the Douai Bible. It is characteristic of this translation that it was made from the Vulgate and not from the Greek and Hebrew originals. This was because of the decree of the Council of Trent making the Vulgate the standard Bible of the Roman church.

The Rheims Testament of 1582 contains an elaborate preface setting forth the value and proper use of a popular version and defending the accuracy of the following translation. It was a serious, conscientious attempt, hampered, indeed, by a compulsory dependence on the Vulgate, but not altogether blind to the necessity, at times, of falling back on the Greek. Its English is not so idiomatic as that of Tyndale's version. The renderings that have called forth ridicule, such as "the Pasche and the Azymes" (Mark xiv 1), "the justifications of our Lord" (Luke i 6), and the like, are not so numerous as is often implied, nor were they the result of carelessness on the part of the translators. In subsequent editions, such as those of Dr Challoner (London, 1752) and Dr MacMahon (Dublin, 1791) and more modern reprints, these "inkhorn" expressions are rare. In fact, the modern editions of the Douai Bibles show marked improvement over those of 1582 and 1609.

Authorized Version.—At the Hampton Court Conference, 1604, James I was petitioned to give the Geneva Bible preference over the Great and the Bishops' Bible, or else to authorize a new translation of the Scriptures. James was pleased with the latter proposition, and on July 22 directed the Archbishop of Canterbury (Baneriot) to begin the undertaking. The work was done by a commission of 47 members, following directions suggested by the King. In 1611 the translation was completed and published, with a fulsome dedication to the King and a wholesome explanatory and hortatory preface to the reader. According to the preface the translators, by a careful comparison of all preceding versions, sought to make a better one than any of the many good ones then in use. The new Bible was in good demand at once. Five editions were issued in three years. It found, however, a formidable rival in popularity in the Geneva Bible, yet its manifest superiority gave it inside of 50 years the field, and it became the Bible universally used by English-speaking people. Its influence on the English language has been immeasurable.

The Revised Version.—From 1702 to 1870 many schemes for further revision were proposed, and many private translations of the whole or parts of the Bible were published. In 1870 the Convocation of Canterbury entertained a plan for the revision of the Authorized Version of 1611. The work was done by two committees—the one British, the other American—the latter being advisory only. Each committee was divided into an Old Testament and a New Testament company. After long and painstaking labor the Revised New Testament was published in 1881 and the whole Bible in 1885, by the University Presses of Oxford and Cambridge. The sale of the Revised New Testament was at first immense. Many unauthorized reprints appeared in America. It is estimated that in less than one year after issue 3,000,000 copies were sold on both sides of the Atlantic. Though the Revised Bible has been subjected to severe criticism, it has steadily won favor among the more educated circles in preference to the version of 1611. In 1902 this version began to be issued by the British and Foreign Bible Society. This should be the best proof of its general acceptance, as the Society is restricted to the issue of Bibles in current use in English. In 1901 the surviving members of the American

Committee published an *American Revised Version* (New York), embodying the readings they had suggested to the British Committee, and such other improvements as had occurred to them in the interval.

Celtic Versions—In the British Isles there were no Celtic versions before the Reformation. An Irish New Testament was first published in 1595, the Old Testament in 1685. O'Kane's Irish Testament was issued in 1858. In Gaelic a New Testament appeared in 1690, the whole Bible in 1783-1801. It has since been revised in 1826, 1860, and 1880. A Manx version was made in 1770-72. In Cymric a New Testament was printed in 1567, the whole Bible in 1588. A Breton New Testament was published in 1827, another in 1847, the Bible in 1860.

German Versions—The earliest Germanic versions did not include the whole Bible, but generally only the Psalter and the Gospels. The *Monsee Fragments*, of the year 738, rescued from old book covers, belonged to a bilingual copy of the Gospels, Latin on the left, old Bavarian German on the right. The "German Talian" is a harmony of the ninth century in the East Frankish dialect. Such manuscript versions were numerous and continued to be made even after the invention of printing. Of printed German versions before Luther's, a register has been made of 18 editions of the entire Bible, 22 of the Psalter, and 12 of other portions, all between 1466 and 1521. The earliest was the Bible published by Mantel, Strassburg, 1466. Next appeared Eggenstein's, Strassburg, 1470, and Pfanzmann's, Augsburg, 1473. None of these early editions became popular. They were all made from the Vulgate, and by translators who were not masters of the German tongue. It was Luther's translation that made an epoch in the history of both the German Bible and language. Luther began translating as early as 1517, but not until 1521 did he decide to make a new version of the entire Bible. The New Testament was completed during his confinement in the Wartburg (1521-22), and published at Wittenberg by Melchior Lotther, Sept. 21, 1522. A second edition was issued in December of the same year. The Old Testament appeared gradually, the Pentateuch in 1523, other parts later, until in August, 1534, the first complete edition of Luther's Bible was published, probably by Hans Lufft of Wittenberg. The character of this version was such that its author has been called the German translator. It was based on independent study of the original Hebrew and Greek, coupled with marvelous exegetical insight and a remarkable ability to express ideas clearly in strong, pure German. It was so popular that 10 editions of the Bible and 16 of the New Testament were issued in Luther's lifetime, under his supervision, besides over 50 independent and unauthorized reprints. Other German versions made during this period have been almost forgotten, though the excellent translation of the Prophets made by Donck and Hülzer (1527-29), of which 10 editions in quick succession were published, deserves to be mentioned. It appeared before Luther's translation of the Prophets and was made from the Hebrew and Aramaic. From Roman Catholic circles versions were issued in opposition to Luther's, notably Spener's, 1526, Dittenberger's, 1534, and the Cologne Bible of 1630 and 1632, commonly called the "Catholic Bible." Of revisions of Luther's version, the "Dutch-

ge-eheue Bibel," and an official revision of 1892 ff., called the "Probeibel," are the most recent and important. Of the many independent German versions since Luther the most important are Piscator's, 1602, De Wette and Augustin's, 1809-69, E. Reuss's, 1892-94, E. Kautsch's (Old Testament), 1890-94 (2d ed., 1896, 3d ed., 1913), C. Weissbach's (New Testament), 7th ed., 1894, and J. Weiss (2d ed., 1907).

In Switzerland Luther's version became known at once. The delay in the publication of the fourth and fifth parts of the Old Testament led to an independent translation of these portions at Zurich in 1520. The Zurich Bible, issued in 1530, was largely identical with Luther's. This has been revised from time to time, most recently in 1895 (New Testament and Psalms only).

Dutch Versions—During the fourteenth and fifteenth centuries a Dutch version, made perhaps as early as 1300, was represented in many manuscripts, none containing the whole Bible. On the basis of this version a portion of the Bible was printed at Delft in 1477. In 1478 the "Cologne Bible," the first complete Bible in Low German, was published. In 1522 a Dutch revision of Luther's New Testament was printed at Basel and Amsterdam. In 1524 an independent Dutch translation of Erasmus' Greek New Testament, "in goede platte Duytsche," appeared at Delft. This was followed in 1526 at Antwerp by a Bible of the Reformation period. On the Roman Catholic side a New Testament was printed in 1527, the whole Bible in 1548. In Protestant Holland many Bibles were issued by the various branches of the Reformed Church. In 1632 the Dutch Bible was officially revised by order of the States-general and the Synod of Dort. This was published in 1636, and became known as the "Staaten Bibel." Of modern editions, the most noteworthy is the revision undertaken at the request of the synod by Kuenen and his disciples, known in Holland as the "Synod Bibel" (New Testament, 1866, Old Testament, 1897-1902).

Scandinavian Versions—Parts of the Bible existed in Old Norwegian and Old Swedish as early as the twelfth and thirteenth centuries, somewhat later in Old Danish. Under the auspices of Christian II a New Testament was issued in Danish in 1524, but it was not well received. In 1529 a Danish New Testament and Psalms by Christen Pedersen (1480-1554) was published at Antwerp, in 1531 a new and improved edition, and in the same year a Danish translation of the Psalms. But it was not till 1550 that the whole Bible was printed in Danish, the version being based on Luther's German. A revision of this in 1605-07 was not popular. After the separation of Norway (in 1814) a revision for Denmark alone was made in 1819. In 1872 a second revision was published. In Norway revisions were published in 1830, 1857-60, and 1890, and of the New Testament in 1904, as well as a new version in the "landsmaal" of the New Testament in 1889, new ed. in 1899. In Icelandic a New Testament was issued in 1540, the whole Bible in 1584. This was revised in 1644, and a number of times after. In Sweden a translation of the New Testament, made by Laurentius Andree and Olaus Petri on the basis of Luther's version, was printed in Stockholm in 1526. Parts of the Old Testament appeared in 1536, and in 1540-41 the entire Bible, translated by Laurentius Petri, Lauren-

tus Andree, and Olaus Petri, was published in Stockholm. The most important revisions have been those by Johan Gezelius, father and son (1674-1724), Odman and Tingstadius (1774-93), and Toien, Lindgren, and Melin (1853-79). The new version of the New Testament, which since 1883 is officially recognized by the Lutheran church, is the work of Sundberg, Toien, and Johanson. Of independent translations, those by Thomander and Waldenström of the New Testament, and by Fjallsted and Melin of the whole Bible, have enjoyed the greatest popularity. Perhaps the most elegant and scholarly versions of biblical books are those by F. O. Myrberg.

French—The earliest versions on French soil were in the Teutonic dialects. Not until the twelfth century was any part of the Bible translated into French. The first printed French Testament appeared in 1477 at Lyons. In 1487 a large edition of the Bible was issued, dedicated to Charles VIII. This was followed by other sumptuous expensive editions. Of a more popular character were the translations by J. Lefebvre d'Étaples (New Testament 1523, Old Testament, 1528, lacking the Psalter, Bible, 1530), all based on the Vulgate. In 1540 this Bible was placed on the Index. The Louvain Bible of 1550, though only a slightly altered Lefebvre d'Étaples, became the generally used Roman Catholic Bible of France. It was revised in 1608, 1621, and 1647. More modern versions, to keep pace with the development of the French language, have appeared from time to time, such as the New Testament of Richard Simon, 1702, and the Port Royal Bible of 1667-87. Of modern Roman Catholic versions, Lasserre's *Gospels*, 1887, is excellent, though not approved by the Church authorities. On the Protestant side Olvetan (Peter Robert), Calvin's cousin, made a translation which was issued at 1535 at Serrières at the expense of the Waldenses. In subsequent editions this version was greatly improved. It was revised in 1588 by the Geneva pastors. In 1721 and 1744 J. F. Ostervald made a more modern version, which succeeded Olvetan's as the Bible of French Protestantism. Ostervald's version was revised, not very successfully, in 1805 (Old Testament) and 1835 (New Testament). Better modern revisions of the same are those of Ségond, 1874 and 1880, and the New Testament of Ollivarez, 1872, and that of the French Bible Society, 1891. Other good modern translations are those of Perier-Gentil, Neuchâtel, 1817 ff. (Old Testament), Eug. Annand, 1858 (New Testament), A. Rilliet, Geneva, 1859 (New Testament), E. Stapfer, Paris, 1889 (New Testament), E. Reuss, Paris, 1874 ff., Ledram, 1886-96, Zadoc Kahn, 1901 ff., and Ciampun, revised by the Jesuits, 1907.

Italian—The first Italian version was made probably by Waldensian missionaries, in north Italy in the thirteenth century. The first printed Italian Bible was that of Nicola de Malherbia, Venice, 1471. The better translation of Ant. Brucellini, Venice, 1530-32, based on the Hebrew and Greek, was prohibited. Other early versions were those of Zaccaria, 1532, and Giglio, 1551, both of Venice. From Protestant circles an Italian New Testament was issued at Lyons in 1551, and a Bible at Geneva in 1562. In 1607 Giovanni Diodati, of Lucerne, issued a Bible at Geneva. In 1776 the Archbishop of Florence, Ant. Martini, published a Bible at

Turin, which, being favored by the Church, was the version adopted by the British and Foreign Bible Society in their Italian editions of the Sacred Scriptures. A Roman Catholic revision of the Martini Bible was issued in 1880.

Spanish—In Catalonia a version of the New Testament was made as early as the fourteenth century. A Bible was printed in Valencia in 1478. In Castile, on account of the large number of Jews, Spanish versions of the Old Testament were not uncommon in the fourteenth and fifteenth centuries. The first printed Spanish New Testament was issued at Antwerp, 1543, the second at Geneva, 1546. In 1553 an Old Testament was printed at Ferrara, a double edition, the joint work of Jews and Christians. The first Spanish Bible, translated by Cassiodoro Reyna, was published at Basel, 1560, revised at Amsterdam in 1602. These books circulated in the Netherlands and Italy, but were prohibited in Spain. In 1790 the Roman Catholic Miguel published a Bible at Valencia which became commonly used, and was reprinted in 1828 by the British and Foreign Bible Society for distribution in Spain.

In *Portuguese* a new Testament was printed in 1691 at Amsterdam. In 1712-19 the same translator, J. F. d'Almeida, published the Pentateuch and Historical Books. In 1778 a Bible, the first printed in Portugal, was published at Lisbon, the work of A. P. Figueiredo. This version has been reprinted by the British and Foreign Bible Society.

Slavic Versions—The beginnings of the Slavic versions go back to the efforts of Cyril and Methodius in the ninth century. The first version for general use among the Slavs of Russia was made in the fifteenth century. In 1581, under the auspices of Prince Constantine, a Bible was published at Ostrog. A revision of this was published in 1663 at Moscow. In 1753 a more thorough revision was made under the auspices of the Empress Elizabeth. In the early part of the nineteenth century, for linguistic reasons, the Holy Synod authorized another revision. This was partially published, 1818-25, by the Russian Bible Society, but opposition to the society prevented further progress until after the accession of Alexander II. In 1876 the revision was completed and published. The dates of the first versions in the other Slavic languages are as follows: Greek (Bohemian), fourteenth century (first printed edition, 1488), Bulgarian, 1828, Croatian, 1495, Polish, thirteenth century (first printed in the fifteenth century), Serbian, 1817, Sloven, 1555, Wend, 1547.

Modern Greek—A modern Greek version of parts of the Old Testament was made by the Jews in 1547. In 1638 certain Dutch Protestants had a modern Greek Testament published at Geneva. Another one was issued in England in 1703. These were forbidden by the authorities of the Greek church. In 1830 the British and Foreign Bible Society republished and circulated this translation. In 1833-38 a new and better version of the New Testament was published, and the Old Testament was also gradually rendered into modern Greek. Later editions appeared in 1861 and 1872. The attempt to circulate a new revision in 1901, in the army, led to student riots in Athens, because it was supposed to emanate from Russia and to be the entering wedge for such a version into the Church.

In *Magyar* or *Hungarian* a New Testament was first printed in 1541. The whole Bible was published in 1590. A modern revision is partially completed. The *Lithuanian* and *Lettish* version began with the New Testament and Psalms in 1662. A *Finnish* New Testament was published in 1548, the Bible in 1642. A new translation was made in 1859. The *Lapps* received the Bible in their own tongue in 1838-40.

Of modern missionary versions, only brief mention can be made. The whole or parts of the Bible have been translated into about 400 languages, many of these, of course, being dialects of one main stock. As to particulars, it may be specified that the entire Bible has been rendered into upward of 40 Indian dialects of the Western Hemisphere, into 60 dialects and languages of Africa, into many of the tongues of the Pacific Isles, into Japanese, Chinese, the various dialects of India, into Arabic, Persian, Turkish, modern Armenian, Kurdish, Georgian, and modern Syriac. The uplifting and civilizing influence of such translations is beyond all estimation.

V THE TEXTUAL CRITICISM OF THE BIBLE

Text of the Old Testament. Our knowledge of the Masoretic text is derived from the printed editions and the extant manuscripts. The Psalter was printed in 1477, probably at Bologna, the Pentateuch in 1482, at Bologna, the Five Megilloth, possibly also in 1482, at Bologna, the Prophets in 1486, at Soncino, the *Itaglographia* in 1486-87, at Naples. Of the whole Bible, the *editio princeps* appeared at Soncino in 1488. A second edition was probably printed at Naples, 1491-93. The third edition, used by Luther, appeared at Brescia in 1493, and a fourth at Pesaro in 1511-17. For the Complutensian Polyglot, printed at Alcalá, 1514-17, Cardinal Ximenes employed Alfonso de Zamora, who had at his disposal seven valuable manuscripts. The first Rabbinic Bible was edited by the Christian Jew, Felix of Plato, and published by Daniel Bomberg at Venice, in 1516-17. Of this, quarto editions appeared in 1518, 1521, and 1525-28. The *editio princeps* of Jacob ben Chayim's Rabbinic Bible, with the Masora, was published by Bomberg at Venice in 1524-25. Of all the earlier editions, this is the most accurate. These editions were, in part, based on manuscripts not known at the present time. A mixture of the Complutensian and the Bomberg texts is found in the Antwerp (1569-72), Paris (1629-45), and London (1654-57) Polyglots, and in Hutter's edition (1587). More critical value, because of the collation of new manuscripts, must be accorded to the editions of Joseph Athias (1661 and 1687), Jablonski (1699), Van der Hooght (1705), Optiz (1709), and J. I. Michahis (1720). But particularly valuable is the edition of Raphael Chayim Italia, printed at Mantua in 1742-44, because of the subjoined commentary of Jedidja Salomo Norzi (written 1626). Kennicott's Bible (1776-80) was the result of a collation of over 600 manuscripts. An indispensable supplement to this work was published by De Rossi (1781, 1788, 1798). Together Kennicott and De Rossi possessed some knowledge of 1346 manuscripts and over 300 editions. The books have been carefully edited by Baer and Delitzsch (1869-95, 14 parts, including all except Exodus, Leviticus, Numbers, and Deuteronomy). A Masoretic, critical edition,

based on Jacob ben Chayim's text, was published in 1804 by Ginsburg, with a valuable apparatus, and a more recent critical edition is that by Kittel and a company of scholars assisting him (Leipzig, 1906-08, 2d ed., 1909), also provided with an apparatus.

The manuscripts are either unpunctuated parchments or leather rolls of the Pentateuch and the Megilloth for public use, or pointed codices in book form of parchment or paper for private use. By direct statement or by handwriting, they are shown to have been made in Spain, Italy, Germany, France, Egypt, Arabia, or Syria. The oldest dated manuscript is the St. Petersburg Codex of the Latter Prophets, written in 1228 of the Seleucid Era, or 916 A.D. It is possible that a manuscript of the Law in the British Museum (Or 4445) belongs to the ninth century. But it is difficult to determine the age of a Hebrew manuscript on paleographical grounds, and the dates given are not always reliable. The work of classifying these manuscripts into families, according to age and country, and of comparing their minute differences, has been retarded by the discovery that they all represent substantially the same recension of the text. This fact has been explained by many scholars as due to the adoption of one model codex and the destruction or retirement of its rivals. It is more likely, however, that the uniformity results from the labors of scribes and Masorites. Among the Masoretic marginal annotations there are frequent references to standard codices, now lost, such as Codices Mugal, Hillel, Zambuki, Jericho, Sinai, Machzor rabba, Ezra, and Babil. Of these, the oldest seems to date from c. 600. There is no reason to suppose that any of them differed essentially from those now known, though they may have contained many minor differences, not wholly without importance. For the Masorites, who from the sixth to the eleventh century supplied the text with annotations, vowel points, and accents, were, as the name implies (Masora, 'tradition'), chiefly recorders of a tradition that had already taken form. It was above all to preserve the traditional reading of the Scriptures that they entered their marginal notes on textual peculiarities, introduced their systems of vowel notation, and indicated the accents as aids in cantillation. The latest of these activities was the accentuation. Possibly as early as 700 A.D. the punctuation marks and *neumes* used in Greek lectionaries and psalters began to be adopted as an assistance to the eye in the musical declamation of certain books. This chanting itself had grown out of a particularly solemn reading. The written signs probably took the place of manual signs without changing the customary intonation. While the same system was applied to all books in Babylonia, a special system was developed in Palestine for Psalms, Proverbs, and Job. Many differences still existed in the eleventh century between the Babylonian school of Jacob ben Naphtali and the Palestinian school of Aaron ben Asher. During the seventh century the vowel signs seem to have been introduced. The infra-linear system, derived from the Nestorians, is likely to have been earlier than the supra-linear system exhibited, e.g., by the St. Petersburg Codex of 916 A.D., wrongly supposed to have been Babylonian. That the vowel points are not earlier than 500 A.D. is evident from the Talmud, which does not know any such signs. In regard to the vocalization, minor differences

have been recorded between the Babylonian schools at Nehardea, Sura, and Pumbedita and between these and the Palestinian school of Tiberias. It was probably during the sixth century that the Masora, in its narrower sense, was inserted by the side of the text (*Masora parva*), or at the bottom and the top of the page (*Masora magna*), or at the end and beginning of the book (*Masora finalis*). This is a body of annotations, partly indicating how in doubtful cases the text should be read (qere' = 'it is read,' sebir = 'it is thought'), partly giving summaries, concordantal matter, and the like. This material was gathered during the Talmudic period (c 180-500 A.D.).

Quotations in the Mishna, the Palestinian Talmud, the Midrashim, and the Babylonian Talmud, the Aramaic Targums, and Jerome, and less directly the later Greek versions, reveal the consonantal text that enjoyed canonical authority from the second to the sixth century. It is probable that a standard text was gradually obtained, and that divergent types were naturally eliminated as a result of the critical process by which the canon was established, and of the demand that holy scriptures should be written exclusively in the Syrian ("Assyrian") characters to facilitate correct reading and to distinguish approved codices. Certain differences between the earliest Greek version and the Masoretic text suggest that, in the case of some of the Prophets and the Hagiographa, the codices used by the Alexandrian translators were written in the Egypto-Aramaic alphabet, possibly already in the middle of the second century B.C. As the Book of Esther (last third of the second century B.C.) still associates the Hebrew language and its peculiar script (viii 9), the change probably began somewhat later in Palestine. The lingering preference for the older letters yielded only to the practical considerations of the scribes in the course of the first century A.D. All rolls were not transcribed from the old Semitic alphabet at the same time, but as new copies were made, the request to write them in the characters then in vogue in Syria (resembling the Palmyrene and the Nabataean) was more and more followed. While many copyists' errors undoubtedly were committed, the text is not likely to have suffered very greatly in this process of transcription. For the motive of the change was a deeper reverence for the text that was deemed canonical and a desire for greater accuracy. This regard for the codices copied and the traditional reading is evidenced by the curious arrest of the tendency to indicate by vowel letters the pronunciation, and by the introduction of spaces between words. Since, in the Talmudic period, only copies written in the later Syrian characters would be used as models, the disappearance of older manuscripts is naturally accounted for.

Concerning the state of the text from the third century B.C. to the second century A.D. we possess a certain amount of knowledge through the Samaritan Pentateuch and its Targum, the earliest Greek version, and the translations made from it, the Book of Jubilees, the earliest Syriac version, and some writers of the period. For the Pentateuch, the testimony is most direct, as the Samaritan copy is written in Hebrew and in the old characters, slightly modified. Our earliest manuscript, however, is of the thirteenth century, and the age of this recension is very uncertain. There is no evidence that the

present text is identical with the one recognized by the Samaritan community at the time when the temple on Gerizim was built. But the fact that many of its 6000 deviations from the Masoretic text agree with the Greek version suggests that it gained a definite form at an earlier date than the Judean law. It is printed in the Paris and London Polyglots. The difference between the Masoretic text and that from which the oldest Greek version was made is very great. The latter manifestly had no division of words, used vowel letters very sparingly, was in some passages longer, and in many more instances shorter, than the Masoretic text, and frequently presented different consonants. It is evident, from the Book of Jubilees, that the text had not yet assumed its present form in Palestine at the beginning of our era. Whether the codices that were first rendered into Syriac presented a type akin to those used by the Alexandrian translators, or corrections were made after the second century A.D. to bring the Syriac version into harmony with the Greek, cannot easily be determined.

The earliest condition of the Hebrew text can only be surmised, and the original itself approximately restored, by a critical sifting of all this comparatively late material, by observation of parallelism, metre, and logical connection, and by scientific conjecture. In the attempt to reconstruct the earliest form of the text, literary and historical criticism must come to the aid of the investigator, removing later glosses, interpolations, annotations, editorial remarks, and mistaken ascriptions, and thus revealing the growth and composition of the biblical books. Houbigant first undertook to publish a translation based upon a critically restored text (1753). Since then the necessity of such work has been in increasing measure felt by scholars. The greatest enterprise in this direction has been the publication of the Polyglotte Bible under the editorship of Paul Haupt, of which 18 out of 20 parts have appeared (New York, 1898 et seq.).

The earliest division of the several books was occasioned by the practice of reading certain sections of the Law and the Prophets on the Sabbath. In Palestine the Law was read in about three years, in Babylonia in one year. Hence the 154 Palestinian *sedarim* of the Law and the corresponding *haphthoroth* of the Prophets and the 54 Babylonian *perashoth*. There were also 379 shorter paragraphs called "closed," because the next section began on the same line, and 200 "open" paragraphs. These Jewish sections were frequently arranged with a view to the effect of the opening and closing sentences rather than to the logical connection, and are not superior to the Christian chapters, imperfect as they are, that Stephen Langthorn introduced in 1270.

Text of the New Testament (1) *The History of the New Testament Text. The Autographs and First Copies*.—In all probability the New Testament autographs were written on the perishable papyrus paper. They circulated at first separately and independently of each other. Copies began to be made at once. With the first of such copies the history of the New Testament text began. Early Christianity was free, informal, and not distinguished for literary culture. Therefore the first copies of the New Testament books were not always carefully executed, especially if made for private use only.

Yet such copies must have been used as exemplars from which other copies were made.

The External Form—This was, except in the case of the smaller epistles, that of the roll. After a time it was customary to write several books on one large roll. The roll form was, however, inconvenient. Probably the whole New Testament was never written on one large roll. It is evident that the text of a manuscript or roll comprising several books would depend for its accuracy on the quality of the text of each of the separate copies used as exemplars rather than on the skill of the scribe who executed it.

The Origin of Variant Readings and Various Types of Text—It was during the first two centuries that the most of the more important errors, or variant readings, crept into the New Testament text. Then the churches were most independent of each other; intercourse between leaders of Christian thought in different parts of the world was more rare and scholarship less accurate than was the case later. The absence of a standard text and the lack of competent supervision made the production of errors almost inevitable. The same conditions permitted the use of several distinct types of text. In any given locality—Rome, for example—the Christian teachers would seek to establish a uniform text. They would try to eliminate the differences between their copies of the New Testament books. Thus there came into being and common use a Roman type of text. Such measures could not, of course, produce absolute uniformity even in Rome. Essentially the same process went on in other centres of Christian influence—as, for example, Alexandria.

Improvement in the Third and Fourth Centuries—During the third century the Church improved its scholarship. Parchment was being used in preference to papyrus. The roll form was giving way to the codex. The older copies of the New Testament writings were being used as standards of comparison. The scholars of Rome, Alexandria, Carthage, Antioch, and other centres of Christian learning were coming to know each other's work. Comparison of texts was possible. Such conditions brought about a more conservative spirit. Scholars sought to correct, eliminate, or prevent errors in manuscripts. The result was, on the whole, beneficial. The labors of Origen (c 185–254 A.D.), Pamphilus (died 309), Eusebius (date uncertain), Lucian of Antioch (250–315 A.D.), and Jerome (c 340–420 A.D.), were all inspired by the desire to ascertain and preserve the true text. These efforts did not produce a uniform text, but they tended to check the production and propagation of errors. By the end of the fourth century several main types of text were dominant. One of these was the so-called Western text, represented in the writings of Irenaeus, in the early Latin fathers, Tertullian and Cyprian of Carthage, in the Old Latin Version, in the earliest forms of the Syriac Version, and, in part, in the Egyptian Version. Another type of text is found in the writings of the Alexandrian Fathers. In the East—in Antioch, and afterward Constantinople—a third type, sometimes called the Syriac, made its appearance. The Syriac text is a later and less original type than the Western, or Alexandrian. There were, of course, many manuscripts whose text was so confused as not to be representative of any particular type.

From about 450 A.D. the history of the Greek

text (or manuscripts) contains nothing needing special mention.

The Printed Greek Text—The first printed Greek Testaments were those of Erasmus, published at Basel, by Froben, in 1516–35, five editions in all, and that included in the Complutensian Polyglot, printed 1514–17 but not published until 1521, at Alcalá, Spain. These were followed by the beautiful Regius editions of Robert Stephens (Etienne), of Paris (1546–51, four editions), of which the third, that of 1550, is the most famous, and of Theodore Beza, of Geneva (1565–1611, 10 editions). The text of all these earliest editions was practically the same, not based on early or good manuscripts, or constructed on true critical principles. In 1624 a Greek Testament was issued from the Elsevir Press, of Leyden, based on the editions just mentioned, which informed the reader that he had therein the "textum nunc ob omnibus receptum." This edition gained great currency, and its "textus receptus" became commonly used throughout Protestant circles.

The continuous discovery of Greek manuscripts and the more careful study of the versions and fathers, showed only too plainly that the received text was far from identical with that of the more ancient witnesses. It now became the task of scholarship to seek to ascertain, if possible, the correct text. Soon the so-called critical editions began to make their appearance. The first great work of this kind was the New Testament of John Mill (Oxford, 1707), a large folio volume with prolegomena containing a mine of information. This was followed by the editions of J. A. Bengel (Tübingen, 1734), of J. J. Wettstein (Amsterdam, 1751–52), and of C. F. Matthaei (1782–88), and others of less importance. The next step in advance was taken by J. J. Griesbach, in his two-volume edition of 1786 and 1806, and his *Symbolae Criticae* (1785 and 1793). In his printed text the readings of the received text were often supplanted by those which seemed more strongly supported. Griesbach, like Bengel, followed clearly defined critical principles. In 1840–50 the philologist, Carl Lachman, published a New Testament in which the received text was altogether discarded. In its place was a text constructed by the critic on the basis of evidence. This method has been followed in all subsequent critical editions.

The work of all these men was used and more than supplemented by the gigantic labors of Tischendorf in his great eighth edition, published in 1865–72, containing a critical text and an apparatus exhibiting all the more important variants then known. Similar in character, and also the monument of the labor of a lifetime, was the Greek Testament of S. P. Tregelles, which appeared in 1857–72. In 1881, after 25 years' joint study, the edition of Westcott and Hort was published at Cambridge and London—the text in one volume, an introduction and appendix in another, written by Dr. Hort. The veteran German exegete, Bernhard Weiss, has also crowned his lifelong study of the New Testament by an edition of its text (1900). A valuable recent edition, with a very ample textual apparatus, has been published by Von Soden (1902–07), and Gregory has devoted years of careful study to the perfection of Tischendorf's text, consult his *Prolegomena* (1908), and also Nestle's excellent *Einführung in das Neue Testament* (1900).

(2) *The Textual Criticism of the New Testament*—Since the autographs of the New Testament have long since perished, the existing witnesses to the text must be carefully studied, their variations noted, and a decision reached, if possible, as to which variants are to be preferred as more nearly representing the readings of the autograph. This is textual criticism.

(a) *The witnesses to the text of the New Testament* are (1) Greek manuscripts, (2) ancient versions, (3) New Testament citations found in the writings of ecclesiastical writers, especially of the first five centuries. (1) Greek manuscripts are of two kinds, *uncial* and *cursive*. The uncials are those written in capitals or semi-capitals, the letters being unconnected with each other. Some of the uncial manuscripts contain the whole or large portions of the New Testament, while others are only fragments, stray leaves of lost codices. They are all earlier than the tenth century. In the ninth century the cursive or running style of handwriting came into use. Manuscripts written in this are called cursives. No cursives are earlier than the ninth century, but many of them preserve ancient and valuable texts. While there are less than a hundred uncials, the known cursives number over 1400 for the Gospels alone. Among all these manuscripts five uncials deserve special mention. (1) The *Codex Sinaiticus*, now in St Petersburg, containing the whole New Testament, with the Epistle of Barnabas and a part of Ilermas, was discovered by Tischendorf in the Monastery of St Catharine at Mount Sinai, in February, 1859. It was probably written in the fifth century. Its leaves are of fine parchment, or vellum, 13½ inches wide by 14½ inches high. The text is in four columns of 48 lines each. The codex once contained the whole Bible. (2) The *Codex Alexandinus*, one of the treasures of the British Museum, was written in the fifth century. It is also a manuscript of the entire Bible. To the New Testament were added 1 and 2 Clement. The whole manuscript contains 773 leaves, of which 639 belong to the Old Testament. The pages measure 10½ by 12½ inches, with two columns on each. The text is divided into sections, or paragraphs, instead of being without a break (except at the end of a book), as in the Sinaiticus and Vaticanus. (3) The *Codex Vaticanus*, in the Vatican Library at Rome, is probably the best New Testament manuscript in existence. It was probably written at the end of the fourth century, after 367 A.D. Like the Sinaiticus, it is a manuscript of the whole Bible, though some parts are lacking. Its pages measure 10 by 10½ inches. Its vellum is of the finest quality, 142 of its 750 leaves belong to the New Testament. The last part of the volume is missing. The New Testament text is written in three columns on a page. (4) The *Codex Ephraemi Rescriptus*. This is a palimpsest, i.e., a manuscript whose original writing has been erased in order that the parchment might be used for another work. In this case a part of a Greek Bible was used on which to write some of the works of the Syrian father Ephraem. By means of chemicals, the original writing has been partially restored. The manuscript has but one broad column on a page. It was written in the fifth century. At present it contains only about two-thirds of the New Testament, many parts having been lost. The Codex is in the National Library in Paris. (5) The

Codex Bezae is a manuscript of the Gospels and Acts, written in the sixth century. It is a bilingual codex, the Greek text being on the left, the Latin on the right, page of the open book. There is but one column on a page. This manuscript was presented to the University of Cambridge, by Theodore Beza, in 1581.

For convenience of reference manuscripts are designated by symbols, either letters of an alphabet or numbers. Thus, the five uncials just described are designated by the letters α (or S), A, B, C, D, respectively.

In addition to New Testament manuscripts, the service books of the Greek church, containing lessons for daily reading, are useful witnesses to the New Testament text. Over 1000 such books, ranging in date from the fourth to the fourteenth century, are known.

(2) *The Versions*—For textual criticism, the three most important versions are the Syriac, the Latin, and the Egyptian.

The origin of the *Syriac Version* is hidden in obscurity. It is altogether likely, judging from the parallel history of the Latin Version, that the first translations were of a private character, the work of different Christian teachers in the early days of Syrian Christianity. Tatian (about 150–175 A.D.), a companion of Justin Martyr after his quarrel with the Roman church, returned to his native Syria, and there published his *Diatessaron*, a compilation of the four canonical Gospels into a continuous narrative. Some have thought that this was the beginning of the Syriac New Testament. However that may be, it is a remarkable fact that the earliest forms of the Syriac Version were made from a Greek text similar to that prevalent in Rome in the latter half of the second century. Such, in general, is the text found in the fragments discovered by William Cureton in 1842 (published in 1858), and in the Syriac palimpsest discovered in 1892 at Mount Sinai by Mrs. Lewis and her sister, Mrs. Gibson. The great importance of the Sinaitic Syriac is generally recognized. While, in the judgment of many scholars, it has been somewhat overemphasized by Merx, this eminent Orientalist has furnished an exceedingly learned and suggestive commentary on this version (1897–1905). After a while these earlier forms of text became more conformed to the type of Greek text prevalent in the East. This text is represented in the Peshita, or common Syriac Version, which was current as early as the fourth century. The Philoxenian, or Harkleian, Version, a slavishly literal translation, begun in 508 A.D., was revised and completed in 616 A.D. It was published by White (1778–1803) and its text of Acts was discussed by Pott (1908). The Jerusalem, or Palestinian, Version was made about the same time, for the use of the Syrian churches of Palestine. It has been published by Buzzo, Lagarde, and Mrs. Gibson.

The Latin Version—Not until about the end of the second century did the need arise for a Latin New Testament. The early Roman Christians used Greek. It was in country districts, probably, especially in northwest Africa, that the first Latin translations were made. These were private translations for local use. The text was of the Western type, current in Rome and northern Africa. A little later the same thing took place in Italy. The effect of so many independent versions was that in the time of Augustine (354–430) and Jerome (c.340–420)

the Latin text was greatly confused. At the solicitation of Damasus, Bishop of Rome, Jerome undertook to revise it. Though he used the best Greek manuscripts at his disposal, yet his work was but a revision, not a new translation. It was published about 384 A.D. It slowly but steadily won its way to supremacy, and so became known as the *Vulgata*, or commonly used version. Through careless copying and mixture with older types of text the *Vulgata* became corrupted. It was revised by Alcuin in 801, by Lanfranc in 1069-89, and by others in succeeding centuries. In obedience to a decree of the Council of Trent (1546), a revised *Vulgata* was published in 1589-90 with the sanction of Pope Sixtus V. (the *Sistine Vulgate*). This was found so faulty that in 1592, under the auspices of Pope Clement VIII., the *Clementine Vulgate*, the standard Bible of the Roman Catholic church, was issued. A critical revision of the *Vulgata* has been made in England (Wordsworth and White's *Novum Testamentum Latine*). The *Codex Amiatinus*, the most important manuscript of the *Vulgata*, is one of the most magnificent books in the world.

The Egyptian or Coptic Versions.—The early history of these versions is exceedingly obscure. Several dialects were spoken by the native Egyptian during the early Christian centuries, such as the Sahidic, in Upper Egypt, the Akkimmic, Fayyumic, and Memphitic, in middle Egypt, and the Bohairic in the Delta. In each of these there seems to have been a version. The earliest of them was the Sahidic. The beginnings of this version may go back to c. 200 A.D. It was designed in the first place to meet the needs of the uncultivated populations of the rural districts. For some unknown reason the text of these versions, represented in our New Testament manuscripts, is more Western than Alexandrian.

The other ancient versions are of minor importance. The *Armenian* seems to have been made in the fifth century, the *Georgian* a little later. The *Gothic*, the work of Ulfilas, second bishop of the Goths in Mesia, dates from the latter half of the fourth century. The *Ethiopic*, used in the churches of Abyssinia, was made between the fifth and seventh centuries. The *Persian* and the *Arabic* are later. The earliest *Slavonic* version dates from the ninth century. The *Frankish* of the ninth and the *Anglo-Saxon* of the tenth century were made from the Latin.

(3) A third class of witnesses to the text of the New Testament consists of the patristic citations. Among the Fathers, Irenaeus, Tertullian, and Cyprian are the main representatives of the Western text, Clement of Alexandria, and Origen of the Alexandrian, while the post-Nicene fathers, especially of the East, generally represent the Syrian text.

(b) *The Principles of Textual Criticism*.—The first printed Greek Testaments were uncritical and based on few and late manuscripts. With the appearance of Mill's New Testament in 1707 A.D. it was seen that the number of witnesses to be consulted was very large, and that the variant readings were to be counted by the thousands. The first attempts to decide between readings were based, naturally, either on mere individual preference or on the comparative number and age of the opposing authorities. It was soon found, however, that such simple rules were not sufficient. For very often the reading that commends itself on grounds of in-

trinsic worth and probability is absent from the majority of manuscripts, including some of the oldest. It is well known that difficult readings in an autograph are quite likely to be changed in the course of transcription to easier or smoother ones. The reverse is not the case. Hence we have the celebrated canon of Bengel, "*proclivae scripturae praestat aetna*," i.e., the more difficult reading is to be preferred to the easier. Other principles or canons are, "that reading is to be preferred which seems to have been likely to have been the source of the others," and, "the shorter reading is to be preferred." Such canons are the result of close observation and are necessary to prevent the too free use of mere conjecture. But a textual critic deals not merely with readings alone. Readings are contained in documents, and the quality and inter-relationship of the documents must be considered. If 9 out of 10 manuscripts are all copies of one and the same manuscript, their united testimony amounts only to the testimony of the one manuscript from which they are derived. If that one was a poor manuscript, the text of the nine copies can be no better. Therefore the testimony of one manuscript may be of more weight than that of a number of opponents. That a majority of witnesses favor a reading is not a necessary indication of its correctness. The witness of a manuscript which is carefully executed or seems to have been exceptionally fortunate in its ancestry should be allowed great weight. The general value of a manuscript is ascertained by a careful examination of each of its various readings. Hence the canon adopted by Westcott and Hort, "knowledge of documents should precede judgment on readings." Another canon, formulated by the same critics, is drawn from the fact that the relation between the different manuscripts of a work is like that of the several branches of a genealogical tree. With any new copy or set of copies serious changes may be introduced. Such copies may become, in their turn, parents of large numbers of others, all of which will exhibit the same characteristic changes. These readings will be absent from manuscripts belonging to another line of descent. So we have the canon, "all trustworthy restoration of corrupted texts is founded upon a study of their history—that is, of the relations of descent or affinity which connect the several documents." The value of these principles is now universally recognized.

BIBLE, CURIOUS EDITIONS OF. Besides those issues of the book which have historical importance are those notable for curious errors or for incidents of publication. The following is a list of the more familiar of these, with their peculiar designations.

THE GUTENBERG BIBLE. The earliest book known printed from movable metal types is the Latin Bible issued by Gutenberg at Mainz, 1452–56 A.D., also known as the Mainz Bible, because the copy which first attracted the notice of bibliographers was discovered by Debus in 1760 among the books of Cardinal Mainz (d. 1661).

THE BIBLE OF THIRTY SIX LINES. A folio edition of the Biblia Latina, of the time of Gutenberg, the pages of which contain two columns of 36 lines.

THE BUG BIBLE. So called from its rendering of Ps. xcii. 5 "Afraid of bugs by night." Our present version reads "Terror by night." 1551 A.D.

THE BRECHES BIBLE. The Geneva version is sometimes called the Breches Bible, from its rendering of Gen. iii. 7 "Making themselves breeches out of fig-leaves." This translation of the Scriptures—the result of the labors of the English exiles at Geneva—was the English Family Bible during the reign of Queen Elizabeth, and till supplanted by the present authorized version of King James I. This Bible appeared in 1580.

THE PLACE MAKERS' BIBLE. From a remarkable typographical error which occurs in Matt. v. 9 "Blessed are the place-makers," instead of peace makers. 1562.

THE TRIFACLE BIBLE From its rendering of Jer viii 22 "Is there no treacle [instead of balm] in Gilead?" 1568

THE ROSIN BIBLE From the same text, but translated 'rosin' in the Douai Version 1609

THE HE AND SHE BIBLES From the respective renderings of Ruth iii 15—one reading 'She went into the city' the other, 'He went' 1611

THE WICKED BIBLE From the fact that the negative has been left out of the Seventh Commandment (Ex xx 14), for which the printer was fined £300 1631

THE THUMB BIBLE One inch square and half an inch thick, published at Aberdeen in 1670

THE VINEGAR BIBLE So named from the headline of the twentieth chapter of Luke, which reads "The parable of the vinegar," instead of the 'vineyard' 1717

THE PRINTERS' BIBLE We are told by Cotton Mather that in a Bible printed prior to 1702 a blundering typographer made King David exclaim 'Printers [instead of "Princes"] have persecuted me without a cause' See Ps cxix 161

THE MURDERERS' BIBLE So called from an error in the sixteenth verse of the Epistle of Jude, the word "murderers" being used instead of "murmurers" 1801.

THE STANDING FISHES BIBLE "And it shall come to pass that the fishes will stand upon it," etc Ezek xlviii 10 Printed in 1806

THE DISCHARGE BIBLE "I discharge thee before God" 1 Tim v 21 Printed in 1806

THE WIFE-HATER BIBLE "If any man come to me, and hate not his father . . . yea, and his own wife also," etc Luke xiv 26 Printed in 1810

THE EARS TO EAR BIBLE "Who hath ears to ear, let him hear" Matt xiii 43 Printed in 1810

REBEKAH'S CAMELS BIBLE "And Rebekah arose, and her camels" Gen xxiv 61 Printed in 1823

TO REMAIN BIBLE "Persecuted him that was born after the spirit to remain, even so it is now" Gal iv 20 This typographical error, which was perpetuated in the first 8vo Bible printed for the Bible Society, takes its chief importance from the curious circumstances under which it arose. A 12mo Bible was being printed at Cambridge in 1805, and the proof reader, being in doubt as to whether or not he should remove a comma, applied to his superior, and the reply, penciled on the margin, "to remain," was transferred to the body of the text and repeated in the Bible Society's 8vo edition of 1805-06, and also in another 12mo edition of 1819

THE CANTON MEMORIAL BIBLE Wholly printed and bound in 12 hours, but only 100 copies struck off 1877 See also DEVIL'S BIBLE

BIBLE, ILLUSTRATIONS OF As soon as the earliest *symbolic* stage of Christian art had passed, which is represented by the Catacombs (q.v.), and their frescoes of the second, third, and early fourth centuries, the *historical* stage began, when the emblems, allegories, and symbols, such as vine, anchor, dove, fish, good shepherd, are replaced by scenes from the Old and New Testaments. These scenes were at first used in more than their purely historical sense. In the same way as in contemporary writings, many scenes of the Old Testament were used as symbols of events in the new dispensation, thus,

Noah in the ark, the sacrifice of Abraham, Elijah caught up to heaven, Jonah cast up by the whale, Moses striking the rock, are all used, not only as prefigurations of Christ, but also as images of the salvation of the elect. The three children in the fiery furnace, and refusing to adore the statue of Nebuchadnezzar, as well as Daniel in the lion's den, are symbols of Christian martyrdom. These and many other subjects always had, for the Christian masses, even in the fourth and fifth centuries, a meaning far transcending the historic (See SYMBOLISM). But before 400 A.D. the construction of a number of great churches (see BASILICA) had put before the artists an immense expanse of wall to be covered with Christian subjects, and at the same time the freedom to teach Christian doctrine had made it possible to multiply manuscripts of the Bible and to illustrate them artistically, in order by images to bring the truth home to the masses that could not read. The authorities of the Church seized at as a means of propagating and strengthening the faith.

Bible history was the principal form of this teaching in monumental forms on church walls, in miniature form on the pages of Bible manuscripts. We cannot say which served as a model to the other, for both sprang up simultaneously. The Rossano Gospels, the Vienna and the London Genesis, the original of the roll of Joshua (see ILLUMINATED MANUSCRIPTS), all of the fifth century, are as early as the mosaic pictures of Santa Maria Maggiore at Rome (see MOSAICS) and Sant' Apollinare Nuovo at Ravenna. In these works we see Bible history without symbolic intention for the first time. In place of a few subjects, selected for their suggestiveness from Bible pages, every event that forms a picturable episode is treated by the artist. It became the custom to give up the whole of one side of the nave walls to the Old Testament, the opposite side to the New Testament, and then to represent on the triumphal arch and apse the more spiritual subjects of Christ Triumphant and the Heavenly Jerusalem. Very soon it was found necessary to systematize the new exuberance, to exercise a process of selection, to reduce the number of subjects, so that everything essential from Genesis to Revelations could be crowded into one church or one manuscript. It became the rôle of the foremost erudite churchmen to select the subjects for the artists. About 400 A.D. Prudentius (q.v.) made a selection of 40 subjects, 24 each from the Old and New Testaments, the 49th being for the apse and representing the Heavenly Jerusalem, each with a descriptive inscription in verse. Often these subjects were selected so as to form parallel related series, in which each subject of the Old Testament bore a remarkable similarity to one opposite it from the New Testament.

Meanwhile the illumination of Bible codices in the same fashion was steadily progressing, and having begun in the East, with Greek manuscripts, passed to the West, where the work was carried forward by the Benedictine monks. The church frescoes and mosaics were mainly for the teaching of the masses, but these codex illustrations were intended for the instruction of the teachers themselves. Certainly series like the mosaic pictures from the Old Testament in the nave of Santa Maria Maggiore seem copies from some illustrated Bible rather than creations of the mosaicists. The letters of Paulinus of Nola (c.400) show how he would sug-

gest themes to his friends who were building and decorating churches. With the constant spread of Christianity and the rapid building of churches, the mass of the clergy, unfamiliar with the detailed system of Christian art, were glad to use for their guidance these illustrated texts executed at a few artistic centres under the instructions of the foremost thinkers. Hence the uniformity of treatment, hence the formation of a tradition, for these miniatures gave not only subject, but treatment, composition, colors, attitudes. There are even manuscripts where the places in the church that certain subjects should occupy are noted. Where symbolism descended to the colors of garments, to the emblems held, to the form of the nimbus, no detail could be neglected. So it came to be that the painter was merely the hand, and the churchman the brain behind it. After a while these traditions, it is true, became the property of the painters themselves, so that they required no prompting. The period of lay artists was followed by that of monastic artists (seventh to eleventh century), when the thought and the hand were one. Then such works as the Byzantine *Guide to Painting* came into existence, which became the painter's *vade mecum*, where every subject of Christian art was minutely described as it should be painted. And the form of this guide, even now in use among Greek painters of Mount Athos and Thessaly, goes back as far as the eleventh century.

Bible illustrations, besides continuously instructing the people already converted, were used as instruments in missionary work. In order to convert the Anglo Saxons, for instance, Benedict Biscop, who built the two greatest early monasteries in England, brought from Rome a series of small pictures illustrating the Old and New Testaments and had them reproduced on the church walls. For the conversion of the Saxons, Charlemagne's *Capitulares* insist, no new church was complete until it had its tale of instructive pictures. In the conversion of the Bulgarians, Methodius, the Apostle to the Slavs, is said to have brought about the change of heart of the King and his people mainly through the effect of a painting of the Last Judgment. This period—roughly, the Carolingian era—was one of great activity in Bible illustrations, both in codices and in church walls. The element of fear began to be more emphasized than that of love and peace. The torments of hell were soon to replace the visions of the Heavenly Jerusalem, in the same way as in the fifth century the Heavenly Jerusalem had replaced the Garden of Paradise of the Catacombs, but this transformation progressed slowly, between the eighth and thirteenth centuries, culminating in the Torcello mosaics and in poetry in Dante's *Inferno*.

Hitherto no distinction has been drawn between the Bible illustrations in the East and those in the West, because in this part of Christian art there was less chance for divergences than in other branches, still, even here, Eastern art showed far more poetry and imagination. The age of the iconoclasts there was a crucial epoch in Eastern Bible illustration and in many ways revived antique traditions, which were kept much fresher in the East. The dull level of mediocrity which then ruled the West was not really broken until the approach of the Gothic age in the twelfth century. Then scholasticism came to the rescue of art. The encyclopedic passion was vivified by religious fervor,

the mysticism of a St Bernard, a St Victor, and a St Bonaventura gave to the pictorial image of the world's essence and history which was then attempted a value far transcending the historic Bible illustration, as pure history, was still faithfully carried on, but it no longer occupied the old-time prominent place. There was a return to symbolism, but on a far higher, more imaginative, as well as more intellectual plane than that of the early Christian period. The "Wise and Foolish Virgins," the "Tree of Jesse," were Bible illustrations, but not in the historic sense. There was a new life in the teaching of religion. But, while the purely historic series no longer were so prominent on church walls, the work of Bible illustration continued in codices unabated. In fact, there were—perhaps there had been before—series of such illustrations bound together with descriptive inscriptions and text, but without the Bible texts themselves. Such manuals continued in use until very late. When printing and block engraving were invented in the fifteenth century, they could be multiplied in cheap form and circulated among the people. (See *BIBLIA PAUPERUM*.) From these sprang the really artistic series of prints by such artists as Albrecht Dürer, from whom our more modern Bible illustrators descend. But after the masses learned to read and write, and after the text of the Bible itself became accessible to the majority, such illustrations no longer played the really important rôle in the development of Christianity which they had held for over 1200 years.

BIBLE, RESTRICTIONS UPON THE READING OF, BY THE LAITY. The Roman Catholic and Protestant churches differ on this point, in that the former punts authorized translations and requests the faithful to restrict their reading to them, and makes the vernacular translations from the Latin Vulgate text, whereas the latter as such authorize no version, adopts no standard text, but encourages every one to read translations which are made directly from the Hebrew and Greek originals. In the earliest times we find no evidence of any prohibition of Bible reading by the laity. On the contrary, as the foundation on which the Church was built, and the sole source of religious knowledge, the reading of the Bible formed an essential part of the instruction communicated by pastors to their congregations, and the greatest orators of the Church—especially Chrysostom and Augustine—continually reminded their hearers that private reading and study of the Scriptures should follow attendance on public services. Warnings are found here and there in the Fathers against the abuse or mistake of the meaning of Scripture, these warnings imply that Scripture reading was common among the laity. In 1080 Gregory VII declared that Latin should be the universal language of Catholic worship, and consequently excluded all vernacular readings of Scripture in church services. Again, with regard to the Waldenses, Innocent III, in 1190, prohibited the private possession and reading of Scripture (excepting the portions contained in the Breviary and the Psalter) without priestly permission and supervision. Similar prohibitions were repeated at the Synod of Toulouse (1229), in its fourteenth canon, and with regard to Welf, at the Synod of Oxford (1382). Ultimately the recognized Latin Version, or Vulgate, was more and more decidedly made the sole authorized Church Version. In-

deed, as early as 1233, the Synod of Tarragona in its second canon ordered that no one, either priest or layman, should retain in his possession a copy of the Romanic translation of the Bible. As, however, it soon appeared that little could be effected by such prohibitions, milder measures were employed. The Council of Trent (1545-63) at its fourth session (April 8, 1546) passed a decree concerning the canonical Scriptures, which gave a list of the books which were received, made the Vulgate Latin Version the sole authoritative source of quotation, and threatened with punishment those who presumed to interpret the Scriptures contrary to the sense given them by the Fathers. But nothing was determined with regard to Bible reading among the laity. This was first done in the publication of the first *Index Librorum Prohibitorum* (Rome, 1564), which enjoined the necessity of obtaining written permission of the bishop before a lay person could read the Bible in the vernacular. Afterward the rules of the Church, placing the use of the Scriptures under the supervision of the bishops, were more and more strictly defined. The publication of the New Testament with practical annotations by Paschasius Quesnel (1687) gave occasion to the Roman Catholic church to speak more definitely on the reading of the Bible by the laity in the bull *Unigenitus Dei Filii* (1713). New ordinances were issued by Pope Pius VII in his brief to the archbishops of Gnesen and Mohilev (1816) against translations formerly authorized, again, by Leo XII, in his condemnation of Bible societies (1824), by Pius VIII (1820), Gregory XVI (1844), and by Pius IX, who, in his famous *Syllabus of Errors* (1864, sec. iv), condemns Bible societies, because they "publish the Bible 'without note and comment,' and so encourage erroneous private interpretations." Leo XIII advocated the reading of the Scriptures in his Encyclical of Nov. 18, 1893, upon "The Study of the Bible."

The position of the Greek church is somewhat different. It has passed no plain prohibition of Bible translations to the laity, without church guidance, as the Latin church has. But in three of the questions appended to the *Eighteen Decrees of the Synod of Jerusalem*, otherwise called *The Confession of Dositheus* (1672), which relate to the Scriptures, it answers in the negative the question whether it is permitted to all Christians to read the Bible. It then goes on to explain that only those who had given it special study were able rightly to interpret it. Agreeably to the spirit of this prohibition, Czar Nicholas I in 1826 suppressed the society for the circulation of the Russian vernacular translation of the Bible, allowed by Czar Alexander I in 1813.

BIBLE ARCHÆOLOGY. The name that is sometimes given to a branch of study whose object is to elucidate the Jewish and Christian Scriptures by means of the archaeological remains of ancient Israel and Judah and of other peoples mentioned in the Bible. In the strictest sense archaeology deals only with such remains as material objects, and not with the epigraphical material, which belongs to the domain of philology and history. But as the inscribed monuments have, as a rule, been brought to light through archaeological research, and the meaning of the texts has often been first discussed by archaeologists, the distinction has not always been closely drawn, and archaeology is popularly

understood as having to do with the inscriptions as well as with the character of the monuments. It was once customary to include in biblical archaeology a great variety of subjects, such as the religious, social, and political conditions, the arts and sciences, manners and customs, geography and topography, flora and fauna of Palestine in early days and of other lands and nations referred to in the biblical books.

In recent times, however, many of these fields have been cultivated separately and have not been regarded as belonging to the proper sphere of archaeology. Thus the geography of Palestine has been treated by itself, with more or less attention to the geology, flora, and fauna, as well as to the more important results of exploration and excavation, as in the works of Robinson, Guérin, Conder, Buhl, and George Adam Smith. Like all historiography, that of Israel and Judah and of the Jewish people in the Roman period has had a tendency to include not only the political but the entire social development in its various aspects. Such historians of ancient Israel as Ewald, Renan, Gratz, Stade, Wellhausen, Winckler, and Kittel have not limited themselves to the political relations, but taken cognizance of the social conditions, and especially the religious ideas and practices, and the same applies to Hausath, Holtzmann, and Schurei, who have dealt with the Roman period. The development of what has been called biblical theology has given us a number of separate text books, setting forth historically and yet in systematic form the expressions, in ideas, customs, and institutions, of the religious life of ancient Israel and the early Christian church. This has limited the field which it has been regarded as proper to treat under the title of archaeology. But many excellent works on Hebrew archaeology have been published, notably those by De Wette, Nowack, and Benzinger, in which the archaeological remains as well as the literary sources have been used for a systematic representation of the social life of Israel in its different aspects. They have generally divided the material into secular and sacred institutions, and proved very helpful because of the convenient grouping of this material and the increasingly adequate and accurate illustrations.

While it cannot be maintained that a complete and scientifically satisfactory survey has yet been made of the whole of Palestine, the labors of Conder, Clermont Ganneau, Kitchener, Schumacher, Musil, and many other explorers have furnished a fairly reliable working basis. The excavations carried on by the Palestine Exploration Fund, especially at Lachish, Gezer, and Jerusalem, by the Austrians at Megiddo and Taanakh, by the Deutsche Orient Gesellschaft at Jericho and Capernaum, and by the Americans (Harvard University) at Samaria, have been of epoch-making significance for the early history of Palestine and have furnished an abundance of important archaeological material. Of very great value has been the establishment of schools in Palestine devoted to archaeological research, such as the French School of the Dominicans, the German School, and the American School for Oriental Study and Research, all in Jerusalem. The results of their investigations have been published chiefly in the *Revue Biblique Internationale*, the *Zeitschrift* and the *Mitteilungen des deutschen Palästina Vereins*, the *Journal of Biblical Literature*, and the *Jour-*

nal of the American Institute of Archaeology, but also in many other periodicals and books. Valuable reports and discussions also appear in the *Proceedings of the Society of Biblical Archaeology* and the publications of the Palestine Exploration Fund.

On the other hand, our knowledge of the nations with which Israel and Judah and the first generations of Christians came into contact has increased to such an extent that their antiquities are naturally treated in connection with their history, and it no longer seems expedient to deal extensively with them in discussions that have primarily to do with biblical lore. At the same time the discoveries made have been so great and startling that very naturally a keen interest has been aroused as to their possible bearing on the biblical accounts. The comparative study has not always been marked by sufficient historic objectivity. As most of the inscriptions are original autographs, their statements have often been accepted without criticism as of more authority than those found in records of which we possess only late copies, when a more searching examination has revealed their untrustworthiness or improbability. Conclusions have been drawn, from one side or another, which have subsequently been seen to be without validity or in need of modification. Sometimes the evidence has tended to strengthen the positions which critics have been led to assume, sometimes it has been more favorable to the traditional views, not seldom it has only offered new problems for which new solutions must be found. As the paramount importance of such external, contemporaneous, and indirect testimony is readily appreciated, there has often been a tendency to exaggerate the conflict between the supposedly assured results of archaeology in this sense and the traditional views or the opinions of critical students, with an unfortunate lack of due discrimination in either case.

Thus the similarity between the Sumerian and Akkadian legends concerning chaos, creation, paradise, and deluge and the stories in Genesis, seemed at first to indicate a direct borrowing and a very late date when Israel and Judah had been invaded by Assyrian armies, or exiles lived in Babylonia. When it was found, however, that such narratives had already spread from Babylonia to Egypt and probably also to Syria in the Tell el Amarna period (fourteenth century B.C.), the arguments for a late date and a direct derivation were considerably weakened, yet cannot be said to have been conclusively disposed of. Similarly the analogy between the code of Hammurapi (2184-2081 B.C.) and some of the Pentateuchal codes is scarcely of a nature to suggest direct dependence, but raises a question both as to the age of the latter and as to their possible derivation, at least in part, from the common law of Canaan, to some extent influenced by the principles of jurisprudence established during the occupation of the land by an Amorite dynasty reigning in Babylon. The inconclusiveness of the evidence is well illustrated in the case of Genesis xiv. That Amraphel is Hammurapi is extremely probable (see AMIRAPHEL, HAMMURAPI), that Arioch may be Rim Sin is not impossible, since Aku seems to be the Elamite equivalent of Sin, yet it cannot be strictly proved (see ARIOCH); that Chedorlaomer represents a genuine Elamite name Kudur Lagamar (servant of the goddess

Lagamar) has long been recognized, but this name has not yet been found in any inscription (see CHEDORLAOMER), that Tidal may be Tudhul is clear, and Goyim, peoples, may be a textual error for Gutim, but the Tudhul mentioned in a tablet from the Persian period is not said to be a Gutian king, that the tablet referring to Eri-ekna and Tudhul is late does not show that they are unhistorical, and while there is nothing improbable in an expedition to Palestine by an Elamite king, Kudur Lagamar, accompanied by Hammurapi, still subject to Elam, Rim Sin, and Tudhul, the source whence the account came to the author of Genesis xiv is still unknown, and there is nothing to indicate whether Abram, the Hebrew, and Melchizedek were mentioned in this source. What is now known concerning the Amorites (qv) through the Boghaz Keui tablets and Babylonian inscriptions places in a new light the accounts of Og of Bashan and Sihon of Heshbon and increases their probability, but these kings are not mentioned in any inscriptions. The fact that some system of writing was in vogue in Palestine and neighboring countries at the time of the Hebrew invasion has at times unduly affected the judgment as to the unity and Mosaic authorship of the Pentateuch, to the neglect of the internal evidence furnished by the work itself. Archaeological research in Egypt has hitherto failed to produce any evidence of the sojourn of Israel in that country, while the reference, in the Meremphth stele, to Israel as manifestly settled in Palestine at the time of that King has upset the generally held theory as to the oppression and exodus in the days of Rameses II and his son. But this solitary allusion to "Israel" in Egyptian literature furnishes a fresh problem, and the silence of the monuments cannot be adduced as a sufficient evidence against the historicity of Israel's sojourn in Egypt. The Tell el Amarna tablets seem to refer to the Hebrews (Habiru), but what ethnic elements were included under that term cannot be determined. If the Elephantine papyri (qv) appear to have fortified the position of those who believe in a late date for Deuteronomy and some other parts of the Pentateuch, they have also tended to strengthen the traditional view of Nehemiah's date and increased the probability of a Jewish dispersion in Egypt at the time of Jeremiah (qv). From the inscriptions of the Chaldean kings, the Marduk priests, and Cyrus, the legendary character of the stories in Daniel is manifest, but the actual position of Belshazzar (qv), whose existence was doubted, renders the origin of the dramatic story in Daniel v more intelligible. Certain discrepancies between the Assyrian inscriptions and the accounts in the Book of Kings have occasionally led to an undue disparagement of the latter. For several centuries the Assyrian chronology is the most reliable we possess, and it has been of great value both in confirming and in correcting the biblical chronology. The references to kings of Israel like Omri, Ahab, Pekah, Pekahiah, and Hoshea, and kings of Judah like Ahaz, Hezekiah, and Manasse agree well with the biblical narrations. But the statements of Assyrian kings in display inscriptions are not always to be taken at their face value. Thus Sargon's claim to have conquered Samaria, which has generally been accepted in spite of the conflicting statement in the Bible, is rendered very doubtful by the reference to the con-

quest of Samaria (Samarina) by Shalmaneser V in the Babylonian Chronicle and the consideration that it was a matter of no importance either to Babylonians or Israelites who the conqueror was, while Sargon not infrequently makes similar claims that have proved to be without foundation. Mention should also be made of the inscription of Meshu, King of Moab, and of Zakir, King of Hamath.

The archaeological material available for elucidation of the New Testament is not so rich. But in this field also recent research has brought to light important documents and remains. The Hymn to Augustus, the Egyptian census, the Gallic decree, the results of exploration and excavation in Asia Minor, the papyri of the Græco-Roman period, and the study of the mystery cults may be specially mentioned as having shed light on many questions and led to their discussion from new points of view.

BIBLE CHRISTIANS See METHODISM
BIBLE OF THE POOR See BIBLIA PAUPERUM

BIBLE SOCIETY A religious society, having exclusively for its object the translation and diffusion of the Sacred Scriptures. Such associations must be regarded as a natural form of expression of Christian benevolence, acting according to the principles of Protestantism, and seeking to take advantage of the facilities afforded by the art of printing, but a long period elapsed after the Reformation before a Bible society was formed—during which, how-

ever, an extensive diffusion of the Scriptures took place, and partly by the agency of associations which included it among other means for the advancement of Christianity. It necessarily became, along with the translation of the Scriptures, one of the objects to which missionary societies directed their energy. But perhaps the first association ever formed for the sole and specific purpose of providing copies of the Scriptures for those who were destitute of them was that founded by Baron Hildebrand von Canstein, an intimate friend of Spener, in conjunction with Francke at Halle, which, down to 1834, when other Bible societies were beginning to make their appearance in Germany, had distributed 2,754,350 copies of the Bible and about 2,000,000 copies of the New Testament. The impulse, however, to the formation of the Bible societies now existing in all parts of Protestant Christendom proceeded from England, where in 1780 an association was formed for the distribution of Bibles among soldiers and sailors. It was at first simply called "The Bible Society", it exists at the present day, and is known as the Naval and Military Bible Society, and, confining itself to its original specific object, has accomplished much good. It is not an uninteresting circumstance that the first ship in which Bibles were distributed by this society was the ill-fated *Royal George*. Early in 1792 a similar association was formed in London, under the name of the French Bible Society, with a similar limited and specified object of distributing Bibles in the French tongue. It was probably the attitude assumed by infidelity in France which occasioned the formation of this society, but the greater part of its funds, having been remitted to Paris for the printing of the Bible there, was lost, and everything belonging to the society destroyed during the Revolution. In 1802 the first steps were taken towards the formation of the BRITISH AND FOREIGN BIBLE SOCIETY, the parent of a multitude of similar institutions, and the establishment of which must be regarded as a great epoch in the history of this branch of Christian beneficence, nor was the society fully organized and established till March 7, 1804. Its formation resulted from the deep impression made upon the mind of the Rev. Thomas Charles, of Bala, in Wales, by the great lack of Bibles which he found to exist in the sphere of his labors, and particularly by a circumstance strikingly illustrative of that destitution. The facts as to this are variously related, but one form of the story is as follows. Meeting a little girl, Mary Jones—a name had in loving remembrance by the friends of Bible societies—he inquired if she could repeat the text from which he had preached on the preceding Sunday. Instead of giving a prompt reply, she remained silent, and then, weeping, told him that the weather had been so bad she could not get to read the Bible. She had been accustomed to travel every week seven miles over the hills to a place where she could obtain access to the Welsh Bible. Mr. Charles, on his next visit to London, brought the subject of the want of Bibles in Wales to the notice of the committee of the Religious Tract Society (q.v.), when it was suggested by Mr. Hughes, a member of the committee, that a society might be formed for the purpose of supplying Bibles, not only in Wales but wherever they were lacking throughout the world. The society was constituted on the

widest possible basis, Churchmen and Dissenters being alike included in it, and soon attained a greatness corresponding with that of the other two religious societies, the London Missionary Society (see MISSIONS), and the Religious Tract Society, which had been formed on similar principles a few years before. It was indeed able to expend only about £619 in the first year of its existence, but its annual income gradually increased to an average of £70,000, and in 1875-76 it amounted to £116,802, derived from the donations, legacies, collections, etc., and applicable to the general purposes of the society, besides £108 for a special object (the "Roxburghe fund"), and £105,410 derived from sales of Bibles and Testaments, abstracts, monthly reports, etc., showing the net receipts for the year to be £222,320. In 1912-13 the expenditures of the society amounted to £269,311. Auxiliary and branch societies and dependent associations rapidly sprang up in all parts of Great Britain and in the colonies the number of which at present amounts to between 5000 and 6000. Large sums have, of course, been spent by the British and Foreign Bible Society for the diffusion of the Authorized English Version of the Bible. The fundamental law of the society had for a long time restricted it to the publication of this version only in English, but a change in its constitution has been made, by which the Revised Version can be published. It has also spent large sums in printing and circulating the Scriptures in the different Celtic languages spoken in Great Britain and Ireland. It has developed an effective system of agencies for thoroughly meeting the needs of Great Britain. The foreign department of this work has gradually become, with the progress of modern missions, one of its chief functions. It stands ready to print the translations of the Bible prepared by missionaries and offered for publication, and in many cases has been prominent in initiating the undertaking of such translations. The translation, printing, or distribution of the whole or part of the Bible has been promoted by the society in 450 languages or dialects. The foreign field employed over 1200 colporteurs in 1912-13 to distribute the Scriptures. Its list now contains the Bible in 111 languages, complete New Testaments in 108 more, and some portion of the Scriptures in more than 231 others. To print these, over 50 different styles of characters are required. The payments made by the society for the services of translators, revisers, and proof readers amounted in this last fiscal year to about £4000. The extent of its operations can be measured in some degree by its issues. These, during the last two years, were

1912-1913 COMPARED WITH 1911-1912

Bibles	936,346	Bibles	908,377
Testaments	1,266,919	Testaments	1,584,202
Portions	5,090,297	Portions	4,841,884
Total	7,899,562	Total	7,894,523

The total issues for the society for the 109 years since its foundation in 1804 amount to nearly 244,444,855 copies. These stupendous figures become still more impressive by a closer survey of its work in various foreign-mission fields of the world, where the society maintains agents to direct its operations. These operations are now conducted on a scale practically coextensive with the advancing tide of modern missionary conquest, so that wherever the

missionary goes, and sometimes before he goes, the colporteur is found at his task of Scripture distribution.

In the principal countries of Europe, including Russia, where it has generally the cordial support of the Russian church, in Central Asia, Siberia, Persia, Turkey, Greece, Egypt, Algeria, Morocco, South Africa, Madagascar, the Indian Empire, China, Japan, Australia, South and Central America, British North America—in fine, throughout the whole world its labors are abundant and successful.

A controversy concerning the circulation of the books of the Apocrypha along with the canonical Scriptures by the British and Foreign Bible Society (see APOCRYPHA) led to a resolution in 1826 that its funds should be devoted, according to its original design, to the diffusion of the canonical books alone. The Edinburgh Bible Society existed from that time forward as an entirely separate society till 1861, when all the Scottish societies amalgamated to form the NATIONAL BIBLE SOCIETY OF SCOTLAND.

Of the numerous Bible societies of Germany, the most important and extensively ramified is the Prussian Central Bible Society (*Hauptbibelgesellschaft*) in Berlin. It was founded in 1814, has branches in all parts of the Prussian dominions, and distributes annually about 116,000 Bibles and 60,000 New Testaments. There are besides numerous independent Bible societies in other parts of the German Empire, as in Wurttemberg, Saxony, Bavaria, and Mecklenburg, but they are of less importance. All these societies unite in supplying the German army with Bibles and Testaments. They also now circulate the revised Lutheran version. A large number of Bibles are still, however, annually supplied to the people of Germany by the agents of the British and Foreign Bible Society. Bible societies were prohibited by the Austrian government in 1817, and some which had already been established in Hungary were dissolved. The RUSSIAN BIBLE SOCIETY, founded at St Petersburg in 1813, through the exertions of Dr Paterson, and under the patronage of the Emperor Alexander I, entered upon a career of great activity and usefulness, cooperating with the British and Foreign Bible Society for the printing of the Scriptures in the numerous languages spoken within the Russian dominions, but its operations were suspended in 1826 on the accession of the Emperor Nicholas, its stock of Bibles, and the whole concern, being transferred to the Holy Synod, under the claim that the sacred work of supplying the people with the Holy Scriptures belonged to the Church and not to a secular society. The Bibles and Testaments in stock were indeed sold, and very large editions were thus disposed of, but the activity of a society which had no equal in continental Europe was at an end. A Protestant Bible society was then formed for the purpose of providing editions of the Scriptures, and circulating them among the Protestants of all parts of the Empire, which now reckons about 300 auxiliary societies. But the action of this society "does not touch the members of the Greek church, or, if at all, only slightly and incidentally, and it makes no provision of the Scriptures in the language spoken by the great mass of the people. It is merely designed to meet the wants of colonists and others, who do not use the Russian language." Of the translations of the Scriptures published by the origi-

nal Russian Bible Society, the greater number have never been repented since its suppression.

The principal Bible Society in the United States is the American Bible Society.

The organization of the AMERICAN BIBLE SOCIETY was preceded by a period of awakening interest in the translation and circulation of the Scriptures. This showed itself in a variety of ways. The first portion of Scripture printed in America was the New Testament, translated into the Indian language by John Eliot, and printed at Cambridge, Mass., in 1661, a translation of the whole Bible followed in 1663. A German Bible was printed at Germantown, Pa., in 1743. In 1777 the English New Testament, and in 1782 the entire Bible, was printed at Philadelphia. This was the first English Bible with an American imprint, and it was recommended by Congress, after an examination by the chaplains. A petition had been presented to the National Congress during the Revolutionary War asking that an appropriation of public funds be made for the printing of Bibles, and in response thereto Congress directed that 20,000 copies be imported at the public expense. The first Bible Society in the United States was instituted at Philadelphia in 1808, the second, at Hartford, the third, at Boston, the fourth, at New York, the fifth, at Princeton, N. J.—all in 1809. In a few years there were about 60. Delegates from 35 of these societies met in New York, May, 1816, and organized the American Bible Society, to which the local organizations generally became auxiliary. The number of auxiliaries increased rapidly, and in 1905 amounted to about 700—a number, however, considerably less than the total of a few years ago. In 1841 an act of incorporation for the American Bible Society was obtained with privileges which have since been enlarged. The first place of business was a room 7 feet by 9, the next was 20 feet square, the third was in a building erected in Nassau Street on a lot 50 feet by 100 and afterward enlarged. In 1852 the Bible House was built, occupying the whole of the ground bounded by Third and Fourth avenues, Astor Place, and Ninth Street, a brick building having an open square in the centre and six stories in height. It is one of the oldest office buildings in New York City, and at the time of its erection was considered an imposing structure. The working force consists of the executive and manufacturing departments, the former containing the corresponding secretaries and treasurer, the latter including printing, electrotyping, proof reading, etc. The printing is done on modern presses. In the bindery, also, modern improvements have been introduced. The society owns 120 sets of electrotype plates, from which are printed 20 sizes of English Bibles, and 10 sizes of the New Testament, each size is bound in from four to six styles, as there is a demand for Bibles of all sizes in fine bindings, but the greater proportion of all issues is in plain style and is circulated among the poor. The whole Bible has been stereotyped at great expense in the Boston raised letter for the use of the blind. It also has plates in the New York point print and in the American Braille. About 26,000 volumes of the former and 16,000 of the last two have been circulated, in large measure gratuitously. By the charter and the constitution of the society it is restricted, as the British and Foreign Society has been, to the circulation of the Holy Scriptures

without note or comment. Like the British and Foreign Society also, the American Society has been restricted by its constitution to the publication in English of the Authorized Version only, but this restriction is now removed sufficiently to allow the publication of the Revised Version, which is now issued under an arrangement with the owners of the copyright. The government of the society is intrusted to a board of managers, consisting of 36 laymen, one-fourth of whom go out of office each year, but are reeligible. Laymen who were constituted directors for life before June 1, 1877 (by the payment of \$150), and ministers who are life members (by the payment of \$30) are authorized to attend the meetings of the board, with power to speak and vote. This brings into connection with the lay managers a certain number of ordained ministers, and laymen and ministers serve on its various committees, to whom are intrusted the departments and branches of its work. The Committee on Versions is composed of eminent ministers representing various different Christian denominations, and all new translations offered for publication must first receive the approval of the Committee on Versions.

The constant aim of the American Bible Society, as of its elder sister, the British and Foreign, with which it has ever labored in the closest official friendship, has been to secure the adequate translation of the Holy Scriptures into all the languages of the earth and to distribute these translations as widely as possible and especially to reach the destitute of all classes and conditions. For this purpose it has often initiated and supported new translations or revisions of existing translations, and its books are by fixed rule sold at cost prices as a maximum, and at much less than cost in many cases, and often given away to the very poor. At first its energy was naturally directed to a thorough supplying of the needs of the United States. Four times it has undertaken to canvass the whole country for this purpose. These canvasses were begun in 1829, in 1856, in 1866, and in 1882, and they occupied altogether many years. During the fourth resupply, beginning in 1882, more than 6,300,000 families were visited by its colporteurs, and 473,806 families were supplied with the Scriptures, and in addition, nearly 300,000 individuals, in 27 languages, including Welsh, German, Dutch, Norwegian and Danish, Swedish, Italian, Finnish, Hungarian, Bohemian, and Chinese. The immigrant populations, the negroes of the South, and other needy classes, it has sought to help. In 1912 it issued Scriptures for use in the United States in 83 languages besides English.

With the development of the country, during the progress of the century, the foreign work of the society has come into greater relative prominence than its work at home. During the last 30 years its foreign circulation has steadily increased, rising from less than 250,000 copies in 1876 to 2,224,099 copies in the year 1912. It has by large grants, both of money and books, aided missionary labors of the various Christian churches having missions in foreign lands, to prosecute Bible translation and distribution, entering fully into the foreign-mission enterprise and sharing its enthusiasm. It has now 12 regular foreign agencies under its own direction, each under the direction of an ordained minister of the Gospel—the La Plata Agency (including Argentina, Uruguay, Paraguay, Bo-

livia, Chile, Peru, and Ecuador), Brazil, Venezuela, Central America, Mexico, the West Indies, Levant (including Bulgaria, Turkey, Syria, and Egypt), China, Siam and Laos, Japan, Korea, and the Philippines. Besides these agencies under its own direction, it aids in Bible circulation by means of missionary and other correspondents, in Norway, Sweden, Russia, France, Germany, Switzerland, Spain, Italy, Austria, Africa, Arabia, Persia, India, Hawaii, Micronesia, and other countries. The scope and magnitude of its operations are exhibited by the following table

BIBLE SOCIETY ISSUED	Bibles	New Testaments and portions
1810-1825	251,642	187,938
1825-1850	2,673,826	4,459,561
1850-1875	6,786,200	18,766,539
1875-1900	9,156,615	39,701,153
1900-1913	6,793,603	25,471,673

It will thus be seen that its total issues during a period of 97 years have exceeded 98,000,000 volumes, and its total receipts during the same period have been somewhat over \$36,000,000. During the last 30 years its circulation in foreign lands has reached a total of 18,039,376 copies—at the present time the majority of its publications being sent to foreign countries. In 1905 it had 428 persons under its direction in the home field and 810 in foreign lands, as Bible distributors.

Its circulation at home and abroad, for its last fiscal year (1913), was 4,049,610 Bibles, Testaments, and portions. These figures, however, are only a partial index of the extent and variety of its labors. It has aided, during its existence, in the translation, printing, or distribution of the Scriptures in more than 100 different languages. At the present time translations and revisions are proceeding under its patronage in various languages in mission lands, notably in Spain, Brazil, China, Siam, South and West Africa, and the Philippine Islands.

In addition to the printing done in the Bible House, in New York, in 1912, it had Scriptures printed for its use at Shanghai and other cities in China, at Yokohama, at Constantinople, at Beirut, and at Bangkok. Translations have been begun, and in part published, in several of the many languages spoken in the Philippine Islands. In these new territorial possessions of the United States, as well as in Cuba and Porto Rico, the society finds a field peculiarly suitable for its labors.

THE AMERICAN AND FOREIGN BIBLE SOCIETY was organized by the Baptists, who desired that translations of the Bible in foreign lands should conform as nearly as possible to the original Hebrew and Greek. In this they had mainly in view the rendering of *Sacris* by *immense* instead of *baptize*. In the circulation of the English Scriptures they were willing that for a time the Authorized Version should be used. In 1850 a portion of the denomination, dissatisfied with this course, formed "The American Bible Union," whose object, as set forth in its constitution, is "to procure and circulate the most faithful versions in all languages throughout the world." It has done much in foreign lands, and, with the assistance of scholars both in Europe and America, was engaged in revising the Authorized Version. In 1883 the Bible con-

vention held by the Baptists at Saratoga, N. Y., decided that the American Baptist Publication Society should henceforth do the work of publication and circulation for the American and Foreign Bible Society and the American Bible Union, which still maintain their legal existence on account of certain legacies and other funds. The most of the money goes for the distribution of the Scriptures. The Bible Union revised the entire New Testament and portions of the Old—the Pentateuch, Job, Psalms, and portions of other books. The original revision was itself revised, and the Old Testament parts again revised. The revision was completed in 1912.

BIBLIA PAUPERUM (Lat. Bible of the poor). A sort of picture book of the Middle Ages, giving, on from 40 to 50 leaves, the leading events of human salvation through Christ, each picture being accompanied by an illustrative text or sentence in Latin or, later, in vernacular. A similar and contemporaneous work on a more extended scale, and with the legend or text in rhyme, was called *Speculum Humanae Salvationis*, i. e., the 'Mirror of Human Salvation.' The redemption by Christ is the central idea of this collection, so that the Old Testament subjects are chosen for their typical significance. Before the Reformation these two books were very popular among both the clergy and the laity. Owing to this general popularity, the printed copies were soon worn out and are now very rare. Many manuscripts of it and of the *Mirror of Salvation*, several as old as the thirteenth century, are preserved in different languages. The pictures of this series were copied in sculptures, in wall and glass painting, altarpieces, etc., and thus became of importance in the art of the Middle Ages. In the fifteenth century the *Biblia Pauperum* was perhaps the first book that was printed in the Netherlands and Germany, first with blocks and then with types. The chief proof for the discovery of printing in Haarlem rests on the first impressions of the *Speculum Humanae Salvationis*. The *Biblia Pauperum* has been several times reprinted in facsimile, e. g., London, 1884 (by Unwin, with preface by Dean Stanley).

BIBLICAL CRITICISM. Under this term are included two distinct departments of biblical investigation, Textual Criticism and Historical Criticism, each of which is defined according to the object in view.

1 **Textual Criticism** has for its object the determination of the true text of the biblical writings, i. e., the text as it stood in the autographs. Since these are no longer extant, the textual critic must carefully examine the various existing witnesses to the text, such as manuscripts in the language of the autographs, manuscripts of versions, especially of the more ancient ones, and quotations found in the writings of ancient authors. On the basis of such an examination, conducted in accordance with certain well-defined principles, the critic seeks to reconstruct the text of the autographs. The principles governing textual criticism are the same for all ancient writings, biblical or secular. The difference between the textual criticism of the Old and New Testaments is due mainly to the different character and quantity of the evidence for the respective texts. For the New Testament the manuscripts are more numerous, and in many instances nearer the autographs than is the case for the Old Testament. But the principles are essentially the same in both cases.

For the principles of textual criticism, as applied to the New Testament, see BIBLE, *Text of the New Testament*

2 **Historical Criticism** has for its object the determination of questions concerning the date, authorship, genuineness, composition and character of the biblical writings. If it seems to find that some of the books of the Bible are of composite origin, it seeks to ascertain the facts as to the sources from which they were derived, i.e., their age, original form, and general character and worth. These and similar questions are important and, as biblical science stands to-day, imperatively demand answers. It is true that tradition furnishes answers to such questions, but modern biblical study is not content to take the dicta of tradition, unsupported by other evidence. The evidence which it is the object of historical criticism to obtain is almost entirely internal, furnished by the writings under investigation. Such criticism is, of course, not confined to biblical study, but is recognized as indispensable to the proper investigation of all ancient literary productions. In order to form a judgment as to the date, authorship, and general character of a writing, the critic is careful to observe all the phenomena that the contents of the writing present.

Historical criticism, concerning itself with the relative age of the various parts of a book or a smaller section, may profitably employ a literary method, noting all peculiarities of style, such as vocabulary, idioms, and literary forms. It is sometimes found that different sections in the same book differ in marked degree from each other in these respects, and the question at once arises whether these differences point to different authorship of such sections. If so, it would imply that the book under investigation is of composite authorship. The whole question of the sources of certain biblical books thus becomes a matter of serious inquiry. The use of this literary method also enables the critic to form a tentative judgment as to the style peculiar to a given author, furnishing a standard of comparison to be applied to sections or books of uncertain authorship to determine whether they may be assigned to a writer whose style is known. Sometimes the employment of this method is designated as literary criticism. Its purpose, however, is historical, though the necessarily subjective character of its judgments makes it possible for the historian to use them only with much caution.

The method that gives the greatest assurance to the historical student is based on the observation that literary productions generally contain some indications of the age and surroundings in which they originate. The critic seeks to detect all such explicit or implicit historical allusions and to pass judgment on their significance. Where the indications are clear and positive, a conclusion is easily reached. Where there is only silence—i.e., no such indications—it is only in rare instances that the silence can be safely interpreted as showing that a certain work did not originate in a given age. The argument *e silentio* is always precarious.

Among the indications of age on which historical criticism to some extent depends are the thoughts and sentiments expressed. There is often a circle of ideas belonging unmistakably to a certain document, or author, or age. From the undoubted productions of a given author or age, conclusions may be reached as to the

ruling theological or other conceptions belonging to such an author or period. The conclusions so reached may then be used as tests to be applied to writings of uncertain age and authorship. The application of this test is a matter of delicacy, and conclusions based upon it are apt to be somewhat insecure.

The history of Biblical Criticism is as old as the attempts by thoughtful readers to solve the problems presented by the Bible itself concerning the integrity of the text, the authorship, date, and composition of the various books, and the character of their contents. There has probably not been a generation that has not contributed something of value to the development of this science. But the marked advance in modern times is largely the result of a greater determination to make the biblical books themselves answer the questions as to their origin and nature, without undue influence of traditional opinions.

It is doubtful whether any scholar has done more for the textual criticism of the Old Testament than Origen. In his *Hexapla* he not only followed the rules of Aristophanes of Byzantium and Aristarchus of Samos and applied their methods of sifting the testimony of the manuscripts and indicating defects and excrescences, but also furnished invaluable material for the comparison of copies of an original text with its versions. To recover the extant remnants of this great work is one of the chief ends of textual criticism in this field. Ximenes, Montanus, Le Jay, and Walton, in their great polyglots, provided a more extensive apparatus in the sixteenth and seventeenth centuries. The discussion between the Buxtorfs and Mornin and Cappel as regards the age of the vowel points, in which the latter proved to be right, was of epoch-making significance. The legitimacy of using the evidence of the versions is now generally acknowledged, and only the extent to which resort may be had to conjectural emendation, based on the requirements of the sense or metrical considerations urged in recent years, is still questioned. Emphasis has recently been put upon the necessity of applying the same canons of textual criticism that are followed in the case of other books to the Pentateuch as well, where many adherents of the current system of critical analysis strongly insist upon a greater integrity of the Hebrew text. In the field of New Testament textual criticism the dependence upon the great uncial codices on the part of excellent critics like Griesbach, Lachmann, Tregelles, Tischendorf, Westcott, and Hort has been modified by a greater attention to the cursive manuscripts and especially the early versions to which the discovery of the Sinaitic Syriac has given a fresh impetus.

The methods and results of literary and historical biblical criticism have never been quite unaffected by theological or philosophical considerations. This may be seen in the beginnings of such criticism by Philo, who frankly acknowledged many of the difficulties in the Pentateuch, but was led by his theory of inspiration to explain them away through the allegorical method, by the Gnostics, who observed many peculiarities of a purely literary character, but also permitted their conception of history and their theology to guide them in the discrimination between original elements and later additions, and by the Antiochene exegetes, who reached many advanced positions

on literary and historical grounds, as in the case of Canticles and Daniel, but could not altogether free themselves from the tendency to allegorization. The early Baptists and Unitarians dealt with many questions concerning canonicity and the authorship of books both in the Old and the New Testament in a searching manner, but their knowledge of history and of true critical principles was defective and their dependence on "the inner light" deprived them to some extent of the steady influence of a mastered and carefully sifted tradition. This judgment also applies to the deists and rationalists of the old school, whose reaction against traditional views often led them to a fanciful interpretation and a failure to appreciate historic facts. Many important forward steps, such as that taken by Astruc, were inspired by apologetic motives, and, while their suggestive value in justifying investigation has been very great, they have not seldom, under closer examination, been seen to involve moves in the wrong direction (See PENTATEUCH). Similarly, the vast strides towards a more comprehensive historical criticism made by Reuss, Vatke, and George, by Baur and his school, by Strauss, and by Bruno Bauer were more or less consciously influenced by an indiscriminating allegiance to Hegel's philosophy. Even the latest phase of criticism represented by Kuenen, Williamson, Stade, Duhm, and Cheyne, by the Ritschlian school, and by many independent scholars of to-day, has been affected to such an extent by the general acceptance of a philosophy of evolution as to give the impression that purely literary and historical questions are sometimes decided by what, in the judgment of the interpreter, must, on a priori grounds, have been the course of development. While it is manifestly undesirable that the investigator should pursue so exclusively one line of research as to cause him to forget the necessary coordination, and the best results are achieved when the student has not only mastered the technique of his special craft but also is an independent thinker, aware of the larger bearings of every new discovery or new theory advanced, it is nevertheless true that the most hopeful signs of the times in Biblical Criticism are the increasing rigidity of the methods employed in every branch of this great study, the willingness to undertake careful and prolonged examinations of minute details, the readiness to hold opinions tentatively and subject to revision, the fairness in considering every new hypothesis proposed for the explanation of the facts, the urgent demand for satisfactory proofs, and the growing conviction that every long-cherished tradition, whatever its nature, must be studied profoundly and with respect before it is either accepted or rejected. True Biblical Criticism is in its purpose and nature neither destructive nor constructive, it does not seek to destroy any old tradition nor to build up a new one that may impose its authority on men. Its sole aim is to find the truth, and that is a process which can never cease unless the human mind becomes wholly nihilistic, i.e., insensible to the highest realities in life. Against such an issue one of the surest preventatives is an honest and reverent scientific study of the Bible.

Bibliography. The various *Introductions* to the whole or parts of the Old and New Testaments contain accounts of the biblical criticism. In addition, consult such special treatises as the following: J. Wellhausen, *Prolegomena zur*

Geschichte Israels (5th ed., Berlin, 1899); W. R. Smith, *The Old Testament in the Jewish Church* (2d ed., Edinburgh, 1892); T. K. Cheyne, *Founders of Old Testament Criticism* (London, 1892); A. C. Zenos, *The Elements of the Higher Criticism* (New York, 1895); M. W. Jacobus, *A Problem in New Testament Criticism* (New York, 1900); H. S. Nash, *The History of the Higher Criticism of the New Testament* (New York, 1900); Sir R. Anderson, *The Bible and Modern Criticism* (London, 1905); Orr, *The Problem of the Old Testament Considered with Reference to Recent Criticism* (1906); C. F. Kent, *Origin and Permanent Value of the Old Testament* (1911).

BIBLIOGRAPHY. A term which was first used, according to its original meaning, to denote the transcription of books. After the publication of the first volume of DeBure's *Bibliographie Instructive* in 1763, it was used to signify the proper description of books, and concerned itself with authorship, printing place, and date of publication, editions, rarity, history, and external beauties of books. With the spread of popular education, the multiplication of books, and especially with the modern development of libraries and the book trade, the term "bibliography" has come to be used in a still more practical sense, as concerning itself with the contents of books. The most useful modern bibliographies are those of special countries, those concerning any one considerable branch of knowledge, and bibliographies of individual authors. Allied to them are bibliographies of anonymous and pseudonymous works. Subject indexes to periodicals or society transactions may also be regarded as bibliographic.

A favorite dream of bibliographers has always been the production of a catalogue which would cover the whole realm of printed books. The most notable, though not the earliest, attempt of this sort was that of Conrad Gesner, who published at Zurich his *Bibliotheca Universalis* (4 vols., 1545-55). In one alphabet he recorded, under the names of the authors, all the books in the Hebrew, Greek, and Latin languages about which he could obtain information. Since Gesner's time there have been many others who have attempted to make a universal catalogue, among them Dr. Robert Watt, of Edinburgh, who prepared the *Bibliotheca Britannica* (4 vols., 1824). But the latter's work, in respect to foreign books, is selective and not universal. Its greatest use, in spite of some inaccuracies, is in connection with British works. The other general bibliographies of greatest utility are the following: Brunet, *Manuel du libraire et de l'amateur de livres* (5th ed., 6 vols., Paris, 1860-65, supplement, including a *Dictionnaire de géographie*, 3 vols., 1870-80); Giese, *Trésor de livres rares et précieux* (7 vols., Dresden, 1859-69); Ebert, *Allgemeines bibliographisches Lexikon* (2 vols., Leipzig, 1821-30). An English translation was published under the title *General Bibliographical Dictionary* (4 vols., Oxford, 1837). The library of the British Museum has so large a collection of books that its *Catalogue of Printed Books* (108 vols., London, 1881-1905) serves as the most important of the general bibliographies. Bibliographical literature has increased to such proportions that a large number of extensive works have been published, simply to enumerate them. The most famous of these is Petzholdt's *Bibliotheca Bibliographica* (Leipzig, 1866).

Henri Stein's *Manuel de bibliographie generale* (Paris, 1897) uses the material of Petzholdt, revising it and bringing it up to date. Of even greater value to the general reader is the published *List of Bibliographical Works in the Reading Room of the British Museum* (1889), while the latest and for ready reference the most useful of all such lists is William Pideaux Courtney's *Register of National Bibliography* (2 vols., London, 1905, vol. iii, supplement, 1912). These works have increased to such a number that the Bibliographical Society of Chicago printed as its first publication in 1901 A. G. S. Josephson's *Bibliography of Bibliographies Chronologically Arranged*, a second edition of which was issued in 1910-11 by the Bibliographical Society of America in its *Bulletin*, vol. ii-iv, and *Papers*, vol. vii.

For the general purposes of the ordinary student, bookseller, and librarian, the book trade bibliographies of the various countries are of most service. In the case of American books, the series of the *American Catalogue* and its supplements will be sufficient for most cases. Beginning with the books in print in 1876, 9 volumes cover the field to 1910. Annual volumes were published from 1886 to 1911, and the *Publisher's Weekly* keeps the record up to date. Part of this period is covered even more completely by the *United States Catalogue* of books in print (1st ed., 1899, 3d ed. superseding all earlier editions, Minneapolis, 1912), its annual supplements since 1902 and its bimonthly supplement, the *Cumulative Book Index*. American publications before 1870 are still very incompletely listed. Evans's *American Bibliography, 1639-1820*, is excellent as far as it has been issued (vols. i-vii, covering the years 1639-1789, Chicago, 1903-12), but for the period 1820-70 Rootbach's *Bibliotheca Americana 1820-61*, and Kelly's *American Catalogue of Books Published in the United States, 1861-1871* (2 vols., New York, 1866-71) furnish only partial lists. The *Publisher's Trade List Annual* is indispensable when publishers' lists are needed. *American Book Prices Current*, a record of books, manuscripts, and autographs sold at auction since 1894, is published annually, and is exceedingly valuable as giving the fluctuating prices of out-of-print books. Both English and American books are included in Allison, *Critical Dictionary of English Literature* (3 vols., 1859-72), with supplement (2 vols., Philadelphia, 1897).

For books printed in England 1837-1910 there is the *English Catalogue* (8 vols., London, 1864-1911), since 1837 an annual catalogue has been issued. *The Reference Catalogue of Current Literature* (well indexed), published every four years, is the standard collection of publisher's lists. For the earlier period of British publications, Watt's *Bibliotheca Britannica* (4 vols., 1824) and Lowndes's *Bibliographer's Manual of English Literature* (new ed. 11 vols., 1857-64) are the chief authorities, although neither is a complete record and the former is often inaccurate. More dependable for the periods covered are the *Transcript of the Register of the Company of Stationers of the City of London, 1556-1640*, edited by Edward Aiber (5 vols., London, 1875-94), and Aiber's *Term Catalogues, 1668-1709* (3 vols., London, 1903-1906), Bent's *General Catalogue of Books, 1700-1786* (London, 1786), his *London catalogue, 1786-1811*, and Hodgson's *London Catalogue, 1816-51* (London, 1851) give only brief and imperfect records

For the prices of books sold at auction in England *Book Prices Current*, published annually since 1886, may be consulted. The *Publishers' Circular* gives weekly and monthly lists.

The principal trade catalogue of France is that of Lorenz, entitled *Catalogue général de la librairie française* (24 vols., Paris, 1867-1913). It covers a period from 1840 to 1912. Since 1893 a *Catalogue annuel* has been published, edited by D. Jordell. The weekly *Bibliographie de la France* has been issued since 1811. Le Souder's *Bibliographie française, 2 série* (2 vols., Paris, 1908-11), is an excellent five yearly record of books published since 1900, and Federn's *Répertoire bibliographique de la littérature française des origines à 1911* is a useful selected list (Leipzig, 1913). The earlier literature of France is best traced in Brunet's *Manuel* and Querard's *La France littéraire* (12 vols., 1827-64) and its supplements (6 vols., 1842-57).

There are two very extended series of German trade bibliographies, that of Hensius, *Allgemeines Bucher-Lexicon* (Leipzig, 1812-94), covering the period 1770-1892 in 19 vols., while that of Kayser, *Vollständiges Bucher-Lexicon* (Leipzig, 1834-1910), covers the period 1750-1898, in 36 vols. For many years Hinrichs has published at Leipzig catalogues covering five-year since 1851 and half-year periods since 1797.

The best means of tracing modern Italian publications is in the *Catalogo generale della libreria italiana* (3 vols., Milan, 1901-05, subject index, 1910-), supplement for 1900-10, 1911-), and in the *Bollettino delle pubblicazioni italiane*, a monthly list published by the National Central Library of Florence.

To look up Spanish publications one needs Hidalgo's *Diccionario general de bibliografía española* (7 vols., Madrid, 1862-81) and the monthly *Boletín de la librería*, which has been published since 1873. For earlier books, Antonio's *Hispania nova 1500-1681* (2 vols., Madrid, 1733-88) should be used. The authority for Portuguese books is Silva's *Diccionario bibliografico portuguez* (16 vols., Lisbon, 1868-93), this also covers Brazilian works.

Among numerous works published in Belgium, mention need only be made of the *Bibliographie nationale 1830-80* (4 vols., Brussels, 1886-1910) and of the monthly *Bibliographie de la Belgique*. In Holland the name of Binkman stands for the series of catalogues which he has published at Amsterdam, including *Naamlijst van boeken sedert 1799 tot 1819* (Amsterdam, 1835-68) and *Catalogue van boeken 1830-1910* (Amsterdam, 1883-1913).

For the literature of Denmark the chief authorities are Bruun's *Bibliotheca Danica, 1482 til 1830* (3 vols., Copenhagen, 1872-96) and the series *Dansk Bogfoiøgnelse, 1841-1900* (5 vols., Copenhagen, 1891-1903). In Sweden the series of Bibliog's *Svensk Bok-Katalog* and its supplements covers the years 1866-1905 (5 vols., Stockholm, 1878-1910).

In addition to these national bibliographies, practically every science has its own bibliography. Reference may be made here to some of the more important ones, principally published in Germany. For astronomy, Houzeau and Lancaster, *Bibliographie de l'astronomie* (Brussels, 1882-87), for botany, Pritzl, *Thesaurus Literaturæ Botanicae* (Leipzig, 1872), for chemistry, Bolton, *Select Bibliography of Chemistry, 1492-1897* (Washington, 1893-1901, suppl. 2 vols., 1899-1904), for archaeology, Hubner, *Bibliographie*

der klassischen Altertumswissenschaft (Berlin, 1889), for Greek and Latin literature, Engelmann, *Bibliotheca scriptorum classicorum*, 8th ed by Preuss (2 vols, Leipzig, 1880-82), together with its continuation for the period 1876-96, by Klusmann (2 vols in 4, Leipzig, 1909-13), for French literature, Lanson, *Manuel bibliographique de la littérature française* (4 vols, Paris, 1909-12), and Thème, *Guide bibliographique de la littérature française de 1800 à 1900* (Paris, 1907), for German poetry, Goedeke, *Grundriss zur Geschichte der deutschen Dichtung* (vols 1-x, Dresden, 1884-1910), for fiction, Baker, *Guide to the Best Fiction* (New York, 1913), for comparative literature, Betz, *La Littérature comparée, essai bibliographique* (2d ed, Strassburg, 1904), for American history, Lained, *Literature of American History* (Boston, 1902), and Channing and Hart, *Guide to the Study and Reading of American History* (Boston, 1912), for English history, Gross, *Sources and literature of English History to 1855* (London, 1900), for French history, Molmer, Hauser, and Bourgeois, *Sources de l'histoire de France* (vols 1-x, Paris, 1901-13), and Caron, *Bibliographie des travaux publiés de 1866 à 1897 sur l'histoire de France depuis 1789* (Paris, 1912), for German history, Dahlmann-Waltz, *Quellenkunde zur deutschen Geschichte* (8th ed, Leipzig, 1912), for medieval history, Chevalier, *Répertoire des sources historiques du moyen âge* (4 vols, Paris, 1894-1906), and Potthast, *Bibliotheca historica medii ævi*, *Wegweiser durch die Geschichtswerke des europäischen Mittelalters* (2d ed, 2 vols, Berlin, 1896), for the political and social sciences, Mühlbrecht, *Wegweiser der Rechts- und Staatswissenschaften* (2d ed, 2 vols, Berlin, 1893-1901), Stammhammer, *Bibliographie der Sozialpolitik* (2 vols, Jena, 1896-1912), his *Bibliographie der Finanzwissenschaften* (Jena, 1903), and his *Bibliographie der Socialismus und Communismus* (3 vols, Jena, 1893-1909), for philosophy and psychology, Rand, *Bibliography of Philosophy, Psychology, and Cognate Subjects* (2 vols, New York, 1905), for science, Royal Society of London, *Catalogue of Scientific Papers* (12 vols, London, 1867-1902, subject index, vols. 1-11, 1908-12).

For certain subjects the best bibliographies are not in separate form, but are appended to some other work, e.g., the bibliographies of English literature in the *Cambridge History of English Literature*, of theological and religious topics in the *New Schaff-Herzog Encyclopedia of Religious Knowledge*, the *Catholic Encyclopedia*, the *Dictionnaire d'archéologie Chrétienne*, etc., and of general and modern history in the *Historie générale* by Lavisse and Rambaud, and the *Cambridge Modern History*. Bibliographies of individual authors especially, are often included either in standard biographies or in standard editions of their collected works. Consult, e.g., the excellent bibliographies appended to all volumes in the *Great Writers Series*, and the very extensive bibliography of Thackeray in the *Life of Thackeray* by Lewis Melville (2 vols, London, 1910). New bibliographies, which appear in great numbers every year, are listed in the *Library Journal*, in the *Bulletin of the American Bibliographical Society*, and especially in the *American Library Annual*.

Quite as important as the large comprehensive subject bibliographies are the annual summaries or bibliographical surveys of the current literature of special subjects which serve the

double purpose of a list of new books and an index to the periodical literature on the subject. Bibliographies of this type are published principally in Germany, and their growth has been especially evident during the latter part of the nineteenth century. It would be impossible to list all such surveys here, as practically every branch of knowledge has its annual bibliography or *Jahresbericht*. Some of the best known are for astronomy, *Astronomisches Jahrbuch* (Berlin, since 1899), for chemistry, *Jahresbericht über die Fortschritte der Chemie* (Giessen, since 1861), classical philosophy, *Bibliotheca philologica classica* (Buln, since 1873), for education, *L'Année pédagogique* (Paris, since 1911), for geography, *Bibliotheca geographica* (Berlin, since 1902), and *Bibliographie géographique annuelle* (Paris, since 1893), German philology, *Jahresbericht über die Erscheinungen auf dem Gebiete der germanischen Philologie* (Berlin, since 1879), German literature, *Jahresbericht für neuere deutsche Literaturgeschichte* (Stuttgart, since 1892), for history, *Jahresbericht der Geschichtswissenschaft* (Berlin, since 1878), for American history, *Writings on American History* (New York and Washington 1902-03 and since 1906), for French history, *Répertoire méthodique de l'histoire moderne et contemporaine de la France* (Paris, since 1898), for German history, Masslow, *Bibliographie zur deutschen Geschichte* (Leipzig, since 1898), for philosophy, *Philosophie der Gegenwart* (Heidelberg, since 1908), and *Bibliographie de la philosophie française* (Paris, in *Bulletin de la Société française de philosophie*, since 1909), for psychology, the *Psychological Index* (New York, since 1894), for Romance philology and literature, *Kritischer Jahresbericht über die Fortschritte der romanischen Philologie* (Munich, since 1892), for the social sciences, *Bibliographie der Socialwissenschaften*, a monthly list with annual indexes (Dresden and Berlin, since 1905), for science, *International Catalogue of Scientific Literature* (London, since 1901), for theology, *Theologischer Jahresbericht* (Brunswick, since 1882).

There are numerous societies organized for the encouragement of bibliographical research and the publication of bibliographies. Some of the more important of these, with the dates of founding, are: Bibliographical Society, London, 1892, Bibliographical Society of America, 1904, Institut International, Brussels, 1895, the Deutsche bibliographische Gesellschaft, 1906, Gesellschaft der Bibliophilen, 1899, Société française de Bibliographie, 1906.

Numerous bibliographies of anonymous and pseudonymous works have appeared from Geisler (1671) and Placcius (1674) down to the present day. (See ANONYMOUS.) Poole's *Index to Periodical Literature* covers, for the nineteenth century, a vast number of articles which have never appeared in book form. Consult, for information on national bibliography, A. Crowell, *Three Centuries of English Book-trade Bibliography* (New York, 1903), R. A. Poole, *National bibliographies* (London, 1912), New York State Library, *Selected National Bibliographies* (Albany, 1908), for help in the selection of best books, Sonnenschein, *Best Books & Reader's Guide to the Choice of the Best Available Books*, about 100,000 (3d ed, parts 1-11, New York, 1910-12) and the *A. L. A. Catalog, 8000 Volumes for a Popular Library* (Washington, 1904, Supplement, Chicago, 1912), for additional

titles of subject bibliographies, John Crerar Library, *List of Bibliographies of Special Subjects* (Chicago, 1902)

BIBLIOL'OGY See BIBLIOMANIA

BIBLIOMANCY (Gk βιβλία, *biblia*, the Bible + μαντεία, *mantheia*, divination) Divination by means of the Bible. Divination by means of poetic verses, fixed on by chance, was common in the Roman world, and Veigil was frequently used for the purpose (*Sorites Vergilianae*). When Christianity had spread through Europe, the Bible naturally became the most valuable book of divination. The method was to open the Bible at random and observe the first passage which met the eye, to pick a passage by laying the finger or a pin on the open page, or to note the first words of the Bible heard after entering a church. Such chance passages were supposed to foretell the future or in some other way to convey a divine meaning. Writings of the church fathers or lives of the saints were also used. The conversion of St Augustine furnishes a classical example of bibliomaney. He seemed to hear a voice, "Take and read." Picking up a volume of the Epistles, he read Rom xii 13, the first passage his eye met, and took it as a direct message from God. Yet in a letter (lv, 1, 20) he deprecated the custom. Though frequently condemned, it was often openly used in the Church. The election of St Martin to the bishopric of Tours (371) was decided by the use of the Psalter. Prognostications regarding the administration of a newly elected bishop were often made in this way. Bibliomaney was prohibited, under pain of excommunication, if the person was a clergyman, by the sixteenth canon of the Synod of Vannes, in Brittany, A.D. 465, and by the synods of Agde, in South Gaul (506), in the forty-second canon, and Orleans (511), in the thirtieth canon. It continued, however, to prevail for many centuries thereafter, and is said to have been introduced into England at the Norman Conquest.

It has persisted into modern times and has been used by devout persons of all classes. In Tennyson's *Enoch Arden* the poet has made literary use of the custom, which was not uncommon among the class whose life the poem presents.

BIBLIOMANIA (Gk βιβλία, *biblion*, book + μανία, *mania*, madness) A word formed from the Greek to express the passion for rare and curious books, which has manifested itself to such an extent during the last two centuries. While the ordinary collector is satisfied with the possession of works which are valuable either on account of their established reputation or as assisting him in his literary or professional pursuits, the bibliomaniac or bibliophile is actuated by other motives. With him utility is of secondary importance, rarity being the first and great requisite. The history of the auction room reads like a romance. In 1812 occurred the famous sale of the library of the Duke of Roxburghe. Among the treasures which that library contained was the only perfect copy known to exist of the first, or at least the first dated, edition of Boccaccio's *Decameron* (Venice, Christ Valdarfer, 1471). After a spirited competition with Lord Spencer the Marquis of Blandford purchased this volume for the sum of £2260—probably the highest price ever paid up to that time for a single book. One of the results of the sale was the establishment of

the Roxburghe Club (1812), the object of which was to reprint, for the use of the members only, works hitherto unedited or of extreme rarity. The example thus set was speedily followed by the Bannatyne and Maitland clubs in Scotland and by many more in other parts of Great Britain. In 1884 the Grolier Club was established in New York City. The books most sought after by American collectors may be classed as follows: the earliest printed books and the first editions of the classics, first editions of the books of English writers of the sixteenth and seventeenth centuries, especially the poets and dramatists, first editions of the books of the great nineteenth century writers in England and America, books relating to America, more especially the narratives and accounts of the earliest explorers and colonizers, and the first books printed at American presses. A copy on vellum of the first book ever printed, the *Bible in Latin*, in 2 vols., printed 1450-55, by Gutenberg and Fust, brought £4000 at the sale of Lord Ashburnham's library in 1897, but a copy on paper for which £3950 had been paid in 1884 brought only £2860 when resold in 1898. A copy of the *Latin Psalter* printed by Fust and Schoeffer (1459) brought £4960 in 1884, still the highest price ever paid at auction for a printed book. A second copy of the same book sold in 1904 for £4000. The few books printed by Caxton which come upon the market bring very high prices. A copy of the *Royal Book* (1487) sold in 1902 for £2225. Since 1900 there has been a marked increase in price of the Shakespeare folios and the early quarto editions of the separate plays. In 1905 the sum of £10,000 was paid for a fine set of the four folios, 1623, 1632, 1664, and 1685, at private sale, though they had never brought a greater aggregate sum than £3380 at auction. In the same year £2000 was paid for the first edition of *Titus Andronicus* (1594), £1750 for *Richard III* (1605), £1650 for *Much Ado About Nothing* (1600), and £1000 for Part I, *Henry IV* (1608). The first was at private sale, the last three at auction. The rarest pieces by the great modern poets bring prices equally surprising. Shelley's first volume of verse, *Original Poetry by Victor and Cazire* (1810), brought £800 in 1903, and in 1900 £2050 was paid at auction for a copy of Poe's first book, *Tamerlane and Minor Poems* (1827). The most valuable American printed book is no doubt the first collection of the *Laws of the Colony of Massachusetts Bay*, printed in 1648 at Cambridge on Daye's Press. Though it was known to have been printed and was diligently sought for, no copy was known to have survived to modern times until one was discovered in 1906. The books printed at the Kelmseott Press, which sold at such extremely high prices just after the death of William Morris, have again fallen in value, as have the first editions of some modern writers, notably Stevenson and Kipling.

The word "bibliomaniac," too suggestive of madness, is being displaced by *bibliophile* (lover of books), while "bibliophage" means one who is a collector of beautiful or unusual bindings. Consult: *Book-Prices Current* (London, 1887-), Livingston, *American Book-Prices Current* (New York, 1895-), Dibdin, *Bibliomane* (London, 1811), Fitzgerald, *The Book Fancier* (London, 1886), A. Lang, *The Library* (London, 1881), Burton, *The Book-Hunter* (New York, 1882), E. Field, *The Love Affairs*

of a *Bibliomaniac* (New York, 1896). F S Merryweather, *Bibliomaniac of the Middle Ages* (London, 1849), reprint with introduction by C Orr (New York, 1900). Feigelson, *Some Aspects of Bibliography* (Edinburgh, 1900). Pollard, *Fine Books* (New York, 1912). In the United States especial note is made of Fletcher's *An Index to General Literature* (Boston, 1901), and of the elaborate volumes of Poole's *Index to Periodical Literature*, which, with different successors of like purpose, covers the period from 1802 to 1914. Reference may also be made to Gustave's *Guide to Periodical Literature* in two massive volumes (Minneapolis, 1910). There are special bibliographical indexes of books on special subjects. These are noted under the proper heads, as ART, HISTORY, ETC.

BIBLIOPEGE, bíb'li-o-pěj (Gk βιβλίον, *biblion*, book, and πήγνυμι, *pēgnymī*, to bind) See **BIBLIOMANIA**.

BIBLIOTHÈQUE DE SAINTE GENEVIÈVE, be'bli-o-těk'de sánt zhán'yvè' (Fr library of Ste Genevieve) A Paris library in the Place du Panthéon. Its contents once made up the Ste Genevieve Library, which was founded in 1624 by La Rochefoucauld, became national property in 1790, and was transferred to the present edifice, built by Labrousse, in 1850. It contains 35,000 manuscripts, over 5000 engravings, and 125,000 volumes. Its most remarkable possession is its nearly complete collection of Aldines. See **LIBRARIES**.

BIBLIOTHÈQUE MAZARIN, ma'za'ri-n' (Fr Mazarin library) A library in Paris, in the first court of the Institut de France, founded by Cardinal Mazarin. It contains over 300,000 volumes and 5800 manuscripts, besides many interesting editions for the curious. See **LIBRARIES**.

BIBLIOTHÈQUE NATIONALE, ná'syó'-nal' The French National Library, in Paris, the greatest in France. In its four sections it contains over 2,600,000 printed volumes and maps, about 102,000 manuscripts, 150,000 coins and medals, and more than 250,000 engravings. The two chief sources of its origin were the Bibliothèque du Roi, arranged in 1367 by Charles V in the Louvre, and the library of the Orleans family at Blois. These libraries were united by Francis I at Fontainebleau, whence Charles IX transferred them to Paris and placed them in the Collège de Clermont. The library is now in the Rue Richelieu. A legal requirement decreed in 1536 that one copy of every work printed in France should be deposited in the National Library. See **LIBRARIES**.

BIB'LIS, or **BYBLIS** (BÍSLIS or BÚSLIS) The daughter of Miletus and Eudothia, and sister of Latmus, with whom she fell violently in love. After long and fruitless pursuit of him in many lands, she gave up in despair, and was, according to Ovid (*Metamorphoses*, ix, 450-665), changed into a fountain. Consult Fretter-Robert, *Die griechische mythologie*, i, 374, and Rohde, *Griechische Roman* (1896).

BIB POUT, or **WHITING POUT**, hwít'ing (so called from a bil-like membrane about its head) A small codlike (*Gadus luscus*), rather common on the British and Scandinavian coasts. It is seldom over a foot in length, with an unusually deep body for a cod, and is in the best condition in November and December. In Scotland it is called a "bass."

BIBRA, bí'bra, ERNST, BARON VON (1806-

78) A German naturalist and author. After completing the study of law at the University of Wurzburg he devoted himself to natural science and chemistry, traveled in South America, and on his return to Germany settled in Nuremberg. He published a number of works on chemistry, including *Chemische Untersuchungen über die Knochen und Zähne der Menschen und der Wirbeltiere* (Schwenfurt, 1844), *Chemische Fragmente über die Leber und die Galle* (Brunswick, 1849), *Die Bronzen und Kupferlegierungen der alten und ältesten Völker* (Erlangen, 1869). He also wrote numerous works of travel and fiction, including *Reisen nach Sudamerika* (2 vols, Mannheim, 1854), *Erinnerungen aus Sudamerika* (3 vols, Leipzig, 1861), *Reiseskizzen und Novellen* (4 vols, Jena, 1864), *In Sudamerika und in Europa* (2 vols, Jena, 1874).

RIBULUS See **CALPURNIUS**.

BICE, bí, or **BISE** (OF *bis*, fem *bise*, brown, dark, origin doubtful) A name given to two colors used in painting, tones of blue and green. Blue bice is known as *mountain blue*, *ongar o*, etc, and green bice as *Hungarian green*, *verde de Spagna*, etc. Both colors are native carbonates of copper, but as inferior kinds are artificially prepared, and as other pigments often pass under the same name, the word "bice" is of very doubtful value and has become, indeed, almost an obsolete term.

BICEPS (Lat double-headed, from *bis*, twice + *caput*, head) The muscle which gives a rounded appearance to the front of the arm. Above, it consists of two portions or heads, the

BICEPS OF ARM

short head being attached to the coracoid process of the scapula, the long head to the margin of the glenoid cavity, the depression which lodges the head of the humerus. They unite to form a fleshy belly, which terminates in a rounded tendon, and this tendon is inserted into the tubercle of the radius. (See **ARM**.) Before passing to this insertion, it gives off an expansion, which separates the median basilic vein from the brachial artery in the situation generally selected for venesection. The action of the biceps is to flex the forearm on the arm and to help supinate the hand.

The name is also given to a thigh muscle whose tendon forms the outer "hamstring." See **RIGHT**.

BICÊTRE, be'sâ'tr' (corrupted from *Winchester*), John, the Bishop of Winchester, was at the head of the hospital here. Originally, the name given an ancient castle, situated on an eminence to the south of Paris (Map Paris id vicinity). After having served as a prison id as a hospital, it has been converted into an insane asylum. A notable feature of the building is a well sunk in the rock to the depth of 53 feet. The village of Bicêtre surrounds it, id on the eminence is situated the modern port de Bicêtre.

BICHAT, be'sha', MARIE FRANÇOIS XAVIER (1771-1802). A French anatomist and physiologist. He studied in Paris under Desault, who quickly recognized his genius and befriended him. In 1797 Bichat became lecturer on anatomy, experimental physiology, and surgery, and in 1800 was appointed physician in the Hôtel-Dieu, but he soon broke down under the strain of intense and unremitting labor. Bichat is justly considered as the founder of general anatomy, he was the first to show that the different organic tissues and membranes in common—a fact which permitted him greatly to simplify and to systematize both anatomy and physiology. His principal work is *Anatomie générale, appliquée à la physiologie et à la médecine* (2 vols., 1801). In his *Recherches physiologiques sur la vie et la mort* (1800) he differentiates between what he terms organic life and animal life. The passions, as well as the various transformations constantly taking place in the living organism, constitute organic life, while animal life comprises the manifestations of pure intelligence. Death, hastened by Bichat's arduous labors in the dissecting room, interrupted his writing of an *anatomie descriptive* (2 vols., 1801-03). *Condillisme*, "Essai sur la philosophie de Xavier Bichat," *Archives d'anthropologie criminelle*, vol. xvi, pp. 753-825 (Paris, 1911).

BICHR, be-shér' (native name). A fish (*Polypterus bichir*) of the upper Nile and of some other African rivers, which is regarded as the best food fish of those waters. Three related species are known in other Central African rivers, dwelling in deep pools and apparently reaching over the surface of the ooze, where they feed on fishes and other aquatic animals (see **REED FISH**). These fishes are of particular interest as the few remaining representatives of the once very extensive Ganoid order *Crossopterygii* (see **GANOIDEI**). All the forms, fossil id recent, according to Kingsley, agree in having a diphycecal tail, the dorsal fin divided into two or more divisions, pectorals and ventrals with a scaly axis and fulcra absent from the throat. The throat is protected by two large plates, the scales are thin and cycloid or else thick and rhomboid—the latter in the living species. In the young bichir external gills are present, the mode of progression is interesting, as when creeping over the bottom the pad-like pectoral fins are used as limbs. These fish can live only one or four hours out of water, and then only when covered with damp weeds.

BICHLORIDE OF MERCURY. See **ANTIDOTE**.

BICK'ELL, GUSTAV WILHELM HUGO (1838-1906). A German philologist and theologian, born at Cassel. He studied in 1857-62 at Marburg and Halle. In 1867 he was consecrated a

priest of the Roman Catholic church and appointed a professor in the college at Munster. He became professor of Christian archaeology and Semitic languages at the University of Innsbruck in 1874, and in 1891 professor of Semitic philology at the University of Vienna. In addition to a translation of the poems of Ephraem Syrus, and an edition of the works of Isaac of Antioch, his publications include *Grundriss der hebraischen Grammatik*, Eng. trans. by Curtius (1869-70), *Conspicuum Rei Synonym. Litterariae* (1871), and *Messe und Pascha* (1872).

BICK'ERSTAFF, ISAAC, ASTROLOGER. A pseudonym adopted by Dean Swift in the pamphlet (1709) in which he proved that the well-known almanac maker, Partridge, was dead. The name was later adopted by Steele in his *Tatler* (1709-11).

BICK'ERSTAFFE, ISAAC (1735-1812). An Irish dramatist, author of numerous comedies and light musical pieces which were produced under Garrick's management and had great success. When 11 years old, he became page to Lord Chesterfield, then Lord Lieutenant of Ireland. Afterward he was an officer of marines, but was dismissed for some discredit offense. Under the suspicion of a capital crime, he took refuge abroad in 1772. Except that he lived for a time at St. Malo under an assumed name, nothing is known of his later life. His best-known pieces are *The Mad of the Mill* (1765), *The Padlock* (1768), *He Would if He Could* (1771), *Love in a Village* (1763), *The Hypocrite* (1768), *The Captive* (1769).

BICK'ERSTETH, EDWARD HENRY (1825-1906). An English Bishop and poet. He was born at Islington, son of Edward Bickersteth, was educated at Cambridge, and was ordained in 1848. He was in charge of parishes in various places until 1885, when he became the Dean of Gloucester. In 1885-1901, when he retired, he was Bishop of Exeter. He is an author of some distinction in prose and poetry. His eschatological poem, *Yesterday, To-Day, and For-ever* (London, 1866, 10th ed., 1889) has been reprinted and widely read. About 30 of his hymns are in popular use. Among the best known of these are "O Brothers, Lift Your Voices" and "Peace, Perfect Peace."

BICK'MORE, ALBERT SMITH (1839-). An American naturalist, born at St. George, Me. He graduated at Dartmouth in 1860, studied at Lawrence Scientific School (Harvard University) under Agassiz, and was an assistant in the Museum of Comparative Zoology. From 1865 to 1869 he traveled in the Malay Archipelago and eastern Asia and upon his return was for a short time professor of natural history at Madison (now Colgate) University. He was a founder of the Museum of Natural History in New York (see **MUSEUMS**) and became lecturer in charge of the departments of public instruction there in 1882. He held this post until 1904, when he resigned and was made professor emeritus. His publications include *Travels in the East Indian Archipelago* (1869) and other works.

BICK'NELL. A city in Knox Co., Ind., 13 miles east by north of Vincennes, on the Indianapolis and Vincennes Railroad, and on White River (Map Indiana, B 4). The town is in a productive coal region and has several mines. Pop., 1910, 2794.

BICKNELL, ERNEST PERCY (1862-). An American public official and reformer, born near Vincennes, Ind., and a graduate of Indiana

University. In 1887 he engaged in newspaper work in Indianapolis, in 1893 was appointed secretary of the Indiana Board of State Charities, in 1898 became general superintendent of the Chicago Bureau of Charities, and in 1908 was appointed national director of the American National Red Cross Society. He took an active part in many reform movements in Chicago and other cities, and was a representative of the American National Red Cross at San Francisco following the fire of 1906, and in Sicily and Calabria after the earthquake of 1909. In 1908 and 1909 he was president of the National Conference of Charities and Corrections.

BICKNELL, GEORGE AUGUSTUS (1846-), rear admiral (retired) of the United States navy, born at Batsto, N. J. In 1861 he was appointed acting midshipman in the navy and saw service for a time during the Civil War, graduating from the United States Naval Academy in 1866, he was present two years later at the opening to trade of the ports of Kobe and Osaka in Japan and commanded the marines which protected Yokohama until order was restored. He was promoted through the various ranks up to that of rear admiral in 1907. He commanded the *Niagara* during the Spanish-American War, the *Monocacy* at Shanghai, China, in 1899, was commandant of the Naval Station at Key West, Fla. (1902-04), and for two years was in command of the battleship *Owens*, flagship of the United States Coast Guard. After serving as commandant at the Annapolis and Portsmouth navy yards from 1906 to 1908, he was in the latter year retired on active service.

BICOL, bá-kól' See **VICOL**.

BICORNED, LORD. A term applied to Alexander the Great, suggested by the two horns with which, on certain ancient coins, his head is decorated.

BICYCLE, bí-sí-k'l (Lat *bis*, twice + *Gr. κύκλος, kýklos*, circle, wheel). A name given to the special form of man-motor machine which

than the other, hence arose the familiar name, "the wheel," which is also applied, though less appropriately, to the machine of to-day, which was first known as a "safety bicycle," in which the two wheels are of the same diameter. Within 10 years the bicycle leaped into public favor by enormous bounds, and for a while its use became well-nigh universal in the United States,

VELOCIPÈDE, 1867

and as a natural consequence its manufacture developed into a vast industry.

The so-called "bicycle craze" was at its crest in 1899, when the value of the American product, which amounted to about 1,000,000 wheels per annum, was estimated at more than \$31,000,000. By 1904 the interest in cycling had declined so that the annual production had fallen in value to some \$5,000,000, and from this time the industry, as well as the use of the bicycle, has remained more or less stationary, with many of the bicycles manufactured in the United States being sold for export. The increased use of the motor car and the motorcycle has attracted many of those who formerly were devotees of bicycling as a means of recreation, and the use of the wheel as a matter of convenience by those living at a distance from their place of occupation while it has continued is being largely supplanted by the motorcycle. In Europe, especially England, the use of the bicycle persisted longer than in the United States, and it still has its devotees, though not to the extent that it once enjoyed.

The history of cycling, as a popular pastime at least, might justifiably be assumed to begin with the advent of the English high-wheel bicycle in 1873, but, in order to trace the evolution of the machine from its conception, we have to go back to a period more than half a century earlier. About the year 1816 Baron von Drais devised a vehicle to assist him in the performance of his daily duties as chief forester to the Grand Duke of Baden. This machine, which was named "draisine," after the inventor, and was exhibited and patented in France shortly afterward, is claimed to have been a rudimentary bicycle. It was composed of two tandem wheels of equal size, connected by a perch, on which the rider partly sat, propelling it by thrusting with his feet upon the ground, and guiding it by a bar connected with the front wheel, and provided with a rest for the arms. In 1891 a handsome monument was erected in memory of the "Father of the Bicycle," over his grave at Karlsruhe, the expenses of which were borne exclusively by bicyclists. An improved form of draisine appeared in England in 1818, and was patented by

DRAISINE, OR CHERLEPERÈDE, 1816

was introduced into England about 1873 and the United States in 1877 and was the immediate forerunner of the modern bicycle. This early and now obsolete bicycle was a skeleton vehicle consisting primarily of two tandem wheels, the forward one and "driver" being very much larger

Denis Johnson, under the name of "Johnson's Pedestrian Curricule." This machine was very popular for a short time, but as soon as it acquired the suggestive titles of "hobby horse" and "dandy horse," it rapidly fell into disuse

ORDINARY OR HIGH WHEEL, 1874

In June, 1810, the curricule was patented in the United States by Wm K Clarkson, but failed to arouse more than a languid interest. The next progressive step in the improvement of this novel vehicle was made by Louis Gompertz in England in 1821. The rider was still obliged to thrust with his legs as before, but there was placed in front of the body rest a lever connected with a segment rack, gearing in a pinion on the front wheel, which could thus be driven by the hands. This machine, however, did little to retard the waning popularity of the "hobby horse," and the contrivance was practically allowed to sink into oblivion for nearly a quarter of a century. About 1840 a Scotchman named Kirkpatrick McMillan applied driving levers to a machine of the draisine type, and four or five years later another Scotchman, one Gavin Dalzell, actually produced a rear-driving "safety," on which he was able to travel 10 or 12 miles an hour.

During the next 10 years we hear more or less of the French velocipede, and finally, in 1855, one M Michaux, a carriage repairer in Paris, brought out a machine not unlike the draisine, but having cranks and pedals fitted to the front wheels. A monument was erected to

TYPICAL CHAIN WHEEL

Michaux in France in 1894. Another inventor, Pierre Lallement, said to have been in the employ of M Michaux, shares with the latter the credit of having laid the foundation stone of modern cycling. At all events Lallement secured, in 1865, a patent on a two-wheeled

velocipede, propelled directly by cranks and loose pedals and surmounted by a wooden perch. The inventor then came to the United States, where he patented a second velocipede Nov 20, 1866. Lallement's machine, which was dubbed "boneshaker" in England, was vastly improved in France shortly afterward and is said to have made cycling a fashionable pastime in Paris during the winters of 1866 and 1867. Schools were established for teaching the art of riding, and everybody who claimed to be anybody possessed a velocipede. So universal was the practice, in fact, that at the Grand Opera House straps were fixed to the walls of the vestibule for holding the machines of fashionable velocipedists. These vehicles were handsomely finished and cost from 625 to 750 francs each. Meanwhile cycling interest was revived in England. In 1866 Edward Gilman patented a velocipede which was to be propelled by a treadle, connected with cranks on the axle of the rear wheel. An endless chain and a "two-speed gear" had already been suggested the same year. The cycling mania soon spread to the United States, and by 1869 manufacturers had all they could do to supply the demand for velocipedes. Inventive ingenuity continued to make surprising progress in Eng-

BALL BEARING

land until, in 1873, James Starley, of Coventry, the second "Father of the Bicycle," produced the first machine embodying most of the features which were found in the ordinary or high wheel. The driver was about three times the size of the rear wheel, and both were provided with rubber tires and cross-tension spokes. Succeeding changes increased the size of the front wheel until it was 60 inches in diameter, depending in large part on the height of the rider, and that of the rear wheel was correspondingly reduced until it fell to 16 inches. In 1875 the average roadster weighed 65 pounds. The modifications and improvements of the 10 years, during which the bicycle enjoyed a halcyon career on both sides of the Atlantic, included plan, roller, and adjustable ball bearings, direct and tangent spokes, and cushion tires. Most important of these improvements was the ball bearing, which soon was applied to all the moving parts of the wheel, with the result that its propulsion was accomplished with far less effort and the rider was able to make greater speed and ride longer distances. The ball bearing illustrated in section consists of a series of steel balls, arranged in a circle, on which the axle moves, its bearing surface being a cone so turned that it is tangent

to the steel ball at *c*. The balls in turn bear against two other tangent surfaces at *a* and *b*. Consequently friction is reduced to a minimum, as the points of contact are theoretically a number of points instead of surfaces.

Meanwhile the idea of a low or safety machine was slowly but surely beginning to assume a tangible shape. An Englishman named H. T. Lawson invented a rear-driving safety in 1876. This machine was followed by the Bicycleette in

CHAIN AND SPROCKET

1880, the Kangaroo in 1883, and finally by the Muvet and the original Rover in 1884. The last mentioned, brought out by the veteran James Starley, was really the prototype of the modern bicycle. For a long time the word "Rover" was applied to all safeties of the new pattern—those with wheels of nearly equal size, the front wheel steering, and the rear one driving by means of a single chain. But the name gradually lost its meaning as the designation of a type, and was replaced by the more comprehensive term "Safety," for since 1890 the high wheel is scarcely to be found outside of junk or curiosity shops. Previous to 1875 English bicycles were imported to supply the demand in the United States, but in that year the Pope Manufacturing Company started the manufacture of bicycles in Boston. The safety model was universally adopted by manufacturers in this country in 1888. A year later the most important of all modern improvements on the bicycle was made by the application of the pneumatic tire. This was not originally designed for the bicycle, but was patented by R. W. Thompson in England in 1843 and in the United States in 1847. Its application to the bicycle was patented in 1889 by Dunlop. After the adoption of the pneumatic tire the development of the bicycle consisted in improving its various parts to secure greater strength and lightness and more grace-

CHAINLESS TYPE OF 1898 (BEVEL GEAR)

ful form, in the invention and improvement of special parts, such as the coaster brake, saddles, adjustable handle bars, and other familiar fittings, the application of bevel gears and a driving shaft in place of the sprocket wheel and chain, the invention of the drop frame for ladies' bicycles, and the development of the machine for two, four, six, and even eight persons. Some notion of the number of inventions developed in

connection with the bicycle is conveyed by the fact that over 5000 patents have been granted on velocipedes and bicycles.

In the Census of Manufacturers for 1899 these were reported 312 establishments with an aggregate capital of \$29,783,650, and a production for the year of 1,112,880 bicycles valued at \$22,127,310. By 1900, as recorded in the bulletin published in 1912, these figures had shrunk to 95 establishments with a capital of \$9,780,102, whose output for the year was 168,824 machines valued at \$2,436,996.

A description of the modern bicycle is somewhat superfluous, so familiar has the construction of the machine become during the last decade. Generally speaking, a modern bicycle weighs from 23 to 27½ pounds complete. The frame consists of cold-drawn, hollow steel tubing, with all joints brazed, and all bearings of the ball type. Suspension wheels with steel wire spokes, wooden rims, and pneumatic tires are universally employed. Popular favor approves the sprocket wheel and chain driver, but a large number of machines are built with shaft and bevel-gear drive. A so-called coaster brake enabling the speed of the wheel to be checked by pressure on the pedals is also a feature of modern machines. Consult H. A. Garratt, *The Modern Safety Bicycle* (New York, 1899), which

MECHANISM OF BEVEL GEAR CHAINLESS BICYCLE

contains a careful discussion of bicycle design and construction, Allen, *Wheel Magic* (London, 1906); Henry, *Cycle Building and Repairing* (New York, 1913). See CYCLING, MOTOR-CYCLE.

BIDA, bē'dā. A town of Nigeria, Africa, capital of the state of Nupe, situated a short distance north of the Niger (Map Africa, F. 4). An extensive trade is carried on, and the industries include embossed copper and brass works, a glass factory, and the dye works. It is well fortified, and its population is estimated at from 50,000 to 90,000.

BIDA, bē'dā', ALEXANDRE (1813-95). A French painter and illustrator. He studied with Delacroix at Paris and excelled in water colors. His favorite subjects were taken from the Orient, especially Palestine, which he visited repeatedly. His best works were produced in 1867-67, such as "Return from Mecca," "Refectory of Greek Monks," "Jews Praying at the Wall of Solomon," "The Field of Boaz at Bethlehem," "The Mosaic of the Mamelukes" (Metropolitan Museum, New York). He is best known, however, for his illustrations for Alfred de Musset's complete works in 10 vols. (1865-66); and for the Bible, comprising the Book of Ruth and the Four Evangelists (1876).

BIDASSOA, bē'dās-sō'a (Basque, ptic river) A river which forms part of the boundary between Spain and France and falls into the Bay

of Biscay at Fuenterrabia. On the Isle of Pheasants (called also *Ile de Conférence*) in its mouth the momentous Treaty of the Pyrenees was concluded in 1659. Bidassoa was the scene of several conflicts during the Napoleonic wars. In 1793 the Spanish broke into France, across the Bidassoa, but were driven back with loss in 1794, and their entrenched camps taken Aug. 1, 1813, the French under Soult were defeated at San Marcial, on the Bidassoa, by the Allies, and in October of the same year Wellington surprised and drove the French from their strongly fortified position on its northern side.

BIDDEFORD A city in York Co., Me., 15 miles southwest of Portland, on the Saco River, and on the Boston and Maine Railroad (Map Maine, B 5). The river furnishes excellent water power, and the city has extensive manufactures of cotton goods, machinery, match blocks, shoes, wooden boxes, and lumber. It also ships a superior quality of granite. On account of its fine beach and good boating and fishing facilities, the city has some reputation as a summer resort. It has a hospital and a public library. Biddeford was settled in 1630, was part of Saco until incorporated as a separate town under its present name in 1718, and was chartered as a city in 1855, the charter of that date now being in force. It provides for an annually elected mayor and a bicameral council. The mayor appoints a few subordinate officers, but the heads of the several administrative departments are elected by the two houses of the council in joint session. Pop., 1900, 16,145; 1910, 17,079. Consult Folsom, *History of Saco and Biddeford* (Saco, 1830), and Clayton, *History of York County* (Philadelphia, 1880).

BIDD'ING PRAYER ('a prayer which bids or directs what is to be prayed for'). A form of exhortation, always concluding with the Lord's Prayer, enjoined by the fifty-fifth canon of the Anglican church, in 1603, to be used before all sermons and homilies. It is a prayer for the church, the sovereign, various classes of people, and a thanksgiving for the faithful departed. Except in cathedrals and the university churches, it is now seldom used, though the use has grown somewhat of late. The form is of extreme antiquity, and we have a similar one in the apostolic constitutions (q.v.), probably that used in the Church of Antioch. It was anciently used for the communicants or believers after the dismissal of the catechumens and was pronounced by the deacon, each petition beginning with the words, "Let us pray for —," and the people responding at the end of each with "Kyrie Eleison," or some such words. There is another very ancient example in the Ambrosian liturgy, and St. Chrysostom alludes to such a form in one of his sermons. It must have been, and even now in its abridged shape still is, very impressive, allowing each individual to supply from his own thoughts special cases of necessity under the different heads. There is close resemblance between the bidding prayers and the Prayer for the Church Militant, used in the Anglican church in the communion service. Consult Wheatley, *Bidding of Prayers Before Sermon No Mark of Disaffection to the Present Government Or an Historical Vindication of the LVth Canon* [of the English Prayer Book] (London, 1718, new ed., 1845); Dearmer, *Buryman's History of the Prayer Book* (Milwaukee, 1913); Harford, *Prayer Book Dictionary* (New York, 1912).

BIDDLE, CLEMENT (1740–1814) An Amer-

ican soldier of the Revolution, born in Philadelphia and known as the "Quaker Soldier." He raised a corps for the protection of friendly Indians against the outlaws known as "Paxton Boys." In the beginning of the Revolution he was an officer in the Quaker Volunteers and was made deputy quartermaster general. After the battle of Trenton he was delegated by Washington to receive the swords of the Hessian officers. He was also at Princeton, Brandywine, and Germantown, and rendered valuable service in the terrible winter of 1777–78 at Valley Forge. He left the military service in 1780 and was appointed by Washington United States Marshal of Pennsylvania in 1787. As quartermaster general of the State, he accompanied, in 1794, the expedition sent to suppress the Whisky Insurrection.

BIDDLE, JAMES (1783–1848) An American naval officer. He was born in Philadelphia, entered the navy in 1800, and served as midshipman in the war with Tripoli, where he was made prisoner and kept until the peace. He was lieutenant on the *Wasp*, which captured the British *Fyoko* early in the War of 1812, and was put in command of the prize, but both vessels were captured by the *Poachers* and taken to Bermuda. Exchanged in 1813, he served on the *Hornet*, in command of which he sailed for the East Indies, captured the *Penguin*, and was wounded in action. Congress gave him a gold medal and the rank of captain. In 1817 he was sent to take possession of Oregon for the United States, in 1845 he negotiated the first treaty between the United States and China and during the Mexican War served on the Pacific coast.

BIDDLE, JOHN (1815–62) The founder of English Unitarianism. He was born at Wotton-under-Edge, in Gloucestershire, baptized Jan. 14, 1815, and in 1831 entered Magdalen, Oxford, where he took his degree of B.A., 1838, and M.A., 1841. In 1841 he was elected master of the free school in the town of Gloucester, the duties of which office he discharged with such zeal that the character of the institution was greatly improved, but having embraced certain opinions—which he put in writing for private circulation—in regard to the personality of the Holy Spirit, at variance with those held by the majority of Christians, he was thrown into jail, Dec. 2, 1845, but bailed out. Being in January, 1847, summoned before the Parliament at Westminster on account of his heresy, he was imprisoned and then published the manuscript *True Questions or Arguments Drawn Out of Scripture, Wherein the Commonly Received Opinion Touching the Duty of the Holy Spirit is Clearly and Fully Refuted* (London, 1847). He was formally tried and condemned to imprisonment. The famous Westminster assembly of divines undertook to "settle" Biddle's case, but unfortunately their arguments—as is usual in disputation—had only the effect of strengthening his previous convictions. In 1848, while still in prison, he published a *Confession of Faith Concerning the Holy Trinity*, etc., which was followed by another tract containing the opinions of the Church Fathers on the same question. In consequence of this attempt to combat the orthodox doctrine, the Westminster divines called upon the Parliament to pass an act declaring the denial of the Trinity a crime punishable by death. The army, however, strange to say, moved on this occasion less cruel than the Church, for it manifested such strong opposition

hat the act remained a dead letter. He was again bailed out and preached in Staffordshire, again cast into prison at Newgate, London, and on Feb. 10, 1662, by order of Oliver Cromwell, Parliament passed a general act of oblivion, and so Biddle was released.

He now began to gather a congregation of those whom he had converted to his opinions, namely, that there was but one person, as there was but one nature, in the Godhead. The members were first called Bidellians, then Socinians, and finally assumed for themselves the name of Unitarians. In December, 1654, he was again imprisoned, for faith's sake, released on May 28, 1655, only again to be imprisoned after a month, and Cromwell was, on Oct. 5, 1655, in order to save his life, compelled to banish him to one of the Scilly Isles. Three years of imprisonment having elapsed, he was permitted to return and continued to preach in London till the death of Cromwell (Sept. 3, 1658), and also after the restoration, until June, 1662, when he was again apprehended and fined £100. Being unable to pay, he was committed to jail, where he died Sept. 22, 1662, of the rigors of the imprisonment. His personal character was highly esteemed by those who knew him. For biography, consult Joshua Toulmin (London, 1789, new ed., 1805), Spears, *Memorable Unitarians* (London, 1906).

BIDDLE, NICHOLAS (1750-78) An American naval officer. He was born in Philadelphia, went to sea at the age of 13, and in 1770 entered the English navy as midshipman, but deserted and joined Captain Phipps's Arctic expedition as seaman. On the outbreak of the Revolution he joined the Americans and was made a captain. He captured two British transports with valuable cargoes and a battalion of Highlanders in 1776, and as commander of the *Randolph* took four prizes and received command of a vessel to cruise in the West Indies. He was killed in an engagement with the *Yarmouth* near Charleston, S. C.

BIDDLE, NICHOLAS (1786-1844) An American financier. He was born in Philadelphia and graduated at Princeton in 1801. He was secretary to President Monroe, then United States minister to England, returned from that country in 1807, and settled down to the practice of law. In 1810 he became a member of the Legislature of Pennsylvania. He was appointed a director in 1819, and president in 1823, of the United States Bank and for the most part conducted its affairs with great skill, integrity, and prudence. On the expiration of the old charter in 1830 he became president of the new United States Bank, chartered by the Legislature of Pennsylvania, but resigned in 1839, and the bank became insolvent in 1841. Biddle had considerable literary taste and from 1812 to 1823 edited and contributed to the *Philadelphia Portfolio* a request of the President of the United States, compiled from the original papers a *History of Lewis and Clark's Expedition to the Pacific Ocean*, which, however, bears the name of Paul Allen on the title page, Allen having completed the work after Biddle's election to the Legislature in 1810. Biddle also published *The Commercial Digest*, a volume issued under the authority of Congress.

BIDDLE, WILLIAM PHILLIPS (1853-) Major general of the United States Marine Corps. He was born in Philadelphia, was educated in private schools and at the University

of Pennsylvania, and, becoming captain in the Marine Corps in 1894, was with Admiral George Dewey on the flagship *Olympia* at the battle of Manila Bay. He had charge of the American division of the international forces that took part in the Boxer Rebellion in China in 1900, commanded in Panama in 1904-05 and later in the Philippines, was commandant of marine barracks at New York, and (1909-10) was again at Panama. He received a number of medals and was promoted through the grades to major general in 1911.

BIDEFORD, bid'e-fēid (from 'by the ford'). A market and seaport town of Devonshire, England, on the Torridge, about 3 miles above its confluence with the estuary of the Taw, 30 miles northwest of Exeter (Map, England, B 5). A bridge of 24 arches and 677 feet long, built in the fourteenth century, unites the two divisions of Bideford. "The little white town of Bideford," as it has been called by Charles Kingsley, dates from before the Norman conquest. It was in the seventeenth century a serious rival of London and Exeter as a centre of trade. It has manufactures of ropes, sails, earthenware, and leather, and in addition to its own manufactures exports timber and coal mainly to Ireland and Wales. Pop., 1891, 7800, 1901, 8800, 1911, 9078. Vessels of 500 tons can approach the quay in the centre of the town. Bideford was the birthplace of Sir R. Grenville, one of the founders of Virginia, whose exploit in attacking a Spanish fleet with his single ship, the *Revenge*, has been celebrated by Tennyson. Consult Watkins, *History of Bideford* (Exeter, 1792).

BIDPAI, bid'pī, or **PILPAI**. The reputed author of a collection of fables which have become famous all over Europe and Asia under his name. The earliest version of this collection which we now possess is the Arabic. (See below.) But this was not the original form of the fables. The researches of Colebrooke, Wilson, De Sacy, Loiseleur Deslongchamps, and Benfey have shown the origin of the tales, their growth, and subsequent modifications. The ultimate source was the unwritten collection of Sanskrit fables, which has, unfortunately, not come down to us. From this Sanskrit it was made the oldest recension which we possess, the *Pañcatantra* (qv). An abridgment of this work was later made in Sanskrit, called the *Hitopadeśa* (qv). This work has always been very popular throughout India. It was the first Sanskrit book ever printed in the Devanāgarī script (ed. Carey, Serampore, 1803). Two translations into English had previously appeared—one by Wilkins (Bath, 1787), and the other by Sir W. Jones (London, 1799).

In early times the fame of the Sanskrit original from which both the *Pañcatantra* and the *Hitopadeśa* are descended reached Persia, and so interested the reigning King, Khosrū Anushirvān (531-579 A.D.), known as "The Just," that he sent his court physician, Barzoi, to India to learn more about the matter. Barzoi translated the collection into Pahlavi, the literary language of Persia at that time, with the title of *Kahāleh and Dimnah*, from the two jackals, Karataka and Damanaka, who appear prominently in the Sanskrit. From the Pahlavi two important translations were made. The first was the old Syriac (c. 570) of Bod, and the Arabic of Abdallah-ibn-al-Mokaffa, who lived in the reign of the Caliph Almansur (754-775). In the intro-

duction to this Arabic translation, the author of the original is called Bidpai, the chief of Indian philosophers. Bidpai is the Sanskrit word *vidyapati* ('master of knowledge'), so it was probably used as a title of honor rather than as a proper name. Great interest centres in the translation of Mokaffa, for its influence upon literature has been very great. There are three elements which can be distinctly traced in its chapters—the Persian in 3 chapters, the Arabic in 6, and the Indian in 12. Of these 12 3 may be traced to the *Mahābhārata*, 5 to the *Paicatantra*, 2 to the first book of the *Paicatantra*, and of 2 the originals seem to be irrecoverably lost. Buddhism was the inspiration for most of the stories, and comparisons with the *Jatakas* or 'Birth Stories' of the Buddha reveal the origin of nearly, if not quite all, of the parables. These *Jatakas* have been widely scattered in the course of Buddhist propaganda, and they can be found in more or less changed forms in Greek, Persian, Arabic, Syriac, Chinese, Japanese, Korean, Mongolian, Finnish, and Samoyed literature, as well as throughout Europe. In the fables of Bidpai, animals appear and act as if endowed with human powers. The stories themselves are usually rather simple, but are interspersed with maxims and sayings of shrewd practical wisdom.

On the Arabic version of Mokaffa five different translations were based, which, in turn, were the bases of many others. These five were the later Syriac (tenth or eleventh century), Greek, by Symeon Seth (c 1080), Hebrew (thirteenth century), Persian of Nasrullah (c 1120), and Old Spanish (1251), from the text of which Raimund made his Latin version (1313). A more important Hebrew translation was that of Rabbi Joel, from which was made the Latin *Doctrinum Humanae Vitae* (c 1270) of John of Capua, who was a converted Jew. This is the most important translation of the fables, for from it flowed most of the translations into the modern European tongues. Some of these were German of Graf Eberhard (c 1480), from which came the Danish (1618) and Dutch (1623), the Spanish *Exemplario* (1493), on which was based the first Italian version, Frienzuola's *Discorsi degli animali* (1548), and another Italian translation by Domi, the *Moral Philosophy* (1552), from which was made the English version of North (1570). From the Persian translation of Nasrullah was made the later Persian collection, the *Anwar-i-Suhaili* (end of fifteenth century), which was the parent of the Turkish *Humayun-namah* (sixteenth century), and the versions in the vernaculars of India. Through the Turkish came the Spanish, and the French of Galland (1724-78), the basis of the Greek (1783), Hungarian (1783), and Dutch translations.

The text of the Arabic collection was edited by De Sacy (Paris, 1816). It was translated into German by Wolff (2 vols., 2d ed., Stuttgart, 1830), and into English by Knatchbull (Oxford, 1819). For the literary history of the fables, consult J. G. N. Keith-Falconer, *Translation of Wright's Edition of the Later Syriac Version of Bidpai's Fables*, with an admirable introduction (Cambridge, 1885). For the fables Rhys Davids, *Buddhist Birth Stories* (London, 1880), Max Müller, "On the Migration of Fables," *Chips from a German Workshop*, vol. III (London, 1880), North, *Moral Philosophie of Dens*, ed. Jacobs (London, 1888), Deslongchamps, *Essai sur les fables indiennes* (Paris, 1838), The

Anwar-i-Suhaili, or Lights of Canopus, trans. by A. N. Wollaston (new ed., London, 1904), E. G. Browne, *Persian Literature* (1906). For John of Capua, consult Hervieux, *Les fabulistes latins* (1899).

BIDWELL, MARSHAL SPRING (1798-1872). A Canadian legislator and political reformer, born in Massachusetts. In 1811 he went to Upper Canada with his parents and settled at Bath. He was called to the bar, entered political life, and soon became prominent among the reformers who were contending for responsible government (see **POLITICAL PARTIES, CANADA**). He was elected several times to the Legislative Assembly, and was twice elected Speaker of that body. Previous to and during part of the upper Canadian rebellion of 1837-38 he was a leader on the popular side, and the object of much suspicion and hostility in Tory circles at Toronto. In 1837 the Secretary of the Colonies in London favored his elevation to the bench and instructed the Lieutenant Governor, Sir Francis Bond Head (qv), to act accordingly, but Head refused, owing to Bidwell's alleged communications with the rebels. It is recorded that Bidwell was compelled to choose between permitting the Lieutenant Governor to examine certain letters that had been put into his possession by the postmaster, and the alternative of leaving the province. He left for New York City in 1838, and there became eminent as a lawyer and public-spirited citizen.

BIEBERSTEIN, be'ber-shitn, ADOLF MAR-SCHALL, BARON VON (1842-1912). A German diplomat and statesman, born in Karlsruhe, in the Grand Duchy of Baden. He was educated in the Frankfurt Gymnasium and at the University of Heidelberg. At an early age he entered the diplomatic service, but did not rise to importance until, upon the retirement of Bismarck in 1890, he was made Secretary of State for Foreign Affairs, with special charge of the details of commercial treaties. During this period, and after 1894, when he was Prussian Minister of State, he gained such a reputation for skill and diplomacy that in 1897 he was appointed Ambassador to Turkey. During his residence of more than 13 years in Constantinople he was frequently called to Berlin for important conferences with the German Emperor, and it was generally understood that he would have succeeded Count von Bulow as Imperial Chancellor but for the fact that a man of Von Bieberstein's calibre was needed in Constantinople to maintain Germany's domination in Turkey and prevent England's return to power there. Most of what he accomplished, to be sure, was undone by the revolution of the Young Turks, the Russo-Italian War, and the Bulgarian War of 1912. Von Bieberstein is said to have inspired the Emperor's telegram of sympathy to President Kruger of the Transvaal at the outbreak of the Boer War, and because his position at The Hague Peace Conference was often in marked opposition to that of the British delegates, it was inferred that he was, to all intents and purposes, the Emperor's proxy. In June, 1912, he was made German Ambassador to Great Britain, at a time when his reputation was greater than that of any other German diplomat. His transfer was heralded as proof of a German decision to change its foreign policy toward both England and Turkey. He died, however, before there was any opportunity of ascertaining the truth of this belief. See **GERMANY, History**.

BIEBRICH, be'brīk. A town in the Prussian province of Hesse-Nassau, on the right bank of the Rhine, about 3 miles south of Wiesbaden. Its most noteworthy building is the summer palace of the dukes of Nassau, which dates from the seventeenth century. The industrial establishments of Biebrich include iron foundries, and manufactures of cement, soap, asphalt, varnish, and various acids. It is the river port of Wiesbaden, and an important station for both passenger and freight traffic. Pop., 1905, 18,980, 1910, 21,104.

BIEDERMANN, be'der-man, FRIEDRICH KARL (1812-1901). A German publicist and historian, born in Leipzig. He studied at the universities of Leipzig and Heidelberg and was appointed professor of philosophy at Leipzig in 1838. He was a prominent member of the Frankfurt *Vorparlament* of 1848, and was elected to the National Assembly, of which he was for a time First Vice President. In 1854, as editor of the *Deutsche Annalen*, he was sentenced to one month's imprisonment and was removed from his professorship. He was restored to this position in 1855. From 1863 to 1879 he edited the *Deutsche Allgemeine Zeitung* and in 1871-74 was a member of the Reichstag. His many publications include *Die deutsche Philosophie von Kant bis auf unsere Tage* (2 vols., 1842-43), *Erinnerungen aus der Paulskirche* (1849), *Friedrich der Grosse und sein Verhältnis zur Entwicklung des deutschen Geisteslebens* (1859), *Fünfzig Jahre in Dienste des nationalen Gedankens* (1892), *Vorlesungen über Sozialismus und Sozialpolitik* (1900), *Deutsches Volk und Kulturgeschichte* (4th ed., 1901). Consult his *Mein Leben und ein Stück Zeitgeschichte 1812-1886* (2 vols., 1886).

BIEDERMANN, GUSTAV WOLDEMAR, BARON VON (1817-1903). A German literary historian, and Saxony railroad official, born at Marienberg. He made numerous valuable contributions to Goethe literature, among which are editions of the letters of Goethe to Friedrich Schlegel (Berlin, 1872) and to Rochlitz (Leipzig, 1887), *Goethe und Leipzig* (2 vols., 1895), *Goethe und Dresden* (1875), *Goethe Forschungen* (1879, 1886, 1899), *Goethes Gespräche* (10 vols., 1889-97).

BIEÛVE, byé', EDOUARD DE (1809-82). A Belgian historical and portrait painter. He was born at Brussels, and was a pupil of Pacheco in the Brussels Academy, and of the sculptor David d'Angers in Paris. His most famous work is the "Compromise of the Brussels Nobles of Feb. 10, 1566," produced by order of the government and now in the Brussels Museum, which was greatly praised at the Paris Exhibition of 1855. It was also exhibited throughout Europe and made, especially in Germany, a deep impression by reason of its coloristic treatment. Some of his other works are "The Last Moments of Anne Boleyn," "The Introduction of Rubens to Charles I of England," "Masaniello," "Ugolino," "Raphael and La Fornarina," and "The Knights of the Teutonic Order Recognizing the Elector of Brandenburg as their Grand Commander," painted for the King of Prussia. Bieûve was one of the principal representatives of the Romantic school in Belgium.

BIEL, GAMBIEL (c1425-95). A German scholastic philosopher. He was born at Speyer, studied at the universities of Heidelberg and Erfurt, became preacher of the cathedral of St. Martin, Mainz, and subsequently provost of Urach, Wittenberg. In 1494 he was appointed professor of theology and philosophy in the newly

founded University of Tübingen. He was among the last representatives of the Nominalism (qv) of Occam (qv). His works include *Epitome et Collectorium ex Occamo super IV Libros Sententiarum* (1495), *Expositio Canonis Missæ* (1510), *Sermones Dominicales de Tempore et de Sanctis per Totum Annum* (1519), *De Moneturum Potestate simul et Utilitate* (1541).

BIELA, be'la, WILHELM VON (1782-1853). A German astronomer. He was born at Rossia, Prussia, became a captain in the Austrian army, and died in Venice. He is celebrated as the discoverer of a comet named after him. See **BIELA'S COMET**.

BIELAGA. See **STURGEON**.

BIELA'S COMET. One of the comets of short period, named from its discoverer, Wilhelm von Biela (qv). Its periodic time is 6,602 years. Observations are on record for the appearances that took place in 1772, 1805, 1826, 1832, 1846, and 1852. On its return in 1846 it was in two parts, separated by about 160,000 miles, unequal in size, each having a distinct nucleus and tail. At the return in 1852 the parts were 1,500,000 miles asunder. Since then it has not been seen. It has been suggested with much probability that it has been broken up and dispersed, forming material for shooting stars.

BIELAU, be'low. See **LANGENBIELAU**.

BIELAYA, byél'a-ya (Russ. *byelaya*, white, i.e., *ryeka*, river). A river in the governments of Ufa and Orenburg, Russia, emptying into the Kama after a course of about 500 miles (Map Russia, J 4). From its source among the marshes on the Ural ridge in lat. 53° N, it flows northwesterly through a mountainous mining region until it reaches the city of Ufa, where it is spanned by a railway bridge. The Bielaya is navigable from this city to its junction with the Kama, 200 miles below. Regular passenger and freight transportation of timber, mineral products, and salt is carried on during the navigable season, April to November. Nine other Russian rivers bear the name, the most important of which are the river in the government of Ekaterinobsk, 150 miles long, with coal deposits on its banks, and the affluent of the Angara in the government of Irkutsk, Siberia.

BIELAYA TSERKOV, byél'a-ya tser'kóf (Russ. white church). A town in the government of Kiev, Russia, the revenues of which go to the Counts Brantky. It is situated in an affluent of the Dnieper, 30 miles southwest of Vasilkov (Map Russia, D 5). It carries on an important trade in grain and cattle and has machine works. Pop., 20,700.

BIELEFELD, be'le-félt (MITG. *bil*, simple, plain, level + *Gei*, field, field, cf. Eng. *Plain-field*). A town of Westphalia, in Prussia, on the Lutter near the Teutoburg forest, Brunschwick-flamm, 385 feet above sea level (Map Prussia, C 3). Near the town, on a hill, is the old castle of Spandenburg, built in the twelfth century by Count Bernard of Lippe. Previous to its destruction by fire in 1877 it was used as a prison, but now in its restored state is fitted up as an historical museum. The city affairs are administered by a municipal council of 36 members who elect a burgomaster and an executive board of eight. The town has a gymnasium, two hospitals, and clinics. It is one of the principal industrial towns of the province and is the centre of the linen trade, the productions of the Ravensberg, Westphalian and the Vorwärts factories together.

amounting yearly to about 9,000,000 marks. There are also manufactures of silk and plush materials, furniture, glass, sewing machines, motor cars, and bicycles. Pop, 1900, 63,044, 1910, 78,334.

BIELGOROD, byél'gó-rót. See BELGOROD.

BIELINSKY, byél'-lyén'ské, VISSARION. See BELINSKY.

BIELITZ, be'lits (Polish *Bielsko*, from the river *Biala*, white). A town of the Austrian crownland of Silesia, on the left bank of the river *Biala*, about 40 miles west southwest of Cracow (Map Austria, F 2). A bridge over the river connects it with the town of *Biala*, in Galicia, and it contains the old castle of Prince Sulkowicz. It is one of the chief seats of the Austrian woolen industry and exports large quantities of cloth, particularly to the Orient. There are also manufactures of machinery, wire nails, furniture, glassware, and paper. Pop, 1890, 15,000. 1900, 16,900. 1910, 18,568, mostly Germans. Bielitz was founded in the thirteenth century and was made a principality in 1752.

BIELLA, byél'la. A city in the province of Novara, north Italy, on the Cervo and the Auna, 55 miles northeast of Turin, on the south edge of the lower Alps (Map Italy, C 2). It is divided into two parts: the old town, elevation 1558 feet, lies on a hill above the new town. There are fine old palaces and cathedrals, a gymnasium, seminary, and technical schools. Biella contains manufactures of woollens, silks, and cotton, the power for which is furnished by neighboring falls. The principal trade is in silk, chestnuts, and wine. Pop, 1881, 15,000, 1901, 19,514, 1911, 22,519.

BIELO-OZERO, byél'ó ó'zá-ró (Slav, Russ *byely*, white, *ozero*, lake. Once called *Ves*). A lake in the northeastern part of the government of Novgorod, Russia (Map Russia, E 2). It is elliptical in shape, 27 miles long, 20 miles wide, and occupies an area of over 430 square miles. Its bottom is composed of white clay, which during stormy weather gives to the water a milky appearance. Bielo Ozero is deep, and fish exist in abundance. It receives the Kovsha and Kelma and is drained by the Sheksna, a tributary of the Volga. It is connected by canals with Lake Onega and the Dvina and forms a part of the extensive canal system which connects the Baltic with the Caspian Sea through the Volga.

BIELOPOL, byél'pól (Russ *byely*, white + *Gk pólis*, polis, city). A town of Russia, in the government of Kharkov, 106 miles from the city of that name, on an affluent of the Seim (Map Russia, D 4). It has a considerable trade in grain and cattle and maintains distilleries and brickyards. Pop, 1897, 15,200.

BIELOSTOK. See BIALYSTOK.

BIEŁOWSKI, byél'ów'ské, AUGUSTUS (1806-76). A Polish poet and historian. He was born in Galicia, received a university education, and in 1869 became director of the Ossolinski Institute at Lemberg. His chief work was the publication of the *Monumenta Poloniae Veterissima* (2 vols, 1864, 1872), containing all the chronicles relating to Poland up to the time of Dugosz. This work was continued after his death by the Academy of Sciences at Cracow. Of his other works, mention should be made of his poem, "Lied von Heinrich dem Frommen," and translations from Schiller, his *Kritische Einleitung zur Geschichte Polens* (1850), containing many hypotheses which were afterward

proved untenable by Lelewel and Szańnocha, and his *Pompeii Trogi Fragmenta* (1853), fragments of Pompeius found at the Ossolinski Library and not previously edited.

BIELSKI, byél'ské, MARCIN (c 1495-1575). A Polish historian. He was born at Biala, near Sieradz, Poland. His chief works were his *Kronika świata* (1550-64), a universal history from the earliest period down to his own time, and his *Kronika polska* (1856), a history of Poland, afterward brought down by Bielski's son, Joachim, to the year 1597. They were the first important historical works published in the Polish language, as well as one of the first models of Polish literary prose. On account of alleged heterodox statements, however, these works were interdicted by the Bishop of Cracow in 1617. Besides these historical works Bielski wrote also a number of political satires, which made him many enemies. As a writer he idealized the distant past and naturally regarded his own age as an age of decadence.

BIENAIME, byá'ná-má', LUTER (1795-1878). An Italian sculptor. He was born in Carrara and studied there and at Rome under Thorvaldsen, after whose death he became one of the leading Roman sculptors. His best-known works include "John the Baptist" (1820, Metropolitan Museum), "Cupid and the Dove" (Conte Sommariva, Milan), "Venus" (Turin Museum), and several statues in the Winter Palace, St Petersburg. They are all in the style of Thorvaldsen, of whom he was a mannered follower.

BIENER, be'nér, CHRISTIAN GOTTLÖB (1748-1828). A German jurist of great learning and distinction. He was born at Zorbig, pursued his legal studies at Wittenberg and Leipzig, and became professor of law in Leipzig in 1790. His *Commentarii de Origine et Progressu Legum Jurumque Germaniae* (2 vols, 1787-95) is one of the first notable works on jurisprudence published in Germany. Important, also, are the works entitled, respectively, *Systema Processus Judicialis et Communis et Sacrorum* (1796, 4th ed by Siebald and Krug, 1834-35), *Questiones*, and *Interpretationes et Responsa* (1830).

BIENEWITZ, be'ne-vits, PETER. See ARXANUS, PETRUS.

BIEN-HOA, byén'hó' A town of Lower Cochinchina, French Indo-China, on the Donnia River, 20 miles northeast of Saigon, with which it is connected by canal and telegraph. It is the capital of an arrondissement and is fortified. Pop, 1901, 19,300.

BIENNE, byén (Ger name, *Biel*). A town of Switzerland, in the canton of Bern, 17 miles northwest of the city of Bern, at the foot of the Jura, 1400 feet above sea level, in the valley of the Suze, and at the northern extremity of the lake of Biemme (Map Switzerland, B 1). Surrounded by old walls, Biemme has several interesting buildings, notably the city church and the new Catholic church, the former castle, now the townhall, and the Schwab Museum, which contains an interesting collection of Roman and Celtic weapons, and remains of the ancient lake dwellers. Chief among the educational institutions is the West Swiss Technical Institute, which includes a school for railroad employees and a watchmakers' school. The industries consist mainly of watch making, cotton spinning, tanning, dyeing, bookbinding, machine building, and the manufacture of jewelry, cigars, and paper. It is on the line of railroads running to Basel and Bern. Biemme is a place of great

antiquity, having belonged to the Bishop of Basel, and as early as 1352 it entered into an alliance with Bern for the protection of its liberties. The Reformation so weakened the power of the clerical governors of Bienne that in the beginning of the seventeenth century it had become merely nominal. It was essentially a free city until 1707, when France annexed it, and in 1815 it was united to Bern. Pop., 1900, 22,100, 1910, 23,583.

BIENNE, LAKE OF. A Swiss lake extending from the town of Bienne along the foot of the Jura Mountains in a southwest direction, until within 3 miles of Lake Neuchâtel, its length being about 10 miles and its greatest breadth 3 miles. It is situated at an elevation of 1419 feet above the level of the sea, 8 feet lower than Lake Neuchâtel, whose surplus waters it receives at its southern extremity by the Thièle, by which river it again discharges its own. Its greatest depth is 280 feet. Towards its southern extremity is situated the island of St. Pierre, crowned with a grove of fine old oaks, to which Rousseau retired for two months after his proscription at Paris in 1765.

BIENNIALS (Lat. *bis*, twice + *annus*, year). Plants whose life cycle is completed within two vegetation periods, separated by a period of rest. Many biennials are rosette plants during the first season and have erect leafy stems the second season. See **DURATION**, **SIEMIS**.

BIENTEVEO, byán'tá-vá'ó (for derivation see below). A tyrant flycatcher of southern South America (*Pitangus bolianus*) familiar about the houses and gardens of Buenos Aires and neighboring villages. It is noted for its loud, cheerful cry, "in which," says W. H. Hudson, "people fancy there is a resemblance to the Spanish words *bien-te-voo*, 'I see you well,' while its big head and beak and strongly contrasted colors, especially the black and white head stripes, seem to give it a wonderfully knowing look." In exception to the custom of its family it erects a very elaborate domed nest which it sometimes takes weeks to construct. It feeds upon insects and also fishes in pools for small fry and tadpoles and haunts places where raw meat is obtainable. The adult has a black head, with a large yellow crest and white eye stripe, the upper parts are brown and the lower surface sulphur-yellow.

BIENVILLE, byán'vél', JEAN BAPTISTE LE MOYNE, SIEUR DE (1680-1768). One of the four brothers who were conspicuous in the exploration and settlement of the French province of Louisiana. The others were Iberville, Souville, and Chateaugay, all sons of Charles Le Moyne. In 1699 Iberville, accompanied by Bienville and Souville, arrived from France and founded Biloxi and a post on the Mississippi River, some 50 miles from its mouth. In 1701 Bienville succeeded Souville as Governor of Louisiana. He founded Mobile, whither he transferred the seat of government. Chateaugay joined him in 1704 with 17 settlers from Canada, and 20 women arrived from France to be married to the colonists. Bienville was dismissed in 1707, but his successor died at sea and left him still in authority. The colonists suffered exceedingly from the cumbersome system of French Colonial administration, failed to prosper, and made no return to the King for his large outlays. In 1712, therefore, Louis XIV. farmed out the Colony to a rich merchant, Antoine Crozat,

granting him an absolute monopoly in trade and the right to import negroes from Africa. In 1713 Cadillac was made Governor of the province, with Bienville as his deputy. They quarreled, and Cadillac was replaced by Epinay. Crozat soon threw up the Colony as a losing venture. In 1718 Bienville was made Governor, and with the aid of men sent out by Law's Mississippi Company, founded the city of New Orleans, which became the seat of government in 1723. Recalled the next year, he went to France to answer certain charges, leaving in the Colony a code regulating slavery, prohibiting all religions except the Roman Catholic, and banishing Jews. In 1726 he was removed, but was reappointed in 1733, and made lieutenant general throughout the whole of his active career in Louisiana. Bienville was intent upon the welfare of the Colony. That the Colony did not prosper more rapidly must be ascribed to the French Colonial policy rather than to the faults of Bienville. In 1743 he was finally superseded, and he passed the remainder of his life in France.

BIER, bër, AUGUST (1861-) A German surgeon, born at Helsen, Waldeck, Germany. He was educated at the universities of Berlin, Leipzig, and Kiel. In 1889 he became lecturer, and in 1894 professor, at Kiel. In the latter year he was appointed professor and director of the surgical clinic at Giefsfeld, and in 1903 he took up the same work at Bonn and in 1907 at Berlin. He became known as a daring operator and as an originator of new surgical methods. His publications include *Hyperamie als Heilmittel* (1903, 6th ed., 1907, Eng. trans. by G. M. Blech under the title *Bier's Text-book of Hyperamie as Applied in Medicine and Surgery*, 1909), *Ueber das Bezeichnung des Telologischen Denkens in der Praktischen Medizin* (1910).

BIERBAUM, bër'baum, OTTO JULIUS (1865-1910). A German author, born at Grunberg, lower Silesia. He successively took up the studies of philosophy, Romance philology, history of art, and Oriental languages, visiting the universities of Zurich, Leipzig, Munich, and Berlin. In 1892 he became editor of the *Freie Bühne* in Berlin (later the *Neue Deutsche Rundschau*), the publication of which he abandoned to found the art journal *Pan*, which, in collaboration with Julius Meyer-Graefe, he conducted till 1895. His publications include *Erlebte Gedichte* (1892), *Studentenbeichten* (1897), *Die Friesenfahrten und Friesenmeinungen des vierzehnten Jahrhunderts* (Herrn Pankrazius Grauer) (1897), *Der bunte Vogel von 1897*, *Ein Kalenderbuch* (1896), *Der bunte Vogel von 1899*, *Ein Kalenderbuch* (1898), *Irigenen der Liebe* (1901), a collection of poems, *Stella und Antonie*, a drama (1903), *Eine empfindsame Reise im Automobil* (1903), *Das Cenci der Mautesel* and *Die Schlangendame*, plays (1905), *Urban*, *Die literarische Gegenwart 20 Jahre deutschen Schriftstums, 1888-1908* (Leipzig, 1908). A light-hearted, nature-loving spirit romps through his comedies and stories and breathes in his melodious lyrics. His collected works were published in 1908, and his reminiscences at Munich in 1912.

BIERCE, bër's, AMBROSE (1842-). An American journalist and author, born in Ohio. He served with distinction in the Civil War, was breveted major, went to California in 1866 and to London in 1872. In London he contributed to *Fun* fables purporting to be translations from the Zambesi and the Parsi, and published

later in *Cobuebs from an Empty Skull*. Returning to California, he contributed to the *Oakland Monthly* and for many years to the "Prattle Columns" in the *San Francisco Examiner*. He edited *The Argonaut and Wasp* in California (1877-84). In more recent years he has been editorially connected with the *Cosmopolitan Magazine*. His more noteworthy books are *The Monk and the Hangman's Daughter*, with Dr. A. Danagier (1892), *In the Mist of Life* (1894), *Can Such Things Be?* (1898), *Fantastic Fables* (1899), *Shapes of Clay* (1905), *The Cymic's Word-Book* (1906), *The Shadows on the Dial and Other Essays* (1909), *Write it Right* (1909). His collected works in 12 volumes appeared in 1913.

BIERNATZKI, bér-natz-ké, JOHANN CHRISTOPH (1795-1840). A German author and clergyman. He was born at Elmshorn, in Holstein, studied theology and Oriental languages at the universities of Kiel and Jena, then served as a Lutheran pastor at Friedrichstadt in the province of Schleswig from 1825 to 1840. His most important tale is *Die Hallig, oder die Schifferbrüder auf dem Eiland in der Nordsee* (1836, 4th ed with introduction by Duntzer, 1881), which is still valued for its accurate description of personal experiences during the floods which frequently desolated Schleswig. His complete works, including tales, poems, and didactic treatises, were published after his death (8 vols., Leipzig, 1852). Consult his biography (Leipzig, 1852), by his son Karl Bernhard Biernatzki.

BIER'S HYPERÆMIA. A method of treating certain local inflammations by increasing temporarily the blood supply of the part. Acute and chronic joint diseases, infections, abscesses, spina, neuralgia, and rheumatoid arthritis are so treated. Active or passive hyperæmia may be induced—the former by directing a current of hot air upon the affected area, or placing the part in a hot-air box heated from 144° to 230° F. Passive hyperæmia is brought about in one of two ways, suction or constriction. Suction is accomplished by glass vacuum cups ingeniously fashioned to fit different parts of the body and connected with a rubber bulb by means of which the air is exhausted. This causes a rush of blood to the part, and congestion, i.e., hyperæmia, is produced. In treating the larger joints or extremities constriction is most convenient. A bandage, generally of rubber, is applied above the joint to be treated, lightly enough to obstruct the return venous flow, but not the arterial circulation. Bier's hyperæmic treatment must be used with skill and discretion, or it may do harm. Bandages and cups are applied intermittently, for definite lengths of time, and the circulation watched lest sloughing or gangrene occur. The method is based on the observation that increased blood supply results in increased phagocytosis, rapid tissue repair, and heightened local resistance, and is nothing more than an attempt to reproduce or accentuate in a definite, systematic way, nature's process of healing. The same effects are obtained by poulticing, counter-irritation, dry cupping, etc., but in a less exact and controllable manner.

BIERSTADT, bér'stat, ALBERT (1830-1902). An American landscape painter. He was born at Cologne, near Düsseldorf, Germany, received a common-school education at New Bedford, Mass., in 1853-57 studied at the Düsseldorf Academy under Lessing, A. Achenbach and

Leutze, and for a short time at Rome. In 1857 he opened an atelier in New Bedford, Mass., and the following year he made a sketching tour in the Rocky Mountains, largely in conjunction with the expedition of Gen. F. W. Lander to survey an overland wagon route. Leaving the party, with only two companions he undertook a dangerous journey in the eastern Rockies. Later (1863) he again visited the Rockies, Salt Lake City, the Sierras, San Francisco, and the Yosemite. From these and other travels he collected materials for his most important works. He was elected a National Academician in 1860 and received numerous decorations and medals in Austria, Belgium, and Germany. His studio was at Irvington-on-Hudson, N. Y., until 1882 and subsequently in New York City. Trained in the Düsseldorf school of landscape, he was skillful as a draftsman, although as a colorist somewhat hard and dry. The Düsseldorf method he applied to the interpretation of the vast scenery of the Rockies and the Sierras, and with F. E. Church and Thomas Moran, introduced a spacious, panoramic manner into American national art. His study of nature was direct and patient, his rendering of it, in the panoramic landscapes which made him famous, was empty and theatrical. The smaller canvases of his early period, like the "Arch of Octavian" (Boston Athenæum), are much better. His more ambitious works include "Rocky Mountains" (1863, Metropolitan Museum, New York), "North Fork of the Platte" (1864), "El Capitan, Merced River" (1866), "Storm in the Rocky Mountains" (1866), "Valley of the Yosemite" (1866, Public Library, New York City), "Valley of Kern's River" (1875), "Mount Corcoran, Sierra Nevada" (1878, Corcoran Gallery, Washington, D. C.), and two historical paintings, "The Discovery of the Hudson River" and "The Settlement of California" (both in the Capitol at Washington). Consult Tuckerman, *Book of the Artists* (New York, 1867).

BIESBOSCH, bies'bósk (Dutch, the reedy thicket). A marshy sheet of water lying just southeast of Dort, Netherlands, and partly separating the provinces of North Brabant and South Holland. It was formed in November, 1421, by an inundation which destroyed 72 villages and 100,000 people and covered an area of 80 square miles. Since the eighteenth century a considerable portion of the submerged area has been reclaimed, thus forming a number of large islands (Map Netherlands, C 3). The Biesbosch forms the eastern end of the estuary known as the Hollandsch-Diep, into which flows the Maas (Meuse) River.

BIESTER, byás'tér, JOÃO ERNESTO (1829-80). A Portuguese dramatist. He was born in Lisbon, and began his literary career by articles published in 1851 in *O País*. In 1853 he produced his first drama, *Raphael*, on the stage in his native city. Though utterly lacking in local and national coloring, his works, which were about 60 in number, were for many years the most popular dramas on the Portuguese stage. Despite the fertility of his imagination and the morality of the subjects of his plays, he had little influence on the revival of the national Portuguese theatre. Among the best known of his plays are *Moodade de D. João V.*, a drama in five acts (with Rebello da Silva, 1858), *Os homens servos*, a comedy-drama (1858), *Prima-vera eterna*, a comedy-drama (1860), *Abnegação*, which won the prize in the dramatic

tourney (1861), and *Os dsfamadores*, a comedy (1866) Biester is the only Portuguese dramatist to write only in prose, and, in addition to his plays, he gave us one work of criticism, *Uma Viagem pela litteratura contemporanea* (1856) He was also the founder and first editor of the journal *Revista Contemporanea de Portugal e Brazil* (1859) In 1862 he was made a member of the Royal Academy

BIFROST, be'fröst, or **BIFRAUST** (Old Norse, the tremulous way, from *bifa*, to tremble + *rost*, way) The rainbow, which in Norse mythology was deemed to be a bridge between heaven (Asgard) and the earth (Midgard) or hell (Hela) It was used by the gods in their daily descent to the Urdar-fountain, and was guarded by Heimdal, god of light (qv) In the latter time the warriors of Muspelheim (land of fire), after having traversed great rivers, were to ride over the bridge to give battle to Odin and his associate gods, the bridge (*ásbrú*, Asabridge) was to break down, the wolf Fenrir, the Midgard serpent Loki, all the followers of Hel, and the frost giants were to unite in the war There was nothing in heaven or earth that should be exempt from fear in that terrible hour All the gods, led by Odin, were to come forth to war The evil powers were to triumph, and the whole universe was to be consumed with fire Consult Anderson, *Norse Mythology* (Chicago, 1901) See SCANDINAVIAN AND TRUTONIC MYTHOLOGY, BURI

BIGA, or **BIGÆ**, bi'gæ, which is the usual form before the second century A.D. (Lat. from *bis*, twice + *agum*, yoke) A term for a vehicle drawn by two animals and commonly applied to the Roman chariot used in processions or in the circus In shape it resembled the Greek war chariot—a short body on two wheels, low and open behind, where the charioteer entered, but higher and closed in front A good example is the marble biga in the Vatican Museum

BIG'AMY (OF *bigame*, from Lat. *bis*, twice + Gr. *γάμος*, *gamos*, marriage) In law the criminal offense of contracting a second marriage by one who is at the time a married person In ecclesiastical law, marriage being a sacrament of the Church and binding each party for life, a second marriage, the former having been valid, was deemed bigamous and was punished as such, whether the former spouse of the offending party was living or dead Although void by the canon law, ecclesiastical courts will recognize it so far as to entertain proceedings for the formal nullification of the second marriage In the criminal law of Great Britain and the United States bigamy (more properly called polygamy) is a statutory offense The earliest English statute on this subject, that of 1 Jas. I, c. 11 (1603), declared it a felony with benefit of clergy (qv) Blackstone says "the legislature thought it just to make it a felony by reason of its being so great a violation of the public economy and decency of a well-ordered State" The latest English statute (24 and 25 Vict, c. 100, § 57) treats it as a wrong against the chastity of the second spouse As the statute of James was enacted prior to the settlement of the English Colonies in America, it might have been accepted as a part of the common law of the States, and it was so accepted in Maryland Most of the States, however, and the Federal Legislature have enacted statutes modeled after the statute of James Under these the crime consists in going through the

ceremony of marriage with another person while having a husband or wife living A second, non-ceremonial or common-law marriage, so called, though valid but for the former marriage, will not in general support an indictment for bigamy The crime is cognizable only by the courts of the State where the second marriage occurs The present statute in England continues this rule so far as aliens are concerned, but makes punishable in England the bigamous marriage of a British subject, wherever it may have been contracted It is provided by statutes on this subject, generally, that they do not extend to any person by reason of a former marriage whose husband or wife shall have been absent for a specified period (in England seven years, in the United States often five years), and is not known to such person to be living, but is believed by such person to be dead, nor to a person whose former marriage shall have been dissolved or pronounced void by a valid decree of a competent court In 1882 Congress amended Section 5352 of the United States Revised Statutes, so as to bring the polygamous practices of Mormons within the definition of criminal bigamy In some States a person who knowingly enters into a marriage with a bigamist is declared to be guilty of the same offense Consult Stephen, *Digest of the Criminal Law* (5th ed., London, 1894), Phillimore, *Ecclesiastical Law of the Church of England* (2d ed., London, 1895), Evesley, *Law of the Domestic Relations* (2d ed., London, 1896)

BIG BEN The name of the bell in the Parliament clock tower, London, cast in 1858

BIG BETH'EL A small village on the peninsula between the York and James rivers, Va., 10 miles northeast of Fortress Monroe It was an outpost of Magruder's encampment at Yorktown early in 1861, 1800 Confederates being stationed here, and on June 10 was unsuccessfully attacked by Gen. E. W. Pierce, at the head of about 2500 Federals, acting under the directions of Gen. B. F. Butler (qv) The fight was characterized by a series of blunders on the Federal side, and General Pierce was soon forced to retire with a loss of 76 (including Major Theodore Winthrop), the Confederates having lost only 14 Consult *Official Records* (vol. 11, Washington, 1881-1901) and Johnson and Buell (ed.), *Battles and Leaders of the Civil War*, vol. 11 (New York, 1887)

BIG BLACK RIVER 1 An affluent of the Mississippi, rising in Choctaw Co., Miss., and after a southwest course of 200 miles flowing into the greater river 20 miles south of Vicksburg (Map Mississippi, E 5) It is navigable for nearly 60 miles to Bovina 2 A tributary of the Porcupine River, Alaska, into which it flows a few miles above the latter's junction with the Yukon River at Fort Yukon 3 One of the eastern feeders of Lake Winnipeg, Canada, which it enters in lat. 52° 20' N

BIG BLUE RIVER See BLUE RIVER

BIG BONANZA A popular play adapted by Bartley Campbell from a German source (1875)

BIG'ELOW, ERASTUS BRIGHAM (1814-79) An American inventor, born in West Boylston, Mass. He invented looms for weaving suspended webbing, piping cord, knotted counterpanes, carpets, coach leaces, etc., founded Clinton, Mass., the headquarters of the Bigelow Carpet Co., and was one of the original incorporators of the Massachusetts Institute of Technology. He pub-

lished *The Tariff Questions Considered in regard to the Policy of England and the Interest of the United States* (1863)

BIGELOW, FRANK HAGAR (1851-) An American meteorologist, born at Concord, Mass. He graduated at Harvard College in 1873, and at the Episcopal Theological School in Cambridge (Mass.) in 1880. He was assistant astronomer at the observatory in Córdoba, Argentina, and afterward was successively professor in Racine College (Wis.) and assistant in the *Nautical Almanac* office, Washington, D. C. In 1891 he was appointed a professor of meteorology in the United States Weather Bureau and in 1894 professor of solar physics at the Columbian University. He also became, in 1891, assistant rector of St. John's Church, Washington, and in 1898 was president of the Washington Philosophical Society. He invented an instrument for obtaining photographic records of stellar transits and endeavored to prove a connection between terrestrial magnetism, the aurora, and the solar corona. In 1904 he was made a member of the International Commission on Solar Physics and Meteorology. He became professor of meteorology at the Oficina Meteorológica in Córdoba, Argentina, in 1910. He published an important monograph on the *Solar Corona* (1899), *Studies on the Thermodynamics of the Atmosphere* (1907), and bulletins on evaporation, the circulation and radiation of the atmosphere, and synchronism between solar phenomena and terrestrial meteorology (Buenos Aires, 1911-13), *The Daily Normal Temperature and the Daily Normal Precipitation of the United States* (1908).

BIGELOW, JACOB (1787-1879) An American physician and botanist. He was born in Sudbury, Mass., graduated at Harvard in 1806, and began the practice of medicine in Boston in 1810. He was for more than forty years physician to the Massachusetts General Hospital and for a long time professor of materia medica and clinical medicine in Harvard. In 1820 he was one of the committee of five who formed the American Pharmacopoeia and assisted in establishing the nomenclature which substituted a single for a double word when possible. He was also the originator of Mount Auburn Cemetery. His works include *Nature in Disease* (1854), a *Brief Exposition of Rational Medicine* (1858), *History of Mount Auburn* (1860), and many papers on medicine and botany, chief among the latter being his *Florula Bostonensis* (1814). For many years he was president of the Massachusetts Medical Society.

BIGELOW, JOHN (1817-1911) An American journalist, diplomat, and miscellaneous writer. A graduate of Union College (1835) he was later admitted to the bar, practiced law for some years, but gradually exchanged this profession for that of journalism. From 1845 to 1846 he was inspector of the prison at Sing Sing, in 1849 he became joint owner of the *Evening Post* with William Cullen Bryant and was its managing editor until 1861, when he became consul at Paris. From 1864 to 1867 he was United States Minister to France. Returning to America, he was Secretary of State for New York (1875-77), and, after August, 1886, a trustee of the Tilden Fund for a New York public library. His more important publications are *Some Recollections of A. P. Berrery* (1869), *Molinos the Quietist* (1882), *Life of Samuel J. Tilden* (2 vols., 1895), *France and the Confed-*

erate Navy (1888), *The Mystery of Sleep* (1897). He edited *The Autobiography of Franklin* from a manuscript that he had discovered in France (3 vols., 1868), also the *Complete Works of Franklin* (10 vols., 1887-88), and the *Speeches of S. J. Tilden* (1886). In 1895, he was elected president of the board of trustees of the New York Public Library. In 1890 appeared his biography of William Cullen Bryant, and in 1909 was published a valuable and entertaining narrative of his diplomatic and social experiences under the title *Retrospections of an Active Life*, 2 vols.

BIGELOW, MAURICE ALPHEUS (1872-) An American biologist, born at Milford Centre, Ohio, and educated at Ohio Wesleyan, Northwestern, and Harvard universities. He served as instructor in biology (1894-95) at Ohio Wesleyan and as assistant and instructor in zoology (1895-98) at Northwestern. At Columbia University he became instructor in biology in 1899, adjunct professor in 1903, and professor of biology in 1907. From 1905 to 1910 he was editor of the *Nature-Study Review*, and he is also author of *The Early Development of Lepus* (1902), *The Teaching of Zoology in the Secondary School* (1904), *Applied Biology* (1911), *Teacher's Manual of Biology* (1911), *Introduction to Biology* (1913).

BIGELOW, MELVILLE MADISON (1846-) A distinguished jurist and law writer. He was born at Eaton Rapids, Mich., and was educated at the University of Michigan and at Harvard. He became successively lecturer in the law schools of the University of Michigan and of Northwestern University, and professor of law and dean of the Law School of Boston University. His researches into the sources of our legal system resulted in the publication of a scholarly work, *Placita Anglo-Normannica*, in 1879. His interest in the relation of law to social progress has found expression in numerous essays, addresses, and other works, especially in the volume *A False Equation. The Problem of the Great Trust* (1911). In addition to his American edition of *Jarman on Wills*, he published treatises on various branches of the law, among which the following are especially noteworthy: *The Law of Estoppel* (1872, 6th ed., 1912), *The Law of Torts* (1878-1901), *History of English Procedure* (1880), *The Law of Bills, Notes, and Cheques* (1895-1900), *The Law of Wills* (1898), *The Law of Fraudulent Conveyances* (1911).

BIGELOW, POULTNEY (1855-) An American author, historian, and traveler, the son of John Bigelow. After a cosmopolitan training in the United States, France, and Germany (where he was a fellow pupil of the present German Emperor), he was graduated at Yale in 1879 and from the Columbia Law School in 1882. Admitted to the bar, he abandoned the law, after a few years, for journalism and travel in the East, Africa, Europe, and the West Indies. He was editor of *Outing* (1885-87), London correspondent of *Harpers Weekly*, and correspondent of the *London Times* during the Spanish-American War. He has published *The German Emperor* (1889), *The German Emperor and his Neighbors* (1892), *Paddles and Politics down the Danube* (1892), *The Border Land of Czar and Kaiser* (1894), in gathering the materials for which he was expelled from the Russian Empire, *A History of the German Struggle for Liberty* (4 vols., 1896,

new ed, 1912), and *White Man's Africa* (1898) In 1905 he published in a New York magazine an alleged "exposure" of Panama Canal conditions, which was sharply challenged by the government as based upon insufficient knowledge of the subject

BIGELOW, ROBERT PAYNE (1863-) An American biologist, born at Baldwinville, N Y, and educated at Harvard and Johns Hopkins universities He became instructor in biology in 1893 and librarian in 1895 at the Massachusetts Institute of Technology In 1897-98 he was editor of the *American Naturalist*, and in 1895-1908 of the *Technology Quarterly* He is author of several papers on zoology and contributor of a series of biological articles in the *Reference Handbook of the Medical Sciences* (1900-04)

BIGELOW, SAMUEL LAWRENCE (1870-) An American chemist, born in Boston He was educated at Harvard, the Massachusetts Institute of Technology, and the University of Leipzig Having taken up work at the University of Michigan in 1898 as instructor in general chemistry and in 1901 as acting director of the laboratory of general chemistry, in 1907 he became professor of chemistry His publications include *Denatured Alcohol* (1907) and *Theoretical and Physical Chemistry* (1912)

BIGELOW, WILLARD DELL (1866-) An American chemist, born at Gardner, Kans After graduating from Amherst College he was assistant professor of chemistry in the Oregon State College in 1889-90, and instructor in chemistry in the Washington high school in 1890-91 He became chemist in 1891, chief of the Division of Foods in 1901, and assistant chief of the Bureau of Chemistry in the United States Department of Agriculture in 1903 From this last office he resigned in April, 1913, following the resignation of Harvey W Wiley His publications include the following bulletins *Pure Food Laws of European Countries Affecting American Exports* (1901), *Preserved Meats* (1902), *Foods and Food Control* (1902-04), *Tom Salts in Canned Foods of Low Acid Content* (1911)

BIGGLESWADE, big'iz-wad' A parish and market town of Bedfordshire, England, on the east bank of the river Ivel, about 10 miles southeast of Bedford (Map England, F 4) The region produces vegetables for the London market Pop, about 5000

BIGGS, HERMANN MICHAEL (1859-) An American physician, born at Trumansburg, N Y Educated at Cornell University and Bellevue Hospital Medical College, he became lecturer and professor of pathological anatomy in the latter institution in 1885 From 1892 to 1901 he was pathologist and director of the bacteriological laboratories and thereafter was general medical officer of the New York Department of Health In 1897 he was appointed professor of therapeutics and clinical medicine, and in 1907 associate professor of medicine in the University and Bellevue Hospital Medical College In addition to his other duties he assumed the directorship of the Rockefeller Institute for Medical Research, upon its organization in 1901 In 1913 he was chief of a board of experts appointed to make an investigation of health conditions in New York State, and in 1914 he was appointed State Commissioner of Health His publications include *The Administrative Control of Tuberculosis* (1904), and *An Ideal Health Department*, with C E A Winslow (1913)

BIG HATCHIE, hăch'y A small river of the United States, rising in northeast Mississippi, one head branch in Prentiss County, but the larger one in Union County (Map Mississippi, H 1) It flows through a fertile cotton region north into Tennessee, and then northwest, joining the Mississippi River 5 miles above Randolph and nearly 40 miles above Memphis It is nearly 200 miles long, drains an area estimated at 4000 square miles, and is navigable for small steamboats for about 100 miles to Bolivar, Tenn

BIG HEAD' (OSTEOMALACIA or OSTEOPOROSIS) A disease of horses and mules in which the bones become more massive and less compact by reason of an increase in the cancellate tissue It arises from general malnutrition disturbances, which cause an increased absorption of lime salts from the bones The enlargement of the head is the most conspicuous symptom, hence the name A peculiar lameness precedes or accompanies other symptoms The ribs undergo certain changes so that a round-barreled horse becomes flat-sided Treatment includes a change of conditions both as to feed and surroundings In the early stages of the disease beneficial results have followed the supplemental use of lime given in the drinking water Feeds containing mineral salts, such as beans, cowpeas, oats, and cottonseed meal, may prove beneficial in replenishing the bony substance that is being absorbed See ACTINOMYCOSIS

BIG'HORN' The popular name in the United States of the Rocky Mountain sheep, on account of their immense, semi-spiral, argali-like horns These sheep, in one or other of their species, were formerly to be found throughout the whole Rocky Mountain system from New Mexico to the Arctic Circle, and they are still fairly numerous from Montana northward, but much less so southward, in the higher ranges They are gregarious, fond of the highest pastures, wary, and much hunted not merely for sport, but because the flesh is excellent and the horns make handsome trophies Wyoming, Montana, Idaho, and Washington still permit their killing There are perhaps less than 500 unprotected head in the four States In Colorado, where wild sheep have been protected for 25 years there are about 3500 animals After the pronghorned antelope the wild sheep will probably be the next large mammal of the United States to become extinct outside of game preserves

"To many American sportsmen and naturalists," remarks William T Hornaday (*Fifth Annual Report New York Zoological Society*), "there is no other wild animal on this continent which challenges admiration equal to that bestowed upon the mountain sheep Unfortunately, it is only those who have made the acquaintance of this animal in life, and upon its own ground, who have a fair conception of . . . the true character of this hardy mountaineer, in whose anatomy strength is combined with agility to an extent which is nothing short of marvelous Its home is the loftiest rim rock of the high mountain plateaus, or the most rugged and forbidding Badlands of the middle altitudes In summer its favorite pastures are the treeless slopes above timber line, and in winter it paws through the snow of the mountain meadows to reach the tallest spears of grass All the year round this animal is both well-fed and well-clad, and its savory flesh invites constant pursuit and attack from the mountain lion and

BIGNONIA, ETC

1 BIRCH (*Betula alba*)

2 BLADDERNUT (*Staphylea trifolia*), *a*, fruit

3 BLADDERWORT (*Utricularia vulgaris*), *a*, an utricle

of Bladderwort, entire and opened to show valve

8 BOX ELDER *a* mature leaf

4 BIGNONIA CHERERE

5 MOONWORT (*Lunaria annua*)

6 BOX (*Buxus sempervirens*)

7 BOX ELDER (*Negundo aceroides*), a flowering sprig

hunters both white and red. Unlike its dull-witted neighbor, the mountain goat, the mountain sheep is wide-eyed and wary, and difficult to approach."

The best-known species is the common bighorn (*Ovis cervina*), which is very stoutly built, stands about 40 inches high at the shoulder, is grayish brown, with the face ashy, a dark line along the spine, and the under parts and conspicuous "caudal disk" on the buttocks whitish. The horns of the ram are massive, thick and keeled on the outer edge, springing backward and then downward in a majestic sweep, and measuring 42 inches in largest specimens around the curve, those of the ewe are short and ribbed. It dwells in bands sometimes containing 50 or more of all ages throughout all the high mountains from the Dakota Badlands to Arizona, California, and northern British Columbia. A smaller and paler variety, inhabiting the central basin, is called Nelson's bighorn. A second species is Stone's bighorn, lately found in northern British Columbia, which is larger and has comparatively slender, pale-brown, outward curving horns, its general color is a blackish-brown grizzle, with the spinal stripe, throat, chest, sides, buttocks, and tail and hoofs almost black. Another species belongs to the mountains of Central Alaska, north of 60°, named *Ovis dalli*, which is altogether white, in winter perfectly free from the few brownish hairs that may appear in its summer coat. The horns are of moderate size and of a clear amber color. A fourth species, also Alaskan, has been described as *Ovis fannini*, and resembles Dall's sheep, except that the body is brownish gray, leaving the head, neck, breast, belly, and rump white. See Plate of WILD SHEEP, etc., accompanying article SHEEP.

Consult Mayer (editor), *Sport with Gun and Rod* (New York, 1883), Roosevelt, *Hunting Tips of a Ranchman* (ib., 1883), Baillie-Grohman, *Camps in the Rockies* (London, 1882), Lydekker, *Wild Oxen, Sheep, and Goats* (London, 1898), *Fifteen Years' Sport and Life in Western America* (ib., 1900). For an account of the Mexican bighorn, consult Hornaday, *Campfires on Desert and Lava* (New York, 1908), Lydekker, *The Sheep and its Cousins* (London, 1912).

BIG HORN A river of the Rocky Mountain region of the United States, rising in the Wind River Range in Fremont Co., Wyo., near the central part of that State (Map Wyoming, C 2). It flows northward into Montana and, following thence a northeasterly course, it empties into the Yellowstone River, of which it is the chief tributary. Its principal headstream is the Wind River, which rises in the Shoshone Mountains in Wyoming, southeast of the Yellowstone National Park. Its source is between 8000 and 9000 feet above sea level. The principal tributaries of the Big Horn are the Grey Bull and Stinking Water rivers in Wyoming and the Little Big Horn River in Montana. Its total length is about 450 miles, and it is navigable up to its junction with the Little Big Horn at Fort Custer. The famous Custer massacre took place in the valley of the latter in 1876. The Big Horn drains an area estimated at over 20,000 square miles. The scenery along the river's course is magnificent.

BIG LAUREL See MAGNOLIA.

BIGLOW PAPERS, THE The title of a series of satirical poems in Yankee dialect by James Russell Lowell. They appeared in two

parts. Part I, voicing the New England opposition to the Mexican War, was brought out in 1848, and Part II, concerned with the Civil War, in 1867. Their fictitious editor is the Rev. Homer Wilbur. Lowell's wit and humor are here unstinted. Written rapidly and with great enjoyment, the work was warmly received, and parts of it are still popular.

BIGNON, bé'nyon', LOUIS PIERRE ÉDOUARD (1771-1841). A French diplomat and historian, born at Guerboville, in the department of Seine-Inférieure. During the Revolution he entered the army as a volunteer, but transferred, after some years, to the diplomatic service, and in 1801 was made Secretary of Legation at Berlin, becoming in the following year charge d'affaires. He subsequently was Minister Plenipotentiary to Cassel (1804-06) and, after the battle of Jena, was Administrator of Finances and Public Domains in the Prussian provinces occupied by the French. After acting as French Ambassador at the court of Baden and as Administrator General in Austria (1809) he was sent in the following year on a secret mission to Warsaw, where he remained for three years. His encouragement and advice contributed to arouse the Poles to an energetic resistance against Russia and Austria. After the fall of Napoleon he lived in retirement, but during the Hundred Days became Undersecretary of State for Foreign Affairs, and subsequently head of that department. From 1817 to 1837 he was a member of the Chamber of Deputies, and from July to November, 1830, held the portfolio of foreign affairs, but was soon removed because of an attack on the reactionary allies in his *Du Congrès de Troppau* (1821) and *Les cabinets et les peuples* (1822). Designated by Napoleon, in his will, to write the diplomatic history of France after the establishment of the consulate, Bignon performed his task in the *Histoire de France sous Napoléon* (14 vols., 1820-50). He also wrote *Exposé comparatif de l'état financier, politique et moral de la France et des principales puissances de l'Europe* (1815).

BIGNONIA (named after the Abbé Bignon). A genus of Bignoniaceae embracing about 150 species of twining shrubs. According to some authors the genus should include only two species. Most of the species are South American, although one, *Bignonia capreolata* (cross vine), occurs in the United States from Illinois to Virginia and south to Louisiana and Florida. Many of the species are cultivated in greenhouses for their striking habit of growth. They climb by twining and by tendrils. The flowers of many are very handsome. The long flexuous stems are frequently used as cordage substitutes, and the natives of French Guiana are said to weave the split stems into mats, baskets, etc. Near relatives of *Bignonia* are *Tecoma* (trumpet creeper) and *Catalpa*.

BIGOD, big'od, HUGH (?-1176 or 1177). First Earl of Norfolk, a son of Roger Bigod, who had come to England with William the Conqueror. The origin of the family name has been ascribed to the oath "bi got," frequently used among the Normans. Bigod is said to have secured the throne for Stephen by swearing to Archbishop William Corbois, immediately after the death of Henry I, that the latter on his deathbed had quarreled with his daughter Matilda and had disinherited her in favor of Stephen of Blois, whose arrival in England shortly afterward seemed to substantiate this statement. In

recognition of his services Bigod subsequently received the Earldom of Norfolk

BIGORDI, bê-gôr'de The real name of a family of Florentine painters, better known as Ghirlandajo (qv)

BIGORRE, bê-gô'r' (from the Gallic people *Bigerri*, or *Bigerriones*) A mountainous district in the southwest of France, formerly constituting a part of Aquitaine and subsequently of Gascony. It is now included in the department of Hautes-Pyrenees. The wines and baths of Bigorre are world famous. In mediæval times it was ruled by counts of the houses of Foix and Albiet and was united to France on the accession of Henri IV. Tarbes (qv) has been the chief town since the days of the Romans. Consult Froidout, *Memoire du pays et des etats de Bigorre* (Paris, 1892)

BIGOT, bê-gô'r, CHARLES JULES (1840-93) A French writer and critic, born in Paris. He received his education at the Ecole Normale and at the Art School at Athens and, devoting himself to journalism, became one of the leading critics and reviewers of his day. He wrote for the *LXXe Siecle*, and to the *Revue Bleue* contributed the popular *Annales politiques et litteraires*. Among his books are *Les classes dirigeantes* (1876), *Le clergé français devant la loi française* (1877), *Le petit Français* (1882), *Raphael et la Farnesine* (1884), *Gyccce, Turquie, le Danube* (1886), *De Paris au Magara* (1887). His wife, MARY HEALEY BIGOT, of American parentage, is the author, under the pseudonym of "Jeanne Mariet," of a number of successful novels dealing with contemporary life, of which *Marca* (1882) was crowned by the Academy. Other titles are *Une folie* (1886), *La tache du petit Pierre* (1887), *Artistes* (1890). She is also an accomplished translator from the French.

BIG RAPIDS A city, and the county seat of Mecosta Co., Mich., 65 miles north of Grand Rapids, on the Muskegon River, here crossed by two bridges, and on the Grand Rapids and Indiana and the Pere Marquette railroads (Map Michigan, D 5). It has a public library, hospital, theatre, and a fine courthouse, and is the seat of the Ferris Institute. Good water power is supplied by the river, and the city has an extensive lumber trade and manufactures of furniture, veneer, doors, sash, blinds, bed-spring frames, and flour. Settled in 1859, Big Rapids was incorporated 10 years later. The water works are owned and operated by the city. Pop., 1890, 5303, 1900, 4686, 1910, 4519.

BIG SANDY A navigable affluent of the Ohio River, formed by the junction of two main forks on the border between Kentucky and West Virginia and flowing north to the Ohio, separating these two States (Map West Virginia, B 3). The east fork, called Tug Fork or Tattawavka River, rises in West Virginia, near the Virginia line and, flowing northwest, forms with the Big Sandy the southern boundary between West Virginia and Kentucky. The west fork, called the Louisa Fork, rises in southwest Virginia and flows northwest into Kentucky and then northeast to its junction with Tug Fork. Both branches pass through a heavily wooded country, but the best timber has been removed. The river drains an area of over 4000 square miles and lies in the Ohio coal-producing area. It empties into the Ohio River near Catlettsburg, Ky., and is navigable for small boats for 100 miles.

BIG SPRING The county seat of Howard

Co., Tex., 270 miles west of Fort Worth, on the Texas and Pacific Railroad (Map Texas, D 3). The city contains a hospital, fine high and business school buildings, cotton gins, and an ice plant. It is an important railroad town, with division shops and offices of the Texas and Pacific, and has a considerable trade in the products of the surrounding region, principally live stock, hides, fruit, lumber, cotton, and agricultural produce. Extensive deposits of salt underlie the town, and near it is a large spring from which it is named. The water works are owned by the municipality. Pop., 1910, 4102.

BIG STONE GAP A town in Wise Co., Va., 175 miles (direct) south by west of Charleston, on the Louisville and Nashville and the Virginia and Southwestern railroads (Map Virginia, B 5). The town contains a historic museum, the Bee Rock Tunnel, a beautiful park, and a fine government building. Although the surrounding region is rich in timber and mineral deposits, Big Stone Gap is essentially a residential town. Pop., 1900, 1692, 1910, 2590.

BIG TREES See SEQUOIA

BIG WARRIOR See BLACK WARRIOR

BIHAC, or **BIHATCHE**, bê'hôch A fortified town of Bosnia, capital of a district of the same name. It is situated on an island in the Una, near the frontier of Dalmatia (Map Austria-Hungary, D 4). The Fethija Mosque, one of the important buildings, was converted from a Gothic church by the Turks in 1592. It has been the scene of frequent contests during the Turkish wars. In September, 1878, the town was successfully defended by the Bosnian insurgents against the Austrian army of occupation. Pop., 1895, 4330, chiefly Mohammedans, 1910, 4629.

BIHARI, bê-hîr'e, or **BHARS**, bûz Natives of Bihar or Behar, in northern India, also found in Oudh and to the south of the river Jumna. Some of them represent a fine type of Aryo-Dravidian intermixture. They were possibly once the ruling race of the plains, and the lower classes are undoubtedly of Dravidian ancestry. Crooke styles the Bhars a "remarkable race," and Haddon (1909) notes that they have contributed to the Rajput clans. The Bihari language is spoken by some 35,000,000 people. Consult Grierson's *Bihar Peasant Life* (1885) and other works, also Crooke's *Natives of Northern India* (London, 1907).

BIHE, bê'a A portion of the Portuguese West African Colony of Angola (qv)

BIJAPUR, bê-jû'pûr' (Skt *vijaya*, victory + *puri*, city) A decayed city in the presidency of Bombay, British India, on an affluent of the Kistna, 245 miles southeast of Bombay (Map India, C 5). Bijapur was for centuries the flourishing capital of a powerful kingdom, falling therewith under various dynasties in succession, Hindu and Mussulman, till in 1686 it was captured by Aurangzeb. Early in the eighteenth century it passed into the hands of the Mahattas. On the overthrow of the Peshwâ, in 1818, it was assigned by the British to the dependent Rajah of Salara. Bijapur presents a contrast perhaps unequalled in the world. lofty walls, of hewn stone, still entire, enclose the ruins of a city which is said to have contained 1800 mosques and 100,000 dwellings. With the exception of an ancient temple, the sole relic of aboriginal domination, the ruins are Mohammedan and consist of beautiful mosques, colossal tombs, and a fort of more than 6 miles in

circuit, with an inner citadel. An additional wonder of the place is the largest piece of brass ordinance in existence, cast at Ahmednagar. Pop., 1901, 23,811, 1911, 27,615. Consult Ferguson, *History of Indian and Eastern Architecture* (London, 1876), id., *Study of Indian Architecture* (ib., 1887).

BIJAYANAGAR. See VIJANAGARA.

BIJNS, bins, ANNA (c1494-1575). A Flemish poet. She was born at Antwerp and was the first writer of the sixteenth century in her native language. Her best-known verses are collected in her *Schoone Refereynen Schruftuoren ende Leevingen teghen Talle Kettereyen* (1528, with commentaries by Van Helden and Jonckbloet, 1876), which were frequently republished and won for the author the name of "Sappho of Brabant." Most of these poems are directed against Luther and his adherents, but all are written in a language of singular purity for that period. Those which are free from religious intolerance show more poetic fire than is found in the works of her contemporaries. A collection of 94 of her other poems was published by Van Helden (1886).

BIJUGA ISLANDS. See BISSAGOS ISLANDS.

BIKANER, bē'ka-nēr'. The capital of the native state of the same name in Rajputana, India, situated in a desolate tract, 250 miles west-southwest of Delhi in lat 28° N and long 73° 22' E (Map India, B 3). Population, 1901, 53,100, 1911, 55,826. It is surrounded by a battlemented wall 6 feet thick, 15 to 30 feet high, and 3½ miles in circuit, and from a distance presents a magnificent appearance with its carved Jain monasteries, palace, and buildings, but inside, the streets are narrow and, like the inhabitants, dirty. Immediately to the northeast is a detached citadel, of which the Rajah's residence occupies the greater part. The state of Bikaner is in lat 27° 30' to 29° 55' N and long 72° 30' to 75° 40' E, measuring, in its extremes, 160 miles by 200 miles. It contains 23,311 square miles. Pop., 1901, 584,627, 1911, 700,983. The Rajputs are the predominant race, but the Jats form the great body of the inhabitants. The people find their principal resource in pasturage, especially the raising of camels and fine horses, yet water is remarkably scarce. In the whole territory there is not one perennial stream, while wells, as precarious and scanty as they are brackish and unwholesome, average 250 feet in depth. In 1868-69 nearly half of the population were destroyed by famine. The temperature varies greatly. In the beginning of February ice is formed on the ponds, and in the beginning of May the thermometer stands at 123° F. in the shade. In the beginning of November each period of 24 hours, as the sun is above or below the horizon, presents such extremes of heat and cold as often to be fatal to life. Consult Warner, *Native States of India* (London, 1910).

BIKELAS, bē-ka'las, DIMITRIOS (1835-1908). A modern Greek poet and historian. He early attracted national attention by his patriotic hymns and has rendered into modern Greek several plays of Shakespeare. His chief historical works have appeared under the titles *The Greeks of the Middle Ages* (1878), *The Role and the Aspirations of Greece in the Eastern Question* (1885), *Greece, Byzantine and Modern* (1893). He also published *Stichoi* ('poems,' 1862), and *Loukas Laras* (a novel, 1879, English trans., 1881).

BILA-AN, bé-la'an. A primitive mountain tribe living on both slopes of the Matutum mountain range of southern Mindanao and in the Sarangani Islands. See PHILIPPINES.

BILASPUR, bé-las'pooi'. A town of the Central Provinces, British India, capital of the district of the same name (Map India, D 4). It is situated on the river Arpa and on the Bengal-Nagpur Railway. Pop., 1901, 18,937, 1911, 19,850. The district of Bilaspur comprises 7618 square miles. Pop., 1901, 918,491, 1911, 1,146,223. Rice is the principal agricultural product, and famines are frequent.

BILBAO, bé-ba'o (Basque *Ibaizabal*, under the hill). A seaport town of Spain, capital of the province of Vizcaya, situated in a mountain gorge on the Nervión, about 8 miles from its mouth at Portugalete (Map Spain, D 1). Bilbao is well built, the principal streets are straight, and the houses substantial. Five bridges, one a stone bridge of the fourteenth century, cross the river which divides the old town from the new. There are several fine public walks, numerous fountains, but no public buildings of any note. The city is purely commercial. It has many extensive rope works, and manufactures of hardware, leather, hats, tobacco, and earthenware. There are also docks for building merchant vessels, and in the vicinity are iron and copper mines. The Nervión has been deepened so as to be navigable by vessels drawing 22 feet, and at present Bilbao is one of the most important trading ports of Spain. The imports consist chiefly of cotton and woolen manufactures, colonial produce, fish, furs, spirits, hardware, machinery, etc., and the exports consist of wool, iron, steel rails, fruits, oil, flour and grains, wines, madder, minerals, liquorice, etc. For centuries Bilbao has been celebrated for the excellent quality of its sword blades, and in England a good sword was called a Bilbao even in Shakespeare's time. The women here do almost all the heavy portage. Bilbao owes its present prosperity to the iron mines which stand on the left bank of the Nervión. Their valuable deposits were known to exist from the earliest times, but the mines have only been worked within the last decades of the nineteenth century. Bilbao was founded in the year 1300 by Diego Lopez de Haro, under the name of Belvaio, i.e., 'the fine ford,' and, being well situated and little disturbed by the civil wars of Spain, it soon attained great prosperity. In the fifteenth century it was the seat of the most authoritative commercial tribunal in Spain. It suffered severely in the wars with France, first in 1795, and again in 1808, when 1200 of its inhabitants were slaughtered in cold blood. During the wars of 1833-35 and 1872-76 it was often vainly besieged by the Carlists. Pop., 1900, 83,306, 1910, 92,514. Consult Guindarri, *Historia de Bilbao* (Bilbao, 1905).

BIL'BERRY. See HUCKLEBERRY.

BILBILIS, bé'l'bē-lēs. An old Celtic town of Spain, about 2 miles east of the modern town of Calatayud, in the province of Saragossa. Chiefly celebrated as the birthplace of the poet Martial, it is also famed for its highly tempered steel blades. Under the Romans Bilbilis was a municipal town with the surname of Augusta and possessed the right to coin money.

BIL'BOES. See IRONS.

BILDERDIJK, bil'dér-dik, WILLEM (1756-1831). A Dutch poet, philologist, and philosopher. He was born in Amsterdam, Sept. 7,

1756, became famous as a poet while quite young, studied law in Leyden, and then practiced it at The Hague. In 1795 he was exiled as an anti-Revolutionist and went to London and Brunswick, after a discreditable love affair with Katherina Schweikhardt, redeemed later (1802) by marriage. Katherina was herself author of a narrative poem *Rodrigo the Goth* and of graceful *Poems for Children*. On Bilderdyk's return to Holland (1806) King Louis Napoleon made him librarian and patronized him in various ways, but he was rather overweening and ungrateful, and at last, refusing to live in Amsterdam, went to Leyden (1817), where he lectured on history till 1827. Bilderdyk's industry was indefatigable. While in Germany he translated *Ossian* and wrote *Country Life and Patriotic Love for Orange*. After his return he wrote *The Disease of Genius*, *Leyden's Battle*, several dramas, and his poetic masterpiece, *The Destruction of the First World*. His poetry had no deep sentiment and never caught the romantic inspiration. In politics he stood, in later years, almost alone as an ultra-conservative. His greatness lies in a mastery of language that no Dutch poet since Huygens had approached. Bilderdyk's *Works* are collected in 15 vols (1856-59). Consult Gorter, *Bilderdyk* (Amsterdam, 1871), Allard Pierson in *De Gids* for 1866, Kollewijn, *Bilderdyk zyn Leven en zyn Werken* (2 vols., Amsterdam, 1891).

BILE (Lat *bilis*, bile, anger). A fluid secreted by the liver. It is bright golden-red in man and in omnivorous or carnivorous animals, and green in the herbivora. The primary (parenchymatous) cells of the liver separate the bile from the blood of the portal veins and discharge it into small ducts, which unite to form larger ones and eventually the right and left hepatic ducts. The latter unite to form the common hepatic duct, which is soon joined by that of the gall bladder (the cystic duct). This junction forms the common bile duct, which pierces the second part of the duodenum and, running obliquely in its walls for a short distance, opens on its mucous surface. The amount of bile secreted daily varies from 20 to 30 ounces, secretion being continuous, but much more active directly after meals. During the intervals of digestion bile accumulates in the gall bladder, whence it is poured into the intestines when required, the passage of the acid contents of the stomach over the intestinal orifice of the common bile duct furnishing the necessary reflex stimulus. Bile has a bitter taste and peculiar odor. Its specific gravity is 1.026, its reaction neutral or slightly alkaline. It is composed of water, bile salts (sodium glycocholate and taurocholate), a small quantity of fats, consisting partly of a complex body called lecithin, the pigments bilirubin and biliverdin, and bile taken from the gall bladder contains a considerable amount of mucus. Another constituent of bile is cholesterol, a peculiar substance resembling fat, but really an alcohol, which, with inspissated mucus and bile pigments in varying proportions, forms gallstones. The passage of these bodies through the cystic and common ducts gives rise to the agonizing paroxysms of pain known as biliary colic. When the flow of bile into the intestine is obstructed, this secretion is reabsorbed into the blood, and jaundice (qv) follows. The bile of salt-water fish contains potash, while that of land and fresh water animals contains soda. The function of this

fluid is to aid in the digestion of fats, stimulate peristaltic movements of the intestine, to disinfect its contents and prevent fermentation. See CALCULUS DIGESTION, JAUNDICE, LIVER.

BILFINGER, bil'fing-ēr, or **BULFINGER**, bul'fing ēr, GEORG BERNHARD (1693-1750). A German mathematician and philosopher of the Leibnitz-Wolffian school. He was the son of a Lutheran minister of Kannstatt, Württemberg, and, like several others of his family, was born with 12 fingers and 12 toes. He studied at Halle under Wolff, became professor of philosophy in 1721 and of mathematics also in 1724. In 1725, on Wolff's recommendation, he obtained a professorship in St. Petersburg, whence he was recalled in 1731. He gained the prize (1000 crowns) offered by the Academy of Science of Paris for a dissertation on the cause of gravity. Later in life he was a privy counselor at Stuttgart and greatly advanced the interests of public instruction and agriculture. Among his numerous works the most important is *Dilucidationes philosophæ de deo, anima humana, mundo* (1725, 3d ed., 1746), in which he expounded minutely and defended against its opponents Wolff's division of metaphysics into four branches.

BILGE (akin to *bulge*, a rounded protuberance, Lat *bulga*, a leathern bag). That portion of the bottom of a ship which is nearest horizontal than vertical. The bend in the frames which joins the bilge to the side is called the *turn of the bilge*. If the turn of the bilge is sharp, the vessel is said to have a *hard bilge*, if rounding, to have an *easy bilge*. If the bilge frames amidships run nearly horizontal, the ship is said to have very little *dead rise*, if they incline upward at quite an angle as they leave the keel, she has considerable *dead rise*. When a vessel strikes the ground with such force as to cause serious injury in the bilge, she is said to be *bilged*. The upper side of the floor timbers in a wooden ship, and of the inner bottom in a modern vessel, form, near the midship line, natural drainways for any water which may leak into or be formed in the ship, and are called *bilges*. The largest circumference of a cask is called the *bilge*.

Bilge Blocks. A series of blocks on which the bilges of a ship rest in a dry dock.

Bilge Keel. A V-shaped keel riveted to a ship's bottom near the turn of the bilge for the purpose of checking her rolling. These keels are very effective, and few large ships are now built without them. A comparison of the behavior of two 15,000-ton British battle ships, one fitted with bilge keels and one without them, showed that the gain in a rough sea was very great, at one time the ship without bilge keels was rolling 28 degrees each way, while her sister ship with keels 30 inches deep rolled only 11 degrees.

Bilge Keelson. An internal longitudinal stiffening plate or timber inside the bilges.

Bilge Water. The water which collects in the bilges. It has a peculiar fetid odor which is very strong if the bilges are not kept as clean as possible. In the ships of the navy bilges are pumped out at least once a day and carefully cleaned once a week. In wooden ships it is very difficult to keep the bilges clean, and sickness on board has often been ascribed to their foulness.

Bilgeways. A series of timbers on the launching ways on which rests the cradle, which supports the body of the ship in launching.

BILGUER, bil'gwēr, PAUL RUDOLF VON

(1815-40) A German chess player, born at Ludwigslust, at an early age one of the most accomplished players of his day. He frequently gave exhibitions of memory feats, such as playing two games simultaneously, without watching the board. He was one of the group of seven chess experts (called "The Pleiades") who were associated in the Berlin chess school, founded by Ludwig Bledow (qv). His *Handbuch des Schachspiels* (completed by Von Heydebrand and der Lasa, 7th ed., 1891) is regarded as an authority.

BILHANA, bel-ha'na. An Indian poet of the eleventh century. He was born in Kashmir and is supposed to have died in the Deccan. His *Vikramānādhavacarita* (ed. by Bühler, Bombay, 1875) contains a biographical account of King Vikramāditya. But his most celebrated work is the *Cānuśuratapanocticāhā*, a lyric poem of about 50 strophes, of which several versions have been preserved (ed. by Solf, Kiel, 1886). Consult Höfer's metrical translation in the *Indische Gedichte* (Leipzig, 1844).

BILHARZIA DISEASE (syn Bilharziosis, Egyptian hæmaturia). A tropical or subtropical disorder due to a parasitic trematode worm, the blood fluke. Two distinct species of this parasite are known, the African blood fluke, *Schistosoma hæmatobium*, being more common than the Asiatic variety, *Schistosoma japonicum*. Whether the ova of the parasite gain entrance to the body through the skin or by way of the mouth is not known, but the fully developed worm is found chiefly in the veins of the liver, intestine, and bladder walls. The symptoms of the disease arise from the irritation of the eggs rather than from the worm itself, and consist of anæmia, due to frequent attacks of hæmaturia, cystitis, vesical calculus, and general inflammation of the pelvic structures. Bilharziosis is a chronic affection and of itself rarely kills, but its victims become so exhausted by it that they readily fall a prey to other diseases. No specific treatment is known. The disease is occasionally found in temperate latitudes, and several cases have been recognized in the United States.

BILIM'BI See CARAMBOLA.

BILIN, be'lén (Bohem Bilina, from the river Biela, white). A town of the Austrian crown land of Bohemia, beautifully situated in the valley of the Biela, about 6 miles southwest of Teplice. It has important agricultural industries. Over 4,000,000 bottles of its famous alkali spring water are exported annually. Pop., 1890, 6000, 1900, 7800, 1910, 8345. Bilin contains a château of Prince Lobkowitz, and in the vicinity rises the remarkable isolated clinkstone rock, called the Borschen, or Bilner Stein.

BILIN The language of the Bogos (qv).

BILIOUS FEVER See INFLUENZA IN ANIMALS.

BILL, or BEAK See BIRD.

BILL (Lat *billā*, from Lat *bullā*, anything rounded, seal, stamp, edict, bull). In parliamentary law, a completed draft of a proposed legislative enactment. Ordinarily a proposed law retains the name "bill" from its introduction, whether, as in England, by the government or a private member or, as in the United States, by a member or a legislative committee, through all its parliamentary stages, until it has been enacted into law, when it becomes an act or statute. In the United States a bill is popularly known by the name of the member intro-

ducing it. Formerly the method of initiating legislation in the British Parliament was by petition to the sovereign, but this fell into disuse in the fifteenth century.

The drafting of legislation is a matter calling for great technical skill as well as a wide and intimate knowledge of law, both statute and common. In Great Britain government bills are prepared under the supervision of an expert, the clerk of the House of Commons, and even private bills must pass under his scrutiny before being introduced. In the United States, in Congress as well as in the legislatures of the several States, there has been great laxity in the preparation of bills, the form and scope thereof being determined by the individual legislators introducing them or by private, irresponsible persons seeking the legislation embodied in them. This condition of affairs, which has naturally resulted in much lax and confusing legislation, is now gradually giving way to a system under which the services of expert bill drafters are being brought into play. Bill-drafting bureaux have been established in connection with the Library of Congress at Washington and by the legislatures of several of the States, the most notable and successful of which is that of the State of Wisconsin. The New York State Library at Albany and Columbia University in the city of New York have also recently established such bureaux.

Bills are of two kinds, public and private, according as they by their terms affect the particular interest of any person or persons, whether private individuals or corporations, or the interests of the people at large. In the British Parliament bills for raising revenue can originate only in the House of Commons, and they are not subject to amendment by the House of Lords. In the United States Congress such bills must originate in the Lower House, but the Senate may propose and make amendments. See LEGISLATION. CONGRESS, BILL OF ATTAINDER.

In the Law of Pleading a bill is a form of pleading, by which actions are instituted, both at common law and in equity. (See BILL IN EQUITY, PLEADING.) In criminal law the written accusation or presentment of a grand jury is known as a bill. See BILL OF INDICTMENT.

BILLAUD-VARENNE, bë'yô'va'rën', JEAN NICOLAS (1756-1819). A French Revolutionist. He was a member of the National Convention in 1792, voted for the execution of Louis XVI, and favored in every way the most violent measures. He was subsequently president of the Convention and a member of the Committee of Public Safety. Though he assisted in the overthrow of Robespierre, he ultimately shared the fall of the Terrorists and was transported to Cayenne in 1795. He visited New York in 1816, but was coldly received and went to Haiti, where he died, 1819.

BILLBOARD See ANCHOR.

BILLERICA, bil'rik-a. A town in Middlesex Co., Mass., 18 miles northwest of Boston, on the Boston and Maine Railroad (Map Massachusetts, F. 2). The town contains repair shops of the Boston and Maine Railroad and woolen mills. It has a public library and owns the water works. Pop., 1900, 2775, 1910, 2780.

BILLET (Fr *billet*, a ticket, dimin of *bole*, bill, note). A naval term denoting the station or employment of an individual. A *sleeping billet* is the numbered space assigned to a member of the crew in which he is required to swing his

hammock A *station billet* is a memorandum of his station and duties furnished to each member of the crew, one is given to him when he first comes on board, and if he be afterward changed to another division or part of the ship, his station billet is changed accordingly.

In architecture, an ornament consisting of a series of short cylinders spaced along a straight line and formed by cutting a molding—generally a round molding—into notches, so that the parts left resemble billets of wood. When used in several rows, the billets and empty spaces are placed interchangeably. It is frequent in Norman buildings. See **HERALDRY**.

Billethead A scroll head of a ship at the end of the timbers underneath the bowsprit. It replaced the old figurehead in vessels of the middle and latter part of the last century.

BILLET, bé'ya', FÉLIX (1808-82) A French physicist born at Fismes (Marne). He became professor of physics at the University of Dijon in 1845 and dean of the faculty in 1873. His name has become associated with the apparatus known as the "Bilentesilles de Billet." His numerous important works include the following: *Sur les changements de volume des corps par le passage de l'état solide à l'état liquide* (1845), *Condensations électriques de deuxième et de troisième espèce* (1851), *Traité d'optique physique* (2 vols., 1858-59), *Mémoire sur les dédoublements d'interférences* (1862).

BILLETING (Fr. *bille*, ticket, dimin of *OF bille*, bill), or **QUARTERING** A system of provisioning and lodging soldiers, when not in camp or barracks. Before the era of permanent barracks in England, soldiers were billeted or quartered on the citizens, who were compelled to support them. The abuses and hardships endured by citizens generally because of this arrangement brought about the erection of permanent barracks. (See **BARRACKS**.) One of the grievances which led to the American Revolution was the quartering of British troops upon the people without their permission. At the present time "quartering" is restricted in the United States by the third amendment to the Constitution. In England it is confined to troops on the march and individual soldiers traveling on special duties. The keepers of inns or public houses, or citizens—failing the former—on whom troops may be billeted are paid according to a scale fixed by the government.

BILL-FISH A fish having the snout much drawn out in the form of a bill, as (1) a gar (see **GAR**), (2) spearfish (q.v.), or some similar form.

BILLHOOK An intrenching tool, used for cutting underbrush in clearing passages through jungle growths, etc., and clearing camping grounds or bivouacs. It is also used for securing materials for gabions, fascines, and other defensive supports. The regimental pioneers of European infantry carry a billhook as part of their equipment. The working holo of the Filipinos and the machete of the Cubans closely resemble it, both in practice and general use. See **ENGINEERING, MILITARY**.

BILLIARDS, bil'yairdz (Fr. *billard*, originally the cue, from *bille*, a log of wood, cf. Eng. *billet*) A game of skill, whose development as a scientific indoor game is wholly modern. Its origin is obscure. Some assert that it was brought from the East by the Crusaders. Cotton, in his *Complaisant Gamester* (1674), wavers between a Spanish and an Italian origin, but there is better

reason to believe that De Vigne, an artist of the court of Charles IX of France (c 1571), designed tables and drew up a code of rules. In any case it was known in England soon after this time. Spenser, in his *Mother Hubbard's Tale* (1591), speaks slightly of those who play—

"With dice, with cards, with behards far unfit,
With shuttlecock, musseuming manly wit"

It was originally an outdoor sport, played on the ground, at first with round stones, later with two balls, an ivory post, an upright cone called a king, and two sticks called masts (maces), made of heavy wood and tipped with ivory. (A modification of this game, called "Lawn Billiards," had some vogue during the latter half of the last century.) It was then played in a similar form indoors upon a table, still with two balls, an iron arch being used through which the ball was driven, beyond this was the king, and pin pool is a survival of this primitive form. In the eighteenth century holes, called "hazards," and suggested probably by the iron arch, were cut in the bed of the table—first in the centre, then at the corners and sides—into which the balls were driven. Then the French added the third, or red ball, introducing the carambole or carom game, which involves striking both the other balls with the cue ball.

The next period of development is marked by improvements in the materials of the game. Where the end of the cue had been simply made rough with a file so that chalk might adhere to it and prevent slipping off the ball, the French player Mangin introduced leather tips (first used in the United States in 1823), and a little later marble and slate came to be employed instead of wood for the bed, and india-rubber for the cushions. In 1854 a new cushion, possessing great durability and elasticity, was invented by Michael Phelan, the father of billiards in America, and the game in the next half-century attained a wonderful scientific precision.

The English game is played with three balls, two being white and one red, which generally measure 2 1/16 inches in diameter and weigh about 4 2/3 ounces. One of the white balls has a spot upon it, the purpose of which is that one ball may be distinguished from the other. The red ball is placed upon a spot at what is called the top of the table and about 13 inches from the top cushion, but exactly in the centre width of the table, at the other, or lower end of the table, and at a distance of 2 feet 4 1/2 inches from the lower-end cushion, and exactly in the centre width of the table, is placed a spot, and from this spot is drawn a semicircle, with a radius of 21 inches to 23 inches, of which the spot is the centre base, the space within the semicircle is called "balk." The object of the player is, by striking his own ball against the red ball or his adversary's, to drive either it or them into the pockets, or else effect a "cannon"—i.e., to strike both balls with the player's ball. The general limit of each game is "50 up," as it is called, although any number of points may be agreed upon.

The method of play is as follows for the lead and choice of balls, the players "string"—i.e., placing then white balls within the semicircle, they cause them to strike the furthestmost cushion and to rebound, the striker whose ball stops nearest the bottom cushion may take which ball he likes and play or direct his opponent to play, the red ball must, at the opening of the game,

be placed upon the top spot and replaced after being pocketed or forced off the table, or whenever the balls are broken—i.e., when the balls are played as in the opening stroke, the game is adjudged in favor of whoever first scores the number of points agreed upon. Two points are scored for a cannon or carom, two for a white hazard (pocketing the opponent's ball), three for a red hazard (pocketing the red ball). The following strokes count against the player: a simple miss, one point; a losing hazard (pocketing your own ball), two; and doing both at once, three.

Billiard tables vary in size. The playing area of the English table is 6 feet by 10½ feet; it has six pockets, one at each corner and one at each side at the centre, the standard size in America is a table 5 feet wide and 10 feet long, although in public rooms, clubs, and private houses the size generally used is 4 feet 6 inches in width and 9 feet in length. In the United States the game of billiards is now played almost exclusively on carom tables, pocket tables being reserved for the game of pool. The bed of the table is made of slate and is covered with fine green broadcloth, while rubber cushions are used at the sides and ends of the table, against which the balls strike and rebound. Three and four balls are used in playing the game, the balls being propelled with cues, which are generally made of ash or maple and in length vary from 4 feet 6 inches to 5 feet. A billiard cue is about 1½ inches thick at the butt end, while the tip runs to a point, in size from ⅝ to ¾ inch. In weight cues vary from about 14 to 22 ounces. Ivory balls are generally used, and in America and France the standard ball measures 2⅝ inches in diameter, in England 2 1-16 inches.

The original American four-ball game of caroms and pockets was played upon a 6 × 12 table, with six pockets. Two white and two red balls (light and dark in color) 2⅝ inches in diameter were used, but it is so seldom played now that it needs no further notice, its place having been taken by the four-ball carom game, which in turn is giving place to the more popular three-ball carom game. This is played in America and France with two white balls and one red. In professional contests a 5 × 10 carom table is used—i.e., a table without pockets, although it can be played on a table with pockets, counting only the caroms. The billiard table has three spots in a line, dividing the table lengthwise, running from the centre of the head cushion to the centre of the foot cushion, one of these spots, cutting the line in two equal parts, is called the centre spot, and the other two are situated half-way between the centre spot and the head and foot cushions. The spot at the head of the table is called the white spot, and the one at the foot the red spot. The centre spot is used only when a ball, forced off the table, finds both white and red spots occupied. Should the white ball forced off the table find its spot occupied, it would be placed on the red spot, and vice versa. In beginning the game the red ball and one white are placed on their respective spots, the other white remains in hand and is placed near the white spot previous to the opening stroke in the game. The player can take any position within six inches of the white spot, but he must strike the red ball first before a count can be effected. The cushion-carom game, in which the cue ball is required to strike one cushion after having hit the first object ball, is

now very general, while the two-cushion and even three-cushion contests are not infrequently played by amateurs as well as professionals.

What has come to be generally known as the "balk-line game" is a development made necessary by the wonderful skill acquired by the professional players of first rank in "cushion nursing," i.e., the making of an almost indefinite number of shots by getting the balls in a corner or against one of the cushions. With the balls in this position very skillful players (like Frank Ives, Jacob Schaefer, and George Slosson) are able to make runs of several hundred, such is their adeptness and delicacy of touch. To guard against this, lines were drawn running parallel to and, at first, eight inches from the cushions and completely crossing the table both ways. The rules of this game provide that the players shall be permitted to make only one or a given number of shots when one or both of the object balls are between the line and the cushion. The player is permitted to make as many carom shots as he can when the balls are entirely outside the balk lines, and although this space is, of course, relatively small, the more expert players frequently make runs of from 20 to 30 by extremely delicate carom playing with occasional forcing of one of the object balls to the cushion with such accuracy as to make it return to a position from which the carom playing may be continued. But with the further development of skill among professional players, this free space was decreased by increasing the distance of the balk line from the cushions first 14 and then 18 inches, while games occasionally provide for a 22-inch balk line. Again, the restrictions of play within these lines are made more exacting as the skill of the player increases, in many of the tournaments between professional players no shot may be counted when the balls are within the balk lines, unless one is forced over the line. The 18-inch balk-line game, one or two shots in, is the form usually prescribed for professional championship matches.

The only play upon balls against the cushion in most tournaments between professionals is one which provides that both object balls shall be within what is known as the "anchor space." These anchor spaces are rectangles about six inches long and three inches broad, drawn at the cushion line so that the balk line will divide each into two squares. If the player is skillful enough or fortunate enough to get the two object balls within this anchor space, he may make one shot, but he must at the same time drive one of the balls outside the space. If his skill is sufficient to make the ball or balls return to this anchor space, he may continue his play, but this, as may be supposed, is an exceedingly difficult feat.

Tournaments between professional players are generally arranged with the utmost exactness as to the smallest details of play. In many cases this niceness extends even to a definite requirement as to the temperature of the room in which the contest is to take place, because moisture or low temperatures affect the elasticity of the ivory of which the balls are made.

The following are some of the remarkable scores made in recent times, under the modern highly scientific developments. Straight rail—highest run for match play (3 balls, on regulation 5 × 10 table) 1531 points, Maurice Vignaux, Paris, 1880. Highest average for match play, 333⅓, by Jacob Schaefer, Chicago, 1879. Cush-

ion caroms, one cushion to be taken before hitting the object ball, or between the two object balls—highest run for tournament play, 85 points, Frank C Ives, Boston, 1896 Highest average for straight-cushion caroms, in tournament play, 10 (in 200 points), Jacob Schaefer, New York, 1883 Fourteenth-inch balk line, 2 shots in—highest run (with "anchor nurse" barred), 350 points, Frank C Ives, Chicago, 1894, (with "anchor nurse" allowed), 566 points by Jacob Schaefer, New York, 1893 Highest average (with "anchor nurse" allowed), 100, Jacob Schaefer, New York, 1893, and Frank C Ives, Chicago, 1894 Highest average (with "anchor nurse" barred), 632-10, Frank C Ives, New York, 1894 Highest amateur record run for tournament games, 202, by Calvin Demarest, Chicago, 1908 Highest amateur average for tournament games, 57½, by Demarest, 1908 Eighteen-inch balk line, 1 shot in—highest run for tournament play, 140 points in 500-point game, by F C Ives, 1897 Best average in tournament play, 3125, by F C Ives, 1897 Highest run in championship match, 100, by Jacob Schaefer, 1907 Best average in championship match, 20 83, by William Hoppe, 1906 Eighteen-inch balk line, 2 shots in—highest run for tournament play (with 5 shots allowed in anchor spaces), 290 points, by Ives, New York, 1896 Highest run (with "anchor nurse" barred), 234 points, by George Sutton, New York, 1906, and 255, by Louis Curé, of France, against Jacob Schaefer, in Paris Highest average for tournament games (with 5 shots allowed in "anchor spaces"), 50, by Ives, New York, 1896 Highest average for tournament games ("anchor nurse" barred), 100, by George Sutton, New York, 1906 Highest run for championship games, 232, by Sutton, 1907 Best average for championship match, 33 33, by Sutton, 1907 Highest runs, straight-cushion caroms, 85, by Ives, Boston, 1906, 398, championship game, Paris, 1882, 3-cushion caroms, 16, by George W Moore, New York, 1910, English billiards, 2106, by George Gray, of Australia, at London, 1911

Pool is played with billiard tables with fifteen numbered balls and one white unnumbered ball. This is the cue ball. The balls are placed on the table in the form of a triangle, the apex on the spot at the foot of the table. The player's object is to pocket as many numbered balls as he can, the number on each ball he pockets being scored to his credit. Pyramids is also played with fifteen red balls and one white one, the cue ball. The balls are placed on the center of the table in the form of a triangle, and the first player must strike them with the cue ball with sufficient force to cause two or more object balls to strike a cushion, or one at least to go into a pocket. The following player must distinctly call the number of the ball he intends to pocket, but he need not designate the particular pocket he intends to put it in. In Chicago pool, the fifteen balls are placed at intervals around the cushions. For the American game, consult *Modern Billiards*, published by the Brunswick-Balke-Collender Company (New York, 1905), Cady, *Billiards* (New York, 1896), Thatcher, *Championship Billiards, Old and New* (Chicago, 1898), Garner, *Scientific Billiards* (New York, 1880), Daly and Harris, *Daly's Billiard Book* (Chicago, 1913), for the English game, Broadfoot, *Billiards* (London, 1896), Roberts, *The Game of Billiards* (London, 1897), Ritchie, *Useful Strokes for Billiard Players* (London, 1910),

for the French game, Vignaux, *Le billard* (Paris, 1889)

BILL IN EQUITY The original process instituting an action or proceeding in a court of equity, corresponding to a *declaration* in an action at law, a *libel* in admiralty courts, or (in England) an *allegation* in a spiritual court. It is a complaint in writing addressed to the chancellor, giving the names of the parties to the suit, a statement of the matters on which the complainant relies, the allegations which he makes, an assertion that the matters complained of are contrary to equity, and a prayer for relief. By the former practice in the English court of chancery a suit in equity was initiated by a petition addressed to the lord chancellor, lord keeper, or lords commissioners for the custody of the great seal, as representatives of the king, unless the seal was in the king's hands or the chancellor was the petitioner, when it was addressed to the king himself—for, according to the theory of chancery, the plea was made to the king's conscience, i. e., for the exercise of the reserved powers of justice inherent in the crown. Where the crown was the tutor, complaint was by *information* (qv). But by the Supreme Court Judicature Act of 1874, which abolished the court of chancery as a separate tribunal and vested its jurisdiction and functions in the Supreme Court of Judicature of the Kingdom, all suits now begin by writ. Formerly the several jurisdictions of the United States followed the old chancery pleadings, but in New York and other States which have adopted codes of civil procedure the same pleadings are now established for equity as for common-law actions. Instead of the elaborate bill, the first pleading is now a complaint stating the facts "constituting the cause of action," with demand for judgment. In the non-code States the old bill is retained, though generally with statutory modifications in the direction of simplicity.

A bill may be either original, as when it initiates an action, or not original, as when it supplements an original bill or is brought by a third party intervening in the suit. Bills are characterized according to the nature of the remedy sought, as "bill of peace," "bill of interpleader," "bill of discovery," etc. See CHANCERY, EQUITY, PROCEDURE.

BILLINGS A city and the county seat of Yellowstone Co., Mont., 238 miles east by south of Helena, on the Yellowstone River, and on the Northern Pacific, the Great Northern, and the Burlington and Missouri River railroads (Map Montana, II 4). It is the commercial center of a vast stock-raising district, the exports of which consist principally of live stock and wool, the city being one of the largest inland wool markets of the United States. Its shipments of this product and of live stock are enormous. There are also flour and lumber mills, beet-sugar factory, railroad shops, foundry, a creamery, and brickyards. In the vicinity are deposits of coal, marble, and limestone. The city has a public library, an opera house, and a fine city hall and courthouse buildings. Pop., 1890, 836, 1900, 3221, 1910, 10,031.

BILLINGS, FRANK (1854—) An American physician, born at Highland, Iowa Co., Wis. He graduated at the Northwestern University Medical School (1881) and took post-graduate work in Vienna and Paris in 1885 and 1886. He was appointed professor of medicine at the

Northwestern University Medical School in 1870, and professor of medicine in 1898 at the Rush Medical College, Chicago, and dean of the faculty of that institution in 1900. He became professor of medicine in the University of Chicago in 1905. In 1905-06 he was president of the American Medical Association, and in 1907-08 president of the National Association for Study and Prevention of Tuberculosis. He became editor of the *Year Book of General Medicine* in 1901.

BILLINGS, JOHN SHAW (1839-1913). An American surgeon and librarian. He was born in Indiana, graduated at Miami University in 1857, and at the Medical College of Ohio three years later. He then entered the surgeon-general's department of the United States Army and during the Civil War served in the field and in hospitals until 1864, when he was transferred to the surgeon-general's office in Washington. There he became curator of the Army Medical Museum and Library and succeeded in making the latter the third largest and probably the most valuable medical library in the world. The *Index-Catalogue* of this library in 16 quarto volumes, which he prepared, is a work of the highest order. Dr Billings was also for a number of years professor of hygiene in the University of Pennsylvania. On the consolidation, in 1896, of the Astor and Lenox libraries with the Tilden Foundation into the New York Public Library, he was appointed chief librarian of the system. Among his publications are *Principles of Ventilation and Heating* (1884), *Mortality and Vital Statistics of the United States* (1885), *National Medical Dictionary* (2 vols., 1889), *Description of the Johns Hopkins Hospital* (1890), *Social Statistics of Cities* (6 vols. for the Eleventh Census), *Some Library Problems of Tomorrow* (1902), *Physiological Aspects of the Liquor Problem* (1903).

BILLINGS, JOHN. The pseudonym of the American humorist, Henry Wheeler Shaw (q.v.).

BILLINGS, LUTHER GUTHRIE (1842-). A rear admiral (retired) of the United States navy, born in New York City. Aboard the United States steamship *Water Witch*, when it was captured by Confederates, he was taken, wounded, to a Confederate hospital, and later was thrown into prison. After various adventures he was released from Libby Prison late in 1864 in exchange for a Confederate soldier, and was promoted 15 numbers in his grade for "eminent and conspicuous conduct in battle." He was made pay director with the rank of rear admiral in 1895 and general inspector of the pay corps in 1897. In the following year he was retired from active service.

BILLINGS, ROBERT WILLIAM (1813-74). An English architect and artist, born in London. He acquired during a seven years' apprenticeship with John Britton, topographical draughtsman, a taste for and facility in the preparation of illustrations of historic buildings. Between 1838 and 1849 he produced illustrations of several churches and cathedrals, as well as his *Architectural Antiquities of the County of Durham* (1846), and a *History and Description of St Paul's Cathedral and Churches of London* (1843). His chief work was entitled *Baronial and Ecclesiastical Antiquities of Scotland* (4 vols., 1845-52), with 240 illustrations. Under his direction Crosby-upon-Eden Church, Cumberland, the chapel of Edinburgh Castle, and the Douglas Room in Stirling Castle were restored.

BILLINGSGATE (Billing, presumably a former proprietor of the land). A gate, wharf, and fish market, a little below London Bridge. It was opened in 1558 as a landing place for provisions and in 1699 was made "a free and open market for all sorts of fish." The unpolished phraseology, native, though not peculiar, to this quarter of London, has given rise to the use of the name "Billingsgate" as a synonym for coarse or abusive language, such as is proverbially ascribed to fishwives.

BILLINGTON, ELIZABETH, née WEICHSFL (1768-1818). A celebrated English singer, born in London. She was the daughter of a German musician. At an early age she came forward as a performer on the piano and as a composer, and after marrying her music master, Thomas Billington, appeared with brilliant success on the operatic stage in Dublin in 1786. She perfected her musical education under Sacchini in Paris, and sang subsequently in Venice and Rome with the greatest success. After her first husband died, in 1799, she married a Frenchman of the name of Felissat and returned to London, 1801, where she received £4000 for six months, playing alternately at Covent Garden and Drury Lane. She retired from the stage in 1811 and died at her villa near Venice. Her private life was very stormy. To a voice of wonderful compass (of three octaves), trained in all the art of the Italian school, she added a fascinating personal beauty and grace. Consult G. F. Ferris, *Great Singers*, vol. 1 (New York, 1892).

BILLITON, bil'it-tôn', or BLITONG, blé-tông'. One of the Dutch East India Islands, situated between the islands of Banca (off the southeast coast of Sumatra) and Borneo (Map East India Islands, C. 5). It is compact in form and covers an area of 63 square miles, with a rough surface rising to 3000 feet, and has rich deposits of tin and other minerals. It is divided into five districts, under the jurisdiction of the governor-general of the east coast of Sumatra, and has a population (1905) of 36,858, of whom many are Chinese, but only about 100 are Europeans. The capital, Pandang, is on the northwest coast, and has a trade in coffee. The island is surrounded by coral reefs.

BILL OF ATTAINDER (for derivation see ATTAINDER). In English law, a bill introduced into Parliament convicting a person, without trial in an ordinary court of justice, of high crimes, such as treason or felony, and prescribing the penalty of death and the forfeiture of the estates of the person accused. Attainder (q.v.) was the ordinary consequence of a judicial conviction of treason or felony, but the method of procedure by bill in Parliament was resorted to in the case of offenders of too great power and influence to make their conviction in an ordinary judicial proceeding certain or in cases of grave civil danger when quicker action was demanded than that afforded by the ordinary process of indictment and trial. It was first employed in the Parliament of 1459 when a bill was presented attainting the Yorkist lords of high treason and declaring the forfeiture of their estates and dignities. During the next two centuries this was the method commonly employed of dealing with political offenders. It is now probably obsolete. By the Constitution of the United States Congress is forbidden to pass any bill of attainder (Art. I, Sec. 9, 3), and the constitutions of the several

States contain similar prohibitions on the acts of their respective legislatures. See **FORFEITURE**, of **BILL OF PAINS AND PENALTIES**.

BILL OF COSTS In England, the itemized statement of account for services rendered by a solicitor or attorney to his client. It is customary to render the items of this account in great detail, and it thereupon becomes the basis of the claim which the law gives the solicitor upon his client. The bill may be disputed by the client on the ground that it is unreasonable or that there was in fact no retainer or that it was not signed by the solicitor. It may be enforced by an application for a summary judgment. Barristers have no legal claim for compensation and hence are not privileged to render bills of costs.

In the United States a bill of costs is an itemized statement of the statutory or other fixed costs of a suit, filed by the successful party, with the judgment. The bill is usually "taxed," i.e., verified and allowed, by the clerk of the court in which the judgment was rendered, and its amount thereupon becomes a part of the judgment. The defeated party's objections to the bill must be presented in writing to the taxing authority whose finding is conclusive in the absence of such objection. See **COSTS**.

BILL OF CREDIT A letter of instructions issued by one person to another authorizing or directing the latter to pay a sum of money or to give credit for a certain amount to a third person named therein and promising to reimburse the person making the advance requested. Until acted upon, the letter is revocable. Payment of a sum of money in pursuance of the letter constitutes an acceptance of the writer's offer and renders him liable in contract to the extent of such payment. See **CONTRACT**, **LETTER OF CREDIT**.

BILL OF EXCEPTIONS In English and American law, the formal statement, for the purpose of a writ of error or appeal to a court having the proper jurisdiction by way of review, of the exceptions taken, or objections raised, to the rulings or decision of the trial court upon points of law. The object of a bill of exceptions is to bring the points complained of before the proper court for review and possible reversal or modification of the decision. See **APPEAL**, **ERROR**, **WRIT OF**.

BILL OF EXCHANGE An unconditional order in writing, addressed by one person to another, signed by the person giving it, requiring the person to whom it is addressed to pay on demand, or at a fixed or determinable future time, a sum certain in money to, or to the order of, a specified person or to bearer. An inland or domestic bill is one which purports to be drawn and payable within a particular State. A foreign bill is one drawn in one State upon a person in another. For this purpose our States and Territories are deemed foreign to each other. While no set form of words is required to constitute a bill of exchange, an inland bill is ordinarily in the following form:

\$500

New York, March 4, 1914

Sixty days after date pay John Smith, or order, Five Hundred Dollars, value received, with interest, and charge to account of

JOHN JONES

To

JAMES LAMB, Albany, N. Y.

Foreign bills are often drawn in a set of three, numbered, respectively, first, second, and third

The following is a common form of the first of such a set

£100

New York, March 4, 1914

At sight of this first of Exchange (second and third unpaid) pay John Smith, or order, One Hundred Pounds, value received, with interest, and charge to account of

JOHN JONES

To

ARTHUR LAMB, London

Bills of exchange arose out of the commercial transactions of merchants engaged in foreign trade in the Middle Ages. They were used by the Florentines as early as the twelfth century, by the Venetians in the thirteenth, and were introduced into England during the latter part of the fourteenth century. However, they were long in securing general recognition in England, the first reported case in the courts of that country occurring in 1603. Originally, a bill of exchange was employed to avoid sending money from one country to another. If a London merchant, A, owed a debt in Amsterdam, he went to B in London, to whom money was owing from C in Amsterdam, paid to B the amount of the debt and received from him a bill of exchange on C directing him to pay that amount to A's creditor, D, in Amsterdam and charge the same to the drawer's account. By this means A's debt to D was discharged without sending any money out of the country. At this stage, therefore, a bill of exchange represented a trade transaction and was drawn by a creditor on his debtor. Such is still the character of a bill in France. In Great Britain and the United States, on the other hand, a bill of exchange need not represent a trade transaction, and is frequently issued as a mere instrument of credit. The person upon whom it is drawn (the drawee or acceptor), the drawer, or an indorser may put his name on the bill, not because he has received the value named therein, but simply for the accommodation of some other party, i.e., for the purpose of lending his credit to such accommodated party. In other words, bills of exchange have come to perform the functions of a paper currency.

The liability of the various parties to a bill may be stated briefly as follows: The drawee is under no legal obligation on a bill until he accepts it. An oral acceptance was held valid at common law, and this rule obtains in some of our States, but in others, and in Great Britain, under the statutes, acceptance must be in writing and signed by the drawee. This statutory requirement is satisfied by the drawee's signature across the face of the bill. By accepting the bill the drawee (hereafter called the acceptor) engages absolutely to pay it, and no demand need be made on him as a condition of suing him thereon. Nor will the fact that he received no consideration for accepting the bill be a defense against a holder for value, for the latter has been induced to give value for the bill by the acceptor's engagement to pay. It is a good defense, however, as against any one but a holder for value, or one claiming through such holder, the rule being that every negotiable instrument is presumed to have been issued, and every contract thereon, whether of acceptor, drawer, or indorser, made for a valuable consideration, but that this presumption may be rebutted in an action brought by any one who has not paid value for the bill or has not obtained title through a holder for value. The acceptance of a bill operates as a conclusive admis-

sion by the acceptor of the genuineness of the drawer's signature, of his capacity and authority to draw the bill, of the existence of the payee, and of his then capacity to indorse it, but it is not an admission that the body of the bill is genuine, nor that the indorsement of the payee is genuine.

The liability of the drawer and of indorsers is conditional, not absolute. The drawer admits the existence and capacity of the payee, and engages that the bill shall be accepted and paid by the drawee upon due presentment, and if it is dishonored and due proceedings thereon are taken, he will pay it to the holder or to any indorser who may be compelled to take it up. Every indorser engages that the instrument is a genuine, valid, and subsisting bill, to which he has a good title, that all prior parties were capable of contracting, that if accepted it shall be paid, or, if not accepted, that it shall be accepted and paid upon due presentment, and if it is dishonored and due proceedings thereon are taken, that he will pay it to the holder, or to any indorser subsequent to himself who may be compelled to take it up.

If a bill is presented for acceptance and acceptance is refused by the drawee, the holder, upon taking due proceedings of dishonor, has an immediate right of recourse against the drawer and indorsers and need not present the bill thereafter for payment. If the bill is accepted, then due presentment for payment must be made, in order to fix the liability of drawer and indorsers. For the various rules governing the time and manner of presentment of bills, and the proceedings of dishonor to be taken by the holder in order to secure his right of recourse against the drawer and indorsers, the reader is referred to law treatises on the subject, or to the Negotiable Instrument Law which has been enacted in about one-half of our States (This statute is Chap 612 of the Laws of New York, 1897.) The negotiability of a bill of exchange will be dealt with in the article on NEGOTIABLE INSTRUMENTS.

BILL OF HEALTH A certificate issued to the master of a vessel on clearing from a port, domestic or foreign, by the authorities of the port, describing the sanitary conditions there prevailing. When no disease of an infectious nature is known to exist in the port, the bill is known as a clean bill of health, if infectious disease is apprehended or suspected, it is called a suspected bill, and if such disease exists at the time of sailing, it is known as a foul bill. A vessel unprovided with a clean bill of health is liable to be quarantined at the port at which she arrives. It is the duty of a master to procure a bill of health before sailing and to deliver up the same to the superintendent of quarantine at the port of arrival.

BILL OF INDEMNITY In Great Britain and the United States a bill introduced into Parliament, the Congress, or a State legislature to legalize acts, usually of an official character, which, when they were performed, were illegal, or to exempt specified individuals or classes of persons from punishment for breaches of the law committed by them. When enacted into law, such a bill becomes an *Indemnity Act*. Acts of indemnity were, before the abolition of religious tests for holding municipal office in England, regularly passed by Parliament to relieve dissenters from the penalties incumbent by them for accepting office. They are still em-

ployed to relieve from liability officials who have exercised a doubtful authority under a suspension of the *habeas corpus* acts as well as to legalize official acts performed by a *de facto* officer whose right to exercise his office is doubtful or unfounded. See *DE FACTO, HABEAS CORPUS, INDEMNITY*.

BILL OF INDICTMENT In criminal law, the written finding of a grand jury as to the sufficiency or insufficiency of the charge laid before it as to the guilt of an accused person. If an indictment is found, indicating that, in the opinion of the grand jury, the evidence adduced shows that the accused should be put on trial for the offense charged in the indictment, the foreman of the jury indorses the words "a true bill" on the indictment, with his signature and the date of the finding. If, on the contrary, the evidence does not appear to justify putting the accused on trial, the foreman endorses the word "ignoramus" or, as is now more usual, the words "not a true bill" on the indictment with his signature and date as before. See *GRAND JURY, INDICTMENT*.

BILL OF LADING A written instrument issued by a common carrier, reciting that he has received certain goods, which he agrees to transport from one place to another and to deliver to a designated person or assigns, for such compensation and upon such conditions as are stated therein. Originally bills of lading were issued only by shipowners or carriers by water. Now they are employed by every class of carriers.

As a receipt, the instrument may be modified and even contradicted by oral evidence, so far as the immediate parties are concerned. If, however, a third party has bought and paid for the goods referred to in the bill of lading, relying upon the truth of its statements, the carrier is estopped (see *ESROPPEL*) from showing that those statements are incorrect.

While the contract was not assignable at common law, the indorsement of the bill of lading could operate to transfer the title to the goods represented. This symbolical character of a bill of lading originated in the fact that while a cargo is at sea it is incapable of physical delivery. Persons could sell and deliver goods during their transit only by treating bills of lading as symbols of the goods themselves. Hence the law merchant recognizes the delivery of a bill of lading as the legal equivalent of the delivery of the goods, and this rule of the law merchant was adopted by the common law. But bills of lading are not negotiable for all purposes. A shipper can give no title to the goods represented by a bill of lading by indorsing or transferring it, unless he is their owner, or has apparent authority from their owner. Nor can a finder or a thief of a bill of lading indorse in blank confer even upon a bona-fide purchaser a better title than he has. (See *NEGOTIABLE INSTRUMENTS*.) This seminegotiability of a bill of lading continues until a complete delivery of possession of the goods has been made to some person having a right to claim them under it.

Bills of lading are made, as a rule, in two or more parts—a practice which enables dishonest shippers to use them as instruments of fraud, by selling the various parts to different purchasers for value. In such a case the purchaser, to whom the transfer of one part is first made, becomes the owner of the property. Still, the carrier may safely deliver the property to

the one who first presents a part of the bill of lading if he has no notice or knowledge of a claim by the holder of another part, although the one so receiving delivery may be compelled to surrender the goods to other holders. In some States bills of lading have been declared by statute to be negotiable, like bills of exchange. But such legislation has not transformed, and cannot transform, documents of title to goods into fully negotiable instruments. Consult *Scrutton, Contract of Affreightment as Expressed in Charter Parties and Bills of Lading* (4th ed., London, 1899), and the authorities referred to under the title *CARRIER, COMMON*.

BILL OF MORTALITY A list, issued weekly, of births and deaths occurring within the limits of London, the publication of which began in 1592. Such bills are now superseded by the weekly bills prepared at the Registrar General's office.

BILL OF PAINS AND PENALTIES A bill introduced into the British Parliament, providing for the punishment of an offender without a trial in a court of law. The procedure in passing such bills is the same as that followed in ordinary legislation, and the act when passed has the effect of a judgment of conviction for crime in an ordinary tribunal. It differs from other penal legislation in that it is retroactive in its operation and may make that to be an offense against the state which was not so at the time of its commission, or impose a penalty which the offense did not involve when committed. Strictly speaking, the bill of pains and penalties comprehends the bill of attainder, but, as commonly employed, the former is limited to cases in which any penalty less than death is imposed by the statute, whereas the bill of attainder always imposes the penalty of death. This method of punishment was resorted to for political offenses, or in cases where the penalties of the ordinary criminal law were deemed inadequate, or where the offense committed was not defined by the law of the land, or where the courts were, by reason of bias, deemed incompetent to deal with it. It was generally employed in cases of treason or other high crimes and misdemeanors, but sometimes also for lesser offenses. Punishment by act of Parliament has long since fallen into disuse, the last instance of its employment being in the case of Queen Caroline in 1820.

The exercise of such despotic legislative power having been found to result in gross injustice under stress of violent political excitement, or by reason of the inquiry of oppressive rulers, bills of pains and penalties were prohibited by the clause of the Constitution of the United States forbidding Congress and the several States from passing bills of attainder or ex post facto laws (Art. I, Sec. 9), so that no act may be made criminal after its commission, nor may the punishment prescribed therefore be increased. See *ATTAINDER, BILL OF ATTAINDER, TREASON*.

BILL OF PARTICULARS In American legal practice, a written statement of the items of the demand upon which the plaintiff in a suit founds his action or the defendant his set-off or counterclaim. In some jurisdictions it must be filed with the pleading of the party, in others, only on request of the opposite party, or in response to an order of the court. The requiring of a bill is largely in the discretion of the court. It is generally conclusive on the party furnishing it. A failure to file a bill of particulars

when required by law precludes the party in default from giving any evidence in support of his claim on the trial. Consult the authorities referred to under the title *PRACTICE*.

BILL OF PEACE A complaint in equity to restrain repeated attempts to litigate the same cause of action by suits at common law. The objects of the proceeding are to suppress useless and oppressive litigation and to prevent a multiplicity of suits, and this procedure may accordingly be resorted to (a) where a numerous class of persons insist upon the same legal right arising out of the same transaction, and (b) where the same individual persists in renewing repeatedly an unsuccessful action. The remedy is by injunction forbidding the prosecution of the vexatious suits. See *BILL, CHANCERY, EQUITY, QUIA TIMET*.

BILL OF RIGHTS An act of Parliament passed in 1689, immediately after the accession of William and Mary, and embodying the fundamental principle of political liberty as understood in England. It condemns as unconstitutional certain abuses of the royal power that had characterized the reign of the preceding sovereign, James II.—the suspension of acts of Parliament by royal prerogative, the levying of taxes without consent of Parliament, the maintenance of a standing army in time of peace, interference with the administration of justice and free elections, the infliction of unusual punishments, the exaction of excessive bail, and the denial of the right of petition. It then affirms the freedom of debate in Parliament, the freedom of elections, and the freedom of petition. In France bills of rights were frequently enacted after the Revolution of 1789. The name is commonly given to the first ten amendments to the Constitution of the United States, proposed in the first Congress that met after the adoption of the Constitution itself and ratified by the necessary number of States in December, 1791. They appear to have been added in order to satisfy the objection made by many that the Constitution itself was not sufficiently specific in defining the rights of the citizen. See *RIGHTS, DECLARATION AND BILL OF*.

BILL OF SALE A formal written conveyance, generally, but not necessarily, under seal, of a right to or interest in personal property. It should contain a description of the parties and property sufficient for identification, and on delivery it effects transfer of title from vendor to vendee. A bill of sale is the instrument used commonly in the sale of household furniture, the stock, fixtures, and good will of a business, and especially in the transfer of ownership of ships, which, if the ships be registered, must, under both the English and United States laws, be made by bill of sale (English Merchant Shipping Act, 1854, Sec. 55, U. S. Rev. Stats., Sec. 4170). If the property is delivered when sold or a part of the purchase money is paid, a bill of sale is unnecessary to make a valid transfer, but is a convenient evidence of title. The instrument alone is insufficient without delivery of the property to protect the purchaser against the creditors of the seller, though under the registration laws of the United States this protection may generally be secured without transfer of possession by filing or recording the bill of sale. It may also be employed, in place of the actual physical delivery of a chattel, to effect a gift thereof. Bills of sale may be absolute or conditional. The latter operate as

security and are generally considered chattel mortgages (q.v.) in American law. See SALE.

BILL OF SIGHT A document signed by or on behalf of an importer of goods in England, who does not possess a sufficiently accurate knowledge of their quantity or quality to enable him to make a perfect entry of them. In this document the importer gives the best description of the goods that is practicable. It is then presented to the collector of customs, who is authorized, upon its receipt, to have the goods landed and examined by the importer in the presence of customs officers, after which the importer must make a perfect entry within a limited period, or the goods are sold to pay duties and charges. Somewhat analogous provisions for expediting the delivery of parcels and packages are contained in Secs 2855-2858, 2990-2997, and Chap 371 of Laws of 1896 (29 United States Statutes at Large, 263).

BILLON, be'yón' (Fr. copper coin, base coin, OF *bilion*, mass, of bullion) An alloy of silver with copper, in which the copper predominates. Billon was formerly much used in Germany and in Austria for coins of smaller denominations, in order to avoid the bulkiness of copper.

BILLOT, be'yó', JEAN BAPTISTE (1828-1907) A French general, born at Chaumeil (Correze). He was admitted to the military academy at Saint-Cyr in 1847, was advanced to the rank of lieutenant in 1852, captain in 1854, lieutenant colonel in 1869, and colonel in 1870. After a period of service in Mexico and Algeria he was appointed to the command of a division of the Second Army Corps (l'Armée du Rhin) upon the outbreak of the Franco-Prussian War and participated in the battle of Spichern and in the defense of Metz. Afterward he became commander of the Eighteenth Army Corps and rendered distinguished services at Baune la Rolande and Villersexel, where the French army gained one of the few victories of the war. He was Minister of War in the cabinets of Freycinet (1882-83) and Méline (1896-98).

BILLROTH, bil'ró't, THEODOR (1829-94) A German surgeon. He was born at Bergen, on the island of Rugen, and studied medicine at the universities of Griefswald, Göttingen, Berlin, and Vienna. He was the assistant of Langenbeck at Berlin and was appointed professor of surgery at the universities of Zurich (1859) and Vienna (1867). Billroth was one of the greatest operators of modern times and one of the foremost promoters of histology, pathology, and military surgery. His publications include the following valuable contributions to medical literature: *Die allgemeine chirurgische Pathologie und Therapie* (translated into nearly all the principal languages of Europe, as also into the Japanese, 1863, 16th ed., 1906), *Chirurgische Briefe aus den Kriegslazareten in Weissenburg und Mannheim* (1872), *Ueber den Transport der im Felde Verwundeten und Kranken* (with Mundy, 1874), *Die Krankenpflege im Haus und im Hospital* (6th ed., 1900, Eng. trans., *The Care of the Sick at Home and in the Hospital*). Billroth was a skillful amateur musician, and after his death there was published his *Wer ist Musikisch?* (3d ed., 1898).

BILNEY, bil'ní, or **BYLNEY**, THOMAS (1495-1531) An English martyr, born probably at Norwich, studied at Trinity Hall, Cambridge, and in 1519 ordained priest. After a study of Erasmus' Latin *New Testament* (1516), he denounced the scholastic doctrine of "good

works," as well as saint and relic worship, and pilgrimages to Walsingham and Canterbury. He was arraigned before Cardinal Wolsey in 1527 and, having recanted, was absolved, but confined in the Tower until 1529. In 1531 he began field preaching in Norfolk, but was soon arraigned, condemned as a heretic, and burned at London.

BILOXI, bi-lók'sí A city in Harrison Co., Miss., 60 miles southwest of Mobile, Ala., on a peninsula formed by Back Bay of Biloxi and the Gulf of Mexico, and on the Louisville and Nashville Railroad (Map Mississippi, H 10). A popular summer and winter resort, it has a beach 6 miles long, shell and brick paved streets, and beautiful surroundings. The city has a fine government building, several hotels and beautiful residences, a country club, and a sanitarium. Biloxi is the centre of an extensive canning industry (oysters, shrimp, crabs, fruits, and vegetables), has shipyards and ice factories, and manufactures lumber. The water works are owned by the municipality. In 1699 Iberville (q.v.) established a settlement at a point across the bay from the present city and named it Biloxi, from the Biloxi Indians. He also built a fort near by (Fort Maurepas), which was the first French post in this part of the country. In 1701 the settlement (now known as Old Biloxi) was abandoned because of a destructive fire, and about 1712 a permanent settlement, the first within the present limits of Mississippi, was made here. For several years in the early part of the eighteenth century Biloxi was the capital of the French territory in this part of North America. It was incorporated as a town in 1872 and as a city in 1896, the date of the charter now in force, which provides for a mayor, elected every two years, and a city council. Pop., 1900, 5487, 1910, 8049. For the history of Old Biloxi (1699-1701), consult French, *Historical Collections of Louisiana* (New York, 1846-50).

BILOXI A small tribe of Indians, originally residing about Biloxi Bay, on the Gulf coast of Mississippi, whence they removed to Louisiana, probably early in the eighteenth century. From their geographic position and alliances it was long assumed that they were related to the Choctaws, but in 1886 Gatschet discovered a few families in Louisiana still speaking their language and demonstrated that it is a detached dialect of the great Siouan stock. Consult J. R. Swanton, *Bulletin 43, Bureau of American Ethnology*, Dorsey and Swanton, *Dictionary of the Biloxi Language* (Washington, 1912).

BILSA. See **BHILSA**.

BILSTON, bil'stón A town of Staffordshire, England, situated on rising ground, 2½ miles southeast of Wolverhampton (Map England, D 4). It forms a part of the parliamentary borough of Wolverhampton, and has extensive iron and coal mines, iron-smelting works, iron foundries, manufactures of tin-plate goods, japanned and enameled wares, nails, wire, screws, and coarse pottery. Fine sand, adapted for metal casting, is found here. The municipality owns and operates its water works and maintains public baths and parks. Pop., 1891, about 23,500, 1901, 24,000, 1911, 25,681.

BIMA, bé'ma See **BRIMA**.

BIMBASHI See **BASHI**.

BIMBISARA A King of Magadha, the modern Bihar, one of the earliest friends and protectors of the Buddha, whom he presented with the famous pleasure park, *Vesuvana*. Bim-

bisāra resigned in the sixth century B C for 52 years, and he was murdered by his son, Ajatasatru. According to other accounts, however, Bimbisāra reigned only 28 years.

BIMELER, J M See BAUMELER, JOSEPH MICHAEL.

BIMETALLISM (Lat *bis*, twice + *metallum*, metal) The name given to a monetary system in which both gold and silver stand upon precisely the same footing as regards mintage and legal tender. The practical difficulties which in times past have confronted the maintenance of a concurrent circulation of the two metals have led one nation after another to abandon the effort, and to adopt a system of monometallism, with gold as its basis. The historical development of coinage in modern nations has been from silver monometallism through a more or less unsatisfactory experience with bimetalism to the single gold standard.

The English monetary notation with the pound as the unit recalls the origin of English money, with a pound of silver as its basis. By successive debasements the coinage of the monetary pound parted company with the pound weight, until in the time of Elizabeth the pound weight of silver was coined into 62s instead of 20s. Gold coinage had been introduced by Edward III, but a long course of experimentation, often of a most arbitrary nature, both with the silver coinage and the gold coinage, had failed to accomplish any satisfactory adjustment of their mutual relations. During this whole period silver was in theory the standard coin of the realm and was so considered when William III in 1699 completed the recoinage of the silver coin. His government fixed the value of the guinea at 21s 6d, but, as this overrated gold, the silver coinage, in excellent condition from its recent passage through the mint, was rapidly exported, and the loss of the small change caused great inconvenience among the people. On the advice of Sir Isaac Newton, then master of the mint, the guinea was in 1717 declared to be equal in value to 21s. This mitigated the evil, but did not remove it. Silver could be freely minted as before, but since its market value was higher than its legal value, it was not carried to the mint. For all larger payments gold became the exclusive medium of exchange, for there was scarcely enough silver to meet the needs of retail trade. During the course of the century the stock of silver coin was not replenished, and the money in circulation became extremely abraded. This depreciation of the coin led in 1774 to the law that in sums of £25 and upward silver should be legal tender by weight only, and not by tale. By the coinage law of 1816 silver was reduced to a place of a token coinage. By that law 60s were to be coined from the pound weight of silver, though the mint price paid to individuals remained, as before, 62s for the pound. This threw the coinage of silver in fact upon the government, and by the coinage act of 1870 the right of individuals to take silver to the mint for coinage was abolished. By these successive steps England legalized the single gold standard, which had in fact been in operation since 1699 at least.

Other nations were slow to follow this example. By the monetary law of 1801 France contemplated the 5-franc silver piece as the standard money, but in fact established a bimetallic system. In the first half of the century silver

remained the usual currency of the country, but after the discovery of gold in California and Australia and the fall in the price of gold relatively to silver, the French law favored the coinage of gold. Silver disappeared from circulation, and the lack of small change led in 1800 to the reduction of the smaller silver coins to tokens by increasing the percentage of alloy. Similar but not uniform action by contiguous countries which used the same coin, and were accustomed to regard all francs as identical, irrespective of the heads upon the coins, led to much inconvenience, and finally, in 1865, the Latin Monetary Union was formed to secure a common basis of coinage among such countries. The 5-franc piece, then little coined, was not disturbed, but the subsequent fall in the price of silver led to such excessive and unequal coinage by the several States composing the Union that agreements were entered into restricting, and finally abolishing, in 1877, the further coinage of the 5-franc piece. By this action France, Belgium, Switzerland, Italy, and Greece were added to the ranks of the gold-standard nations. Germany, which had been exclusively upon a silver basis until 1871, in that year adopted the gold standard as one of the elements of the unification of the coinage following the establishment of the Empire. Indeed, her action in throwing her stock of silver in the following years upon a market which was already falling is deemed to have been an important factor in leading the Latin Union States to abandon silver. The Scandinavian countries and Holland followed the example of their neighbors in the seventies, while Russia and Austria, then in the toils of a paper currency, were unable to take such action until the close of the century.

The United States until the outbreak of the Civil War had been legally upon a bimetallic basis. As in France, the outflow of silver following the gold discoveries of the middle of the century had led to laws making the silver fractional coins tokens of limited legal tender. In the revision of the coinage laws in 1873, when we were yet upon a paper basis, the silver dollar was dropped from the coinage, and gold became the nominal standard. With the return to a metallic currency, a reaction in favor of silver set in. Various unsuccessful attempts were made to reestablish the free coinage of the silver dollar. The strength of the silver advocates was sufficient to bring about a series of compromise measures which, without removing all restrictions upon the coinage of silver, materially increased the volume of silver in the circulation of the country and at times threatened the maintenance of the gold standard. The law of 1878 provided for the purchase of not less than two million dollars' worth of silver monthly nor more than four million dollars' worth, and the coinage of the bullion thus purchased into silver dollars of 412½ grains standard silver nine-tenths fine. Under this law nothing more than the minimum amount was purchased and coined. In some respects the law of 1890 went further in providing that the Secretary of the Treasury should purchase monthly 4,500,000 ounces of silver bullion and issue Treasury notes for the purchase price of the same. Both the silver dollars and the Treasury notes of 1890 enjoyed the full legal-tender quality. The policy of purchasing silver was abandoned in 1893. In 1896 the presidential election hinged upon the declaration of the Democratic platform in favor of the free coinage of sil-

ver by the United States in the ratio of 16 to 1. The defeat of the Democratic candidate and the subsequent adoption of the currency law of 1900 still further strengthened the gold standard legislation of the nation. These, with the cessation of silver coinage in India, and the adoption of the gold standard by Japan, and the introduction of a theoretical gold standard in Mexico in 1905, the establishment in 1906 by Brazil of a conversion fund by which the gold standard was rendered effective, are in brief the salient features of the history of the standards among modern nations. For a more detailed account, see *LATIN UNION, MONETARY COMMISSION, MONETARY CONFERENCES, MONEY*.

The arguments advanced by the advocates of the opposing systems may now be passed in review. In the first place, it should be stated that in its modern form the question of bimetalism is one of standards and not of circulation. If in earlier days the problem was to secure the concurrent circulation of gold and silver coin to meet the needs of wholesale and of retail trade, this aspect of the question is no longer important, for means have been found to insure this result without a resort to bimetalism. Almost equally irrelevant is the objection often heard to the use of silver as standard money because of its bulk and weight. This is an objection perfectly well founded, to be sure, against the circulation of silver coin, but not against silver as standard money. For silver money may and does circulate through its paper representatives, as the notes of the Bank of France or the silver certificates of the United States amply testify. In the same line of argument the contention that bimetalism exists everywhere in fact, because, whenever gold is used, silver must also be used in the monetary circulation, has no bearing upon the controversy. Only the most inexperienced in monetary affairs would attach the name "bimetalism" to the circulation of the two metals side by side, irrespective of the laws which govern their coinage. For it is the essence of bimetalism, as appears in our definition, not simply that both metals should be coined, but that both should be coined on precisely the same legal footing and possess the same legal-tender qualities. They may circulate together, yet stand upon a wholly different basis. Thus, in the United States, the subsidiary silver coins are limited both in amount and in legal tender, while the silver dollars, though unlimited in legal tender, are limited in amount. Both stand obviously upon a wholly different footing from gold, which not only possesses unlimited legal tender, but which can be coined at the instance of individuals without restriction of amount. It is that element in the metallic currency which is freely expansible by law which gives the standard.

The advocates of bimetalism have laid stress upon two results which they say would follow the adoption of their system. (1) the regulation of exchanges between the various nations, (2) the attainment of a more stable standard of value. They point out that the use by some nations of gold and by others of silver as the monetary standard produces a fluctuating par of exchange between gold and silver nations which impedes commerce and causes great uncertainty in their mutual relations. To the extent that uncertainty prevails as to the return when the prices attained in one country are translated into the standard of the country which has sold the goods, to that extent is trade rendered difficult

The liability to loss through exchange enhances the prices of goods sold. It is further pointed out that the varying tendencies of prices under one standard, as compared with another, act as an unnatural impediment or stimulus to trade. If gold prices and the gold price of silver fall alike, silver using nations may export to gold countries without any loss, while gold countries find prices falling. Thus, if wheat falls in price in England, exporters in India suffer nothing, while exporters in the United States must be content with lower prices. A fall in the gold price of silver accompanies a fall in the prices of other commodities in gold countries, but the relation of silver to commodities remains the same, and no enhancement of general prices ensues in silver-using countries.

A more important tenet of the bimetallic creed is that such a system produces a more stable standard of value. The evils of instability in the monetary standard are thoroughly conceded by all parties. As illustrated in the fluctuating fortunes of paper money, they are patent to all. Under a metallic system, changes in the value of the standard are more gradual and less revolutionary in their effects. Yet they exist, none the less, and reveal themselves in the ups and downs of general price movements. It is only after some study that persons understand that prices and the value of the standard are reciprocals, that low prices mean a high value of money and high prices a low value of money. The economic effects of changes in the value of money must be studied in the effects of price changes. Downward movements representing an enhanced purchasing power of money redound to the benefit of creditors and bear heavily upon debtors, who require a larger produce to fulfill their obligations. Upward movements lighten the burden of the debtor, while they shrink the purchasing power of what the creditor receives and thus work to his injury. Such changes are not without profound effects upon the general conditions of trade and industry. Bimetalism proposes to eliminate in a large measure these evils, furnishing a more stable standard. Instability of the standard rests upon the fluctuations in the production of the metals. It is argued that by uniting in the monetary standard two metals instead of one, the fluctuation in the production will be diminished. The aggregate product is less likely to vary than is the product of either, the changes in the production of the one being offset by changes in the production of the other.

In reply to these claims and assertions, the gold monometallists have taken several positions. In the first place, some have contended that the evils which bimetalists seek to redress are of no great consequence. In the second place, others have contended that as a plan of relief bimetalism is out of the question because it will not work in practice. And finally, granting the possibility of bimetalism, it is claimed that we have no guarantee that it would actually relieve the situation.

It is an extreme view that the changes in prices, which constitute the chief stay of the bimetallic argument, have no relation to the money supply. If this, however, be true, a system which, like bimetalism, aims at working upon prices through the money supply is useless. If this extreme view has not been adopted by all monometallists, it is yet represented. Another and somewhat more moderate view of the same proposition is the claim that such changes in

prices have worked far less disturbance than the bimetallics have claimed, and that, if they involve some disadvantages, they have some compensations which the bimetallicist in his ardor has overlooked.

More important, and occupying a larger place in the bimetallic controversy, is the standpoint that bimetallicism will not work, that no legal enactment can so fix the relative values of silver and gold as to insure their concurrent circulation. In this view bimetallicism is not a double standard, but an alternating standard. Divergences between the legal ratio and the market ratio being bound to occur, Gresham's Law immediately enters into operation. The more valuable metal is no longer brought to the mint, and the existing stock in the circulation is exported. Monometallicists claim this to be inevitable. They tell us that law cannot fix values, that the relative value of gold and silver in the market will be fixed by commercial considerations, especially by the cost of production. Any attempt on the part of governments to interfere with the operation of these laws must be fruitless. To these considerations the bimetallicist replies by calling attention to the predominating influence of demand as a factor affecting the value of the precious metals. He points out that as the existing stock is much greater than the annual accretions, the cost of producing these cannot be the sole criterion of the value of the mass. He points out further that the demand for the use of the metals as money far outstrips any other demand. He therefore concludes that law can and does affect the value of the metals and is competent to fix the rates between them, that if the monetary demand thus created be strong enough, the commercial ratio must adjust itself to the legal ratio. Both sides of the controversy appeal to the facts of history as bearing out their contentions. On the one hand, the monometallicist points to the fact that the French law of 1801 which established the legal ratio of $15\frac{1}{2}$ to 1 between gold and silver did not control the market ratio, but there was always a divergence between them, leading now to a preference for gold and now to a preference for silver in the French coinage. The bimetallicists concede that such divergence might have prevented both silver and gold being carried to the mint at the same time, that they might have determined which of the metals would be preferred for export, but they strenuously deny that they caused the export of one metal or the other. If the French law gave but an imperfect picture of the workings of the bimetallic system, it is only a proof to the advocates of the latter that the area within which it worked was too restricted. Enlarge the scope of the law by an international agreement embracing the leading commercial nations, and it would, they claim, be proof against fluctuations of ratio. Hence the agitation for a bimetallic standard has been for an international bimetallic system.

Finally, the monometallicists are frequently willing, for argument's sake, to concede the practicability of bimetallicism, that they may put the further question, What would be gained? The evil to be remedied is an unstable standard. What guarantee have we that two metals would be better than one? The bimetallicists claim a compensatory action, that irregularities in the supply of one metal will balance those of the other. They assert that a greater stability would follow the introduction of their system from the

fact that by distributing the variation over a wider area the full supply of both metals offering a much more extensive surface, the effect would be far less perceptible. "Imagine," says Professor Jevons, "two reservoirs of water, each subject to independent variations of supply and demand. In the absence of any connecting pipe the level of the water in each reservoir will be subject to its own fluctuations only. But if we open a connection, the water in both will assume a certain mean level, and the effects of any excessive supply will be distributed over the whole area of both reservoirs." They point to the experiences following the discovery of gold in the middle of the century as proof. In 1840 gold was produced to the extent of \$30,000,000 and silver to that of \$32,500,000. In 1852 the figures were, for gold \$150,000,000, and for silver \$42,500,000. In other words, gold was advanced fivefold, but the combined product of gold and silver only threefold. This moderated the effect of the gold discoveries upon prices. The monometallicists contest this theory and deny that it rests on a sufficient basis of historical fact. They hold that there are no inherent reasons why the combined production of gold and silver should not under a bimetallic system fluctuate quite as much as the production of gold alone.

We have endeavored to state the case between the two parties as one of pure theory. In so doing we fail to give any adequate idea of the heat of the controversy and the passions which it has aroused. To understand properly the ardor of the struggle, a brief reference to the historical setting of the discussion is perhaps desirable. The great bulk of the theoretical and controversial literature upon the subject appeared in the period between 1873 and 1898. This was a period of steadily falling prices—a period, upon the whole, of commercial depression. Trade languished, and the burden of debt grew heavier. The gold product was growing less each year, yet the general adoption of the gold standard with increased population, and a growing economy in the use of money made a constantly increasing pressure upon the gold supply. Bimetallicism seemed to promise a relief from the deadening effects of falling prices, and the industrial world lent a ready ear to its plans. It was not so much a conviction that bimetallicism represented a superior monetary system as a deep-seated feeling that the adoption of the gold standard and the attendant price changes had wrought serious social injury that won for bimetallicism so wide a following. With the upward trend of prices following the great increase in the output of gold (qv) the bimetallic movement was sapped of all vitality.

The literature of bimetallicism is extensive. An exhaustive bibliography on the money question was issued in 1878 as an appendix to the *American Report of the International Monetary Conference* (Consult Horton, *The Monetary Situation*, Cincinnati, 1878.) Since that time the output has been enormous. The bimetallic theory claims the authority of Wolowski and Cairnes in France, Malou and de Laveleye in Belgium, Mees, Violik, Van den Berg, and Boisserman in Holland, Seyd, Nicholson, and Foxwell in England; Arendt in Germany, Haupt in Austria, Horton, F. A. Walker, and Andrews in the United States. On the side of the single standard are many of the older English economists—Locke, Petty, Harris, later Lord Liverpool, Tooke, Ricardo, and J. S. Mill, and, more re-

cently, Giffen—and among American writers, Wells and Laughlin. For a clear notion of the controversy, consult Walker, *International Bi-metallicism* (New York, 1896) and Giffen, *Case against Bi-metallicism* (London, 1896). Other works to be commended are Nicholson, *Money and Monetary Problems* (London, 1897), Horton, *The Silver Pound* (London, 1887), Walker, *Money* (New York, 1878) and *Money, Trade and Industry* (New York, 1879), Andrews, *An Honest Dollar* (Hartford, 1894), *Report of the Monetary Commission of the Indianapolis Convention* (Chicago, 1898), Helm, *The Joint Standard* (London, 1894), Taussig, *The Silver Situation in the United States* (New York, 1893), White, *Money and Banking* (Boston, 1896), Laughlin, *History of Bi-metallicism in the United States* (New York, 1897), Price, *Money and its Relations to Prices* (London and New York, 1896).

In official literature, the *Report of the United States Monetary Commission* (1870), the *Reports of the Monetary Conferences* (1878, 1881, and 1892), the *Reports of the Royal Commission on the Depression of Trade* (1883) and on the *Relation of Gold and Silver* (1886), the *Report of the Indian Currency Commission* (1893) and of the *Berlin Silver Commission* (1894) are important.

BINALONAN, be'na-lō'nan A town of Luzon, Philippines, in the province of Pangasinan, 27 miles east of Lingayen (Map Luzon, D 2). It is situated in a densely wooded territory and is the junction of several important highroads. Pop, 1903, 14,603.

BINANG, be'nyan, or **BINAN** The largest town of the province of Laguna, Luzon, Philippines, 19 miles by highway from Manila (Map Luzon, F 9). It is situated on the west shore of Laguna Bay. Pop, 1903, 19,786.

BINARY SYSTEM See DOUBLE STARS

BIN-BIR-KILISSEH, ben'ber-ke'la-sā' (Turk bin, thousand, bir, one, kilisseh, church, from Gk ἐκκλησία, ekklesiā). The name of extensive ruins in Karamania, Asia Minor, 20 miles north-northwest of the town of Karaman. The ruins consist chiefly of the remains of early Byzantine churches, of which four or five are in fair preservation and over 30 are in ruins. Bin-Bir-Kilisseh is supposed to be the ancient Debe, though Hamilton identifies it with Lystra.

BINCHE, binsh A town in the province of Hainaut, Belgium, on the Haine, 10 miles east-southeast of Mons (Map Belgium, C 4). It is well built and walled, manufactures leather, cutlery, pottery, glass, etc., and carries on a considerable trade in paper, marble, coal, and lace, which is shipped principally to Brussels. Formerly the revenue of Binche was the marriage portion of the eldest daughter of the Count of Hainaut. Pop, 1890, 10,100, 1900, 11,500, 1910, 11,690.

BINCHOIS, bin'shwa', GILES (c 1400-60). One of the principal masters of the Gallo-Belge school of composition. He was born at Bins in Hainaut and at first followed the profession of arms. Later he was a singer in the chapel of Philip the Good of Burgundy. He died at Lille. Until quite recently only a few fragments of his masses were known. But the discovery of some manuscripts containing 52 secular songs in rondeau form with instrumental accompaniment threw new light on the condition of music at that time.

BINDING, bin'ding, KARL (1841-) A

German criminologist and jurist, born in Frankfurt-on-the-Main. He studied at the universities of Göttingen and Heidelberg and in 1873 became professor of criminal law in Leipzig, and rector of the university (1908-09). Of his works on jurisprudence, *Die Normen und ihre Uebersetzung* (1872-77), in which he attempted a thorough revision of accepted theories respecting criminal law, is especially important. But one volume (1898) appeared of his *Das Burgundisch-Romanische Königreich*. In 1885 he established the *Systematisches Handbuch der deutschen Rechtswissenschaft*. Among his other publications may be mentioned *Die rechtliche Stellung des Kaisers im heutigen deutschen Reiche* (1898), *Grundriss des deutschen Strafrechts* (1890, 5th ed, 1905), *Lehrbuch des gemeinen deutschen Strafrechts* (3 vols, 1902-05).

BINDRABAN, bin'dra-bān' (Skr Vrnda-vana, a grove consecrated to Krishna or Vishnu), or **BRINDABAN** A town on the Jumna, in the district of Muttra, United Provinces of Agra and Oudh, British India, situated 92 miles south of Delhi (Map India, C 3). Pop, 1901, 22,717, 1911, 18,443. It is one of the sacred Hindu cities, and crowds of pilgrims come from all parts chiefly to do honor to Krishna. It has several superb temples and shrines, and, through the munificence of wealthy devotees, these are becoming more numerous and costly. Here, as at Benares, the immediate margin of the river is occupied by flights of steps, or ghats, extending for about a mile along the bank.

BINDWEED See CONVULVULUS

BINET, bē'nā', ALFRED (1857-1911). A French psychologist, director of the laboratory of physiological psychology at the Sorbonne, Paris. He was born in Nice, July 8, 1857. He went to Paris in 1871 and, having studied law and medicine, turned his attention in 1880 to experimental and pathological psychology. He contributed many articles to the *Revue philosophique*, the *Revue scientifique*, and *Mind*. His first book was *La psychologie du raisonnement, Recherches expérimentales par l'hypnotisme* (1886, Eng trans, 1899), in which he undertook to apply the method of hypnotism to psychological questions. Other works are *Perception intérieure* (1887), *Études de psychologie expérimentale* (1888), comprising a section upon sexual psychology (fetichism in love), one upon the physical life of microorganisms (trans, 1897), and a third upon mental imagery, *Les altérations de la personnalité* (1892, Eng trans, 1896), *Introduction à la psychologie expérimentale*, in connection with Philippe, Courtier, and V. Henri (1894), *On Double Consciousness* (1896), *La fatigue intellectuelle*, with the collaboration of Henri (1898). His later works include *La Suggestibilité* (1900), *Étude expérimentale de l'intelligence* (1903), *L'âme et le corps* (1905), *Les révélations de l'écriture d'après un contrôle scientifique* (1906), *Les enfants anormaux*, with Simon (1907), *Les idées sur les enfants* (1900). From 1895 Binet also, together with H. Beaunis and Th. Ribot, edited *L'année psychologique*, a yearly volume comprising original articles, a review of the progress of psychology, and (for some years) an index of all publications which bear upon that science.

The pages of his journal had always been open to problems in "applied psychology," and in 1908 he formally devoted the *Année* to the

study of practical and social questions. To posterity he will doubtless be best known for his contributions to this field, in particular, for his attempts to find some standard by which degrees of intelligence might be measured. To this end he published, with Th. Simon, the *Binet-Simon Tests* (first series 1905, second series 1908). (See *MENTAL TESTS*.) As a man of science he had a large measure of originality and true psychological insight, and he will take rank with the leading psychologists of his generation. Consult Simon, "Alfred Binet," *Année psychologique*, vol. XVIII (Paris, 1912).

BINET, SATANÉ A pen name of Francisque Sarcey.

BINET TEST See *MENTAL TESTS*.

BINGEN, bing'en (anciently, *Bingum* or *Vincum*, capital of a Gallic tribe). A town in the Grand Duchy of Hesse, Germany, 17 miles west of Mainz on the left bank of the Rhine, at the mouth of the Nahe, and opposite Ruedenheim (Map Germany, B 4). It is the seat of the Rhenish Technical College and a number of other educational institutions. The Gothic Parish Church dates from the fifteenth century and contains a crypt of the eleventh century. Near by, on the Rothenberg, are the ruins of the castle of Klopp on the site of an old Roman fortress, and a short distance higher is the chapel of St. Roch, to which pilgrimages are made by thousands of people annually. On the other side of the Nahe is the Rupertsberg, with the ruins of a monastery in which St. Hildegard resided in the twelfth century. A short distance below the town, on the Rhine, is the celebrated Binger Loch, formerly a dangerous point in the navigation of the Rhine, but since 1834 rendered safe through the deepening of the channel. The magnificent Niederwald Denkmal, to commemorate the victories of 1870 and 1871, rises high on the opposite side of the river, and in the middle, on a rock, stands the Mouse Tower, in which according to legend Archbishop Hatto was devoured by mice in the year 909. The mediæval stone Drusus Bridge, whose foundations date back to the Roman occupation, crosses the Nahe near its mouth. Bingen's principal industries include the manufacture of starch, tobacco, leather, and liquors, and a trade in grain, cattle, coal, iron, and wine. Pop., 1895, 8187; 1905, 9950. Bingen was a town of the ancient Belgæ, and in 70 A.D. was the scene of the battle of Bingenum, in which the Romans defeated the rebellious Gauls. Drusus built a castle there and threw a bridge across the Rhine, in 13 B.C. In 1281 it came under the rule of the Archbishop of Mainz. It was repeatedly captured during the Thirty Years' War, and in 1689 the French burned the town and blew up the castle. The town belonged to France from 1797 to 1814 and in 1815 became a part of Hesse.

BINGER, bin'zhâ, LOUIS GUSTAVE (1856-) A French African explorer, born at Strassburg. In 1887 he started from Bamaku, explored Sikasso, and then turned to Kong, which he was the first European to explore. After disproving the hitherto accepted theory that there were mountains in that region, he visited Baramo and Wagadugu (1888) and in 1889 reached Grand Bassam. By treaties he succeeded in placing Tchia, Kong, and Boutuku under a French protectorate and thus laid the foundation of a French Sudanese Empire. He returned to West Africa in 1892, as French com-

missioner for the settlement of the Ashanti boundaries with England, and after serving as Governor of the French territory on the Ivory Coast from 1893 to 1896, was director of the French colonial department from 1896 to 1903. His chief publications are *Du Niger au golfe de Guinée, par le pays de Kong et de Mossi* (1891), *Declatage, Islamisme, et Christianisme* (1895), *Le serment de l'explorateur* (1905), *Le pèril de l'Islam* (1906), *Héros d'Alsace* (1907).

BINGHAM. A town in Salt Lake Co., Utah, 20 miles southwest of Salt Lake City, on the Denver and Rio Grande and the Bingham and Garfield railroads (Map Utah, B 2). The town has extensive copper mines and contains a hospital. Pop., 1910, 2881.

BINGHAM, AMELIA (1860-) An American actress, born at Hicksville, Ohio, her parents' name being Smiley. She married Lloyd M. Bingham, after studying at Ohio Wesleyan University. Her professional debut was made at the People's Theatre, New York, in *The Power of Gold*, and subsequently she played in several melodramas. After one year with Augustus Pitou and five years with Charles Frohman, she was leading lady at the New York Empire Theatre in *His Excellency the Governor*, and other plays. In 1901 she formed her own company, which produced *The Climbers*, *A Modern Magdalen*, *The Frisky Mrs. Johnson*, etc. In 1913-14, in a company including William H. Crane, she played in *The New Henrietta* (a revision of *The Henrietta*, by Bronson Howard), taking the part of Mrs. Opdyke.

BINGHAM, HIRAM (1875-) An American explorer and educator, born at Honolulu, Hawaii. He graduated from Yale University in 1898 and received a Ph.D. from Harvard in 1905. For several years he taught history and related subjects at Harvard and Princeton. In 1906 he began a series of explorations in South America, first following Bolívar's route across Venezuela and Colombia, then (in 1908-09) exploring the Spanish trade route from Buenos Aires to Lima, Peru. At this time and in subsequent investigations (especially in 1912-13) he made important archaeological discoveries relating to prehistoric and Inca remains. He was appointed lecturer at Yale on Latin-American history (1908), lectured in 1910 at Johns Hopkins on diplomatic history, and became curator of South American history at Harvard and at Yale. Besides numerous papers contributed to magazines and reviews, his writings include *Journal of an Expedition across Venezuela* (1909), *Across South America* (1911), *The Monroe Doctrine and Obsolete Shibboleths* (1913).

BINGHAM, bing'am, JOHN ARENDE (1815-1900). An American jurist and legislator. He was born at Mercer, Pa., and was educated at Franklin College, Ohio. From 1855 to 1863 he served as a Representative in Congress from Ohio, and was chairman of the House board of managers in the impeachment trial of West W. Humphreys, United States district judge of Tennessee, who, in an address delivered at Nashville, Dec. 20, 1860, had advocated secession and was consequently accused of high treason. Mr. Bingham subsequently prepared and introduced the Fourteenth Amendment to the Constitution of the United States. He conducted the prosecution of Mrs. Sumner and others charged with complicity in the plot to assassinate President Lincoln and his cabinet, and was chairman of

the board of impeachment of Andrew Johnson in 1868. After serving four additional terms in Congress (1864-73), he was, in 1873, appointed United States Minister to Japan, which position he held until 1885. Consult J. B. Foaker, "John A. Bingham," in the *Ohio Archaeological and Historical Society's Publications*, vol. x (1902).

BINGHAM, JOSEPH (1668-1723). An English clergyman, educated at Oxford, a tutor there in 1691, and somewhat later a rector near Winchester. Here he wrote his valuable *Origines Ecclesiasticae* or *Antiquities* of the Christian Church (1708-22), which has often been reprinted and translated into various languages. He was made rector of Havant, near Portsmouth, in 1712, and lost his savings in the famous South Sea Bubble of 1720.

BINGHAM, THEODORE ALFRED (1858-) An American soldier and public official, born in Andover, Conn. He graduated from the United States Military Academy in 1879, served in various duties as engineer officer from then until 1890, and subsequently was military attaché at Berlin and at Rome. From 1897 to 1903 he was in charge of the public buildings and grounds of Washington, with the rank of colonel. In 1903-04 he supervised the engineering district of Lake Ontario and Lake Erie, and was then retired from active service with the rank of brigadier general. As police commissioner of New York City (1906-09) he was able, through the employment of military discipline, to accomplish many reforms in his department. He was removed by Mayor Gaynor in 1911 on the ground of insubordination, but in the same year was appointed chief engineer of highways in New York City, and when he retired after two months' service was immediately appointed consulting engineer in the department of bridges. He contributed numerous articles to magazines on New York police conditions.

BINGHAMTON, bing'am-ton. A city and the county seat of Broome Co., N. Y., on the Erie, the Delaware and Hudson, and the Delaware, Lackawanna, and Western railroads (Map New York, E 3). It occupies an area of 10 square miles, at an elevation of 867 feet, and has a picturesque location. The Susquehanna and Chenango rivers unite within the city and are crossed by several bridges. Among the more prominent buildings are the State almshouse, the Binghamton State Hospital for the Insane, the Susquehanna Valley Orphans' Home, St. Mary's Home, Stone Opera House, Armory theatre, public library, municipal building, Federal courthouse, and the Security and the Kilmer buildings. Other features of interest are Ross Park, of about 100 acres, Ely Park, Industrial Exposition grounds, O'Neil Park, and the Supreme Court law library. Binghamton has extensive manufacturing interests, which include boots and shoes, canoes and photographic supplies, cigars, spices, carriages and carriage trimmings, sleighs, leather goods, motors, clocks, furniture, electrical apparatus, clothing, cotton fabrics, medicines, lumber, etc. First settled in 1787, Binghamton was called Chenango Point until, in 1800, its limits were slightly changed and the present name adopted in honor of William Bingham, a proprietor of land in the vicinity. It was incorporated as a village in 1834 and as a city in 1867. Its charter provides for a mayor, elected biennially, who appoints the fire, police, health, park, and public works com-

missions (single headed), and the civil service, school, library, and hospital boards. The common council, city judge, assessors, and board of water commissioners are chosen by popular vote. The annual expenditures of the city amount to about \$720,000, the principal items of expense being \$60,000 for the fire department, \$53,000 for the police, and \$175,000 for schools. The water works, built in 1867, are operated by the municipality. Pop, 1890, 35,005, 1900, 39,647, 1910, 48,443, 1913 (local est.), 62,000. Consult Wilkinson, *The Annals of Binghamton* (Binghamton, 1840), and Lawyer, *Binghamton Its Settlement, Growth, and Development* (Binghamton, 1900).

BINGHAM. See BINGEN.

BINGLEY. A town in the West Riding of Yorkshire, England, on the Aire, and the Leeds-Liverpool Canal, 15 miles west-northwest of Leeds. It has considerable woisted, cotton, and paper manufactures. The town owns its water and gas works and maintains a free public library and baths. Pop, 1891, 17,400, 1901, 18,448, 1911, 18,759.

BINMALEY, ben'ma-lá's. A town of Luzon, Philippines, in the province of Pangasinan, 3 miles east of Lingayen (Map Luzon, C 2). It is situated in a level region, on the south shore of the Gulf of Lingayen, at one of the mouths of the Agno River. Pop, 1903, 16,439.

BIN'NACLE (earlier *bitacle*, Portug *bitacola*, corrupted from Lat *habituaculum*, dwelling place from *habitare*, to dwell). A stand for

containing and supporting a ship's compass and its correctors. It is made of brass or wood. The binnacle cover is dome shaped and fits down over the top of the binnacle, protecting the compass, it contains lamps for lighting up the compass card at night, and has a glass plate let into the rear side through which the helmsman can see the compass and thus ascertain the direction of the ship's head. In modern steamers, fitted with electric lights in all parts, the binnacles have electric instead of oil lamps. Binnacles for gyroscopic compasses are usually smaller and flatter than the one shown and have electric lighting near the lubber's point only. See COMPASS.

BIN'NEY, Amos (1803-47). An American physician. He was born in Boston, Mass., Oct. 18, 1803, and died in Rome, Feb. 18, 1847. He was a man of wealth, a patron of artists and scientists, and an early president of the Boston Society of Natural History. He wrote *Terrestrial and Air-Breathing Molluscs of the United States* (Boston, 1847-51, Gould's ed., 1851-59).

—BINNEY, W. G. (born 1833), son of Amos Binney, is a conchologist of note who resides at Burlington, N. J. Besides editing his father's works in a new edition published in the *Bulletin* of the Museum of Comparative Zoology (vol. 19,

1878), he wrote *Land and Fresh-Water Shells of North America* (Smithsonian Institution, Washington, 1869), and many special papers on this subject. The collection of land and fresh-water shells of North America, and preparations of their anatomy, made by the two Binneys, are in the Museum of Comparative Zoology at Harvard University.

BINNEY, HORACE (1780-1875) An American lawyer. He was born in Philadelphia, graduated at Harvard in 1797, studied law in the office of Jared Ingersoll, and was admitted to the bar in 1800. Between 1807 and 1814 he published *Binney's Reports* of the decisions of the Supreme Court of Pennsylvania in six volumes. Though averse to public life, he served in the Twenty-third Congress and took a distinguished part, as an opponent of the Administration, in the debates over the removal of public deposits from the United States Bank. He then withdrew from active practice in the courts and until 1850, when he retired altogether from the bar, confined his legal practice to the preparation of written opinions. Perhaps his most famous case was that of *Bidal v. Girard's Executors*, which he argued before the United States Supreme Court in 1844. His argument in this case is considered to have greatly modified the old conception of the law of charities. Binney was frequently called upon to speak before public meetings, and he published addresses on *the Life and Character of Chief Justice Tilghman* (1827) and *the Life and Character of Chief Justice Marshall* (1835). He also published *A Sketch of the Life and Character of Justice Bushrod Washington* (1858), *Leaders of the Old Bar of Philadelphia* (1858), *An Inquiry into the Formation of Washington's Farewell Address* (1858), and three pamphlets (1862-63) on *The Privilege of the Writ of Habeas Corpus under the Constitution*, in which he supported the policy of President Lincoln in suspending the right of habeas corpus during the Civil War. Consult C. C. Binney, *Life of Horace Binney* (Philadelphia, 1903).

BINNEY, THOMAS (1798-1874) An English Nonconformist divine, born at Newcastle-on-Tyne. He studied at the theological seminary at Wymondley, Hertfordshire, and in 1824 became pastor of St James's Street Congregational Chapel, Newport, Isle of Wight. From 1829 to 1869 he was pastor of King's Weight-house Chapel, London, and from 1869 was professor of homilectic and pastoral theology at New College, London. For 40 years he was famous as a pulpit orator. He was known also as a keen controversialist, attacking the Church of England with much vehemence, and publishing numerous pamphlets in discussion with representatives of the Establishment. He exerted an important influence in the enrichment of the musical services of Dissenters, and wrote considerable devotional verse, of which the hymn "Eternal Light! Eternal Light!" is most familiar. His publications include *Is It Possible to Make the Most of Both Worlds?* (1853), *Miscell., the Priest-Maker* (1867). Consult J. Stoughton, *Memorial of the Late Thomas Binney* (London, 1874).

BINOCULAR MICROSCOPE See MICROSCOPE.

BINOCULAR TELESCOPE A telescope with two tubes and two separate systems of lenses. See OPERA GLASS and TELESCOPE.

BINOMIAL (Lat. *bis*, twice + *nomen*,

name, thing, item). In algebra, an expression consisting of two terms connected by the sign + or -, e.g., $a + b$, $a^2 - b^2$. The terms of the binomial may be any expressions, e.g., $(x - y) + (y - z)$. See POLYNOMIAL.

BINOMIAL COEFFICIENTS The numerical coefficients of the successive terms in the expansion of a binomial $(a + b)^n$, n being a positive integer. For $n = 1, 2, 3, 4$ the series of coefficients are, respectively 1, 1, 1, 2, 1, 1, 3, 3, 1, 1, 4, 6, 4, 1. Each series is got from the initial coefficient 1 by multiplying successively by the descending integers $n, n-1, \dots, 1$ and dividing successively by the ascending integers 1, 2, \dots, n . The general formula for the $(k+1)$ th coefficient is $C_{n,k} = \frac{n(n-1)(n-k+1)}{1 \cdot 2 \cdot 3 \cdot k}$, symbolized by

$\binom{n}{k}$. This is the same as the number of combinations of n things taken k at a time. The coefficients read the same from either end of the series. Their sum is 2^n , but if taken with alternate plus and minus signs, their sum is 0. They have other interesting properties. See, e.g., PASCAL'S TRIANGLE.

BINOMIAL THEOREM A general formula for raising a binomial, $a + b$, to any power, the meaning of the word "power" being extended to include exponents which are not positive integers. The formula is

$$(a+b)^n = a^n + na^{n-1}b + \frac{n(n-1)}{1 \cdot 2}a^{n-2}b^2 + \frac{n(n-1)(n-2)}{1 \cdot 2 \cdot 3}a^{n-3}b^3 + \dots,$$

where n may be any rational number. In case n is not a positive integer the expansion is an infinite series, which, unless convergent, does not represent the given function to be expanded.

The truth of the binomial theorem for positive integral exponents has long been known to mathematicians, but Newton first extended its application and emphasized its general usefulness.

BINON'DO A suburb of Manila (q.v.), and a centre of commercial and mercantile activity.

BINTURONG, bin'ta-rong (native name). A large arboreal civet (*Arctitis binturong*), allied to the paradoxures, but representing a separate genus of the Viverridae. It inhabits the Malay Peninsula and islands, and is 2½ feet long in body, with a bushy tail nearly 3 feet in length and prehensile, assisting it in climbing. It passes its day asleep in a tree, and at night hunts in a slow, cautious way for animals, birds' nests, etc., and also seems to eat vegetable substances. The adult is black, but younger specimens are grizzled or yellowish. Its fur is long and harsh, and it has long, bristly brown hairs about the mouth, ears, and eyes, giving it a very strange appearance. Its nature is fierce, but it is frequently kept in captivity.

BINUE See BENUE.

BINYON, bin'yon (ROBERT) LAURENCE (1869-) An English poet and artist. He was born in Lancaster and studied at St Paul's, London, and Trinity College, Oxford, where he won the Newdigate prize for poetry. In 1893 he entered the employ of the department of printed books in the British Museum, and in 1895 was transferred to the department of prints and drawings, of which he became assistant keeper in 1909. He edited *The Shilling Garland* in 1895-

98 and was a constant contributor to the *Saturday Review*. He published a catalogue of drawings in the British Museum (4 vols, 1898-1907), essays on Crane and Cotman, the etchings of Stang and the landscape etchings of Rembrandt, reproductions of William Blake's drawings, vol 1 (1906), *Painting in the Far East* (1908, 2d ed rev, 1913), *The Flight of the Dragon, an Essay on the Theory and Practice of Art in China and Japan* (1911), the dramas *Paris and Othello* (1905, produced 1906) and *Attilla* (1907), and, among many volumes of verse, *Lyric Poems* (1894), *London Visions* (1895, 1898, collected, 1908) and *Odes* (1901, new ed, 1913). In 1913 he published *Aquinas and The Art of Botticelli*. Consult Streetfield, *Two Poets of the New Century* (London, 1901).

BINZ, bintz, KARL (1832-1913) A German physician and pharmacologist, born at Benkstel. He studied at Wunzburg, Bonn, and Berlin, and in 1868 became professor at Bonn. In 1869 he founded the pharmacological institute there. He retired in 1908. His more important investigations had to do with experimental pharmacology and pathology. The action of quinine was first defined by him. His publications include *Grundriss der Arzneimittellehre* (1866, 13th ed, 1901), *Experimentelle Untersuchungen über das Wesen der Chininwirkung* (1868), *Das Chinin nach dem neuen pharmakologischen Arbeiten* (1875), *Über den Traum* (1878), *Vorlesungen über Pharmakologie* (1891), *Äther gegen den Schmerz* (1896), *Rezepturen und ihre Folgen* (1899).

BINZER, bintz'er, AUGUST DANIEL VON (1793-1868) A German author. He was born at Kiel and studied law at the universities of Kiel and Jena, where he became one of the most active members of the *Burschenschaft*, or students' society, which was dissolved in 1819 by the government for meddling with politics. Afterward he taught and edited papers in various parts of Germany. He is the author of two famous songs—"Wir hatten gebauet ein stattliches Haus," written on the dissolution of the *Burschenschaft*, and "Stosset an," which still retain their popularity. Among the works published by him are *Venedig im Jahre 1844* (1845), *Erzählungen und Novellen*, written in collaboration with his wife and published under the pseudonym of A. T. Beer (3 vols, 1836). He also translated Benjamin Franklin's *Autobiography and Writings* (1829), and *Night Thoughts*, by Edward Young.

BIOBIO, bió'bio. The largest river of Chile. It rises in the Cordilleras and after a northwesterly course of over 250 miles, with its lower reaches along the valley between the Andes and the Coast Range, empties into the Pacific Ocean just below Concepcion. It has a number of tributaries, has a width of 2 miles at its mouth, and becomes navigable at Nacimiento.

BIOGENESIS (Gk *bios*, *bios*, life + *genesis*, *genesis*, origin, source). The doctrine that the series of forms which an animal passes through in developing from the egg to the adult is an epitome of the stages in the evolution of the species. This is stated briefly in the expression Ontogeny recapitulates phylogeny. The truth of this doctrine seems to have been recognized long ago, according to Meckel (1811), by Aristotle, Hally, Harvey, Kielemeyer, Autenreith, and many other early authors. The law is often called Von Baer's, because in his great work on the development of animals (1828-37)

he demonstrated its truth in detail. Louis Agassiz also laid stress on this law, although he did not accept evolution. The law is based upon observed parallels between ontogenetic changes and assumed evolutionary ones. Thus, at an embryonic stage, man possesses gill slits and a two-chambered heart, like a fish, later the gill slits close and the heart becomes reptilian. A tail like that of lower apes is present at a later stage. At birth the child grasps things with its feet, as the higher apes do, and not until several months after birth are the essentially animal instincts replaced by the human. The tadpole stage of development of many amphibians was formerly one of the standard examples of biogenesis, but it is now thought that the fish-like form and mode of life is wholly secondary and has nothing directly to do with the recapitulation of the frog's phylogeny. Many terms have been coined to express the various stages or modes of growth and development from embryo to old age, but all have been discarded save the popular terms in common speech. The development is so gradual and the stages in different forms of life so dissimilar that all attempts at defining definite steps are useless.

The recapitulation law remains unexplained, it does not hold in detail, but only in a rough and general way. "The embryonic record," says Balfour, "as it is usually presented to us, is both imperfect and misleading. It may be compared to an ancient manuscript with many of the sheets lost, others displaced, and with spurious passages interpolated by a later hand." See EMBRYOLOGY, GASTRÆA THEORY.

Abiogenesis, though apparently merely the negation of "biogenesis," has a somewhat different meaning, the term signifying reproduction by spontaneous generation—not now accepted as a fact in any case.

BIOGEOLOGY See PALEONTOLOGY, PALEOBOTANY, GEOLOGY.

BIOGRAPHY (Gk *bios*, *bios*, life + *graphein*, *graphein*, to write). A term applied to that department of literature which treats of the lives of individuals. The mode of treatment, especially in modern times, is far from uniform. In some cases biography approaches the sphere of philosophy, in others, that of history, while in the majority it assumes, to a large extent, the character of analytic or descriptive criticism. To none of these modes, theoretically considered, can there be any valid objection, everything depends on the judiciousness of the biographer. The great points which he must keep perpetually in view are the personality and characteristics of his subject. If these are buried under a load of digressive dissertations, his book, however valuable or interesting, ceases to be a biography except in name. Such a book, for example, is Masson's *Life of Milton*. Anciently biography was more of a mere curriculum *vite* than it is now, that is to say, the leading incidents of a man's life were narrated in their historical sequence, without any elaborate attempt to analyze the character from which they emanated. Like ancient history, it was possessed of a simple greatness, a stately dignity of narrative, colored here and there, but sparingly, with grave eulogy or censure. Modern biography, on the other hand, like modern history, is full of elucidations, criticisms, and disquisitions, and, if wanting in the severe grace of its classic predecessors, it is much more lively, acute, and expansive.

Biographical literature has existed from an early period. The oldest historical books of the Jews abound with beautiful examples of it, such as the lives of the Patriarchs and the story of Ruth. Indeed, the mythologies of all ancient nations are but the lives of heroes and gods. Of purely biographical works, the most valuable that has come down to us from the Greeks is the *Parallel Lives* by Plutarch, written about the close of the first century after Christ. Roman literature also possessed an admirable specimen in the *Life of Agricola* by his son-in-law, Tacitus. Besides these may be mentioned the *Lives of the Twelve Caesars* (in Latin), by Suetonius, and *Apollonius of Tyana* (in Greek), by Philostratus, *Lives of the Sophists* (in Greek), by Philostratus, and a *Life of Plato* (in Greek), by Olympiodorus of Alexandria. Coming down to a later period, we meet St Jerome's *Lives of the Fathers*, while biographies, more or less complete, of saints, martyrs, bishops, etc., are scattered profusely through private ecclesiastical literature. The monks of the Middle Ages employed their leisure in weaving legends that abound in superstition and absurdities. Modern biographical literature really dates from the sixteenth and seventeenth centuries. Among the valuable works that then appeared may be mentioned Vasari's *Lives of the Painters* (Florence, 1550), the *Acta Sanctorum* (qv), Tillemont's *Mémoires pour servir à l'histoire ecclésiastique des six premiers siècles de l'église* (10 vols., Paris, 1693), Thomas Stanley's *History of Philosophy*, containing the lives, opinions, actions, and discourses of philosophers of every sect (1st ed., London, 1655-62, 4th ed., with Lysle, London, 1743), Bayle's *Dictionnaire historique et critique* (Rotterdam, 1697).

In England and elsewhere the biography of the man of art or letters is a late development. The men who visited the Globe Theatre never thought of writing the life of Shakespeare. To them the career of the dramatist seemed uneventful, for it was in no wise connected with the great affairs of church and state. The signs of a new era appeared with the publication of Walton's charming *Lives* (1670), comprising Donne, Wotton, Hooker, and Herbert. This list, however, contains the name of no one who devoted himself wholly to letters. Walton's volume was followed by Wood's *Athenæ Oxonienses* (1690-92), the lives of Oxford writers and bishops, and by Aubrey's *Minutes of Lives* (not published till 1813), containing sketches of Bacon, Milton, Hobbes, and others. These two writers, who depended largely upon anecdotes, were the forerunners of Boswell, whose *Life of Dr Johnson* (1791) is the most famous of English biographies. Since the appearance of this work biographical literature has increased enormously. There is no escape now for the man of letters. Among noteworthy biographies, since Boswell, are Lockhart's *Scott* (1836-38), Foister's *Dickens* (1872-74), Trevelyan's *Macaulay* (1876), Cross's *George Eliot* (1884), Tennyson, by his son (1897), the *Life and Letters of Russey*, by his son (1901), the *Life of Gladstone* by John (afterward Lord) Morley (London and New York, 1903). Cross adopted the novel plan of letting George Eliot speak through her letters, chronologically arranged, and elucidated by brief remarks. This method, which does away with the fulsome praises of the biographer, is very attractive, and has, perhaps, led to a taste for the correspondence of literary

men. Among notable volumes of letters of recent date are Matthew Arnold's (1895) and Stevenson's (1900). Beginning with Dr Johnson's *Lives of the Poets* (1779-81), there is a long line of works in which biography is combined with criticism. To this class belong Macaulay's essays on *Milton*, *Addison*, etc., Carlyle's essays on *Burns*, *Sterling*, etc., Grimm's *Michael Angelo*, and many series of which the type is represented by the *English Men of Letters*, the *American Men of Letters*, and *Les grands écrivains français*.

Biographical dictionaries date from the *Eleucidarius Carminum et Historiarum* (Holland, 1498). But the nineteenth century was, as the twentieth promises to be, a flourishing period for them. Among the best general dictionaries are the *Biographie universelle, ancienne et moderne* (new ed., 45 vols., Paris, 1843-65), and the *Nouvelle biographie générale* (46 vols., Paris, 1852-77). The best work of the kind published in the United States is *Lippincott's Pronouncing Biographical Dictionary*, by Dr Joseph Thomas, often reedited. Most nations have biographical dictionaries confined to their own celebrities. For Germany there is the *Allgemeine deutsche Biographie*, Bavarian Academy of Sciences (Leipzig, 1875-1900), for Austria, the *Biographisches Lexikon des Kaiserthums Oesterreich*, ed. by Wurzbach (Vienna, 1856-89), for Holland, the *Biographisch Woordenboek der Nederlanden*, ed. Van der Aa (Haarlem, 1852-78), for Belgium, the *Biographie nationale de Belgique* (Brussels, 1866-95), for Sweden, *Biographical Handbook*, ed. Hofberg (Stockholm, 1876), for Russia and Spain there are also good biographical dictionaries. England has the magnificent *Dictionary of National Biography* (63 vols., ed. by Sir Leslie Stephen and later by Sidney Lee, London, 1885-1900), to which were added three supplementary volumes in 1901, and a valuable volume which is entitled *Index and Epitome* (1903), and the United States, Appleton's *Cyclopedia of American Biography* (6 vols., New York, 1887-89), a seventh volume appearing in 1900 as a supplement, and Lamb's *Biographical Dictionary of the United States*. For contemporary biography we have Vapereau's *Dictionnaire Universel des Contemporains*, *Wer ist's?* (Leipzig, 1905), *Qui êtes vous?* (Paris, 1905 ff.), *Men and Women of the Time*, *Who's Who* (London), *Who's Who in America?* (Chicago), and *Who's Who in New York?* (New York), revised annually or biennially. They contain only the biographies of living persons, though reference is made to preceding volumes in the case of distinguished men and women who have died.

Belonging to this department of literature is the autobiography, i.e., the life of a person written by himself. We may cite, for their charm, the *Autobiography* of the first Lord Herbert of Cherbury, Benvenuto Cellini's *Vita da lui medesimo scritta*, Pepys' *Diary* (see PEPYS, SAMUEL), Rousseau's *Confessions*, Casanovi, who wrote (originally in 12 vols.) a most cynically accurate account of his own variegated career (see CASANOVA), Goethe's *Die Welt und Wahrheit*, Gibbon's *Memoirs*, Franklin's *Autobiography*, Scott's *Journal*, Newman's *Apologia*, Ruskin's *Præterita*, *Bismarck*, dictated by Prince Bismarck (Eng. trans. 1890) and *Richard Wagner* (1911). George Moore's *Confessions of a Young Man* (last ed., New York, 1910), like his *Memoirs of my Dead Life*

(1906), is partly autobiography and partly fiction, like the earlier writings of Maurice Barrès (q.v.) (See MOORE, GEORGE) This form of biography often runs into fiction as in Bowrow's *Lavengio*. The interesting development of biography, of which outlines are here presented, has never been adequately treated. See *ENCYCLOPEDIA*

BIOLOGY (from Greek *bios*, *bios*, life + *lógos*, *logos*, discourse) is not an ancient word of Greek origin, but appears to have been coined independently by Lamarck (1801) and by Tiepmanus (1802). In Germany the term "biology" has come to refer to the general habits and life histories of animals and plants, while in France, England, and America the word has retained its broader significance, owing more especially in the latter countries to its use in the writings of Herbert Spencer and of Huxley. In these countries biology signifies the study of the properties common to all living things in contrast to the properties of non-living things. A secondary meaning has also come to be associated with the use of the word, namely, for courses of study in which the general phenomena of both animals and plants are considered, as contrasted with the study of animals alone (zoology) or of plants alone (botany). In its broadest significance biology should stand for the study of all living phenomena, even including the study of human action in its every phase. Usage and tradition have, however, wisely or unwisely, excluded from the subject-matter of biology the historical, social, and political studies of mankind, as well as his psychological, philosophical, and religious views, although by a strange paradox these matters, in so far as they belong to other races and especially to the less civilized races, are sometimes made the subject of biological examination.

The origin of living things on our globe has occupied the forefront of biological speculation. Rejecting the supernatural explanation of former times, modern speculation has found itself in the dilemma of affirming, on the one hand, that living organisms have arisen from non-living substances in the *natural* course of cosmological changes, and, on the other hand, of acknowledging the absence of satisfactory evidence of such an origin. These alternatives are involved in, but should not be confused with, the doctrine of Biogenesis and Abiogenesis. The doctrine of Biogenesis maintains that the evidence we possess shows that living things always arise *at the present time* from other living things. No life without preceding life is now the universal rule on the earth. This is one of the most general and important deductions of biological science, but our present standpoint has only been reached after the most patient and laborious work of many years and many brains. As far back as human history goes we find a tradition that the lower and the less familiar animals and plants arise continually out of slime and filth, and in the dark and mysterious corners of the universe. Aristotle accepted this view of Abiogenesis, and throughout the Middle Ages it was generally held. That maggots arise in foul meat, that insects spring forth from the leaves of the plants on which they appear, that disease and pestilence arise spontaneously from the marshes and in crowded and dirty communities, and from the unburied dead of battlefields, has been believed and is still believed. One by one these ideas have been demonstrated to be myths. Redi, in 1668, showed conclusively and finally that mag-

gots are not engendered in foul meat, but come from the eggs of flies, the discovery of the complete life cycles of the lower animals leaves no possibility of spontaneous generation in their development, the discovery that putrefaction is due to bacteria and other microscopic organisms has finally removed any lingering doubt on this score, and the triumphs of experimental medicine have shown that contagious disease is not spontaneously bred inside or outside of the animal body, but is transmitted by minute germs from place to place. The classical work of Pasteur and of Tyndall has convinced all thoughtful men that fermentation and putrefaction do not occur unless organisms have access to the putrescible substances.

All life from preceding life is the motto of modern science, Biogenesis, not Abiogenesis. But whence came the first life on our globe? It has been suggested that it was brought to the globe from outer space by falling meteors. This suggestion only pushes the problem farther off and gives no solution of it, even if there were the slightest evidence in favor of such an extraneous origin of life. It has also been suggested that in a former condition of our planet, when the physical conditions were different from what they are at present, organic substances were produced from inorganic matter, and out of these organic substances living substances arose. This hypothesis has at least the great merit that it can be tested, for if the process once occurred we might expect to repeat it in our laboratories, since there is no reason to suppose that at the time when the earth had sufficiently cooled to allow organic matter to exist the conditions were different from those that can be produced with modern appliances. In fact, with the wonderful development of modern organic chemistry many of the older distinctions between organic and inorganic matter have disappeared.

It was long supposed that organic compounds, as the name implies, were formed only by organisms, and not by the synthesis of inorganic or "dead" substance. Wohler's synthesis of urea in 1820 was the first step in the artificial production of organic compounds. Since that time there has been a constant increase in the number of such compounds produced in the laboratory. Still more important is the fact that such widely distributed organic compounds as sugar and xanthine have been synthesized, and even compounds closely resembling the peptones that approach most nearly the proteids in composition have been artificially produced. Fischer's synthesis of these compounds and his study of the splitting products of the proteids themselves have shown the way at least in which the proteids themselves may ultimately be synthesized. When it is recalled that the proteids form the basis of all living material, the very great importance of this work will be manifest. Of equal interest is Kossel's work on a substance, *protamin*, derived from the sperm of animals. He has shown how this protamin might be built up into the proteid molecule, and while protamin has not yet been artificially produced there seems to be no difficulty in the way of its production aside from the labor involved, i.e., its production seems to lie within the limits of known chemical processes. The discovery of a large number of ferments (enzymes, etc.) in almost all the organs of the plant and animal, and the study of the action of these ferments, both inside and outside of the body, has thrown a flood of light on a

great number of physiological changes—changes not only in the digestion of food materials, but in the metabolism of the protoplasm and in its growth. Many of the chemical changes in the body seemed inexplicable before the discovery of these ferments which have the peculiar property of bringing about chemical combinations without themselves becoming altered or lost in the process—acting as middle men in a chemical transaction, without, however, profit or loss to themselves. The further discovery of the reversible action of some of the ferments has also helped explain how a proper balance between the substance to be transformed and that already transformed is reached, for an excess in either direction leads to a reversal of the action of the ferment. Here we begin to get an insight into certain chemical transformations that recall some of the well known regulative properties of organisms, in fact one physiologist of note has gone so far as to look upon changes of this kind as vitalistic rather than mechanical.
